North Korea’s leader, Kim Jong-un, said that his country was making final preparations to conduct its first test of an intercontinental ballistic missile — a bold statement less than a month before the inauguration of President-elect Donald J. Trump. In his annual New Year’s Day speech, which was broadcast on the North’s state-run KCTV on Sunday, Mr. Kim spoke proudly of the strides he said his country has made in its nuclear weapons and ballistic missile programs. He said that North Korea would continue to bolster its weapons programs as long as the United States remained hostile and continued its joint military exercises with South Korea. “We have reached the final stage in preparations to test-launch an intercontinental ballistic rocket,” he said. Analysts in the region have said that Kim might conduct another weapons test in coming months, taking advantage of leadership changes in the United States and South Korea. Kim’s speech indicated that North Korea may test-launch a long-range rocket several times this year to complete its ICBM program, said Cheong Seong-chang, a senior research fellow at the Sejong Institute of South Korea. “We need to take note of the fact that this is the first New Year’s speech where Kim Jong-un mentioned an intercontinental ballistic missile,” he said. Doubt still runs deep that North Korea has mastered all technology needed to build a reliable ICBM. But analysts in the region said that the North’s launchings of three-stage rockets to put satellites into orbit in recent years showed that the country had cleared some key technological hurdles. (Choe Sang-hun, “North Korea Says It’s Close to Long-Range Missile Test,” New York Times, January 2, 2016, p. A-3)

New Year’s Day Address: “Dear Comrades, Having seen out 2016, in which we glorified each and every day with gigantic struggle, creating a new history of great prosperity unprecedented in the history of the Juche revolution, we are seeing in the new year 2017. …Last year, amid the soaring revolutionary enthusiasm of all the Party members, service personnel and other people and great interest of the world, the Seventh Congress of the Workers’ Party of Korea was held in a meaningful and splendid way as a grand political festival. The congress proudly reviewed our Party’s glorious history of advancing the revolutionary cause of Juche along the victorious road under the wise leadership of the great Comrades Kim Il Sung and Kim Jong Il, and unfolded an ambitious blueprint for accomplishing the socialist cause under the banner of Kimilsungism—
Kimjongilism. Through this historic congress, the iron will of our service personnel and people to continuously march along the road of Juche following the Party was fully demonstrated, and lasting groundwork for the Korean revolution was laid. It will be etched in the history of our country as a meeting of victors that demonstrated the invincible might of the great Kimilsungist-Kimjongilist party, as a glorious meeting that set up a new milestone in carrying out the revolutionary cause of Juche. **Last year an epochal turn was brought about in consolidating the defense capability of Juche Korea, and our country achieved the status of a nuclear power**, a military giant, in the East which no enemy, however formidable, would dare to provoke. We conducted the first H-bomb test, test-firing of various means of strike and nuclear warhead test successfully to cope with the imperialists’ nuclear war threats, which were growing more wicked day by day, briskly developed state-of-the-art military hardware, and entered the final stage of preparation for the test launch of intercontinental ballistic missile; we achieved other marvelous successes one after another for the consolidation of the defense capability. This provided a powerful military guarantee for defending the destiny of the country and nation and victoriously advancing the cause of building a powerful socialist country. Our valiant People’s Army reliably defended the security of the country and the gains of the revolution by resolutely frustrating the enemy’s reckless moves for aggression and war, and gave perfect touches to its political and ideological aspects and military and technical preparations, as befits an invincible army. The brilliant successes achieved in the sector of national defense instilled a great national dignity and courage in our people, drove the imperialists and other reactionary forces into an ignominious defeat, and remarkably raised the strategic position of our country. Last year we achieved proud successes in the 70-day campaign and 200-day campaign organized for glorifying the Seventh Congress of the Party. These campaigns were a do-or-die struggle in which all the people smashed to smithereens the enemy’s vicious schemes to isolate and suffocate our country and brought about a turning point on all fronts where a powerful socialist country is being built, a massive struggle of creation that gave birth to a new Mallima era. Thanks to the heroic struggle of the Kim Il Sung’s and Kim Jong Il’s working class and all other people, the ambitious goals the Party set for the 70-day campaign and 200-day campaign were attained with success and a fresh breakthrough was made in the development of the national economy. **Our resourceful, talented scientists and technicians, following the successful launch of the earth observation satellite Kwangmyongsong 4, succeeded in the static firing test of new-type high-thrust motor of the launch vehicle for a geostationary satellite. By doing so, they have opened up a broad avenue to the exploration of outer space.** Also, they established fully-automated, model production systems of our own style, bred high-yielding strains with a view to ramping up agricultural production and achieved other laudable scientific and technological breakthroughs one after another. All this will be of great significance in developing the country’s economy and improving the people’s livelihood. The electric-power, coal-mining, metallurgical, chemical and building-materials industries, rail transport and other major sectors of the national economy attained their respective production and transport goals, thereby demonstrating the potential of our self-supporting economy and giving a powerful impetus to the building of a socialist economic giant. Numerous industrial establishments and cooperative farms registered the proud success of surpassing the peak-year level. The People’s Army stood in the vanguard in adding lustre to the history of “gold seas” and in creating a legendary speed at important construction sites. The sectors of education, public health and sports, too, made admirable achievements. When some areas in North Hamgyong Province were devastated by a sudden natural calamity, the whole country turned out in the restoration effort in hearty response to the Party’s appeal and achieved a miraculous success in a short span of time. During the 70-day campaign and 200-day campaign we created a new spirit of the times for building a powerful socialist country, and our people’s trust in the Party and confidence in socialism grew firmer. Last year, in which the whole country kept on seething with vigor day and night, all the Party members and other working people, youth and service personnel gave full scope to the indomitable attacking spirit of braving ordeals and difficulties, the death-defying mettle of answering the Party’s call with devotion and practice in any adversity, and the collectivist might of helping one another and leading one another forward to advance by leaps and bounds. …We should wage a vigorous all-people, general offensive to hit the targets of the five-year strategy on the strength of self-reliance and self-development. The strength of self-reliance and self-development is that of
The year strategy is to give science and technology, and the shortcut to implementing the five-year strategy is to give importance and precedence to science and technology. The sector of science and technology should concentrate efforts on solving scientific and technological problems arising in modernizing factories and enterprises and putting their production on a regular footing with the main emphasis on ensuring the domestic production of raw materials, fuel and equipment. Production units and scientific research institutes should intensify cooperation between themselves, and enterprises should build up their own technological development forces and conduct a proactive mass-based technological innovation drive, propelling economic development with valuable sci-tech achievements conducive to expanded production and the improvement of business operation and management. The electric-power, metallurgical and chemical industries should take the lead in the efforts to hit the targets of the economic strategy. The electric-power industry should carry out its production plan without fail by ensuring good maintenance of generating equipment and structures and stepping up its technical upgrading. It should run the nationwide integrated power control system effectively and organize alternated production scrupulously to ensure balance between power production and consumption; it should also develop the various sources of power to create a new generating capacity on a large scale. The metallurgical industry should introduce advanced technologies to lower the iron production cost and ensure normal operation of Juche-based production lines to turn out iron and steel in larger amounts. The state should take stringent measures to supply raw materials, fuel and power to the Kim Chaek and Hwanghae iron and steel complexes and other metallurgical factories. The chemical industry is a basis for all other industries and plays an important role in consolidating the independence of the economy and improving the people’s living standards. This sector should revitalize production at the February 8 Vinalon Complex, expand the capacity of other major chemical factories and transform their technical processes in our own way, thus increasing the output of various chemical goods. It should direct efforts to establishing a C1 chemical industry to carry out the tasks at every stage promptly and satisfactorily. The coal-mining industry and the rail transport sector should meet the demands for coal and its transport by power stations and metallurgical and chemical factories on a top priority basis. The machine-building industry should be rapidly developed. Machine factories should step up their modernization, perfect the processes for the serial production of new-type tractors, vehicles and multi-purpose farm machines, and produce and supply different kinds of high-performance and quality machinery and equipment. This year light industry, agriculture and fishing industry should be radically developed to make greater progress in improving the people’s living standards. Light industry should work out proper management strategies, regarding use of domestically available raw and other materials as their core, so as to revitalize production and bring about a turn in diversifying the range and types of consumer goods and improving their quality. It should normalize production in the mines and enterprises in the Tanchon area, so that they can prove effective in improving the people’s living standards. The agricultural front, the major thrust in building an economic giant, should raise a strong wind of scientific farming and push forward the movement for increasing crop yield. It should widely introduce seeds of superior strains and scientific farming methods, whose advantages have been proved in practice, expand the area of land under two-crop farming, and be proactive in inventing and introducing high-performance farm machines. By doing so, it can attain the production goal of grains. It should adopt measures to run the livestock farming base in the Sepho area on a normal basis and increase the production of fruits, mushrooms and vegetables, so that the people can enjoy benefits from them. The fishing sector should conduct a dynamic drive for catching fishes and push perseveringly ahead with aquatic farming. It should build modern fishing vessels in a greater number and lay out a comprehensive fishing equipment production base in the east coast area, so as to consolidate the material and technical foundations of the fishing industry. The construction sector should complete the construction of Ryomyong Street at the highest level and concentrate its forces on the major construction projects including the building of the Tanchon Power Station, modernization of the Kim Jong Thae Electric Locomotive Complex and the development of the Wonsan area. It should also build more educational and cultural facilities and houses in an excellent way. …Upholding the slogan of self-reliance and self-sufficiency, every field and every unit of the national economy should launch a dynamic struggle to increase production and practice economy to the maximum, and thus carry out the plan for this year on all indices. The whole country should turn out in land administration. We should further transform the appearance of the
land of our country by building modern tree nurseries in provinces, perseveringly pressing on with the forest restoration campaign and conducting river management, road repair and environmental conservation on a planned basis. In order to bring about a turnabout in implementing the five-year strategy for national economic development, it is imperative to carry on economic guidance and business management with clear objectives and in an innovative way. The Cabinet and other economic guidance organs should work out tactics to ensure the sustainable economic development by putting the overall national economy definitely on an upward track, and implement them with an unflinching perseverance. …The political and military position of socialism should be further cemented so that it can be an impregnable fortress. Single-hearted unity is the precious revolutionary legacy the great Comrades Kim Il Sung and Kim Jong II bequeathed to us, and herein lies the invincible might of our style of socialism. All the service personnel and people should establish the ties of kinship with the Party, their hearts pulsating to the same beat as it, and unite closely behind it in ideology, purpose and moral obligation, so as to struggle staunchly to achieve the prosperity of the country. We should thoroughly apply the people-first doctrine, the crystallization of the Juche-oriented view on the people, philosophy of the people, in Party work and all the spheres of state and social life, and wage an intensive struggle to root out abuses of power, bureaucratism and corruption that spoil the flower garden of single-hearted unity. We should resolutely thwart the enemy’s sinister and pernicious schemes to check the warm and pure-hearted aspiration of our people who follow the Party single-heartedly and to alienate the Party from them. In this year of the 85th anniversary of the founding of the Korean People’s Army, we should raise the fierce flames of increasing the military capability. The People’s Army should conduct the Party’s political work in a proactive manner, so as to ensure that it is pervaded with the ideology and intentions of the Party alone. It should designate this year as another year of training, another year of perfecting its combat preparedness, and ensure that all its units of different arms, services and corps raise a hot wind of perfecting their combat preparedness in order to train all its officers and men as a-match-for-a-hundred combatants, tigers of Mt Paektu, who are capable of annihilating any aggressor force at a stroke. Officers and men of the Korean People’s Internal Security Forces and members of the Worker-Peasant Red Guards and Young Red Guards should prepare themselves politically and militarily and maintain full combat readiness to firmly defend the socialist system and the people’s lives and property. Officials, scientists and workers in the defense industry, burning their hearts with the “Yongil bomb spirit” of the days of the anti-Japanese struggle and the revolutionary spirit of the workers of Kunja-ri of the days of the Fatherland Liberation War, should develop and produce larger quantities of powerful military hardware of our own style. By doing so, they can build up the arsenal of the Songun revolution. …The current stirring era demands that our officials, standard-bearers in carrying out the Party’s policies, improve their working style and attitude in a revolutionary way. Last year, in reflection of the national desire for reunification and the requirements of the times, we put forward the Juche-oriented line and policy of reunification at the Seventh Congress of the Workers’ Party of Korea and made strenuous efforts to this end. However, the south Korean authorities turned a deaf ear to our patriotic appeal and ignored our sincere proposal. Instead, they clung to their sanctions-and-pressure schemes against the DPRK and persisted in clamoring for a war against it, thus driving inter-Korean relations towards the worst catastrophe. Last year, south Korea witnessed a massive anti-“government” struggle spreading far and wide to shake the reactionary ruling machinery to its foundations. This resistance involving all south Korean people, which left an indelible mark in the history of their struggle, was an outburst of pent-up grudge and indignation against the conservative regime that had been resorting to fascist dictatorship, anti-popular policy, sycophantic and traitorous acts and confrontation with their compatriots. This year we will mark the 45th anniversary of the historic July 4 Joint Statement and the 10th anniversary of the October 4 Declaration. This year we should open up a broad avenue to independent reunification through a concerted effort of the whole nation. Positive measures should be taken to improve inter-Korean relations, avoid acute military confrontation and remove the danger of war between north and south. The improvement of inter-Korean relations is the starting-point for peace and reunification, and it is a pressing demand of the whole nation. Any politician, if he or she remains a passive onlooker to the current deadlock between the two sides, can neither claim to be fully discharging his or her responsibility and role for the nation nor enjoy public support. Every manner of abuses and slanders aimed at offending
the other party and inciting confrontation cannot be justified on any account, and an immediate stop should be put to the malicious smear campaign and other acts of hostility towards the DPRK, all designed for the overthrow of its system and any other “change.” We are consistent in our stand to safeguard the security of the compatriots and peace of the country without fighting with the fellow countrymen. The south Korean authorities should not aggravate the situation by finding fault with our exercise of the right to self-defense thoughtlessly, but respond positively to our sincere efforts to prevent military conflict between north and south and ease the tension. They should also discontinue arms buildup and war games. The whole nation should pool their will and efforts to usher in a heyday of the nationwide reunification movement. All the Korean people in the north, in the south and abroad should achieve solidarity, make concerted efforts and unite on the principle of subordinating everything to national reunification, the common cause of the nation, and revitalize the reunification movement on a nationwide scale. They should promote active contact and exchange with each other irrespective of differences in their ideologies and systems, regions and ideals, and classes and social strata, and hold a pan-national, grand meeting for reunification involving all the political parties and organizations including the authorities in the north and south, as well as the compatriots of all strata at home and abroad. We will readily join hands with anyone who prioritizes the fundamental interests of the nation and is desirous of improving inter-Korean relations. It is necessary to frustrate the challenges of the anti-reunification forces at home and abroad who go against the aspiration of the nation for reunification. We must put an end to the moves for aggression and intervention by the foreign forces including the United States that is occupying south Korea and tries to realize the strategy for achieving hegemony in the Asia-Pacific region, and wage a dynamic pan-national struggle to thwart the moves of the traitorous and sycophantic anti-reunification forces like Park Geun Hye who, failing to see clearly who is the real arch-enemy of the nation, is trying to find a way out in confrontation with the fellow countrymen. Well aware of the will of the Korean nation to reunify their country, the United States must no longer cling to the scheme of whipping up national estrangement by inciting the anti-reunification forces in south Korea to confrontation with the fellow countrymen and war. It must make a courageous decision to roll back its anachronistic policy hostile towards the DPRK. The international community that values independence and justice should oppose the moves of the United States and its vassal forces aimed at wrecking peace on the Korean peninsula and checking its reunification, and the neighboring countries should act in favor of our nation’s aspiration and efforts for reunification. All the fellow countrymen in the north, in the south and abroad should do something to make this year a meaningful year of a new phase in independent reunification by stepping up a nationwide grand march towards reunification through the concerted effort of the nation. Last year the imperialist reactionary forces’ moves for political and military pressure and sanctions against our country reached an extreme. But they failed to break the faith of our service personnel and people in victory, and could not check the vigorous revolutionary advance of Juche Korea. We will continue to build up our self-defense capability, the pivot of which is the nuclear forces, and the capability for preemptive strike as long as the United States and its vassal forces keep on nuclear threat and blackmail and as long as they do not stop their war games they stage at our doorstep disguising them as annual events. We will defend peace and security of our state at all costs and by our own efforts, and make a positive contribution to safeguarding global peace and stability. Our Party and the government of our Republic will remain committed to the ideals of our foreign policy of independence, peace and friendship, expand and develop the relations of goodwill-neighborliness, friendship and cooperation with those countries championing independence, and make concerted efforts with them to ensure genuine international justice. Comrades, As I am standing here to proclaim the beginning of another year, I feel a surge of anxiety about what I should do to hold our people in greater reverence, the best people in the world who have warmly supported me with a single mind out of their firm trust in me. My desires were burning all the time, but I spent the past year feeling anxious and remorseful for the lack of my ability. I am hardening my resolve to seek more tasks for the sake of the people this year and make redoubled, devoted efforts to this end. Previously, all the people used to sing the song We Are the Happiest in the World, feeling optimistic about the future with confidence in the great Comrades Kim Il Sung and Kim Jong Il. I will work with devotion to ensure that the past era does not remain as a moment
in history but is re-presented in the present era. On this first morning of the new year I swear to become a true servant loyal to our people who faithfully supports them with a pure conscience. And I will push the effort to set up across the Party a revolutionary climate of making selfless, devoted efforts for the good of the people. As long as the great Kimilsungism-Kimjongilism is illuminating the road ahead of us and we have the single-hearted unity of all the service personnel and people around the Party, we are sure to emerge victorious. Let us all march forward dynamically towards a bright future, holding up the splendid blueprint unfolded by the Seventh Congress of the Workers’ Party of Korea to develop ours into a powerful socialist country.” (Kim Jong Un’s New Year Address, Rodong Sinmun, January 2, 2017)

President-elect Donald Trump has asked for an intelligence briefing on North Korea's nuclear weapons program, Reuters reported. "Trump's first, and at that time only, request for a special classified intelligence briefing was for one on North Korea and its nuclear weapons program," the news agency said citing a senior U.S. intelligence official. "North Korea and its nuclear program has also been of interest to retired Lieutenant General Michael Flynn, Trump's choice for national security advisor." (Cho Yi-jun, “Trump Asks for Briefing on N. Korean Nukes,” Chosun Ilbo, January 3, 2017)

1/2/17

A day after North Korea’s leader, Kim Jong-un, declared that the “final stage in preparations” was underway to test an intercontinental ballistic missile, President-elect Donald J. Trump took to Twitter to declare bluntly, “It won’t happen!” Kim offered no time frame. “North Korea just stated that it is in the final stages of developing a nuclear weapon capable of reaching parts of the U.S.,” Trump wrote, somewhat misstating. Kim’s warning. Pyongyang has already tested nuclear weapons underground; the latest threat concerned what Kim called a “test launch of an intercontinental ballistic missile.” After his first Twitter message, “China has been taking out massive amounts of money & wealth from the U.S. in totally one-sided trade, but won’t help with North Korea. Nice!” That appeared to reflect briefings Mr. Trump has received about how Chinese leaders fear instability and collapse in the North more than the status quo. A spokesman for the Chinese Ministry of Foreign Affairs rejected Trump’s criticisms and appeared to suggest that such comments could inflame tensions with North Korea. “We hope that all sides avoid using words and actions that lead to escalating tensions,” the spokesman, Geng Shuang, said at a regular news briefing in Beijing on January 3 when asked about Mr. Trump’s messages. Geng said that China was committed to using negotiations to defuse the standoff over North Korea’s nuclear weapons. China, he said, “has made tremendous efforts to promote a peaceful and effective solution to the North Korean nuclear issue.” In his New Year’s Day speech, Kim said he would continue his country’s efforts to build a nuclear-strike capability unless the United States abandoned its “hostile” policy toward the North. How Trump would respond to such a provocation is a matter of great concern for South Koreans. (Maggie Haberman and David E. Sanger, “’Won’t Happen,’ Trump Says of North Korean Missile Test,” New York Times, January 3, 2017, p. A-13)

1/3/17

The number of North Koreans escaping to South Korea rose 11 percent on-year in 2016, government data showed, as more elites and overseas workers fled the country amid tough international sanctions. A total of 1,414 North Koreans came to South Korea last year, compared to 1,275 tallied for 2015, according to a preliminary data provided by the Ministry of Unification. The total number of North Korean defectors in South Korea reached 30,208 as of end-December. The 2016 tally marked the first time that the pace of annual growth picked up since 2011 when the North's leader Kim Jong-un took office. The number of defectors reaching the South peaked at 2,914 in 2009, but the pace of growth had fallen off since 2011 as Kim strengthened border control and surveillance over North Koreans. (Yonhap, “Number of N.K. Defectors Grows 11% On-Year 2016: Data,” Korea Herald, January 3, 2017)

DoS Spokesman John Kirby: “Q: And then what is the U.S. assessment? I know you say you don’t talk about intelligence, but what if he’s lying? I mean, what if this is just an empty – empty threat? What is your assessment? I mean, is he close to – is this the last stage, or he is just — KIRBY: I think the intel – my understanding is that – again, we don’t talk about intelligence
issues, so that’s one. Number two, we do continue to believe that he continues to pursue both nuclear and ballistic missile technologies. I mean, that’s pretty apparent. **We do not believe that he, at this point in time, has the capability to tip one of these with a nuclear warhead.** That’s as far as I’m going to go in terms of assessing. But we do know that he continues to want to have those capabilities and he continues – the programs continue to march in that direction, which is why, quite frankly, that the whole international community is as galvanized as it is to try to deter and to stop that. … **Q:** Yeah. Following up on Six-Party Talks, you mentioned – you called for them to return to that process. Is that without preconditions? **KIRBY:** It has always been. I mean, we want them to return. And the – **but the condition is that they have to commit to a verifiable denuclearization of the peninsula. That’s always been the case,** if that’s what you mean by preconditions. Nothing’s changed in that regard. They’ve got to be able to commit to denuclearization of the peninsula, and they have proven, obviously, unwilling to do that and unwilling to return to the process. …**Q:** John, you mentioned that the U.S. doesn’t believe that North Korea has the capability to … put a nuclear warhead on one of its missiles. **KIRBY:** To tip one. **Q:** Does that mean any kind of missile, a short-range missile, a mid-range? **KIRBY:** I think I’m just going to leave it at that. I’m going to leave my statement where it was.” (DoS Daily Briefing, January 3, 2017)

South Korea will this year launch a special unit tasked with incapacitating North Korea's wartime leadership, two years ahead of schedule, its defense chief said Wednesday, as it strives to better counter Pyongyang's evolving military threats. During its New Year policy briefing to Acting President and Prime Minister Hwang Kyo-ahn, Defense Minister Han Min-koo said the military is putting top priority on beefing up defense capabilities against North Korea’s weapons of mass destruction (WMD), which includes nukes and missiles. "We are planning to set up a special brigade with the goal of removing or (at least) paralyzing North Korea’s wartime command structure (in the face of escalating threats from the communist state)," Han told Hwang, who took over the country's executive powers from President Park Geun-Hye after she was impeached by parliament last month. In a related move, Seoul's Joint Chiefs of Staff launched the Countering Nuclear and WMD Center on Jan. 1 to better handle North Korea's growing nuclear threats by drawing up military operations and strategic countermeasures in a more detailed and organized manner. The Ministry of National Defense has recently updated the size of weapons-grade plutonium and highly-enriched uranium that the North may be holding, the minister said. The materials are critical in making nuclear weapons. Seoul estimates Pyongyang has some 40 kilograms of weapons-grade plutonium, which is sufficient to manufacture four to eight nuclear weapons. In other efforts to cope with WMDs, the military will speed up the planned deployment of advanced weapons by a couple of years from the original schedule of the mid-2020s to enhance the country's defense capabilities, the ministry said. Under the "three-pillar" system, South Korea aims to detect the North's incoming missiles and launch counterattacks against the communist state's key facilities. The system includes a "kill chain" strike system, the Korean Air and Missile Defense (KAMD), and the Korea Massive Punishment & Retaliation (KMPR) plan. The entire plan is based on the use of locally developed defense systems. The kill chain and the KAMD are designed to detect and destroy incoming missiles in the shortest possible time. The KMPR is aimed at launching attacks on the North's military leadership if signs of the imminent use of nuclear weapons are detected. Han said the Terminal High Altitude Area Defense system (THAAD) will be deployed in South Korea as planned. In November, U.S. Forces Korea Commander Gen. Vincent Brooks said the THAAD missile defense system will be installed in eight to 10 months to counter growing nuclear and missile threats from the North. As for defense ties with Japan and China, the minister said South Korea will expand bilateral intelligence sharing with Japan under the the General Security of Military Information Agreement (GSOMIA) signed in November to counter North Korean threats. With China, he said Seoul will seek ways to explain the need for the THAAD system. China has explicitly expressed opposition against the planned THAAD deployment in South Korea on concerns that the move could hurt its strategic security interests. Looking ahead, the minister warned that the North could make a "strategic or tactical provocation" in the coming months while not giving up its nuclear and missile programs despite stricter international sanctions following its fourth nuclear test in January. The communist nation

South Korea plans to faithfully implement a set of U.N. and unilateral sanctions against North Korea and seek ways to boost their effectiveness this year, Seoul's unification ministry said. It also said that it will not respond to North Korea's offer for talks which has no sincerity, but instead make efforts to seek inter-Korean dialogue that could contribute to North Korea's denuclearization. "This year, North Korea is expected to seek recognition as a nuclear state and may continue to overturn South Korea's inter-Korean policy and the international sanctions regime," the ministry said in a statement. Seoul's unification ministry presented its 2017 policy goals to Prime Minister Hwang Kyo-ahn who serves as acting president following a parliamentary impeachment of President Park Geun-hye. The government said that North Korea's willingness to give up its nuclear weapons should take precedence if the two Koreas are to hold meaningful dialogue. "North Korea does not seem to have an interest in denuclearization, as Kim's New Year message showed. At the current stage, we are not considering proposing dialogue to the North," Unification Minister Hong Yong-pyo told reporters. Kim Nam-jung, the head of the ministry's unification policy office, said that resuming the complex would not be easy, given the U.N. sanctions imposed on North Korea last year. "There may be many limitations (in resuming the Kaesong Industrial Complex). It is hard to gauge the current situation at the factory zone, but it is believed that there are no signs that North Korea moves equipment out of the complex." The ministry, meanwhile, said that it seeks to allow civic groups to provide humanitarian assistance to socially vulnerable people in North Korea, including infants, after taking into account various factors such as necessity and urgency. Seoul has suspended almost all civilian inter-Korean exchanges and South Koreans' visits to North Korea since Pyongyang's fourth nuclear test in January 2016. With virtually all cross-border exchanges at a standstill, the Unification Ministry will focus on laying the foundation for unification at home such as by improving policy on defectors and human rights in North Korea. But the ministry said it would explore ways to revive dialogue if it contributes to the denuclearization of the peninsula. “It's not that we won't do talks. Our direction is to hold denuclearization talks first and then expand them to other areas if conditions are mature.” Unification Minister Hong Yong-pyo said at a news conference. “For the two Koreas to have meaningful dialogue, the North’s resolve for a denuclearization is vital. But at the moment, as the North’s firm resolve for nuclear development was confirmed in (Kim’s) New Year speech, we are not considering offering talks from our part first.” Since Pyongyang’s fourth nuclear test and long-range missile firing early last year, Seoul refrained from providing humanitarian assistance or approving civic groups’ requests. Hong, however, acknowledged the need for sustained relief supplies, saying he would support aid for children, pregnant women and others in need and make a decision based on “necessity, urgency and transparency.” (Yonhap, “S. Korea Vows to Continue Employing Pressure, Sanctions on N.K. This Year,” January 4, 2017)

Rodong Sinmun: “The improvement of the north-south relations is a starting point for achieving the peace in the country and advancing the cause of national reunification. Improving the inter-Korean ties is a vital issue related to the destiny of the nation and the supreme task, a matter of utmost urgency. If the north and the south of Korea remain partitioned and stand against each other, it is absolutely impossible to pave the way for peace and reunification. To allow the north-south ties of confrontation and distrust to persist is just tantamount to committing an indelible crime against history and the generations to come. The north-south ties on which the destiny of the nation depends should be replaced by the ties of trust and reconciliation and only then is it possible to achieve lasting peace on the Korean peninsula and the independent reunification of the country by the concerted efforts of all Koreans. Whoever is concerned about the destiny of the nation should not be indifferent to the improvement of the ties but should boldly take the patriotic road of national reconciliation and unity, transcending differences in ideology, ism and social system. It is the steadfast will of all the fellow countrymen in the north and the south and abroad to meet the blatant challenges of the anti-reunification forces at home and abroad and open a new phase in the improvement of the north-south ties and the realization of the
Kim Jong Un rang in the New Year with an unsettling announcement: that North Korea was perfecting the design of an intercontinental ballistic missile, potentially posing a dire threat to the United States and its allies. President-elect Donald Trump was quick to respond with a pair of cryptic tweets that seemed to warn North Korea, or China, or both. His first: “North Korea just stated that it is in the final stages of developing a nuclear weapon capable of reaching parts of the US. It won’t happen!” Followed by: “China has been taking out massive amounts of money & wealth from the U.S. in totally one-sided trade, but won’t help with North Korea. Nice!”

Sometime in the past year, the small tribe of North Korea-watchers has watched with alarm as Pyongyang has come closer of realizing its dream of a nuclear weapon that could hit U.S. shores. A swirl of tests this year showed the country making significant progress in its medium-range missile program and advancing toward larger goals. But just how scared should we be? And will Kim test President Trump with his first foreign policy crisis, as many national security experts expect? Not so fast, says Joshua Pollack, the editor of the Nonproliferation Review and senior research associate at the Middlebury Institute of International Studies at Monterey. It’s possible that North Korea’s enigmatic leader was, in fact, carefully moderating his language and signaling a willingness to go to deal with a new American administration. Of course, even if Kim is trying to cool it, an unpredictable Trump administration still worries Pollack for a number of reasons: rising U.S.-China tensions, a South Korea that wants nukes of its own and a region simmering with submerged tensions. “POLITICO: So after that tweet from Trump, a lot of people are predicting that North Korea will somehow provoke the first overseas crisis of Trump’s presidency. How do you think that might play out? Pollack: I don't know that they’re intent on doing that. I got a very different message from reading Kim Jong Un’s New Year’s speech, and I thought he was actually intent on keeping his powder dry and waiting to see what moves the new administration makes and perhaps any new South Korean government that will come along. So, I’m not at all sure that there will be any such crisis. There was barely any movement on these issues during the Obama presidency. So, I could imagine something where the North Koreans could overplay their hand and, as a result, get nowhere. If they play it cool, then they might allow Trump an opening if he’s interested in pursuing one. POLITICO: An opening to do what? Pollack: To reach a new understanding. I think [Kim] said that in 2016 they completed the preparations for a test launch, or words to that effect. And he did not say, contrary to some headlines, that they’re planning one any time soon. So, you know, when you speak of preparations, that implies you will act, but he didn't actually say that. He certainly did not promise it, and he could have. So, given that the speech overall was about big economic accomplishments this year, and was describing all of the military activities as accomplished or done, it made it sound like they checked a box. He also said that they would continue to strengthen their nuclear forces as long as the United States threatened them with nuclear weapons and with the joint exercises with the South Koreans that take place twice every year, and there he did not specifically say that they would undertake a nuclear test. He could have, but he was vague, and he sort of left it open. So, it seemed like he was putting down some markers about what might justify these activities and was perhaps putting them on the negotiating table. It’s difficult to make these inferences, but since his language was relatively muted and restrained compared to what it has been before and the overall focus of the speech was about basically overhauling the economy, I think it signaled that the door is open a crack. He did not refer openly to the new administration. The North Korean media has said very little about Trump, but simply because they are not eager to negotiate with Obama doesn't mean that they wouldn't be interested in negotiating with Trump, in my view. That’s why I see an opportunity there. There just wasn’t a whole lot of menace and saber-rattling. POLITICO: Do you think it reflects any kind of real change in their ambitions? Pollack: No. I mean, why would it? They have a longstanding approach which they’ve spelled out for us repeatedly, which is they want us to abandon what they call “the hostile policy.” They want us basically — they see themselves as being on a list of enemies, you know, an impression you might get from George W. Bush's “Axis of Evil” speech, and they want off of it. They want us to treat them more like a peer, knowing that countries that have nuclear weapons tend not to mess with each other. So, they’re looking for ways to improve the situation to deter an attack that they
always are afraid might be coming from the United States and South Korea.” (Katelyn Fossett, “Is Kim Jong Un Trying to Tell Donald Trump Something?” Politico, January 4, 2017)

1/5/17

Trilateral Briefing: “Q: (Via interpreter) Thank you for the opportunity to ask a question. I am Hyun Won Sup from MBC. I have two questions. My first question goes to Deputy Secretary Blinken. You have mentioned about ways to address North Korea’s nuclear weapons. In his New Year’s speech, Kim Jong-un has mentioned that he is in the final stage of ICBM testing, and one North Korean defector diplomat has said that in the initial part of the Trump Administration North Korea will complete its nuclear weapons and, as a nuclear power, it will engage in negotiations with the United States. And as was mentioned before, there were several international sanctions; however, whether those sanctions were effective is something that we are thinking of these days. Some experts are saying that the United States has to consider some other military measures, including the preemptive attack, where they have to go ahead with negotiations with North Korea in order to address North Korea’s nuclear threats. What is – would be the most effective ways to address this issue? So we would be grateful for Deputy Secretary Blinken gives an answer to this question. …BLINKEN: Thank you. The effectiveness of sanctions and pressure requires two things. It requires determination and it requires patience: determination to build a sustained, comprehensive pressure campaign; and the patience to see that take hold and have effect. And it’s not like flipping a light switch. It takes time. But what we’ve done in the last year particularly is to put in place the building blocks of that sustained, comprehensive pressure campaign, as I described a few minutes ago, and it’s across the board. And I believe that as long as we sustain it and build on it, it will have an effect. And it will require the regime in North Korea to make a choice – a choice between continuing to pursue nuclear and missile programs that are unacceptable to the international community – not just the United States, not just Japan, not just Korea, the entire international community – or, if it doesn’t, it will face growing isolation and growing pressure in a way that will make it impossible for the regime to deliver on the basic needs of its people. Again, the purpose here is not to bring the regime to its knees. It’s to bring it to the table to negotiate authentic, credible steps toward denuclearization. And again, as I said a moment ago, it’s important to understand that it takes time to do this, and the Iran example is a very good one. We spent years building our own domestic sanctions against Iran and then, in this Administration, several years putting in place an international framework for sanctions and pressure. People said it’s not working, it’s not working, and then all of a sudden it worked. The pressure got to a point where Iran made the wise decision to come to the table to engage. We were able to get an interim agreement that froze the program in place, started to roll it back in certain respects, got inspectors in. That created time and space to negotiate a comprehensive agreement that has produced a very positive result for the security of the world. I would hope that the DPRK would be inspired by that example, and to add to its inspiration we are putting in place these comprehensive, sustained pressure and sanctions.” (DoS, Joint Press Availability with Japanese Vice Foreign Minister Sugiyama Shinsuke and Republic of Korea First Vice Foreign Minister Lim Sung-nam, Washington, January 5, 2017)

1/6/17

Tokyo said it will recall its diplomats from South Korea and take other retaliatory measures against Seoul’s inaction concerning a “comfort women” statue in front of the Japanese consulate-general in Busan. “The installment of the statue will have a detrimental effect on Japan-South Korea relations,” Chief Cabinet Secretary Suga Yoshihide said at a news conference in Tokyo. Through diplomatic channels, Tokyo demanded the immediate removal of the statue, which was set up by a citizens group late last month. The South Korean government, however, has taken no action on the Japanese demands. In response to Seoul’s apparent tacit approval of the statue, Japan will instruct Nagamine Yasumasa, the Japanese ambassador to South Korea, and Morimoto Yasuhiro, consul general at the consulate-general in Busan, to return temporarily to Japan. Tokyo will also suspend talks on a new currency swap arrangement that will oblige the two countries to offer U.S. dollars or other currencies to each other during a financial crisis. In addition, Japan will shelve bilateral talks on economic cooperation involving vice ministers or their equivalents and call off participation by Japanese diplomats in events related to Busan. Suga said the government will “make a comprehensive assessment of the circumstances” before deciding on the time period
for the measures. Japan and South Korea reached a bilateral agreement on the comfort women issue in December 2015, calling it a “final and irreversible resolution” to the longstanding source of friction between the two countries. Japan agreed to pay 1 billion yen ($8.62 million) to a foundation that Seoul helped to establish for assistance to the former comfort women who were forced to provide sex to Japanese troops before and during World War II. Tokyo acknowledged the Japanese military’s involvement and responsibility in the agreement. The Japanese government said the statue in Busan, which is similar to the one that remains in front of the Japanese Embassy in Seoul, goes against the spirit of the agreement that pushes future-oriented relations. Seoul promised to “make efforts” in response to Japan’s request for the removal of the comfort women statue put up by a citizens group in front of the Japanese Embassy. “We strongly hope that a promise agreed upon by the two countries is implemented,” Suga said. The statue in Busan was originally removed by city officials on December 28 soon after it was installed. But anti-Japan sentiment resurfaced in South Korea, fueled by Defense Minister Inada Tomomi’s December 29 visit to Yasukuni Shrine, where Class-A war criminals are honored along with Japan’s war dead. The statue was set up again on December 30. Suga said Seoul is obliged to protect the dignity and other matters of Japanese diplomatic missions on its territory based on the Vienna Convention on Diplomatic Relations. “(The statue) undermines the dignity of the consulate-general facility, and it is extremely regrettable in light of the provisions of the convention,” he said. (Asahi Shimbun, “Japan to Recall Ambassador over ‘Comfort Women’ Issue,” January 6, 2017)

Perry: “In 1994, when I was secretary of defense, we came perilously close to a second Korean War because of North Korea’s nuclear program. Today we are again approaching a crisis with North Korea, and again the cause is its nuclear program. A war in 1994 would have been terrible, but we were able to avoid it with diplomacy (the Agreed Framework, from which the United States and North Korea withdrew in 2002). Today a war would be no less than catastrophic, possibly destroying the societies of both Koreas as well as causing large casualties in the U.S. military. It is imperative that we employ creative diplomacy to avert such a catastrophe. The pressure boiled over this past week when Kim Jong Un announced plans to test an intercontinental ballistic missile (ICBM) that could deliver a nuclear warhead to the continental United States. In reply, President-elect Donald Trump tweeted, “It won’t happen,” seemingly suggesting he might take military action against North Korea’s missile program. The threat is real enough. North Korea has built more than a dozen nuclear bombs and conducted five nuclear tests, several at about the destructive power of the Hiroshima bomb. Pyongyang also has a robust ballistic missile program — it has fielded a large number of medium-range missiles and is testing long-range missiles. So the question is not whether but when Pyongyang will have a nuclear-armed ICBM. Its ICBM program is not yet operational, and it must take many difficult steps to make it so. But this is evidently a high-priority program moving at a fast pace. There is no reason to doubt that it will reach an operational capability, perhaps in the next few years. Certainly this is dangerous, but we should try to understand the nature of the danger. During my discussions and negotiations with members of the North Korean government, I have found that they are not irrational, nor do they have the objective of achieving martyrdom. Their goals, in order of priority, are: preserving the Kim dynasty, gaining international respect and improving their economy. The regime has demonstrated — over and over again — that it is willing to sacrifice its economy to assure that the dynasty is preserved. During negotiations in 1999 and 2000, we found a way to achieve all three of their goals without nuclear weapons. I believe that the North Korean government was ready to accept our proposal (it is easier for leaders to forgo weapons they do not yet have), but we can never be certain of that — nor that they would have, in fact, complied with an agreement — because the George W. Bush administration cut off the talks in 2001. I believe that the danger of a North Korean ICBM program is not that they would launch an unprovoked attack on the United States — they are not suicidal. But they have been playing a weak hand for decades, and they have demonstrated a willingness to take risks in playing it. The real danger of their ICBM program is that it might embolden them to take even greater risks — that is, overplay their hand in a way that could (inadvertently) lead to a military conflict with South Korea. The South Korean military, backed by U.S. air and naval power (and a small ground force), is more than a match for the large but poorly equipped North Korean military. So if North Korea were to begin losing a conventional conflict, they might in desperation turn to their nuclear weapons. What can we do to mitigate that
danger? During the time I was defense secretary, I considered a preemptive conventional strike on
their Yongbyon nuclear facility. We rejected that option in favor of diplomacy. Such a strike could
still destroy the facilities at Yongbyon but probably would not destroy their nuclear weapons,
likely not located there. In 2006, Ashton B. Carter, now secretary of defense, and I recommended
that the United States consider a strike on North Korea’s ICBM launch facility. I would not
recommend either of those strikes today because of the great risk for South Korea; at the very
least, any such plan would have to be agreed to by South Korea’s leadership, since their country
would bear the brunt of any retaliatory action. I believe it is time to try diplomacy that would
actually have a chance to succeed. We lost the opportunity to negotiate with a non-nuclear North
Korea when we cut off negotiations in 2001, before it had a nuclear arsenal. The most we can
reasonably expect today is an agreement that lowers the dangers of that arsenal. The goals would
be an agreement with Pyongyang to not export nuclear technology, to conduct no further nuclear
testing and to conduct no further ICBM testing. These goals are worth achieving and, if we
succeed, could be the basis for a later discussion of a non-nuclear Korean Peninsula. These
objectives are far less than we would desire but are based on my belief that we should deal with
North Korea as it is, not as we wish it to be. If this attempt at diplomacy fails, then we could
consider much more punishing sanctions that would require China’s significant participation. That
would be more likely if North Korea rejected a serious diplomatic approach. We could also pursue
non-diplomatic approaches, such as disrupting their ICBM tests, not at their launch sites but over
international waters. Indeed, our diplomacy would have a better chance of working if the North
Korean government realized that we were serious about non-diplomatic alternatives. Time is of the
essence. If we don’t find a way — and soon — to freeze North Korea’s quest for a nuclear ICBM,
this crisis could all too easily spin out of control, leading to a second Korean War, far more
devastating than the first. (William J. Perry, “To Confront North Korea, Talk First and Get Tough

North Korea said it can test launch an intercontinental ballistic missile at any time from any
location set by leader Kim Jong Un, saying the United States' hostile policy was to blame for its
arms development. "The ICBM will be launched anytime and anywhere determined by the
supreme headquarters of the DPRK," an unnamed Foreign Ministry spokesman was quoted as
saying by KCNA. A U.S. State Department spokesman said last week that the United States
does not believe that North Korea is capable of mounting a nuclear warhead on a ballistic
missile. "The U.S. is wholly to blame for pushing the DPRK to have developed ICBM as it has
desperately resorted to anachronistic policy hostile toward the DPRK for decades to encroach
upon its sovereignty and vital rights," KCNA quoted the spokesman as saying. "Anyone who
wants to deal with the DPRK would be well advised to secure a new way of thinking after
having clear understanding of it," the spokesman said. (Jack Kim, Tony Munroe and Ju-min

DPRK FoMin spokesman’s “answer to the question raised by KCNA Sunday as regards the fact
that the U.S. is pulling up the DPRK over its preparations for ICBM test-fire that have reached
their final phase: The DPRK's ICBM development is part of its efforts for bolstering its capability
for self-defense to cope with the ever more undisguised nuclear war threat from the U.S.
Nevertheless, the U.S. is crying out for tightening sanctions to pressurize the DPRK, terming the
entirely just rocket launch preparations of the latter "provocation" and "threat." This reminds one
of a guilty party filing the suit first. A U.S. deputy secretary of State spouted rubbish on January 5
that threat from north Korea has reached an extreme pitch and sanctions aimed at pressurizing
North Korea would as ever continue no matter what administration may appear in the U.S. Some
pseudo-experts and conservative media are busy joining the Obama group in putting pressure on
the DPRK. Explicitly speaking again, the U.S. is wholly to blame for pushing the DPRK to have
developed ICBM as it has desperately resorted to anachronistic policy hostile toward the DPRK
for decades to encroach upon its sovereignty and vital rights. Despite the unheard-of harsh
sanctions and pressure, the DPRK developed H-bomb and had access to standardized nuclear
warheads by bolstering up its nuclear weapons on a high level at an unimaginably high speed on
the strength of self-development. The ICBM will be launched anytime and anywhere
determined by the supreme headquarters of the DPRK. Respected Supreme Leader Kim Jong Un clarified that the DPRK will continue to build up our self-defense capability, the pivot of which is the nuclear forces, and the capability for preemptive strike as long as the United States and its vassal forces keep on nuclear threat and blackmail and as long as they do not stop their war games they stage at our doorstep disguising them as annual events. Anyone who wants to deal with the DPRK would be well advised to secure a new way of thinking after having clear understanding of it.” (KCNA, “DPRK’s ICBM Development Is to Cope with U.S. Nuclear War Threat: FM Spokesman,” January 8, 2017)

William Perry: “In October of 2000, we had already come to a full verbal agreement on a detailed agreement on North Korea, by which they would agree to give up their nuclear program, and their long-range missile program. We were, I think, three to six months from having a signed, formal, agreement for doing that. Of course, it can, and should, be stated that, at that time, we could not be a hundred percent certain we would actually get that agreement, and even if we got the agreement, we could never be certain that North Korea was going to comply with that. So, I make that caveat. But, we will never know, because in 2000 the Bush administration in, it was about March of 2001, I believe, broke off all discussions with North Korea. It was a whole negotiating process which had gone on for more than a year before that that broke down. They said they had a different, and hopefully better, strategy of pursuing. Whatever that strategy was, the results of it are pretty clear. Namely, that North Korea actually, during that period, that administration, built and tested nuclear weapons. So, whatever you can say about the theory of this strategy, I have to say the results were bad. They were followed, in 2009, by the Obama administration, which actually articulated their strategy. It was called “strategic patience.” The results of “strategic patience” were more nukes and more missiles. So again, whatever you can say about the theory of this strategy, you have to conclude the results were bad. … The time for patience is over. Because time is really not on our side. I emphasize that as clearly as possible: time is not on our side; we have to do something. So, what? I consider those two questions separately, “How do we deal with the present dangers?” And my answer is very clear, simple and straightforward; we deal with it through deterrence. We already implicitly have that deterrence. I believe we should make that explicit, quite clear and quite specific, to North Korea. We do it with deterrence. The argument had been made that deterrence would not work with North Korea because they’re crazy. I simply do not believe that. Indeed, to deal with either of these problems, namely dealing with the present problem or reducing the dangers, we have to understand what North Korea’s goals are. Anybody that’s ever done any negotiations understands you cannot succeed unless you know where the other side of the table is coming from, what they’re trying to achieve. And I think a big failure of our negotiations in the so-called “Six Party Talks” is we have not done that and not understood where North Korea is coming from. I presume to tell you what I think they are. My knowledge is based on two things. Partly on having had numerous discussions with North Korean senior officials on this subject. But, I think more importantly, by observing what they do. What they do makes clear what they are thinking. So, let’s get to that for a moment. I believe – I believe without any, really, uncertainty – goal number one of North Korea is to sustain the Kim dynasty. You could describe that as survival of the regime. But I put it more specifically: sustaining the Kim dynasty. The second goal is an important goal for them. It is achieving international recognition. A third goal is improving their economy. But I want to emphasize that third goal is subservient to the first two goals, and they have demonstrated that over, and over, again. They’re willing to sacrifice their economy if it’s necessary, to achieve those first two goals. So, sustaining the dynasty, achieving international recognition, and a poor third is improving their economy. The idea of a unified Korea that they talk about I think that’s way behind the other goals. They don’t see that as something that’s going to be operational for many, many – a long, long time. So, when I say, then, that dealing with the present problem is through deterrence, I have in mind that they have in mind sustaining the Kim dynasty is a critical goal, and they understand – they understand – that actions they take to provoke a war with South Korea and the United States would result in retaliation which would end their dynasty. So they are not suicidal, and we may not understand the logic but I think it’s clear that they are not suicidal and, most importantly, this is not ISIS. This is not al-Qaeda. They are not seeking martyrdom; they want to sustain their dynasty. So, deterrence will work. We should just be sure that we’re very
clear and very explicit that they’re facing the challenge of a response from the United States, a devastating response to them. That will deal, I think, with the present threat, both for the United States and to our allies. But let’s make it more explicit. The second question is “How do we get them to lessen, take steps to lessen, the danger?” All of our negotiations in the past have been oriented around giving up their nuclear weapons. I just state flatly they are not going to do that; we’re wasting our time on those negotiations. We can achieve, I believe, if we try hard, achieve important goals in lessening the danger of their nuclear weapons. We can formulate that in many ways. **Three things I would focus on are, number one, no more nuclear tests. Number two, no more ICBM tests. And number three, no selling or transport of nuclear technology.** I think **we might be able to achieve that kind of a deal.** I think we can enforce that kind of a deal. And I think it would be something worth achieving, in and of itself. Beyond that, it’s quite possible, if we were to achieve that step, it would be a platform on which we could move to the more desirable goal of a non-nuclear Korean Peninsula. I do not think we can go directly to that goal, today. And we’ve had how many years of Six Party Talks to prove how futile that is. So, I am not at all in favor of restarting the Six Party Talks, based on the same goal we had in the past; it would just be an exercise in futility. I have no way of guaranteeing that even with setting those goals and even with good negotiating tactics, that we could succeed. I believe we can succeed. But I cannot assure that. So, we have to look at a plan B. “What if? What if we try, seriously and specifically, and still fail? What is our backup plan?” I think, first of all, any backup plan, at that stage, has to be based upon _____________, not coercion, and to turn to coercive tactics, and what kind, of course, of tactics? **Number one on my list would be disrupting their ICBM tests.**

**There are many ways we could do that. The one way I would not recommend today is bombing their launch sites.** Some of you may remember that my colleague, Ash Carter, and I wrote an op-ed seven years ago saying that we should consider that. I do not recommend that today. I think it is too dangerous to South Korea. Any action, any military action, we take against North Korea, South Korea is the one that’s going to bear the brunt of the action. Even when we were considering that, which we were back in 1994, we understood we would never do it without consulting and getting the approval of the South Korean President. So, number one, backup action, if negotiation fails, is disrupting their ICBM tests, in my judgment short of bombing their launch sites. There are many things we – alternatives – for doing that. The second thing we can do is significantly increase sanctions. Our attempts at sanctions in the past have not been fully successful, because they have not had the full cooperation of China. So, what would be different? Why might China consider it this time? I think what might make a different to China is if we really had already gone through a really serious attempt at negotiation, offered a real alternative to North Korea. And, if they turn that offer down, then I think we’re in a much better position to go to China and say “We want to really tighten the screws on sanctions.” We can’t be sure of that outcome but it’s worth a try. The third is strengthen our anti-ballistic missile forces, both in South Korea and in Japan, to help defend those two countries. As many of you know, I am not a big ABM fan, both for technical reasons and for strategic reasons. But, in this case, I think they make sense. A very limited scale attack we’re considering, I think they have a reasonable prospect of, A, diminishing the effectiveness of the attack and, B, creating uncertainty in the minds of the attacker. So, in this case, I would recommend increasing the ABM capability both in South Korea and Japan. And the fourth recommendation I would make is increasing US military presence in South Korea, including a consideration of nuclear weapons. I have never been a fan of deploying nuclear weapons in South Korea, and I am not, today, a fan of that. I look at it only as a backup position if our negotiations completely break down. They are not necessary, to defend South Korea with. We can do it with the other nuclear weapons we have, both land-based and sea-based. What may be necessary, though, is to give the South Korean people the confidence that their nuclear deterrence is there. So therefore, in this case, if negotiations completely break down, I would consider that as a reasonable alternative. That concludes my opening remarks, and I will be happy to take questions. … Q: This is Nico Pandi from Jiji Press, Japan. If, in the negotiations to achieve those …four goals, if North Korea asks for signing a peace treaty, would you be willing to consider that, in exchange for achieving those goals of non-proliferation, halting ICBM tests, halting nuclear tests? PERRY: That’s a very good question and I neglected to answer it. I told you what our goals were. I neglected to say what would we have to offer North Korea, to get this. And my starting point on that would be looking at what we offered them in the year 2000, which in
those days they were willing to accept. And we offered them three things. We offered them recognition, in various forms – there are several dimensions to the recognition – that was something primarily the United States could do. And we offered them economic incentives. Not “we.” In this case, it was South Korea and Japan. South Korea had one form of incentives, and Japan had another form of incentives. So, there were three different incentives on the table for them, at that time. They were interested in all three of those, and in those days they were willing to accept those three, in return for the non-nuclear and the no ICBM thing. Now, today, the situation is very different. They already have a nuclear arsenal, so they’re not going to agree to those same three incentives. But I say we look at those incentives as a starting point for what would be required to achieve these lesser goals. I think we could get by with lesser incentives, but I would start off with that package and sort of scale down from there, holding out the whole package for a later negotiation which might eventually get to a non-nuclear Peninsula. But, there’s no doubt in my mind that they are very much interested in the economic incentives of the kind South Korea had offered, which is helping build up some of their industry, for which those of you who are familiar with the Koreans know that the Kaesong factory, which is a joint South Korean-North Korean, is one good example. It could be based on that model. And from Japan we were considering great economic incentives, and the United States would sell them dimensions of recognition, one of which would have included the preliminary steps for setting up an embassy in Pyongyang, another which would include signing a formal peace agreement, which has never been signed after the Korean War. All of those things were very, very important to the North Koreans then. I think they are still important today. But, in and of themselves, they’re probably not enough, today, to make them give up what they were willing to give up in 2000. There’s a big difference negotiating with somebody not to develop nuclear weapons than getting them to give up nuclear weapons they already have. It’s a much steeper area to go. Q: David Brunnstrom from Reuters. Mr. Secretary, when you talked about the possibility of disrupting their ICBM tests, I’m just wondering how you would envisage going about that. PERRY: I can’t elaborate too much on that. Seemingly the most obvious way is simply shooting them down over international waters. But there are other ways of doing that as well, and so I would leave that up to the military, to decide how to do it. The goal would be disrupting their tests, disrupting them with the least – (pause) – the least political impact. I can think of three or four ways of doing it, but the one which is most obvious, the most straightforward, is simply shooting them down over international waters. They cannot really verify the effectiveness of an ICBM if it’s never gone through complete testing. And, to this date, their ICBMs have not gone through complete testing. Particularly, they’ve never tested the reentry aspect of it. Some of you know that technically speaking reentry of an ICBM is a pretty challenging technical problem, because of extreme heat generated on the reentry vehicle when it enters the atmosphere. So, that is a technical challenge which has to be – which I am willing to believe they probably have developed something they believe can do that, but it still has to be tested. So I think disrupting testing is a pretty effective way of stopping their ICBM program. To me, though, that is a far less attractive alternative than getting a diplomatic solution to the problem. WIT: Let me – I’m going to follow up on that a little bit, because this is a very unique opportunity to actually hear from someone who participated in planning for a preemptive attack, in 1994. And so I was wondering if you could talk a little bit about that experience, of planning for a preemptive attack, considering the consequences... PERRY: Yes, I would be happy to do that. In 1994 – I’ve already said that in ’94 I thought we were very close to a war. I was, in fact, in the Roosevelt Room – I mean, in the Cabinet Room – with the President and his national security staff, for the final meeting to get approval for deployment of many tens of thousands of troops to Korea, and other actions, which might very well have precipitated a North Korean attack. We were preparing for that to happen. And, I was actually in the room about the decision on how many we were going to deploy. Not “whether” to deploy, but how many to deploy. When the telephone call came in from Pyongyang in the middle of the meeting. I have never believed that was a coincidence, that that meeting – they knew the meeting was going on and they wanted to shortstop it. So...now let me get back to the question, the question, now, in particular – would you repeat the question in the question? WIT: I think you answered David’s question. PERRY: Well, okay. We did consider, and I had actually, on my desk, a plan for attacking Yongbyon, and taking the reactor out. We were satisfied we could do it with a few cruise missiles with conventional warheads, and we could do it without
undesirable contamination to the people of North Korea. So, it was a plan that was easy to implement. What we did not know, of course, was what the repercussions would be from that plan, and the extent to which it would call upon military action against South Korea. So, we strongly favored diplomacy as an alternative to that, and diplomacy, in fact, was what finally won out. So, that plan could have been done. I never recommended it to the President. Had I recommended it, he would have, then – and had he agreed to do it – he would then have had to go to the President of South Korea and get his agreement also. Because, as I said, any action, military action, that we take against North Korea, the most likely consequence would be military action against South Korea. So, we cannot separate that out. The United States, in my judgment, does not have the right to take unilateral action, military action, against North Korea; it has to come in conjunction with our allies, in particular our ally in South Korea, which would face the brunt of any reprisals. So, that action, even aside from those issues, that actually makes no sense today, taking – namely, bombing Yongbyon – because they now have nuclear weapons and their nuclear weapons are undoubtedly not located at Yongbyon. So, taking out that facility would not take out their nuclear weapons. So, that’s an alternative, that’s an option, whose day has passed.

Q: Korea and Japan to acquire their own nuclear weapons, as a form of deterrence. What do you make of that, the efficacy of that? And also, his idea that it’s really China that should be taking the lead in persuading North Korea to negotiate? PERRY: Two good questions and two very different questions. To get China’s cooperation, I think our only prospect is to demonstrate by our action that we’re offering a serious diplomatic alternative to North Korea. That was basically what I proposed. I believe, if we made that offer and negotiated in good faith and North Korea walked away from negotiations, then I think there would be a much better opportunity to get cooperation from China, much more effective sanctions. On nuclear weapons, on a South Korean nuclear weapons program or Japan nuclear weapons program, let me be very clear on a few points. First, when either nation – if they were to decide to go to build a nuclear weapon – could have nuclear weapons in less than a year’s time. They both have the capability. They both have the ability to get the fissile material. They could move very quickly and very rapidly. They have voluntarily abstained from doing that, I think for good reasons, and I support them continuing to abstain from doing that. I am very much opposed to the proliferation of nuclear weapons from more nations, including even responsible nations like South Korea and Japan. So, I’m not in favor of that happening. If it gets to the point where either, in particular South Korea, were doubtful that our extended deterrence would apply to them, and therefore were considering building their own nuclear weapons, I think a preferred alternative to that would be the deployment of US nuclear weapons in South Korea, as an alternative to South Korea building their own nuclear weapons. It’s a better alternative, I think, than South Korea building their own nuclear weapons. That was the situation – and some of you may be old enough to remember the days of the Cold War, when Germany was “under the gun,” in this case from the Soviet Union, and we offered our extended deterrence to Germany from an attack by the Soviet Union. The Germans were a little hesitant, and they said, “Would you willing to sacrifice, if the Soviet Union attacked us, would you be willing to sacrifice New York to save Bonn or Berlin? We would feel much more confident about your offer of deterrence if you were deploying your nuclear weapons in Germany.” And so we did, during the Cold War. I think – thought then, and I think now – it was a bad decision, from a military point of view. But, from a political point of view, it was the right decision, because it gave the Germans the confidence that our deterrence really did apply to them. Again, to go one more step in detail, during the Cold War, when we deployed those nuclear weapons in Germany, we deployed them on a two finger on the button policy. In other words, they would be launched not only by the US President giving the authority but by the German Chancellor giving the recommendation. So, it seems to me that’s an analogy we can look to. I didn’t think it was a good idea then. I don’t think it’s a good idea now. But, a far better alternative – but it seems to me – and then it seemed to be a necessary alternative, because Germany was uneasy, uncertain, about our willingness to really follow through on extended deterrence. So, to the extent the South Korean people, for example, feel uncertain about our willingness to really extend our deterrence, and are thinking of building their own nuclear weapons, then I think a good alternative to that would be to deploy nuclear weapons there in the same spirit that we did in Germany during the Cold War.

Q: John Harris from Politico. If you had succeeded, in the closing hours of the Clinton administration, with getting a nuclear deal, that would have solved the security problem. To what
very high risk of trying. Q: My name is Aikawa Haruyuki with Mainichi Newspaper. Could you
combine together to give you a pretty low confidence that they can really do anything, and give a
whether their nuclear weapon will work. And t
face three dubious propositions. One is whether their ICBMs will even work. Number two,
ICBM and neither of them have been tested, it’s a very dubious proposition. They then have to
towards lessening the danger
would be to stop ICBM testing, stop nuclear testing. That would go a long way, I think,
have it in our power, probably, to lessen the danger, and the number one objective of that
power today to negotiate an end to the nuclear weapons program in North Korea, but we do
have it in our power, probably, to lessen the danger, and the number one objective of that
would be to stop ICBM testing, stop nuclear testing. That would go a long way, I think,
towards lessening the danger. And, even if they can put a small enough nuclear warhead on an
ICBM and neither of them have been tested, it’s a very dubious proposition. They then have to
face three dubious propositions. One is whether their ICBMs will even work. Number two,
whether their nuclear weapon will work. And three, whether our defense will work. All those
combine together to give you a pretty low confidence that they can really do anything, and give a
very high risk of trying. Q: My name is Aikawa Haruyuki with Mainichi Newspaper. Could you
please address your estimation about when the DPRK will get an ICBM with a nuclear warhead? And my second question is how to [intercept DPRK’s ICBMs] I understand that the United States has [different defense systems in Alaska – could the] US intercept North Korean ICBMs? PERRY: The answer to the first question of when they will be ready to deploy the ICBMs, is I don’t know. It depends not just on the factual data and test data we have, but it turns on what are their standards for deployment. Are they willing to deploy something which has not been fully tested? Are they willing to deploy something which they don’t have full confidence in? My guess is they would be, which means, I would say, in a year or two. But if they insist on the standards of testing that we insist on, then they are probably three, or four, or five years away from it. So, the reason I can’t give you a definite answer is that I do not know what standard they’re willing to impose before they could actually deploy something. If they want to deploy it for show, for effect, they could probably do it in a year or two. …Those of you who have heard me speak before, on the ABM subject, know that I’m not a big fan of the ABM, though my big negative on them has to do with their ability to defend against a mass attack, largescale attack. If we continue to work to improve our ABM capability, we probably have a reasonably good probability of stopping a small-scale attack, one, or two, or three. So, we would defend against it, first of all, by trying to catch it early in flight, which is relatively easy because of North Korea’s geography and the fact that we have ABM systems deployed on Aegis ships. We also have ABM systems deployed and designed to go for ICBMs specifically, and the reason I’m concerned about them is that they depend on midflight intercept and midflight intercept is highly susceptible to counter-measures and decoys and the like. But, with a relatively unsophisticated attack, from relatively few ICBMs, I think we’d have a pretty good shot. So, that’s a longwinded answer. To give you a short answer to your question, I think our ICBMs [ABMs] probably could be successful against a small-scale attack. Q: Jae-soon Chang, Yonhap News Agency. Secretary Perry, you talked about disrupting North Korea’s ICBM tests as part of plan B that should be considered only after negotiations break down completely. …What if North Korea test fires one, even before negotiations begin, like, for example, last week? Do you think we should shoot it down? PERRY: I would not be opposed to some forms of disruption, even then. To make some point about coercive measures, I think it’s useful for North Korea to believe that we are willing to and capable of conducting coercive actions. I want to tell you one anecdote about that, based on the time when I was Secretary of Defense and we were, at the time, I said, we were very close to a war. The issue then was different. The issue was North Korea reprocessing spent fuel at Yongbyon, with the goal of making plutonium. And they had enough that they could – plutonium – they had enough to make about six nuclear bombs with what they had then. And we considered that a very undesirable outcome. And we were taking strong diplomatic measures to try to keep it from doing that. At the same time, as I told you, I had requested a study and had it on my desk of how to take out Yongbyon with cruise missiles. I didn’t advertise that, but I had it. But we did state, and I stated unequivocally, that we would not permit North Korea to make that plutonium. And, by the way, we meant it. This was not an empty threat. What happened, at that time, was a pure accident, as far as I was concerned. But my good friend, Brent Scowcroft, wrote an op-ed, I think in the Washington Post, in which they recommended we do the very thing that I had a plan to do, said that’s what we should do. And, two days later, we got the offer from Yongbyon [Pyongyang] to negotiate. I have always believed – I can’t prove it – that that op-ed, which was certainly read by North Korea – that they believed that I had stimulated that op-ed. It was not true; I did not. But they believed it. And they believed that was a very serious threat. So, I think the ability to do coercive actions, and the other side believes that you’re willing to do coercive actions, is a great help in diplomacy sometimes. Q: Mike Elleman with the IISS. On the ICBM, would you – well, first, if they don’t test it, the chances of it actually working, historically and from an engineering risk analysis, is about 30-40 percent, maybe less, which means they couldn’t possibly have much confidence in it. They may deploy it. But, if you combine that with missile defense and other measures, reliability of the warhead, it has to impact their calculus. If that is true, then would it be worthwhile to negotiate with them specifically on the ICBM issue, leaving the nuclear issue as a second negotiating tactic? Work the ICBM and incentive, allow them to do space launch activity under very controlled circumstances, with sufficient transparency. And what I mean by “controlled circumstances,” there is a limit to what types of engines and trajectories they
can use. Would that be something that we should be considering and working towards? PERRY: Mike, understanding “the devil is in the details” in negotiation, my answer to that would be yes. Absolutely. They certainly could not have confidence, whether it’s 30 percent or – I don’t know what the number is – but it’s not fifty-fifty. They certainly cannot have that confidence. Add to that the question about whether our ABM system might work. All of that adds together to say that the deployment, if they made it, would be for show rather than because they think it’s going to work. But they might find value in deploying it, just for the show _______________. We could not write it off, but we should not take it too seriously. …WIT: I actually have a question now, before going back to – I’ll get to John at the end. I’ll save him, the best, for last. Since, of course, you have been Secretary of Defense, you are very well positioned to comment on one of the North Korean demands, which is the suspension of joint exercises, in return for some of the things that you would like to achieve. So, the question is, of course, first of all, do you think we can maybe not suspend joint exercises but modify them, change our exercises in a way that wouldn’t adversely affect our security but that the North Koreans might find attractive? Particularly, this whole idea of decapitating the North Korean regime. PERRY: I would not suspend them as a precondition. In fact, the exercises are a useful pressure for helping bring North Korea to the bargaining table. Once we get into a serious negotiation, would I put them on the table? And the answer is certainly I would. We can do all sorts of exercises; they don’t have to be called “Team Spirit.” They don’t have to be done in the way that was done. So, I think you could, in good faith, put them on the table without giving up the idea that exercises are a good thing. (William J. Perry, Transcript of a 38North Press Briefing, Washington, January 9, 2017)

The $36 billion system of ground-based interceptors can’t yet be counted on to shoot down a nuclear-armed missile aimed at the West Coast by the likes of North Korea or Iran, the Pentagon’s weapons testing office says. The network of radar and communications combined with missiles based in California and Alaska has demonstrated only a “limited capability to defend the U.S. homeland from small numbers of simple” intercontinental ballistic missiles, the testing office said in its latest annual report. The probability that the U.S. would succeed in intercepting an incoming missile can’t be quantified with any precision “due to a lack of ground tests” supported by verified “modeling and simulation,” according to an advance copy of the assessment provided late today to congressional defense committees and Pentagon officials. The testing office’s assessment is the same as its 2016 report because too few new results were generated to warrant a change, even as the threat from North Korea in particular has grown. The office said the “reliability and availability of the operational” interceptors are also low, as the Missile Defense Agency continues to discover new flaws and “failure modes” during testing. In response, Vice Admiral James Syring, director of the missile defense agency, said in an interview today he retains “high confidence” in the system. He said the next attempt to intercept a dummy missile is tentatively scheduled for the period of April to June. The next test will attempt to shoot down a target that replicates for the first time the speed, trajectory and closing velocity of an actual ICBM, Syring said. The U.S. will test avionics updates to the booster rocket built by Orbital ATK Inc. that carries an improved version of a hit-to-kill conventional warhead built by Raytheon Co. Interceptors are located at Fort Greely in Alaska and Vandenberg Air Force Base in California. The system is managed by Boeing Co. The next interception attempt will be the first since a successful test in June 2014. Before that, though, two tests that failed in 2010 prompted an extensive effort to fix flaws with the interceptor’s warhead that Syring said have now been fixed and verified. “I am very confident in the systems and procedures” the U.S. Northern Command, which operates the missile defense shield, “will employ to intercept a North Korean ICBM were they to shoot it toward our territory,” Syring said. Laura Grego, a missile defense analyst with the Union of Concerned Scientists, said last year that none of the interception tests since 2010 have used targets representative of actual threats or complex countermeasures. Since its inception, the system “has destroyed its target fewer than half the 17 times it has been tested, and its record is not improving over time,” she said. Since the 2004 deployment decision, “the system has a three-for-nine record,” said Grego, co-author of a July 2016 report titled “Shielded From Oversight: The Disastrous U.S. Approach to Strategic Missile Defense.” (Anthony Capaccio, “Stopping N. Korean Missile No Sure Thing, U.S. Tester Says,” Bloomberg News, January 10, 2017)
The U.S. military might monitor a North Korean intercontinental ballistic missile test and gather intelligence rather than destroy it, as long as the launch did not pose a threat, Defense Secretary Ash Carter said. "If the missile is threatening, it will be intercepted. If it's not threatening, we won't necessarily do so," Carter said in his final news briefing. "Because it may be more to our advantage to, first of all, save our interceptor inventory, and, second, to gather intelligence from the flight, rather than do that (intercept the ICBM) when it's not threatening." The top U.S. military officer, Marine General Joseph Dunford, who will stay in his role as chairman of the Joint Chiefs of Staff, concurred with Carter at the event but did not enter into specifics. Carter's language left open the possibility of U.S. military action in any scenario. (Idrees Ali and Phil Stewart, “U.S. Says Might Not Shoot down North Korean ICBM, Eying Intel,” Reuters, January 10, 2017)

The Defense Ministry warned that North Korea "seems to be capable" of launching an intercontinental ballistic missile from a mobile launcher. In a press briefing, ministry spokesman Moon Sang-kyun said, "We're keeping close watch on the North's big anniversaries this year as possible dates for an ICBM launch." The Defense Ministry spokesman here said the KN-08 or the improved KN-14 could be launched from a 16-wheeled mobile launch vehicle without being immediately noticed by South Korea and the U.S. (Yu Yong-weon, “N. Korea ‘Could Fire Long-Range Missile from Mobile Launcher,’” Chosun Ilbo, January 10, 2017)

Secretary of State John Kerry said the U.S. may need “more forceful ways” of dealing with North Korea if it develops an intercontinental ballistic missile that threatens America. Speaking at the U.S. Naval Academy, Kerry said nuclear weapons in the hands of North Korea’s “reckless dictator” Kim Jong Un pose one of the most serious national security challenges to the United States. He said the aim should be resuming talks on denuclearization that could open the way to economic assistance for North Korea, sanctions relief and a formal peace on the divided Korean Peninsula. But Kerry said if the North persists in developing the long-range missile it “drags the United States into an immediate threat situation to which we may then have to find other ways, more forceful ways of having an impact on the choices that he is making.” Kerry didn’t elaborate. (Matthew Pennington, “Kerry ‘More Forceful Ways’ May Be needed with North,” Associated Press, January 10, 2017)

Tension between South Korea and China flared up after Beijing’s fighter jets entered South Korea’s air defense zone without prior notice, amid protests from China over a US anti-missile system set to be installed here. According to the Korea’s Joint Chiefs of Staff, some 10 Chinese military planes — including bombers — flew into the Korean air defense identification zone near the southern island of Jeju between 10 a.m. and 3 p.m. yesterday. The aircrafts also entered an equivalent air defense zone near the Tsushima Strait of Japan. In response, the South Korea military sent out 10 fighter jets, including F-15Ks and KF-16s. They sent a warning signal to the Chinese planes which, the Korean military said, were in and out of the KADIZ until they exit the area without conflict. It was not the first time that Chinese aircraft have entered the area since it was expanded in 2013. This latest action has, however, prompted fresh speculation over China’s motive in light of its clashes with Seoul over its decision to station the Terminal High Altitude Area Defense anti-missile system here. "(China) gave us the answer that it was for training purposes,” said a JCS official. “We believe they have a different purpose at different times. It needs further analysis to find out what they were getting at.” Beijing has adopted a series of retaliatory measures against Seoul since it reached an agreement with the US to deploy the THAAD battery here last July. Not only did China impose punitive trade measures against Korean companies, it has even banned Korean actors and actresses from appearing on its shows. During a meeting on Jan. 4 with lawmakers of Korea’s main opposition Democratic Party of Korea, Chinese Foreign Minister Wang Yi condemned Seoul’s decision to deploy THAAD, saying the process should be “delayed and frozen” if South Korea wants to expand cooperation with Beijing. Since the ADIZs are not officially recognized airspace, military officials noted, states are not able to exercise sovereign rights to evict aircrafts flying over them. Instead, individual states can issue warnings to other nations who enter the area without prior notice. “Under the KADIZ, we are only
allowed to detect and track unidentified aircrafts. We are not able to take forcible measures to evict those who intrude in the zone. It is different from what we can do in the airspace,” said the JCS official. According to the JCS, Chinese military planes intruded into the KADIZ on more than a dozen occasions last year. But the incident yesterday was “unusual,” they said, because it involved more than 10 aircrafts. In 2015, there were only few aircrafts flying into the area. Mounting tensions over the air defense areas has spurred the call for building a proper communication channel between Korea, China and Japan — such as to inform each other of their entry into the areas and to take preventive measures to prevent potential armed conflicts. Currently, the three countries are not obliged to notify each other of their entry into the ADIZs, the JCS said.

South Korea often shares flight information with Japan when their aircrafts fly along the ADIZs under bilateral agreement. It has not yet to make such a pact with China. (Yeo Jun-suk, “THAAD Tension Brews after China Sends Planes to Korea’s Air Zone,” Korea Herald, January 10, 2017)

Rex Tillerson, President-elect Donald Trump’s nominee for Secretary of State, denounced China’s “empty promises” on North Korea and said he would consider action to “compel” China to comply with the United Nations sanctions in case of violations. Tillerson pointed to North Korea as an adversary which posed “grave threats to the world because of their refusal to conform to international norms.” Speaking at a nine-hour confirmation hearing at the U.S. Senate Foreign Affairs Committee, Tillerson attacked China’s attitude toward the DPRK and said the U.S. wouldn’t ignore “violation of international accords”. “We cannot continue to accept empty promises like the ones China has made to pressure North Korea to reform, only to shy away from enforcement,” Tillerson, former chairman and former chief executive officer (CEO) of Exxon Mobile, told committee members in an opening statement. “Looking the other way when trust is broken only encourages more bad behavior. And it must end.” The U.S. Secretary of State nominee said China “hasn’t been a reliable partner in using its full influence to curb North Korea.” When asked by Senator Cory Gardner whether he would be “willing to exert additional pressure on North Korea through China,” including enforcement of UN Security Council resolutions, Tillerson suggested China should enhance its role in North Korean issues. “I think we have to be clear-eyed as to how far China will go and not get overly optimistic,” Tillerson said. “That’s why ultimately it’s going to require a new approach to China in order for China to understand our expectations of them, going beyond certainly what they have in the past, which has fallen short.” With respect to imposing secondary sanctions, Tillerson also pointed out that “90 percent” of the North’s trade was with China and that it was “solely dependent on Chinese trade.” “To the extent there are specific violations of the sanctions, such as the purchase of coal, which is specifically mentioned in the UN sanctions most recently, if there are gaps of enforcement, they have to be enforced,” Tillerson said. “If China is not going to comply with those UN sanctions, then it’s appropriate for the United States to consider actions to compel them to comply.” The nominee reiterated that the U.S. should “hold China accountable to comporting with the sanctions.” “They really do have complete control over what sustains the government of North Korea. A big part of that is the sale of anthracite coal across the border and sanctions did speak to that sale,” he said.

Tillerson called for “closing gaps” caused by insufficient enforcement of the UN sanctions as a way to lead multilateral efforts to peacefully disarm Pyongyang, describing it as “a long-term plan.” “…There are gaps in those sanctions today that are undermining their effectiveness. It is a question of closing those gaps where it’s appropriate to seek further steps against those who are not fully complying with those sanctions.” He said that the U.S. would “put additional pressure” on the North so as to prevent it from continuing to “advance not just their development but the delivery systems, which is where the greatest threat exists today.” (Dagyum Ji, “U.S. Can ‘Compel’ China to Comply with Sanctions on N. Korea: Tillerson,” NKNews, January 12, 2017)

North Korea has made significant progress on its nuclear capability with its plutonium stockpile reaching 50 kilograms, which is capable of making up to a dozen fission bombs, according to South Korea’s 2016 defense white paper released today. The report assessed that Pyongyang has secured some 50 kilograms of weapons-grade plutonium, up from the 40 kilograms estimated in the 2014 edition of its white paper. The volume is sufficient to manufacture around 10 nuclear weapons, as one bomb generally requires 4 to 6 kilograms of the material. “We have come up with
this number based on when its nuclear reactor at Yongbyon began operation (and) how much plutonium it has obtained after using it for nuclear tests,” a Defense Ministry official said. The Defense Ministry’s biennial report said the communist state has scaled up its “Strategic Rocket Force” in charge of nuclear and missile warfare to 10,000 and cyber personnel to 6,800 as part of efforts to boost its asymmetric warfare capability. The 2016 report described in detail information about Pyongyang’s various ICBMs, including the KN-08 and KN-14 with a range of up to 12,000 kilometers as well as the SLBM that the North test-fired last August. Pyongyang has yet to test-fire the KN-08 and KN-14, which were revealed during a military parade in 2012. “We decided to classify the KN-08 and KN-14 as ICBMs because we want to track their development process,” the Defense Ministry official said. “It is part of our efforts to figure out the missiles’ capabilities and technological process.” The white paper also noted that Pyongyang has made “considerable” progress in producing highly enriched uranium, another type of fuel for nuclear bombs. But the report did not provide information about the specific amounts of weapon-grade HEU — a material produced by a centrifuge plant usually run in a secretive environment. Meanwhile, North Korea has increased its number of cyberwarfare troops to 6,800 from 6,000 in 2014, said the paper, reflecting mounting concerns over the growing threat of North Korea’s cyberattacks targeting South Korea’s defense system and socioeconomic infrastructure. “Recently, the North Korean government has reassigned its organization,” said the paper, adding that Pyongyang’s General Staff Department, equivalent to Seoul’s Joint Chiefs of Staff, has created a new organization dealing with intelligence operation and increased military personnel for the mission. The paper noted that the Pyongyang has increased the number of standing troops to 1.28 million in 2016 from 1.2 million two years earlier, highlighting the regime’s efforts to enhance conventional military power despite its decreasing population and shrinking economy. Specifically, the army boasted 1.1 million troops, 80,000 higher than two years earlier. Among them, 100,000 were assigned to “strategic forces” dedicated to nuclear and missile warfare. The air force shrank from 120,000 to 110,000. The navy remained unchanged at 60,000. North Korea’s army has increased the number of corps-level units to 17 from 15, and division-level units by one to 82, the paper said. The newly established units are dedicated to massive construction missions such as building highways and monuments idolizing Kim Jong-un, it added. “North Korea believes that it will need a more unified command and control system for construction missions glorifying Kim’s legacy,” said the official. “They think the military is more suitable for doing such missions than civilian organizations.” (Yeo Jun-suk, “Pyongyang’s Plutonium Stockpile Grows to 50 Kg: Seoul,” Korea Herald, January 11, 2017)

The Treasury Department targeted seven North Korean government officials and two government agencies, escalating the U.S. response to the Asian nation’s missile testing and threats. Americans are banned from financial transactions with the officials and agencies, sanctioned by the Treasury’s Office of Foreign Assets Control (OFAC). The department will also freeze the U.S.-based assets of the sanctioned officials and parties. The sanctioned officials include government and party leaders in charge of national security, labor camps, propaganda, censorship and “maintaining ideological purity,” according to OFAC. Kim Won Hong, North Korean minister of state security, is among those sanctioned. OFAC said his ministry conducts torture at labor camps, including “beatings, forced starvation, sexual assault, forced abortions, and infanticide.” Other sanctioned officials include Kim Il-Nam, who runs a labor camp; Kim Yo Jong, who helps oversee propaganda and media censorship; Kang P’il-Hun, who manages “a network of police stations, interrogation and detention centers, and labor camps;” and Min Byong Chol, reportedly known as the “angel of death” for a record of political purges, according to OFAC. OFAC also sanctioned North Korea’s State Planning Commission and Ministry of Labor. (Sylvan Lane, “Treasury Sanctions Top North Korean Officials,” The Hill, January 11, 2017) The U.S. Department of Treasury has released a new list of designations against North Korean entities and individuals which include Kim Yo Jong, sister of the country’s leader, Kim Jong Un. Kim was identified as Vice Director of the Workers’ Party of Korea Propaganda and Agitation Department (PAD), an entity previously designated by the Treasury’s Office of Foreign Assets Control (OFAC) in March. In total seven individuals and two entities were listed “Treasury is taking this action in conjunction with the State Department’s Report on Serious Human Rights Abuses or Censorship in North Korea,” a Treasury press release read. “The North Korean regime not only engages in...
severe human rights abuses, but it also implements rigid censorship policies and conceals its inhumane and oppressive behavior,” John E. Smith, Acting OFAC Director, was quoted as saying. In a Department of State Report published in February the PAD was identified as controlling all media in the country, “which the government uses to control the public.” Kim Yo Jong now joins her brother Kim Jong Un on the list of designated individuals after he was listed in sanctions by OFAC in June, 2016 for his involvement in for what an accompanying press release called “North Korea’s notorious abuses of human rights.” Choe Hwi was also identified as a Vice Director of PAD and included in the sanctions list alongside Kim. Jo Yong Won and Min Byong Chol were designated for their roles in the country’s Organization and Guidance Department, a previously sanctioned agency. The press release said that Min was also known as the Angel of Death “for his record of political inspections and purges.” Kang Pil Hun was designated for his role as a Director of the General Political Bureau of the Ministry of People’s Security, which is also an entity previously sanctioned for its role in human rights violations in North Korea. Kim Il Nam and Kim Won Hong were sanctioned for their roles in the Ministry of State Security, again a previously sanctioned agency. Kim Jong Un is head of both the Ministry of State Security and Ministry of People’s Security. North Korea’s Ministry of Labor and its State Planning Commission were the two entities subject to the new designations. “The Ministry of Labor forcibly allocates individuals to specific sectors, including the mining sector, in accordance with the State Planning Commission’s labor allocation plans,” the OFAC press release read. (Hamish Macdonald, “U.S. Sanctions Kim Jong Un’s Sister for Censorship Activities,” NKNews, January 11, 2017)

A high-tech sea-based U.S. military radar has left Hawaii to monitor for potential North Korean intercontinental ballistic missile test launches, a U.S. defense official said. The official said the radar, known as the Sea-based X-band radar (SBX), left two days ago and would reach its destination, about 2,000 miles (3,218 km) northwest of Hawaii, towards the end of January. The radar is able to track ICBMs and differentiate between hostile missiles and those that are not a threat. “The SBX’s current deployment is not based on any credible threat; however, we cannot discuss specifics for this particular mission while it is underway,” Commander Gary Ross, a Pentagon spokesman, said. (Idrees Ali and Phil Stewart, “U.S. Deploys High-Tech Radar amid Heightened North Korea Rhetoric: Official,” Reuters, January 11, 2017)

Sigal: “Lost in the countryside, a city slicker stops to ask a farmer for directions. The farmer replies laconically, “Well, I wouldn’t start from here.” Starting from here is the sort of advice President Donald Trump is likely to get when he asks about North Korea. He will be urged to pick up where his predecessor left off: refuse to enter into negotiations unless the North first commits to denuclearizing completely and takes steps to demonstrate it is serious about that commitment. He also will be told to continue ratcheting up sanctions in a vain effort to force Pyongyang to the negotiating table on U.S. terms. That advice is tantamount to wishing away Washington’s current predicament in hopes of somehow going back to the future. Looming Threat President Barack Obama’s stance of “strategic patience”—pressure without negotiations—rested on the dubious premise that time was on Washington’s side. His successor does not have that luxury. North Korea’s fifth nuclear test may have yielded a nuclear device that can be mounted on a missile, although a few more tests still may be needed to prove its reliability. The North’s reactor at Yongbyon is fitfully generating more spent fuel, a refurbished reprocessing facility has just turned that spent fuel into plutonium, a new reactor is nearing completion, and its uranium-enrichment program, an alternative route to produce the explosive material for a nuclear bomb, has expanded. At its current pace, Pyongyang could have enough fissile material for more than 40 nuclear weapons by 2021. Pyongyang is also test-launching new missiles, its intermediate-range Musudan and a new submarine-launched ballistic missile that could circumvent the Terminal High Altitude Area Defense (THAAD) anti-missile system that is soon to be deployed in South Korea. A KN-08 ballistic missile is assessed to be capable of reaching the United States. Without testing, neither Washington nor Pyongyang can be sure of its range or reliability, but leader Kim Jong Un now said in his New Year address January 1 that his country is in the “final state of preparation” for the test launch of an intercontinental ballistic missile (ICBM). “Won’t happen,” Trump responded
in a January 2 tweet. So what will Trump do to head off that looming threat? Trump’s Impulses

Trump’s campaign rhetoric was contradictory, yielding few cues about what his North Korea policy might be. He has disparaged Kim as a “total nut job” and a “madman playing around with the nukes.” Yet, he also expressed willingness to sit down and talk with him. “Who the hell cares? I’ll speak to anybody,” Trump said. “There’s a 10 percent or 20 percent chance I could talk him out of having his damn nukes, because who the hell wants him to have nukes?” Trump’s rhetoric was often impulsive, but it may be worth looking at the impulses he repeatedly revealed. Tougher sanctions. The favorite prescription of the foreign policy establishment is to tighten sanctions. To appear to do something while failing to tackle a difficult political problem is the classic stance of Washington insiders. Yet, sanctions may have less appeal to an anti-establishment outsider such as Trump and for good reason. Sanctions have enjoyed far less success against North Korea than against Iran. As the experience of negotiating with Iran suggests, moreover, relaxing sanctions may help stanch nuclear arming better than tightening them.

Although UN sanctions have impeded weapons trade with North Korea, the evidence suggests that they have not done much to hamper North Korea’s economy, which has continued to grow at a modest pace over the past decade. Its foreign trade persists despite efforts of the U.S. Department of the Treasury to cut off its access to banks around the globe, suggesting that hawala, the informal networks of brokers and middlemen who move money for clients in countries with large Muslim populations in the Middle East, Africa, and South Asia, and similar middlemen in China have picked up some of the slack. Unlike oil-rich Iran, North Korea does not have many big-ticket items to buy or sell, making letters of credit from international banks less of a necessity. In a world where money flows more freely than water, trying to plug the many leaks seems doomed to fail. North Koreans may denounce financial sanctions as a sign of U.S. hostile intent, but they are crying all the way around the banks. Let China do it. Another favorite prescription in Washington is to outsource the North Korean problem to China. That misreads Pyongyang’s purpose: it has long sought to improve relations with the United States, South Korea, and Japan as a hedge against overdependence on China for its security and prosperity. Nothing threatens Pyongyang more than cooperation between Washington and Beijing. When Washington and Beijing applied concerted pressure on Pyongyang, the North responded with nuclear tests in 2006, 2009, 2013, and 2016 in an effort to drive them apart. During his campaign, Trump repeatedly voiced support for letting China deal with Kim. “I would get China to make that guy disappear, in one form or another, very quickly,” Trump told CBS. “China has absolute control of North Korea. They won’t say it, but they do, and they should make that problem disappear.” As it has demonstrated over many years, China has no interest in making Kim or North Korea disappear, which limits how much pressure it is willing to apply on Pyongyang by imposing stringent sanctions. At the same time as he wants China’s help with North Korea, Trump has shown an impulse to pick a fight with China over trade and Taiwan. How will that help persuade China to step up pressure on Pyongyang, let alone “make that guy disappear”? “They don’t live and they don’t breathe without China,” he said of Pyongyang. “They wouldn’t get anything without China. China has the power, and we have to tell China to straighten out the situation,” Trump told Fox News. “We have power over China because of trade. Frankly, if we ever stopped it, believe me you would see a depression in China like you have never seen a depression before.” Yet, such a depression might also reduce U.S. growth and imperil South Korea and Japan, whose economies depend heavily on trade with China. And threatening to break the commitment to a one-China policy is likely to encourage Beijing to prop up Pyongyang. Regime change. South Korean President Park Geun-hye’s current passion for regime change has impeded U.S. efforts to open negotiations, but she is being forced out of office. Ironically, regime change seems to have come to Washington and Seoul sooner than to Pyongyang. Yet, if Trump follows Park’s lead and waits for North Korea’s collapse, he will likely face a North Korea with many more nuclear warheads able to be delivered by missiles, some possibly capable of reaching the U.S. heartland, before his first term ends. By then, if not before, Trump will hear siren calls to launch a preventive war to keep North Korea from fielding ICBMs armed with nuclear warheads, as if U.S. intelligence could pinpoint the locations of all the warheads in that tunnel-riven land. For a president who, as a candidate, repeatedly criticized U.S. military intervention abroad and was skeptical of alliances, that option might be particularly unpalatable. Negotiation. Trump’s strongest impulse is to approach international politics as transactional and to regard himself as a peerless deal-breaker and deal-maker. He first broached
the idea of talking to Kim on January 6, the very day that North Korea conducted its fourth test of a nuclear device. “You have this madman over there who probably would use it, and nobody talks to him other than, of course, Dennis Rodman,” he told “Fox and Friends.” “But nobody is talking to him whatsoever, and nobody is discussing it with China.” In a May 17 interview with Reuters, he revealed a willingness to sit down personally with Kim, saying, “I would have no problem speaking to him.” In a campaign appearance in California on June 6, he was dismissive of experts’ “qualms about bargaining with North Korea.” To the practitioner of “The Art of the Deal,” that posed “no problems at all.” Not one to suffer critics gladly, Trump added, “They say ‘we would never, ever, talk.’ How foolish they are!” Nine days later, at a rally in Atlanta, he doubled down on the need for talks, saying he was prepared to host Kim, although he would forgo the usual diplomatic niceties. “If he came here, I’d accept him, but I wouldn’t give him a state dinner like we do for China and all these other people that rip us off when we give ‘em these big state dinners. We give them state dinners like you’ve never seen. We shouldn’t have dinners at all. We should be eating a hamburger on a conference table, and we should make better deals with China and others.” If he follows that instinct, he has to act sooner rather than later. The longer he waits, the greater the North’s bargaining leverage will be. Deferring negotiations until the North commits to complete denuclearization and takes unilateral steps to that end would be a waste of time. The urgent task is to induce Pyongyang to suspend arming now. **Past Agreements**

Suspending the North Korean nuclear program has been the thrust of all three agreements that the United States has made with North Korea: the 1994 Agreed Framework; the September 19, 2005, six-party joint statement; and the 2012 Leap Day deal. Contrary to conventional wisdom, the first two accords had some success. The 1994 accord halted all fissile material production in the North for more than nine years until the George W. Bush administration seized on U.S. intelligence reports that Pyongyang was secretly acquiring the means to enrich uranium and used those reports to scrap the accord without bothering to probe the North’s offer to negotiate the issue. The 2005 accord was nearly stillborn when two days before the accord was finalized, the U.S. Treasury Department threatened sanctions on all banks that did business with North Korea, prompting authorities in Macao to seize North Korean funds at Banco Delta Asia. Shortly after North Korea conducted its first nuclear test in October 2006, Washington agreed to arrange for the return of the funds; and Pyongyang ceased all fissile material production at Yongbyon and nuclear tests and missile test-launches, only to have the deal fall apart in 2009 after South Korea failed to deliver promised energy aid. The Leap Day deal collapsed almost immediately when North Korea proceeded with a satellite launch attempt in 2013 despite a U.S. warning that such a move would be a deal-breaker. Given that history, trying for a suspension yet one more time would face formidable political opposition in Washington and Seoul. Opponents would demand that no deal be made unless Pyongyang first commits to denuclearization, which it insists it will not do. Delaying a possible suspension of the North’s programs while seeking an unlikely commitment to give up its weapons is to sacrifice the practical on the altar of the theoretical, and trying for a permanent dismantling of Pyongyang’s nuclear and missile programs would take much more substantial inducements and consume precious time. In short, without giving up the U.S. goal of denuclearization of the Korean peninsula, negotiations have to start somewhere. Insisting on a more comprehensive deal while the North’s programs proceed apace does not make much strategic sense. **Next Steps**

Washington understandably cannot keep negotiating while North Korea continues arming. Recent unofficial contacts indicate that Pyongyang seems open to talks about talks so long as it does not have to satisfy U.S. preconditions unilaterally. The subject of such talks would be a suspension of Pyongyang’s programs and the reciprocal steps that Washington would take to address its security concerns, along the lines of “action for action” as set forth in the September 19, 2005, joint statement. The North might be willing to suspend arming. That was also the implication of its January 9, 2015, offer of “temporarily suspending the nuclear test over which the U.S. is concerned” if the United States “temporarily suspend[s] joint military exercises in South Korea and its vicinity this year.” A one-year suspension would not work. What would happen when that year was up? Would exercises have to be suspended permanently to keep the North from testing? The North may be amenable to a reduction in the scale, scope, and operating tempo of the three largest U.S.-South Korean joint exercises instead. For instance, if it were forgoing nuclear tests, there would be less need to fly B-52s into South Korean airspace to reassure U.S. allies. Similarly, mock attacks on nuclear sites and leadership
targets could be avoided as needlessly provocative. Both sides would have to agree to do more. Pyongyang might be willing to suspend not only nuclear testing, but also missile tests and possibly satellite launches and verifiably stop fissile material production. In return, Washington could suspend the application of all sanctions that predate the North’s nuclear program, reaffirm its commitments in the October 2000 U.S.-North Korean joint communiqué renouncing “hostile intent” and pledging to build “a new relationship free from past enmity,” commit to respect the North’s sovereignty and not interfere in its internal affairs, and, after consulting with Seoul, agree to commence a peace process on the Korean peninsula. Yet, the chances of persuading North Korea to go beyond another temporary freeze and dismantle its nuclear and missile programs are slim without firm commitments from Washington and Seoul to move toward political and economic normalization, engage in a peace process to end the Korean War, and negotiate regional security arrangements, among them a nuclear-weapons-free zone that would provide a multilateral legal framework for denuclearization. Trump’s willingness to hold out the prospect of a summit with Kim would also be a significant inducement. Doubts about his enduring commitment to the alliance, however, could intensify Seoul’s resistance to engaging in a peace process. Suspension would leave North Korea with a rudimentary deterrent, but it would forestall unbounded weapons programs with profoundly destabilizing effect on the balance of power in Northeast Asia. Outlook If all else fails and North Korea continues to arm, the fallback position of many in Washington is to bolster deterrence and contain it. For others, that is not enough. Yet, Trump’s indisposition to military intervention and skepticism about alliances seem to rule out some of the more forceful options being bruited about in Washington. Impulses are not policies, but they may provide clues to Trump’s inclinations. If he follows his impulse to talk, he could succeed where Presidents Obama and George W. Bush have failed. North Korea’s arming is now unbounded. Temporary suspension of its nuclear and missile programs, if possible, would have huge benefits for U.S. and allied security and could open the way to a gradual improvement in relations with North Korea that would ease its insecurity and facilitate more permanent dismantlement of its weapons programs. Perhaps Trump could get there if he starts from here. ENDNOTES 1. Kim Jong Un, “New Year Address,” http://www.naenara.com.kp/en/news/?22+3039. 2. Maggie Haberman and David E. John Schilling: “In his 2017 New Year’s Address, Kim Jong Un mentioned (among many other things) that North Korea had “entered the final stage of preparation for the test launch of intercontinental ballistic missile.” It should be noted that this was neither the focus of his speech—which, for the most part, was a list of last year’s accomplishments—nor was it an announcement that a test would occur any time soon. Quite possibly, it was a signal to the new dealmaker-in-chief of the United States that North Korea might be ready to make a deal: to not conduct the provocative test for the right price. Still, we should consider the possibility that a test may occur in the near future. In which case, how might this happen and what might it mean? First, any “test” that takes place so soon after such a high-level political announcement is probably no test at all, but a demonstration. A test is an experiment, an attempt to determine whether or not a new system will work, and if not, why. A demonstration is meant to prove to a skeptical audience that, yes, North Korea does have a workable ICBM. Even if a test ends in failure and the North loses credibility it would still gain valuable information about why it failed and how to fix it. People tend to call their demonstrations “tests” to minimize the impact if they do fail, but Kim’s announcement means North Korean credibility will unavoidably be at stake in any long-range missile launch. Which brings us to the next question: which ICBM might they test? North Korea has a family of road-mobile ICBMs under development, of which, the KN-08 and KN-14 might be ready for a real test of the sort that often leads to politically embarrassing failures. It also has a proven space launch vehicle, the Unha-3, which could be pressed into service as a crude ICBM. An ICBM variant of the Unha could be sufficiently similar to the space launch vehicle in that it would be very likely to succeed, making it a good candidate for a political demonstration even though the Unha would make for a poor missile. A demonstration launch of an Unha-based ICBM would, at first, look very much like a satellite launch. The rocket would be assembled, checked out, and fueled over a period of several days at the Sohae launch facility. The launch would follow a trajectory similar to a satellite launch, probably aligned to avoid overflying any of North Korea’s neighbors. The first technical indication that anything was different would be the low acceleration of the upper stage, carrying a reentry vehicle with enough ballast to simulate a nuclear warhead. Eventually, the simulated warhead would enter the atmosphere and impact some eight to ten thousand kilometers downrange. The reentry event would be the only part of this exercise that would qualify as a real test, as North Korea has never demonstrated an ICBM-class reentry vehicle before. If they are conservative in the design, there is little chance that it would fail outright, but the accuracy on the first launch is likely to be poor. North Korean engineers would certainly want to have a ship stationed near the impact point to gather data, and we would certainly hope the United States Navy is keeping a close eye on where the North is stationing its ships. Pyongyang might also test a new upper stage with a more powerful engine, better suited for carrying heavy warheads. They might test an accelerated launch procedure, with hours rather than days of preparation. Such changes would increase risk, however, and even then, they wouldn’t really demonstrate anything we haven’t already known for years. The Unha rocket works, it can be adapted to carry warheads instead of satellites, but it can only be launched from large fixed sites that can be monitored for signs of an impending launch. If it were seen as a real threat, it could be preemptively destroyed. It is more useful as a space launch vehicle, and North Korea seems to genuinely want a space program as well as an arsenal of missiles. If the North Koreans really want to impress anyone, and particularly if they have any hope of their space program being seen as a peaceful endeavor that might escape the political and economic sanctions imposed on North Korea’s missile programs, they will want to demonstrate their ICBM capability using a KN-08 or KN-14 mobile missile. Moreover, it is more likely that they will test when they are ready to test rather than risk repeating the recent experience of demonstrating the Musudan intermediate-range missile which resulted in an embarrassing record of six or seven failures out of eight launch attempts. In any case, the first test of an entirely new multistage missile whose main engine has only recently been demonstrated on the ground will almost certainly end in failure. Nevertheless, even a failure might put the North on a path to success. This is literally rocket science, one of the archetypal hard problems, and success can only be achieved through perseverance. The first American ICBM, the SM-65 “Atlas,” failed 26 seconds into its maiden
flight. Eight tests were conducted over the course of a year, with only two being fully successful. The first all-up test of the competing SM-68 “Titan” was even shorter, exploding on the launch pad. The Titan scored only one success in its first six launches. However, both missiles entered operational service within two years of their initial, disastrous flight tests, and proved adequately reliable in service. Russia’s early experience with ICBMs was similar, though some of the details are still hazy. We should expect North Korean ICBMs to follow a similar path—a series of early failures leading to an operational capability even with a spotty testing record. There might be a somewhat slower pace of testing with a North Korean ICBM since the high pace of testing in early US and Soviet ICBM programs was a sign of desperation, not wanting to be on the wrong side of a “missile gap” by showing up late to the ICBM party. Even under the best of circumstances, it usually takes an engineering team at least three months to verify that they understand why a long-range rocket exploded and develop a fix they can be confident in. If missiles are being tested every month and usually failing, this means someone is willing to destroy large, sophisticated rockets on little more than an educated guess at a solution to the last test’s problem. That’s a very expensive way to gain a few months’ edge in an arms race. North Korea has traditionally conducted large rocket tests at intervals of six months to a year, a slower but more efficient process that gives their engineers time to do their jobs properly. Recently, as with the Musudan, the North tested at the sort of pace we demonstrated in the early Cold War. We can guess at what might drive such desperation, but it seems unlikely that Pyongyang can afford to keep up that pace in a full-scale ICBM development program. Its aerospace industry hasn’t demonstrated the production capacity needed to test an ICBM every month. One test every three to six months would be more realistic, at least in the long run, so this is not a process that will be completed in 2017. If North Korea wants the tests to succeed, or at least to learn as much as possible from the failures, it will also conduct them at existing launch sites and on their usual trajectories. Even if they use a mobile launcher, as the KN-08 and KN-14 likely will in operation, the North will want to have the full support facilities and technical staff of an experimental test facility close at hand for the early flights. And, since at least one of the failed Musudan tests apparently destroyed an expensive mobile launcher, conducting the first few tests from a heavy steel gantry on a concrete pad would be preferable. It is likely that the North Koreans will launch on a trajectory that accurately represents a long-range missile flight, and with full coverage from tracking radar and telemetry antennas. They might choose a lofted trajectory, firing at a steep angle to reach a high altitude but a short range, as they have on some recent Musudan and KN-11 flights. The Unha’s upper stages don’t have the thrust for such a trajectory, but a KN-14 would and a KN-08 might. At ICBM velocities this would be technically challenging, particularly during the reentry phase, but is the only practical way to conduct such a test at reduced range while avoiding the need to send a tracking ship far out into the Pacific to monitor reentry. Several reports have suggested that the United States might respond to a North Korean ICBM test by simply shooting down the missile. The more responsible comments along these lines have limited the discussion to missiles whose trajectory directly threatens the US and its allies. However, North Korea is unlikely to “test” an ICBM by firing it at Los Angeles or Hawaii. In any case, currently the United States and its allies have a very limited ability to shoot down a test or demonstration flight of a North Korean ICBM. The US National Missile Defense system could probably do the job but it is based at fixed sites in Alaska and California and would be of no use in protecting US allies. The US, Japanese and South Korean navies all operate warships with the Aegis, meant for use against shorter-ranged missiles although under ideal conditions could be capable of shooting down an ICBM or even a satellite. However, shooting down something capable of flying as high and as fast as an ICBM would require an Aegis warship to be located very close to the missile’s trajectory during the first or last few minutes of its flight. If the North Koreans limit themselves to using standard trajectories from fixed launch sites we could probably position Aegis warships to shoot the missile down shortly after launch, albeit close enough that North Korea could easily harass them with its air or naval forces. And that problem gets much worse if the North tests from a mobile launcher at a remote site, or on a lofted trajectory, or if they are willing to overfly other nations. To have any chance at an intercept, Aegis ships would have to be stationed even closer to North Korea, in waters Pyongyang regards as critical to its national security. Do we really want to find out what happens if a US warship fires a large surface-to-air missile while a North Korean MiG is conducting a mock attack run? The MiG pilot may not understand the missile isn’t aimed at him. And even
then, the attempt to shoot down the ICBM would probably fail because Aegis was never designed to do that under combat conditions, has never been tested in such a role, and would be operating at the edge of its theoretical capabilities. In short, North Korea appears to have three options. First, it could conduct a near-term demonstration using a modified Unha space launch vehicle fitted with a reentry vehicle large enough for a nuclear warhead. Such a test would likely work, gathering information related to reentry technology while putting an end to any pretense or hope of a peaceful space program. Second, the North could launch a KN-08 or KN-14 ICBM prototype almost guaranteed to fail, and fail repeatedly if it keeps launching rockets faster than its engineers can understand what is going wrong. Or third, Pyongyang can conduct a serious test program characterized by launches at a reasonable pace, leading to deployments even before a full program is completed. Only in the very unlikely case that the North fires the test at the United States could the US reliably shoot it down.” (John Schilling, “How Might North Korea Test an ICBM?” 38North, January 12, 2017)

KCNA: “A sign of acute China-U.S. confrontation is clearly seen in the run-up to Trump’s presidential inauguration. And there is awkward rumor afloat in the world that China would use "north Korea" as a playing card in its confrontation with the U.S. in the future. The Wall Street Journal and American Interest of the U.S. and the Financial Times of Britain and many other media of the world are carrying articles to the effect that there is increasing possibility for China to counter the Trump administration with "north Korea as a playing card." This cannot be construed otherwise than a unilateral viewpoint of media ignorant of the universal principle concerning the sovereignty of countries and the true picture of the DPRK. Explicitly speaking, it is illogical to say that the DPRK can be used as a "playing card" of others as the country is demonstrating its might as a political and ideological power and a nuclear power. Firm is the DPRK’s position as a nuclear weapons state whether others recognize it or not. One has to face up to the reality of the DPRK clearly and squarely, if one wants to know about it. The hotspot in which the interests of big powers are intertwined and the issues of international nature have historically accumulated is the Northeast Asian region centered on the Korean peninsula. Historically, the tense situation on the Korean peninsula and the war atmosphere fanned up on it have been attributable to the U.S. and other hegemonic forces’ diplomatic and political purposes and the Korean nation has been the biggest victim of the tension on the peninsula. If the DPRK had not bolstered up and defended its sovereignty, it would have already faced the miserable fate of modern day slaves in the 21st century, not just ending in the "color revolution" and Mideast situation. Today the sovereignty of countries and nations is wantonly violated in different parts of the world due to the hegemonic forces' high-handed and arbitrary practices and appeasement, and the U.S. and its vassal forces' sanctions and blockade against the DPRK have reached the extremes. Even under such situation the DPRK towered as a nuclear power and a military power in the East no formidable enemies can dare to provoke. The DPRK is not an entity sandwiched between neighboring powers. For its treasured nuclear sword of justice it has emerged a powerful force that can spearhead the regional situation as a strategic stronghold in which the vital interests of big powers are intertwined. A new dynamic structure has been set up with the DPRK as an absolute parameter. Nothing can bring down the position of the DPRK that has ranked itself with dignity among the nuclear powers with a firm hold on the treasured nuclear sword of justice in order to defend the sovereignty of the nation and its rights to existence and development and safeguard the regional peace and stability. It remains strong regardless of someone's recognition. Now is the time for the DPRK to steer the solution of the issue of peace and stability in Northeast Asia as it has undergone a fundamental change in its strategic position. The DPRK will as ever safeguard its peace and security by its own strength and make a positive contribution to defending the world peace and stability.” (KCNA, “KCNA Commentary Stresses Need to Have Proper Understanding of DPRK,” January 14, 2017)

Bermudez: “Commercial satellite imagery indicates that North Korea may be preparing to resume operations at its 5 MWe reactor, which had been suspended since late-2015. Throughout the previous four months, there has been a continued presence of vehicles at and around the 5 MWe reactor suggesting either ongoing maintenance, refueling or preparations for renewed operations.
Concurrently, while no steam exhaust was observed at the 5 MWe reactor or its support buildings in any imagery from October through January, the channel in the Taeryong River leading to and from the reactor’s cooling cisterns was cleared of ice and dredged between December 1 and 29. This channel remains clear as of January 16, although no water discharge is observed. Additionally, no snow was observed on the roofs of the 5 MWe reactor or its support buildings in imagery from December 29, but there was snow on the roofs of other buildings in this area. This indicates that the 5 MWe reactor and its support buildings are occupied and at least minimally heated. Taken as a whole, these activities suggest preparations to resume operation of the 5 MWe reactor.” (Joseph S. Bermudez, Jr., “North Korea’s Yongbyon Facility: Possible Resumption of Operations at the 5MWe Plutonium Production Reactor,” 38North, January 18, 2017)

A group of F-35 fighter jets arrived at a U.S. Marine base in western Japan, marking the first deployment of the stealth aircraft outside the United States and reflecting the country's policy of focusing on Asia. The move is expected to increase the importance of U.S. Marine Corps Air Station Iwakuni as a key military post in the region at a time when Japan faces rising Chinese maritime assertiveness. Some F-35s will arrive later, raising the total number of the deployed aircraft to 16, according to the U.S. military. The Yamaguchi Prefecture base is also set to accept about 60 carrier-based aircraft now stationed at the U.S. Navy's Atsugi Air Facility in Kanagawa Prefecture, with the relocation to start in the second half of this year in line with a realignment plan for U.S. forces in Japan. (Kyodo, “U.S. F-35 Fighter Jets Arrive in Japan, Mark 1st Overseas Deployment,” January 18, 2017)

North Korea has probably built two missiles presumed to be intercontinental ballistic missiles (ICBMs) (?) and placed them on mobile launchers for test-firing in the near future, military officials said. The two missiles are estimated to not exceed 15 meters in length, making them shorter than the North's existing ICBMs, the 19-20 meter-long KN-08 and the 17-18 meter-long KN-14, the officials familiar with the matter told Yonhap. The North appears to have intentionally leaked the new missiles to send a "strategic message" to the incoming government of Donald Trump who takes office tomorrow, they said. The officials didn't provide the exact date for when the missiles were picked up by intelligence, although it is estimated that the U.S. detected them on January 16 when the U.S. Navy hurriedly moved its sea-based X-band radar system to the western part of the Pacific Ocean from seas off Hawaii. "There is no imminent sign of provocations, but we remain vigilant as the North could fire a missile at any time and place determined by its leadership," an official from Seoul's Joint Chiefs of Staff told reporters. The ministry didn't confirm whether the North has recently developed a new, upgraded prototype of their ICBM. (Yonhap, “N. Korea Has Likely Build 2 ICBMs, Placed Them on Mobile Launchers: Sources,” January 19, 2017) The United States has seen indications that North Korea may be preparing for a new missile test-launch in the coming days or weeks, U.S. officials said on Thursday, in what could be an early test of President-elect Donald Trump's administration. South Korean media, citing intelligence agencies, said Pyongyang may be readying a test of a new, upgraded prototype of an intercontinental ballistic missile (ICBM) as early as tomorrow, the day Trump is inaugurated. U.S. officials, who spoke to Reuters on condition of anonymity, cautioned however that they did not have such precise information about the range or potential timing of Pyongyang's missile test, should it happen. One official suggested Pyongyang could be largely seeking to provoke the Trump administration. "If they do something, it would more likely be a test of Trump than a test of a delivery system," said a U.S. intelligence officer who monitors North Korean activities. "They probably want to see how he reacts to a provocation, even a minor one, and if they really want to poke him, they'll do it right away." (James Pearson and Phil Stewart, “North Korea May Be Readying Missile Test, Timing Unclear: U.S. Officials,” Reuters, January 19, 2017)

John Schilling: “On January 19, South Korea’s Yonhap news agency reported that North Korea had placed two missiles on mobile launchers in preparation for possible testing in the early days of the Trump administration. Details are still scarce, and it should be noted that North Korea has in the past prepared missiles for launch without conducting any test. As we recently noted, missile
White House: “The Trump Administration is committed to a foreign policy focused on American interests and American national security. Peace through strength will be at the center of that foreign policy. This principle will make possible a stable, more peaceful world with less conflict and more common ground. Defeating ISIS and other radical Islamic terror groups will be our highest priority. To defeat and destroy these groups, we will pursue aggressive joint and coalition military operations when necessary. In addition, the Trump Administration will work with international partners to cut off funding for terrorist groups, to expand intelligence sharing, and to engage in cyberwarfare to disrupt and disable propaganda and recruiting. Next, we will rebuild the American military. Our Navy has shrunk from more than 500 ships in 1991 to 275 in 2016. Our Air Force is roughly one third smaller than in 1991. President Trump is committed to reversing this trend, because he knows that our military dominance must be unquestioned. Finally, in pursuing a foreign policy based on American interests, we will embrace diplomacy. The world
must know that **we do not go abroad in search of enemies, that we are always happy when old enemies become friends**, and when old friends become allies. The world will be more peaceful and more prosperous with a stronger and more respected America. …This strategy starts by withdrawing from the Trans-Pacific Partnership and making certain that any new trade deals are in the interests of American workers. …In addition to rejecting and reworking failed trade deals, the United States will crack down on those nations that violate trade agreements and harm American workers in the process. The President will direct the Commerce Secretary to identify all trade violations and to use every tool at the federal government’s disposal to end these abuses.” (White House, “America First Foreign Policy,” January 20, 2017)

In the first major policy change about North Korea’s weapons of mass destruction in nearly a decade, Seoul will focus more on blocking Pyongyang from actually using the weapons instead of trying to deter their development. The change was described by an official from the South Korean government Thursday who requested anonymity due to the sensitivity of the issue. “For almost 10 years, [the South] tried in vain to freeze North Korea’s nuclear weapons development program or scrap it entirely through the six-party talks and other efforts,” said the source. “But none led to any tangible results.” Seoul’s policy shift reflects the “reality” of circumstances and imminent threats from North Korea, the official continued. For the new strategy, the Joint Chiefs of Staff established a so-called Weapons of Mass Destruction Response Center on Jan. 1 to better respond to North Korean provocations by predicting Pyongyang’s military capabilities five to 10 years from now and devising ways for the South to defend itself from them. The group is composed of three different departments, a drastic expansion from the past when only one department was allotted for the same task. In another tip-off from the South Korean military, a senior official said that North Korea appears to have recently developed a satellite that uses an optical camera it bought last year from abroad. The international community widely views North’s satellite development as a cover to test the ballistic missiles needed to put the satellites into orbit. (Jeong Yong-soo, Lee Sung-eun, and Lee Chul-jae, “Seoul to Give up North Denuclearization Policy,” JoongAng Ilbo, January 20, 2017)

*Rodong Sinmun* commentary: “The U.S. deputy secretary of State blustered that the DPRK’s threat has reached an alarming phase and sanctions and pressure upon it would go on no matter what administration may emerge in the U.S. as regards the DPRK’s entry into the final stage in preparation for the test launch of ICBM. …It is a righteous self-defense measure for the DPRK to test-launch its ICBM as part of its measures for bolstering up the military capability to cope with the U.S. daily-increasing threat of nuclear war. Therefore, no one can find fault with this. The U.S. is wholly to blame for pushing the DPRK to developing ICBM as it has desperately pursued its anachronistic policy hostile toward the DPRK for decades to encroach upon its sovereignty and vital rights. The U.S. is not entitled to grumble about the DPRK’s test-fire of inter-continental ballistic racket, to say nothing of more powerful weapons, to react to its nuclear blackmail. The DPRK, a responsible nuclear weapons state, will never remain a passive onlooker to the daily-increasing nuclear war danger on the Korean peninsula. It will redouble its efforts to put an end to the source of nuclear threat and blackmail. Its test-launch of ICBM is part of a series of measures for bolstering up the self-defense military capability to cope with the U.S. daily-increasing nuclear war threat. No matter what others may say, ICBM will be launched anytime and anywhere determined by the supreme leadership of the DPRK.” (KCNA, “No One Can Find Fault with DPRK’s Test-Fire of ICBM: Rodong Sinmun,” January 20, 2017)

South Korea, the United States and Japan began a three-day naval exercise designed to counter North Korean missiles amid growing indications that Pyongyang is ready to test-fire an intercontinental ballistic missile in time for Donald Trump’s inauguration. According to the South Korean Navy, the joint maritime exercise involves three Aegis-equipped destroyers capable of detecting, tracking and intercepting ICBM. Seoul deployed its first Aegis destroyer, the Sejong the Great, while Washington and Tokyo sent USS Curtis Wilbur and JDS Kirishima, respectively. “The military exercise takes place in the waters of the three countries,” a Navy official familiar with the matter said on the condition of anonymity. “The exercise is not an interception drill.
Using hypothetical targets, we will track, detect and share information (about the missiles)." (Yeo Jun-suk, "S. Korea, U.S., Japan Kick off Maritime Drill to Counter N.K. Missiles," Korea Herald, January 20, 2017)

The United States thought in the early 1990s that economic sanctions would not make North Korea give up its nuclear weapons program even if such a step would significantly hurt the North's economy, a declassified report showed. The US analyzed the possible impacts of economic sanctions on North Korea and potential responses from the North, South Korea, China and others, according to the National Intelligence Council's report from December 1991 and titled "North Korea: Likely Response to Economic Sanctions." The report said that the intelligence community believes that sanctions per se would not cause North Korea to abandon its nuclear weapons program, but they would significantly dent the North's economy. "A trade embargo — if fully respected and enforced — would cause a significant falloff in production and impose severe hardships on the North Korean populace," it said. "The reduction of crude oil would be particularly troublesome," the report said, adding that the cutoff of oil deliveries would cause the North to speed up the shutdown of even key industries. It said North Korea could move towards hostile responses including a possible terrorist action against the US or South Korean facilities or people if sanctions were to be enforced militarily. "North Korea could raise tensions by staging military incidents along the Demilitarized Zone," the report said. The report raised doubt that stronger economic sanctions could pose a threat to the North's regime. "In the short run at least, the result could produce more support for the leadership rather than any backlash or pressure for change," the report added. (Yonhap, "U.S. Did Not Think Sanctions Would Cause N.K. to Give up Nukes in 1991: Report," January 20, 2017)

"President Trump will end the defense sequester and submit a new budget to Congress outlining a plan to rebuild our military," the White House said on its website, referring to the automatic cuts in defense spending. "We will provide our military leaders with the means to plan for our future defense needs," it said. "We will also develop a state-of-the-art missile defense system to protect against missile-based attacks from states like Iran and North Korea." (Yonhap, “Trump’s White House Vows to Develop Missile Defense System to Defend against N. Korea,” January 21, 2017)

Exports to China have fallen sharply for South Korean materials and components such as semiconductors, flat-panel displays, and automobile parts. Analysts said the phenomenon, which comes amid steps by China to hasten its own technology independence and strengthen bans on processing trade, shows an increasing collapse in the three-way division of labor with China and Japan that took shape after the rapid rise of the Japanese economy in the early '00s. A report on 2016 exports and imports for materials and components released by the Ministry of Trade, Industry and Energy (MTIE) on Jan. 16 showed a total of US$82.7 billion (around 97.8 trillion won) in South Korean material and component exports to China last year. The number was down by more than US$10 billion from the US$95.3 billion recorded for 2014 and the US$93.5 billion for 2015. By item, exports of electronic components such as mobile phone liquid crystal displays and wireless communication devices plummeted to US$38.7 billion last year from US$46.2 billion in 2014 and US$47.2 billion in 2015. Transport machinery exports, including mechanical equipment and car parts, were down to US$5.5 billion in 2016 from US$6.7 billion in 2014 and US$6.5 billion in 2015. “Exports have dropped off as China has improved its self-sufficiency in materials and components and strengthened restrictions on processing trade,” explained the MTIE. “There has also been a phenomenon of reverse exports back to South Korea because of businesses that have ventured in China and produced material and component intermediate goods there but have been unable to sell them locally,” it added. The number of items subject to Chinese processing trade bans rose from 341 in 2004 to 1,871 in 2014. As the Chinese economy began its period of rapid growth in the '00s, material and component manufacturers in South Korea, Japan, and Japan formed a system with a three-way East Asia division of labor. Japan, which holds a technological comparative advantage in key materials, exported materials and parts to South Korea, which developed them into components and half-finished goods for export to China, which in turn assembled and processed them as finished products for export to the global market. Fears
On his first full weekday in office, President Donald Trump signed an executive action to abandon a multilateral trade deal involving 12 countries, underlining his tough trade policy and raising concerns over a possible renegotiation of the South Korea-US Free Trade Agreement. Trump and his economic advisors have showed their strong opposition to free trade deals — which have been a global trend since the mid-2000s — citing a growing trade deficit with its trade partners. In addition to withdrawing from the TPP, the Trump administration also vowed to renegotiate the North American Free Trade Agreement. As the US drops out from the deal — a fast execution of one of Trump’s campaign pledges — concerns are raising here over a possible renegotiation of the South Korea-US Free Trade Agreement. Peter Navarro, who will lead the new National Trade Council, last year called NAFTA, the World Trade Organization and the Korea-US Free Trade Agreement the three worst trade deals in history. “The entire scrapping of the trade deal seems unrealistic but it is possible that the US might ask for a renegotiation of the trade deal with bigger openness in service sectors such as finance, health and law,” said Oh Jun-beom, a senior researcher at Hyundai Research Institute. Some are adopting a cautious stance on the possibility. “Trump did mention the Korea-US FTA during the campaign, but he has not mentioned it since he was actually elected,” an official at the Ministry of Trade, Industry and Energy said Tuesday. Hyundai Research Institute’s Oh also agreed. “If renegotiated, it would be after the Trump administration handles NAFTA and TPP issues and China, which has a bigger trade surplus with the US than South Korea,” Oh said. South Korea’s trade surplus with the US was $23.4 billion in 2016, according to the Ministry of Trade, Industry and Energy. China’s trade surplus with the US stood at $250.79 billion in 2016, according to China’s customs data. Over in Washington, the reaction was mixed. Democratic Sen. Bernie Sanders welcomed the move while Republican Sen. John McCain lamented it. “Now is the time to develop a new trade policy that helps working families, not just multinational corporations,” Sanders said in a statement. “For the past 30 years, we have had a series of trade deals … which have cost us millions of decent-paying jobs and caused a ‘race to the bottom,’ which has lowered wages for American workers.” McCain said in a statement, “This move to withdraw from the TPP is a serious mistake that will have lasting
consequences for America’s economy and our strategic position in the Asia-Pacific region.” The member countries of the TPP showed their willingness to continue the trade pact without the world’s biggest economy and open their doors to other nations. Australian Trade Minister Steven Ciobo said during a radio interview January 24 that there is scope for China to join the TPP. The remaining 11 member countries of TPP include Australia, Brunei, Canada, Chile, Japan, Malaysia, Mexico, New Zealand, Peru, Singapore, and Vietnam. Japan ratified the treaty January 20, becoming the first country to do so. Meanwhile, South Korean Trade Minister Joo Hyung-hwan said he will visit the US soon to seek ways to expand bilateral cooperation with the new US administration. Joo said the Seoul government remains open to every possibility and is preparing for every possible scenario, as the new US administration’s trade policies still remain uncertain. While the US ditches the TPP, stepping back from free trade deals, Asia will push ahead with regional economic cooperation. Last week at the World Economic Forum, Chinese President Xi Jinping likened protectionism to “locking oneself in a dark room” and signaled that China would push ahead regional trade deals. Joo urged to conclude the Regional Comprehensive Economic Partnership, another major trade deal undertaking of nearly the scope of the TPP, in order to expand markets and regional integration. The RCEP under negotiation since 2012 involves 16 countries including China, Japan, India, Australia and South Korea. (Park Ga-young, “Trump’s TPP Abandonment Fans Trade Fears in Korea,” Korea Herald, January 24, 2017)

The U.S. government has reportedly sent humanitarian aid earmarked for flood relief to North Korea’s North Hamgyong Province via the UN. “Shortly before President Obama left office, the Obama administration sent humanitarian aid to North Korea by way of the UN, and the Trump administration is planning to make this public before long,” an expert on the Korean Peninsula in Washington who is familiar with affairs in the US government told Hankyore. This expert said that American aid to North Korea was at a “symbolic level” and did not mention the exact size or the items provided. This is the first humanitarian aid the US government has given to North Korea since it gave US$900,000 through the independent relief organization Samaritan’s Purse in 2011. Even as the Obama administration toughened its independent sanctions against the North in response to North Korea’s fourth and fifth nuclear tests, it allowed humanitarian aid from the private sector but did not provide any governmental aid. Considering that the Obama administration maintained a harsh policy of ignoring North Korea known as “strategic patience,” the fact that it played the card of governmental humanitarian aid through the UN just before Obama left office can be seen as a significant message to North Korea. The move provides the Trump administration, which is succeeding Obama, with a way to make unofficial contact with the North Koreans early on to explore resetting US relations with the North while giving Trump cover for the political fallout of providing humanitarian aid. The fact that the Obama administration provided government-level humanitarian aid to North Korea through the UN just before Obama’s term ended looks very much like a “small present” to the incoming Trump administration. The Obama administration takes on the political burden of providing the humanitarian aid to the North, while the Trump administration only has to make the announcement. Considering that the Obama administration even this year avowed putting sanctions and pressure on the North during high-level deliberations with South Korea shortly before the handover of power on January 20, this decision can also be seen as an unexpected twist. The Trump administration has basically been given effective leverage to explore the possibility of resetting US-North Korea relations at the beginning of the Trump presidency. When dealing with North Korea, humanitarian aid from the government is a way to send a friendly signal to the North without spending much domestic political capital. It’s a way to “prime the pump” and relax tensions that offers good “value for money.” While the administration of South Korean President Park Geun-hye completely severed inter-Korean relations and basically banned humanitarian aid from the private sector in response to North Korea’s two nuclear tests in 2016 (the fourth test on January 6 and the fifth test on September 9), the Obama administration has not closed the final “window of opportunity” that humanitarian aid represents. The fact is that the Trump administration and the North Korean regime of Kim Jong-un are still testing the waters. Trump did not mention North Korea during his inaugural address, and the six major policy goals announced by the White House only mention Iran and North Korea in the context of developing a cutting-edge missile defense system. Trump has yet to announce the framework of his North Korean policy or the specific methods of
implementing that policy. During his New Year’s address on January 1, North Korean leader Kim Jong-un indulged in a little saber-rattling by claiming that “the preparations for a test launch of an ICBM are in their final stage.” Nevertheless, he has maintained a wait-and-see attitude for President Trump and the new American government by refraining from mentioning them so far. That’s why the Korean Peninsula expert in Washington believes that the US government’s humanitarian aid to North Korea, as “the first action to be taken,” could cause US-North Korea relations to move in a positive direction in the early days of the Trump administration. “In order for South Korea to avoid being trapped between the US and China, it needs to negotiate with the Trump administration so that Trump will suspend efforts to deploy THAAD for now and so that he will eventually not feel the need to deploy it at all. That will require North and South Korea to hold off-the-record meetings toward that end and for North Korea to continue refraining [from taking military action],” the expert advised. If the Obama administration’s “last little gift” is to be used as a stepping stone to transforming the political situation on the Korean Peninsula, there needs to be wise response not only from North Korea and the US but also from the South Korean government, the expert said. (Lee Je-hun, “U.S. Provides First Humanitarian Aid to North Korea in Five Years,” Hankyore, January 25, 2017)

The United States has provided $1 million in humanitarian aid to impoverished North Korea, the State Department said. Outgoing Secretary of State John Kerry awarded $1 million for North Korea to UNICEF, a U.N. agency, the day before President Donald Trump took office last week. It marks the first time that the U.S. provided humanitarian assistance to the North since 2011, when it provided relief items including medical supplies to North Korean flood victims. That aid, worth $900,000, was made through Samaritan’s Purse, a U.S.-based humanitarian aid organization. The current assistance comes in the aftermath of Typhoon Lionrock, which hit North Korea in August with heavy rain that resulted in flooding. At the time, the government reported hundreds were dead and missing, and said thousands had lost their homes. International aid organizations responded immediately. The State Department confirmed the assistance in an email to VOA and said the funding was destined only for humanitarian assistance. However, a spokesman added that U.S. officials are “currently reviewing last-minute spending approved by the previous administration.” News of U.S. assistance to North Korea came as a surprise to some officials in Washington and Seoul, since both countries have been increasing pressure on Pyongyang since the communist country conducted multiple nuclear tests last year. (Baik Sungwon, “U.S. Humanitarian Aid Goes to North Korea Despite Nuclear Tensions,” VOA, January 25, 2017)

The highest-ranking defector from North Korea in years said that the days of the country’s leadership were “numbered,” and that its attempts to control outside information were not working because of corruption and discontent. “I am sure that more defections of my colleagues will take place, since North Korea is already on a slippery slope,” the defector, Thae Yong-ho, said during a news conference in Seoul. “The traditional structures of the North Korean system are crumbling.” His diagnosis of Mr. Kim’s rule is hardly new. Defectors from the North, as well as some conservative analysts and policy makers in the South, widely share that view. Before his defection, he was a career diplomat, fluent in English, who had served in Britain, Denmark and Sweden, often delivering passionate speeches glorifying the Kim family that has ruled North Korea for seven decades. In the South, Thae, now affiliated with the Institute for National Security Strategy, a think tank arm of the National Intelligence Service, has vowed to spend the rest of his life trying to bring down the North Korean government. Thae said he had high expectations when Kim took power after the death of his father, Kim Jong-il, in 2011. Schooled for several years in Switzerland, Kim was expected to help modernize his impoverished country. Instead, he resorted to a “reign of terror” by executing scores of officials, including his uncle Jang Song-thaek, whom he thought posed a challenge to his power, Thae said. The former diplomat said he had come up with a detailed plan for his defection, first ensuring that his two sons joined him and his wife in London. (North Korean diplomats are required to leave a child in the North, a measure intended to prevent their defection.) The best way to force change in the isolated North, he continued, is to disseminate outside information there to help ordinary citizens eventually rebel. South Korean TV dramas and movies smuggled from China are already popular in the North, he said. Another sign of Kim’s weakening control, Thae said, is evident at the unofficial markets in North Korea where
women trade goods, mostly smuggled from China. The vendors used to be called “grasshoppers” because they would pack and flee whenever they saw the police approaching. Now, they are called “ticks” because they refuse to budge, demanding a right to make a living, Thae said. Such resistance, even if small in scale, is unprecedented, he added. The spread of outside news and market activities could eventually doom Kim because his government “can be held in place and maintained only by idolizing Kim Jong-un like a god,” Thae said. “If he tries to introduce a market-oriented economy to North Korean society, then there will be no place for Kim Jong-un in North Korea, and he knows that.” But the leader’s efforts to clamp down on information and products from outside North Korea have been unsuccessful because the police accept bribes in exchange for freeing smugglers and people caught watching banned movies and dramas. “Kim Jong-un’s days are numbered,” Thae said. After months of debriefing by the authorities in South Korea, Thae used meetings with the country’s politicians and the news media to suggest that North Korea was determined to be recognized as a nuclear power, just as India and Pakistan are. Thae warned against compromising with the North, arguing that sanctions were effective. In recent interviews with local news outlets, he said that North Korea had lost annual income worth tens of millions dollars, after Britain froze accounts last year held by its state-run insurance company as part of sanctions recommended by the United Nations. Until then, the company had claimed large insurance payments through fabricated documents, he said. Kim wanted to negotiate a compromise, under which the United States and South Korea would cancel their annual joint military exercises and lift sanctions on the North in return for a moratorium on North Korean missile and nuclear tests, Thae said. But such a deal would violate Kim’s argument that he had been forced to develop nuclear weapons as a reaction to American hostility, he said. “That is really a trap Kim Jong-un wants,” Thae said. (Choe Sang-hun, “North Korean Defector Says Leadership’s Control Is Crumbling,” New York Times, January 26, 2017, p. A-6) Besides being the deputy ambassador, North Korea’s number two diplomat in London was the man appointed to spy on embassy colleagues and report signs of disloyalty to the feared secret police. But last August, it was Thae Yong Ho himself who defected. He said in an interview in Seoul that one of his jobs was to report to the "bowibu", North Korea’s Stasi-like State Security Department, on everyone in the embassy, including the ambassador. But he told his embassy colleagues about the reports and made sure they were positive. He did not arouse suspicion himself, so it was easy to defect with his wife and two sons, Thae said. Thae and his family disappeared from the embassy quarters in the west London suburb of Gunnersbury in August. "In the London embassy, I was in charge of this kind of surveillance," the 54-year-old said. "I had to write back if they had any ideological changes or if they met any British or South Koreans in secret," Thae said of his colleagues. "But I always reported good things." (James Pearson, “North Korean Defector Was Chief Minder in London Embassy,” Reuters, February 3, 2017)

China has released a new list of items banned for export to North Korea, ranging from wind tunnels to plutonium, following a new round of United Nations sanctions and complaints from U.S. President Donald Trump that Beijing was not doing enough to pressure its communist neighbor. The step was seen by one leading expert on North Korea as an attempt to show that China is fully meeting its commitments, and to pre-empt any moves by the U.S. to punish Chinese companies that deal with the North. However, the expert questioned whether the ban would have much effect in slowing a North Korean nuclear weapons program that is already well advanced and gathering momentum. A statement from the Chinese Commerce Ministry said the items included dual-use technologies that could aid the North’s programs to develop nuclear, chemical and biological weapons as well as the missiles to deliver them. While largely comprising specialty chemicals and rare alloys, the list also includes computer software, machinery, high-speed cameras, aerospace engines and six-axle truck chassis. Grinding machines, molds and radio transmitting equipment also joined plutonium and wind tunnels among the banned items. The ban on “dual-use measures related to weapons of mass destruction and their means of delivery” takes effect immediately, the announcement said. There was no evidence that the extensive list of items was prompted by anything other than the U.N. Security Council resolution passed in November in response to the North’s missile test in September. Foreign Ministry spokeswoman Hua Chunying on Thursday said sanctions should be “implemented in an all-round and balanced way” and China was merely meeting its obligations. However, the official Communist Party newspaper Global
States exhibit a political willingness to act in response to the human rights crisis in North Korea, targeting Kim and ten other top officials in the DPRK. The recent seizure orders by the United companies. On July 7, 2016, the U.S. Treasury Department enacted new sanctions continue to facilitate trade with Pyongyang while being insured by European, UK, and U.S.Leaks of which are traceable through the International Consortium of Investigative Journalists' Offshore countries, and ownership data suggests that they are controlled by offshore shell companies, some operated by the regime. However, many veManagement, as well as those that are sailing under flags of convenience but that are ultimately in the DPRK or owned by the Kim regime under the Pyongyang "blacklisted" vessels under Resolution 2270. This list is meant to in the DPRK continued throughout 2016. Between April 2016 and October 2016, I used automatSecurity Council sanctions in March 2016 and U.S. sanctions in June 2016, marine traffic into the traffic into the DPRK during this period was from Chinese ports by vessels flagged by several countries in Africa, the Caribbean, and the DPRK. The registration and flagging of vessels trading with North Korea occurs via offshore firms that are based outside sanctions enforcement zones in places such as Hong Kong, the British Virgin Islands, and the Seychelles. Sanctions against North Korea are thus largely symbolic gestures of disapproval thatdo not demonstrate any capability to change the political behavior of the Kim Jong-un regime. For sanctions to influence the regime's behavior, it would be necessary to pursue restrictions on the capital flows that allow marine traffic to enter the country rather than sanctioning the regime itself. Despite the latest round of UN Security Council sanctions in March 2016 and U.S. sanctions in June 2016, marine traffic into the DPRK continued throughout 2016. Between April 2016 and October 2016, I used automatic identification system (AIS) software from the International Maritime Organization (IMO) to analyze marine traffic into active DPRK ports and identified approximately 70 incoming vessels, mostly arriving from Chinese ports but also from other locations, including a vessel that traveled to Sinpo harbor from Vancouver, Canada. While the methods used in this article are insufficient to produce a conclusive account of all marine traffic into the DPRK, this study finds that, despite the existence of sanctions, marine traffic regularly enters DPRK ports owing to the reflagging of vessels under flags of convenience and ownership of vessels by offshore capital management firms. This suggests that the Kim Jong-un regime has the means to bypass many of the sanctions that are currently in place. These restrictions are meant to restrict the movement of any vessel owned, managed, or operated by the Kim regime. The United Nations listed 31 North Korean “blacklisted” vessels under Resolution 2270. This list is meant to include vessels that are flagged in the DPRK or owned by the Kim regime under the Pyongyang-based company Ocean Maritime Management, as well as those that are sailing under flags of convenience but that are ultimately operated by the regime. However, many vessels on this list have since been reflagged in third countries, and ownership data suggests that they are controlled by offshore shell companies, some of which are traceable through the International Consortium of Investigative Journalists’ Offshore Leaks Database, which contains information from the Panama Papers. Many vessels on this list continue to facilitate trade with Pyongyang while being insured by European, UK, and U.S.companies. On July 7, 2016, the U.S. Treasury Department enacted new sanctions specifically targeting Kim and ten other top officials in the DPRK. The recent seizure orders by the United States exhibit a political willingness to act in response to the human rights crisis in North Korea,
in addition to addressing the nuclear proliferation threat from the Kim regime. The sanctions freeze any property that Kim or his colleagues have in U.S. jurisdictions. The Treasury Department bases the sanctions on “North Korea’s notorious abuses of human rights...and to further our efforts to expose those responsible for serious human rights abuses and censorship in North Korea.” Executive Orders 13722 and 13687 target individuals who “have engaged in, facilitated, or been responsible for an abuse or violation of human rights by the Government of North Korea or the Workers’ Party of Korea” and who could assist in the regime’s nuclear proliferation goals. This executive order aims to punish these officials by confiscating any assets that they may have in the United States and U.S. territories. The question remains as to whether any of those named in the executive orders actually have property or assets in the United States.

Assets held in offshore accounts set up by third-party intermediaries often cannot be seized under such measures. In addition to the eleven individuals named in Executive Orders 13722 and 13687, five firms are also included. However, all these entities are DPRK government departments, with no mention of banks, transportation firms, merchants, or suppliers. Previous U.S. executive orders have targeted DPRK banks and firms for seizure based on nuclear security concerns. The financial measures that involve maritime vessels are aimed at reducing the importation of military goods and luxury items. The U.S. Office of Foreign Assets Control passed Executive Order 13551 in June 2015 to target the maritime transport of goods to North Korea, with a specific focus on military material and resources. This executive order uses an assets seizure clause for anyone who has “imported, exported, or re-exported any arms or related material”; provided “training, advice, or other services” related to arms materials; or “imported, exported, or re-exported luxury goods into North Korea.” Executive Order 13466 “prohibits persons from registering vessels in North Korea, obtaining authorization for a vessel to fly the North Korean flag, and owning, leasing, operating, or insuring any vessel flagged by North Korea.” This 2015 legislation, while aimed at stopping arms trafficking into the country, has the ability to target individuals who are profiting from business with the Kim regime. It thus could disrupt trade with the DPRK if the stakeholder also has direct dealings with the United States. Other countries have imposed sanctions on marine vessel traffic into the DPRK. The European Union, Canada, and New Zealand all follow the UN sanctions to restrict trade and financial transactions with the Kim regime. The UK Treasury has a list of 66 North Korean individuals whose assets are subject to seizure. In addition, the British government names 42 DPRK entities, including banks, firms, and merchants. Effectively enforcing these sanctions remains a problem, however, given that the entities targeted likely have their assets outside UK jurisdiction. Although heralded as a worthwhile political move, such executive orders to freeze assets do not actually apply much pressure on their targets and thus have little value in curbing human rights abuses or deterring nuclear proliferation. A notable change in tone exists with the recent U.S. financial measures to focus on human rights as the impetus for the sanctions rather than previous efforts that solely aimed at quelling nuclear proliferation or tactical security concerns. These measures do not target third parties, whereas the 2015 legislation provides the capacity to take action on those trading and dealing with the regime via marine traffic. In both cases, the fundamental purpose of the sanctions is to bring about behavioral change; yet unless the financial networks on which the Kim regime depends are targeted, this is unlikely to occur. Between April 2016 and October 2016, I used IMO’s AIS software—a system that tracks the recorded position and destination of merchant marine vessels—to record approximately 70 vessels that entered DPRK ports. This figure may not include all traffic, but it certainly captures the majority of it. Of the seventeen ports in the DPRK, most marine traffic enters the port of Nampo, located down river from Pyongyang. Other active ports include Daeson, Chongjin, Wonsan, and Sinpo. The vessels’ IMO numbers and call signs were recorded, along with country flag, home port, past track, and itinerary history. The analysis also recorded the management companies, owners, and insurers of the vessels. Taken together, the data demonstrates that despite imposed sanctions, marine traffic continues to Nampo, which is a supply port for the capital, and Sinpo, which includes a submarine pen that is being expanded. This finding exposes four challenges to enforcement of the sanctions regime: the use of flags of convenience, false or misleading vessel identification and registry, offshore ownership, and the failure of maritime insurance companies to monitor compliance with sanctions requirements. The container ships entering DPRK ports are almost entirely arriving from either Chinese ports or the Russian port of Vladivostok. The exceptions are the vessels Cheyenne (IMO 9706504) and Ryong
Rim (IMO 8018912) that left the Japanese ports of Kashima and Yokohama, respectively, in early May 2016. Dalian, Bayuquan, Tianjin, Jingtang, and Lianyungang are all Chinese ports from which vessels have departed for the DPRK. Yet despite the number of ships arriving from Chinese ports, no Chinese-flagged vessels were found to have entered DPRK ports during the period of time examined. Rather, nineteen ships were flagged under the DPRK, six were flagged under Panama colors, six were flying Tanzanian flags, four were flagged in Russia, and four carried Mongolian colors. Other arriving vessels were flagged in Jamaica, Liberia, India, Togo, Taiwan, the Bahamas, and Cambodia. No data on the cargo the ships carried is publicly available. While some vessels are linked to the regime or connected to offshore capital, some are not and instead rely on misleading travel plans, misidentification, or false registries. The Voge Challenger (IMO 9490454), a Liberian-flagged vessel owned by TSC Ship Management out of Hamburg, traveled from Bahia Blanca, Argentina, to Sinpo, North Korea, on April 16, 2016. On June 18, it left Vancouver, Canada, broadcasting its destination as Port Qasim in Pakistan. AIS tracking confirmed the ship’s anchorage 38 days later in Port Qasim for a twelve-hour period on August 3. However, the tracking information also shows that the vessel stopped in Sinpo between July 17 and July 26, which constitutes a sanctions violation under Canadian and European law. According to Canadian law, vessels cannot leave Canadian ports carrying goods destined for the DPRK, while the EU prohibits companies from insuring, owning, or managing vessels trading with the DPRK. Other ships entering North Korean waters may have violated regional regulations, including those imposed by China and South Korea. In March 2016, Japanese media reported that China banned DPRK-flagged vessels from entering six of its ports. The DPRK-flagged vessel Su Song, formerly the Sun Orion (IMO 9024889), entered the port of Weifang, one of the allegedly banned Chinese ports, on July 19, 2016. Chinese authorities later denied that the ports were given instructions to prohibit DPRK-flagged vessels. The vessel Chon Un 68 (IMO 9001021) is a Tanzanian-flagged cargo ship with a capacity of four thousand tons. AIS tracking shows that on July 10, 2016, the vessel docked at Nampo port, and on July 18 it was docked at Weifang. On July 29, 2016, the ship registered its destination as Barra, a small passenger ferry terminal in the western Hebrides of Scotland. This, however, was a false registry by the ship’s management meant for distraction. On October 10, 2016, the Chon Un 68 was sailing for Nampo, once again with its registered destination as Barra. The companies that own and manage these vessels are mostly based in Hong Kong, Singapore, or Pyongyang and registered in offshore locations such as the British Virgin Islands, Samoa, Hong Kong, Seychelles, Panama, and the Bahamas. The companies that own the vessels—including Hunchun Sino Unity, Hua Heng Shipping, Korea Kumunsan Trading, Fortune Shipping International, Nanjing Ocean Shipping Co., World Merge Shipping, and Dorian—are all mentioned in the Offshore Leaks Database (also known as the Panama Papers). These firms are established in offshore locations with the assistance of third-party intermediaries, many of which are based in Hong Kong or Singapore. The Hong Kong company Orion House is cited as the intermediary for several of these shipping firms, including four North Korean vessels on the United Nation’s blacklist. Since these firms are registered in offshore locations, the United States, South Korea, and the EU are unable to pursue enforcement of sanctions. Offshore firms are incredibly opaque, especially with respect to identifying their stakeholders or boards of directors. Intermediaries play an essential role in establishing offshore holdings, and the system could not function in its current form without their assistance. There is little, however, that authorities can do to penalize or otherwise stop intermediaries. As long as they exist, marine traffic will continue to flow to the DPRK. Most of the vessel traffic into the DPRK relies on this murky network of offshore capital. However, companies that do not rely on third-party offshore firms own some vessels that enter DPRK ports. The vessel Badri Prasad (IMO 8903284) was owned by Essar Shipping, an Indian company that is affiliated with Essar Energy, a power-generation company in India. In April 2016, the Badri Prasad docked in Sinpo port, stopped in Yantai port in China, and then traveled to Pakistani waters. As of December 2016, the vessel appears to be decommissioned. The CEO of Essar Power, K.V.B. Reddy, was featured by the North Korean media in early 2016. Although Essar’s traffic between India and Pakistan may be a concern for Indian authorities, the Indian government’s Act East policy has encouraged more trade with the DPRK. Ri Su-young, the DPRK’s foreign minister, visited India in 2015, and since then relations seem to be warming. Another factor is that many of the marine protection and indemnity (P&I) insurance companies connected to vessel traffic into North Korea are able to operate in
violation of sanctions because mechanisms of enforcement are not rigorously applied. Some of these insurance firms are questionable shell companies themselves with offshore holdings, but others are legitimate. Yet even when the management firms dealing with North Korea exist outside sanctions jurisdictions, the firms insuring the vessels are registered within enforceable territories. West of England P&I, for example, is headquartered in Luxembourg and has an office in London. It is the insurance provider for dozens of vessels traveling to North Korea, including the Mi Yang 8 (IMO 8863733), a DPRK-flagged vessel owned by Miyang Shipping in Pyongyang. Likewise, Raetsmarine Insurance, a Dutch company, insures the DPRK-flagged vessel Kum San Bong (IMO 8810384), and Britannia Steam Ship Insurance covers the Zhang Hong No. 1 (IMO 8307894), a Taiwan-owned and -flagged vessel that entered Nampo on July 30, 2016. The Norwegian firm Skuld P&I currently insures the Tian Zhu (IMO 9338981), a formerly DPRK-flagged vessel owned by Hunchun Sino Unity Shipping in Hong Kong. On July 19, 2016, Skuld posted a page on its website stating that U.S. and EU sanctions prevent firms from offering marine insurance to DPRK-flagged vessels. As of August 1, 2016, the IMO broadcast signal reported that the name of the Tian Zhu had changed to Chang Phyong and that the vessel is now sailing under the flag of Kiribati—a flag of convenience. The Chon Un 68, mentioned above, is owned by Hua Heng Shipping and K&H Shipping based in Hong Kong. However, the ship is insured by a South Korean firm, Korea P&I Club, based in Seoul, despite the fact that South Korean law prohibits the insurance of ships entering North Korea. Other insurers of vessels entering the DPRK include Steamship Mutual P&I, North of England P&I, and Standard Club in the United Kingdom. A noteworthy example of poor compliance with sanctions by maritime insurance companies involves the Sun Un, now named the Sun Rizhao (IMO 8736382), which traveled from a Chinese anchorage to Nampo port on August 2, 2016. The vessel is owned by a Hong Kong–based firm and insured by Maritime Mutual Insurance Association, a New Zealand–based company. In 2005, the government of Japan complained to the government of New Zealand that Maritime Mutual had exploited a loophole in sanctions law in order to profit from insuring DPRK vessels entering Japanese waters. The company calls itself an insurance agent even though it is not registered as one in New Zealand. The directors of Maritime Mutual are thought to be based in Liechtenstein and on the island of Guernsey. The company has insured DPRK vessels with impunity for over ten years. New Zealand responded to Japan’s complaint against Maritime Mutual by maintaining that it could do nothing to prevent its corporations from insuring DPRK vessels. In sum, European, Asian, and other marine insurance firms are actively providing coverage for vessels entering the DPRK and possibly for vessels using flags of convenience, which flaunts sanctions restricting the insurance of vessels tied to the Kim regime. Shareholders and directors of offshore accounts or of intermediary firms could be targets for international pressure, but once again no real juridical authority exists within current sanctions law to pursue action. What is even more troubling is that it appears that insurance firms that fall within sanctions jurisdictions, including the New York–based insurance firm American Club P&I that insures the First Gleam (IMO 9110236) and Orion Star (IMO 9335839), continue business with impunity. Any firm with assets in the United States should be pursued under Washington’s executive orders, but there is no evidence of such actions being taken. The lack of political will to enforce sanctions against violating vessels and their associated entities becomes obvious when vessels like the Voge Challenger and the Cheyenne enter U.S. waters after docking at a DPRK port. The Cheyenne was reported in DPRK ports in May 2016 but returned to U.S. ports in August 2016. In sum, marine traffic continues to flow into North Korea, with most of the vessel owners flying flags of convenience and registering with offshore firms, some not accurately disclosing their port calls, and some being insured by marine P&I companies that are merely shells. In the latter case, the insurance companies are in violation of UN sanctions and domestic financial regulations. The Badri Prasad case discussed above demonstrates emerging relations between India and North Korea regardless of international sanctions. The activities of the Voge Challenger and the Chon Un 68 could also be challenged as violations of current sanctions inasmuch as these vessels are operating in jurisdictions with specific sanctions laws against the DPRK. However, many of the owners and managers of vessels entering the DPRK are connected to offshore capital, and additional financial regulations would be needed to target the flow and exchange of money between the regime and the vessel operators. This would involve targeting the offshore firms rather than the regime itself. The lack of action to strengthen enforcement demonstrates a
phenomenal indifference to the issue or an embarrassing inability to enforce sanctions on vessels. In either case, the current state of active marine traffic into the DPRK exposes the weaknesses of the recent sanctions aimed at the Kim regime, as the deep involvement of offshore holding companies, combined with lax enforcement, outmaneuvers current sanctions.” (Robert Huish, “The Failure of Maritime Sanctions Enforcement against North Korea,” Asia Policy, 23 (January 2017) pp. 131-52)

1/26/17

Rodong Sinmun: “It is an earnest requirement of the Koreans in the north and the south and abroad to improve the north-south relations and achieve national unity and reunification. …The reality of the situation in which the north-south ties are pushed into the lowest ebb, is presenting their improvement as a pressing issue. …There are extremely growing tensions between the north and the south at present. There is no dialogue or cooperation, exchange or contact between the north and the south but daily escalating political and military confrontation and tensions and the danger of nuclear war only. History and the reality show that the improvement of the inter-Korean ties is a starting point for achieving peace and reunification and that the deadlock between the north and the south leads to confrontation and war. Any politician, if he or she remains a passive onlooker to the current deadlock between the two sides, can neither claim to be fully discharging his or her responsibility and role for the nation nor enjoy public support. Whoever is heartily interested in the destiny of the nation should resolutely break with the outdated confrontation concept, irrespective of differences in ideology, political view, faction and position, and take the patriotic road to mend the north-south relations as desired by the fellow countrymen. If the Koreans are to improve the ties and achieve the national reconciliation and unity, they should resolutely put an end to the confrontation move of the puppet conservatives. The reckless anti-reunification action taken by the puppet ruling forces of south Korea with the extreme hostility to the ideology and system of the fellow countrymen in the north is a serious barrier to the improvement of the relations. All Koreans in the north and the south and abroad should turn out in the nation-wide struggle to thwart the anti-reunification scheme of the puppet regime aimed at inciting and escalating distrust and antagonism among the compatriots.” (KCNA, “Improvement of Inter-Korean Ties Is Pressing Requirement: Rodong Sinmun,” January 26, 2017)

1/27/17

The White House has launched a review of its policy on North Korea, reflecting the growing nuclear threat from Pyongyang that Barack Obama told Donald Trump would represent his most pressing national security challenge. Two people familiar with the review, which the White House has not disclosed, said it was designed to determine what the Trump administration could do differently to address concerns that North Korea could strike the U.S. with a nuclear-armed missile. One person said Michael Flynn, national security adviser, ordered the review on January 27. Trump has personally had several detailed intelligence briefings in recent days, according to a third person familiar with the discussions. The move came just as James Mattis, defense secretary, was preparing to travel to South Korea then Japan to discuss ways the allies can tackle the mounting nuclear threat from Pyongyang. (Demetri Sevastopulo and Bryan Harris, “U.S. Launches Review of North Korea Policy,” Financial Times, February 2, 2017)

President Trump has been deferential to Jim Mattis, the retired Marine general sworn in today as defense secretary, who has quickly established himself as a top aide whose advice the president is willing to take. In a remarkable show of deference to his own subordinate, Trump said during an earlier news conference this morning with Theresa May, the British prime minister, that he would let Mattis decide about whether to use torture in interrogations. Mattis has said he does not believe torture is effective. “I don’t necessarily agree, but I will tell you that he will override because I’m giving him that power,” Trump said. “I’m going to rely on him. I happen to feel that it does work.” Before the refugee ban signing ceremony, Trump met with Mattis and his military chiefs for about an hour. The meeting in “the tank” included introductions for Trump to his military chiefs of staff. The meeting was attended by Michael Flynn, the national security adviser; Gen. Joseph Dunford, chairman of the Joint Chiefs of Staff; and the chiefs of the four services and the National Guard. The men discussed how to accelerate the fight against the Islamic State and North Korea and how to deal with a host of global challenges, said a defense official who was not authorized to talk

Liu and Bermudez: “New commercial satellite imagery indicates that operations at the 5 MWe plutonium production reactor located at North Korea’s Yongbyon Nuclear Scientific Research Center has likely resumed. Analysis from January 18 showed signs that Pyongyang was preparing to restart the reactor after spent fuel rods had previously been unloaded for a reprocessing campaign that produced additional plutonium for its nuclear weapons stockpile. Imagery from January 22 shows a water plume (most probably warm) originating from the cooling water outlet of the reactor, an indication that the reactor is very likely operating.” (Jack Liu and Joseph S. Bermudez, Jr., “North Korea’s Yongbyon Nuclear Facility: Operations Resume at the 5MWe Plutonium Production Reactor,” 38North, January 27, 2017)

Elleman: “Drawing from an excellent description of how North Korea might test an ICBM by John Schilling, it is easy to see that the most politically and technically feasible flight-test option would be to use an Unha rocket—possibly one modified to include higher-thrust engines for the upper stages—to evaluate warhead re-entry technologies. The test would likely succeed because the Unha is a relatively proven system, though using the satellite-carrier rocket as a military missile would throw cold water on Pyongyang’s claims that its space program is a strictly civilian enterprise. Further, relying on Unha technology would do little to address the development challenges associated with the KN-08 or KN-14 missiles, which appear to be optimized for the delivery of a nuclear weapon. As such, if North Korea’s primary objective is to develop an operational ICBM, Pyongyang would want to begin by conducting flight trials of the KN-08, KN-14 or both notwithstanding the strong probability initial test flights would fail. How the missiles are tested will also take into account geographic, political and diplomatic constraints. To avoid the risk of a simulated warhead landing on the territory of another country, North Korea would likely fly the missile to the east; however, an easterly trajectory would necessarily overfly Japan. A test of the two-stage KN-14 offers the greatest likelihood that the impact of the first stage would fall well short of Japan. Use of the three-stage KN-08 would leave little room for error in missing Japanese territory. It therefore seems reasonable that if North Korea decides to launch an ICBM toward the Pacific Ocean, the KN-14 would be the preferred missile. The United States and Japan operate Aegis ships armed with SM-3 Block 1A and 1B interceptors in the East Sea. These ships are capable of intercepting short, medium and intermediate range ballistic missiles in the mid-course and terminal phases of flight. Tests to validate the performance of the SM-3 Block 1 interceptors are ongoing and to date have been largely successful. SM-3 interceptors have never been tested against an ICBM, nor have they been tested against any missile in the boost or ascent phase of flight. In other words, boost- or ascent phase intercepts using SM-3 interceptors are an unproven, hypothetical capability. An Aegis ship armed with SM-3 Block 1A or B interceptors could, in principle, intercept a North Korean KN-14 ICBM under a limited set of circumstances. If North Korea flies a KN-14 on a minimum-energy trajectory, and the Aegis ship is located 500 km from the launch site, intercepts are kinematically possible. If, however, Pyongyang launches the KN-14 on steeper trajectories, the possibilities are reduced. For lofted trajectories roughly 18 degrees steeper than minimum-energy ones, no intercept is possible. In other words, North Korea can defeat America’s current sea-based capabilities by flying the ICBM to higher altitudes and shorter distances, while still gaining the necessary engineering information to support missile development. Though it must be noted, as stated previously, the KN-14 (or KN-08) is more likely than not to fail on its own during initial flight tests. But even if the US was improbably fortunate, and North Korea launched a KN-14 directly over an Aegis ship, and the trajectory is not sufficiently lofted, it is doubtful that a successful intercept would occur. There are multiple operational reasons why an intercept is beyond current capabilities. First, it is doubtful that an Aegis ship would be close enough (500 km or less from the KN-14 launch location) at the right time. The US or Japan would be placing their Aegis boats at considerable risk if either attempted to move closer than 200 km off North Korea’s coast while waiting for a launch. At the very least, good fortune would be needed to have an Aegis ship in the right place, at the right
President Donald Trump spoke with Korea’s acting president, Prime Minister Hwang Kyo-ahn, over the phone. “The two discussed the importance of the U.S.-Republic of Korea [ROK] alliance,” the White House said in a statement. “President Trump reiterated our ironclad commitment to defend the ROK, including through the provision of extended deterrence, using the full range of military capabilities.” The statement confirmed the two leaders agreed to “take steps to strengthen joint defense capabilities” to defend against possible threats and provocations from North Korea, and also discussed the upcoming visit of Secretary of Defense James Mattis to Korea. “The conversation took place at the request of the White House,” said an official of the Prime Minister’s Office. “It was the first time that Trump spoke with Hwang after his inauguration.” “The U.S.-Korea relations have developed into a comprehensive and strategic alliance in the past 60 years and must be strengthened further,” Hwang told Trump, according to the Prime Minister’s Office. “Should there be a North Korean provocation in the future, the United States and South Korea will have to respond strongly together.” The Prime Minister’s Office in a press release said that Trump responded by saying the United States will be with Korea “100 percent” of the time, and that the U.S.-Korea relations will be “better than ever before.” The two also reportedly discussed the U.S. Terminal High Altitude Area Defense system to be installed in Korea to counter the military threats from the North. Hwang has been serving as acting president since, though some critics have questioned the extent and power of this role. Hwang has been criticized by some politicians as a possible dark horse in the upcoming presidential election using his new position to his advantage. “It is troubling to see Hwang, an acting president, taking the role for more than it actually is,” Rep. Chang Je-won of the Bareun Party said in a written statement. “[Though he is not the president,] he hosted the New Year press briefing and now is holding talks with leaders of other countries.” (Esther Chung and Jeong Yong-soo, “Trump Chats with Acting President for 30 Minutes,” JoongAng Ilbo, January 31, 2017)
Joint Chiefs of Staff (JCS) Chairman Gen. Lee Sun-jin asked Washington to strengthen its
deterrence against North Korea, including deploying U.S. strategic assets in South Korea. During
a 20-minute phone call with his U.S. counterpart, Gen. Joseph Dunford, Lee stressed the
importance of implementing measures agreed to in December during the inaugural meeting of the
allies' Extended Deterrence Strategy and Consultation Group (EDSCG) in Washington. At the
time, the United States reaffirmed its commitment to regularly deploying strategic weapons, such as
nuclear-capable bombers, to South Korea to better deter Pyongyang's growing nuclear and
missile threats. This is the first time that Seoul brought up the issue of the deployment of strategic
weapons since the inauguration of President Donald Trump's administration. The telephone
conversation took place a day after talks between Defense Minister Han Min-koo and U.S.
Defense Secretary James Mattis, during which the latter vowed to offer extended deterrence,
which refers to Washington's stated commitment to defend its ally by mobilizing all military
capabilities — nuclear and conventional — to deal with the North's aggression. "During their
phone conversation, the two generals also reaffirmed the allies' commitment to forming a strong
joint defensive posture against the North," the JCS said, adding that the two agreed on the greater
possibility of the isolated state pushing forward with strategic and tactical provocations to show
off its advanced nuclear capability around major events in the isolated state. Lee cited North
Korean leader Kim Jong-un's birthday on February 16, the allies' Key Resolve exercise in March
and the North's late founder Kim Il-sung's birthday on April 15 as possible days for such
provocations, according to the JCS. Following the talks, expectations are growing that Han and
Mattis will discuss whether Washington will deploy U.S. strategic assets to South Korea on a
regular rotational basis during their upcoming meeting scheduled for Friday in Seoul. Mattis will
arrive here today for a two-day visit on his first overseas trip after being appointed to head the
Pentagon. He said he chose South Korea as his first destination as the Seoul-Washington alliance
is significant amid growing North Korean threats. Gen. Dunford will accompany Mattis. During
the annual Security Consultative Meeting (SCM) in October, Minister Han and former U.S.
Defense Secretary Ash Carter agreed to conduct a review of whether to deploy strategic military
assets to the South on a rotational basis. The U.S. armed forces temporarily dispatched strategic
assets such as B-52 and B-1B bombers to Seoul last year in response to Pyongyang's two nuclear
tests and missile launches. Observers raised the likelihood that the bombers and nuclear-powered
aircraft carriers could participate in the Key Resolve exercise. Meanwhile, the United States plans
to deploy 12 F-16 fighter planes to South Korea this month, the U.S. Pacific Air Forces Command
said. "Approximately 200 airmen and 12 F-16 Fighting Falcons with the 119th Fighter Squadron
from Atlantic City Air National Guard Base, New Jersey, are set to deploy in February to Osan
Air Base" in South Korea, the command said on its website. The U.S. Pacific Air Forces routinely
deploys a unit to the region in a bid to counter North Korea's growing threats and bolster the
Seoul-Washington alliance since 2004. The move is part of its "theater security packages", which
aims to help "maintain a deterrent against threats to regional security and stability," the command
said. The planned action would mark the first deployment of military assets by the U.S. to South
Korea since Trump took office last month. (Jun Ji-hye, “Korea, U.S. Military Chiefs Discuss
Contingency Plans,” Korea Times, February 1, 2017)

Rodong Sinmun: “The DPRK set it as a primary task to steadily improve the inter-Korean relations
in the whole course of the cause of national reunification and has spared no efforts to carry it out.
…The DPRK remains unchanged in its stand to achieve the reunification of the country and
prosperity of the nation through improvement of the north-south relations. …Its proactive
measures for mending the north-south relations are prompted by the Juche-based stand to settle the
issue of national reunification by the concerted efforts of the Koreans responsible for it, the
patriotic standpoint of prioritizing the requirements and interests common to the nation. No one
can replace the Korean nation in settling its issue. When the Koreans pool their will and intention,
they will have nothing impossible to settle and can properly improve the north-south relations as
desired by them. How to approach toward improved inter-Korean relations is the touchstone
distinguishing reunification from division and peace from war. It is necessary to eliminate the anti-
reunification forces to the last one in order to improve the inter-Korean relations as early as
possible. The reality goes to prove that the Korean nation cannot achieve peace and the
reunification of the country but may suffer irrevocable disasters of a nuclear war unless positive
measures are taken to remove the obstacles to mending the north-south relations.” (KCNA, “DPRK Remains Unchanged in Its Stand to Mend Inter-Korean Relations: Rodong Sinmun, January 31, 2017)

Roberta Cohen: “North Korea’s accelerated nuclear weapons development and threats to test intercontinental ballistic missiles to target American cities have prompted calls to the Trump administration to initiate negotiations on denuclearization. But denuclearization talks alone will not be sufficient. The threat to the United States emanates not only from North Korea’s weapons of mass destruction but also from the nature of the regime. A nuclear-empowered country with North Korea’s unparalleled human rights record is a danger to the rest of the world. If a denuclearization agreement is to inspire confidence and trust, it would have to be matched by efforts to mitigate serious human rights abuses at the foundation of the regime. During the Cold War, the United States did not limit its discussions with the USSR to one subject—arms reduction. Instead, it insisted upon an expanded information flow between the communist bloc and the West and a more open society; and advocated for core human rights concerns—Soviet Jewish emigration, the protection of Pentecostals and other Christians, the release of political dissidents, the unification of families and the formation of human rights organizations to monitor the Helsinki Final Act. It raised these concerns in bilateral discussions and in the multilateral Helsinki process. Non-interference in the internal affairs of other countries, a doctrine espoused by the Soviet Union to shield itself from criticism was not accepted by the US in its negotiations with Moscow. Neither should it be in the case of North Korea, as increasing numbers of policy experts now point out. A recent Council on Foreign Relations (CFR) Task Force report suggests that nuclear negotiations could expand into broader talks and that a peace agreement and normalization of relations will have to depend on both “nuclear disarmament” and “progress on human rights.” Even more cautious strategists also acknowledge that human rights must be part of any future negotiation. But which human rights issues should be raised? The UN General Assembly’s annual resolution on North Korea’s human rights situation—adopted by consensus in 2016—lists a wide range of violations, many said to constitute crimes against humanity. The UN Commission of Inquiry (COI)’s 400-page report provides extensive backup information on the crimes committed. Beginning in 2016, the US sanctioned some 30 North Korean individuals and entities responsible for serious human rights abuses, from the head of state down. It follows that any human rights negotiations between the US and North Korea would have to address these serious issues of concern rather than limit talks to the lower standard that is sometimes proposed. For example, it has been argued that the US should raise at the outset of negotiations only those human rights issues the DPRK is ready to discuss, in particular, “low hanging fruit,” that is, the rights of women, children and the disabled to which North Korea agreed in a UN process known as the Universal Periodic Review (UPR). Such initial talks would presumably also encompass the recommendations agreed to by North Korea concerning the rights to food, health care and education. These are matters worthy of discussion, in particular, non-discrimination in access to food and health care in light of North Korea’s discriminatory songbun (class) system; and the DPRK’s promised increase in governmental expenditures on health care and agriculture. But to limit negotiations, even initially, to issues selected by North Korea would be to set aside many of the serious human rights concerns that the UN General Assembly and Human Rights Council have identified over the past decade in resolutions and reports as well as those raised publicly by the US and put forward in its own legislation. A permissive approach born out of fear that “a forceful human rights policy may backfire” and put “at risk” security objectives would abet the denial of rights as fundamental as the right to life, freedom of expression and movement, protection from torture and cruel and inhuman treatment, protection from arbitrary detention and imprisonment, protection from deliberate starvation and more. That is, the rights set forth in UN human rights treaties to which the DPRK has acceded, and from which it should not be given a pass. North Korea will not become less dangerous by being asked to promulgate another law on economic, social and cultural rights, ratify more human rights treaties or add more women to public office—per the UPR. Such issues can and should be taken up and advanced by UN treaty bodies, committees and humanitarian organizations on the ground. What must be given attention by the US is that North Korea at the UPR excluded from consideration or redress the many violations deemed by the COI to have crossed “the high threshold of crimes against humanity.” If
negotiations are to be credible, they will have to address these issues. The US should begin with those specific to its own interests, namely: The release of all Americans imprisoned in North Korea. Currently, there are two, including a university student on charges that would not merit more than a fine in other countries. A negotiation must also include a warning against the detention of future Americans as hostages—over the past eight years, 10 Americans have been detained and then released for a political price. The reunion of Korean Americans with their families in the North separated since the Korean War. Of the 1.7 million Korean Americans in the US, some 100,000 are estimated to have families in the North, but just about none have been allowed to meet with their relatives. A resolution approved by Congress in 2016 calls upon North Korea to allow such reunions. Another important priority would be access to North Korea by human rights and humanitarian actors since access is an effective entry point for addressing human rights issues. It would enable North Koreans to engage with the world, bring needed information and knowhow into the country, and correct the human rights findings it says are fabrications. In particular, the US should insist on: Access for the UN Special Rapporteur on human rights in the DPRK and for the UN High Commissioner for Human Rights, whose offices have requested entry for more than a decade. Since 2014, North Korea has indicated it might allow entry to these officials although it has also obstructed their proposed visits. At the UPR, North Korea agreed to cooperate with UN human rights mechanisms. At the UPR, the DPRK accepted “free and unimpeded access to all populations in need” so that humanitarian aid can reach “the most vulnerable.” The US should continue to support this principle together with the language adopted by General Assembly resolutions that the most vulnerable include children, pregnant and lactating women, the elderly, the disabled and “political prisoners,” those held in a cruel network of prison camps. Although in 2012, the US regarded prisoners in the prison labor camps as too sensitive to talk about, its statements and policy changed dramatically after satellite imagery, former prisoner and guard testimonies and the COI report offered evidence of the camps’ existence and the cruelty practiced there. In 2016, Congress required the State Department by law to compile and provide information about the prison camps; and US human rights sanctions came about in part because of the camps. The intention is clear: the US must support the access of humanitarian agencies not only to places North Korea allows, but to the most vulnerable in camps and detention facilities. And accordingly, the US must not shy away from raising the most difficult issue—the release of tens of thousands of men, women and children held in political prison camps, reeducation camps and other detention facilities deprived of adequate food and medical care and subject to inhumane treatment. The COI found North Korea’s camps to be reminiscent of those of World War II, and UN resolutions have made them of concern internationally. Although North Korea denies the existence of some of these camps and objects to their being spoken about, it knows that US officials and intelligence agencies have information about these facilities as do members of Congress, the UN, other governments and NGOs and that the US is likely to raise them in discussion. The first step should be to press for the release of the children and families incarcerated with the political prisoners as a result of North Korea’s practice of ‘guilt by association.’ Their liberation should not affect the security of the state. Thereafter, a negotiation should be proposed, led by the UN or an organization like the International Committee of the Red Cross, to support the release of all North Koreans held on political and religious grounds, as called for by UN resolutions. The US should also raise the issue of abduction of foreigners by North Korea, a practice affecting countries’ security outside North Korea’s borders, in particular Japan and South Korea. The lifting of US human rights sanctions depends, in fact, on steps toward resolution of this issue. Most recently, information surfaced about an American who might have been abducted by North Korea while in China in 2012. Clearly, there is need for: An accounting of the numbers and whereabouts of abducted foreigners and the voluntary repatriation of those held and their families. Although Japan has led negotiations regarding abductees from its country and has achieved the return of a small number, it has called for US and international support. A multilateral effort should be undertaken. Finally, the US should seek to expand information exchanges, internet usage, radio broadcasts, DVDs, USBs and other messaging that could bring into North Korea needed information about life in other countries and how to address problems North Koreans face, whether in business, private markets, agriculture or other fields. A more open society and freedom of information would also help assure the success of denuclearization agreements. The US goal should be a negotiation, not a dialogue with North Korea. DPRK
dialogues with EU members in the past have been described as sterile legal conversations about provisions in UN human rights treaties. What must be conveyed to North Korea is that political acceptance by the international community, economic investment in its economy, and greater national security will require changes in its human rights practices. The negotiation should be focused on results. In fact, in the past, North Korea has, at times, released Americans, arranged for family meetings at least as concerns South Korea, released some abductees, provided information on others and offered visits to UN human rights officials. Needed now is for North Korea to genuinely carry out these steps and expand them to include access to the camps and release of prisoners. If either a peace treaty or normalization of relations is important to the North, then it should be ready to consider concessions on these issues. Other incentives the US will offer will vary. For some of the family reunification meetings between North and South Koreans, Pyongyang reportedly expected cash payments. In its discussions with Japan over abductions, North Korea asked for and received the easing of financial sanctions and other concessions in exchange for information. Food and fuel aid have been a major incentive in past nuclear negotiations with the DPRK. For the failed “Leap Day Agreement” of 2012, for instance, Pyongyang committed to a freeze on nuclear weapons in exchange for the US provision of food for some 900,000 North Koreans. Sometimes, the question is posed whether North Korea will try to barter away human rights concerns, in particular, accountability, in exchange for making nuclear concessions. But if the past is any guide, North Korea appears to prefer concrete and substantial material gains as a quid pro quo for denuclearization. In the case of human rights, it has confined its bargaining to objectives within that arena—offering the Special Rapporteur a visit in exchange for the removal of the accountability provisions from a General Assembly resolution. Certainly, were nuclear negotiations to take place, diplomacy and common sense would dictate that the US not use the occasion to publicly call for the accountability of people with whom the US is negotiating. But at the UN, over the past five years, the US, the EU, Japan, South Korea and more than 100 other states have stood firmly behind strong resolutions on North Korea’s human rights situation, including accountability. This multilateral effort is the only human rights measure that has ever unnerved North Korea, and could, over time, lead to results. It was the General Assembly’s reference to crimes against humanity and the ICC that prompted North Korea to offer visits to UN human rights officials. Its sensitivity even prompted Victor Cha and Robert Gallucci to comment that human rights could serve as “a source of leverage and pressure on North Korea for the nuclear issue.” Similarly, in the United States, the human rights provisions in the North Korea Sanctions Act, adopted by near unanimity in Congress cannot simply be bartered away. Specific human rights steps are required to suspend and then terminate sanctions. Choosing nuclear issues at the expense of human rights would be to ignore what the US and world now know about North Korea. It also would be out of step with a well-established part of US policy—expressing Americans’ “shared values of democracy, human rights and the rule of law,” which “are probably the most important thing that defines us.” If North Korea refuses the political and economic benefits that could accrue from overall negotiations, and continues to defy UN resolutions, it will undoubtedly face more potent steps to bring it to the table. In the nuclear area, experts speak of more coercive economic and military measures, while the Security Council in its latest resolution mentions the possible threat of suspension from the UN if North Korea fails to cooperate. In the human rights area, there are stronger measures to take as well. The CFR Task Force recommended mobilizing other states to adopt human rights sanctions like those the US has enacted and also to explore the withdrawal of North Korea’s credentials at the General Assembly. It proposes giving North Korea two years to take human rights steps to avert withdrawal. Some might object that withdrawal would only increase North Korea’s isolation, but allowing it to continue to defy the world body undermines the longstanding system established to uphold human rights monitoring and scrutiny and removes pressure on the regime to make improvements. Human rights talks may or may not succeed with North Korea, but the relationship between security and human rights makes it essential to try to encompass both goals in US policy, make clear to North Korea that America stands for both and that improved relations will require both to be taken into account.” (Roberta Cohen, “A Serious Human Rights Negotiation with North Korea,” 38North, February 1, 2017)
North Korea fired its state security minister last month, presumably over corruption, abuse of power and torture committed by his agency, according to rival South Korea's government on Friday. Jeong Joon Hee, spokesman for the Unification Ministry, said the sacking of Kim Won Hong, who had been seen as close to leader Kim Jong Un, might cause instability in the country's leadership by causing more fear into the ruling elite. North Korea has not said anything about Kim Hong, and Jeong did not say how the South's government obtained the information. South Korea has a spotty record of tracking developments in North Korea as information about the secretive, authoritarian state is often impossible to confirm. It is not clear if Kim Hong's alleged sacking means he has been permanently removed from North Korea's leadership circle. (Associated Press, “Seoul Says North Korea Has Fired Its Security Chief,” February 2, 2017)

On his first mission to reassure an important American ally, Defense Secretary Jim Mattis met on October 2 with top South Korean officials, who agreed to push ahead with the deployment of a new missile defense system. “THAAD is for defense of our allies’ people, of our troops who are committed to their defense,” Mattis told reporters. “Were it not for the provocative behavior of North Korea, we would have no need for THAAD out here.” Mattis added. “There is no other nation that needs to be concerned about THAAD.” Trump’s various messages — some spontaneous, some premeditated — have turned Mattis’s otherwise traditional statements of support for South Korea and Japan into messages with strategic importance. “It is a priority for President Trump’s administration to pay attention to the northwest Pacific,” Mattis said. “I am going to get current by listening to them, finding out where their issues are, and then we are going to work together and strengthen our alliance.” Mattis met with an array of officials in Seoul, including Hwang, who is the country’s prime minister as well as serving as acting president during the impeachment trial of President Park Geun-hye. “Mattis is going to meet with people who probably aren’t going to be in office in a few months,” said Joel S. Wit, a Korea expert at the School of Advanced International Studies at Johns Hopkins University. During Mattis’s meeting with Hwang, the allies confirmed that they would deploy the THAAD system as planned. “Secretary Mattis reaffirmed the United States’ firm defense commitment to South Korea, including the provision of extended deterrence, and said that the Trump administration will be treating the North Korean nuclear threat as a top-priority security issue,” the office of Kim Kwan-jin, South Korea’s director of national security, said in a statement. Mindful of the possible early election, crucial opposition leaders in Seoul are opposing the deployment of the THAAD system. They say it would do little to defend South Korea from the North’s plentiful short-range missiles but would anger China, which might retaliate economically. Moon Jae-in, an opposition leader who is considered the front-runner among potential presidential candidates, has argued that South Korea should use the THAAD program as diplomatic leverage with China, keeping open the possibility that it would not be deployed if China helped rein in North Korea. “Given our standoff with North Korea and its nuclear program, our security and the alliance with the United States are our top priority,” Moon told reporters recently. “But the best scenario for us is when the U.S. and China get along well. If there is friction between the two, it’s not going to be easy for us.” Hwang, in contrast, has said that the THAAD deployment is “inevitable” because of the North’s rapidly growing missile threat. “THAAD is a defense tool whose deployment should not be delayed any more,” he said at a recent news conference. “We are explaining our position in various ways to neighboring countries like China, who are concerned about the THAAD deployment.” (Michael R. Gordon, “Mattis, in South Korea, Tries to Reassure an Ally as Regional Tensions Rise,” New York Times, February 3, 2017, p. A-4) Mattis promised an “effective and overwhelming” response to any use of nuclear weapons against America or its allies, delivering a firm message to North Korea during his first overseas trip. Mattis said during a meeting on October 3 with South Korean Defense Minister Han Min-koo that the U.S.'s defense commitment was "ironclad" in the face of Pyongyang's "threatening rhetoric and behavior." "Any attack on the United States or on our allies will be defeated and any use of nuclear weapons will be met with a response that will be effective and overwhelming," he said. Mattis cited the deployment in South Korea of a U.S. missile-defense system, known as a Terminal High-Altitude Area Defense system, or THAAD, as a sign of Washington's commitment to protect South Koreans and the roughly 28,500 U.S. troops stationed in the country. Mattis visited South Korea's acting president and foreign minister before meeting with Han. Mattis said that over the course of his two-day trip, he "gained a deeper sense of the
trusted bonds between our countries." Mattis also called the U.S.-South Korea alliance "the linchpin of peace and stability in the Asia-Pacific region." His reassurances have resonated in Seoul. Meeting with Foreign Minister Yun Byung-se yesterday, Mattis emphasized the "100% reliability" of the U.S. commitment to South Korea, according to South Korea's Ministry of Foreign Affairs. A Pentagon spokesman said that during a meeting with acting President Hwang Kyo-ahn, Mattis "emphasized the priority that President Trump places on the Asia-Pacific." The acting president's office said that Mattis said that Trump had instructed him to "clearly deliver that the U.S. government is putting a priority on South Korea and the U.S.-Korea alliance." (Jonathan Cheng, “U.S. Promises ‘Effective and Overwhelming’ Response to Use of Nuclear Weapons,” Wall Street Journal, February 3, 2017)

The White House has launched a review of its North Korea policy, reflecting the growing nuclear threat from Pyongyang that Barack Obama told Donald Trump would represent his most pressing national security challenge. Two people familiar with the review, which the White House has not disclosed, said it was designed to determine what the Trump administration could do differently to address concerns that North Korea could strike the U.S. with a nuclear-armed missile. One person said that Michael Flynn, national security adviser, ordered the review today. The U.S. president has personally has several detailed intelligence briefings in recent days, according to a third person familiar with the discussions. (Demetri Sevastopulo and Bryan Harris, “White House Shifts Focus to North Korea in Face of Nuclear Threat,” Financial Times, February 3, 2017)

China's imports of hard coal from North Korea jumped in December despite U.N. sanctions, according to recent data. This suggests Beijing has continued to allow Pyongyang to bypass international sanctions designed to reduce the reclusive country's coal sales, its biggest foreign exchange source. The latest data from China's Commerce Department shows that Beijing imported 2 million tons of hard coal (anthracite) worth $168 million in December alone, bringing the 2016 annual figure to 22.5 million tons worth $1.2 billion. The December figure was twice the volume and three times the value approved by the latest United Nations Security Council (UNSC) sanctions imposed late November. On November 30, the council, including China, adopted a set of sanctions over North Korea's September nuclear test, imposing an export limit of 7.5 million tons for 2017 valued at $401 million. Separately, it put a cap on December exports of 1 million tons ($53 million). "I think China is protecting the Kim regime even though it doesn't really want to," William Brown, a non-resident research fellow at the Korea Economic Research Institute, said. He is also professor at the Georgetown University School of Foreign Service. "It senses more danger from radical change than from the status quo or from slow change," he said. (Kim Jae-kyoung, “China Keeps on Pampering N. Korea,” Korea Times, February 3, 2017)

Elleman: “Little is known about the missile, though some have speculated that it relies on a liquid-fueled engine originally developed by the Isayev Design Bureau for the Soviet R-27 submarine-launched ballistic missile. If so, this could make it a variant of the North Korean Musudan (KN-10), an intermediate-range ballistic missile (IRBM) that uses the same engine and that Pyongyang began flight testing in 2016. The ramifications of such a connection would be significant, not only because it would signify ongoing close Iranian-North Korean missile cooperation, but also because such an engine would be a foundation for Iran to develop a viable intercontinental ballistic missile (ICBM). However, contrary to some assertions, the available evidence cannot verify speculation that the Iranian missile is similar to North Korea’s Musudan, or reports that Pyongyang exported R-27 engines to Iran. … Fox News asserted that Iran tested a BM-25 missile, built with R-27 engine technology imported from North Korea in July 2016. However, that report was not independently confirmed by other media sources. Moreover, during a briefing to journalists on February 1, 2017, a National Security Council official described the missile tested as a Shahab, a missile based on older North Korean technology. Given these uncertainties, there are four possibilities regarding Iran’s new ballistic missile, ordered from most likely to least likely. The first possibility is that Iran tested a Shahab-3 medium-range ballistic missile (MRBM) based on North Korea’s Nodong missile. Initially test fired by Tehran in 1998, this weapon has a range of 950 kilometers when carrying a 1,000-kg warhead. Iran has created variants of the
Shahab-3 called the Ghadr, and most recently the Emad, which deliver a smaller 750-kg payload to roughly 1,600 kilometers. The Emad, the most recent design, is similar to the Ghadr, but in principle could become more accurate since fins on its base allow the warhead to alter its flight path as it re-enters the atmosphere. Perfecting the new re-entry vehicle design requires Iran to conduct a dozen or more flight tests, essentially creating a new missile. The second possibility is that the missile tested was a variant of the Shahab-2, based on the North's Scud-C missile that was imported by Iran from North Korea in the late-1980s and early-1990s, called the Qiam. It has a maximum range of about 700 kilometers, which would seemingly eliminate it as well as any other Scud variants as the possible subject of the recent test flight. However, North Korea unveiled and tested a one-meter diameter Scud in the summer of 2016 capable of reaching a distance of about 1,000 kilometers. There is no evidence to suggest Pyongyang has transferred one-meter Scuds to Tehran, but it is within Iran's technical and industrial capacity to develop a clone of the North Korean missile. Third, the recent Iranian test may have been a solid-fueled missile derived from Iran's Sajjil program which has not been tested since 2011. A missile consisting of only the Sajjil's first stage would have an approximate range of 1,000 kilometers and could be used to target Arab Gulf states and US forces in the region from less-vulnerable launch positions in Iran's interior. The final and least likely possibility is that Iran tested a missile that is essentially the same as the North Korean Musudan. This is unlikely for three reasons. First, if the Iranian missile were modeled on the 3,000-kilometer-range Musudan, it would be an intermediate-range ballistic missile, contrary to the US description of the Khorramshahr as a medium-range ballistic missile.

Second, while the July 2016 and January 2017 test flights conducted by Iran were largely successful, North Korea's tests of the Musudan failed soon after launch in six of eight attempts, a wide discrepancy that is difficult to explain even if, as some might assert, Iran is more capable at missile development. Finally, flying a Musudan to only 1,000 kilometers is unnecessary for Iran, since it has a much larger flight corridor within which test flights can be performed and has done so. There is also no reason to believe that Iran could not test a BM-25 to maximum range—instead, if the Khorramshahr is based on the BM-25, it would have flown a very lofted trajectory. In fact, the flight paths associated with each of the possibilities vary considerably, with a possible BM-25 launch flying to the highest altitude, and the one-meter Scud taking the flattest trajectory. The countries monitoring Iranian air space would certainly be able to distinguish between a BM-25 missile test from one involving a Ghadr or Emad. A one-meter Scud missile test would differ from either a BM-25 or Ghadr/Emad test. If a single-stage missile based on Sajjil technology were tested, its flight path and acceleration profile during boost phase would be different from that of a one-meter Scud. Given these differences, it is difficult to imagine that the US government does not know the identity of the missiles tested last July and in January 2017. The strategic implications of Tehran's recent missile test and the possibility of continued missile cooperation with Pyongyang vary depending on what was actually launched. If the Khorramshahr was a Shahab-3 variant based, in part, on old Nodong technology acquired from North Korea years ago, then Iran is keeping with a pattern it has pursued over the past half dozen years—prioritizing greater accuracy and enhanced military utility. However, it would not be evidence of ongoing missile cooperation with North Korea. If the test involved either a one-meter Scud or a single-stage version of the Sajjil, then Iran has refocused its missile acquisition efforts in an attempt to diversify its stockpile and increase operational flexibility. In this case, only the development of a one-meter Scud would indicate ongoing cooperation with Pyongyang. Finally, in the least likely scenario, if the Khorramshahr did employ an R-27 engine, which uses high-performance propellants, it would signify that not only does Iran continue to have close missile cooperation with North Korea, it could also develop a road-mobile, two-stage intercontinental ballistic missile capable of striking the US mainland. However, such a development would not occur overnight, and would require four or five years of observable flight tests.” (Michael Elleman, “Iran’s Missile Test: Getting the Facts Straight on North Korea’s Cooperation,” 38North, February 3, 2017)

Abrahamian: “The leadership of the DPRK certainly realizes that over the next five years their international environment could develop in several different ways—and most of the scenarios would have a negative impact on economic growth and exports. Sanctions could increase, China’s economic slowdown could continue, or other consumers of North Korean goods could abandon traditional partnerships with the DPRK in response to South Korean and US diplomatic pressure.
Although it is possible that a breakthrough on the nuclear issue could ease international pressure, Pyongyang cannot count on such a long shot coming to pass. As such, it makes sense for the country to keep its goals vague. It is probably unclear—even to the leaders themselves—to what extent they will incorporate the market economy into official plans for growth. Their policy steps after the Party Congress assumed a decidedly traditionalist tenor with the June commencement of a 200-day “speed battle,” a competitive, Stakhanovite, nationally mandated program of overtime and additional work. This battle followed directly on the heels of a 70-day speed battle that was started in February and lasted until just before the Party Congress. While this grueling work schedule may provide tangible boosts in some sectors, it does little to solve the bottlenecks or key shortages of capital investment that are major inhibitors of growth. If the international environment shapes how the leadership in Pyongyang makes economic promises and policies, what room is there for more reform in the current context? UN, US and ROK sanctions are challenging the DPRK’s economic growth streak of recent years. Facing external pressure, leaders in Pyongyang recognize it will be harder than ever to attract capital and investment from abroad. In theory, they could help alleviate this by improving protection of property rights and access to information and communication tools. However, they have found this hard to do. Some experimentation with greater information access happened between 2010 and 2013 and more companies and organizations appeared to get online, but they still faced serious restrictions. Moreover, property rights also remain politically sensitive; while there is a very active grey market, formal property ownership rights extend only to two apartment blocks in the Rason Special Economic Zone. In both of these areas, concerns over security and stability appeared to supersede any interest in reforms that could spur economic growth. Banking, then, is perhaps the only consequential economic sector poised for potential near-term change. Indeed, that change is underway. In a way, North Korea is taking it back to the 2000s, when they began trying to strengthen the lending functions of banks by encouraging them to attract depositors. In 2004, the DPRK Central Bank Law was passed, followed in 2006 by the DPRK Commercial Bank Law. The latter was supposed to codify rules for two-tier banking and allow “commercial banks to positively mobilize idle funds, for which they can take savings.” Unfortunately, a lack of expertise and commitment hindered progress. Kim Jong Il was primarily focused on the nuclear program and attendant diplomacy, and then suffered ill health in 2008. The 2009 currency revaluation then shattered any faith that North Koreans had in their banking system, prompting most to keep as much of their savings as possible in foreign cash. Recovering the trust of potential North Korean depositors has been an ongoing, years-long project, but the country has steadily trained them to believe in banking again. This has been no easy task. Re-establishing trust in non-cash financial products may have begun with cash cards, which are now available in competing versions and accepted widely in Pyongyang and elsewhere. Such cards are not linked to bank accounts, but they have helped citizens become used to reliable, non-cash transactions. Cash still remains king for most people, and many in Pyongyang and elsewhere have Narae or other cash cards but no bank accounts. Ultimately, though, banks will need to attract deposits for the commercial banking sector to function. To this end, North Korean financial institutions have competed for retail customers since at least 2012, when the DPRK’s Civilian Cooperation Bank reportedly offered interest rates ranging from 1 percent for general deposits to 9 percent for 10-year deposits. Chinmyong Joint Bank, which ran a booth at the 2016 Pyongyang Spring International Trade Fair, offered interest rates of 2 percent on three-month deposits, 3 percent on six-month deposits and 7 percent on one-year deposits. These are extremely high rates, arousing skepticism among foreign observers that such returns could possibly be paid out. Possibly in another bid to attract deposits, North Korean banks have improved their use of technology. Retail financial products now include a mobile app that allows payments and top-ups on the go. Corporations appear increasingly reliant on banking and companies have received access to an electronic fingerprint verification system for ensuring secure transfers between one another. Interest in the financial sector has generally grown under Kim Jong Un, as more students and delegations have been sent abroad to explore issues related to banking, and relevant domestic education has increased. Also in the last couple of years, North Korean media have made a rhetorical return to the mid-2000s by lamenting the wastefulness of “idle funds.” As The Kim Il Sung University Gazette noted in 2014: “Some of the funds that are being circulated in the market have strayed away from the normal production process and distribution passage and remain harbored in the hands of organizations, enterprises, and people …
mobilization of idle funds shall meet the funding needs of the state and serve as a source of supplementary income to increase state revenue." The last sentence implies a key risk: if banks in the DPRK take deposits to fund loans, those loans have to perform. If banks are forced to make loans to economically non-viable state projects, depositors could lose out, quickly undermining the process of banking-sector development. Despite this potential pitfall, greater regulation and formalization of the system of deposits and lending would be a positive step. Informal financing currently dominates the commercial loan market with little guidance from the state and interest rates can surpass 15 percent. By offering formal loans that are cheaper, North Korea's banks could help drive growth. Much remains to be done. The central bank has limited experience managing a banking sector, and the experience of most North Korean bank employees is in many cases limited to being transaction service providers, catering to trading companies that conduct foreign transactions. Moving forward, it will be crucial for these bankers to properly set rates and ensure reliable and transparent practices in an economy known for exactly the opposite. Technocrats realize the high stakes in this sector, but if managed properly, North Korea's banks could help improve the functioning of the economy. This may contribute to the sense that the country can put off other key reforms. Under Kim Jong Un, the economy has grown and North Korea's quality of life has improved. His personal brand is very much connected to the economy, and Pyongyang is reluctant to experiment with rules that could disrupt social order or minimize asymmetric advantages it holds over its enemies by having most of its systems offline. Fortunately, though the pace of economic experimentation has slowed significantly since 2013, no significant rollback of prior changes has taken place. Facing a tougher external environment, Pyongyang is responding by trying to invigorate the domestic banking sector. It will be important for observers to pay attention to this sector, and it will be even more important for government officials to regulate and communicate with stakeholders. Such communication is necessary to ensure the development of effective management, as well as trust in banking institutions among North Korean citizens.” (Andray Abrahamian, “Banking on North Korea’s Banks?” 38North, February 3, 2017)

Visiting U.S. Defense Secretary Jim Mattis clearly said during talks with Prime Minister Shinzo Abe on October 3 that the Senkaku Islands in Okinawa Prefecture are within the scope of Article 5 of the Japan-U.S. Security Treaty, which obliges the United States to defend Japan, according to a senior government official who attended the meeting. At the opening of the meeting, Abe said he hopes and is certain the two countries “can demonstrate in our country and abroad that the Japan-U.S. alliance is unshakable.” In response, Mattis said that he intended to make clear during the meeting that Article 5 of the security treaty will be important five years or 10 years from now, just as it was a year ago or five years ago. Mattis arrived in Tokyo on the day to hold talks with the prime minister, Defense Minister Inada Tomomi and other members of Abe’s Cabinet to exchange views on the security environment in East Asia and to address mutual security concerns. (Yomiuri Shim bun, “Abe, Mattis Reaffirm U.S. Commitment on Senkakus,” February 3, 2017)

North Korea still has a lot of work to do in developing an operational intercontinental ballistic missile (ICBM), so the test it threatened to do will almost certainly end in failure, according to military experts. They said the North seems to have made progress in some technologies related to the intermediate- and long-range missile, such as stage separation, clustering of engines and guidance and control systems, but its progress in reentry vehicle capability and engine performance remain dubious. Pyongyang has never flight-tested road-mobile KN-08 or KN-14 ICBMs. On January 19, the reclusive state reportedly has built two missiles, presumed to be the new ICBMs, and placed them on transport erector launchers (TELs) for the North's first test-firing of ICBMs. However, Leon Sigal, director of the Northeast Asia Cooperative Security Project at the Social Science Research Council (SSRC) in New York, downplayed the young leader's claim, saying "in the final stages of preparation" may mean the state is not quite ready yet. "There is no sign yet that it has perfected a reentry vehicle robust enough to resist the heat and pressure of penetrating the atmosphere," he said. Securing missile reentry technology is the toughest challenge in developing operational middle- and long-range ballistic missiles. As missiles reenter the Earth's atmosphere at Mach 24, the warhead needs to be capable of withstanding temperatures of around 7,000 to 8,000 degrees Celsius. In March last year, after its simulation test, the reclusive state
claimed that it has secured the heat-resistant capability of the long-range missiles. But a South Korean military expert said, asking not to be named, the test environment was far different from that in real ICBM test-firing, given that the test temperature was only about 1,500 degrees Celsius. "I don't assess that the North has secured reentry vehicle technology," he said. Terence Roehrig, a professor at the U.S. Naval War College, said it was difficult to know for sure how reliable Kim's claim was, albeit it could be a reliable claim for a future test. But he noted that being willing and able to conduct a test does not mean the test will be successful. "The record would suggest that an ICBM test will likely have problems," he said. "Though North Korea has improved its missile capabilities through its satellite launches, these have had difficulties." Referring to last year's tests of the Musudan intermediate-range ballistic missiles (IRBM), he said, "The tests had numerous failures before one that showed some degree of success and the likely ICMBs to be tested, the KN-08 or KN-14 have yet to be flight-tested so that the likelihood of failure in the short-term seems high." According to military officials in Seoul, the North's ICBM uses engines in the same series as those of the Musudan. They said the fact the only one of the eight tests was successful showed that the North has failed to correct faults in the missile's engines. Engine performance is essential in boosting the missiles, they added. "Each time North Korea tests, they learn from the attempt and their program continues to move forward," Professor Roehrig said. "But there remain some important question marks for making the entire system operational. North Korea still has a good deal of work to do in developing an ICBM capability, but they are making progress and they will continue trying." Taking into consideration the North's dubious ICBM capability, military authorities here see the greater possibility for Pyongyang to launch the Musudan instead of the ICBM if it does decide to conduct any provocations in the near future. "We are closely monitoring any new military activities in North Korea, as it could launch an IRBM at any time if leader Kim Jong-un gives the order," a military official said, asking not to be named. The Ministry of National Defense interpreted Kim's ICBM threat as part of the North's efforts to send a message to the new administration of U.S. President Donald Trump. Referring to the two suspected new ICMBs reported a day before his inauguration, officials raised the possibility that the North intentionally revealed the existence of the new missiles to send a strategic message to the new U.S. administration, which has hinted at carrying out a hard-line policy against the North. U.S. experts agreed with this view. "Kim's announcement could have been an effort to see how the Trump administration would respond," Professor Roehrig said. According to Sigal, it is noteworthy that in the past, after each United Nations Security Council sanctions resolution was passed, the North responded with test-launches and nuclear tests, but it did not do so this time. "This could be a sign that it is waiting to see whether President Trump meant what he said during his campaign about wanting to negotiate with Pyongyang, as well as the regime change in Seoul," he said. "The statements by Kim Jong-un and the foreign ministry are a reminder of what is at stake if there are no talks." (Jun Ji-hye, “N. Korea Has Yet to Master ICBM Technologies,” Korea Times, February 6, 2017)

U.S. Forces Korea Commander Vincent Brooks called for greater capability to target and destroy North Korean missile bases. Addressing the Association of the United States Army in a video call, Brooks said the proliferation of low-cost missiles that can be used to threaten the U.S. requires a "layered" approach to missile defense. Brooks joins a growing chorus of hawkish voices in the U.S. calling for preemptive strikes against North Korea if it continues its nuclear and missile programs. Brooks said existing defenses are "insufficient" in dealing with the North Korean missile threat. The U.S. general warned that even one stray North Korean missile could wreak havoc on South Korea because of the high population density here. He also stressed the need "to present a sufficient combination of capabilities that is known to an adversary in both defensive and offensive aspects so that deterrence actually occurs." Brooks is not the only U.S. government official touting the need for preemptive strike capabilities. New U.S. Secretary of State Rex Tillerson the next day vowed to come up with a "new approach" to dealing with North Korea that includes military measures, while Senate Foreign Relations Committee Chairman Bob Corker asked a hearing on North Korea last week whether the U.S. needs to prepare for a preemptive attack on the North's putative intercontinental ballistic missiles. (Yu Yong-woon, “USFK Chief Hints at Preemptive Strikes against N. Korean Missiles,” Chosun Ilbo, February 10, 2017)
South Korea's Acting President and Prime Minister Hwang Kyo-ahn warned of North Korea's possible strategic provocations ahead of the birthday of its late former leader next week, stressing the need for Seoul to maintain strong security cooperation with its ally Washington. During a Cabinet meeting, Hwang also noted that U.S. Defense Secretary James Mattis' visit to Seoul last week reaffirmed the robust bilateral alliance and sent a "strong" warning to an increasingly provocative Pyongyang. "North Korea's threats of provocations — including its claim that it is in the closing phase of preparations to launch an intercontinental ballistic missile — are increasingly explicit," Hwang said. "Especially this month, which includes the 75th birthday of (former North Korean leader) Kim Jong-il, the likelihood of strategic provocations is higher than before," he added. The late Kim's birthday falls October 16. "I urge (the military) to stay alert so that it can sternly and immediately respond to any kind of provocation," Hwang said. (Yonhap, “Acting President Warns of N.K. ‘Strategic’ Provocations,” February 7, 2017)

Officials from South and North Korean civic groups met in Shenyang to discuss ways to promote exchanges between the two Koreas despite Seoul's opposition to their unauthorized contact. The two Koreas' committees for the joint implementation of the June 15 summit declaration kicked off a two-day conference, according to an official from South Korea. Topics for the meeting are known to include football matches for teams from the labor unions of the two countries and the formation of a joint cheering squad for the 2018 PyeongChang Winter Olympics. Seoul's unification ministry rejected a request by the South Korean civic group to meet with their North Korean counterparts, citing inter-Korean tensions. "$\text{(W)}\text{e are facing a grave security situation as North Korea has continued to threaten and make provocative acts,} "$ Jeong Joon-hee, a ministry spokesman, said at a regular press briefing yesterday. "The government does not see such inter-Korean civilian exchanges as proper against this backdrop." The government has suspended almost all inter-Korean exchanges and South Korean visits to North Korea since the North's fourth nuclear test in January last year. Any trip to the North requires the Seoul government's approval. "The meeting is being held as we believe that inter-Korean exchanges should be maintained at least at the non-government level," said Lee Seung-hwan, a spokesman for the South's committee. A ministry official said that unauthorized contact with North Koreans will entail fines for violators under the law on inter-Korean exchanges and cooperation. (Yonhap, “S. Koreans Make Unauthorized Contact with N. Koreans in China,” February 7, 2017)

The top diplomats of South Korea and the US reaffirmed their commitment to shoring up the alliance Tuesday, calling for a joint approach to tackle North Korea's “imminent threats,” Seoul’s Foreign Ministry said. Foreign Minister Yun Byung-se had his first phone conversation with new US Secretary of State Rex Tillerson. During the 25-minute talks, the ministers agreed to continue “coercive diplomacy” to thwart Pyongyang’s unabated nuclear ambitions, while strengthening the alliance to a comprehensive, multifaceted partnership to handle regional and global issues. “The sides also concurred they will deploy the Terminal High Altitude Area Defense system here as planned under the view that it is a defensive step to respond to North Korean threats and does not damage other nations’ interests,” the ministry said in a statement. Yun singled out North Korea’s nuclear program as the “most critical foreign policy and security issue that the Donald Trump administration will face,” calling for a mobilization of a round-the-clock consultative scheme. Tillerson affirmed the US’ “steadfast” security commitment to its key Asian ally including the extended deterrence, saying the allies should develop a “joint approach” to the communist state’s “immediate threat. Ahead of the call, Tillerson also spoke with Japanese Foreign Minister Kishida Fumio by phone, during which he reaffirmed that the Senkaku or Diaoyu islands claimed by China are subject to the U.S.’ defense commitment. (Shin Hyon-hee, “Yun, Tillerson Reaffirm ‘Joint Approach’ to N.K. Threats,” Korea Herald, February 7, 2017) Concerning the planned deployment of a U.S. Terminal High Altitude Area Defense (THAAD) battery in South Korea, the two top diplomats reiterated the agreement reached between Han and Mattis last week. "Yun and Tillerson were on the same page about the deployment of the THAAD battery by the U.S. military in South Korea. They agreed it should be solely a defensive measure aimed at countering North Korea's military threats, and will not hurt national interests of other countries," the foreign ministry said. The two vowed to make "a wide range" of efforts to encourage China to join in
denuclearizing North Korea, citing that Beijing's role is critical in thoroughly implementing the U.N. Security Council's sanctions on Pyongyang and fulfilling other related goals. Tillerson said he supports South Korea's efforts to improve its relations with Japan, and that it will be helpful in strengthening the trilateral security alliance with the U.S. Both Yun and Tillerson are scheduled to join the Meeting of G20 Foreign Ministers in Bonn, Germany on Feb. 16 and 17, plus the annual Munich Security Conference from Feb. 17 to 19. The foreign ministry said it is consulting with the U.S. on setting up face-to-face talks between Yun and Tillerson then. (Korea Times, “Seoul Backs Trump ‘Peace through Strength,’” February 7, 2017)

North Korea vowed to further launch what it claims to be satellites into space as it marked the first anniversary of firing off a long-range rocket in defiance of international condemnation. "We will launch more satellites at the time and in the place decided by the Workers' Party of Korea," Rodong Sinmun said. South Korea's Prime Minister Hwang Kyo-ahn, who serves as acting president, warned today that North Korea could make strategic provocations ahead of the 75th birthday of late North Korean former leader Kim Jong-il slated for February 16. "The government believes that North Korea will (make provocations) if the North's leader gives the order," said an official at Seoul's unification ministry. "But there is no clear sign of (military provocations) yet." (Yonhap, “N.K. Vows to Launch More Long-Range Rockets,” Korea Herald, February 7, 2017)

South Korea is currently reviewing if China's recent trade actions, taken after Seoul's plans to deploy U.S. missile defense systems on its soil, can be referred to the World Trade Organization (WTO), a high-ranking official said. "As we may happen to need to take legal action in the future, a working-level examination is under way on (the illegality of) all measures taken by the Chinese central and regional governments as well as the private sector following the Seoul deployment decision," the official told reporters. (Yonhap, “South Korea Mulls Referring China to WTO for THAAD Retaliation: Official,” February 7, 2017)

North Korea has threatened a pre-emptive strike against South Korea if provoked as it marked a key military anniversary, KCNA reported. Hwang Pyong-so, director of the General Political Bureau of the Korean People's Army (KPA), made the remarks during an event in Pyongyang one day before the 69th anniversary of the foundation of the armed forces. "If the enemies dare violate the sovereignty and dignity of the country even a bit, the KPA will wipe out the strongholds of aggression through merciless pre-emptive strikes of (North) Korean style and accomplish the historic cause of national reunification without fail," Hwang was quoted as saying. (Yonhap, “N. Korea Threatens Preemptive Strike against S. Korea ahead of Anniversary,” February 9, 2017)

While the Donald Trump administration is reportedly reviewing the current U.S. policy on North Korea, some U.S. lawmakers and experts are calling for increased sanctions on the isolated state. During a House Foreign Affairs Committee hearing on North Korea this week, U.S. Rep. Ed Royce, R-California, stressed the need for additional sanctions. "There are other steps that can be taken to crack down on the Kim regime," the committee’s chair said in a prepared statement. Anthony Ruggiero, a North Korea expert in the use of targeted financial measures who spent more than 17 years in the U.S. government, told VOA the failure to thwart North Korea’s nuclear program can be attributed to existing sanctions that aim at the wrong targets. Ruggiero suggested the U.S. should reorient the focus of North Korea sanctions. “I think that North Korea is vulnerable to sanctions if they are done in the right way,” said Ruggiero, who is now a senior fellow at the Foundation for Defense of Democracies in Washington. According to Ruggiero, designations have doubled under the previous administration, with the designated parties mostly being “people located inside North Korea.” Instead, the U.S. should, he said, pursue North Korea’s offshore front companies, whether they be in China or elsewhere, that facilitate the Kim regime’s nuclear development. Ruggiero added that it is crucial to introduce additional sanctions, including restricting tourist travel to North Korea. “I think that’s a dangerous area that provides hard currency to the regime but also puts Americans at risk,” he said. The North is known to hold two U.S. nationals, and the U.S. State Department issues travel warnings about the communist
country every 90 days. Joshua Stanton, a Washington, D.C.-based attorney who also maintains the influential One Free Korea blog, called on the Trump administration to impose secondary sanctions on third parties that take part in North Korean financial activities, namely Chinese companies and financial institutions. “We need to do a much better job of first, devoting sufficient resources to finding out where North Korea’s money laundering is going through, and second, we have to have the political will to sanction, to designate, to freeze the assets of companies and banks in third countries, including China, that are helping North Korea violate the sanctions,” the lawyer said in an interview. Stanton claims that getting the sanctions to work quickly might be the only alternative to military action. “We have lost too much [time] and if sanctions don’t work, I am afraid that the president will decide that to protect the American people, the only alternative is a preemptive strike,” he said. Some argue the full implementation of existing sanctions is more important than imposing additional sanctions. “The U.S. has substantial sanctions against North Korea as it is. I don’t think it’s really a question of the U.S. adding new measures,” Daniel Glaser, who served as assistant secretary for terrorist financing at the Treasury Department in the Obama administration, told VOA. Glaser, a 20-year veteran of the Treasury Department, added that new measures are not going to have a substantial impact on the North at this point, “unless the [sanctions] are vigorously enforced across the borders throughout the international financial system.” Joseph DeThomas, who has spent 32 years in the U.S. State Department serving in various positions that dealt with North Korea, told the VOA the first step forward is to get the U.N. sanctions fully and completely enforced throughout the world. “We have very little to sanction North Korea. But we have to influence other countries to behave first according to the existing U.N. sanctions, which are relatively tough now,” said DeThomas, who is now an international affairs professor at Penn State University. (Jenny Lee, “Sanctions against North Korea: Strong Should They Be?” VOA, February 9, 2017)

The Air Force says an unarmed Minuteman 3 missile has been launched from California’s central coast in the latest test of the intercontinental system. The missile blasted off at 11:39 p.m. PDT today from Vandenberg Air Force Base. The Air Force says the missile carried test re-entry vehicles that headed for a target area 4,200 miles away to the Kwajalein Atoll in the Marshall Islands. The Air Force routinely uses Vandenberg to test Minuteman missiles from bases around the country. This test involved personnel from Vandenberg’s 576th Flight Test Squadron and the 91st Missile Wing, Minot Air Force Base, North Dakota. (Associated Press, “California Missile Launch: Did You See the Bright Flash,” San Jose Mercury News, February 9, 2017)

North Korean and Libyan officials met in Tripoli to discuss increasing military cooperation between the two countries, according to the Information Office of the Libyan Ministry of Defense. The Office of Information for the Libyan Ministry of Defense published details of the meeting between Minister of Defense Al-Mahdi Al-Barghathi and newly appointed North Korean Ambassador Ju Jin Hyok on its Facebook page. The meeting “brought together the defense minister with the Ambassador of the Republic of North Korea (sic), to bilaterally discuss the relations between the two countries, particularly in the field of military cooperation,” the post read. The two “agreed to develop a joint action plan to promote bilateral cooperation between Tripoli and Pyongyang in various fields, particularly in the fields of technical cooperation, information technologies and communication in military fields,” it added. Current UN Security Council (UNSC) resolutions prohibit the procurement of “all arms and related materiel, as well as to financial transactions, technical training, advice, services or assistance related to the provision, manufacture, maintenance or use of” that material from North Korea. Resolution 2270, which was passed unanimously in March 2016, sought to clarify this point, and prohibits “States from engaging in the hosting of trainers, advisors, or other officials for the purpose of military-, paramilitary- or police-related training.” “UN Resolution 2270 made unavoidably clear that any North Korean exports that enhance the capabilities of foreign armed forces are prohibited,” Andrea Berger, a Senior Research Associate at the James Martin Center for Nonproliferation Studies, told NK News on Friday. “Military communication and IT technologies are now clearly within the scope of UNSC restrictions.” If the cooperation were to involve the transfer of other military-related equipment it could also be in breach of the Libyan arms embargo originally set
North Korea is capable of building as many as 60 nuclear warheads, according to South Korean and U.S. intelligence authorities, based on an assessment that it has been secretly producing more highly enriched uranium than previously estimated. According to a secret report by intelligence and military authorities exclusively acquired by JoongAng Ilbo yesterday, Pyongyang has 758 kilograms (0.83 tons) of highly enriched uranium and 54 kilograms of plutonium, based on 2016 figures. Military experts in Seoul and Washington estimate that between four to six kilograms of plutonium and 16 to 20 kilograms of highly enriched uranium are needed to make one nuclear warhead. Taking into consideration the government’s analysis of the plutonium and weapons-grade uranium that North Korea is stockpiling, the regime should be able to build between 46 to 60 nuclear warheads. It is the first time that such specific intelligence on Pyongyang’s highly enriched uranium reserves has been revealed. The figure is much higher than average estimates by defense experts that North Korea possessed around 300 to 400 kilograms of highly enriched uranium and 40 to 50 kilograms of plutonium. Seoul and Washington through intelligence-sharing last year calculated how much nuclear material North Korea has using various data including U.S. information on a new North Korean uranium enrichment facility, as well its expanded existing facility in Yongbyon in North Pyongan Province. “South Korea and the United States have been continuously tracking the trend of North Korea’s facilities that produce nuclear materials,” a South Korean intelligence official said. “And they concluded that the amount of nuclear materials possessed by North Korea far exceeds the amount estimated by experts.” Government officials deduced that Pyongyang is likely to be operating another secret facility to produce highly enriched uranium, taking into consideration the sharp increase in its stockpile of nuclear materials. This second uranium enrichment facility is believed to be located near Panghyon air base in Kusong, a city also in North Pyongan Province. A large-scale facility is needed in order for plutonium production, but centrifuges producing highly enriched uranium only requires around 600 square meters, so Seoul’s intelligence officials believe Pyongyang is concealing more uranium enrichment facilities. In 2010, nuclear expert Siegfried S. Hecker, a professor of management science and engineering at Stanford University, visited the Yongbyon nuclear complex and its uranium enrichment facility with 2,000 centrifuges. He estimated that the site could have produced 40 kilograms of highly enriched uranium. Seoul and Washington concluded in following years that Pyongyang expanded the facility by a factor of two between 2013 and 2014 and that the
Yongbyon complex alone produced around 80 kilograms of highly enriched uranium yearly since 2014. Military experts have estimated that North Korea produced some 300 to 400 kilograms of weapons-grade uranium since 2005. However, the Yongbyon facility alone would not be enough to produce 758 kilograms of highly enriched uranium, hence the possibility of a second or even third uranium enrichment facility, according to experts. “A second facility [for uranium enrichment] definitely exists, and we are sharing the information with the United States,” an intelligence official told the newspaper. North Korea’s uranium ore deposits are estimated to be 26 million tons. “Highly enriched uranium can be mass produced for relatively little cost, and 1,000 centrifuges can be operated in a relatively small amount of space of around 600 square meters, so it is easy to conceal,” said Lee Chun-geun, a research fellow with the Science and Technology Policy Institute. The South’s Ministry of National Defense last month claimed in its 2016 defense white paper that North Korea’s stockpile of plutonium was around 50 kilograms, an increase of 10 kilograms from 2014. It estimated that Pyongyang has enough plutonium to manufacture 10 such nuclear bombs. But this biennial white paper released on January 11 only said that North Korea possessed “a considerable level” of highly enriched uranium without specifying a number. The South Korean government said it was not able to confirm the details of the intelligence report on North Korea’s nuclear materials. “We are concerned about North Korea’s increasing nuclear capabilities and observing the situation closely,” an official of the Ministry of Unification said. “South Korea and the United States routinely evaluate [North Korea’s nuclear capabilities] and closely share information. We cannot speak on this information in detail.” Moon Sang-kyun, a Defense Ministry spokesman, said in a briefing the same day, “The content is related to security matters, so we cannot confirm the details.” (Jeong Yong-soo, Lee Chul-jae, and Sarah Kim, “North Korea Could Have 60 Nuclear Warheads,” JoongAng Ilbo, February 10, 2017)

A senior US official warned North Korea not to undertake any provocations, saying such actions would affect the strategy the administration of President Donald Trump is putting together to deal with Pyongyang, according to a news report. The unidentified official also told a conference call with reporters that it is premature to discuss Trump's policy on how to deal with the North's nuclear program, according to a Reuters report. The White House has reportedly launched a North Korea policy review to determine what the Trump administration could do differently to address concerns that North Korea could strike the US with a nuclear missile. North Korea carried out a string of provocations last year, including two nuclear tests and a number of ballistic missile launches. But the regime in Pyongyang has not carried out any such provocations since November’s US presidential election. North Korean leader Kim Jong-un said in his New Year's Day address that the country is close to test-firing an intercontinental ballistic missile apparently capable of striking the US and two ICBMs were later readied on mobile launchers, but they were ultimately put back into hiding. Many experts saw that as a sign that the regime might have opted to wait out until the Trump administration puts together its North Korea policy. Other experts say the North is exercising restraint to avoid galvanizing conservatives in South Korea ahead of a presidential election. (Yonhap, “U.S. Official Warns N.K. Provocations Could Affect Trump Strategy,” Korea Herald, February 10, 2017)

Any restart of denuclearization talks with Pyongyang will likely end up as a “great fraud” due to its firm resolve to master its nuclear program, massive political risks for South Korean and US leaders, and the lack of solid monitoring mechanisms, said Thae Yong-ho, who served as the No. 2 man at the communist state’s embassy in London before defecting to the South last summer, said that despite calls for dialogue, a new round of gathering would only buy time for leader Kim Jong-un to prop up the moribund economy as shown by the so-called Geneva agreement with the US in 1994. “In my view, the Geneva deal was a joint work of fraud by Kim Jong-il and Bill Clinton,” he said at an international conference hosted by the Institute for National Security Strategy, an affiliate of the National Security Service, referring to the then North Korean and U.S. leaders. At least within the North, including the Foreign Ministry, no one saw the agreement’s implementation as possible in the first place, he said, citing the utter absence of infrastructure required for a light water reactor to be built by Seoul and Washington. “Back then, what Kim Jong-il needed the most was time, the time to achieve his purpose — patching up the country after
his father Kim Il-sung died, the Soviet Union collapsed and so many people died from hunger,” Thae said. “Clinton, for his part, had apparently assessed that the North was about to break down on its own and sought to buy time to manage the situation for the time being.” Thae, who now works at the Seoul-based think tank, underscored that the incumbent Kim will not give up his nuclear ambition even in return for $10 trillion won. The leaders of South Korea and the US, too, would not be able to bear massive risks to strike such a deal at a time when they lack any authority or mechanism to inspect the reclusive country. “It’s never about the quantity or quality of incentives. … Kim will never engage in any act that may pose threats to his long-term rule,” he said, referring to offers from Russia and China to build a gas pipeline and railroad running through the peninsula from there. (Shin Hyon-hee, “Ex-N.K. Diplomats Says New Nuke Talks Would Be ‘Great Fraud,’” Korea Herald, February 9, 2017)

North Korea is increasing the scale and refinement of the tactics it uses to evade international sanctions, particularly in the lucrative trade in military technology, according to a summary of a U.N. experts’ report obtained by Kyodo News. The country’s movement of illicit ammunition, weapons and natural resources continues to prop up the regime of Kim Jong Un. The report blames a lack of political will on the part of the international community in effectively enforcing the implementation of sanctions. “The DPRK is flouting sanctions through trade in prohibited goods with evasion techniques that are increasing in scale, scope and sophistication,” the report reads. DPRK stands for North Korea’s official name, the Democratic People’s Republic of Korea. “(The sanctions implementation) effort has not yet been matched by the requisite political will, prioritization and resource allocation to ensure effective implementation,” the summary warned. According to the report, the problem was laid bare when in August the largest shipment of ammunition in the sanctions period was discovered. Maritime databases, which track vessels, indicated that the Cambodian-flagged ship reached a port in Egypt. “An interdiction of the vessel Jie Shun was the largest seizure of ammunition in DPRK sanctions history,” according to the document. A source informed Kyodo that the Egyptian port was not the general cargo ship’s final destination, despite its strategic location near a number of regional conflict hot spots. However, the report said that seizures like it demonstrate “the country’s use of concealment techniques as well as an emerging nexus between DPRK entities trading in arms and minerals.” The trade in minerals is also a valuable source of funding for North Korea despite it being specifically prohibited from supplying or transferring by sea or air from its territory minerals, such as gold, copper, nickel, silver, zinc and rare earth minerals. Although bans on trade in minerals were adopted for the first time in 2016, the report points out there are various interpretations of the minerals that are listed, and countries utilize exemption clauses in different ways, effectively circumventing bans. The summary also points out that North Korean entities and banks continue to operate by using agents who are “highly experienced and well-trained” in moving money, people and goods, which include arms and related materials, across borders. They include agents who are foreigners working as facilitators for North Korea utilizing front companies. “Their ability to conceal financial activity by using foreign nationals and entities allows them to continue to transact through top global financial centers,” the document states. The annual report is produced by a panel of experts under the U.N. Security Council’s sanctions committee on North Korea. The panel also makes recommendations to improve implementation of the resolutions. Before the report is publicly released, it must be adopted by consensus at the next sanctions committee meeting, which is to be held next week. Once adopted it is then circulated to the Security Council and later made public. (Kyodo, “Pyongyang Using Refined Tactics to Duck Sanctions on Large Scale: U.N. Report,” Japan Times, February 9, 2017)

2/10/17

KCNA: “The government of the United States of America decided to offer humanitarian aid to the DPRK in connection with the flood which hit the northern part of the country last year.” (KCNA, “U.S. Government Decides to Offer Aid to DPRK,” February 11, 2017)

The latest joint statement by Japanese and U.S. leaders mentions nuclear weapons as a U.S. option to defend Japan for the first time since 1975, reflecting growing concerns about North Korea. The statement released by Prime Minister Abe Shinzo and President Donald Trump after their summit
talks in Washington states: “The U.S. commitment to defend Japan through the full range of U.S. military capabilities, both nuclear and conventional, is unwavering.” Tokyo and Washington agreed they had to reaffirm the "nuclear deterrence" due to the threat posed by North Korea's repeated missile and nuclear tests, said Mori Takeo at a meeting of the ruling Liberal Democratic Party on February 14. Mori, director-general of the Foreign Ministry's North American Affairs Bureau, said it was only the second time for Japanese and U.S. leaders to release a document that uses the word “nuclear” in terms of the U.S. defense of Japan. The previous one, in August 1975 by Prime Minister Takeo Miki and U.S. President Gerald Ford, stated: “(The) United States would continue to abide by its defense commitment to Japan under the Treaty of Mutual Cooperation and Security in the event of armed attack against Japan, whether by nuclear or conventional forces.” (Geji Kayoko and Takeda Hajimu, “Statement of Nuclear Option to Defend Japan a First in 42 Years,” Asahi Shimbun, February 15, 2017)

The UN Working Group on Enforced or Involuntary Disappearances said at a press conference in Seoul that its search list for South Koreans believed to have been abducted by North Korea has been growing. As of last year, was reviewing 53 cases of South Koreans suspected of being taken by North Korea during and after the Korean War (1950-53). The expert group had formally asked the North Korean government to provide information on 41 of the total cases, but the communist country did not come up with an answer sufficient to verify the fates of those missing, according to the group's report submitted to the U.N.'s Human Rights Council in July. Since the report last year, there has been an increase in the number of such missing South Korean cases whose fates are unknown, the five-member panel's chairwoman Houria Es-Slami told reporters here. Es-Slami said she could not disclose exactly how many until the group's annual report to be submitted later this year, but called the increase "alarmingly high." The panel has also called on the U.N. Security Council to refer North Korea to the International Criminal Court for its "organized and large-scale" human rights violations regarding such enforced disappearances, although little progress has been made so far on the matter, she said. Ariel Dulitzky, one of the panel members, said the group even asked Pyongyang to allow them access to the country for an on-site visit last year, but the country remains unresponsive. "Sadly up to today, we could not verify any single case" because of North Korea's lack of cooperation on the issue, he noted. The meeting with reporters followed the group's five-day consultation held in Seoul this week where the experts reviewed petitions seeking to determine the fate or whereabouts of those who were reportedly abducted by the North and other countries. (Yonhap, “UN Search List for S. Koreans Abducted by N. Korea Growing: Expert Group,” February 10, 2017)

The reopening of the inter-Korean industrial park in Gaeseong, North Korea, is emerging as a presidential campaign issue. Moon Jae-in and Lee Jae-myung, presidential hopefuls from the main opposition Democratic Party of Korea (DPK), have pledged to make efforts to reopen the Gaeseong Industrial Complex (GIC) if elected. They claim this will help restart stalled talks between the two Koreas and save South Korean firms that have plants there. The companies have been suffering snowballing losses following the shutdown a year ago. But other potential presidential contestants are cautious about joining Moon and Lee amid concerns the resumption of the GIC could be a breach of the U.N. Security Council's (UNSC) nuclear sanctions on North Korea. The Park Geun-hye government closed the GIC on February 10, 2016, claiming that the Kim Jong-un regime was pocketing earnings from North Korean employees there and funneling funds to the UNSC-banned nuclear program. Against this backdrop, Ahn Cheol-soo, a former co-chairman of the minor opposition People's Party, has an ambiguous approach, saying, "The shutdown of the GIC doesn't do any good for peace on the Korean Peninsula but we must be prudent over whether to resume its operation." Another DPK presidential hopeful, South Chungcheong Province Governor An Hee-jung, says Pyongyang's sincerity in making changes, such as resuming inter-Korean dialogue and denuclearization efforts, should precede any GIC reopening. Two conservatives from the Bareun Party – Rep. Yoo Seong-min and Gyeonggi Province Governor Nam Kyung-pil – have echoed a similar view by proposing conditions for the GIC's reopening. Yoo wants "progress in resolving North Korea's nuclear and ballistic missile programs" while Nam is seeking to "create a peaceful atmosphere on the peninsula." The accumulated loss of the 123 South Korean enterprises at the GIC is estimated to be at least 250
The victims say they have had difficulty securing new factories and experienced other problems in reviving their businesses. The Ministry of Unification, citing its own data, downplayed the concerns. It said 114, or 92.7 percent, of the 123 companies are operating and their average sales last year were about 79 percent of those in 2015. The Ministry of Foreign Affairs said Thursday reopening the GIC "does not correspond with" the international cooperation to press North Korea. Some analysts said Moon and Lee are not realistic in their pledge and that they are trying to court more left-wing voters. "The support groups of Moon and Lee tend to overlap and they need to ensure wooing more supporters ahead of the primary by making what can be seen as radical promises," said Shin Yul, a political science professor at Myongji University. Shin said the situation is more urgent for Lee, a Seongnam mayor who has been trailing Moon in the polls. Moon, a former DPK chairman, has had a firm lead for weeks. "The issues over the GIC are not something that can be resolved on our own," Shin said. "It is complicated and involves discussion with the United States and Russia, and others." Political commentator Hwang Jae-soon agreed. "The GIC is the most noteworthy legacy of late President Kim Dae-jung and underscoring a need to resume its operation can be effective to bring the voters together for Moon and Lee only until a DPK presidential candidate is chosen," he said. "It will be burdensome for a candidate to oppose the UNSC sanctions, the U.S. pressure and other international measures taken against North Korea in the presidential campaign." Other experts disagreed, claiming Seoul's suspicions over Pyongyang's exploitation of the GIC to funnel funds to the nuclear program are not proven. "Moreover, the UNSC does not explicitly state anything about closing the GIC," said Chang Yong-seok, a senior researcher at the Institute for Peace and Unification Studies at Seoul National University. Yang Moo-jin, a professor at the University of North Korean Studies, said the issues over the GIC should be separated from national security and ideology. "It makes more sense to say that the GIC is more related to economic interest," he said. "Moreover, the voters are fed up with ideological disputes surrounding North Korea." (Yi Whan-woo, "Kaesong Park Becomes Campaign Issue," Korea Times, February 10, 2017)

Asia Society: “The biggest immediate challenge confronting the Trump administration in Asia is the nuclear threat posed by the Kim Jong-un regime’s growing nuclear and missile capabilities, which are fast becoming a direct threat to the national security not only of the United States but also of South Korea, Japan, and other Asian countries. The threat of an actual nuclear attack by Pyongyang may not yet be great, but when the regime secures a so-called second-strike capability to respond to a nuclear attack on its soil, its leaders could easily miscalculate and be tempted to undertake other kinds of provocative actions against its neighbors. The North Korean regime has already displayed signs of just such miscalculation. In 2010, it sank the Cheonan, a South Korean naval ship, and launched an unprovoked attack on the South Korean island of Yeongpyeong. If the United States and its allies were to react forcibly to another such provocation, North Korea might then feel compelled to use its nuclear weapons. What is more, it is possible that North Korea will be moved to sell nuclear and missile technology to other actors, including terrorist groups or hostile states. The North Korean nuclear and missile programs present China with difficult choices that have profound ramifications for its own national security, as well as the future path of US-China relations. With as much as 85 percent of North Korea’s foreign trade going through China, the Kim regime is economically dependent on Beijing—a reality that makes China a crucial actor in any potential solution to the nuclear problem. Yet China’s leaders appear to fear that if they cut off trade and investment with North Korea, then the regime would likely collapse, leaving China facing not only a unified Korea under the Seoul government (and with US armed forces on its border), but also a potential mass refugee crisis across the Yalu River. Still, Beijing appears to recognize that a nuclear-armed North Korea is a serious risk to itself. It is also concerned by the implications for its own security of the defensive security measures now being taken by the United States and its East Asian allies to defend against the North Korean nuclear threat. Moreover, there is evidence that the Chinese public has soured on the Kim Jong-un regime and is increasingly unsupportive of the China-North Korea alliance. Therefore it serves the interests of both the United States and China to reach an agreement on a strategy that brings a halt to North Korea’s nuclear and missile program. To do that, however, Chinese concerns about its own future security must also be addressed. Assessing Current Policy: The lack of progress in the Six Party Talks
An essential part of gaining China’s cooperation will involve offering Pyongyang an accelerated testing program. North Korean officials have hinted at the possibility of negotiating a freeze if the United States abandons its supposedly hostile policy, but the Kim regime failed to implement a prior agreement along these very lines (the so-called “leap day agreement” in 2012) and has now taken the end goal of denuclearization off the table. One objective of the long-stalled Six Party Talks was to lay a foundation for a permanent multilateral security institution in Northeast Asia. But the cessation of those talks since 2008 alongside China’s veto of proposals for a five-country dialogue process—with an empty chair left for North Korea to join if it ever commits to denuclearization—stymied those efforts. The United States subsequently strengthened its security posture in the region and reinforced its alliances with Japan and South Korea by encouraging them to work directly together in response to North Korea’s pursuit of its nuclear and missile programs. The heightened threat from North Korea has, indeed, reduced historical animosities and tensions between Japan and South Korea, which long were a barrier to greater amity, intelligence sharing, and defense coordination. This new common threat perception is now permitting deeper defense cooperation, such as the recent progress toward an information-sharing arrangement called the General Security of Military Information Agreement on the threats posed by North Korea’s ballistic missiles. Policy Recommendations: The North Korean nuclear and missile threat should be the highest priority in Northeast Asia for the Trump administration. The most difficult challenge is finding a way to induce China to use its economic and political leverage with North Korean leadership to spur them to halt their nuclear and missile programs. Yet because the stakes for US national security, Northeast Asian security, and the US-China relationship are so high, the new administration must make this a priority in the bilateral relationship. If China and the United States were able to collaborate more closely in addressing this threat, then they would not only alleviate a dangerous common threat but also reinforce mutual confidence in each other’s long-term strategic goals and help lay the groundwork to promote cooperation in other pressing security and economic issues. There are valuable precedents for the two countries to follow such a scenario, namely the cooperative effort of China and the United States (along with other countries) to reduce the threat of the Iranian nuclear program by means of effective sanctions and diplomatic negotiations, as well as earlier US-China coordination during the course of the Six Party Talks from 2003 to 2008. Without the proper diplomatic groundwork, however, US pressure on China to lean harder on North Korea might backfire, not only failing to halt the North Korean nuclear program, but also further complicating US-China relations. For this reason, President Trump should communicate immediately and directly with President Xi Jinping to call for the establishment of a special high-level channel dedicated to jointly resolving this problem. The new president should explain that unless the United States and China can find a more effective way to work together to reduce the North Korean threat, then the United States, South Korea, and Japan will together take any and all measures necessary to deter North Korea and defend themselves against possible attack or provocation. President Trump should make it absolutely clear to President Xi that the United States would much prefer to work in concert with China to reduce the threat through tougher economic sanctions and the promise of new negotiations. To implement this new approach, the United States should explore close coordination with China on existing economic sanctions to restrict North Korean access to sources of foreign exchange and exports of its coal and iron ore. At the same time, the United States should seek China's agreement to undertake vigorous law-enforcement methods to close down the North Korean front companies operating inside China that Pyongyang uses to finance and transact its foreign trade. (In a promising move, the Chinese government has already begun to do this, launching a criminal inquiry into one firm after the United States charged it with money laundering and evading sanctions.) To secure China’s support, the United States should reiterate its willingness to offer a comprehensive approach to resolving the current impasse. An essential part of gaining China’s cooperation will involve offering Pyongyang an
omnibus package deal including negotiations—among the four (United States, China, North Korea, and South Korea) or six (including Japan and Russia) relevant parties—of a peace treaty to replace the Korean War armistice and steps toward establishing diplomatic relations between the United States and North Korea. In return, however, North Korea would have to be willing to implement a verifiable freeze of its nuclear and missile programs, including no further nuclear tests or missile launches and to pledge (echoing the Joint Statement of 2005) to denuclearize the entire Korean peninsula. Steps toward the peace treaty and diplomatic normalization with the United States could begin simultaneously with the nuclear and missile freeze. Of course, if North Korea failed to take measures toward denuclearization, then these diplomatic steps would immediately be halted. If North Korea did begin to honor its pledges on moving toward denuclearization, however, then the United States and its partners would have to be prepared to offer sequential sanction relief. Here, the negotiations would draw on the experience of the Joint Comprehensive Plan of Action agreed to by Iran, the five permanent members of the UN Security Council—China, France, Great Britain, Russia, and the United States—as well as Germany and the European Union. If China fails to respond to such an offer of cooperation and continues to frustrate full sanctions efforts, then the United States must be prepared to use its authority to impose secondary sanctions unilaterally on Chinese banks and firms still doing business with North Korea. In any event, since South Korea plays a valuable role as interlocutor with China on this problem, the United States should express a willingness to establish a trilateral US-South Korea-China dialogue to coordinate diplomatic efforts. North Korea has been very successful at sowing divisions between China, the United States, and South Korea—especially after the fifth nuclear test and the decision by the United States and South Korea to deploy the Terminal High Altitude Area Defense, or THAAD, antimissile defense system. But the hopeful side of this difficult stand-off is that the three countries involved all actually now share a real common interest—the denuclearization of the Korean peninsula. If they fail to diplomatically overcome their differences, only Pyongyang will be the winner. Should North Korea resist all such joint efforts to bring it back to the negotiating table, the United States should be in a better position to overcome China’s reluctance to establish a five-country Northeast Asia security dialogue among China, Russia, Japan, South Korea, and the United States without the presence of North Korea. South Korea has already called for such a process, and other countries should not allow North Korea’s refusal to cooperate to veto the kind of multilateral mechanism that could help stabilize relations among these important Northeast Asian powers.” (Asia Society Task Force, U.S. Policy toward China: Recommendations for a New Administration, Orville Schell and Susan Shirk, chairs, February 2017)

KCNA: "A surface-to-surface medium long-range ballistic missile Pukguksong-2, Korean style new type strategic weapon system, was successfully test-fired on [February 12]. Supreme Commander of the Korean People's Army Kim Jong Un, chairman of the Workers' Party of Korea and chairman of the State Affairs Commission of the DPRK, guided the test-fire of Pukguksong-2 [Polaris-2] on the spot. Respected Supreme Leader Kim Jong Un set forth the task of developing the weapon system into surface-to-surface ballistic missile with extended firing range on the basis of the success made in the SLBM underwater test-fire held in August last year. He received the report on the development of Pukguksong-2, set the date of the test-fire of the missile and personally guided the preparations for it on the spot. Before the test-fire that day he looked round the caterpillar self-propelled missile launching truck produced by workers in the munitions industry by their own efforts, technology and wisdom. At the observation post he learned in detail about the plan for the test-fire of Pukguksong-2 and gave the order to launch it. The test-fire proved the reliability and security of the surface launch system and starting feature of the high thrust solid fuel-powered engine and reconfirmed the guidance and control features of ballistic missile during its active flight and working feature of high thrust solid fuel- powered engines and those of separation at the stages. It also verified the position control and guidance in the middle section and section of re-entry after the separation of the improved warhead of the missile which can be tipped with a nuclear warhead, the feature of evading interception, etc. The test-fire helped test and round off the mobility and operation of the new type missile launching truck in the worst surface condition and finally confirm its technological specifications through ballistic missile launch. The test-fire was conducted by the high-angle launching method instead of firing
range, taking the security of the neighboring countries into consideration. He said that the newly developed Pukguksong-2 is the Korean style advantageous weapon system providing convenience in operation and ensuring speed in striking and a Juche-missile, Juche-weapon in name and reality as the launching truck and ballistic missile were designed and manufactured and fired by the indigenous wisdom, efforts and technology 100 percent. He expressed great satisfaction over the possession of another powerful nuclear attack means which adds to the tremendous might of the country. Now our rocket industry has radically turned into high thrust solid fuel-powered engine from liquid fuel rocket engine and rapidly developed into a development- and creation-oriented industry, not just copying samples, he said, adding: Thanks to the development of the new strategic weapon system, our People's Army is capable of performing its strategic duties most accurately and rapidly in any space: under waters or on the land. At the end of the test-fire he had a photo taken with scientists and technicians in the field of defense industry and service personnel who took part in the test-fire of Pukguksong-2.” (KCNA, “Kim Jong Un Guides Test-Fire of Surface-to-Surface Medium Long-Range Missile,” February 13, 2017)

North Korea launched a ballistic missile toward the sea off its eastern coast, in what South Korea called the North’s first attempt to test President Trump’s policy on the isolated country. A projectile believed to be a modified version of the North’s intermediate-range ballistic missile Musudan [solid-fueled KN-15] took off at 7:55 a.m. from Banghyon, a town near North Korea’s northwestern border with China, and flew 310 miles before falling in the sea, the South Korean military said. Earlier, the United States Strategic Command issued a statement identifying the missile as “a medium- or intermediate-range ballistic missile” that “did not pose a threat to North America.” South Korea condemned the missile launching, saying that the North had launched the missile to raise tensions over its weapons programs and to use it as leverage in dealing with the Trump administration. “We see this as part of an attempt by the North to grab attention by demonstrating its nuclear and missile capabilities and to counter the new United States administration’s strong policy line against North Korea,” the South Korean military said in its statement. The missile launch came as Trump is hosting Prime Minister Abe Shinzo on an official visit, but it was unclear if the test was intended as a political message. Trump and Abe hastily arranged a joint appearance in response. “North Korea’s most recent missile launch is absolutely intolerable,” Abe said, calling on the country to comply with all relevant United Nations Security Council resolutions. Looking grim, Trump said nothing about the missile launch, but pledged to staunchly back Japan. “I just want everybody to understand and fully know that the United States of America stands behind Japan, its great ally, 100 percent,” he said. The two leaders are at Mar-a-Lago, Trump’s club in Palm Beach, Fla., where they are meeting over the weekend. South Korea’s Foreign Ministry said the test, the first by the North this year, demonstrated the “maniacal obsession” of the North Korean leader, Kim Jong-un, with developing a nuclear-tipped ballistic missile. The test came less than two days after Trump at a news conference with Abe said that defending against the nuclear and missile threats from North Korea was a “very, very high priority.” In their joint statement, the two leaders had urged North Korea “to abandon its nuclear and ballistic missile programs and not to take any further provocative actions.” North Korea has deployed and often tested short-range Scud and midrange Rodong ballistic missiles that can reach most of South Korea and Japan, but it has had a spotty record in test-launching the Musudan, its only missile with a range long enough to reach American military bases in the Pacific, including those on Guam. (Choe Sang-hun, “North Korea Missile Test Is First of Trump Era,” New York Times, February 12, 2017, p. A-9) Launched from Banghyon Air Base in North Pyongyan Province at 7:55 a.m., the missile reached an altitude of about 550 kilometers (342 miles) and flew 500 kilometers before splashing into the East Sea, both figures which indicate that it wasn’t an intercontinental ballistic missile (ICBM), said an official from the Joint Chiefs of Staff. It appears that the missile was a [KN-15] Nodong medium-range class meant to target Japan, according to another South Korean military source who spoke on the condition of anonymity. A more detailed analysis will take days to draw up. The South Korean military said it was also considering the possibility that the missile was an enhanced version of an intermediate-range Musudan missile, noting that intelligence authorities have recently seen signs that Pyongyang was developing a new missile engine. The projectile was detected “immediately after launch” by South Korea’s antiballistic radar, the Green Pine, said the military. As to why the communist regime chose today for
the provocation, the second source said it could have been part of a celebration to commemorate the 75th anniversary of former leader Kim Jong-il’s birth, which falls this October 16, or a message to the Trump administration to adopt new policies toward the regime. The test also came as Japanese Prime Minister Abe Shinzo was meeting Trump in the U.S. Kim Keun-sik, a political science professor at Kyungnam University in Changwon, South Gyeongnam, said the fact that North Korea didn't test an ICBM suggested it was seeking a “compromise” with Washington, or at the very least testing the Trump administration’s reaction to a lower grade provocation. Banghyon Air Base is 45 kilometers west of the Yongbyon nuclear facility, the centerpiece of Pyongyang’s nuclear program. It’s also the same place where North Korea test-fired an intermediate-range Musudan missile on Oct. 15, 2016, which exploded within seconds after its launch. Reuters cited an anonymous U.S. government official as saying that the Trump administration is “likely to step up pressure on China to rein in North Korea,” reflecting Trump’s personal view that “Beijing has not done enough on this front.” The official said that Trump and his aides are “likely to weigh a series of possible responses,” including new U.S. sanctions to tighten financial controls on the North, an increase in U.S. naval and air assets in and around the Korean Peninsula and accelerated installation of new missile defense systems in South Korea. (Lee Sung-eun and Jeong Yong-soo, “Pyongyang Fires a Midrange Missile,” JoongAng Ilbo, February 13, 2017) Bermudez: “Almost all initial reporting indicated that the missile was launched from the Panghyon Airbase in North Pyongan Province, located in the northwest. When, however, North Korea released still and video imagery of the test it was clear to North Korea watchers that the test was not conducted from the Panghyon Airbase, but from the Iha-ri Vehicle Testing and Driver Training Facility approximately 9.5 km to the north-northeast. The choice of the Iha-ri facility was undoubtedly due to its proximity (only 5 km) to the No. 95 Factory (Kusong Tank Factory) where it is believed the transporter-erector-launcher (TEL) and its support vehicles were designed and manufactured. It is likely that the Pukguksong-2 pre-test imagery released by North Korea was taken here.” (Joseph S. Bermudez, Jr., “Finding the Real Sites for the Pukguksong-2 Launch,” 38North, February 17, 2017)

Nationwide Emergency Measure Committee against DPRK-targeted Nuclear War Exercises spokesman’s statement “as regards the fact that the south Korean puppet forces are going busy to stage the largest-ever Key Resolve and Foal Eagle joint military exercises together with the U.S. in upcoming March: The said drill which will involve huge aggression forces, including all nuclear strike means of the U.S. imperialist aggression forces, will take place under the plan for a preemptive strike at the DPRK, including 4D operation scenario envisaging the "detection" of its nuclear and missile bases, "defense" from them, "disturbance and destruction" of them and "beheading operation." This is an open disclosure of the attempt to launch a nuclear war against the DPRK. The puppet forces' racket for a war against the DPRK and the hostile policy of the U.S. which actively supports it are an intolerable challenge to the Korean nation's desire and aspiration after peace and reunification. And they constitute an open violation of the dignity and sovereignty of the DPRK. Hostility, discord, distrust and confrontation have now gone beyond such tolerance limit that any slightest and accidental conflict may lead to an unpredicted incident on the Korean peninsula. This is the situation prevailing on the peninsula at present. The army and people of the DPRK will take appropriate countermeasures depending on the level of the nuclear war racket being planned and pressed for by the south Korean puppet forces with the U.S. involved. The aggressors and provocateurs had better stop their rash actions, pondering over what counter-actions will be entailed by their reckless and serious nuclear war racket against the DPRK.” (KCNA, “Planned S. Korea-U.S. Joint Military Drill Slammed,” February 13, 2017)

The Institute for Disarmament and Peace of the DPRK Ministry of Foreign Affairs memorial report: “On the occasion of the 75th birth anniversary of the great leader Comrade Kim Jong Il, the army and people of the DPRK recollect with deep emotion the immortal feats he had performed to ensure peace and security on the Korean peninsula and the world. The great leader staunchly safeguarded peace and security of the Korean peninsula and the world by taming the unprecedented thunders and storms of history with the Songun politics and nuclear deterrent. His immortal feats have been and will forever be the guarantee for peace and prosperity in the Korean
peninsula and the world. 1. To Prevent War on the Korean Peninsula. Respected Supreme Leader Comrade Kim Jong Un, in his report to the Seventh Congress of the Workers' Party of Korea on the work of the Central Committee, stated that at present various parts of the world were still being devastated by war but the gunfire of war had not been heard in the DPRK for several decades and our people were leading a peaceful and stable life, free from war. He appraised that it was thanks entirely to the Songun politics of the great leader and herein lay the greatest achievement of the Party. With the collapse of socialist systems in the former Soviet Union and other east European countries in 1990s, major changes followed in the world political structure and the balance of forces. Assuming itself as the world's "only superpower," the U.S. became high-handed and arbitrary in the international arena and pursued all the more vicious schemes of aggression and war infringing upon the sovereignty of other nations to realize its ambition of world supremacy. The U.S. concentrated its offensive spearhead on the DPRK which held high the banner of independence and socialism. While unprecedentedly intensifying military aggressive maneuvers to stifle the DPRK, the U.S. and its vassal forces continued to press and suffocate the DPRK in all fields including politics, the economy, ideology, culture and diplomacy. The Korean peninsula had already turned into the hottest spot clouded with increasing danger of nuclear war in the world due to continuous war maneuvers of the U.S. Thus preventing war and defending peace on the peninsula was the pressing issue in ensuring peace and security of the world. Endowed with noble sense of mission to safeguard the destiny of the nation and peace and security of the world, the great leader firmly maintained the Songun-based revolutionary line, an ever-victorious path of the Korean revolution, and administered the Songun politics in an all-round way. Thanks to the iron will of the great leader to enhance defense capabilities at any cost and his energetic guidance, the DPRK's defense industry had developed into a powerful one for self-defense. The strong defense capability provided under the Songun politics was a guarantee that made it possible to firmly defend our national security and socialist fortress by crushing the aggressive maneuvers of the imperialists. It was the unswerving will of the great leader to crush the imperialists' outrageous pressure and challenges through tougher countermeasures of wielding a sword when the enemy were drawing a knife and leveling a cannon when they were pointing a gun. The DPRK thoroughly crushed growing military pressure and aggressive maneuvers of the U.S. and its vassal forces with the powerful military might strengthened by the great leader. In 1993 the U.S. resumed "Team Spirit" joint military exercises involving more than 200 000 aggression troops, thus creating a highly touch-and-go situation of nuclear war on the Korean Peninsula. The great leader frustrated the U.S. aggressive ambition with decisive measures of declaring a semi-war state and withdrawal from the NPT. In April 1996 the Korean People's Army (KPA) under the commandership of the great leader physically pacified the reckless maneuvers of the U.S. and south Korean military war maniacs who aggravated tension to the extreme by bringing in heavy weaponry into the DMZ in wanton violation of the Armistice Agreement. At the end of 1998 when the U.S. made public the details of "OPLAN 5027", a plan for preemptive strike against the DPRK, the KPA made an announcement that no provocateurs in the planet would be pardoned from its strike and demonstrated practical military capability, thus crushing the enemies' aggressive intention. Such being the case, in 1999, the U.S., engaged in war against Yugoslavia and bombing the embassy of a sovereign state, sent Perry, former defense secretary, as the U.S. presidential envoy to the DPRK and claimed an engagement policy. Afterwards, the DPRK and the U.S. maintained contacts and cooperation in several sectors to establish new relations free from past hostilities. However, the Bush administration that emerged later unilaterally scrapped the DPRK-U.S. Agreed Framework and designated the DPRK as an "axis of evil" at the Union Address on January 30, 2002. In March the same year, the U.S. announced a "nuclear posture review" that included the DPRK in the list of targets of its nuclear preemptive strike. The U.S. went on to gradually intensify nuclear war exercises against the DPRK. The DPRK and the Korean nation were exposed to the danger of grave nuclear catastrophe. The increasing nuclear threat from the U.S., the world biggest nuclear possessor and the only nuclear weapons user, kept pushing the DPRK to nuclear possession. To address the grave situation, the great leader made strategic decision to cope the nuke with the nuke. Accordingly, on January 10, 2003, the DPRK government took a decisive defense measure as to effectuate withdrawal from NPT that had been on hold for 10 years. 3 years later, in October 2006, the DPRK carried out its first nuclear test followed by a second one in May 2009. This ended the nuclear imbalance in Northeast
Asia which was full of nuclear weapons and nuclear umbrella but the DPRK remained the only nuclear vacuum. Owing to the deterrent impact of the DPRK's nuclear possession, the danger of war on the Korean peninsula had significantly decreased. The great leader reliably defended peace and security of the peninsula and the world by strengthening the defense capability with the nuclear deterrent as its pivot and crushing every war provocations of the U.S. If the DPRK had yielded to the U.S. nuclear threat and blackmail, the tragedies of Iraq and Libya would have taken place on the Korean Peninsula and the world's current biggest nightmare of refugees would have happened in Northeast Asia as well. The undying feats the great leader performed to prevent war on the Korean peninsula and defend peace and security of the world with the might of the Songun politics and nuclear deterrent will forever shine with the history. 2 To Ensure Durable Peace System. There is no peace mechanism on the Korean peninsula which is at the center of very sensitive Northeast Asia where nuclear states are confronting each other. The great leader Comrade Kim Jong II wisely led the DPRK government to advance reasonable and practical proposals for ensuring durable peace on the Korean peninsula and the region and make consistent efforts for their materialization. The DPRK government has made strenuous efforts to ensure solid peace mechanism in the Korean Peninsula. These efforts include the proposal to sign DPRK-U.S. peace treaty made in March 1974, the proposal to establish a new peace-keeping mechanism to prevent war and guarantee solid peace on the Korean peninsula made in April 1994, and the proposal to sign DPRK-U.S. interim agreement, a more concrete proposal, made in February 1996. In his historic August 4, 1997, work "Let Us Carry Out the Great Leader Comrade Kim Il Sung's Instructions for National Reunification", the great leader Comrade Kim Jong Il clarified the principle stand to reunify the country in a peaceful way without use of armed forces. He stated that, to ensure peaceful reunification, the U.S. should abandon hostile policy towards the DPRK and a new peace mechanism should be established on the Korean peninsula through DPRK-U.S. peace treaty. During the visit to the U.S. by his special envoy in October 2000, a Joint Communiqué was adopted. In the Joint Communiqué the DPRK and the U.S. agreed that there are a variety of available means to reduce tension on the Korean peninsula and formally end the Korean War by replacing the Armistice Agreement with permanent peace arrangements. The DPRK government was actively engaged in multilateral talks including 4-party and 6-party talks and took sincere attitude toward the discussion of issues related with ensuring peace and security of the Korean peninsula. The great leader wisely led the efforts to promote national reunification by concerted efforts of the north and the south and ensure peace and security of the Korean peninsula. Thanks to his great ideas for national reunification and peace mechanism, the inter-Korean contact and cooperation in various fields were active which finally led to the adoption of June 15 Joint Declaration at the historic north-south summit meeting in 2000. The Declaration is a reunification program common to the Korean nation for ensuring peace and realizing reunification by the Koreans themselves. Thereafter, the north and the south adopted and implemented an agreement to prevent accidental collision on the West Sea and end propaganda and remove relevant means along the Military Demarcation Line, which resulted in the brisk inter-Korean cooperation in all fields including politics, the economy and culture. The October 4 Declaration adopted at the historic north-south summit meeting in 2007 proclaimed that the north and the south shared the need to end the existing armistice mechanism and build a durable peace mechanism and agreed to cooperate in arranging the summit meeting of three or four relevant parties in the Korean Peninsula to announce the end of the war. However, the DPRK-U.S. and inter-Korean relations turned towards catastrophe by the Obama administration and the south Korean anti-reunification forces and the danger of nuclear war on the Korean peninsula kept increasing. The reality more clearly proves the validity and vitality of the DPRK's proposals for peace mechanism and the historic inter-Korean agreements. 3. To Honor the Feats of the Great Leader. Today respected Supreme Leader Comrade Kim Jong Un adds light to the immortal feats of the great leader for peace and security of the Korean peninsula and the world. In 2011 when the Koreans suffered a great national loss with the untimely passing away of the great leader, the Obama administration viewed it as a golden opportunity to stifle the DPRK and intensified military pressure on the DPRK, while initiating Asia Pacific Pivot Policy. The U.S. designated the DPRK as its first attack target and moved massively the armed forces that had been deployed in the U.S. mainland, Europe and Middle East into around the Korean Peninsula. The U.S. is increasing the scale and frequency
of the U.S.-south Korea joint military exercises by introducing more strategic assets, including strategic bombers, aircraft carriers and nuclear submarines, into the Korean Peninsula. The aggressive nature and content of the joint military exercises become more rampant with high-profile operations like "Pyongyang occupation," "precision strike," "decapitation operation," etc. In addition, the U.S. has staged trilateral naval exercises annually that involve the U.S., Japan and south Korea since 2012 and decided to deploy THAAD in south Korea so as to contain Russia and China. These moves made, all the more acute, the strategic confrontation of nuclear states around the Korean Peninsula. It is none other than respected Supreme Leader Comrade Kim Jong Un who firmly defended the sovereignty of the DPRK and peace and security of the world from the rigorous whirlpool of the history. Based on scientific analysis of the situation in Asia Pacific, he prevented nuclear war by advancing a new strategic line of simultaneous development of the economy and the nuclear forces and by taking the toughest countermeasures of strengthening nuclear forces. In 2016 alone, he strengthened the nuclear forces at a high speed beyond imagination with successive achievements including the H-bomb test, test launches of various striking means and nuclear warhead explosion test. These measures aimed at defending peace and security in the Korean Peninsula and the region clearly manifested the iron will of the DPRK fully prepared to take counter measures if the enemies dared to provoke it. The U.S. dares not to provoke a war against the DPRK despite its bragging about strong military capability. This is because the U.S. is apprehensive of the strong nuclear deterrent of the DPRK which is fully capable to make preemptive nuclear strike with standardized warheads and diversified delivery means against the aggressive forces deployed in the U.S. mainland and Pacific operation theater. The respected Supreme Leader has wisely led the efforts to prevent war and ensure durable peace on the Korean peninsula. When a touch-and-go situation was created along the Military Demarcation Line in August 2015, he led the DPRK to put under control the crisis by initiating a proposal for north-south high-level urgent contact, thereby clearing the dark clouds of war that hung over the Korean nation and defending peace and stability on the Korean peninsula and the region. The peace restored under the situation that reached the brink of a war was by no means something achieved on the negotiating table but thanks to the tremendous military muscle based on the defensive nuclear deterrent, developed by the great leader and strengthened by the respected Supreme Leader, and to the invincible might of single-minded unity of the army and people around the Party. In his report to the Seventh Congress of the Workers' Party of Korea on the work of the Central Committee, the respected Supreme Leader stated that the U.S. should squarely see the strategic position of the DPRK that has joined the front ranks of nuclear powers and the trend of the times and scrap its anachronistic policy of hostility towards the DPRK, replace the Armistice Agreement with a peace treaty and withdraw its aggressive forces and war equipment from south Korea. In his New Year Address for this year, he stressed that positive measures should be taken to improve inter-Korean relations and remove the acute military confrontation and the danger of war between the north and the south. Now that the DPRK has consolidated its tremendous military muscle and the improvement of inter-Korean relations and national reunification have become a mature and pressing demand of the times, the U.S. and neighboring countries should respect the DPRK’s strategic status and will for independent reunification and change their policies accordingly. This would be the practical way for ensuring durable peace and security on the Korean peninsula and in the region. As long as the immortal feats performed by the great leader Comrade Kim Jong Il shines forever and the DPRK is wisely guided by respected Supreme Leader Comrade Kim Jong Un, the DPRK will defend its own peace and security by its own strength and make positive contribution to preserving the global peace and stability.” (KCNA, “Kim Jong Il’s Feats for Peace and Security of Korean Peninsula and the World,” February 12, 2017)

Despite his campaign vows to take a tougher line with North Korea, President Donald Trump's restrained public reaction to Pyongyang's first ballistic missile launch on his watch underscores that he has few good options to curb its missile and nuclear programs. Trump's initial public comments on the test launch of what was believed to be an intermediate-range Musudan-class missile were unexpectedly measured - and brief - compared to earlier bluster about another U.S. adversary, Iran, since he took office on January 20. “I just want everybody to understand, and fully
know, that the United States of America is behind Japan, our great ally, 100 percent," Trump told reporters in Palm Beach, Florida, speaking in a solemn tone alongside visiting Japanese Prime Minister Abe Shinzo. The U.S. president did not mention North Korea or signal any retaliatory plans for what was widely seen as an early effort to test the new administration. White House adviser Stephen Miller insisted on ABC's "This Week" that Trump's one-sentence statement was an "important show of solidarity" with Japan. He told "Fox News Sunday" the administration was going to bolster its allies in the region against the "increasing hostility" of North Korea. Trump's aides have said that they will take a more assertive approach than the Obama policy dubbed "strategic patience," which involved gradually scaling up sanctions and diplomatic pressure and essentially waiting out the North Korean leadership. But the new administration has been vague about how it would do this. The responses under consideration - which range from additional sanctions to U.S. shows of force to beefed-up missile defense, according to one administration official - do not seem to differ significantly so far from the North Korea playbook followed by Trump's predecessor, Barack Obama. Even the idea of stepping up pressure on China to rein in a defiant North Korea has been tried - to little avail - by successive administrations. But Beijing is showing no signs of softening its resistance under a new U.S. president who has bashsed them on trade, currency and the contested South China Sea. More dramatic responses to North Korea's missile tests would be direct military action or negotiations. But neither appears to be on the table - the first because it would risk regional war, the latter because it would be seen as rewarding Pyongyang for bad behavior. And neither would offer certain success. "Trump's options are limited," said Bonnie Glaser, an Asia expert at the Center for Strategic and International Studies think tank in Washington. (Matt Spetalnick, “Few Good Options in Trump’s Arsenal to Counter Defiant North Korea,” Reuters, February 12, 2017) After North Korea threatened on New Year’s Day to test an intercontinental ballistic missile, Donald J. Trump, then president-elect, reacted with characteristic swagger. He vowed to stop the North from developing a nuclear weapon capable of hitting the United States. “It won’t happen!” he wrote on Twitter. But six weeks later, after North Korea defiantly launched a missile into the sea, Trump, now president, reacted with surprising restraint. Appearing before cameras late at night on February 11 in Florida with his golfing guest, Prime Minister Abe Shinzo of Japan, Trump read a statement of just 23 words that pledged American support for Tokyo without even mentioning North Korea. The muted comment stood in sharp contrast to his response after Iran tested a ballistic missile, when he directed his national security adviser to publicly warn Tehran that he was “officially putting Iran on notice” and followed up with sanctions. If North Korea was testing the new president, as many analysts believe, then Trump seemed intent on showing that he would not be baited into a confrontation every time an American adversary tried to provoke him. At least not right away. In his short time in office, Trump has shown that he can respond to events in measured ways one moment and with hotheaded bluster the next. But even after waking up on Sunday morning, Mr. Trump chose to publicly feud with Mark Cuban, the owner of the Dallas Mavericks, rather than the maverick leader of North Korea. “I assume they don’t have a strategy yet, so Trump with Abe by his side was properly taciturn, surprisingly so,” said Jeffrey A. Bader, an Asia scholar at the Brookings Institution who served as President Barack Obama’s Asia adviser. “But that can’t hold. At some point you need to articulate a strategy.” The tempered response may also have reflected the fact that the missile launched on yesterday by North Korea was either a medium- or an intermediate-range missile, according to the American military, and not an intercontinental missile, or ICBM, capable of reaching the United States. The missile flew 310 miles before dropping harmlessly into the Sea of Japan, according to the South Korean military, which identified it as an intermediate-range Musudan. North Korea regularly tests missiles in violation of United Nations resolutions, including roughly two dozen last year, but has boasted that it could test an ICBM “anytime and anywhere.” The kind tested today poses a potential threat to American allies in Japan and South Korea and American forces in the Pacific, but could not strike the United States. “It’s yet unclear what missile was tested,” said Thomas Karako, a missile expert at the Center for Strategic and International Studies in Washington. “What is certain is that North Korea has now begun 2017 by continuing the aggressive pace of missile testing they’ve shown in recent years.” North Korea challenged Obama early in his tenure, too, with an underground nuclear blast four months after he took office. The effect was to harden Obama’s attitude toward North Korea for the rest of his presidency, according to former aides. Rather than try to negotiate, as both Presidents Bill Clinton
and George W. Bush did, Obama focused on tightening international sanctions and bolstering alliances with Japan and South Korea. That North Korea’s latest test came while Trump was hosting Abe for a multiday set of meetings, meals and golfing, first at the White House and then at Trump’s Mar-a-Lago estate in Palm Beach, Fla., was seen as no accident. And it may be that Abe counseled Trump on his response. In his own comments while he stood beside Trump, Abe called the launch “absolutely intolerable.” Asia experts and members of Congress praised Trump for reaffirming American support for Japan but lamented that he did not mention South Korea at the same time. “I was glad he issued the statement with the prime minister of Japan, but he ought to do it quickly with South Korea,” Senator Chuck Schumer of New York, the Democratic minority leader, said on “Face the Nation” on CBS. “South Korea is probably more susceptible to North Korea’s virulence than any other country.” White House officials remained quiet about the test and their emerging strategy. Stephen Miller, the president’s senior adviser for policy, said Trump had sent a strong signal with his joint appearance with Abe. “But we’re going to be sending another signal very soon, and that signal is when we begin a great rebuilding of the armed forces of the United States,” he said, also on “Face the Nation.” “President Trump is going to go to Congress and ask them to invest in our military so once again we will have unquestioned military strength beyond anything anybody can imagine.” Most policy makers consider China crucial to any meaningful response to North Korea, given the nations’ extensive economic and political connections, but it remains uncertain that Trump would have any better chance of persuading Beijing to take tougher action. Trump had a fence-mending telephone call with President Xi Jinping of China last week and promised to stick by America’s longstanding “One China” policy, reportedly at Secretary of State Tillerson’s urging. But the president has been an unrelenting critic of China on trade and currency matters, and some of his top advisers, including Stephen K. Bannon, his chief strategist, view China as a long-term adversary. “We will learn an enormous amount about his policy and his administration by how he deals with North Korea,” said Evan S. Medeiros, a managing director at the Eurasia Group and a former Obama adviser. “It’s the land of really bad options, and the threat is only becoming more serious and the window is closing. It will probably become the defining security challenge for the next president in Asia, if not globally.” (Peter Baker, “Trump’s Uncharacteristic Response to Provocation from North Korea,” New York Times, February 13, 2017, p. A-16) John Schilling: “What this missile brings to the table is a much higher degree of mobility, survivability and responsiveness than the Nodong. The Pukguksong-2 was tested from a cold-launch canister system carried on a tracked transporter-erector-launcher (TEL) vehicle, which would provide substantially greater cross-country mobility than the Nodong’s wheeled TEL. The solid-fuel missile is more robust, and as it does not need tanker trucks to carry propellant its logistical footprint is smaller. And as it does not need to be fueled prior to launch, it can launch on perhaps five minutes’ notice compared to the thirty to sixty minutes required for a Nodong. All of these factors would make it much harder to find and preemptively destroy the Pukguksong-2. (John Schilling, “The Pukguksong-2: A Higher Degree of Mobility, Survivability, and Responsiveness,” 38North, February 13, 2017) The test took place on Sunday (Saturday evening in the United States) and was dramatic enough that aides to President Trump and Prime Minister Abe Shinzo of Japan interrupted their dinner at the Mar-a-Lago resort in Florida to bring them early reports of the launch. Initially there was concern that North Korea’s leader, Kim Jong-un, had made good on his threat to test an intercontinental ballistic missile, which one day may be able to reach the United States. Before dinner was over, it was clear that was not the case. The Sunday test went only about 310 miles, falling harmlessly into the sea after following a high-arc trajectory that took it briefly into space. That is well short of the estimated real range of the missile, of 700 or 800 miles. But the importance of the launch was not the missile’s range — though it could reach much of Japan — but in how hard it would be for the United States, Japan or South Korea to have warning of a launch in a real conflict. The launch of older rockets provides warning time because the loading of liquid fuel takes hours, and can usually be spotted by satellites. Solid-fuel rockets like the new Pukguksong-2, if the North Korean description is accurate, could provide little advance warning time. They can be stored on mobile launchers, rolled out and prepared for launch in minutes. The North said the test was conducted from a self-propelled mobile launcher. “All of these factors would make it much harder to find and pre-emptively destroy the Pukguksong-2,” John Schilling, a missile expert, wrote on February 13 on 38 North, an online publication that specializes in North Korea. For Trump, the new weapon
complicates the problem of countering North Korea’s missile and nuclear program. It would be far harder for Trump to threaten to strike North Korean launch sites if the country’s mountainous terrain is hiding scores of mobile missiles in tunnels. North Korea said the new missile was based on the solid-fuel, submarine-launched ballistic missile, or SLBM. After several failed attempts, the North said in August that it had successfully launched the SLBM, claiming that the continental United States, as well as American military bases in the Pacific, were now within the range of its missiles, an assertion that military experts questioned. North Korea said it launched its Pukguksong-2 at a sharp angle to keep it from landing too close to Japan, indicating that it could have flown further than 310 miles if it had launched it at a normal angle. Tom Karako, a proliferation expert at the Center for Strategic and International Studies, a policy institute in Washington, said that President Barack Obama’s strategy of “strategic patience has failed” and that it was time for the new Trump administration to take a different approach. “This weekend’s launch is part of a larger pattern of aggressive testing that confirms the North’s intent to produce more capable, more lethal and more survivable systems,” he said. (Choe Sang-Hun and David E. Sanger, “As North Korea Tests Missile, Experts See New Dangers in Its Mobility and Stealth,” New York Times, February 14, 2017, p. A-16)

KCNA: “Analysts of some countries are misleading the public opinion to give impression that the U.S. is stepping up the deployment of THAAD in South Korea this year because of the impending DPRK’s ICBM test-fire, floating rumor that the test-fire is escalating discord among its neighboring countries and aggravating the regional situation. Commenting on this, Minju Joson Sunday says that what arouses big astonishment is the simple and unilateral view of ignoring the essence of the problem while echoing sophism made by the U.S. which is accustomed to justifying its aggression moves by faulting others. The commentary points out what is the root cause of the escalated tension prevailing in Northeast Asia. It stresses that it is a vital matter related with the destiny of the country and nation for the DPRK to bolster up its military capability, as it has stood against the U.S., the most aggressive and arbitrary state in the world, over the past several decades. It goes on: The opinion that the “missile threat” from the DPRK spawned the issue of deploying THAAD is a foolish way of thinking that blindly parrots the U.S. assertion. Why is the regional situation in Northeast Asia being steadily aggravated? The reason is the scramble for hegemony among powers. Antagonism between China and the U.S. is the main reason of the aggravated regional tension. The military antagonism between China and the U.S. is bringing arms race to the Northeast Asian region and driving the regional situation into the worst instability. Another undeniable reason is the antagonism between China and Japan. To try to make the public convince that the DPRK’s self-defensive measures aggravate the situation while ignoring such a reality would be unhelpful to preventing the aggravation of the situation in Northeast Asia.” (KCNA, “Minju Joson Points out Root Causes of Escalated Tension in Northeast Asia,” February 12, 2017)

UN Security Council: “The members of the Security Council strongly condemned the most recent ballistic missile launches conducted by the Democratic People’s Republic of Korea on 11 February 2017 and 19 October 2016. These launches are in grave violation of the Democratic People’s Republic of Korea’s international obligations under United Nations Security Council resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), and 2321 (2016). The members of the Security Council deplore all the Democratic People’s Republic of Korea ballistic missile activities, including these launches, noting that such activities contribute to the Democratic People’s Republic of Korea’s development of nuclear weapons delivery systems and increase tension. The members of the Security Council further regretted that the Democratic People’s Republic of Korea is diverting resources to the pursuit of ballistic missiles while Democratic People’s Republic of Korea citizens have great unmet needs. The members of the Security Council expressed serious concern that the Democratic People’s Republic of Korea conducted these ballistic missile launches after the 15 April, 23 April, 27 April, 28 April, 31 May, 21 June, 9 July, 18 July, 2 August, 23 August, 5 September, and 14 October launches, as well as the nuclear test of 9 September, in flagrant disregard of the repeated statements of the Security Council. The members of the Security Council reitera...
of Korea shall refrain from further actions, including nuclear tests, in violation of the relevant Security Council resolutions, and comply fully with its obligations under these resolutions. The members of the Security Council called upon all Member States to redouble their efforts to implement fully the measures imposed on the Democratic People’s Republic of Korea by the Security Council, particularly the comprehensive measures contained in resolutions 2321 (2016) and 2270 (2016). The members of the Security Council reiterated the importance of maintaining peace and stability on the Korean Peninsula and in North-East Asia at large, expressed their commitment to a peaceful, diplomatic and political solution to the situation and welcomed efforts by Council members, as well as other States, to facilitate a peaceful and comprehensive solution through dialogue. The members of the Security Council stress the importance of working to reduce tensions in the Korean Peninsula and beyond. The members of the Security Council agreed that the Security Council would continue to closely monitor the situation and take further significant measures, in line with the Council’s previously expressed determination. (UN Security Council Press Statement, “DPRK’s Ballistic Missile Launch,” New York, February 13, 2017) Han Tae Song, the new Ambassador of the Democratic People’s Republic of Korea (DPRK) to the United Nations in Geneva, was addressing the Conference on Disarmament on February 14, a day after taking up his post. "The various test fires conducted by DPRK for building up self-defense capabilities are, with no exception, self-defense measures to protect national sovereignty and the safety of the people against direct threats by hostile forces," Han told the 61-member state forum. "The successful test launch of a medium-to-long range missile on February 12th is a part of self-defense measures," he said. "In this respect, my delegation strongly rejects the latest statement of the U.N. Security Council and all U.N. resolutions against my country." Han said the divided Korean peninsula "remains the world's biggest hotspot with a constant danger of war". He condemned joint military exercises carried out annually by South Korea and the United States, as well as what he called "nuclear threats" and blackmail towards his country. "It is the legitimate self-defense right of the sovereign state to possess strong deterrence to cope with such threat by hostile forces aimed at overthrowing the state and the socialist system," he said. North Korea shared mankind's common goal of global denuclearization, Han said. "The DPRK supports global efforts toward nuclear disarmament and complete obliteration of nuclear weapons and we play a responsible role to contribute to achieving global denuclearization," he said. In New York, U.S. Ambassador Nikki Haley said in a statement after the Security Council meeting that it was "time to hold North Korea accountable" with "actions. U.S., Japanese and South Korean military officials held a teleconference today in which they condemned the launch as "a clear violation" of multiple Security Council resolutions. The United States "reaffirmed its iron-clad security commitments" to South Korea and Japan, the Pentagon said. (Stephanie Nebhuy, “North Korea Rejects UN Statement, Says Missile Tests Defensive,” Reuters, February 14, 2017) China is moving to blame South Korea for North Korea’s ballistic missile launch, arguing that one of the causes of the launch was inter-Korean differences. “China is opposed to the DPRK’s launch which violates the Security Council resolutions,” said Chinese Foreign Ministry Spokesperson Geng Shuang during the regular press conference. While calling on countries in the region to refrain from actions that could increase tensions, Geng noted that the UN Security Council would be dealing with this matter and said that “China will take part in the discussions in a responsible and constructive manner.” Geng also reconfirmed China’s official stance: “As a permanent member of the Security Council […] China has always enforced the Council’s resolutions in their entirety” and has “made unremitting efforts to facilitate the settlement of the issue of Korean Peninsula.” The most striking part of Geng’s remarks was his statement that “The root of the DPRK nuclear and missile issue lies in the differences between the DPRK and the US and between the DPRK and the ROK.” The Chinese Foreign Ministry has frequently rejected the argument that China should take responsibility for North Korea’s nuclear program by attributing the program to strife between North Korea and the US, but these remarks also mention missiles and inter-Korean conflict. When asked multiple times for confirmation,
Geng repeated the same remarks and said, “This is a viewpoint that has been repeatedly emphasized.” After the briefing, Geng told reporters, “You see the way tensions are rising now. When one side does something, the other side does something. It never ends - it’s like a knot that never unravel.” From this perspective, North Korea’s ballistic missile launch is seen as part of an arms race linked to military actions by South Korea and the US. “Pyongyang’s persistence in launching missiles will further provide an excuse to accelerate Washington and Seoul’s pace to deploy the Terminal High Altitude Area Defense anti-missile system in South Korea, which damages China’s strategic interests,” Global Times said in an op-ed. (Kim Oi-hyun, “China Says Inter-Korean Tensions at the Root of N. Korean Missile Launch,” Hankyore, February 14, 2017)

The chief of South Korea's spy agency confirmed that North Korean leader Kim Jong-un's half-brother was murdered with poison in Malaysia. National Intelligence Service (NIS) Director Lee Byong-ho told lawmakers that for the past five years Pyongyang has been attempting to assassinate Kim Jong-nam, who was under the protection of the Chinese government. During a meeting with the National Assembly's Intelligence Committee, Lee confirmed that Kim was killed with poison at the airport, although it still needs to find out whether a needle or chemical spray was used. The agency conceded it was notified of the incident about four hours after it occurred. Kim was at the airport to take an airplane heading to Macao when he asked the staff for help after interacting with two "Asian" women. Kim died on the way to a nearby hospital. The Malaysian authorities presume Kim was poisoned, although details will be revealed through an autopsy. The agency said the suspects are presumed to be still at large in Malaysia. "There was also an (assassination attempt) in 2012," Lee was quoted as saying by Rep. Kim Byung-kee of the Democratic Party. Lee then said the North's latest action is presumed to have been based on Kim Jong-un's "delusional disorder," rather than on any calculation that his half-brother is a threat to the regime. The NIS head also told lawmakers that Kim sent a letter to the North Korean leader Kim Jong-un in 2012, asking his brother to spare his and the lives of his family. Kim Jong-nam's wife is currently staying in Beijing with a son, while his second wife is living in Macao with a son and a daughter. All of them are currently under the protection of Chinese authorities. The son in Macao is Kim Han-sol, who came into the spotlight in 2012 after being interviewed by a Finnish television station. He said he hopes for the unification of the two divided Koreas and wants to improve the livelihoods of ordinary people living in the impoverished country now controlled by his young uncle. The agency said Kim has never asked South Korea for asylum, nor was there an effort within North Korea to place Kim Jong-nam as the leader. (Yonhap, “Spy Agency Confirms Assassination of N.K. Leader’s Half-Brother,” February 15, 2017) The Royal Malaysia Police announced late yesterday afternoon on February 15 that they had arrested a woman that morning and that she had been carrying a Vietnamese passport in Terminal 2, where the attack occurred. They said she was “positively identified” from closed-circuit video, and was alone at the time of her arrest. She was identified as Doan Thin Hoang, 28, according to the inspector general of the police, Khalid Abu Bakar. On February 116, the Malaysian police said they had detained a second suspect, a woman with an Indonesian passport. A police official told the Bernama news agency that more arrests were expected. Ever since Kim Jong-un succeeded his father in 2011, “there has been a standing order” to assassinate his half-brother, Lee Byung-ho, the director of the South’s National Intelligence Service, said during a closed-door briefing at the National Assembly, according to lawmakers who attended it. “This is not a calculated action to remove Kim Jong-nam because he was a challenge to power per se, but rather reflected Kim Jong-un’s paranoia,” Lee was quoted as saying. Kim Jong-un wanted his half-brother killed, Lee said, and there was an assassination attempt against him in 2012. Kim was so afraid of assassins that he begged for his life in a letter to his half-brother in 2012. “Please withdraw the order to punish me and my family,” Kim was quoted as saying in the letter. “We have nowhere to hide. The only way to escape is to choose suicide.” Lee said that Kim Jong-nam had no power base inside North Korea, where Kim Jong-un had swiftly established his monolithic rule with what the South called a reign of terror. Kim Jong-nam arrived in Malaysia last week, Lee said. He was in line at the airport to check in for a flight to Macao this morning when he was attacked by the two women, Lee said, citing security camera footage from the airport. The women fled the airport in a taxi, Lee said. If North Korea's involvement is proved, Washington could face intense pressure to put the country back on its list of nations that sponsor terrorism, said Cheong Seong-chang, an analyst at the
such weapons. In 2014, the South Korean Defense Ministry said the North had stockpiled 2,500 to
and stockpiling of chemical weapons, and North Korea is among the world's largest possessors of
Chemistry Department of Malaysia, Khalid said.

samples were taken from Kim's skin and eyes. The poison was identified in a preliminary analysis by the Center for Chemical Weapons Analysis of the

North Korea was first put on the terrorism list after the South caught a woman from the North who confessed to planting a bomb on a South Korean airliner that exploded over the Indian Ocean, near Myanmar, in 1987. The North was taken off the
list in 2008, after a deal aimed at ending its nuclear program. South Korea’s military plans to use loudspeakers along the shared Korean border to inform North Koreans of Kim's killing and of
their government’s brutality, a South Korean news agency, Yonhap reported February 15. The
Defense Ministry declined to confirm the report. Outside analysts often saw him as a possible
candidate to replace Kim Jong-un if the North Korean leadership imploded and China,
traditionally an ally, sought a replacement in its client state. Chinese experts on North Korea said they doubted that Kim Jong-nam had special security protection from Beijing. “Chinese elites had no expectation this guy could play an important political role,” said Cheng Xiaohai, an associate professor of international relations at Renmin University. “If China wanted to use him as an
alternative leader, China would have offered good protection, but this assassination shows he had
no security protection.” Kim was a prince in exile with little chance of returning home, analysts
and officials in South Korea said. His wife and a daughter and son are in Macau under Chinese
protection, Lee said. The South Korean intelligence agency did not disclose how it had obtained
the letter from Kim begging his half-brother to spare his life. But government sources said that
emails Kim sent home through North Korean embassies had been obtained in a hacking operation.
In one of the emails, they said, Kim bitterly complained that the North Korean government
stopped sending him cash after his father died and Kim Jong-un took over. In 2012, a news report
said Kim was thrown out of a luxury Macau hotel, unable to pay a $15,000 bill. Kim Jong-nam’s
mother, Sung Hae-ri, a decorated “people’s actress,” was already married and the mother of a
child when Kim Jong-il forced her to divorce her novelist husband to marry him. Kim Jong-il
adored his first son, Kim Jong-nam. He once seated his young son at his desk and told him, “This
is the place where you will one day give orders,” according to Lee Han-young, a relative who
defected to the South in 1982. But Kim Jong-nam’s grandfather, the North’s founding president,
Kim Il-sung, never approved of the marriage. “My father was keeping highly secret the fact that he
was living with my mother, who was married, a famous movie actress, so I couldn’t get out of the
house or make friends,” Kim was quoted as saying in a 2012 book by a Japanese journalist. “That
solitude from childhood may have made me what I am now, preferring freedom.” Kim was born in
secret, and when his mother fell out of favor with Kim Jong-il and was forced to live in Moscow,
he was left in the care of her sister. He was later sent to Geneva, where he learned English and
French. (His mother was alone in Moscow when she died in 2002.) Kim Jong-il would later begin
a relationship with Ko Young-hee, a star of Pyongyang’s premier opera, who gave birth to Kim
Jong-chol and then Kim Jong-un. According to a Japanese sushi chef who published a 2003
memoir about his experience working for the Kim family, Kim Jong-un was by that time the
father’s favorite. Kim Jong-nam squandered what little chance he may have had to succeed his
father when he embarrassed Pyongyang in 2001; he was caught trying to enter Japan on a fake
passport from the Dominican Republic. He told Japanese investigators that he wanted to visit
Tokyo Disneyland. But rumors of intrigue never left Kim, as analysts speculated that if the young,
inexperienced Kim Jong-un failed to meet the expectations of hard-line generals, they might
summon home the eldest brother. In a way, Kim helped fuel such rumors. In the 2012 book by the
Japanese journalist, Kim called his younger brother “a figurehead.” (Choe Sang-Hun and Richard
C. Paddock, “Dictator’s Estranged Heir Met Death in Exile from North Korea,” New York Times,
February 16, 2017, p. A-6) The poison used to kill Kim Jong-nam, the half-brother of the North
Korean leader Kim Jong-un, was VX nerve agent, which is listed as a chemical weapon, the
Malaysian police announced February 24. In a brief statement, Khalid Abu Bakar, the national
police chief, said the substance was listed as a chemical weapon under the Chemical Weapons
Conventions of 1997 and 2005, to which North Korea is not a party. VX nerve agent can be
delivered in two compounds that are mixed at the last moment to create a lethal dose. The police
say that two women approached Mr. Kim at the airport with the poison on their hands and rubbed
it on his face one after the other. Samples were taken from Kim’s skin and eyes. The poison was
identified in a preliminary analysis by the Center for Chemical Weapons Analysis of the
Chemistry Department of Malaysia, Khalid said. The Chemical Weapons Convention bans the use
and stockpiling of chemical weapons, and North Korea is among the world’s largest possessors of
such weapons. In 2014, the South Korean Defense Ministry said the North had stockpiled 2,500 to

VX is part of a family of nerve agents created decades ago during research into pesticides. It is tasteless and odorless and kills by causing uncontrollable muscle contractions, which eventually stop the victim from breathing. A dose of about 10 milligrams is enough to kill by skin contact, according to the Federation of American Scientists. Several world powers, including the United States and the former Soviet Union, once had large stockpiles of the nerve agent. American stores of VX were destroyed under the Chemical Weapons Convention of 1997, with incineration completed in 2012. In 1994 and 1995, the Japanese cult Aum Shinrikyo used homemade VX to attack three people, one of whom died. North Korea is estimated to have a chemical weapons production capability of up to 4,500 metric tons during a typical year and 12,000 tons during a period of extended crisis. It is widely reported to possess a large arsenal of chemical weapons, including mustard, phosgene and sarin gas, a United States Congressional Research Service report said last year. (Richard C. Paddock and Choe Sang-hun, “Nerve Agent Killed North Korean Leader’s Half Brother, Police Say,” New York Times, February 24, 2017, p. A-10) By using one of the world’s deadliest known toxins to carry off a high-profile assassination in Malaysia, North Korea sent a message to the world that it has two types of weapons of mass destruction – nuclear bombs and the most ghastly of chemical weapons. “The point was made,” said Raymond Zilinskas, director of the chemical and biological nonproliferation program at the Middlebury Institute of International Studies at Monterey in California. The United Nations categorizes VX, which English scientists discovered in 1955, as a chemical weapon of mass destruction and banned its use under a 1993 treaty. Tasteless and odorless, VX has an amber-like color and is the consistency of motor oil. The Centers for Disease Control and Prevention calls it “the most potent of all nerve agents,” and says victims can die within minutes from convulsions and respiratory failure. The announcement that VX was used in a crowded airport generated alarm in Malaysia and around the world. The Organization for the Prohibition of Chemical Weapons called any use of VX “deeply disturbing” and said it “stands ready to provide expertise” to Malaysia. Teams are expected to sweep the airport Sunday for any remaining toxic chemicals, Reuters reported. North Korea has long been suspected of producing chemical weapons but proof has been elusive. “Now we know they have it,” said Zilinskas. “This might have been actually a field exercise for using (it), how does their VX work? The size of its chemical weapons arsenal is unknown. “We have no idea whether or not they have laboratory quantities – like grams or kilograms – or if they have a factory set up somewhere where they have tons,” Zilinskas said. One of the two young women suspected in the attack, 25-year-old Indonesian Siti Aishah, told an Indonesian diplomat that she was paid the equivalent of $90 but said she didn’t know she was applying poison to Kim’s face, the Straits Times reported February 25. Her alleged accomplice, a Vietnamese woman, Doan Thi Huong, was also in custody. Malaysia’s police chief said one of the two women fell ill after the attack, and vomited. But it remained unclear how assailants would have handled the fatal toxin without dying themselves. “If these assassins had VX on their hands, they would be dead in a few minutes,” said Raymond Zilinskas, Middlebury Institute of International Studies, who served as a U.N. weapons inspector in Iraq in 1994. Zilinskas said each of the two assailants probably carried a less-toxic component of VX. “They smeared it on his face, and had the reaction between the two of them produce the VX. It probably wasn’t real efficient but enough to kill him in 15 minutes,” he said. “Then, as quickly as they could, they went off to the toilet and washed their hands off,” he suggested. (Tim Johnson, “North Korea’s VX Use Signals It’s More Dangerous than We Thought,” McClatchy, February 25, 2017) Kim Jong Nam apparently made contact with a suspected U.S. intelligence agent in Malaysia four days before he was murdered there. Malaysian investigation authorities speculate that this was one of the reasons behind Pyongyang’s decision to silence him. According to investigative authorities and acquaintances of Kim Jong Nam, he arrived alone in the Malaysian capital of Kuala Lumpur in the afternoon of February 6 from Macau, where he was living in exile with his family. Security camera footage showed him arriving with a single black bag. On February 8, Kim traveled to the resort island of Langkawi in northern Malaysia without telling anyone around him about his travel plans. Security cameras at a hotel there showed him meeting his contact, described as a middle-aged Korea-American based in Bangkok, in the building on February 9. Malaysian investigation authorities had been tailing the American every time he entered Malaysia, suspecting that he had links to a U.S. intelligence agency. The man entered
Malaysia on the same day that Kim arrived in the country. He had met Kim in Malaysia several times in the past. On February 9, Kim and his contact entered a suite in the hotel around 1 p.m. and left two hours later. An analysis of Kim’s notebook computer showed that a USB memory stick had been inserted into the PC, leading to suspicions that Kim handed over a large volume of information he was not able to convey orally. Kim returned from Langkawi to Kuala Lumpur on the evening of February 12. He was attacked with poison in the concourse of Kuala Lumpur International Airport the following morning and died shortly afterward. The U.S. citizen left Malaysia the same day. Investigative authorities suspect that North Korea’s secret police had gotten wind of Kim’s activities and itinerary. (Norikyo Masatomo, “Kim Jong Nam Thought to Have Met with U.S. Agent ahead of Slaying,” Asahi Shimbun, May 13, 2017) The estranged half-brother of North Korean leader Kim Jong Un had $120,000 (13 million yen) in cash in his possession when he was killed at Kuala Lumpur's international airport in February, triggering speculation the money was a payoff from a U.S. intelligence contact. Malaysian investigative authorities also speculated that Kim Jong Nam's meetings with an American male believed to have links with a U.S. intelligence agency may have been behind North Korea's decision to silence him. Malaysian officials said Kim apparently acquired the sum during his stay and was planning to leave the country without declaring it as they found no record of him making a large cash withdrawal from a bank in Malaysia. During a check of Kim's belongings, police found four bundles of U.S. currency, mostly in mint condition, in a black bag. Each bundle contained 300 $100 dollar bills. Malaysian officials said earlier that Kim, the eldest son of late leader Kim Jong Il, had met with the same U.S. contact on several occasions during previous visits. In Malaysia, as in many countries, arriving and departing passengers with large sums of cash in their possession are required to report the amount to customs officials. As Kim traveled on a diplomatic passport, he was not obliged to follow normal customs or immigration procedures when entering or leaving the country. According to law enforcement officials, Kim spent five days in the northern resort island of Langkawi during his eight-day stay. On February 9, Kim met for about two hours at a hotel with an American male who Malaysian authorities believe is closely associated with a U.S. intelligence agency. Malaysian investigative officials said it was likely that Kim had passed on useful intelligence information to his U.S. contact. "It may well have been in return for the information he provided," said a Malaysian official, referring to the cash found in Kim's possession. (Norikyo Masatomi, “Kim Jong Nam Has $120,000 on Him at Time of Slaying,” Asahi Shimbun, June 12, 2017)

In a case with a thousand plot twists, there has been but one constant in the murder investigation of Kim Jong Nam: Nothing is ever what it seems. The victim himself — the playboy half-brother of North Korean leader Kim Jong Un — was traveling under false papers when he died and had to be identified using DNA. The two women accused of killing him turned out to be hired dupes, paid a few dollars to perform what they thought was a reality-TV stunt. Stranger still was the murder weapon, liquid VX, a toxin so powerful that a few drops rubbed onto the skin killed the victim in minutes, yet it failed to harm the two women who applied the poison with their bare hands. Even more mysterious: why North Korea would go to extravagant lengths to use a battlefield-grade chemical weapon on foreign soil, only to work equally hard to cover its tracks. For the prosecutors preparing for the first court hearings later this month, some of the mysteries behind Kim Jong Nam’s death inside a Malaysian airport terminal will likely never be resolved. But nearly five months after the killing, U.S. and Asian officials have a clearer view of the attack’s significance. In carrying out history’s first state-sponsored VX assassination in a country 3,000 miles from its borders, North Korea has demonstrated a new willingness to use its formidable arsenal of deadly toxins and poisons to kill or intimidate enemies on foreign soil, analysts say. “The choice of weapons was not accidental,” said Sue Mi Terry, a former senior analyst on North Korea at the CIA and currently managing director for Korea at the Bower Group Asia. “Everything about this incident was intended to send a message.” U.S. and South Korean intelligence agencies have long believed that North Korea possesses significant stores of the nerve agents VX and sarin — and probably biological weapons as well — but in the past, such arsenals were assumed to be intended as a deterrent against foreign attacks. But in the attack on Kim Jong Nam, North Korea revealed a strategy for using chemicals that looks a lot like cyberwarfare: limited, highly secretive attacks that can damage an enemy without inviting massive retaliation.
Undertaken camouflage, concealment and deception, North Korea deliberately built its NBC [nuclear, biological, chemical] infrastructures in extreme secrecy; "North Korea is bad enough when you're talking about their nuclear and missiles program," Rebecca Hersman, a former Defense Department deputy assistant secretary for countering weapons of mass destruction, said at a recent policy forum. “But I think we ignore their chemical and biological programs truly at our own peril.” Not one, but two teams of assassins had rehearsed for the moment. The only ones Kim Jong Nam would see were female: two attractive women in their 20s who had been recruited locally. One of them, identified by police as Indonesian native Siti Aisyah, worked in a Kuala Lumpur massage parlor; the other, Doan Thi Huong, had moved from Vietnam to Malaysia to work in what authorities described vaguely as the “entertainment” industry. Both would tell police that they were hired by a Korean man to perform “pranks,” such as smearing baby oil on strangers, for a hidden-camera video show. For their service, each was promised $90 in cash and a shot at future TV stardom. At least four men — later identified by Malaysian officials as North Korean agents — are seen watching the attack and shadowing the visibly agitated Kim Jong Nam as he seeks help from police and an airport first-aid station. Minutes later, as the dying Kim is wheeled into an ambulance, the men slip through the departures gate to board flights out of the country. The only ones who didn’t escape were the women and the victim himself. Aisyah and Huong mysteriously avoided serious injury — perhaps, weapons experts speculate, because each handled harmless precursor chemicals that became toxic only when mixed, or perhaps because both women quickly washed their hands after the attack. Both are seen quickly entering airport lavatories after the attack, behavior that prosecutors have cited in accusing the two women of being knowingly complicit in Kim Jong Nam’s murder. The two women face court appearances later this month on charges of first-degree murder, a capital crime in Malaysia. Kim Jong Nam, who quickly sought medical help after the attack, lost consciousness in the airport medical station and died in the ambulance, less than 20 minutes after the episode began. It would take two autopsies and nearly two weeks to determine the name of the rare toxin that took his life. Malaysian investigators would conclude that the VX was smuggled into the country by North Korea, most likely in a commercial jetliner. It’s unclear whether the toxin arrived ready to use or in a form that required mixing two harmless ingredients to create. In either case, the advantage for the assassins is that only a few drops are needed to kill, said a U.S. official with years of experience in chemical-weapons defense. "Was it assembled in Malaysia? Not necessarily," said the official, who insisted on anonymity in discussing U.S. intelligence assessments of the North Korean threat. “A single three-ounce container that would fit in your carry-on luggage would hold far more than you’d ever need.” Until the February 13 attack, hard evidence of Pyongyang’s arsenal of toxins did not exist, at least in the public realm. But for at least two decades, U.S. intelligence assessments have concluded that North Korea possesses a sizable stockpile of chemical weapons, with VX being one of many varieties. A State Department report in 2001 found that North Korea was “already self-sufficient” in making all the necessary precursors for sarin and VX, as well as older weapons such as mustard gas. Drawing from an array of sources — from North Korean defectors and spies to satellite photos and electronic eavesdropping — U.S. agencies calculated the size of the country’s chemical stockpile at between 2,500 and 5,000 tons. That’s far larger than Syria’s arsenal at its peak, and larger than any known to exist in the world, except for those built by the Soviet and U.S. militaries during the Cold War. A parallel but reportedly much smaller program produces biological weapons, current and former U.S. intelligence officials think. Published Defense Intelligence Agency documents have described efforts underway to weaponize at least four pathogens: anthrax, plague, cholera and biological toxins, such as botulinum. Work on chemical and biological programs began years before Pyongyang tested its first nuclear bomb, and U.S. analysts suspect that both were intended at first as a deterrent against foreign attacks. But although North Korea regularly boasts of its achievements in atomic energy and missiles, its chemical and biological weapons have always been kept carefully hidden, according to a study released jointly last month by the Johns Hopkins School of Advanced International Studies and the U.S. Korea Institute. “North Korea has deliberately built its NBC [nuclear, biological, chemical] infrastructures in extreme secrecy; undertaken camouflage, concealment and deception operations . . . and dispersed NBC facilities
around the country,” report author Joseph S. Bermudez Jr., a prominent expert on North Korean weapons systems, wrote in the report. “It is therefore probable that there are significant elements of the NBC programs and their infrastructures that are simply unknown outside the North Korean government.” U.S. and South Korean defense officials alike take the threat seriously, so much so that both governments inoculate their troops against exposure to anthrax bacteria and even the smallpox virus. Soldiers deployed along the border are issued gas masks and protective suits and put through occasional drills to prepare for the day when canisters of VX or sarin are fired across the border in North Korean rockets or artillery shells. Any such attack would certainly prompt a massive retaliation. But Kim Jong Nam’s assassination has forced U.S. officials to consider the possibility of a clandestine attack, one that might be more difficult to trace, or to defend against.

“With biological weapons, especially, there’s an opportunity for covert attack with deniability, since attribution would be difficult,” said Andrew C. Weber, former assistant secretary of defense for nuclear, chemical and biological weapons defense. Although U.S. officials are fixated on North Korea’s nuclear advances, a nuclear attack “is not the most likely, or possibly even the most consequential,” he said. As Kim Jong Nam’s assassination demonstrated, the delivery of such weapons can be easy — especially for deadly pathogens, but also for toxic chemicals, he said. And any military response would be delayed for days or weeks while investigators attempted to find evidence that firmly pointed to a perpetrator. “A chemical attack would be knowable, almost as soon as it happens,” Weber said. “But Kim Jong Un is a brutal guy, and he may have no qualms against doing it. Or he may just miscalculate.” Kim Jong Un’s plan to use VX to kill his half-brother included extensive measures to ensure secrecy — so many, in fact, that some experts think the North Koreans wanted to keep their enemies ignorant about its use of the toxin, or at least unsure. After Kim Jong Nam’s death, Pyongyang requested the immediate return of his body, without an autopsy being performed. Malaysia refused, and soon afterward, local news media reported an attempt by unknown individuals to break into the morgue where the body was kept. The attempt failed, but in the weeks since, North Korea has insisted that the leader’s half-brother died of a heart attack and that any reports of chemical toxins were lies spread by outsiders. Kim Jong Un has a history of extreme brutality toward relatives whom he suspects of plotting against him. He may have seen Kim Jong Nam — a free-spoken man of leisure who enjoyed protected status in China and was widely reported to have intelligence contacts with several foreign governments — as a possible future choice by Beijing to replace him. “It might have just been an expression of how much he hates traitors,” said Joshua Pollack, a former government consultant on North Korean weapons programs and now editor of the journal Nonproliferation Review.

“There’s no doubt that VX was an unusual choice for an assassination. But I think it was probably chosen because they thought no one would look for it.” Other current and former U.S. officials say that North Korea would have calculated that the VX would be found eventually. According to these officials, Kim Jong Un’s plan was to showcase his ability to strike with terrifying weapons, while also concealing the evidence to reduce the chances of retaliation. “His message about VX was, ‘We have it,’” said Terry, the former CIA analyst. “He knew they would eventually find it.” Whatever the motivation, the tactic worked on nearly every level, North Korea experts say: A potential rival was eliminated. A capability to strike covertly, using one of the most fearsome chemical weapons ever designed, was amply demonstrated. And North Korea, while issuing denials that are widely seen as implausible, managed to get away with it, at least until now. “They carry out an attack and make people afraid, but then ensure that there’s no evidence that can lead to real accountability,” Pollack said. “For them, that’s the sweet spot.” (Joby Warrick, “The Message behind the Murder: North Korea’s Assassination Sheds Light on Chemical Weapons Arsenal,” Washington Post, July 6, 2017)

A senior South Korean lawmaker called for a revision to the missile defense system sought by the country by the mid-2020s as North Korean missiles will likely become harder to detect before launch. The upcoming "kill chain" strike system and the Korean Air and Missile Defense (KAMD) system are both designed to detect and destroy incoming missiles in the shortest possible time. In a meeting with reporters after being briefed on North Korea's latest missile launch and Seoul's countermeasures by the National Intelligence Service, Lee Cheol-woo, chairman of the National Assembly's Intelligence Committee, raised questions about the effectiveness of the anti-missile systems in hitting the North's newly developed solid-fuel missile fired from a mobile
A day after Facebook posts came to light showing deliberations over North Korea's nuclear weapons program, a break from the longstanding stalemate suddenly seems possible. China has urged the United States to enter talks with North Korea to end its nuclear weapons program, apparently sensing that President Trump's desire to make deals could break the deadlock. 

Korean Lawmaker Calls for Revision to Anti-Missile Defense Systems

The Terminal High Altitude Area Defense (THAAD) missile defense system, scheduled to be deployed in South Korea this year, may also be ineffective in dealing with high speed missiles. THAAD is known to be able to intercept a missile flying 40-150 km from the ground, can shoot down missiles that comes directly towards it even if they reach speeds of Mach 14, but are less effective for missiles heading for distant areas. Yoo Seung-min, a presidential candidate for the conservative Bareun Party, argued South Korea needs to "inject a defense budget to secure two to three THAAD batteries here and have control over missile defense operations." (Yonhap, “South Korean Lawmaker Calls for Revision to Anti-Missile Defense Systems,” February 14, 2017) 

A day after Facebook posts came to light showing deliberations over North Korea in the public dining hall of the Mar-a-Lago resort in Florida, President Trump is up in arms about loose national security controls. The real story here is why are there so many illegal leaks coming out of Washington? Will these leaks be happening as I deal on N.Korea etc? — Donald J. Trump (@realDonaldTrump) Feb. 14, 2017

For 16 years, the United States has publicly refused to engage in direct talks with North Korea, arguing that doing so would reward it for bad behavior. In the meantime, the North raced ahead with its nuclear weapons program. Yet with a new president in the White House and South Korea’s leader under the threat of impeachment, a break from the longstanding stalemate suddenly seems possible. China has urged the United States to enter talks with North Korea to end its weapons program, apparently sensing that President Trump's desire to make deals could break the

An Ohio-class ballistic missile submarine assigned to Submarine Group 9 completed a Follow-on Commander's Evaluation Test (FCET) February 16, resulting in four successful test flights of Trident II D5 missiles. Designated FCET-53, the operation spanned a three-day period. The primary objective of an FCET is to obtain, under operationally representative conditions, valid reliability, accuracy, and performance of the missile system for use by Commander, Strategic Command and the Joint Chiefs of Staff. The missiles were unarmed and all launches were conducted from the sea, flew over the sea, and landed in the sea. At no time did the missiles fly over land. Since its introduction to the fleet in 1989, the Trident II D5 missile has completed 165 successful test flights. (John M. Daniels, “FCET Success: SSBN Launches Fleet Ballistic Missiles,” Strategic Systems Program Public Affairs NNS 170216-21, February 16, 2017)
years-long deadlock on negotiations. Beijing did so even after North Korea made another stride in its weapons program on Sunday, testing an intermediate-range missile that went into the Sea of Japan. “The root of the North Korean nuclear and missile issue lies in the difference between North Korea and the United States and between North Korea and South Korea,” Geng Shuang, a spokesman for the Foreign Ministry in Beijing, said today. “We believe that dialogue and consultation offers the way out.” China was not alone in seeking a new direction, as it appeared to capitalize on a re-evaluation by the Trump administration of how to handle the government of Kim Jong-un. In Tokyo, after returning from meeting Trump in the United States, Prime Minister Abe Shinzo told a parliamentary committee that Japan needed to join its allies in finding a different approach. Japan must “cooperate with the international community, including China,” he said. And in South Korea, where the government is paralyzed while waiting for a court’s decision on impeachment and where an election is likely, progressive opposition parties called for new talks, emphasizing that sanctions intended to topple the regime had failed. “Dialogue and diplomacy” are the only proven means to end the development of nuclear weapons, said Choo Mi-ae, leader of the main opposition Democratic Party. Such talks seemed politically impossible under President Barack Obama, who favored sanctions as the prime safeguard against the North’s nuclear ambitions. There is a growing sense in the region that Obama’s approach to the North failed. Chinese analysts said the White House should seize the chance for a new chapter in dealing with North Korea and abandon Obama’s policy of applying sanctions. “We all think that the Trump administration should talk directly with North Korea,” said Lu Chao, director of the Border Study Institute at the Liaoning Academy of Social Sciences in Shenyang. “That would be the best approach to crack this problem.” But the unpredictable nature of dealing with North Korea was underscored by reports today that Kim’s half-brother, Kim Jong-nam, had been assassinated in Malaysia. Dealing directly with the North is anathema to most American officials — Republicans and Democrats alike — who say that would be viewed as compensation for the aggressive behavior of a government whose nuclear tests and ballistic missile launches have alarmed the world. On his first official visit to South Korea as defense secretary, Jim Mattis showed little inclination toward talks. Any use of nuclear weapons will be met with “an effective and overwhelming response,” he said. The United States will keep its “ironclad” commitment to allies in the region, he added. But during his presidential campaign, Trump said he would be prepared to sit down with Kim and share a hamburger with him. After Trump chose not to mention North Korea during his brief remarks after it launched a ballistic missile over the weekend, some analysts interpreted his uncharacteristic restraint as a sign of wanting to take a different tack. Earlier last week, Chinese officials participated in behind-the-scenes talks with senior members of Trump’s staff to arrange the first phone call between President Xi Jinping and Trump. That conversation dealt with Trump’s decision to back the “One China” policy, which recognizes a single Chinese government in Beijing, but the discussions leading to the call covered a range of issues, including North Korea, according to a person in Washington who was briefed on the talks by a Trump administration official. “China wants the Americans to talk directly with North Korea,” said Cheng Xiaohao, associate professor of international relations at Renmin University. “China believes the North Korean nuclear problem actually was caused by the Cold War and Pyongyang’s fear of American invasion. Therefore, the blame falls squarely on the U.S., and all the negotiations should be about the U.S. talking with North Korea.” At the outset, Professor Cheng said China would not be fussy about how the Trump administration approached any talks. “Generally speaking, China is basically saying, please talk — talk whatever you want, in whatever way you like, as long as you guys could reach some consensus,” he said. William J. Perry, a former United States defense secretary, said in Washington last month that the new administration at least had to give direct talks with North Korea a chance to gain China’s help in addressing the nuclear threat. “What might make a difference to China is if we really had already gone through a really serious attempt at negotiation, offered a real alternative to North Korea,” said Perry, who was involved in North Korea policy during the presidency of Bill Clinton and favored Clinton’s visiting the country. “And if they turn that offer down, then I think we’re in a much better position to go to China and say: ‘We want to really tighten the screws on sanctions.’” One American expert on North Korea suggested a clear path for how the Trump administration should proceed. “Trump should start by holding back-channel talks,” said John Delury, associate professor of Chinese studies at Yonsei University in Seoul. “If those make enough progress, he should then send an
President Trump: “Those are criminal leaks. They’re put out by people either in agencies — I think you’ll see it stopping because now we have our people in. You know, again, we don’t have our people in because we can’t get them approved by the Senate. We just had Jeff Sessions approved. Injustice, as an example (ph). So, we are looking into that very seriously. It’s a criminal act. You know what I say, when I — when I was called out on Mexico, I was shocked because all this equipment, all this incredible phone equipment — when I was called out on Mexico, I was — honestly, I was really, really surprised. But I said ‘you know, it doesn’t make sense. That won’t happen’ but that wasn’t that important a call, it was fine, I could show it to the world and he could show it to the world, the president who’s a very fine man, by the way. Same thing with Australia. I said ‘that’s terrible that it was leaked’ but it wasn’t that important. But then I said to myself “what
happens when I’m dealing with the problem of North Korea?” What happens when I’m dealing with the problems in the Middle East? Are you folks going to be reporting all of that very, very confidential information, very important, very — you know, I mean at the highest level? Are you going to be reporting about that too? So, I don’t want classified information getting out to the public and in a way that was almost a test. So I’m dealing with Mexico, I’m dealing with Argentina, we were dealing on this case with Mike Flynn. All this information gets put into the “Washington Post” and gets put into the “New York Times” and I’m saying “what’s going to happen when I’m dealing on the Middle East? What’s going to happen when I’m dealing with really, really important subjects like North Korea? … I’m not going to tell you anything about what response I do. I don’t talk about military response. I don’t want to be one of these guys that say, “Yes, here’s what we’re going to do.” I don’t have to do that. I don’t have to tell you what I’m going to do in North Korea. … I don’t have to tell you what I’m going to do in North Korea. And I don’t have to tell you what I’m going to do with Iran. You know why? Because they shouldn’t know. And eventually, you guys are going to get tired of asking that question.

(President Donald J. Trump Press Conference February 16, 2017 Transcript)

Foreign Minister Yun Byung-se has voiced South Korea’s reservations about any U.S. agreement with North Korea that would reward Pyongyang for a nuclear freeze, sources said Tuesday, referring to the policymaker's recent talks with American Secretary of State Rex Tillerson. Instead, any deal with Pyongyang should aim to dismantle North Korea's nuclear weapons program in a "complete, verifiable and irreversible" manner, the sources quoted Yun as telling Tillerson during their talks in Bonn, Germany. It was Yun's first meeting with the U.S. top diplomat under the Donald Trump administration, which came after North Korea's launch of an intermediate ballistic missile on Feb. 12. The provocation highlighted North Korea's nuclear issue as one of the most pressing security challenges facing the new U.S. administration. The sources said that the South Korean foreign minister stressed that a mere freeze on North Korea's nuclear program would be meaningless mainly because the country is believed to be already in possession of dozens of nuclear weapons and a freeze of North Korea's highly-enriched uranium program may be hardly verifiable. "The (South Korean) government regards it as meaningless to pursue a freeze deal when North Korea shows no intention to give up its nuclear weapons program although freezing its nuclear facilities would be part of the inevitable process before the complete, verifiable and irreversible (nuclear) dismantlement," the sources told Yonhap. During the meeting, Yun also expressed Seoul's skepticism about opening any dialogue over North Korea's demand to sign a peace treaty, the sources said. Pursuing talks with North Korea simultaneously on denuclearization and a peace treaty would give the regime an excuse to delay its denuclearization, Yun was also quoted as telling Tillerson. The foreign minister then underlined the importance of maintaining the on-going pressure-oriented diplomacy toward North Korea, suggesting broader sanctions on North Korea and Chinese firms doing business with the North. He also called for continuing pressure on North Korea's human rights violations as a desirable policy approach toward the reclusive country, according to the sources. Yun's policy stances are likely to be put to discussion when the South Korean and U.S. representatives on the North Korean nuclear issue hold a meeting in Washington possibly before the end of this month. Foreign ministry spokesman Cho June-hyuck said later, "The South Korean and U.S. foreign ministers shared in specific details in their first talks what our side thinks with regard to the two countries' joint response to North Korea's nuclear (development). In follow-up to the ministerial talks, special representative for Korean Peninsula peace and security affairs Kim Hong-kyun will travel to the U.S. in the near future to put the puzzle together on the matters of joint response," he noted. (Yonhap, “Foreign Minister Yun Dissuades Tillerson from Reward-for-Nuclear Freeze Deal with N. Korea: Sources,” February 21, 2017)

2/17/17

South Korea and the United States conducted a joint exercise February 14-17 to seize and destroy North Korean weapons of mass destruction (WMD), according to the U.S. military. More than 400 soldiers, including 200 Korean Army soldiers, took part in the Warrior Strike 5 exercise at a live fire complex in Pocheon, 46 kilometers north of Seoul, the U.S. 2nd Infantry Division's Web page showed. During the exercise, the allied forces formed a hypothetical special operations unit,
China said that it was suspending all imports of coal from North Korea as part of its effort to enact United Nations Security Council sanctions aimed at stopping the country’s nuclear weapons and ballistic-missile program. The ban takes effect tomorrow and will last until the end of the year, the Chinese Commerce Ministry said in a brief statement posted on its website today. Chinese trade and aid have long been a vital economic crutch for North Korea, and the decision strips North Korea of one of its most important sources of foreign currency. Coal has accounted for 34 percent to 40 percent of North Korean exports in the past several years, and almost all of it was shipped to China, according to South Korean government estimates. The ban comes six days after the North Korean test of a ballistic missile that the Security Council condemned as a violation of its resolutions that prohibited the country from developing and testing ballistic missile technology. In the resolution it adopted in November in response to the North’s fifth and most powerful nuclear test, the Security Council said that North Korea should not be allowed to export more than 7.5 million metric tons of coal a year or bring in more than $400 million in coal sales, whichever limit is met first. It was unclear whether that cap has already been reached for this year. The Chinese Ministry of Foreign Affairs did not comment on the suspension after it was announced today. Calls to the ministry’s press officer were not answered. Yesterday, the Chinese minister of foreign affairs, Wang Yi, said at a conference in Munich that the United Nations sanctions of North Korea “must continue to be strictly implemented.” But Wang also argued that only renewed negotiations would offer any hope of curtailing North Korea’s nuclear weapons development. China has hosted six-party talks — including itself, South Korea, North Korea, the United States, Japan and Russia — aimed at a negotiated settlement of the North Korean nuclear standoff. But those talks have stopped since 2009, and there seems little hope of them restarting anytime soon. “This situation cannot continue,” Wang said, “because the ultimate outcome may be intolerable to all sides.” Last year, China imported 22.5 million metric tons of coal from North Korea, an increase of 14.5 percent on the amount in 2015, according to Chinese customs statistics. In December, China imported about 2 million tons of North Korean coal. Mysteel, a Chinese industrial analysis firm, estimated that under the limits imposed by the sanctions, the coal quota would be used up by April or May. In 2015, China’s cumulative imports of North Korean coal reached 7.5 million metric tons by May. The coal suspension also followed the assassination of Kim Jong-nam, the estranged half-brother of the North Korean leader Kim Jong-un, on February 13 at an airport in Malaysia. (Choe Sang-hun, “China Halts Coal Imports from North Korea,” New York Times, February 19, 2017, p. A-6) For years, the United States and others have pressed China’s leaders to suspend imports of coal from North Korea to push the reclusive state to abandon its nuclear weapons program. For years, the Chinese leadership resisted — until February 18, when it suddenly announced in a terse statement that it would do just that. But if Beijing was sending a message to North Korea, it was also directing one at President Trump, who has complained that China was not putting enough pressure on North Korea. Now President Xi Jinping of China has essentially said: We have done our part in enforcing sanctions. Over to you, Mr. Trump. China would like the Trump administration to deal directly with North Korea.

Beijing’s suspension of coal imports from North Korea was a signal that China was being tougher than usual, offering Trump a concession to bring Washington to the table with the North. Secretary of State Rex Tillerson has stepped up his contacts with Chinese officials in recent days. (Jane Perlez, “China Sends a Subtle Signal to North Korea,” New York Times, February 22, 2017, p. A-15) The volume of North Korea’s coal exports reached nearly three times what the U.N. Security Council has allowed

practiced an air assault on nuclear and missile facilities, and conducted mock operations to locate and seize WMDs. “Our companies refined their standard operating procedures for air assault operations, urban operations and combined operations with our ROK Army counterparts,” said Maj. Jared Nichols, the battalion’s executive officer. "The value of training like this is key to our mission to be ready to 'Fight Tonight' if called upon." The exercise was designed to train soldiers from 1st Battalion, 16th Infantry Regiment, 1st Armored Brigade Combat Team, 1st Infantry Division, currently on a nine-month rotational deployment, with an aim to identify and eliminate sites containing enemy weapons of mass destruction, the Web site said. The allies also plan to start a two-week computer-simulated command post exercise, called Key Resolve, on March 13. (Yonhap, “S. Korea, U.S. Hold Exercise to Counter N. Korea Weapons of Mass Destruction,” March 3, 2017)
in its latest punitive resolution imposed, an update on the U.N. website showed. The report indicates huge shipments of the energy resource were sent before China announced its ban last week. The data did not specify which country imported North Korean coal over the months, but put the number of reporting member states that bought North Korean coal at one, apparently meaning China. The latest update of the U.N.’s 1718 Sanctions Committee, which oversees the implementation of UNSC sanctions on North Korea, showed North Korea exported a total of just over 2 million tons of coal in December, which is worth US$183.89 million. In terms of value, the monthly export volume is well over the import ceiling of $53.5 million which the UNSC imposed in Resolution 2321 for the period of November 30 to December 31. The annual import ceiling for 2017 was set at 7.5 million tons or $400.87 million in value. The sanctions committee update also showed that the monthly export of North Korean coal for January stood at 1.44 million tons, which accounts for over 19 percent of the annual total. The data also suggests that China stockpiled on North Korean coal before its announcement February 18 to suspend imports through the end of the year. (Yonhap, “U.N. Report: N. Korea’s Coal Exports Far Exceed U.N. Ceiling in Dec.,” February 21, 2017)

Preparations are underway to bring senior North Korean representatives to the United States for talks with former American officials, the first such meeting in more than five years and a sign that Pyongyang sees a potential opening with the Trump administration. Arranging the talks has become a lot more complicated over the past eight days, with North Korea testing a ballistic missile and the assassination of Kim Jong Un’s half-brother in Malaysia, an act that many suspect was ordered by the leader of North Korea. Malaysian police today named as suspects four North Koreans who left the country on the day of the attack. Analysts also say they are highly doubtful that Pyongyang, which has insisted on being recognized as a nuclear state, would be willing to moderate its position on its weapons program. But if the talks do take place, they could offer a glimmer of hope for an already-hostile relationship that has only deteriorated as the Kim government works aggressively to develop a nuclear-tipped missile capable of reaching the continental United States. The planning for the “Track 1.5” talks — with the U.S. side made up of the former officials who usually take part in Track 2 talks, but the North Korean side comprising government officials — is still in a preparatory stage, according to multiple people with knowledge of the arrangements. The State Department has not yet approved the North Koreans’ visas for the talks, which would take place in New York within the next few weeks. “The North Koreans have expressed an interest in engagement, but nothing’s been approved yet,” said one person familiar with the preparations, speaking on the condition of anonymity because they were not authorized to discuss them. Others who have been in touch with North Koreans describe an intense interest in what President Trump might do. “If this happens, it would be an interesting signal to the new administration,” he said of the discussions. The talks would be the clearest indication yet that Kim wants to talk with the Trump administration. “If this happens, I would take it as a very positive sign from both sides,” said another person with knowledge of the arrangements. In recent years, there have been sporadic Track 1.5 talks that have taken place in Kuala Lumpur, Geneva, Berlin and Ulaanbaatar, Mongolia. But these talks have not taken place in the United States since July 2011, before Kim succeeded his father in North Korea. The planned talks are being organized by Donald S. Zagoria of the National Committee on American Foreign Policy, who served as a consultant on Asia during the Carter administration and has organized previous rounds of such talks. Zagoria declined to comment on the preparations. Choe Son Hui, the director of the U.S. affairs department in North Korea’s Foreign Ministry, is likely to lead the delegation from Pyongyang. She is well known to American officials, having participated in official meetings including the six-party talks on denuclearization, as well as in other Track 1.5 talks. Choe has a direct line to Kim, according to Thae Yong Ho, the North Korean deputy ambassador to London who defected to South Korea last year. Since Trump was elected, there has been a notable change in North Korea’s usually bombastic rhetoric. Pyongyang had been sharply critical of the Obama administration, saying its policy of “strategic patience” — waiting for North Korea to change its nuclear calculations — was “an aggressive and heinous ‘strategic suffocation’ policy” against North Korea. But in its announcement of its missile launch Feb. 12, the North’s state media did not include its usual bluster about needing a deterrent against the United States and its “hostile policies.” In his own statement after the launch, Trump notably did not condemn
Pyongyang. The new president has, in fact, said very little about how he plans to deal with North Korea. “North Korea — we’ll take care of it folks, we’re going to take care of it all,” he said at his news conference last week, without elaborating. His administration is now conducting a review of North Korean policy. This provides space to broaden the options for dealing with Pyongyang and an opportunity to influence the new president, analysts say. While some expect him to take a hard-line approach, encouraged by hawkish advisers, others say that Trump, who prides himself on making deals, could be open to dialogue with the North Korean regime. “U.S. policy is hanging in the balance,” said Adam Cathcart, an expert on North Korea at the University of Leeds in Britain. “I think the North Koreans ought to be pretty happy, because the Americans have laid off criticizing them too much and have, in fact, been making things quite easy for them,” Cathcart said. “But at some point, they are going to have to decide whether to pick up the cudgel.” For those favoring an even tougher approach to North Korea, recent events have provided plenty of ammunition. A week ago, North Korea tested a ballistic missile for the first time since Trump was elected. The missile appeared to show significant technological advances, with upgraded power and range, and could mark another step in the push toward the capacity to hit Alaska or Washington state. Then the next day, Kim Jong Nam, the estranged half-brother of the North Korean leader, was attacked and apparently poisoned at Kuala Lumpur International Airport. He died shortly afterward. Although the investigation is ongoing, the South Korean government has blamed the assassination on Kim Jong Un, who has systematically eliminated potential rivals to his power over the past four years. Malaysian police have arrested one North Korean man in connection with the attack — he is said to have a background in chemistry — and today named four other North Koreans suspected of being involved. The four had been in Malaysia for several weeks, but all left February 13, the day of the attack, said Noor Rashid Ibrahim, Malaysia’s deputy national police chief, on Sunday at a news conference. Complicating the environment even further, the South Korean and U.S. militaries are due to start annual joint exercises next month, an event that always elicits an angry response from Pyongyang, which sees the drills as a pretext for an invasion. In the past year or two, the exercises have become more overtly offensive, with the two militaries practicing “decapitation strikes” on the North Korean leadership. (Anna Fifield, “North Korean Officials Are Preparing to Come to U.S. for Talks with Former U.S. Officials,” Washington Post, February 19, 2017)

China has warned South Korean conglomerate Lotte over its involvement in a planned US missile shield on the peninsula — the first time Beijing has openly criticised the group after months of pressure via undeclared economic sanctions. “Lotte will hurt the Chinese people and the consequences could be severe. The Chinese people will not support a company complicit in damaging China’s interests,” according to a Xinhua commentary. The development underscores China’s two-track approach to the Korean peninsula amid heightened tensions over North Korea’s nuclear and ballistic weapons programs. On one hand, it is increasing pressure on Pyongyang following a declaration that it would stop importing North Korean coal. On the other, it is squeezing Seoul on its plans to deploy the US missile shield that Beijing says is a “threat to regional security and stability.” Related article Beijing turns up the heat on corporate South Korea Hyundai hybrid rollout dented and $2.6bn Lotte theme park project halted over THAAD. North Korea has re-emerged as a potential conflict hotspot after last year testing two nuclear devices and more than 20 ballistic missiles. Earlier this month, Pyongyang launched an advanced mid-range missile off its east coast in what observers saw a test of the new Trump administration. “The proposed deployment of a US missile defense system in the Republic of Korea is a threat to regional security and stability, and Lotte Group is one decision away from becoming an accessory to the act,” said Xinhua. Lotte is in talks with the Seoul government to trade the land needed to host the Terminal High Altitude Area Defense platform. However, South Korea’s fifth-largest conglomerate has dragged its heels on negotiations in recent months as Beijing stepped up retaliatory measures against its operations in China. In December, it emerged the group’s premises across China had come under increased scrutiny and had been subject to an array of health and safety and tax investigations. Earlier this month, the company said it would close three retail stores in Beijing, partly as result of the deteriorating bilateral relationship over THAAD. “Lotte stands to lose Chinese customers and the Chinese market. That would be a very large slice out of their business pie,” said Xinhua. The commentary urged Lotte to defer or reject the Thaad deal.
Related article Asian consumer stocks: bunkered by politics Unpredictable politics is making shares hard to value conventionally The ultimatum puts the company in a difficult position — caught between its business interests and the will of the South Korean government. The issue is also a sensitive one for policymakers in Seoul who recognise the importance of relations with their biggest trading partner but are increasingly anxious about North Korean belligerence. “Lotte has the position to resolve this issue from the broad point of view, in other words, for the sake of the national security and national interests,” said the South Korean defense ministry. The warning to Lotte came after China announced it would suspend coal imports from North Korea in a sign of Beijing’s displeasure with the reclusive regime. China is North Korea’s main trading partner, and coal is one of its biggest imports from the country. “This warning against Lotte is only the first step in pressuring the company as well as the government,” said Cai Jian, a professor at Fudan University in Shanghai. “If Lotte does not budge, the penalties will get worse in terms impact and severity.” (Bryan Harris, “Beijing Threatens Lotte over U.S. Missile Shield,” Financial Times, February 21, 2017, p. 4)

2/21/17

China and the United States have agreed on the need to address the nuclear threat posed by North Korea after a phone call between Chinese State Councillor Yang Jiechi and US Secretary of State Rex Tillerson. The call came after Tillerson met China’s Foreign Minister Wang Yi for talks at the G20 ministerial meeting in Bonn, Germany, last week. A statement released by the US State Department said Tillerson and Yang affirmed the importance of a constructive relationship between the two nations. The two sides also “agreed on the need to address the threat that North Korea poses to regional stability”, the statement added. China this week suspended all coal imports from North Korea as part of efforts to enforce United Nations sanctions against Pyongyang. Tillerson and Wang also discussed economics and trade, potential cooperation on counterterrorism, law enforcement and international crime, the statement said. Yang was quoted by the state-run Xinhua news agency as saying that the two countries have reached consensus over safeguarding the “political foundation” of their relationship after a phone call between President Xi Jinping and President Trump earlier this month. Yang was quoted as saying during his conversation with Tillerson that he hoped both countries would work according to “the essence of the two leaders’ conversation” and would strengthen high-level exchanges and interactions at all levels between China and the US. There was no reference to South China Sea in both statements from the two countries. (South China Post, “China, U.S. Vow to Address North Korea Nuclear Threat,” February 22, 2017)

For years, the United States and others have pressed China’s leaders to suspend imports of coal from North Korea to push the reclusive state to abandon its nuclear weapons program. For years, the Chinese leadership resisted — until February 18, when it suddenly announced in a terse statement that it would do just that. But if Beijing was sending a message to North Korea, it was also directing one at President Trump, who has complained that China was not putting enough pressure on North Korea. Now President Xi Jinping of China has essentially said: We have done our part in enforcing sanctions. Over to you, Mr. Trump. The challenge comes at a tantalizing moment. For weeks now, plans have been afoot for a North Korean government delegation to meet in New York in early March with a group of former United States officials who have long been involved in North Korea policy. Will the Trump administration issue visas to the North Koreans, a move that would suggest the new president is interested at least in hearing from Pyongyang through informal channels? There have been indications that Trump was willing to take a quite different tack from President Barack Obama. During his campaign, Trump said he was interested in sharing a hamburger with the 33-year-old leader of North Korea, Kim Jong-un. He seemed to suggest he had a smidgen of respect for, or at least curiosity about, the maverick leader, the most recent incarnation of a longstanding dynasty. Trump’s response to the recent North Korean missile test was restrained, perhaps the result of Obama’s warning after the November election that North Korea would be the incoming president’s most dangerous foreign policy challenge. “If the visas are issued, it will be a clear message that the Trump administration is prepared to go the extra mile and engage North Korea,” said Evans J. R. Revere, a former principal deputy assistant secretary of state. There should be little expectation, he warned, of any
policy shift by the North, which has shown every indication of wanting to continue building its nuclear program. The planned meeting, sponsored by the National Committee on American Foreign Policy, headed by Donald S. Zagoria, falls far short of talks between the two governments and has been designed as an initial sounding board. “I have been organizing such meetings with the North Koreans since 2003, and our goal is to increase mutual understanding as well as to encourage the kind of frank dialogue that may not be possible in official talks,” Zagoria said. The gathering would be the first of its type in New York in five years because the Obama administration opposed holding even informal talks on American soil given North Korea’s expansion of its nuclear weapons program. That North Korea is holding two Americans hostage was another impediment. Meetings with North Korean officials arranged by Zagoria and other groups were held in world capitals during the Obama era, including Kuala Lumpur, Malaysia, and Berlin last year. The decision whether to allow the meeting to proceed in New York is now freighted with more than the usual complications. Over the last 10 days, North Korea has shown its full colors. First, the regime flaunted its expanding nuclear capabilities with the test of an intermediate-range ballistic missile that uses a solid-fuel technology that will make it easier for the country to hide its arsenal. Then, last week, Kim Jong-nam, the half-brother of the North Korean leader, was assassinated in Malaysia in a crowded passenger terminal at Kuala Lumpur International Airport. The South Korean government has publicly accused North Korea of the killing, and six North Koreans have been linked to the plot. Without these two incidents, the Trump administration could have won praise for breaking the logjam with North Korea by allowing the New York meeting to go ahead, said a former participant in such meetings who declined to be identified because of the sensitivity of the topic. But the assassination of Kim Jong-nam would allow opponents of North Korean engagement to charge that granting visas only rewarded bad behavior, the person said. Soon after the killing, Republican and Democratic members of Congress called for the United States to return North Korea to its blacklist of states that sponsor terrorism, from which it was removed nine years ago. The Trump administration faces another, perhaps more profound, decision on how to handle North Korea. Annual joint military exercises, set for March between South Korea and the United States, are expected to involve an American aircraft carrier, advanced stealth fighters, B-52 and B-1B bombers and a nuclear submarine, according to South Korean news reports. This annual show of force, not far from the demilitarized zone between North and South Korea and off the Korean coast, has traditionally been viewed by North Korea as an American preparation for an attack against its forces. With the heightened tensions on the Korean Peninsula, and Chinese-North Korean relations at a low point, the risk of a strong response by the North to the exercises — through the launch of missiles or a nuclear test — is higher than usual, said Peter Hayes, the executive director of the Nautilus Institute for Security and Sustainability in Berkeley, Calif. Last year, for example, the North conducted its fifth nuclear test during joint American-South Korean military exercises. “We are likely entering a new and extremely dangerous phase of the Korean conflict,” Hayes said. He suggested ramping down the exercises to “avoid inadvertent clashes and escalation to nuclear war, and to probe North Korean intentions.” China would like the Trump administration to deal directly with North Korea.

Beijing’s suspension of coal imports from North Korea was a signal that China was being tougher than usual, offering Trump a concession to bring Washington to the table with the North. Secretary of State Rex Tillerson has stepped up his contacts with Chinese officials in recent days. On February 21 he spoke by telephone with Yang Jiechi, China’s top diplomat, and among the topics they discussed was how to handle North Korea. But how much impact a suspension of coal imports would have on the rudimentary and seemingly resilient North Korean economy was far from clear. The Foreign Ministry insisted that day that the suspension of coal imports was a bureaucratic procedure. In the first six weeks of 2017 China had already imported almost all its annual quota of coal allowed under the United Nations sanctions, the ministry said. Zhang Liangui, an expert on North Korea at the Central Party School of the Communist Party, said he was not optimistic that any talks with North Korea, formal or informal, would result in a diminishing of the North’s nuclear capabilities. “North Korea has said more than 50 times that it will not participate in any talks that have denuclearization on the agenda,” he said. “I don’t think President Trump could pull this off and talk the Koreans out of it.” (Jane Perlez, “China Sends a Subtle Signal to North Korea,” New York Times, February 22, 2017, p. A-15)
President Donald Trump said he is “very angry” at North Korea’s ballistic missile test earlier this month, and that boosting a missile defense system for Japan and South Korea is among the options to counter provocative acts by Pyongyang. In an interview with Reuters, Trump said he wants to build up the U.S. nuclear arsenal to ensure it is at the “top of the pack,” reversing his predecessor Barack Obama’s goal of achieving a world without nuclear weapons. Trump said China could solve North Korea’s nuclear issue “very easily if they want to,” urging Beijing to exert more influence on Pyongyang to get it to rein in its missile and nuclear weapons programs, which violate U.N. Security Council resolutions. “There’s talks of a lot more than that,” Trump said, when asked about the missile defense system. “We’ll see what happens. But it’s a very dangerous situation, and China can end it very quickly in my opinion,” he said. China said over the weekend that it will suspend coal imports from Pyongyang until the end of the year as part of tightened sanctions against the country in accordance with a UNSC resolution. But China, the main economic and diplomatic benefactor of North Korea, has been reluctant to put too much pressure on the country, fearing it could destabilize Kim’s regime. Scholars say China has a strategic interest in ensuring the stability of North Korea because it serves as a buffer zone between it and South Korea, a U.S. ally. Trump did not completely rule out the possibility of meeting North Korean leader Kim Jong Un in the future under certain circumstances, but suggested it might be too late. “It’s very late. We’re very angry at what he’s done, and frankly this should have been taken care of during the Obama administration,” Trump said. Alluding to Obama’s call to reduce the role of nuclear weapons and eventually rid the world of them, as he pledged in his landmark speech in 2009 in Prague, Trump said the United States has “fallen behind on nuclear weapon capacity.” “It would be wonderful, a dream would be that no country would have nukes, but if countries are going to have nukes, we’re going to be at the top of the pack,” he said. “We’re never going to fall behind any country even if it’s a friendly country.” (Reuters, Kyodo, “Trump Backs Missile Shield against North Korea, Pushes Upgrade to Nuclear Arsenal,” Japan Times, February 24, 2017) ON CHINA HALTING COAL IMPORTS FROM NORTH KOREA “Well, we appreciate that. You know, I have a very, very good, I’ve had very good phone calls with the president, President Xi, and I’ve had very, very good talks with him, and the call is a start. But we have a very big problem and a very dangerous problem for the world with North Korea. ... I think China has tremendous control over North Korea. Whether they say so or not is up to them, but they have tremendous control over North Korea. I think they could solve the problem very easily if they want to.” ON NORTH KOREA'S MISSILE PROGRAM “It’s very dangerous and something should have been done about it years ago. It’s very dangerous and very unacceptable. ... And very unfair to Japan.” ON TALK OF ACCELERATING MISSILE DEFENSE SYSTEM FOR JAPAN AND SOUTH KOREA "There's talks of a lot more than that. We’ll see what happens. But it’s a very dangerous situation, and China can end it very quickly in my opinion. ... It’s one of many things that can be done. Missile defense is one of many things that can be done.” ON WHETHER MEETING WITH KOREAN LEADER KIM JONG UN IS A POSSIBILITY “I guess ... I would never say no. It may be very late. It’s very late in the picture right now. ... We’re very angry at what he’s done, and frankly this should have been taken care of during the Obama administration.” (Reuters, “Highlights of Reuters Interview with Trump,” February 24, 2017) President Donald Trump said Thursday that he's "not liking" the military dynamic in eastern Asia, citing the militarization of the South China Sea and the ongoing development of North Korea's ballistic missile program as causes for global concern. "I know exactly what's going on between China and North Korea and everybody else," he told Reuters. "I'm not liking it." The president, who frequently pledged to stand up to China during his presidential campaign, blamed his predecessor for the dynamic. "This didn't take place under the Trump administration. This took place under the Obama administration," Trump said. "Many things took place that should not have been allowed." The president added: "You were in a much better negotiating position three years ago. I am not happy about it." (Christiano Lima, “Trump ‘Not Liking’ Chinese and North Korean Military Moves,” Politico, February 24, 2017) KCNA: “A touch-and-go situation is prevailing again in the hot spot waters of the West Sea of Korea. On February 22 the south Korean belligerent forces let civilian boats repeatedly infiltrate into the waters of the DPRK under the pretext of building "man-made reefs" aimed at checking illegal fishing operations of boats from a third country and protecting aquatic resources in the
The poison used to kill Kim Jong-nam, the half-brother of the North Korean leader Kim Jong-un, was VX nerve agent, which is listed as a chemical weapon, the Malaysian police announced. In a brief statement, Khalid Abu Bakar, the national police chief, said the substance was listed as a chemical weapon under the Chemical Weapons Conventions of 1997 and 2005, to which North Korea is not a party. (Richard C. Paddock and Choe Sang-hun, “Nerve Agent Killed North Korean Leader’s Half Brother, Police Say,” New York Times, February 24, 2017, p. A-10)

Plans for back-channel talks in New York between North Korean government representatives and former U.S. officials were scuttled after the State Department withdrew the visa approvals for Pyongyang’s top envoy on U.S. relations, according to people familiar with the matter. The talks, which were scheduled to take place on March 1 and 2 at a hotel outside the United Nations headquarters in Manhattan, where North Korea has a mission, were contingent on the granting of a visa for Choe Son Hui, the director-general of the American affairs bureau in the North Korean Ministry of Foreign Affairs. (Jonathan Cheng, “Planned Back-Channel Talks between U.S., North Korea Scuttled,” Wall Street Journal, February 24, 2017) After approving plans on Friday for informal talks in New York between a North Korean delegation and former American officials, the Trump administration reversed course hours later, withdrawing approval for the North Koreans’ visas, two people who were to take part in the planned talks said. The schedule called for the two sides to meet in early March, and arrangements were underway for the six-member North Korean group, led by Choe Son-hui, who runs the American affairs bureau of the North’s Foreign Ministry, to travel to New York. The organizer of the talks, the National Committee on American Foreign Policy, led by Donald S. Zagoria, was told by the State Department the morning of February 24 that the visas would be granted. But the decision was reversed in the afternoon when “someone overruled State,” said one person who planned to participate in the talks. Both of the people on the participants’ list spoke on the condition of anonymity because of the delicacy of the matter. The reversal came as the Malaysian government announced that VX nerve agent, a chemical on a United Nations list of weapons of mass destruction, was used to kill the estranged half-brother of the leader of North Korea at the Kuala Lumpur International Airport on February 13. South Korea has accused North Korea’s leader, Kim Jong-un, of ordering the killing of his half-brother, Kim Jong-nam. Just days before Mr. Kim’s death, North Korea launched a new type of nuclear-capable missile, apparently timed to coincide with the visit of Prime Minister Abe Shinzo of Japan to the United States. At first, the North Korea developments did not appear to deter the State Department’s plan to move ahead with the talks. The use of the VX nerve agent was already known when Zagoria got the green light about the visas on Friday morning. The
missile test was on February 11. The State Department also knew about tough comments Trump made about the North Korean leader during an interview with Reuters on February 23. “It’s very late,” Trump said when asked whether he would meet with Kim. “We’re very angry at what he’s done, and frankly this should have been taken care of during the Obama administration.” The decision to reverse the initial approval for the visas came hours later the next afternoon, one of the people who planned to take part in the talks said. But it was clear, that person said, that a senior official in the State Department, the White House or elsewhere in the government had second thoughts about issuing visas to representatives of North Korea in light of recent events. “I suspect it was a combination of the VX attack and the president’s personal pique that caused the reversal,” the person said. “Someone obviously looked at the fact that the United States was going to issue visas to representatives of a country that had just violated international law, carried out a murder and intentionally violated the sovereignty of another country, and decided, ‘Maybe this isn’t such a good idea.’” While the talks were unofficial, they were seen as a test of the willingness of the Trump administration to begin serious negotiations at a later date, or to send a special American envoy to North Korea. Several prominent nuclear weapons experts have urged Trump to send an envoy, arguing that President Barack Obama’s refusal to engage with the North allowed it to make significant advances in its nuclear weapons program. “Every six to seven weeks North Korea may be able to add another nuclear weapon to its arsenal,” Siegfried S. Hecker, emeritus director of the Los Alamos National Laboratory and a senior fellow at the Center for International Security and Cooperation at Stanford University, said in a recent Op-Ed article. The leader of the North Korean delegation, Choe, planned to travel to New York in her “nongovernmental” role as president of North Korea’s Institute for American Studies. The American participants were mostly former officials who had dealt with North Korea over many years. Some of them have participated in similar gatherings with North Koreans organized outside the United States. But more weight was given to the New York gathering because it was taking place at the start of the new administration. During his election campaign, Trump said he was open to meeting with the North Korean leader over a hamburger. The Americans in the group represented a wide range of views on North Korea. Winston Lord, a former ambassador to China who was on the list of participants, recently wrote in a dissent to a report for the Asia Society that the United States should immediately step up sanctions on North Korea. Others in the American delegation were Robert L. Gallucci, a negotiator on North Korea during the Clinton presidency; Victor Cha, a senior adviser on North Korea to George W. Bush; and Evans J. R. Revere, a former principal deputy assistant secretary of state specializing in North Korea. Gallucci and Cha wrote a report for the George W. Bush Institute last year that emphasized the human rights abuses in North Korea. As well as holding discussions about the North’s rapidly expanding nuclear program, the American delegation was planning to talk with the North Koreans about two Americans now detained in North Korea. (Jane Perlez, U.S. Cancels Talks with North Korea, New York Times, February 26, 2017, p. A-8) Talks between North Korean diplomats and former American officials, scheduled to be held in New York next week, have been canceled following allegations that the Pyongyang regime planned the attack that used a chemical weapon to kill leader Kim Jong Un's half-brother. The plans for the “Track 1.5” talks were already hanging in the balance after North Korea launched a ballistic missile earlier this month and then found itself accused of assassinating Kim Jong Nam, the leader’s estranged half-brother, in a busy Kuala Lumpur airport terminal on February 13. But Malaysia’s announcement Friday that his death was caused by VX, a lethal nerve agent banned under the international Chemical Weapons Convention, proved the final straw. The State Department decided not to issue the visas to the North Korean diplomats due to travel from Pyongyang to New York for the talks, according to three people with knowledge of the decision. A State Department spokesperson declined to comment. “We do not discuss the details of individual visa cases,” she said. (Anna Fifield, “North Korea-U.S. Talks Called off after Death of Kim Jong Un’s Half-Brother,” Washington Post, February 25, 2017) 2/24/17 The United States denied visas for North Korean diplomats set to travel to New York for unofficial talks because the half-brother of North Korea's leader was "assassinated presumably by or at the behest of North Korean authorities," Assistant Secretary of State Daniel Russel said March 7. The remark is believed to mark the first time that a senior American official has publicly blamed the North for the February 13 killing in Malaysia of Kim Jong-nam. Russel said the killing led to the decision to deny visas for North Korean diplomats, including Choe Son-hui, director of the North Korean
Foreign Ministry's North American affairs bureau, who had planned to travel to New York for talks with former U.S. officials. "Kim Jong-nam was assassinated presumably by or at the behest of North Korean authorities by means of a chemical weapon that is banned by international convention, and under that circumstance, I think all of us got that the notion of some North Korean diplomats prancing into the United States was unseemly and untimely," Russel said in his farewell briefing to reporters from Asian media. Russel said the planned unofficial talks with the North Koreans were "sideswiped" by the killing. "A North Korea that will commit murder by a WMD, that will threaten the use of nuclear weapons against the United States and its neighbors, and that will launch ballistic missiles repeatedly in the direction of Japan in contravention of its legal obligations under U.N. Security Council resolutions, is not going to look like a country that is serious about negotiations," Russel said. Still, he said the decision to deny visas doesn't mean the U.S. isn't interested in talks. (Chang Jae-soon, “U.S. Official: Kim Jong Nam Assassinated ‘Presumably by or at the Behest of North Korea,’” Yonhap, March 8, 2017)

Rodong Sinmun: “Extremely provocative remarks are heard in the U.S. Brass hats of the U.S. military said that the largest-ever Key Resolve and Foal Eagle joint military drills would be kicked off in south Korea before long and they were examining the proposal to massively mobilize nuclear strategic assets including nuclear-powered carrier Carl Vinson, nuclear strategic bombers B-52 and B-1B and stealth fighter F-22. This goes to clearly prove that the U.S. policy toward the DPRK to bring down the latter by force of arms remains unchanged and the U.S. wants a war, not peace. The U.S. is groundlessly pulling up the DPRK over its measures for self-defense while talking about "provocations and "threat". This is nothing but a cynical ploy to cover up its true colors as wrecker of peace and shift the blame on to the DPRK. It is the consistent stand of the DPRK to oppose the confrontation of force and preserve peace on the Korean peninsula through dialogue and negotiations. However, the DPRK cannot take only a fence-sitting attitude towards the U.S. working with bloodshot eyes to swallow up the former. Unless the U.S. makes a switchover in its policy toward the DPRK and stop the saber-rattling to invade the DPRK, the DPRK will steadily bolster up its capability for self-defense with the nuclear force as a pivot. The U.S. would be well advised to face up to the reality and stop going reckless and take a proper strategic option with deep thought. This would do the U.S. good, too. (Rodong Sinmun, “U.S. Should Take Proper Strategic Option,” February 25, 2017)

South Korea has decided to raise its voice against North Korea's possession of biochemical weapons in international meetings following the Malaysian police's announcement that a VX nerve agent was used to kill Kim Jong-nam, the half-brother of North Korean leader Kim Jong-un, foreign ministry officials said. "The government will bring up the issue of North Korea's biochemical weapons programs when top nuclear envoys from South Korea, the United States and Japan meet in Washington on Monday [February 27], as well as during various multilateral talks based in Geneva and other locations," one of the officials said. "The government plans to take a tough stance on the killing of Kim Jong-nam," the other government official said. The third official said, "Things went out of control as the use of a chemical weapon was unveiled... The government is currently on the stage of trying to find the truth behind the case on the one hand and considering many different countermeasures on the other." (Yonhap, “S. Korea to Raise Issue with N. Korea’s Biochemical Weapons Threat on Global Stage: Official,” February 25, 2017)

The United States informed Japan and South Korea that it has started a review of whether to put North Korea back on a list of state sponsors of terrorism, Yonhap said. Quoting a senior South Korean official, Yonhap said the February 13 killing of Kim Jong Nam, the half-brother of North Korean leader Kim Jong Un, in Malaysia. “I believe the U.S. [government] will take into account reactions from Congress,” the official was quoted as saying, referring to growing calls among U.S. lawmakers for relisting North Korea as a state sponsor of terrorism. Washington removed Pyongyang from the list in 2008. Yonhap said the United States told Japan and South Korea of its intention in a trilateral meeting in Washington of senior diplomats handling North Korean issues. Speaking to reporters after the meeting, Kanasugi Kenji, head of Asian and Oceania affairs at the Foreign Ministry in Tokyo, declined to say whether the three officials discussed such a review in
the United States. He only said, “The United States had increasingly severer views on North Korea.” According to a joint statement issued after the talks, the officials explored new measures to further restrict North Korea’s funding for its ballistic missile and nuclear weapons programs. In addition to existing sanctions under U.N. Security Council resolutions, the three allies “considered other possible measures under national authorities,” with a focus on Pyongyang’s illicit revenue streams, the statement said. The meeting between Kanasugi, Joseph Yun, U.S. special representative for North Korea policy, and Kim Hong-kyun, South Korea’s special representative for Korean Peninsula peace and security affairs, was the first of its kind since Donald Trump was sworn in as the new U.S. president. Referring to the latest ballistic missile test-launch by North Korea, the statement said the country’s “flagrant disregard” for multiple Security Council resolutions prohibiting its ballistic missile and nuclear programs requires “strong international pressure on the regime.” Kanasugi said the three officials affirmed the need to ensure all countries strictly implement UNSC sanctions resolutions on North Korea. “It is important that China, which accounts for a nearly 90 percent share of North Korea’s trade, strictly implement Security Council resolutions,” he said. “We discussed China’s role following its recent announcement of a suspension of coal imports from North Korea.” Kanasugi also said the three officials exchanged information on the poison attack on Kim Jong Nam. “We discussed how the killing of Kim Jong Nam would affect the situation in North Korea going forward, and what kind of impact it may have on North Korea’s relations with China,” he said, without providing further details. Kim Jong Nam is said to have maintained close ties with China. Malaysian police have determined that the highly toxic VX nerve agent was used in the incident at Kuala Lumpur International Airport. VX is classified as a weapon of mass destruction by the United Nations and is banned under multiple international agreements. Kanasugi said his U.S. and South Korean counterparts reiterated support for an early resolution of North Korea’s abduction of Japanese nationals in the 1970s and 1980s. (Kyodo, “U.S. Tells South Korea, Japan It May Return North Korea to List of State Sponsors of Terrorism,” February 28, 2017)

North Korean weapons barred by U.N. sanctions ended up in the hands of U.N. peacekeepers in Africa, a confidential annual report by a U.N. panel of experts on North Korea says. That incident and others in more than a half-dozen African nations show how North Korea, despite facing its toughest sanctions in decades, continues to avoid them on the world's most impoverished continent with few repercussions. The report, obtained by the Associated Press, illustrates how Pyongyang evades sanctions imposed for its nuclear and ballistic missile programs to cooperate "on a large scale," including military training and construction, in countries from Angola to Uganda. Among the findings was the "largest seizure of ammunition in the history of sanctions" against North Korea, with 30,000 rocket-propelled grenades found hidden under iron ore that was destined for Egypt in a cargo vessel heading toward the Suez Canal. The intended destination of the North Korean-made grenades, seized in August, was not clear. A month before that, the report says, a U.N. member state seized an air shipment destined for a company in Eritrea containing military radio communications items. It was the second time military-related items had been caught being exported from North Korea to Eritrea "and confirms ongoing arms-related cooperation between the two countries." Eritrea is also under U.N. sanctions for supporting armed groups in the Horn of Africa. Discovering such evasions is challenging because Africa has the world's lowest rate of reporting on monitoring U.N. sanctions on North Korea. Just 11 of its 54 countries turned in reports to the panel of experts last year, the U.N. report says. "African enforcement tends to be lax," Marcus Noland, an expert on North Korea at the Petersen Institute for International Economics, wrote last month, adding that "North Korea may deliberately target African countries as a circumvention strategy." He said North Korea's long military involvement in Africa, and its growing interest in trade there to reduce its deep dependence on China, "bring the continent's relationship with North Korea into increasing conflict with tightening U.N. sanctions." North Korea continues to train and equip some African militaries, the new U.N. report says. In the most striking example, Congo's government received automatic pistols and other small arms from North Korea that were issued to the Central African nation's presidential guard and special units of the national police. Some of those national police units were deployed in the U.N. peacekeeping mission in neighboring Central African Republic, the report says. Neither the U.N. peacekeeping office nor Congo's government responded to requests for comment on how the
North Korean weapons, part of a series of shipments to Congo that included assault rifles and anti-tank mines, made their way into the peacekeeping mission. In neighboring Angola, officials in September confirmed to the visiting U.N. panel of experts that North Koreans continued to train members of the presidential guard in martial arts, despite a warning that it was a violation of sanctions. And in Uganda, seen as a regional security ally for the United States, North Korea’s military has been training Ugandan air force pilots and technicians under a contract set to expire in March 2018. Uganda has been warned that violates sanctions, the U.N. report says. A spokesman for Uganda’s military, Brig. Richard Karemire, neither denied nor confirmed that the North Korean training continues and would not comment. Last year, under the international pressure to enforce sanctions on Pyongyang, Uganda said it was not renewing separate contracts for North Korean training of its police. But a number of African leaders, such as longtime Ugandan President Museveni, have continued to praise Pyongyang in the fight against what they describe as Western imperialism. The North Koreans, Museveni has declared, are “friends who have helped Uganda for a long time.”

Report of the Panel of Experts established pursuant to resolution 1874 (2009): “Korea Kumsan Trading Corporation 18. The Panel’s investigation reveals that Korea Kumsan Trading Corporation (Kumsan) shares a phone and fax number and an e-mail address with the designated General Bureau of Atomic Energy and the Ministry of Atomic Energy Industry. The Panel previously determined that the Ministry and the Bureau are the same entity. The Panel further notes that Kumsan’s address is identical to that of the sanctioned entities. …

General Precious Metal 24. The Panel investigated the 2016 attempted online sale of lithium metal by the Democratic People’s Republic of Korea. The enriched lithium-6 isotope, and products or devices containing it, are on the list of prohibited nuclear-related items adopted by the Security Council. According to IAEA, lithium-6 is used to produce tritium, an isotope found in boosted nuclear devices. This sales attempt suggests that the Democratic People’s Republic of Korea has access to remaining quantities of the material. Li-6 is advertised for sale by a company of the Democratic People’s Republic of Korea, General Precious Metal, which the European Union has identified as an alias of Green Pine Associated Corporation (Green Pine). Mr. Chol Yun was listed as the contact person of General Precious Metal for sale of the mineral and has an address and phone numbers in Beijing). The same name appeared as third secretary of the embassy of the Democratic People’s Republic of Korea in Beijing on an official diplomatic list dated 24 September 2012. The Panel notes a pattern whereby the Democratic People’s Republic of Korea has accredited Green Pine overseas representatives as diplomats.”

David Albright, et al.: “For several years, North Korea has been concentrating on expanding and refurbishing its nuclear complex with the oft-stated goal of expanding the quantity and quality of its nuclear weapons. One aspect of that expansion has been its development of the capability to make thermonuclear materials. These materials when used in a fission-based nuclear weapon allow for much greater explosive yields and further miniaturization of nuclear weapons. A fundamental thermonuclear material for nuclear weapons is lithium 6, a soft, silver-white metal.

When used as a target element in a reactor or a nuclear weapon, lithium 6 reacts with a neutron to produce tritium (T), the most important thermonuclear material for weapons. When tritium fuses with deuterium (D) it releases relatively large amounts of energy and neutrons, becoming a key reaction driving a thermonuclear explosion and leading to more efficient fissioning of the plutonium or weapon-grade uranium in a weapon. Based primarily on procurement data, North Korea appears to have built a lithium 6 production plant near the city of Hamhung on the east coast of North Korea. The existence of this plant adds credibility to North Korea’s claims that it has been working on thermonuclear weapons for several years. Armed with this plant, North Korea is in a far better position to deliver on its ability to improve the quality of its nuclear weapons by making crude types of thermonuclear or boosted fission weapons. One recent data point that supports that North Korea may have finished its lithium 6 production plant is the 2016 attempted online sale of lithium metal by North Korea. This attempted sale was discovered by Project Alpha at Kings College and, subsequently, investigated by the United
Nations Panel on North Korea. It concluded: “This sales attempt suggests that the Democratic People’s Republic of Korea has access to remaining quantities of the material.” Lithium 6 is used in two main ways in thermonuclear weapons. It is irradiated in a reactor to make tritium, which is then separated and used directly in a nuclear weapon. In the case of North Korea, tritium is believed to be produced in either the 5 megawatt-electric (MWe) reactor or the IRT reactor at the Yongbyon site. Separation of the tritium from the lithium could occur at the Isotope Production Laboratory near the IRT reactor or in a new, larger facility being built in the Yongbyon fuel fabrication complex. Lithium 6 can also be combined with deuterium and sometimes also tritium into weapon components for thermonuclear weapons. When fashioned into components of nuclear weapons, the lithium 6 creates a method using neutrons from the nuclear explosion to greatly magnify the number of D-T reactions. In essence, using an abundant background of neutrons, lithium 6 produces a copious supply of tritium that then fuses with deuterium, adding greatly to the explosive yield through its own reaction and more efficient fissioning of the plutonium or weapon-grade uranium in the weapon. Lithium in combination with deuterium and/or tritium can be used in either one or two stage nuclear weapons; a two stage weapon is the traditional H bomb, and a single stage weapon can have multiple designs, which have been called an onion or a layer cake design. North Korea is likely unable to produce two-stage thermonuclear weapons, but it may be developing single stage weapons. This design is easier to achieve than a two-stage weapon but can achieve very high explosive yields. In the case of North Korea, a single-stage thermonuclear device could use a plutonium core with lithium 6-deuterium and/or lithium 6-deuterium-tritium solid components. The device would also be expected to have shells of weapon-grade uranium. A British one-stage thermonuclear device tested in mid-1950s with a plutonium core had 100 kg of weapon-grade uranium in multiple shells and achieved an explosive yield of several hundred kilotons. Lithium 6, deuterium, and tritium have been combined into a solid tablet which is placed at the center of a fission weapon and used to amplify or boost the explosive yield of the weapon. South Africa researched this design in the 1980s during its nuclear weapons program. It involved a fission weapon with a lithium, deuterium, tritium solid tablet placed at its center. With this method, the yield can be boosted many-fold. South Africa investigated boosting the yield of its weapons in this manner from about 10-15 kilotons to about 60-100 kilotons. Lithium 6 is a stable isotope that exists in nature. However, it has a relatively low natural abundance of 7.56 percent in natural lithium, for the bulk of lithium is lithium 7. For use in nuclear weapons or tritium production, the lithium 6 fraction must be typically increased to 40-95 percent of the lithium via a chemical enrichment process. If the lithium 6 is for tritium production in a reactor, the fraction of the lithium 6 in the targets placed in the reactor is limited to about 40 percent to prevent failure of the targets. For use in nuclear weapons, a 95 percent fraction of lithium 6 is desirable. Based on a 2012 procurement order, according to government sources, North Korea is assessed to have procured the wherewithal to build a lithium 6 enrichment plant based on mercury-based lithium exchange, shortened here to mercury exchange. This method of enrichment has been used by nuclear weapon states, including the United States. Almost all lithium 6 produced by the United States was enriched by the mercury-based column exchange process (COLEX) from 1954 to 1963. South Africa also built a pilot plant using this method to make lithium 6 for its nuclear weapons program in the 1970s. The mercury exchange process involves an amalgam of lithium and mercury which is made via electrolysis. Subsequently, the mercury lithium amalgam is mixed with an aqueous lithium hydroxide (LiOH) solution. Lithium 6 has a slightly higher affinity to mercury than lithium 7, so lithium 7 diffuses out of the amalgam more quickly than lithium 6, leaving the amalgam with increased, or enriched, concentration of lithium 6. The lithium 6 can be separated from the amalgam. The tailings fraction of Lithium 7 is electrolyzed from the aqueous solution of lithium hydroxide. Afterwards, the lithium hydroxide can be reused. What was procured? Most of the procurements were for industrial-scale equipment. Included in the order was metric tonne quantities of mercury and tens of kilograms of lithium hydroxide. Given the procurement of these two materials and the replacement of mercury with less harmful metals in many industrial processes, the purchase of mercury in combination with lithium hydroxide is a strong indicator that North Korea is using the chemicals in a mercury-dependent lithium 6 production process. The procurement evidence is reportedly contained in a 2012 North Korean contract to arrange the purchase of a wide range of industrial and lab-scale equipment and
materials abroad in China. The purpose of the contract is not included but the list of goods, including the mercury and lithium hydroxide, implies they are for a lithium 6 enrichment plant using the mercury exchange method. The most likely site for the lithium 6 plant is the Hungnam Fertilizer Complex near the city of Hamhung in North Korea. The procurement contract had handwritten notes stating that the goods were needed urgently and the procurements involved the Hungnam complex. The Hungnam complex makes sense for a lithium 6 production plant. This site is involved in ammonia processing and fertilizer production, and has electrolysis facilities. We were unable to locate a lithium 6 production site at the Hungnam complex using commercial satellite imagery. Such a facility is not very distinctive in such a large complex (see figures 1 and 2). Moreover, equipment, which includes tanks and columns, would be brought into the building after the roof is installed. Nonetheless, by using historical Google Earth imagery, we could identify new construction in the period of 2009, 2012-2014, and 2016. … However, it should be noted that the equipment may have been put into a refurbished building. We are unable to estimate lithium 6 output. But one would expect that North Korea would build a plant able to produce at least tens of kilograms of lithium 6 per year. This rate would allow both the use of lithium 6 in nuclear weapons and the production of many grams of tritium per year. North Korea’s choice of the mercury exchange method is further supported by examining its scientific and engineering literature. North Korea has devoted considerable effort to the research and development of lithium 6. Analysis of open source literature reveals that North Korea has conducted theoretical and experimental research on this and other lithium 6 production processes since the 1990s. The mercury-dependent process is based on immersing a lithium-mercury-amalgam in lithium-containing solution, such as aqueous lithium hydroxide. Both cost and efficiency of the separation process depend on several factors, and many of them have been studied by North Korea. Among them are kinetic studies, which determine the speed of the process and differences in experimental results and theoretical predictions. Except for the mercury and lithium components, the process includes many variables that North Korea can take advantage of to improve, re-scale, or disguise the enrichment. First, there are variables in the synthesis of the lithium-mercury amalgam, then there are variables during the isotope separation. One study shows that North Korea has used electrolysis of aqueous lithium hydroxide for the preparation of lithium-mercury amalgam at least on the laboratory scale. The following are a few variables from North Korea’s isotope separation studies: amalgam composition, solvents, column length and design, and stirring systems. Two of these studies show the common use of aqueous lithium hydroxide in the process. All this research comes on top of more general fluid mechanics studies. Studies on how these factors change when the individual process is repeated in an enrichment cascade have also been published. A 2004 journal article focused on the reasons why “concentrations of isotopes abnormally fluctuate with time in an […] enrichment cascade.” In this article, some references are made to unreported studies. The length of time North Korea researched the mercury exchange process, combined with procurement data and the ease of making necessary sensitive procurements in China, provide strong evidence that North Korea has built a lithium 6 production plant. There is little reason to doubt that such a plant is operational. The recent attempt by North Korea to sell lithium 6 metal in China supports that conclusion and suggests that North Korea is making more lithium 6 than it needs in its nuclear weapons program. These findings add credibility to North Korea’s claims that it has been developing thermonuclear or boosted fission weapons, albeit likely crude ones that may still not work. But with more nuclear testing and time, North Korea is likely to succeed.” (David Albright, Sarah Burkhard, Mark Gorwitz, and Allison Lach, North Korea’s Lithium 6 Production for Thermonuclear Weapons, Institute for Science and International Security, March 17, 2017)

2/28/17

An internal White House review of strategy on North Korea includes the possibility of military force or regime change to blunt the country’s nuclear-weapons threat, people familiar with the process said, a prospect that has some U.S. allies in the region on edge. While President Donald Trump has taken steps to reassure allies that he won’t abandon agreements that have underpinned decades of U.S. policy on Asia, his pledge that Pyongyang would be stopped from ever testing an intercontinental ballistic missile—coupled with the two-week-old strategy review—has some leaders bracing for a shift in American policy. U.S. officials have underscored the possible military dimensions of their emerging strategy in recent discussions with allies, according to
people familiar with the talks. During Japanese Prime Minister Abe Shinzo’s two-day summit in February with Trump, U.S. officials on several occasions stated that all options were under consideration to deal with North Korea, according to a person familiar with the discussions. It was clear to the Japanese side that those options encompassed a U.S. military strike on North Korea, possibly if Pyongyang appeared ready to test an ICBM, this person said. The Japanese side found that scenario “worrisome,” he said. U.S. allies in recent years have closely aligned with Washington in trying to increase diplomatic and economic pressure on Pyongyang in an effort to force it to drop its nuclear program. But the new U.S. policy review has generated anxiety in Japan and South Korea about a radical shift. After North Korea said earlier this year it was ready to test an ICBM, Trump wrote on Twitter, “It won’t happen!” About two weeks ago, Deputy National Security Adviser K.T. McFarland convened a meeting with national-security officials across the government and asked them for proposals on North Korea, including ideas that one official described as well outside the mainstream. The request was for all options, ranging from U.S. recognition of North Korea as a nuclear state to military action against Pyongyang. McFarland’s directive was for the administration to undergo a comprehensive rethink of America’s North Korea policy. The national-security officials reported back to McFarland with their ideas and suggestions today. Those options now will undergo a process under which they will be refined and shaped before they’re given to the president for consideration. The heightened prospect of U.S. military action in North Korea could encourage China, which fears the fallout of a military confrontation with its neighbor, to take steps Washington has long sought to choke off Pyongyang’s economic lifeline. In the wake of Trump’s election, leaders in Tokyo and Seoul have sought to intensify the existing U.S. strategy of exerting economic and diplomatic pressure against North Korea. “We will make sure that the North changes its erroneous calculations by further enhancing sanctions and pressure,” South Korea’s acting President Hwang Kyo-ahn said in a speech on March 1, as South Korea and the U.S. kicked off major annual military exercises. Japan is concerned it could get sucked into a regional conflict by a U.S. military strike on North Korea, said Kotani Tetsuo, a senior fellow at the Japan Institute of International Affairs, a Tokyo think tank. Another fear for Japan is a scenario in which the U.S. instead holds talks with North Korea and reaches a deal that would lead to Washington disengaging from the region, he said. “Direct talks between Trump and Kim Jong Un would be a nightmare scenario for Japan,” Kotani said. Despite concerns about a military confrontation between the U.S. and North Korea, the acceleration of Pyongyang’s nuclear and missile program has emboldened calls by military hawks in Japan and South Korea for capabilities to pre-emptively hit North Korean military facilities if an attack appears imminent. Komura Masahiko, the vice president of Japan’s ruling Liberal Democratic Party, said recently that Japan should begin discussing whether to acquire such an ability. In parliament, Abe said there were no plans to do so. (Carol E. Lee and Alastair Gale, “White House Explores Options, Including Use of Military Force, to Counter North Korea Threat,” Wall Street Journal, March 1, 2017

President Donald Trump believes the "greatest immediate threat" to the U.S. is North Korea and its nuclear program, a senior administration official told reporters. Trump has already called on China to take action to rein in North Korea, over which China has considerable influence and leverage, the official said. "You gotta work on North Korea," Trump told a Chinese official yesterday, the senior administration official said, apparently pointing to a brief meeting at the White House yesterday between Trump and Chinese State Councilor Yang Jiechi, the highest-ranking Chinese official Trump has met with since taking office. The senior official who spoke to reporters Tuesday on the condition of anonymity said President Barack Obama on his final day in office told Trump he believed North Korea is the biggest national security threat to the U.S. Trump previously referred to the conversation during an interview last month with Fox News, but declined to reveal what Obama relayed, other than to call it "a military problem with a certain place." Trump's concern over North Korea is in part fueled by his belief that North Korea's leader Kim Jong Un "may be crazy," the official said. The question for Trump, though, has been, "Is he crazy or is he smart and strategic?" the official said, relaying Trump's thinking. The senior administration official also pointed to North Korea's alleged role in orchestrating the assassination of Kim's half-brother as a sign of the country's capabilities. Still, the senior administration official said Trump believes the US has a good relationship with China and expressed optimism about the

Trump State of the Union: “We expect our partners, whether in NATO, in the Middle East, or the Pacific — to take a direct and meaningful role in both strategic and military operations, and pay their fair share of the cost. We will respect historic institutions, but we will also respect the sovereign rights of nations. Free nations are the best vehicle for expressing the will of the people — and America respects the right of all nations to chart their own path. My job is not to represent the world. My job is to represent the United States of America. But we know that America is better off, when there is less conflict — not more. We must learn from the mistakes of the past — we have seen the war and destruction that have raged across our world. The only long-term solution for these humanitarian disasters is to create the conditions where displaced persons can safely return home and begin the long process of rebuilding. America is willing to find new friends, and to forge new partnerships, where shared interests align. We want harmony and stability, not war and conflict. We want peace, wherever peace can be found. America is friends today with former enemies. Some of our closest allies, decades ago, fought on the opposite side of these World Wars. This history should give us all faith in the possibilities for a better world.” (Donald Trump, State of the Union Address, February 28, 2017)

Chinese state media have reacted with anger and boycott threats after the board of an affiliate of South Korea's Lotte Group approved a land swap with the government that allows authorities to deploy a U.S. missile defense system on land that is part of a golf course owned by Lotte in the Seongju region, southeast of Seoul. The board of unlisted Lotte International Co Ltd approved the deal with the government on yesterday. Lotte should be shown the door in China, the influential state-run Chinese tabloid the Global Times said in an editorial today. "We also propose that Chinese society should coordinate voluntarily in expanding restrictions on South Korean cultural goods and entertainment exports to China, and block them when necessary," it said in its English-language edition. The paper's Chinese version said South Korean cars and cellphones should be targeted as well. "There are loads of substitutes for South Korean cars and cellphones," it said. China has already twice issued "solemn representations" to South Korea about the most recent THAAD-related developments, Chinese Foreign Ministry spokesman Geng Shuang told a daily briefing in Beijing. But it welcomes foreign companies to operate in China, he said. "Whether or not a foreign company can operate successfully in China, in the end is a decision for the Chinese market and consumer," he added. Late yesterday, the Communist Party's official People's Daily said cutting diplomatic ties should be considered. "If THAAD is really deployed in South Korea, then China-South Korea relations will face the possibility of getting ready to cut off diplomatic relations," it said on the WeChat account of its overseas edition. Xinhua also said in a commentary late yesterday that China "did not welcome this kind of Lotte." "Chinese consumers can absolutely say no to this kind of company and their goods based on considerations of national security," it said. (Reuters, “China Reacts with Anger, Threats after South Korean Missile Defense Decision,” February 28, 2017)

South Korea called for "collective measures" against North Korea, including possible suspension of its United Nations membership, saying the use of chemical weapons to assassinate the half-brother of North Korea's leader was a "wake-up call." Foreign Minister Yun Byung-se was addressing the U.N.-backed Conference on Disarmament (CD) after Malaysia's attorney general said two women will be charged with the murder of Kim Jong Nam. "Just a few grams of VX is sufficient for mass killing," Yun told the Geneva forum. "North Korea is reported to have not just grams but thousands of tons of chemical weapons including VX all over the country ... The recent assassination is a wake-up call to all of us to North Korea's chemical weapons capability and its intent to actually use them," Yun said. States could invoke the Chemical Weapons Convention, as the use of such agents is in violation of international law, he said. Malaysia is part of the 1993 pact prohibiting their production, transfer and use, but North Korea is not. States that have ratified the chemical weapons ban could invoke the treaty and "take collective measures," Yun added. "Now
is the time, I believe, for us to seriously consider taking extraordinary measures in all relevant regional and international fora including the U.N. as well as the CD. "It could take the form of suspension of North Korea's rights and privileges as a U.N. member," he said, calling South Korea's isolated neighbor a "serial rule-breaker." Yun, in a speech yesterday to the U.N. Human Rights Council, urged major powers to criminally pursue Pyongyang's leadership before its "ever-worsening" rights record, including mass executions and labor camps, threatened world peace. (Stephanie Nebehay, “South Korea Suggest Suspending North Korea’s U.N. Seat,” Reuters, February 28, 2017)

A senior North Korean diplomat arrived in Beijing for talks on "issues of mutual concern," amid growing tensions over the North's missile test and the death of the Pyongyang leader's half-brother. China's foreign ministry said that the North's Vice Foreign Minister Ri Kil-song came to Beijing at its invitation and will have talks with senior officials including Foreign Minister Wang Yi during his stay. KCNA also confirmed Kyodo report earlier in the day about his visit. This marked the first time in about nine months that a high-ranking North Korean official has visited China for dialogue with its counterparts. In May, Ri Su-yong, a vice chairman of the Workers' Party of Korea, visited Beijing. (Yonhap, “Senior N.K. Official Arrives in Beijing for Talks,” February 28, 2017)

South Korean and U.S. troops began large-scale joint military exercise conducted annually to test their defense readiness against the threat from North Korea, which routinely characterizes the drills as preparation for war against it. The exercise, called Foal Eagle, comes amid heightened tension following the latest test launch of a ballistic missile by the North and in the past prompted threats by Pyongyang to launch military action in retaliation. South Korea's Defense Ministry and the U.S. military based in the South confirmed the start of the drills on Wednesday that will continue until the end of April but did not immediately provide further details. The exercise last year involved about 17,000 American troops and more than 300,000 South Koreans. Defense Secretary Jim Mattis spoke with South Korean Defense Minister Han Min-Koo early today by telephone and said the United States remains steadfast in its commitment to the defense of its ally. Mattis welcomed a deal signed by South Korea with the Lotte Group conglomerate this week to secure the land to station the Terminal High Altitude Area Defense (THAAD) missile defense system in the South, the two countries said. Han said in the phone call with Mattis that this year's joint drills will be conducted at a similar scale as last year's, which the South's Defense Ministry had called the "largest-ever" exercises by the allies. North Korea's official KCNA news agency said earlier on Wednesday its leader Kim Jong Un inspected the headquarters of a major military unit and issued guidance on increasing combat readiness. (Jack Kim, Ju-min Park, and Phil Stewart, “S. Korea, U.S. Begin Large-Scale Annual Drills amid North Korea Tension,” Reuters, March 1, 2017)

KCNA: “It is half a month since Kim Chol, a citizen of the DPRK bearing a diplomatic passport, died in Malaysia on February 13. The cause of his death has not yet been clearly identified but the U.S. and the south Korean authorities are groundlessly blaming the DPRK, asserting that he was intoxicated by highly poisonous VX nerve substance. The absurdity of the U.S. and the south Korean authorities’ assertion and lack of its scientific accuracy and logical coherence are proven even by comments made by experts and media of other countries. It is view of chemists of many countries that even a drop of VX may claim deaths of tens or hundreds of people and it has strong permeability and stability as its properties. They asserted a claim that the woman suspect was safe because she washed her hands at a washroom does not correspond with the chemical property of VX. They added that even if the persons suspected of murder had been injected with atropine, basic antidote of VX, they might have fallen into shock and that even if they had worn gloves, this fatal substance would have been extremely dangerous. It is, therefore, the height of absurdity to claim that the person who applied VX, a substance fatal to the life even in case of inhalation of a tiny amount of it or its touch of skin, was left unaffected and the person to whom it was applied met a death, they asserted. World media query that if component of VX was allegedly detected from Kim Chol's eyes and lips, the ambulance that carried him and police who guarded him must
have all been intoxicated and if so, the airport should have been closed but it is still in operation. Experts on international law and analysts said that under a regulation of the international organization on ban on chemical weapons, a final conclusion on the results of analysis of chemical weapons can be drawn only on the basis of the identical results of analysis made by at least two specialized laboratories, stressing that the recent case should have been reported to the organization and the relevant sample should have been analyzed at a lab designated by the organization. They further contended that if the use of VX were true, it would be necessary to probe where the substance was from, who made it and who handed it. Drawing any conclusion about VX without any concrete study would be unscientific and if some countries try to use it for other political purposes, the consequences will be beyond imagination, they warned. Some media suspect that in view of the fact that the women arrested as suspected murderers had visited south Korea several times in the past, it is highly possible that the south Korean authorities let them carry the said substance. This is by no means fortuitous. Almost all countries have scrapped chemical weapons under the convention on ban on chemical weapons but only the U.S. and some other countries still possess the said substance. What is all the more problematic is the fact that the U.S. is introducing into south Korea all kinds of chemical weapons. This being a hard fact, the U.S. and the south Korean authorities are kicking up an anti-DPRK smear campaign, groundlessly pulling it up. From the beginning the south Korean authorities spread rumor that the "death of Kim Chol was intoxication by two women secret agents sent by General Reconnaissance Bureau of north Korea" and "their dead bodies will appear", causing confusion and driving a wedge between the DPRK and Malaysia. Lately they tried to use Kim Chol's death for their stepped-up racket of "human rights" against the DPRK and floated the story about "use of chemical weapons" or "use of WMD" by someone in a bid to create atmosphere of "international criticism" of the DPRK. The reckless moves of the U.S. and the south Korean authorities are aimed to meet the dangerous political purpose to tarnish the image of the dignified DPRK and bring down the social system in it. This is clear to everyone. The danger and gravity of the problem lie in that the story about "use of chemical weapons" touted by the U.S. and the south Korean authorities has something in common with the story of "Iraq's possession of weapons of mass destruction" spread by the U.S. in the 1990s. It is the final aim sought by the U.S. to stir up international repugnancy towards the DPRK, lay an international siege for putting pressure on it and provoke a nuclear war against the DPRK at any cost. The U.S., however, is mistaken. Should the U.S. and the south Korean authorities keep resorting to political chicanery to bring down the social system in the DPRK, being lost to reasons, the DPRK will be compelled to take stronger measures for self-defense in order to protect the sovereignty and dignity of the country. The U.S. and its vassal forces should not run amuck, clearly understanding the strategic position of the DPRK as a nuclear power.” (KCNA, “U.S., S. Korea’s Absurd Sophism against DPRK over Its Citizen’s Death abroad Blasted,” March 1, 2017)

Two women were charged with murder in a Kuala Lumpur court in connection with the assassination of Kim Jong-nam, the estranged half-brother of the North Korean leader, Kim Jong-un. Siti Aisyah, 25, of Indonesia, and Doan Thi Huong, 28, of Vietnam, could receive the death penalty. The police said the two women rubbed a deadly nerve agent on Kim’s face as he prepared to check in for a flight at Kuala Lumpur International Airport on the morning of February 13. The women were charged as North Korea yesterday began a diplomatic effort to repair the damage from the killing, sending delegations to Beijing and Kuala Lumpur in a rare bit of outreach by the reclusive nation as it faced accusations that it had carried out the brazen assassination. The delegation to Beijing was led by Vice Foreign Minister Ri Gil-song, said KCNA, which did not provide further details. The Chinese Foreign Ministry confirmed that Ri was visiting at its invitation and would meet with China’s foreign minister, Wang Yi. Ri is the most senior North Korean official to visit Beijing since a delegation met with President Xi Jinping of China in May. His trip came five days after the North lashed out at China in unusually bitter language for tightening sanctions by suspending all coal imports from North Korea for the rest of the year, depriving North Korea of one of its most important sources of hard currency. The police have also arrested a North Korean man, Ri Jong-chol, and are seeking seven others. South Korean officials have accused the North Korean government of ordering the assassination. There was no word yet on whether Malaysian officials would charge Ri Jong-chol in the attack. With relations between
Malaysia and North Korea fraying over the killing, a high-level North Korean delegation, including the former deputy ambassador to the United Nations, Ri Dong-il, arrived in the Malaysian capital to discuss taking Mr. Kim’s body to North Korea, Yonhap reported from Kuala Lumpur. Ri Dong-il, the envoy, said he also would demand the release of Ri Jong-chol, Yonhap reported. “We are here to discuss human rights issues and find an agreement,” Ri told reporters outside the North Korean Embassy. Ri also said he would discuss “strengthening friendly relations” with Malaysia. Whether Malaysia is prepared to discuss friendly relations remains to be seen. Officials at the Malaysian Foreign Ministry declined to comment on the standoff over the release of the body and the detention of the North Korean suspect. (Richard C. Paddock and Choe Sang-hun, “Two Women Are Charged with Murder in Kim’s Death,” New York Times, March 1, 2017, p. A-10)

The US Trade Representative (USTR) issued an official report stressing the need for serious reconsideration of the Free Trade Agreement with South Korea, citing it along with NAFTA and China joining the World Trade Organization (WTO) as factors in a rapid rise in its trade deficit. This marks the first time reconsideration of the KORUS FTA has been mentioned in an official government document since the Donald Trump administration’s inauguration. “[T]he largest trade deal implemented during the [Barack] Obama Administration - our free trade agreement with South Korea - has coincided with a dramatic increase in our trade deficit with that country,” the USTR said in its “2017 Trade Policy Agenda and 2016 Annual Report.” Specifically, the USTR noted that US exports to South Korea in 2016 were down US$1.2 billion (1.3 trillion won) from 2011, the year before the KORUS FTA took effect, while imports of South Korean items had increased by US$13 billion (around 14.8 trillion won). “As a result, our trade deficit in goods with South Korea more than doubled. Needless to say, this is not the outcome the American people expected from that agreement,” the report said. In addition to the KORUS FTA, the USTR also offered a diagnosis of trade with China and NAFTA. “Plainly, the time has come for a major review of how we approach trade agreements,” the report concluded. The statements offer a clear indication that the Trump administration has selected trade issues with three partners - China, Mexico, and South Korea - as areas for focused reconsideration. They also indicate a much stronger possibility of renegotiations on the KORUS FTA. While Trump has not specifically mentioned the KORUS FTA since taking office, he criticized it harshly during his election campaign, calling it a “disaster” and a “job-killing” deal. The message hints that the US may attempt harsh trade retaliation measures on partners in what the Trump administration deems “unfair” trade through anti-dumping and countervailing duties or executive orders. An early chapter on the President’s Trade Policy Agenda noted that “the largest trade deal implemented during the Obama Administration - our free trade agreement with South Korea - has coincided with a dramatic increase in our trade deficit with that country.” “As a result, our trade deficit in goods with South Korea more than doubled [after the agreement]. Needless to say, this is not the outcome the American people expected from that agreement,” it continued. “President Trump is just rehashing the same things he’s said in the past. There’s nothing new there, and he acknowledged some results from the KORUS FTA,” said Moon Jong-cheol, a senior analyst with the Korea Institute for Industrial Economics & Trade. At the same time, Moon said “things like the reference to ‘resisting’ the WTO suggest a commitment to seeing its policies through.” The Ministry of Trade, Industry and Energy said the report “made no direct mention of renegotiating the KORUS FTA, and the position is the same as what the US has expressed before.” The ministry added it would “continue working to develop response measures.” (Ko Na-mu, “U.S. Government Reports Stresses Need for Reconsideration of KORUS FTA,” Hankyore, March 3, 2017)

As ordinary North Koreans have found ways to get information the state denies them — soppy South Korean dramas and peppy pop songs, novels, news from the outside world — so too has the Kim regime developed sophisticated new tools to check just what its citizens are up to, according to Compromising Connectivity, a new report from Intermedia, a Washington-based research group. The report underlines the challenges in getting information into the most tightly controlled country on the planet — and the challenges that North Korea watchers as diverse as the U.S. Congress and small defector-led groups face in trying to penetrate it. “In a lot of ways, the
expansion of information is continuing,” said Nat Kretchun, the lead author of the report, which draws on interviews with 34 recent defectors from North Korea. “It’s just that we also see a lot of signs that the North Korean government is gearing up to combat it.” Thanks to dramas smuggled in on USB sticks and illicit shortwave radio broadcasts from the outside, an increasing number of North Koreans have realized that their brethren in the South enjoy unimaginable levels of wealth and freedom. Being caught with such banned media can result in harsh penalties, including imprisonment. At the same time, the introduction of cellphones — albeit for domestic calls only, and without Internet access — is allowing people around the country to share information much more freely internally. High-profile defectors such as Thae Yong-ho, who served as a North Korean diplomat in Europe for almost 20 years, have described the transformative effect of outside information and have urged governments and NGOs to flood North Korea with it. While imposing new sanctions on North Korea last year, Congress allocated $50 million over the next five years for radio programming and the promotion of freedom of information inside North Korea. But the real picture is more complicated, the Intermedia report says. “They’re clearly trying to innovate their way out of the breakdown of the security apparatus rather than going back to Kim II Sung times,” Kretchun said, referring to the founding president of the totalitarian state.

North Korea’s security apparatus began crumbling in the 1990s, after a devastating famine that gave the regime no choice but to tolerate markets — which then became a venue for sharing information. “They now have a vision of a more sophisticated but no less controlled media environment,” he said. Take cellphones. North Koreans are now allowed such devices — including a re-branded Chinese Android-based smartphone called Arirang. As recently as 2013, North Koreans could use these to share files — including songs and text — through Bluetooth or micro-storage SD cards. But a mandatory software update rolled out in 2013 included a program called “TraceViewer” that would collect browsing history and take periodic screenshots of activity — which the user could not delete. That means the security services can see exactly what the user has been up to, long after they have removed any SD card. The update also included a “signature system” that would prevent a device from opening any files that don’t bear a North Korean state signature — and, in fact, automatically deletes them. “Even with the network restrictions that were applied at the beginning, cellphones could have been a game-changing device in North Korea,” Kretchun said. But the system update stops that from happening. “North Korea has a unique advantage in that it can dictate what devices their people have,” he said. He added that the state has made it very difficult for citizens to undermine their technology. “They put a lot of work into making sure you have to be quite technologically sophisticated to do the equivalent of jailbreaking these phones.” Access to outside networks has also been curtailed. Residents on the border with China have been able to get signals on Chinese phones, but the regime appears to have cracked down on this, using jammers and signal detectors. “Once, I went into a house and made a call to China and inspectors came within 30 seconds,” said a 59-year-old man who used to work for a trading company near the Chinese city of Dandong. “There are inspectors going around with an eavesdropping device to control calls to China,” he told the report’s authors. But North Koreans are still able to watch movies and dramas at home relatively easily. Previously, they watched foreign movies and soap operas on DVDs smuggled into the country, but in recent years they have developed a preference for USB sticks and SD cards, which are easier to hide. They plug the USBs or SD cards into their DVD players — which are permitted, although only to watch North Korean propaganda — and make sure to have a DVD in the drive in case of a spot inspection. Small portable DVD players called “notels” also are used for watching foreign dramas. Using small storage devices not only allows North Koreans to hide them easily during raids but also enables them to share media with each other. All but one of the North Korean defectors Intermedia interviewed said they had shared content with others. Despite the challenges, Kretchun said there was reason to keep trying to penetrate the North Korean regime’s information blockade. “Right now, all the arrows continue to point up. People are still certainly watching foreign dramas and listening to the radio,” he said. (Anna Fifield, “North Korea Regime Is Finding New Ways to Stop Information Flows, Reports Says,” Washington Post, March 1, 2017)

One day THAAD could destroy North Korean missiles in mid-flight, a remarkable feat of military might and technical prowess. But so far, its main victims have been South Korean pop stars, cosmetics companies, and TV shows. As THAAD’s deployment date draws near, its denunciations
have reached fever pitch, spurring retaliations online and in the streets. Chinese authorities have denied visas to South Korean pop stars who frequently perform on the mainland; rejected imports of South Korean cosmetics; and scrubbed at least five enormously popular South Korean TV shows — some with hundreds of millions of Chinese viewers — from Chinese video streaming sites. “We don't have to make the country bleed, but we'd better make it hurt,” the Global Times, a Chinese state-run tabloid, said in an editorial on today. The measures have stirred anxiety in South Korea’s business community, upset Chinese TV fans and cast uncertainty over the future of the China-South Korea relationship, which has enjoyed relative stability since the 1990s, enabling huge amounts of transnational commerce and migration. Shi Yinhong, a professor of international relations at Renmin University in Beijing, said that China — angered by North Korea’s recent missile tests — now faces strained relations with both Koreas for the first time in recent memory. “This is quite bad, in the long term, for the diplomatic security environment in Northeast Asia,” he said. Beijing has issued two “solemn representations” to Seoul over the impending deployment, and the People’s Daily, said in an editorial that Beijing could potentially sever diplomatic ties. But the measures have also played out in more minute and unexpected ways. Yesterday, after months of negotiations, South Korean retail giant Lotte Group reached a deal to swap land at its Lotte Skyhill Country Club — a lush, mountainous resort in on the southern side of Jeju Island — for a military-owned parcel on the outskirts of Seoul, making way for the missile shield to be placed on the country club site. That same day, Chinese authorities fined one of Lotte’s Beijing supermarkets $6,500 for displaying a “false advertisement” — a vanishingly rare charge in the city, according to the state-run Legal Daily. The fine, while negligible for Lotte — one of South Korea’s largest conglomerates — adds to a long list of challenges in the country. Lotte suspended construction of a planned $2.6-billion theme park project in the northeastern Chinese city of Shenyang last month after facing several fire, safety and tax investigations. Authorities have also targeted Lotte businesses in Beijing, Shanghai and the southwestern city of Chengdu. Today, Lotte’s Chinese website was inaccessible, showing only the message: “Lotte’s official webpage is undergoing maintenance. Please forgive any inconvenience.” Its South Korean page remained accessible. The cause of the outage is unclear. Starting last year, Chinese authorities have forbidden Korean stars from appearing on Chinese TV programs and soap operas; one Korean reality show participant, singer Hwang Chi Yeul, was abruptly replaced by an actor from Hong Kong. They have also banned imports from 19 Korean cosmetics brands. Since February 24, at least five Korean TV shows — including the extraordinarily popular variety show Running Man — have been inaccessible on Chinese video websites. South Korea’s economy is heavily dependent upon exports, about a quarter of which go to China, and experts say that the measures could take a bite. “Economic sanctions by China may have a substantial impact on the Korean economy as a whole, and especially on certain business sectors” such as its entertainment industry, said Sangin Park, an economics professor at Seoul National University. South Korean pop culture, exemplified by K-pop music and TV soap operas, is one of the country’s most important exports, and not just economically. Troy Stangarone, a senior director at the Korea Economic Institute of America, said China risks overplaying its hand by blocking popular South Korean content and could, over time, push its neighbor toward investing in other regional economies, such as Vietnam. “Banning or prohibiting the update of additional Korean dramas is a risky course by the Chinese due to the popularity of the products,” he said. “In the short term, it might have a negative impact on South Korea. There could also be a negative impact on China.” “It hurts China’s image as a business-friendly country,” he added. Last week, the South Korean government said it was aware that some local companies have expressed concerns about China’s new trade barriers. “Despite a tightened Korea-China relationship, we keep in touch with China,” said Woo Tae-hee, a deputy South Korean trade minister. He said South Korea would express its concerns to China under a communication framework that’s part of a year-old bilateral trade deal. South Korea plans to deploy the defensive missile system “before the end of the year,” said Moon Sang-gyun, a spokesman for the South Korean defense ministry. He said that authorities are still working on environmental impact studies, facility construction and final negotiations with American officials. Despite the tensions, the number of Chinese visitors to South Korea increased more than 8% from January 2016 to the same month this year. Zhu Quanjingzi, 24, a human resource professional in Beijing, said her feelings about THAAD were “a little complicated.” “I oppose THAAD — I think it poses a threat to China's safety,” she said. She plans to stop traveling to South Korea as a tourist,
North Korea sent a hightech dossier to Malaysia, as it seeks to take custody of Kim Jong-nam's body. Ri said he will also request that Malaysia release the one North Korean suspect, due to a lack of incriminating evidence, AP reported. Four North Korean suspects are believed to have fled Malaysia on the day of Kim Jong-nam's death while three others, including Hyon Kwang-song, the second secretary at the North's embassy in Malaysia, are wanted for questioning. South Korea's spy agency told lawmakers February 27 that Pyongyang's foreign ministry and spy agency were behind Kim's killing. As North Korea

Malaysia has canceled its visa waiver arrangement with North Korea amid a diplomatic spat over the assassination of the half-brother of the North's leader, Malaysian news agency Bernama said. The cancellation will take effect on March 6, after which North Koreans entering Malaysia will be required to obtain a visa, Bernama quoted the country's deputy prime minister, Ahmad Zahid Hamidi, as saying. He cited national security as the reason. This marks Malaysia's first tangible action taken against Pyongyang following the assassination of Kim Jong-nam at Kuala Lumpur International Airport on February 13. Malaysia has decided to release and deport Ri Jong-chol, a 47-year-old North Korean suspect, due to a lack of incriminating evidence, AP reported. Four North Korean suspects are believed to have fled Malaysia on the day of Kim Jong-nam's death while three others, including Hyon Kwang-song, the second secretary at the North's embassy in Malaysia, are wanted for questioning. South Korea's spy agency told lawmakers February 27 that Pyongyang's foreign ministry and spy agency were behind Kim's killing. As North Korea continued to heap on accusations, the Malaysian deputy prime minister said last week that his country will re-examine its diplomatic relationship with Pyongyang, alluding to a possible severance of formal ties with the communist country. Malaysia formally established its diplomatic relationship with North Korea in 1973 and installed its embassy in Pyongyang in 2003. In 2009, they forged a visa waiver program through which about 1,000 North Korean workers are currently employed in Malaysia. On Tuesday, North Korea sent a high-level delegation led by former deputy ambassador to the United Nations Ri Tong-il to Malaysia, as it seeks to take custody of Kim Jong-nam's body. Ri said he will also request that Malaysia release the one North Korean
national detained over the incident and discuss ways to strengthen friendly ties with Malaysia. Malaysian authorities said that Kim's next-of-kin should identify and claim his body. (Yonhap, “Malaysia Cancels Visa Waiver Program with North Korea: Report,” March 2, 2017)

A North Korean diplomat, Ri Tong-il, who is leading a delegation to Malaysia, suggested that Kim Jong-nam died of heart failure despite Malaysia’s finding that he was killed by a banned nerve agent. He said Kim had a history of heart disease and high blood pressure for which he needed medication. But while asserting the cause of Mr. Kim’s death, without providing any evidence, he stood by his country’s refusal to acknowledge that the victim was the half-brother of Kim Jong-un, instead calling him by the name Kim Chol, which South Korean officials have said is an alias. He also called on Malaysia to provide samples of the VX nerve agent that the police say they found on the body to the international organization charged with carrying out the global treaty that bans the use of chemical weapons. “If it is true that it was used,” he told reporters, “then the samples should be sent to the office” of the group, the Organization for the Prohibition of Chemical Weapons, for examination. The Malaysian government said it has indeed reported the use of VX to the organization, which must now decide whether to bring the matter before the United Nations Security Council. “The ministry is in close contact with the O.P.C.W. regarding the recent incident and the latter has provided the Malaysian authority with some technical materials that have been requested to assist in its investigation,” the Foreign Ministry said in a statement on March 3. But the organization has declined to say whether Malaysia had provided it with samples for independent testing. Malaysian officials have also declined to comment on that question. The latest assertions came as Malaysia moved to punish North Korea for the airport assassination, saying that it would require visitors from that country to obtain visas, the government said. Ahmad Zahid Hamidi, the deputy prime minister, imposed the restrictions effective March 6, citing national security concerns. Until now, North Koreans have been able to enter Malaysia without a visa — one of the few places in the world that allowed such easy access for citizens of a country that is widely viewed as a pariah. About 1,000 North Koreans live and work in Malaysia, where they have been able to establish international companies and have access to the global banking system. It was unclear whether the visa order would affect North Koreans who are already in Malaysia. (Richard C. Paddock, “North Korea Offers an Alternate Cause in a Death,” New York Times, March 3, 2017, p. A-6)

The Chinese government is ratcheting up pressure on South Korea over its plans to deploy an American missile defense system, with the state-controlled news media urging the public to boycott South Korean retail products and threatening diplomatic and even military repercussions. Yesterday, South Korea and the United States began talks in Seoul to finalize details of the deployment of the so-called Terminal High-Altitude Area Defense System, or THAAD, according to the South’s Foreign Ministry. No date has been set for the system’s deployment, but the Pentagon said on March 1 that Defense Secretary Jim Mattis wanted it in place “as soon as feasible.” Military experts said the United States could use C-17 transport aircraft to quickly move the system’s truck-mounted launchers, interceptors, radar, fire control units and support equipment to South Korea. An outspoken Chinese general, Luo Yuan, now retired, recommended a tough series of responses in an article, going so far as to suggest a military strike against the missile system. “We could conduct a surgical hard-kill operation that would destroy the target, paralyzing it and making it unable to hit back,” General Luo wrote in the Global Times, a state-run newspaper that often features strident, nationalist views. “Since the United States, Japan and South Korea choose not to respect China’s major security concerns, China does not need to be a gentleman on everything,” the general wrote. “We must not undermine our own security interests while respecting the security interests of others.” People’s Daily, the party newspaper that is often considered the official voice of the leadership, said in its international edition this week that China should consider a “de facto” severance of diplomatic ties with South Korea. It said in a commentary that China should take “political and military measures” against South Korea and that it should consider coordinating with Russia in dealing with what it called the “U.S.-Japan-South Korea antimissile network.” China has said that THAAD would threaten its nuclear deterrent capacity. It said the system’s powerful radar would make it much easier for the United States to
detect Chinese missiles and would give the American military much more time to intercept them. Trade experts said Beijing might be reluctant to take more extreme economic measures. China is South Korea's largest trading partner by far, but South Korea is also China's fourth-largest, and Beijing would probably be reluctant to damage those ties during the current economic slowdown. South Korean politicians have said that Washington wants THAAD deployed by mid-May, when many expect presidential elections to be held in the South. President Park Geun-hye awaits a ruling by the country's Constitutional Court on whether she will be permanently removed from office. The court's decision is expected in the coming weeks, and if it rules against her, a new president will be elected 60 days later. South Korea's progressive opposition is seen as having a strong chance of winning the presidency should that election be held. Opposition politicians have expressed skepticism about the THAAD system, and some have charged that the United States wants to rush the deployment to ensure that it is completed before a new president takes office. Members of the largest opposition party, the Democratic Party, have visited China twice since August. In January, in an unusual development, a delegation from the party met with the Chinese foreign minister, Wang Yi. China had hoped it could persuade the South's next president to refuse to agree to THAAD, said Cheng Xiaohu, an associate professor of international relations at Renmin University in Beijing. “Now China is afraid THAAD will be deployed before the new president of South Korea is in office,” he said. Even as China's fury toward the South is on full display, it is also at odds with the North. A North Korean diplomat, Ri Kil-song, arrived in Beijing on February 28 for five days of talks, an apparent effort by Pyongyang to reach out to China, its economic and political benefactor. Ri and Wang made soothing public statements on March 1 about the "traditional friendship" between their two countries. Behind the scenes, though, things are unlikely to have been so smooth. "One thing after another is happening," Cheng, the Renmin University professor, said of China's simultaneous troubles with the Koreans. "Not good things — all bad things." (Jane Perlez and Choe Sang-Hun, “Actions by North and South Korea Give China a Double Headache,” New York Times, March 3, 2017, p. A-8)

3/3/17 DPRK FoMin spokesman’s “answer to a question raised by KCNA as regards the fact that sophism calling for re-listing the DPRK as a "sponsor of terrorism" is heard in the U.S. Hard-line conservatives in the U.S., including some congressmen, have called for re-listing the DPRK as a "sponsor of terrorism" since the outset of the year. The DPRK government had already clarified its principled stand of opposing all forms of terrorism and any support for it before the international community and has consistently proved the stand in practice. Nevertheless, the U.S. is seeking to label the DPRK a "sponsor of terrorism" though it has nothing in common with it. This cannot be construed otherwise than an expression of inveterate repugnancy and hostile attitude towards it. No matter how the U.S. again calls the DPRK as a "sponsor of terrorism" in line with its standard and interests, the latter will never be a "sponsor of terrorism." Gone are the days never to return when the U.S. could stigmatize at random to oppress those countries incurring its displeasure, while having the world under its control. The U.S. will keenly realize how dearly it has to pay for its groundless accusations against the dignified DPRK.” (KCNA, “DPRK FM Spokesman Warns of Serious Consequences of Its Groundless Accusation,” March 3, 2017)

3/4/17 DPRK FoMin spokesman’s statement: “in denunciation of the ongoing U.S.-south Korea joint military drills against the DPRK. The spokesman branded the Key Resolve and Foal Eagle joint military exercises being staged by the U.S. in south Korea as the most undisguised nuclear war move to throw the Korean Peninsula and the rest of Northeast Asia into nuclear disaster. Nobody can vouch when the war drills kicked off after introducing a lot of nuclear strike means and huge forces into south Korea and the waters off it may go over to an actual war and, consequently, the situation on the Korean Peninsula is again inching close to the brink of a nuclear war. … The U.S. nuclear war drills assume more dangerous nature as they are staged at a time when it is resorting to the worst political and economic sanctions and pressure against the DPRK while finding fault with the latter's measure for bolstering up its nuclear force. The U.S. seeks to convince the public that the joint military exercises are ascribable to the DPRK's access to nuclear weapons, but this is sophism making profound confusing of right and wrong. The DPRK will never remain a passive onlooker to the new U.S. administration overtly revealing its intention to put military pressure on the DPRK and invade it while crying out for "peace by dint of strength." The spokesman stressed
that the army and people of the DPRK are unshakable in their will to further bolster up the
deterrence for self-defense with the strategic nuclear force as a pivot in order to put a radical
deed to the danger of a nuclear war being imposed by the U.S. and deal a merciless retaliatory
strike at any provocation by the invaders.” (KCNA, “DPRK Will Deal Merciless Retaliatory

The government of Malaysia declared North Korea’s ambassador “persona non grata” and gave
him 48 hours to leave the country, a major break in diplomatic relations after the airport
assassination of Kim Jong-nam. The decision to expel Ambassador Kang Chol came after he
failed to appear at Malaysia’s Ministry of Foreign Affairs as requested. Earlier, Kang had ignored
a request to apologize for several inflammatory statements, including questioning the police
finding that Kim was murdered with a banned nerve agent. “It should be made clear — Malaysia
will react strongly against any insults made against it or any attempt to tarnish its reputation,”
Foreign Minister Anifah Aman said in a statement announcing the expulsion order. (Richard C.
Paddock, “Malaysia, in Major Diplomatic Break, Forces Out North Korean Ambassador,” New

3/5/17 Three years ago, President Barack Obama ordered Pentagon officials to step up their cyber
and electronic strikes against North Korea’s missile program in hopes of sabotaging test launches in
their opening seconds. Soon a large number of the North’s military rockets began to explode, veer
off course, disintegrate in midair and plunge into the sea. Advocates of such efforts say they
believe that targeted attacks have given American antimissile defenses a new edge and delayed by
several years the day when North Korea will be able to threaten American cities with nuclear
weapons launched atop intercontinental ballistic missiles. But other experts have grown
increasingly skeptical of the new approach, arguing that manufacturing errors, disgruntled insiders
and sheer incompetence can also send missiles awry. Over the past eight months, they note, the
North has managed to successfully launch three medium-range rockets. And Kim Jong-un, the
North Korean leader, now claims his country is in “the final stage in preparations” for the
inaugural test of his intercontinental missiles — perhaps a bluff, perhaps not. An examina-
tion of the Pentagon’s disruption effort, based on interviews with officials of the Obama and Trump
administrations as well as a review of extensive but obscure public records, found that the United
States still does not have the ability to effectively counter the North Korean nuclear and missile
programs. Those threats are far more resilient than many experts thought, The New York Times’s
reporting found, and pose such a danger that Obama, as he left office, warned President Trump
they were likely to be the most urgent problem he would confront. Trump has signaled his
preference to respond aggressively against the North Korean threat. In a Twitter post after Kim
first issued his warning on New Year’s Day, the president wrote, “It won’t happen!” Yet like
Obama before him, Trump is quickly discovering that he must choose from highly imperfect
options. He could order the escalation of the Pentagon’s cyber and electronic warfare effort, but
that carries no guarantees. He could open negotiations with the North to freeze its nuclear and
missile programs, but that would leave a looming threat in place. He could prepare for direct
missile strikes on the launch sites, which Obama also considered, but there is little chance of
hitting every target. He could press the Chinese to cut off trade and support, but Beijing has
always stopped short of steps that could lead to the regime’s collapse. In two meetings of Trump’s
national security deputies in the Situation Room, the most recent on February 28, all those options
were discussed, along with the possibility of reintroducing nuclear weapons to South Korea as a
dramatic warning. Administration officials say those issues will soon go to Trump and his top
national security aides. The decision to intensify the cyber and electronic strikes, in early 2014,
came after Obama concluded that the $300 billion spent since the Eisenhower era on
traditional antimissile systems, often compared to hitting “a bullet with a bullet,” had failed
the core purpose of protecting the continental United States. Flight tests of interceptors
based in Alaska and California had an overall failure rate of 56 percent, under near-perfect
conditions. Privately, many experts warned the system would fare worse in real combat. So the
Obama administration searched for a better way to destroy missiles. It reached for techniques the
Pentagon had long been experimenting with under the rubric of “left of launch,” because the
attacks begin before the missiles ever reach the launch pad, or just as they lift off. For years, the Pentagon’s most senior officers and officials have publicly advocated these kinds of sophisticated attacks in little-noticed testimony to Congress and at defense conferences. The Times inquiry began last spring as the number of the North’s missile failures soared. The investigation uncovered the military documents praising the new antimissile approach and found some pointing with photos and diagrams to North Korea as one of the most urgent targets. After discussions with the office of the director of national intelligence last year and in recent days with Trump’s national security team, the Times agreed to withhold details of those efforts to keep North Korea from learning how to defeat them. Last fall, Kim was widely reported to have ordered an investigation into whether the United States was sabotaging North Korea’s launches, and over the past week he has executed senior security officials. The approach taken in targeting the North Korean missiles has distinct echoes of the American- and Israeli-led sabotage of Iran’s nuclear program, the most sophisticated known use of a cyber weapon meant to cripple a nuclear threat. But even that use of the “Stuxnet” worm in Iran quickly ran into limits. It was effective for several years, until the Iranians figured it out and recovered. And Iran posed a relatively easy target: an underground nuclear enrichment plant that could be attacked repeatedly. In North Korea, the target is much more challenging. Missiles are fired from multiple launch sites around the country and moved about on mobile launchers in an elaborate shell game meant to deceive adversaries. To strike them, timing is critical. Advocates of the sophisticated effort to remotely manipulate data inside North Korea’s missile systems argue the United States has no real alternative because the effort to stop the North from learning the secrets of making nuclear weapons has already failed. The only hope now is stopping the country from developing an intercontinental missile, and demonstrating that destructive threat to the world. “Disrupting their tests,” William J. Perry, secretary of defense in the Clinton administration, said at a recent presentation in Washington, would be “a pretty effective way of stopping their ICBM program.” North Korea began seeking an intercontinental ballistic missile decades ago: It was the dream of Kim Il-sung, the country’s founder, who bitterly remembered the American threats to use nuclear weapons against the North during the Korean War. His break came after the collapse of the Soviet Union, when out-of-work Russian rocket scientists began seeking employment in North Korea. Soon, a new generation of North Korean missiles began to appear, all knockoffs of Soviet designs. Though flight tests were sparse, American experts marveled at how the North seemed to avoid the kinds of failures that typically strike new rocket programs, including those of the United States in the late 1950s. The success was so marked that Timothy McCarthy of the Middlebury Institute of International Studies at Monterey wrote in a 2001 analysis that Pyongyang’s record “appears completely unique in the history of missile development and production.” In response, President George W. Bush in late 2002 announced the deployment of antimissile interceptors in Alaska and California. At the same time, Bush accelerated programs to get inside the long supply chain of parts for North Korean missiles, lacing them with defects and weaknesses, a technique also used for years against Iran. By the time Obama took office in January 2009, the North had deployed hundreds of short- and medium-range missiles that used Russian designs, and had made billions of dollars selling its Scud missiles to Egypt, Libya, Pakistan, Syria, the United Arab Emirates and Yemen. But it aspired to a new generation of missiles that could fire warheads over much longer distances. In secret cables written in the first year of the Obama administration, Secretary of State Hillary Clinton laid out the emerging threat. Among the most alarming released by WikiLeaks, the cables described a new path the North was taking to reach its long-range goal, based on a missile designed by the Soviets decades ago for their submarines that carried thermonuclear warheads. It was called the R-27. Unlike the North’s lumbering, older rockets and missiles, these would be small enough to hide in caves and move into position by truck. The advantage was clear: This missile would be far harder for the United States to find and destroy. “North Korea’s next goal may be to develop a mobile ICBM that would be capable of threatening targets around the world,” said an October 2009 cable marked “Secret” and signed by Clinton. The next year, one of the new missiles showed up in a North Korean military parade, just as the intelligence reports had warned. By 2013, North Korean rockets thundered with new regularity. And that February, the North set off a nuclear test that woke up Washington: The monitoring data told of an explosion roughly the size of the bomb that had leveled Hiroshima. Days after the explosion, the Pentagon announced an expansion of its force of antimissile interceptors in California and Alaska. It also began to unveil its “left of
The North, meanwhile, was developing its own exotic arsenal. It tried repeatedly to disrupt American and South Korean military exercises by jamming electronic signals for guided weapons, including missiles. And it demonstrated its cyber power in the oddest of places—Hollywood. In 2014, it attacked Sony Pictures Entertainment with a strike that destroyed about 70 percent of the company’s computing systems, surprising experts with its technical savvy. Last month, a report on cyber vulnerabilities by the Defense Science Board, commissioned by the Pentagon during the Obama administration, warned that North Korea might acquire the ability to cripple the American power grid, and cautioned that it could never be allowed to “hold vital U.S. strike systems at risk.”

Not long after General Dempsey made his public announcement, Obama and his defense secretary, Ashton B. Carter, began calling meetings focused on one question: Could a crash program slow the North’s march toward an intercontinental ballistic missile? There were many options, some drawn from General Dempsey’s list. Obama ultimately pressed the Pentagon and intelligence agencies to pull out all the stops, which officials took as encouragement to reach for untested technologies. The North’s missiles soon began to fail at a remarkable pace. Some were destroyed, no doubt, by accident as well as by design. The technology the North was pursuing, using new designs and new engines, involved multistage rockets, introducing all kinds of possibilities for catastrophic mistakes. But by most accounts, the United States program accentuated the failures. The evidence was in the numbers. Most flight tests of an intermediate-range missile called the Musudan, the weapon that the North Koreans showed off in public just after Clinton’s warning, ended in flames: Its overall failure rate is 88 percent. Nonetheless Kim Jong-un has pressed ahead on his main goal: an intercontinental ballistic missile. Last April, he was photographed standing next to a giant test-stand, celebrating after engineers successfully fired off a matched pair of the potent Russian-designed R-27 engines. The implication was clear: Strapping two of the engines together at the base of a missile was the secret to building an ICBM that could ultimately hurl warheads at the United States. In September, he celebrated the most successful test yet of a North Korean nuclear weapon—one that exploded with more than twice the destructive force of the Hiroshima bomb. His next goal, experts say, is to combine those two technologies, shrinking his nuclear warheads to a size that can fit on an intercontinental missile. Only then can he credibly claim that his isolated country has the know-how to hit an American city thousands of miles away. In the last year of his presidency, Obama often noted publicly that the North was learning from every nuclear and missile test—even the failures—and getting closer to its goal. In private, aides noticed he was increasingly disturbed by North Korea’s progress. With only a few months left in office, he pushed aides for new approaches. At one meeting, he declared that he would have targeted the North Korean leadership and weapons sites if he thought it would work. But it was, as Obama and his assembled aides knew, an empty threat: Getting timely intelligence on the location of North Korea’s leaders or their weapons at any moment would be almost impossible, and the risks of missing were tremendous, including renewed war on the Korean Peninsula. As a presidential candidate, Trump complained that “we’re so obsolete in cyber,” a line that grated on officials at the United States Cyber Command and the National Security Agency, where billions of dollars have been spent to provide the president with new options for intelligence gathering and cyberattacks. Now, one of the immediate questions he faces is whether to accelerate or scale back those efforts. A decision to go after an adversary’s launch ability can have unintended consequences, experts warn. Once the United States uses cyber weapons against nuclear launch systems—even in a threatening state like North Korea—Russia and China may feel free to do the same, targeting fields of American missiles. Some strategists argue that all nuclear systems should be off limits for cyberattack. Otherwise, if a nuclear power thought it could secretly disable an adversary’s atomic controls, it might be more tempted to take
the risk of launching a pre-emptive attack. “I understand the urgent threat,” said Amy Zegart, a Stanford University intelligence and cybersecurity expert, who said she had no independent knowledge of the American effort. “But 30 years from now we may decide it was a very, very dangerous thing to do.” Trump’s aides say everything is on the table. China recently cut off coal imports from the North, but the United States is also looking at ways to freeze the Kim family’s assets, some of which are believed held in Chinese-controlled banks. The Chinese have already opposed the deployment of THAAD in South Korea; the Trump team may call for even more such systems. The White House is also looking at pre-emptive military strike options, a senior Trump administration official said, though the challenge is huge given the country’s mountainous terrain and deep tunnels and bunkers. Putting American tactical nuclear weapons back in South Korea — they were withdrawn a quarter-century ago — is also under consideration, even if that step could accelerate an arms race with the North. Trump’s “It won’t happen!” post on Twitter about the North’s ICBM threat suggests a larger confrontation could be looming. “Regardless of Trump’s actual intentions,” James M. Acton, a nuclear analyst at the Carnegie Endowment for International Peace, recently noted, “the tweet could come to be seen as a ‘red line’ and hence set up a potential test of his credibility.” (David E. Sanger and William Broad, “President Inherits Cyberwar on North Korea,” New York Times, March 4, 2017, p. 1)

Schiller and Hayes: “On March 6, 2017, the New York Times published an article that stated that the United States deployed cyberattacks against North Korea’s missile tests. The article implied that these attacks may have succeeded in causing the failure of North Korean missile tests. The assertion that cyberattacks could cause a higher rate of failure than would otherwise have occurred is, to put it mildly, a stretch, given the intervening variables and other factors that are well known to cause high failure rates early in missile testing programs. It is useful, therefore, to examine the fundamentals of how a missile could be caused to fail by a cyber-attack. In principle, interference with a missile’s guidance system may cause it to veer it off course, or even destroy it in flight. But this is not as easily done as people would imagine, or as is suggested in the New York Times article. To mess with a guidance system by hacking into it, it has contain a computer system that uses software. This sounds very obvious, but it is very important to be reminded of this, because different rockets use very different guidance system. The Falcon 9 space launcher from SpaceX, for example, uses a guidance system with software that is based on Linux. It should be possible to hack this software, or plant some virus in it that does something weird during launch. To do this, the attacker must be able to meet two conditions. First, the attacker must know which software is used, and understand how the software is working to create compatible lines of code that actually do what you want them to do, and to plant this code into the existing software. Second, the attacker must have access to the software, either by direct access to the guidance system you want to sabotage, or by infecting the software before it is transferred into the missile’s computers. Also, the malware should not be detected once it is planted. Certainly the DPRK would have established a guidance laboratory early in its missile program to develop accelerometers, gyroscopes, computers, and inertial platforms in the quest for an indigenous inertial guidance system and developed the transformation techniques needed to convert inertial measurements into targeting information. However, the DPRK is not yet capable of developing and producing the required sensors and computers and has had to buy in many of these parts from the world market. The chances that the United States could identify and implant malware in such black market imports are low. Moreover, it is not likely that that the DPRK would have failed to take cyber warfare defensive counter-measures to protect its guidance research and development program. Of course, all bureaucracies make mistakes, especially when operating in compartmentalized, vertical silos like those in the DPRK. But it is unlikely that the DPRK military did not mount cyber defenses given that it was forewarned by media reports in 2011 of the Stuxnet attack on Iran’s centrifuge program. It may also have been aware of the US National Security Agency attempts starting in 2010 to penetrate North Korea’s cyber systems. And it certainly has highly capable and world class cyber warriors to lend a hand. Even if the DPRK missile guidance system community let down its guard, U.S. knowledge of North Korea’s missile program is quite limited. It is doubtful that the United States has sufficient knowledge of the DPRK’s missile guidance software code, or even which software is used. It is also highly improbable that the DPRK’s missiles have a WiFi link, or Internet access, which could be used to
infect the guidance software. But, even more basic: some missile guidance systems cannot be hacked, because they are not software-based. The Scud B guidance system, for example, is quite close to the guidance system that the German A4/V2 used during World War 2. This system is based on mechanical inputs. You cannot hack it, just as you cannot hack old Wurlitzer jukeboxes, or mechanical computers. There is no software, no line of code that could be modified. Scuds, of course, use a Scud-type guidance system, as does the Nodong. And judging by the technology that was found inside the Unha first stage, the Unha satellite launcher also uses some kind of this guidance type, perhaps just a modified Scud guidance system. There is simply no way to infect these systems with malware. The question today is whether the DPRK’s Musudan and the KN-15 missiles use a similar non-cyber guidance system; or if they use some type of modern strap-down guidance system that is based on sensors and a computer, and is running some software. And this question leads us straight to the old questions of where these missiles come from, what technology they are based on, and at what time they were actually developed. If the Musudan indeed is based on the R-27/SS-N-6, the chances are high that the original guidance system of this missile was also used for the Musudan, which means Soviet technology from the nineteen sixties, which would have been mechanical and therefore “hack-proof.” Even if the DPRK uses a modern guidance system on the Musudan, it is doubtful that the United States would have had access to the guidance software and be able to plant a code in there. And missiles do not have an USB port that you can use to infect their computer via USB stick, or just connect from a distance via Bluetooth. Such an insertion would have to be highly targeted, specific to the design and software used in the DPRK’s laboratory, and able to circumvent all the obvious countermeasures and barriers that would stand in the way of such an effort in the first place. Such a combination strains credulity. The New York Times article hearkens back to the movie “Independence Day”, where the world is saved from the Alien invasion by simply planting a computer virus into the mothership’s main computer by somehow just sending it over with a standard laptop. This might work in movies, but not in reality. Perhaps the more interesting story is who leaked to the New York Times the claims of the efficacy of cyberattacks on North Korea’s missiles and why now? We wonder if it is part of a policy battle in the course of the Trump Administration’s North Korea policy review, possibly designed to get President Trump’s attention. It might also be an intentional effort to conduct psychological warfare against the DPRK by creating paranoia and purges within the DPRK missile program. It might also be a way to impress allies and third parties that the United States has been doing more behind the scenes than patientely waiting for the DPRK threat to resolve itself and imposing ineffectual sanctions. We don’t know.” (Markus Schiller and Peter Hayes, “Could Cyberattacks Defeat North Korean Missile Tests?” NAPSnet, March 7, 2017)

KCNA: “The U.S. imperialists and south Korean puppet military warmongers staged the largest-ever joint military exercise for searching and destroying strategic facilities of the DPRK in Phochon, Kyonggi Province from February 14 to 17, according to the south Korean Yonhap News. They are mulling waging again such exercise during the Foal Eagle drill with ground, naval and air forces involved.” (KCNA, “U.S., S. Korean Warmongers Stage Exercise for Searching and Destroying Strategic Facilities of DPRK,” March 5, 2017)

South Korea’s Unification Ministry said that it would quadruple the cash reward it provides for North Korean defectors arriving with important information to 1 billion won, or $860,000 from $217,000, in an effort to encourage more elite members from the North to flee. Since famine hit the North in the mid-1990s, more than 30,000 North Koreans have defected to the South. The South Korean government helps them resettle by providing job training, rent and other subsidies. But it has also offered extra cash rewards for those who defected with information on the North Korean military or the inner workings of the secretive North Korean government, as well as for those who fled with military planes or other weapons. Defectors who flee with a warship or a military fighter jet will also get $860,000, instead of the current $130,000. Those who arrive with lesser weapons, like a tank or a machine gun, can expect rewards ranging from $43,000 to $260,000. The new cash awards will take effect in April, the ministry said. South Korea said the drastic increases reflected the effects of inflation over the 20 years since the rewards were last
North Korea fired four ballistic missiles into the waters off its east coast this morning, South Korea's Joint Chiefs of Staff said, the latest sign of Pyongyang's determination to push ahead with its missile program despite increasing pressure against it. The Joint Chiefs said the projectiles were launched from Tongchang-ri in North Korea's northwestern North Pyongan Province, at 7:36 a.m. Seoul time. North Korea has a launch site for longer-range rockets northwest of the capital Pyongyang. They said the projectiles flew about 620 miles and that the South Korean authorities were analyzing exactly what type of projectiles were fired. There were no immediate signs of any damage. A Japanese government spokesman said North Korea launched four missiles, and that three had landed inside Japan's Exclusive Economic Zone, an area extending about 230 miles out to sea from its coastline. South Korea's acting president, Prime Minister Hwang Kyo-ahn, convened a meeting of the Standing Committee of the National Security Council in response this morning. Japan's Prime Minister Abe Shinzo said he would hold a meeting of its National Security Council to discuss the missile launches. South Korea's national-security adviser, Kim Kwan-jin, also spoke by phone with Lt. Gen. H.R. McMaster, a spokesman for the South Korean president's office said. During the meeting, Hwang called the missile launch "an act of outright defiance to the international community, and a serious provocation." The U.S. State Department condemned the launches on Sunday night, while reaffirming its commitment to defending allies including South Korea and Japan. "The [Democratic People's Republic of Korea]'s provocations only serve to increase the international community's resolve to counter the DPRK's prohibited weapons of mass destruction programs," said Mark Toner, acting State Department spokesman. A South Korean defense ministry official said the flight paths of four projectiles — including the flight distance and the maximum height of about 160 miles — indicate they weren't ICBMs. "The North American Aerospace Defense Command (NORAD) determined the missile launch from North Korea did not pose a threat to North America," said Cmdr. Gary Ross, a Pentagon spokesman. As with its launch in February, which came while Trump was meeting with Abe in West Palm Beach, Fla., analysts and experts struggled to identify details of the exact launch. In that case, analysts initially identified the missile as an intermediate-range missile it had previously fired. But the missile was actually a modified version of a submarine-launched missile that Pyongyang called the Polaris-2, boasting new capabilities some experts hadn't yet expected North Korea to have developed. In this case, South Korea's Joint Chiefs initially identified one missile launch from Tongchang-ri site, but then modified their assessment to include three more missiles, though it remains unclear whether those missiles were also fired from the same site. "This is an unusual launch because of its number and location. If it was this number in a different location or just one launch from this location, it would make sense," said Scott LaFoy, a satellite-imagery and ballistic-missile analyst based in Washington. "North Korea is getting very good at switching up their tests. They keep changing the variables analysts watch for, so it is harder to quickly assess what any one event was." The North's missile launch took place as the U.S. and South Korea were conducting annual joint military exercises, strongly opposed by Pyongyang. Jeffrey Lewis, an arms-control expert at the California-based Middlebury Institute of International Studies, said it was normal for the North launch a salvo of missiles during big U.S. exercises, to signal that they can "practice nuking the forces we are practicing with to invade them." He added that "they are conveying that their plan, early on, is to use nuclear-armed missiles at our forces in the region to repel an attack." (Jonathan Cheng and Kwanwoo Jun, “North Korea Fires Missiles, Fanning Regional Concerns,” Wall Street Journal, March 6, 2017, p. 1) Japan believes one of the ballistic missiles was fired by North Korea earlier in the week may have come closer to its coast than any other missile launched by Pyongyang in the past, splashing down some 200 kilometers out to sea, a Japanese government source said March 9. The missile, one of four launched nearly simultaneously this morning from North Korea's northwest, fell into the Sea of Japan around 200 km north-northwest of the Noto Peninsula in Ishikawa Prefecture, Chief Cabinet Secretary Suga Yoshihide told a press conference. (Kyodo, “North Korean Missile May Have Come Closer to Japan than Any in the Past,” March 9, 2017) North Korea was practicing to strike United States.
military bases in Japan with its latest barrage of missiles, state media in Pyongyang reported March 7, and it appeared to be trying to outsmart a new American antimissile battery being deployed to South Korea by firing multiple rockets at once. Kim Jong Un presided over today’s launch of the four missiles, “feasting his eyes on the trails of ballistic rockets,” KCNA reported in a statement that analysts called a “brazen declaration” of the country’s intent to strike enemies with a nuclear weapon if it came under attack. “If the United States or South Korea fires even a single flame inside North Korean territory, we will demolish the origin of the invasion and provocation with a nuclear tipped missile,” the KCNA statement said. The four ballistic missiles fired this morning were launched by the elite Hwasong ballistic missile division “tasked to strike the bases of the U.S. imperialist aggressor forces in Japan,” KCNA said. The United States has numerous military bases and about 54,000 military personnel stationed in Japan, the legacy of its postwar security alliance with the country. Three of the four missiles flew about 600 miles over North Korea and landed in the sea, within Japan’s exclusive economic zone off the Oga Peninsula in Akita prefecture, home to a Japanese self-defense forces base. The fourth fell just outside the zone. North Korea did not say what kind of missiles it had fired, but after poring over photos released by state media, analysts at the Middlebury Institute of International Studies in California said they were extended-range Scuds capable of flying more than 600 miles. North Korea’s extended-range Scud is halfway between a traditional short-range Scud and the medium-range missile known as the Rodong. But they can be produced much more cheaply than the Rodong, Lewis said, meaning that North Korea could fire them with more abandon. North Korea has tested these types of missiles before, so the point of today’s launches was not to see if the rockets would fly, but to test how quickly the unit could set them up and deploy them — classic training for a wartime situation, said Jeffrey Lewis, director of the East Asia Nonproliferation Program at the Middlebury Institute. “They want to know if they can get these missiles out into the field rapidly and deploy them all at once,” Lewis said. “They are practicing launching a nuclear-armed missile and hitting targets in Japan as if this was a real war.” KCNA reported that the four missiles were launched simultaneously and that Kim commented that they “are so accurate that they look like acrobatic flying corps in formation.” This appeared to be a further challenge to the United States and South Korea, which said March 7 that it had started deploying the advanced antimissile battery called Terminal High Altitude Area Defense, or THAAD, designed to protect the region against North Korea’s rockets. The first parts of the THAAD system arrived today at Osan Air Base south of Seoul, South Korea’s Defense Ministry said. But THAAD would have difficulty intercepting four missiles launched at the same time, analysts said. Furthermore, Osan Air Base is less than 300 miles from the missile launch site in North Korea — another apparent message to Pyongyang’s enemies. The launches coincided with joint U.S.-South Korean military exercises on the southern half of the Korean Peninsula, drills that take place every year and that North Korea views as preparation for an invasion. After the missiles were launched, the U.S. Strategic Command said it had determined that the missile launch “did not pose a threat to North America.” But KCNA reported that the 33-year-old Kim had ordered the strategic forces to be on high alert, “as required by the grim situation in which an actual war may break out anytime, and get fully ready to promptly move.” (Anna Fifield, “North Korea Said It Was Practicing to Hit U.S. Military Bases in Japan with Missiles,” Washington Post, March 7, 2017) A new open-source intelligence analysis of North Korean state-run media by missile experts has shown what appears to be the hypothetical target of the country’s test-launches earlier this week: U.S. Marine Corps Air Station Iwakuni in Yamaguchi Prefecture. Using images released by North Korean state media — including one showing a map detailing the range of the missiles — David Schmerler and Jeffrey Lewis of the Center for Nonproliferation Studies at the Middlebury Institute of International Studies in California, determined that the drill intended to simulate a nuclear attack on the base at Iwakuni. “This is the first time that the North Koreans have been specific about attacking U.S. Forces in Japan,” Lewis told Japan Times. “But last year, a North Korean missile unit launched a Nodong to simulate a nuclear attack on Busan, (South Korea).” Just last year, the North said it held a similar drill that “was conducted by limiting the firing range under the simulated conditions of making pre-emptive strikes at ports and airfields in the operational theater in South Korea,” KCNA said in a dispatch at the time. An accompanying photo, similar to the one released Tuesday, showed a map that displayed the possible flight path of the missiles from Hwangju, North Korea, to areas near South Korea’s southern port cities of Ulsan and Busan. Because the
flight path of the four missiles launched was about 1,000 km into the Sea of Japan off the coasts of Aomori and Akita prefectures, Schmerler said he initially believed the simulation might be targeting the U.S. air base in Misawa, Aomori. “But the range would be a push for the ER Scud to be reasonably used,” he said. Instead, Lewis suggested that U.S. bases in both Sasebo, Nagasaki Prefecture, and Iwakuni would be within range from ER Scuds deployed near the North’s Sohae Satellite Launch Station in Dongchang-ri, where the March 6 missiles were launched. After discovering the map photo from today’s launch, Schmerler compared it with the similar shot from the Busan drill in July, concluding that Iwakuni was the “hypothetical target for the (recent) drill,” he said. Besides American personnel, the U.S. base at Iwakuni is also home to Fleet Air Wing 31 of the Maritime Self-Defense Force, and other units of the MSDF. At present, the station has about 15,000 personnel, including Japanese national employees. The base is also now home to a squadron of F-35B stealth fighters, after the U.S. deployed them in January, marking the first operational overseas deployment for the high-tech aircraft. Lewis said the March 6 drill “demonstrates that North Korea’s war plan is to engage in the large-scale use of nuclear weapons against U.S. forces in the region to ‘repel’ an invasion.” Media reports have said the F-35B would participate in the exercises, known as Foal Eagle. “The addition of the F-35B is meant to deliver a strong message to the North that they could be used against the rogue state in case of a conflict breaking out on the Korean Peninsula,” Yonhap quoted an unidentified military official as saying last week. This, said both Lewis and Schmerler, was likely the North’s rationale for targeting Iwakuni. “North Korea sees Foal Eagle as a dress rehearsal for an invasion,” Lewis said. “So the missile launch is their rehearsal for using nuclear weapons to stop the invasion.” Asked about the analysis at a daily news conference on March 8, Japanese Chief Cabinet Secretary Suga Yoshihide said he was not aware that Iwakuni may have been the simulation’s target, but noted the 1,000-km range would put it and other areas in Japan within the North’s sights. “The missiles flew for 1,000 km, so if you take that into account, western Japan, including Shikoku, could surely be a target,” Suga said, reiterating Prime Minister Abe Shinzo’s comment that the government views the four missiles’ simultaneous launch as “a new level of threat.” A spokesman for U.S. Forces Japan also declined comment on the apparent threat to Iwakuni, but reiterated the U.S. commitment to the defense of Japan and South Korea. “We remain prepared and will continue to take steps to increase our readiness to defend ourselves and our allies from attack, and are prepared to use the full range of capabilities at our disposal against this growing threat,” U.S. Air Force Maj. John Severns said in an email. According to Euan Graham, director of the International Security Program at the Lowy Institute in Australia, targeting Iwakuni could be a “way of letting us know they have the ability to hit U.S. bases in Japan that are likely to be used in a Korean contingency.” Graham also noted the threat to Japanese living nearby. “I wonder how the people of Hiroshima will feel at the prospect they may again be targeted by nuclear weapons in wartime, given the proximity of the marine base at Iwakuni,” he said. (Jesse Johnson, “North Korea Missile Drill Simulated Targeting Iwakuni Base, Analysis Shows,” Japan Times, March 8, 2017)

3/7/17

Alarmed over North Korea’s increasingly provocative behavior, the United States said that it had started to deploy THAAD in South Korea that China has angrily opposed as a threat to its security. The deployment came after North Korea launched four ballistic missiles yesterday, apparently in response to joint naval exercises by South Korea and the United States. Those launchings led South Korea to call for the accelerated deployment of THAAD. A spokeswoman for the United States forces in South Korea said that one of five major components of the missile system had arrived yesterday. Officials said it could take a couple of months for the system to become fully operational. Defense Secretary Jim Mattis had urged the South Koreans to move ahead with the deployment of the system during a visit to Seoul in February. In telephone calls yesterday to South Korean and Japanese leaders, President Trump said the United States would stand with its Asian allies and take steps to defend against North Korea’s growing ballistic missile threat. Trump emphasized that the United States was taking steps to “enhance our ability to deter and defend against North Korea’s ballistic missiles using the full range of United States military capabilities,” the White House said in a statement. China has been incensed over the deployment of the system, fearing it could give the United States military the ability to quickly detect and track missiles launched in China, according to analysts. A spokesman for China’s Ministry of Foreign Affairs, Geng Shuang, said today that China would “take the necessary steps to safeguard our own security.
Abe informed U.S. President Donald Trump on March 7 that Japan is willing to play a larger role in dealing with North Korea after North's launches," according to a newspaper. (Gerry Mullany and Michael R. Gordon, "U.S. Деpl...

Some in China have advocated a "surgical hard blow" on North Korea, or more. A retired general, Luo Yuan, even suggested that China destroy the system with a military strike. “We could conduct a surgical hard-kill operation that would destroy the target, paralyzing it and making it unable to hit back,” General Luo wrote in Global Times, a state-run newspaper. (Gerry Mullany and Michael R. Gordon, "U.S. Deploys Antimissile System in South Korea after North’s Launches," New York Times, March 7, 2017, p. A-9) Prime Minister Shinzo Abe informed U.S. President Donald Trump on March 7 that Japan is willing to play a larger...
security role to counter the growing threat from North Korea. “Japan is prepared to perform more activities and responsibilities to heighten deterrence of the Japan-U.S. alliance,” Abe told Trump during their 25-minute phone conversation. “To do that, we want to promote studies and talks (with the United States) in a rapid manner.” Abe and Trump agreed to hold a bilateral “2 plus 2” meeting of the foreign and defense ministers of the two countries at an early date. The two leaders also agreed that Japan and the United States will closely cooperate with South Korea in dealing with the belligerence of North Korea. (Asahi Shim bun, “Abe to Trump: Japan Ready to Do More to Deal with North Korea,” March 7, 2017)

KCNA: “Kim Jong Un, chairman of the Workers' Party of Korea, chairman of the State Affairs Commission of the DPRK and supreme commander of the Korean People's Army (KPA), supervised a ballistic rocket launching drill of Hwasong artillery units of the Strategic Force of the KPA on the spot. Involved in the drill were Hwasong artillery units of the KPA Strategic Force tasked to strike the bases of the U.S. imperialist aggressor forces in Japan in contingency. Respected Supreme Leader Kim Jong Un learned in detail about the preparations for fire strike while going round the ballistic rocket launching grounds. At an observation post he was briefed on a launching plan and gave an order to start the drill. Feasting his eyes on the trails of ballistic rockets, he appreciated that Hwasong artillery units of the Strategic Force are very good at organizing and commanding fire strikes and strictly ensuring rapid and simultaneous fire strikes. The four ballistic rockets launched simultaneously are so accurate that they look like acrobatic flying corps in formation, he said. Praising once again the Hwasong artillerymen for successfully concluding the drill for launching ballistic rockets simultaneously, he added that it is a great pride of the Party and state, army and people to have such strongest one as the KPA Strategic Force equipped with Korean-style powerful ballistic rockets and Juche-based fire strike methods. He gave the officials accompanying him the tasks to be fulfilled to strictly establish a monolithic leadership system and commanding and managing system of the Supreme Commander over the strategic force, further round off the Juche-style powerful ballistic rockets and Juche-based fire strike methods. He ordered the KPA Strategic Force to keep highly alert as required by the grim situation in which an actual war may break out anytime, and get fully ready to promptly move, take positions and strike so that it can open fire to annihilate the enemies once the Party Central Committee issues an order. Expressing expectation and belief that the Hwasong artillerymen of the KPA Strategic Force would successfully discharge their sacred mission and duty as creditable nuclear force of the Workers' Party of Korea in the death-defying struggle against the enemies, he had a photo session with them. Accompanying him were Ri Pyong Chol, Kim Jong Sik and other leading officials of the WPK Central Committee and scientists and technicians in the nuclear weapon and rocket research fields. (KCNA, “Kim Jong Un Supervises Ballistic Launching Rocket Drill of Hwasong Artillery Unites of KPA Strategic Force,” March 7, 2017)

The apparent success of four simultaneous missile launchings by North Korea yesterday raised new alarms about the threat to its neighbors and its progress toward developing an ability to overcome their ballistic missile defense systems, including those that have yet to be deployed. In Japan, analysts said the launches suggested that North Korea could pose a more serious threat than indicated by previous tests. Indeed, North Korea said that the tests were conducted by units tasked to strike the bases of the U.S. imperialist aggressor forces in Japan in contingency.” “That would mean a lot in terms of the defense of Tokyo, because North Korea might have been conducting a simulation of a ‘saturation attack’ in which they launch a number of missiles simultaneously in order to saturate the missile defense that Japan has,” said Michishita Narushima, director of the Security and International Studies Program at the National Graduate Institute for Policy Studies in Tokyo. “It would be difficult for Japan to shoot down four missiles all at the same time because of our limited missile defense.” KCNA said today that the launches were timed to counter a joint United States-South Korean military exercise. Japan’s Coast Guard sent out navigation warnings and stepped up air and sea patrols on yesterday after three of the missiles landed within the country’s so-called exclusive economic zone, where fishing and cargo ships are active. The fourth landed outside it, though nearby. During a parliamentary committee session
yesterday morning, Abe said that the launches “clearly represent a new threat from North Korea.” The missiles took off from Tongchang-ri, in northwestern North Korea, and flew an average of 620 miles before falling into the sea between North Korea and Japan, said Noh Jae-chon, a South Korean military spokesman. Michishita, of the National Graduate Institute for Policy Studies, said the missile launches could accelerate a discussion within the Japanese government about whether Japan should acquire more missile defense systems, including THAAD. In January, Japan’s defense minister, Inada Tomomi, visited a United States Air Force base on Guam for a briefing on THAAD. After North Korea’s missile test last month, Japan’s governing Liberal Democratic Party formed a committee to discuss the country’s ballistic missile defenses, and it plans to debate various options, including THAAD, early warning satellites and other defense systems that could intercept incoming missiles. North Korea’s provocations could also embolden Abe in his campaign to raise military spending. “This can be used by the government as a pretty credible reason why we have to spend more on defense at the expense of other budget items,” including social welfare programs, Michishita said. Mainichi Shimbun reported that residents in Akita Prefecture, which sits closest to where the missiles landed in the Sea of Japan, were concerned by the increasing frequency of the tests. Asai Kazuhiro, director of the Kitaura branch of the Fishermen’s Cooperative of Akita Prefecture, told Mainichi Shimbun that members of the group were frightened by the launches. (Mokoto Rich, “North Korean Missile Test Raises Stakes for Japan,” New York Times, March 7, 2017, p. A-7)

North Korea said that it was barring all Malaysians from leaving the country until there is a “fair settlement” of a dispute over the assassination in Kuala Lumpur of Kim Jong-nam. Malaysia responded in kind, with Prime Minister Najib Razak instructing the police to prevent all North Koreans from leaving Malaysia until he was assured of the safety of Malaysians in North Korea. The developments were a dramatic escalation in the diplomatic dispute over Kim’s killing, in which the Malaysian police have said that several North Koreans are suspects. Khalid Abu Bakar, Malaysia’s top police official, confirmed at a news conference that at least two suspects had taken refuge at the North Korean Embassy and that North Korea had refused a request to hand them over. “The North Korean authorities are not cooperating with us in this investigation,” he said. He said the police would wait as long as necessary to arrest Kim, the airline employee, and Ri, if he is there. “If it takes five years, we will wait outside,” he said. “Definitely somebody will come out.” North Korea’s statement on Tuesday described the exit ban as temporary. But Pyongyang has been accused of playing hostage politics before, partly to complicate negotiations over its nuclear arms and missile development. In 2014, North Korea said it would reopen an investigation into Japanese citizens it was accused of abducting during the Cold War, but it halted that inquiry last year in retaliation for sanctions imposed by Japan over a rocket launch. Duyeon Kim, a Seoul-based nonresident fellow at Georgetown University’s Institute for the Study of Diplomacy, said on Tuesday that North Korea was “playing dirty and not diplomatically, apparently hoping this might force Malaysia to reverse its findings” about Kim’s killing. Today’s developments follow the tit-for-tat expulsion of ambassadors between the two countries. Kang Chol, North Korea’s ambassador to Malaysia, was expelled on yesterday over what Malaysia considered to be insulting comments. North Korea responded by formally expelling Malaysia’s ambassador, Mohamad Nizar Mohamad, though he had already been recalled to Malaysia for consultations. (Richard C. Paddock, “North Korea, Citing Kim Jong-nam Dispute, Blocks Malaysians from Exiting,” New York Times, March 7, 2017)

As part of a settlement for breaking sanctions and selling electronics to Iran and North Korea, ZTE agreed to plead guilty and pay $1.19 billion in fines, the United States Department of Commerce said in an announcement. The penalty is the largest criminal fine in a United States sanctions case. The action is the latest in a series of skirmishes between the United States and China over technology policy. It also offered a chance for President Trump’s young administration to make a statement about the seriousness of United States sanctions. In addition to ZTE, the Commerce Department is also investigating the company’s larger Chinese rival, Huawei, for violating United States sanctions. “We are putting the world on notice: The games are over,” said Commerce Secretary Wilbur L. Ross. “Those who flout our economic sanctions and export control laws will
not go unpunished — they will suffer the harshest of consequences.” ZTE was found to have breached United States sanctions against Iran by selling American-made goods to the country last March. At the time, the Commerce Department said it would force American companies to obtain a special license to sell to ZTE, which makes smartphones and telecommunications infrastructure equipment. The restrictions would have had the potential to cripple ZTE’s supply chain. The ban, however, was never put in place, and instead the Chinese company was given a series of reprieves. Still, ZTE, which is China’s second-largest maker of telecom equipment, has not fared well over the past year. Its revenue from the expansion of China’s 4G cellular networks has slowed and its smartphone business has faced major competition from new Chinese handset makers, as well as Huawei. Today, the Commerce Department said that along with selling prohibited American electronics to build Iran’s telecom networks, ZTE also made 283 shipments of microprocessors, servers and routers to North Korea, violating American embargoes in that country as well. “ZTE engaged in an elaborate scheme to acquire U.S.-origin items, send the items to Iran and mask its involvement in those exports,” said the acting assistant attorney general, Mary B. McCord. “The plea agreement alleges that the highest levels of management within the company approved the scheme.” She added that ZTE repeatedly lied to and misled federal investigators, its own lawyers and internal investigators. In a statement, ZTE said that it had strengthened its compliance policies and undergone a shake-up of top leaders; the company named a new chief executive last April. “ZTE acknowledges the mistakes it made, takes responsibility for them and remains committed to positive change in the company,” said Zhao Xianming, chairman and chief executive of ZTE. It is unclear whether the Commerce Department has completed its investigations into Chinese telecom equipment makers. In a rare step accompanying the announcement last March, the Commerce Department provided two internal ZTE documents. One, from 2011 and signed by several senior ZTE executives, detailed how the company had "ongoing projects in all five major embargoed countries — Iran, Sudan, North Korea, Syria and Cuba." Another document laid out in a complex flow chart a method for circumventing United States export controls. Citing an unnamed company as a model for circumventing United States sanctions, that second document seemed to implicate ZTE’s more politically important rival, Huawei. The New York Times reported last year that the United States government was also investigating whether Huawei broke export controls. The Commerce Department subpoenaed Huawei, demanding it turn over all information regarding the export or re-export of American technology to Cuba, Iran, North Korea, Sudan and Syria. Huawei has said it is committed to complying with laws and regulations where it operates. Huawei and ZTE are private companies, but they have deep ties to the Chinese government, in part because they supply much of the equipment that makes the country’s telecom backbone function. (Paul Mozur and Cecilia Kang, “U.S. Fines Chinese Electronics Company ZTE for Breaching Sanctions,” New York Times, March 8, 2017, p. B-3)

China, fearing a rapid escalation of tension on the Korean peninsula, called on North Korea on to top its nuclear and missile tests and for South Korea and the United States to stop joint military drills and seek talks instead. Chinese Foreign Minister Wang Yi said the tests by the North and the joint drills across the border in South Korea were causing tension to increase like two "accelerating trains coming toward each other." At his annual news conference on the sidelines of the meeting of China's parliament in Beijing, Wang said, "China's suggestion is, as a first step, for North Korea to suspend nuclear and missile activities, and for the U.S. and South Korea to also suspend large-scale military drills." Such a "dual suspension" would allow all sides to return to the negotiating table, Wang said. "Holding nuclear weapons won't bring security, using military force won't be a way out," Wang said. "There remains a chance of resuming talks, there is still hope for peace." (Ben Blanchard, “China Asks North Korea to Stop Missile Tests, Tells U.S. and South to Seek Talks,” Reuters, March 8, 2017)

Wang Yi press conference: “Reuters: The situation on the Korean Peninsula at the moment is extremely tense. North Korea has again test missiles this week. Does China think there will be war on the Korean Peninsula? What is China's strategy for preventing war from breaking out? Wang Yi: Once again, tensions are rising on the Korean Peninsula. On the one hand, the DPRK has ignored international opposition and insisted on advancing its nuclear and missile programs in
China for talks that will focus on “the advancing nuclear and missile threat” from North Korea, the
region is increasingly complicated, and the possibility of a diplomatic solution to the nuclear
issue is increasingly slim,” he said, referring to North Korea’s nuclear arms program.
Renmin University in Beijing who specializes in North Korea. “The situation in the East Asian
challenge for the Chinese government’s diplomacy,” said Cheng Xiaohe, an associate professor at
North and South Korea and prove itself a mature regional power broker. “The current sit
initiative on the nuclear issue, which has bedeviled Beijing’s efforts to stay friends with both
North and South Korea and prove itself a mature regional power broker. “The current sit
China tried unsuccessfully to calm newly volatile tensions on the Korean Peninsula, proposing
that North Korea freeze nuclear and missile programs in exchange for a halt to major military
exercises by American and South Korean forces. The proposal was rejected hours later by the
United States and South Korea. “We have to see some sort of positive action by North Korea
before we can take them seriously,” Nikki R. Haley, the United States ambassador to the United
Nations, told reporters after a Security Council meeting in New York on the escalating Korea
violations. This suspension-for-suspension can help us break out of the security dilemma and bring the
parties back to the negotiating table. Then we can follow the dual-track approach of
denuclearizing the peninsula on the one hand and establishing a peace mechanism on the other.
Only by addressing the parties’ concerns in a synchronized and reciprocal manner, can we find a
fundamental solution to lasting peace and stability on the peninsula. China’s proposal, fully in
keeping with resolutions 2270 and 2321, tries to get to the crux of the matter. To resolve the
nuclear issue, we have to walk on both legs, which means not just implementing sanctions, but
also restarting talks, both of which are set out in the Security Council resolutions. The nuclear
issue on the Korean Peninsula is mainly between the DPRK and the United States. China is a next-
door neighbor with a lips-and-teeth relationship with the peninsula, so we’re indispensable to the
resolution of the nuclear issue. China has a strong commitment to denuclearizing the peninsula, to
maintaining stability there and to resolving the issues peacefully. Indeed, China has done its level
best to bring the DPRK and the US together and to chair the Six-Party Talks. We’ve also
contributed to the adoption and implementation of Security Council resolutions. Going forward, to
continue my earlier railway metaphor, China will continue to be a "switch-man". We will try to
switch the issue back to the track of seeking a negotiated settlement. And I wish to emphasize that
nuclear weapons will not bring security, the use of force is no solution, talks deserve another
chance and peace is still within our grasp.” (Embassy of China Press Office, Foreign Minister
Wang Yi Meets the Press, Transcript, March 8, 2017)
State Department said. North Korea’s weapons advancements have reached a point where “we do need to look at other alternatives,” Mark C. Toner, a spokesman for the State Department, told reporters in Washington yesterday. “And that’s part of what this trip is about, that we’re going to talk to our allies and partners in the region to try to generate a new approach to North Korea.” But bringing the countries into agreement over initial steps toward peace will not be easy, especially while China is also in a deepening dispute with South Korea and the Trump administration. At the same news conference where he laid out his proposal, Wang stuck to China’s fierce opposition to the missile defense system the United States began assembling in South Korea this week, known as THAAD, or Terminal High-Altitude Area Defense. “It’s common knowledge that the monitoring and early warning radius of THAAD reaches far beyond the Korean Peninsula and compromises China’s strategic security,” Wang said at the news conference, which was part of a regular round of briefings during China’s annual legislative session. “It’s not the way that neighbors should treat each other, and it may very well make South Korea less secure.” American and South Korean officials say that that is untrue, and that China should instead focus on halting North Korea’s threats. Wang’s proposal for mutual suspensions was an attempt to give new life to China’s long-running efforts to tamp down confrontation between North and South Korea. China is the North’s only major economic and security partner, but it has also developed strong economic and political ties with South Korea that the missile defense system threatens to rupture. China’s rift with South Korea and the United States over the missile defense system is likely to embolden North Korea, making it more confident that Beijing would not turn on it, said Shen Dingli, a professor at Fudan University in Shanghai who specializes in nuclear proliferation issues. “The deployment of THAAD has led to a serious deterioration in Chinese-South Korean relations, so North Korea is delighted with that,” Dr. Shen said in an interview. North Korea appears to have passed the point where it would abandon its nuclear arms, he said. “There’s no solution to this, because North Korea won’t give up its nuclear weapons.” But Wang said negotiations were the only acceptable way to resolve the dispute. “To resolve the nuclear issue, we have to walk on both legs,” he said, “which means not just implementing sanctions, but also restarting talks.” North Korea’s ties to the global financial system are also under renewed pressure. Today, the Society for Worldwide Interbank Financial Telecommunication, or Swift, issued a statement saying it had recently moved to ban North Korean banks from accessing its platform. Swift operates as part of the backbone of global bank payment processing by providing a communication platform used by central banks and financial institutions around the world. Several North Korean banks that were subject to sanctions by both the United Nations and the United States had continued as recently as last year to find ways to access the Swift network, according to a report by a United Nations expert panel that was published last week. Swift said it was responding to an enforcement action by the authorities in Belgium, where Swift is based, but it did not say when it moved to block the North Korean banks from its service. (Chris Buckley and Somini Sengupta, “China Is Rebuffed over Suggestion for Defusing Korean Tensions,” New York Times, March 9, 2017, p. A-7) The Trump administration has no intention of taking up China on its proposal of a deal between the United States and North Korea. But behind the scenes, the White House is working to come up with an alternative approach that could be ready soon. A senior Trump administration official told me that the U.S. government is “underwhelmed” by the Chinese offer and will not use it as a starting point for dealing with the North Korean threat, though the policy is still being formed. “This isn’t really a new proposal in any way. This is what the Chinese have wanted for a long time,” the official said. The Trump administration believes that China is still reluctant to use the leverage on the Kim regime that Beijing has available, despite recent steps such as suspending coal imports. “They take steps, but steps that are inadequate to change the regime’s behavior,” the official said. “We’re looking for genuine signs the Chinese are willing to get serious about North Korea.” There have been multiple meetings of the National Security Council’s deputies committee, most recently last week, the senior Trump administration official said. A principals committee meeting, which would include Cabinet members and White House chief strategist Stephen K. Bannon, is in the works. “We are reevaluating how we are going to handle North Korea going forward,” U.S. Ambassador to the U.N. Nikki Haley said. “We are making those decisions now. And we will act accordingly.” The options span a broad range and could be altered or adjusted throughout the process, officials cautioned. But lawmakers and experts said that short of a military strike, which nobody wants to contemplate, there is a limited set of tactics the Trump
administration could adopt: increase the pressure, engage, or some combination of the two. Senate Foreign Relations Committee ranking Democrat Ben Cardin (Md.) told reporters that he too rejects Beijing’s idea that the United States and South Korea should stop military exercises in exchange for Pyongyang adhering to multiple United Nations Security Council resolutions. But he wants the United States to talk with the Kim regime. “It’s not a matter of trading with North Korea for it complying with its international obligations, that’s not what’s at stake,” he said. “But I would welcome an opportunity to have exchanges with North Korea.” Multiple Trump administration officials said that White House is wary of engaging with Pyongyang unless the Kim regime first changes its behavior. Some officials are pushing for increased sanctions on North Korea as well as secondary sanctions on foreign entities that aid North Korea, which would include Chinese state-connected companies. Cardin would rather the administration persuade Beijing to put more pressure on Pyongyang, rather than escalating a dispute with China over the issue by sanctioning Chinese firms. “If we are going to be effective, we need Chinese cooperation. So I would hope the Trump administration has a strategy for working with China for isolating North Korea’s activity,” he said. “We have a common interest here, and it seems to me through diplomacy we should be able to get China to put the pressure on North Korea.” Joel Wit, a nuclear expert who has participated in several “Track 2” unofficial dialogues with North Korean officials, told me that simply increasing the pressure on Pyongyang and Beijing would likely not achieve U.S. objectives. “I don’t think we’re going to get anything out of it, and it’s likely the Chinese will react badly and the North Korean reaction will be more tests,” he said. A more nuanced strategy might be to prepare the punitive measures while simultaneously reaching out to Pyongyang to offer a direct dialogue, even if it’s done on an unofficial level. By nodding to China’s request, the United States could be in a better position to bring Beijing along if and when harsher measures become absolutely necessary. “If we make a credible offer to restart negotiations with the North Koreans and they blow us off, that may help us with the Chinese,” said Wit. “If we think we can just push around the Chinese with second degree sanctions and they are going to roll over, that’s not going to happen.” Time is of the essence. The end of the U.S.-South Korea military exercises will be a natural opportunity for both sides to step back from the brink of conflict. Secretary of State Rex Tillerson is headed to the region next week. He has a brief window to find a way for both Beijing and Pyongyang to save face while giving Trump enough reason to reengage. If that opportunity passes, both sides could escalate, the situation could deteriorate further and the options for the Trump administration would only narrow. (Josh Rogin, “Trump Administration ‘Underwhelmed’ by Chinese Offer on North Korea,” Washington Post, March 9, 2017)

Nikki Haley, the U.S. ambassador to the United Nations on Wednesday rejected calls for opening negotiations with North Korea to defuse escalating tensions, saying North Korean leader Kim Jong-un is "not a rational person." Amb. Nikki Haley also turned down China’s suggestion that the U.S. halt annual joint military exercises with South Korea in exchange for Pyongyang’s suspension of its nuclear and missile activities. She also said the U.S. is reviewing all options on the table. "I appreciate all of my counterparts wanting to talk about talks and negotiations. We are not dealing with a rational person. If this was any other country, we would be talking about that and it wouldn't be an issue. This is not a rational person who has not had rational acts, who is not thinking clearly," Haley told reporters after an emergency U.N. Security Council meeting on North Korea. But State Department spokesman Mark Toner said Haley’s point was that the North's "behavior" has not been rational. He also said the U.S. remains open to dialogue with the North with the aim of returning to credible and authentic negotiations on denuclearization, and the North should take meaningful actions toward the goal. "Efforts up until today, whether it's six party talks, whether it's sanctions, all of the efforts that we have taken thus far to attempt to persuade North Korea to, again, engage in meaningful negotiations, have fallen short, to be honest. So we need to look at new ways to convince them, to persuade them that it's in their interest," he said. (Yonhap, “U.S. Envoy: N. Korea Leader 'Not Rational Person' to Talk to,” March 8, 2017)

DPRK FoMin spokesman gave the following answer to a question raised by KCNA “as regards the fact that the U.S. and its vassal forces are moving to take issue with the ballistic rocket launching drill staged by the Korean People's Army (KPA): The ballistic rocket launching drill
conducted by the Hwasong artillery units of the Strategic Force of the KPA this time is a routine one to resolutely frustrate the ever more undisguised nuclear war racket of the U.S. and other hostile forces and honorably defend the security of the country and nation. The U.S. and south Korean puppet forces kicked off the joint military maneuvers aimed at a preemptive nuclear strike against the DPRK only to push the situation to the brink of a nuclear war. It is a just self-defense right of a sovereign state to keep highly alert as required by the grim situation in which an actual war may break out anytime and to consolidate powerful deterrence in every way to mercilessly wipe out the aggressors. Nevertheless, the U.S. and other hostile forces are openly conducting the drills for a real war aimed at a preemptive nuclear strike against the DPRK by mobilizing lots of strategic assets and armed forces. They let the UN Security Council release a press statement, labeling KPA's routine drill as "threat". It is a brigandish act like a thief crying "stop thief!" The DPRK categorically rejects the press statement of the UNSC as it wantonly violated sovereign state's rights to self-defense. It is the unanimous view of the fair-minded international community that the largest-ever nuclear war drills launched by the U.S. in league with the south Korean puppet forces are the root cause of pushing the DPRK to take the toughest action. The DPRK has already clarified several times that the joint military drills are potentially dangerous as they will wreck peace and stability on the Korean peninsula and screw up regional tensions. So, it filed complaint with the UNSC against the war games this time, too. How to deal with the complaint and the ill-intended maneuvers of the U.S. and its vassal forces will be a marked occasion for the UNSC to show the international community whether the UNSC regarding it as its mission to preserve global peace and security fulfils its responsibility or not. As already clarified, the KPA will reduce the bases of aggression and provocation to ashes with its invincible Hwasong rockets tipped with nuclear warheads and reliably defend the security of the country and its people's happiness in case the U.S. and the south Korean puppet forces fire even a single bullet at the territory of the DPRK. The DPRK will certainly preserve its peace and security with its own efforts and positively contribute to protecting global peace and security.” (KCNA, “Spokesman for DPRK FM Rejects Press Statement of UNSC,” March 8, 2017)

When the United States began deploying a missile defense system in South Korea this week, it was to protect an ally long threatened by North Korean provocations. But it was instantly met by angry Chinese warnings that the United States is setting off a new arms race in a region already on edge over the North’s drive to build a nuclear arsenal. China condemned the new antimissile system as a dangerous opening move in what it called America’s grand strategy to set up similar defenses across Asia, threatening to tilt the balance of power there against Beijing. The tensions are testing the new Trump administration and its uneasy allies South Korea and Japan, which have complained for years that China has simultaneously chastised and coddled the North, refusing to enact stiff enough measures to force it to abandon its nuclear and missile programs. But with the beginning of work to install the antimissile system, the delicate international cooperation against North Korea is splintering: Beijing is expressing more concern about American intentions in the region than about the dangers of the North’s latest surge in nuclear and missile testing. The dual approach seemed evident today when China’s foreign minister, Wang Yi, said, “The two sides are like two accelerating trains coming toward each other, and neither side is willing to give way.” “Our priority now is to flash the red light and apply brakes,” Wang said at a news conference in Beijing. He said that North Korea should suspend its nuclear and missile activities and that in exchange, South Korea and the United States should suspend large-scale joint military exercises, laying the way to new negotiations with North Korea. President Trump got personally engaged in the problem on March 6, after North Korea launched four ballistic missiles aimed toward Japan that the North Koreans later described as practice for hitting American bases there. Japan’s prime minister, Abe Shinzo, said he spoke with Trump for 25 minutes, adding, “I appreciate that the United States is showing that all the options are on the table,” usually code words for raising the possibility of a military response. To conservatives in South Korea’s crisis-racked government, the antimissile system is exactly the kind of strong action needed to counter the North’s belligerence and demonstrate unity with Trump, who had suggested during the campaign that Asian nations needed to do far more to defend themselves. But South Korea remains deeply divided about the one response already underway: the deployment of the Terminal High Altitude Area Defense System, or THAAD. It is designed to intercept short- and medium-range missiles, but not the kind
of intercontinental missiles that the North says it is developing to reach the United States. Many South Koreans oppose it and worry about China’s moves to block South Korean imports because of Beijing’s continued insistence that THAAD is aimed at containing Chinese power, not the missile capabilities of Kim Jong-un, the North Korean leader. Japan is urging stronger American action, but remains uncertain about how much it wants to commit when a conflict with the North — deliberate or accidental — once again looks like a real possibility. The combination of military and diplomatic tensions suddenly unleashed in Asia comes before Trump’s full national security team is in place, and before it has a well-thought-out strategy. Secretary of State Rex W. Tillerson, who will travel to the region next week — stopping in Tokyo; Seoul, South Korea; and Beijing — has never dealt with a proliferation problem like this one. Defense Secretary Jim Mattis has already been to Seoul on one visit, but was there mostly to reassure the country that, despite Trump’s statements last year, the United States remains committed to its defense. The new national security adviser, Lt. Gen. H. R. McMaster, has focused more on counterinsurgency than dealing with the peculiar problem of a nuclear-armed failing state. In three meetings at the White House — more than on any other foreign policy problem — the National Security Council deputies have considered a range of options, and have already come to the predictable conclusion that a dramatic show of force, like attacks on the North’s missile and nuclear sites, would probably start a war. The New York Times reported this weekend that the Obama administration had created a cyber- and electronic-warfare program to slow the North’s missile tests, but that it was unclear how effective it had been, particularly in recent months. The North Koreans have made the most of this period of uncertainty and transition. Their sped-up testing seems intended to send a message that they can overwhelm antimissile defenses, deploying missiles faster than the United States and its allies can put countermeasures in place. And they hold an ace card: an ability to destroy Seoul with artillery buried in the mountains just north of the Demilitarized Zone, a remnant of the Korean War. In the North’s view, the American rush to put missile defenses around it only splits the global community, pushing China and Russia closer to Pyongyang, as American officials acknowledge. Tillerson is focused on ways to pressure China, while trying to set up a first meeting between President Xi Jinping and Trump. But the two nations’ leaders are conducting a balancing act. Xi’s is the hardest, trying to weigh his opposition to North Korea’s nuclear program against his conviction that a North Korean collapse would be far worse. The Trump administration is measuring how hard it can press Beijing. It is mulling negotiations to “freeze” the North’s nuclear arsenal, but that would also acknowledge it as a fact. “You may not want to acknowledge that North Korea has 12 or 20 weapons,” said Robert Litwak of the Woodrow Wilson Center for International Scholars, the author of the new study “Preventing North Korea’s Nuclear Breakout,” “but wouldn’t a freeze be better than looking at 100 weapons a few years from now?” That is exactly the debate taking place in the White House, as Trump’s aides try to figure out their alternatives, including changing the security landscape with a major military buildup or, if needed, an open conflict with North Korea. The current, slow-burning crisis arose not from one episode, but from Kim’s broader strategy over the past year: to accelerate the pace of nuclear and missile tests so his arsenal becomes a fait accompli, something the United States cannot hope to reverse. When North Korea launched four Scud-ER ballistic missiles on March 6, it tried to demonstrate an ability to simultaneously launch multiple missiles at American bases in Japan and at American aircraft carriers around the Korean Peninsula, South Korean military officials said yesterday. The ability to launch a barrage of missiles increases the chances of breaching an antimissile shield. But the types of midrange missiles North Korea has launched in recent months — including the Scud-ERs, with a 620-mile range — pose another problem for South Korea. Some of the missiles have been launched at a steep angle to achieve a higher altitude and return to earth at high speed, techniques that appear intended to complicate intercepting them. American military officials said the recent tests were a particular concern because they illustrated Pyongyang’s ability to carry out a salvo of launches and on very short notice. “What we saw this weekend was demonstration of a near-term simultaneous launch,” said Vice Adm. James D. Syring, the director of the Pentagon’s Missile Defense Agency. “That is something beyond what we have seen in the past.” For Washington and Seoul, the rush to field THADD is as much about politics as missile interception. American officials have repeatedly warned China that its failure to rein in North Korea’s nuclear and missile programs would force the United States to deploy missile defenses in the region. Seoul’s interim government wants to deploy the antimissile system
fore a progressive leader, skeptical of the deployment, can take power in a coming presidential election. But progressives have held deep reservations about the THAAD deployment, seeing it as part of the United States’ effort to wrap the South into an anti-China coalition and arms race. They have already mounted a case against it. Yesterday, Woo Sang-ho, the floor leader of the main opposition Democratic Party, warned, “Our business are dying; our people residing in China are being threatened.” Hong Ik-pyo, a senior policy maker in the opposition, said the THAAD deployment would do more harm than good for South Korea, whose economy depends on exports for growth and reaps a huge annual trade surplus with China. “They say this is only to defend us from North Korea, but everyone knows this is part of the American missile defense plan,” Hong said. “China sees the THAAD deployment in South Korea the way the Americans saw the Cuban missile crisis in the 1960s.” Chinese leaders have struggled to grapple with the unpredictable styles of Kim and Trump. Now there are fears that the North might take advantage of the political discord to move ahead with its nuclear weapons program. “They have seized this opportunity, knowing that U.S. and China are clashing,” said Cheng Xiaohua, an associate professor of international studies at Renmin University in Beijing. In recent weeks, China has shown signs of toughening its stance on North Korea, including banning imports of coal from the North. Criticism of the North has also sharpened. Yesterday, a state-run newspaper warned that North Korea should give up its weapons or “face long-lasting isolation and pressure.” Yet policy makers in Beijing failed to grasp how Washington and its allies regarded North Korea’s nuclear program as getting closer to a dangerous threshold of being able to place a warhead on an intercontinental ballistic missile, said Paul Haenle, the director of the Carnegie-Tsinghua Center at Tsinghua University in Beijing. “That's a game-changer,” he added. (David E. Sanger, Choe Sang-hun, Chris Buckley, and Michael R. Gordon, “Korea Tensions Present Trump with Early Test,” New York Times, March 8, 2017, p. A1)

Rattled by North Korean military advances, influential Japanese lawmakers are pushing harder for Japan to develop the ability to strike preemptively at the missile facilities of its nuclear-armed neighbor. Japan has so far avoided taking the controversial and costly step of acquiring bombers or weapons such as cruise missiles with enough range to strike other countries, relying instead on its U.S. ally to take the fight to its enemies. "If bombers attacked us or warships bombarded us, we would fire back. Striking a country lobbing missiles at us is no different," said Onodera Itsunori, a former defense minister who heads a ruling Liberal Democratic Party committee looking at how Japan can defend against the North Korean missile threat. "Technology has advanced and the nature of conflict has changed." For decades, Japan has been stretching the limits of its postwar, pacifist Constitution. Successive governments have said Tokyo has the right to attack enemy bases overseas when the enemy's intention to attack Japan is evident, the threat is imminent and there are no other defense options. But while previous administrations shied away from acquiring the hardware to do so, Prime Minister Abe Shinzo's LDP has been urging him to consider the step. "It is time we acquired the capability," said Imazu Hiroshi, chairman of the LDP's policy council on security. "I don't know whether that would be with ballistic missiles, cruise missiles or even the F-35 (fighter bomber), but without a deterrent North Korea will see us as weak." The idea has faced stiff resistance in the past but the latest round of North Korean tests means Japan may move more swiftly to enact a tougher defense policy. “We have already done the groundwork on how we could acquire a strike capability,” said a source with knowledge of Japan's military planning. Any weapon Japan acquired with the reach to hit North Korea would also put parts of China's eastern seaboard within range of Japanese munitions for the first time. That would likely anger Beijing. "China has missiles that can hit Japan, so any complaints it may have are not likely to garner much sympathy in the international community," said Onodera. Currently, more than three missiles at once would be too many for Japan's already stretched ballistic missile defense to cope with, another source familiar with Japan's capability said. One serious concern for Japan is North Korea's development of solid fuel systems demonstrated last month that will allow it to conceal preparations for missile strikes because it no longer needs to fuel its missiles just prior to firing. That test also demonstrated a cold launch, with the rocket ejected from its launcher before engine ignition, minimizing damage to the mobile launch pads. Japanese officials also noted that the launch truck was equipped with tracks rather than wheels, allowing it to hide off road. Japan is already improving its ballistic missile defenses with longer-range, more accurate sea-based
missiles on Aegis destroyers in the Sea of Japan and from next month will start a $1 billion (114 billion yen) upgrade of its ground-based PAC-3 Patriot batteries. Also under consideration is a land-based version of the Aegis system or the THAAD system. Those changes, however, will take years to complete and may not be enough to keep pace with rocket technology advances by Pyongyang, the sources said. A quicker option would be for Japan to deploy ground-to-ground missiles to defend against an attack on its Yonaguni island near Taiwan fired from bases on Japanese territory several hundred kilometers to the east. A missile with that range could also hit sites in North Korea. Japan could also buy precision air launched missiles such as Lockheed Martin Corp.’s extended-range Joint Air-to-Surface Standoff Missile (JASSM) or the shorter-range Joint Strike missile designed by Norway’s Kongsberg Defense Aerospace AS for the F-35 fighter jet. But with limited capability to track mobile launchers, some Japanese officials still fear any strike would leave North Korea with enough rockets to retaliate with a mass attack. "A strike could be justified as self-defense, but we have to consider the response that could provoke," said another LDP lawmaker. (Reuters, “As Missile Threat Grows, Japanese Lawmakers Debate 1st Strike Options,” Asahi Shimbun, March 8, 2017)

While the Trump administration is exploring strategies to thwart North Korea’s nuclear ambitions, former U.S. officials who dealt with the communist state extensively offer mixed views on how to achieve that goal. Chinese Foreign Minister Wang Yi proposed Wednesday to halt the military drills in exchange for North Korea freezing nuclear and missile programs, a proposition that has been rejected by the United States and South Korea. Speaking to reporters after attending a U.N. Security Council meeting over the launches, U.S. ambassador to the United Nations, Nikki Haley, said the regime must take “positive action” before it can be taken seriously. She made her remarks a week before U.S. Secretary of State Rex Tillerson is scheduled to make his first trip to Asia, where North Korea is likely to top his agenda. Although former U.S. nuclear envoys who participated in direct talks with the North appear to agree that dialogue with North Korea may not be possible in the near future, they differ on whether the U.S. should pursue negotiations as part of its long-term policy. Christopher Hill, who served as the head of the U.S. delegation to the six-party talks, which stalled in 2008 during the George W. Bush administration, raised doubts about the regime’s willingness to discuss denuclearization. “I’m very pessimistic about talks, but I think we should leave the door open to talks,” Hill said during an interview with VOA Wednesday.

“North Korea indicates no interest in doing away with its nuclear weapons. On the contrary, their interest is in enhancing their nuclear arsenals,” added the former envoy, now the dean of Josef Korbel School of International Studies at the University of Denver. Hill stressed that any future talks with North Korea must be based on what the country has already agreed to, referring to a nuclear deal in 2005 in which Pyongyang promised to give up its nuclear weapons programs. The envoy called for U.S. efforts to strengthen relations with regional allies and engage China to try to narrow differences on the North. James Kelly, a former assistant secretary of state for East Asian and Pacific affairs who also led the U.S. negotiation team in the Bush administration, called on the Trump administration to put all options on the table, describing the current standoff with the North as “very dangerous.” Kelly believes the Trump administration could consider talks as an option, but cautioned against direct engagement with the North, saying it could undermine the administration’s coordination with U.S. allies. Critics argue pressure alone would not resolve the North Korean nuclear issue. Robert Gallucci, who was the top U.S. negotiator when the first North Korean nuclear crisis broke in the early 1990s, said the U.S. should seek an opportunity to engage North Korea without any precondition. “I think the smart thing would be at some point to agree to have talks without preconditions, and then talk about what both sides want to discuss,” said Gallucci in an interview with VOA. Sanctions would not change Pyongyang’s course on its nuclear weapons, Gallucci said. “I am opposed to the idea that we imagine that sanctions are going to be so effective that they are going to stop the North Korean behavior that we don’t like, or maybe even they are going to be so effective, they will cause the regime to collapse,” he said. Joseph DeTrani, who served as envoy for the nuclear talks from 2003 to 2005 during the Bush administration, told VOA the Trump administration should rein in the North’s provocative behavior, while seeking talks to try to slow the country’s nuclear development. “I think it’s important for North Korea to understand that there are consequences when they violate U.N. Security Council resolutions and launch missiles as they recently did,” said the envoy, who
A South Korean court removed the president, a first in the nation’s history, rattling the delicate balance of relationships across Asia at a particularly tense time. Eight justices of the Constitutional Court unanimously decided to unseat Park for committing “acts that violated the Constitution and laws” throughout her time in office, Acting Chief Justice Lee Jung-mi said in a ruling that was nationally broadcast. Park’s acts “betrayed the trust of the people and were of the kind that cannot be tolerated for the sake of protecting the Constitution.” Her removal capped months of turmoil, as hundreds of thousands of South Koreans took to the streets, week after week, to protest a sprawling corruption scandal that shook the top echelons of business and government. Park Geun-hye, the nation’s first female president and the daughter of the Cold War military dictator Park Chung-hee, had been an icon of the conservative establishment that joined Washington in pressing for a hard line against North Korea’s nuclear provocations. Now, her downfall is expected to shift South Korean politics to the opposition, whose leaders want more engagement with North Korea and are wary of a major confrontation in the region. They say they will re-examine the country’s joint strategy on North Korea with the United States and defuse tensions with China, which has sounded alarms about the growing American military footprint in Asia. As the verdict was announced, silence fell over thousands of Park supporters who rallied near the courthouse waving South Korean flags. Soon, they tried to march on the court and called for “destroying” it. When the police blocked them, some of the mostly elderly protesters attacked the officers with flagpoles, hurling water bottles and pieces of the sidewalk pavement. Two pro-Park demonstrators, ages 60 and 72, died during the unrest. Park did not comment on the ruling, and remained in the presidential palace after her removal from power. But In Myung-jin, leader of Park’s Liberty Korea Party, said he “humbly respected” the ruling. With the immunity conferred by her office now gone, Park, 65, faces prosecutors seeking to charge her with bribery, extortion and abuse of power in connection with allegations of conspiring with a confidante, her childhood friend Choi Soon-sil, to collect tens of millions of dollars in bribes from companies like Samsung. By law, the country must elect a new president within 60 days. The acting president, Hwang Kyo-ahn, an ally of Park’s, will remain in office in the interim. After the ruling, Hwang called key ministers to put the nation on a heightened state of military readiness, saying the lack of a president represented a national “emergency.” He also warned North Korea against making “additional provocations.” The last time a South Korean leader was removed from office under popular pressure was in 1960, when the police fired on crowds calling for President Syngman Rhee to step down. (Rhee, a dictator, fled into exile in Hawaii and died there.) In a sign of how far South Korea’s young democracy has evolved, Park was removed without any violence, after large, peaceful protests in recent months demanding that she step down. In addition to the swell of popular anger, the legislature and the judiciary — two institutions that have been weaker than the presidency historically — were crucial to the outcome. “This is a miracle, a new milestone in the strengthening and institutionalizing of democracy in South Korea,” said Kang Won-taek, a political scientist at Seoul National University. When crowds took to the streets, they were not just seeking to remove a leader who had one year left in office. They were also rebelling against a political order that had held South Korea together for decades but is now fracturing under pressures both at home and abroad, analysts said. Park’s father ruled South Korea from 1961 to 1979. He founded its economic growth model, which transformed the nation into an export powerhouse and allowed the emergence of family-controlled conglomerates known as chaebol that...
benefited from tax cuts and anti-labor policies. Park was elected in 2012 with the support of older conservative South Koreans who revered her father for the country’s breakneck economic growth. But the nexus of industry and political power gave rise to collusive ties, highlighted by the scandal that led to Park’s fall. The scandal also swept up the de facto head of Samsung, Lee Jae-yong, who was indicted on charges of bribing Park and her confidante, Choi. Samsung, the nation’s largest conglomerate, has been tainted by corruption before. But the company has been considered too important to the economy for any of its top leaders to spend time behind bars — until now. The jailing of Lee, who is facing trial, is another potent sign that the old order is not holding. In the wake of the Park scandal, all political parties have vowed to curtail presidential power to pardon chaebol tycoons convicted of white-collar crimes. They also promised to stop chaebol chairmen from helping their children amass fortunes through dubious means, like forcing their companies to do exclusive business with the children’s businesses. With the conservatives discredited — and no leading conservative candidate to succeed Park — the left could take power for the first time in a decade. The dominant campaign issues will probably be North Korea’s nuclear weapons program and South Korea’s relations with the United States and China. If the opposition takes power, it may try to revive its old “sunshine policy” of building ties with North Korea through aid and exchanges, an approach favored by China. That would complicate Washington’s efforts to isolate the North at a time other Asian nations like the Philippines are gravitating toward Beijing. Moon Jae-in, the Democratic Party leader who is leading in opinion surveys, has said that a decade of applying sanctions on North Korea had failed to stop its nuclear weapons programs. He has said that sanctions are necessary, but that “their goal should be to draw North Korea back to the negotiating table.” He believes that Park’s decision to allow the deployment of the American missile defense system — known as Terminal High Altitude Area Defense, or THAAD — has dragged the country into the dangerous and growing rivalry between Washington and Beijing; China has called the system a threat to its security and taken steps to punish South Korea economically for accepting it. Conservative South Koreans see the deployment of the antimissile system not only as a guard against the North but also as a symbolic reaffirmation of the all-important alliance with the United States. Moon’s party demands that the deployment, which began this week, be suspended immediately. If it takes power, it says it will review the deployment of the antimissile system to determine if it is in South Korea’s best interest. As South Korea has learned, it cannot always keep Washington and Beijing happy at the same time, as in the case of the country’s decision to accept the American missile defenses. Park’s impeachment was also a pushback against “Cold War conservatives” like her father, who seized on Communist threats from North Korea to hide their corruption and silence political opponents, said Kim Dong-choon, a sociologist at Sungkonghoe University in Seoul. Park’s father tortured and executed dissidents, framing them with spying charges. Now, his daughter faces charges that her government blacklisted thousands of unfriendly artists and writers. “Her removal means that the curtain is finally drawing on the authoritarian political and economic order that has dominated South Korea for decades,” said Ahn Byong-jin, rector of the Global Academy for Future Civilizations at Kyung Hee University in Seoul. Analysts cautioned that political and economic change will come slowly. As Moon put it recently: “We need a national cleanup. We need to liquidate the old system and build a new South Korea. Only then can we complete the revolution started by the people who rallied with candlelight.” (Choe Sang-hun, “Leader Is Ousted in South Korea,” New York Times, March 10, 2017, p. A-1)

Maritime Self-Defense Force destroyers and the U.S. military’s Carrier Strike Group 1, comprising the nuclear-powered aircraft carrier USS Carl Vinson, destroyers, supply and other ships, have been conducting a joint exercise in the East China Sea since Tuesday, according to multiple government sources. It is unusual for the U.S. nuclear-powered aircraft carrier and the MSDF to conduct a joint exercise in that sea. The USS Carl Vinson has conducted patrols in the South China Sea since mid-February, putting strong pressure on China. The aircraft carrier was traveling in the East China Sea toward the sea around South Korea to join a U.S.-South Korea joint military exercise. (Yomiuri Shimbun, “Japan, U.S. Conduct Joint Military Exercise,” March 10, 2017)
KPA Strategic Force spokesman’s statement: “The U.S. and its vassal forces are running around like a chicken with its head cut off following the ballistic rocket launching drill conducted by Hwasong artillery units of the Strategic Force of the Korean People's Army (KPA) on March 6. It is against this backdrop that the UN Security Council, at the instigation of the U.S., Japan and the south Korean puppet forces, made public a press release terming the KPA's ballistic rocket launching drill as "threat" and "violation of resolution", after discarding international justice and impartiality once again. … There is no country in the world whose army responsible for the defense of the state takes into account the approval by the UN or article of the international convention when staging exercises and it does not make sense to claim that the KPA's rocket launching drill becomes a threat to world peace and security. … We have never acknowledged the illegal "resolution" cooked up by the U.S. and its vassal forces. The aggressors and provokers keen on holding the largest-ever nuclear war drills against the north after massively introducing nuclear strike means in and around the Korean peninsula are finding fault with the regular and just drill of the KPA for defending sovereignty. This is nothing but a strange act like a thief crying "stop thief." No matter what rhetoric the aggressors and provokers may make, our Strategic Force will more perfectly arm itself with our-style rockets of super precision and intelligence and further round off the Juche-based rocket strike war methods. The U.S. and the south Korean puppet forces should clearly bear in mind that our warning that if a single bullet is fired into the areas where the sovereignty of the DPRK is exercised, it will blow up the bases of aggression and provocation with the matchless Hwasong artillery pieces mounted with nuclear warheads, is not hot air. (KCNA, “Ballistic Rocket Launching Drill Is Right for Self-Defense of Sovereign State: KPA Strategic Force Spokesman,” March 10, 2017)

A group of former U.S. officials plans to seek its latest round of informal talks with North Korean officials as tensions escalate in the region. Joseph DeTrani, a former U.S. intelligence specialist who helped broker a 2005 agreement on North Korea’s nuclear program, said unofficial talks between the two sides usually take place about every six months. He said his group plans to contact the North Korean mission to the United Nations in New York at the end of this month or the beginning of April to arrange the meetings. DeTrani said he is hopeful that informal talks will eventually lead to exploratory meetings between current U.S. officials and North Korean diplomats. That would allow North Korea to explain its insistence on having a nuclear deterrence, talk about a peace treaty and discuss objections to U.S.-South Korea military exercises, DeTrani said. “You have to give it a shot, re-engage, have some exploratory talks, and see if you can get some momentum on halting what they are doing, because it is beyond the pale right now,” DeTrani said in an interview. (David Tweed, “U.S. Group Seeks Informal Meeting with North Korea as Threat Grows,” Bloomberg, March 12, 2017)

Frank Pabian and David Coblentz: “Commercial satellite imagery of the Punggye-ri Nuclear Test Site shows that substantial tunnel excavation is continuing at the “North” Portal (previously the “West” Portal), which provided support for the last four of the five declared underground nuclear tests conducted by the Democratic People’s Republic of Korea. The North Portal tunnels provide direct access under Mt. Mantap, where up to 800 meters of overlying rock is available for test containment. This locale provides the maximum overlying rock possible within the entire test site and is where the most recent and largest detected test occurred on September 9, 2016 (estimated at 15-20 kilotons yield). The continued tunneling under Mt. Mantap via the North Portal has the potential for allowing North Korea to support additional underground nuclear tests of significantly higher explosive yields, perhaps up to 282 kilotons (or just above a quarter of a megaton). In a recent article, we discussed the yield progression of the five acknowledged underground nuclear tests at the Punggye-ri Nuclear Test Site and the general lack of associated observable surface disturbances until the most recent one. The tests have generally been increasing in explosive yield, from the first test on October 9, 2006, which had an estimated yield of less than one kiloton equivalent of chemical explosives, to the latest test on September 9, 2016, which had a yield of up to 20 kilotons. Several independent seismological teams (in China, South Korea and Norway) have very precisely geolocated the last four tests in the same region near Mt. Mantap, with the most recent test directly under Mt. Mantap. A study by another South Korean team, using

portal within the Punggye
been labeled by outside observers as the “South” Portal. Tunnel excavation at the South Portal continued for several years with one hiatus due to massive flooding that washed away most of the spoil pile in mid-July 2013. The excavation may have also involved a smaller adjacent ancillary tunnel. Since that time, there has been minimal new tunneling activity near the South Portal. Currently, the South Portal is likely to be fully operational and capable of supporting a future underground nuclear test. However, to date, it has not been used for a known nuclear test. Excavation for a fourth tunnel, the new “West” Portal, has been underway since mid-2015. It has also undergone some improvements including terracing above the tunnel entrance in early 2016 for earth stabilization. While clearly an operational site, it is not yet possible to determine the status of that tunnel regarding its readiness for future underground nuclear testing. Roughly six weeks after the third DPRK underground nuclear test (February 12, 2013) involving the North Portal, excavation was observed nearly coincident with a radionuclide detection associated with that test. At about the same time that the radionuclides were detected, additional activity in the form of new tunnel excavation and spoil dumping had already begun at the North Portal. It is also possible that the radionuclide release led to some form of site contamination, because in April 2014, two support buildings nearest the tunnel entrance were removed entirely. One building had previously served to conceal the tunnel entrance (it was not replaced) and the other was a support/compressor building, which was completely reconstructed. In any case, it seems that a second, entirely new, test support tunnel had begun to be excavated very close to the same starting point as the original entrance in the North Portal area, creating a new spoil pile. More spoil has been excavated from tunnel construction in the North Portal tunnel complex than from any other portal within the Punggye-ri nuclear test site.” Frank Pabian and David Coblenz, “North Korea’s Punggye-ri Test Site: Analysis Reveals Its Potential for Additional Testing with Significantly Higher Yields,” 38North, March 10, 2017)

The foes of South Korea’s likely new leaders have called them blindly naïve, closet North Korea followers and anti-American — an unsettling accusation in a country where the alliance with Washington has been the military bedrock for seven decades. Now, after being out of power for almost 10 years, the South Korean liberal opposition is on the verge of retaking the presidency with the historic court ruling on Friday that ousted its conservative enemy, President Park Geun-hye, who had been impeached in a corruption scandal. The liberals’ presidential hopeful, Moon Jae-in, wants a profound change in the country’s tense relations with North Korea, pushing outreach and dialogue. He also is deeply skeptical of the hawkish stance embraced by the conservatives and South Korea’s most important defender, the United States. Moon and his liberal partners are especially worried about a new antimissile shield the Americans are installing in South Korea, citing China’s fury over it and warning of a standoff reminiscent of the Cuban Missile Crisis. The challenges for Moon and his liberal partners as they push to reclaim power in elections now scheduled for May will be how to engage with a far more dangerous North Korea, maintain close ties with the United States and repair relations with China, which increasingly
mistrusts the American military’s intentions. Moon has called himself “America’s friend,” grateful that the United States protected South Korea from communism and supported its economic growth and democratization. The alliance with Washington is “a pillar of our diplomacy,” he said in an interview on the eve of Park’s court-ordered ouster. But he also said South Korea should learn to “say ‘No’ to the Americans.” Moon’s ascent could seriously complicate the American rush this past week to deploy the new advanced missile-defense system, known as Terminal High Altitude Area Defense, or THAAD, in the South. He and his liberal associates have questioned the deployment, calling it an unnecessary escalation of tensions on the Korean Peninsula. The missile system would put sophisticated American weaponry on China’s doorstep, and has infuriated the Chinese so much they are boycotting South Korean brands and may now be less willing to use economic leverage to rein in the North. Moon vowed to review the deployment if elected. “I cannot understand why there should be such a hurry with this,” he said. “I suspect that they are trying to make it a fait accompli, make it a political issue to be used in the election.” Moon said he abhorred “the ruthless dictatorial regime of North Korea.” But he also said sanctions that the United States had enforced with the conservatives in South Korea for a decade had failed to stop North Korea’s nuclear weapons program, so it was time to try something less confrontational. “We must embrace the North Korean people as part of the Korean nation, and to do that, whether we like it or not, we must recognize Kim Jong-un as their ruler and as our dialogue partner,” Moon said. That idea is not entirely new. The last time the liberals were in power, from 1998 to 2008, they pushed the so-called Sunshine Policy of promoting aid and exchanges with North Korea in the hopes of building trust and guiding it toward openness and nuclear disarmament. Moon said the strategy pursued by the conservatives was simply not working. “What have the conservative governments done, except badmouthing the North?” he said. “If necessary, we will have to strengthen sanctions even further, but the goal of sanctions must be to bring North Korea back to the negotiating table.” The possibility that Moon could become South Korea’s next president in a few months also comes as the Trump administration is formulating a new policy on North Korea. “I hope that Mr. Trump will come to the same conclusion as I did,” Moon said. As part of his outreach to the North, Moon said he would reopen the joint-venture factory complex the two Koreas had run in the North Korean town of Kaesong. Analysts of the conflict said it was premature to assess the outcome of Ms. Park’s removal. “A giant leap forward for South Korean democracy, a major step backward for taming Pyongyang,” said Lee Sung-yoon, a North Korea expert at Tufts University’s Fletcher School of Law and Diplomacy. For the past decade, South Korea has been governed by conservative leaders who regard anything less than unequivocal support for the alliance with Washington and the downfall of the Kim Jong-un government as ideologically suspect. Their liberal adversaries would bring in a new mentality. Moon grew up in a family that hated the Communist rule in the North but also had roots there. His parents were among tens of thousands of Korean War refugees on the run from Communists who were evacuated from the North Korean port of Hungnam by retreating American Navy vessels in the winter of 1950. But Moon also belonged to the generation of South Koreans who shaped their perspectives by fighting the anti-North Korean, pro-American military dictators, like Park Chung-hee, Ms. Park’s father, who ruled South Korea from 1961 to 1979. In college in the 1970s, Moon said he was profoundly influenced by Rhee Young-hee, a dissident journalist who wrote a book criticizing the Vietnam War. The military government, which sent its troops to fight for the Americans in Vietnam, banned the book and arrested the writer. “Until then, we were taught to think that whatever the United States did was justice, whatever the United States said was truth, and that whoever argued otherwise was an evil to repel,” Moon wrote in his 2011 memoir, “Fate.” “The book helped lift the veil of falsehood.” Some of the old student activists, like Moon, from the 1970s and ’80s form the mainstay of the political opposition of today. They do not want their country dragged into what they see as a hegemonic struggle among big powers, while conservatives have no qualms about siding with the United States in its rivalry with China. The Thaad antimissile deployment showcased those opposing perspectives. “The United States is pushing us to the West unnecessarily, and China is shoving us to the East unnecessarily,” said Kim Ki-jung, a political scientist at Yonsei University in Seoul and foreign policy adviser for Moon. “They should not push us too much; part of the Korean DNA is resistance against big powers.” (Choe Sang-hun, “Korean Ouster Could Herald a Shift in Ties,” New York Times, March 11, 2017, p. A-1)
Henry A. Kissinger slipped into the State Department last week for a quiet lunch in his old office with Rex W. Tillerson, the former Exxon Mobil chief executive, who has all but covered himself in a cloak of invisibility in his first six weeks as secretary of state. He has been absent from the White House meetings with key world leaders, and when the State Department issued its annual report on human rights — usually a major moment for the United States to stand up against repression around the world — he skipped the announcement. On March 14, Tillerson will leave for his first truly fraught diplomatic mission: a trip to Japan, South Korea and China, at a moment when open conflict with North Korea is a growing possibility, and when the administration is planning Trump’s first meeting with President Xi Jinping of China. The trip is so vital that the “principals” committee of the National Security Council is set to convene tomorrow to discuss the North Korean threat and how to deal with China, so that Tillerson speaks from a consensus strategy. But do not expect to hear much about that strategy from the secretary before he arrives in Asia: The State Department has told reporters that they cannot ride on the plane. The decision appears to be unprecedented for a major diplomatic trip — even four decades ago, when Kissinger was conducting shuttle diplomacy in the Middle East and opening up China, he was delivering spin to reporters on the plane and offering up diplomatic tutorials. So why is the man many in the State Department call T. Rex so quiet? There are several theories. One is that his silence is highly strategic: He wants to cement key relationships in private, make sure he is aligned with a mercurial president and let the policy process at the National Security Council play out before making any grand pronouncements. The second is that he is waiting for the battles at the White House to burn out. In short, he wants to sidestep Stephen K. Bannon, the president’s top strategist, who believes that China’s rise can be halted and that Iran should be vigorously confronted, and work with Mattis, Kushner and McMaster. Senator Bob Corker (R-TN), chairman of the Senate Foreign Relations Committee, said that “he’s already reached an agreement with Mattis to come to agreement and present ideas together,” something that Condoleezza Rice and Hillary Clinton often did with their defense counterpart, Robert Gates. The third is that he sees the job as more akin to what he did at Exxon Mobil: Cut your deals, say as little as possible and take the heat. (David E. Sanger, “Tillerson Leads from Shadows of State Dept,” New York Times, March 12, 2017, p. A-1)

KCNA: “The U.S. administration is floating a rumor that it is examining a way of mounting a preemptive attack on the DPRK. Various media including VOA, CNN and the Wall Street Journal carried articles to the effect that the White House is now examining strategies targeting the DPRK ranging from preemptive attack to regime change, anticipating a military conflict on the Korean peninsula within a month or two. It is against this backdrop that experts on the Korean issue are commenting in unison that the U.S. planned military attack on the DPRK is a crazy act of inviting irrevocable disasters. Harry J. Kazianis, room chief for defense studies of the Center for the National Interest and researcher for national security of the Potomac Foundation, warned that attack aimed at removing the regime in north Korea will invite an irrevocable disaster. He asserted that military invasion of north Korea is a crazy act, adding north Korea, which is well aware of foolishness of Saddam Hussein who allowed the deployment of the world's most powerful war forces just at its doorstep, would not miss an opportunity but mount an attack by mobilizing all possible forces under its possession in case there is a sign of deployment of armed forces. He also said that if the U.S. is true in its decision to "overthrow" the regime in north Korea, there can be no reason for north Korea to tolerate, stressing that what should be taken into consideration is that north Korea has maintained its social system for over six decades to counter possible invasion by the U.S. Researcher of Defense Priorities Bonnie Kristian in a commentary titled "No, let's not invade north Korea" said that the plan for a preemptive attack on north Korea will bring diverse disaster as it is a big blunder rather than a wise alternative. The commentary said that north Korea will decide on a powerful nuclear strike the moment it senses an imminent attack by the U.S., adding that it will be very stressful for the Trump administration to try to find out a solution to the issue of north Korea but military option will entail much greater danger let alone interests. The chairman of the U.S. Council of Foreign Relations when interviewed by media, warned that the Trump administration is at crossroads of crucial choice of whether to co-exist with north Korea possessed of capabilities of attacking the U.S. or disable nuclear and missile capabilities of north Korea by use of military force. This cannot but be wise advices to the Trump administration’s hard-line stand toward the DPRK. The present U.S. administration is repeating senseless policy
of nuclear blackmail which would bring only defeat, from the outset of its office, far from drawing a lesson from the failed north Korea policy of the preceding regimes. It has gone foolish to plan a preemptive attack while pushing the situation on the Korean peninsula to the brink of a nuclear war by staging joint military drills with the south Korean puppet forces with the involvement of nuclear strategic assets like carrier task force, nuclear submarines, B-1B, B-52, B-2 strategic bomber triad. The U.S. had better stop the foolish act of pricking its eyes with its own fingers. Nothing can undermine the strategic position of the DPRK that has reached the highest level. Now that the U.S. started dangerous nuclear war drills again, the DPRK has no option but to counter it with the toughest measures for bolstering the nuclear force as it had already declared. If even a single shell is fired into the territory in which the sovereignty of the DPRK is exercised, the bases of aggression and provocation will be reduced to such debris that no living thing can be found. The U.S. should properly understand that its slightest misjudgment about the DPRK will lead it to final doom.” (KCNA: “U.S. Slightest Misjudgment of DPRK Will Lead to Its Final Doom: KCNA Commentary,” March 13, 2017)

3/14/17

The US has declared it will permanently station missile-capable drones in South Korea in the latest round of military escalation in north-eastern Asia. The US military in South Korea took the unusual step of publicly announcing the deployment of a company of Grey Eagle drones, which it said would add “significant intelligence, surveillance and reconnaissance capability” for American and South Korean forces. Grey Eagles are designed to carry Hellfire missiles and together with the deployment of Thaad anti-ballistic missile defenses in South Korea they represent a significant build-up of US military muscle in response to an accelerated program of missile and nuclear testing by the North Korean regime. Jeffrey Lewis, an expert on the North Korean nuclear weapons program, warned that unless the US military made it very clear that the new drones would not carry missiles in Korean skies, they could bring an already very dangerous situation closer to the brink of war. “If they are not going to arm them, they need to say that. They need to make them absolutely clear,” said Lewis, the director of the east Asia nonproliferation programme at Middlebury Institute of International Affairs at Monterey in California. “The thing the North Koreans are most afraid of is that we’re going to kill Kim Jong-un in a decapitating strike and … that will strengthen their incentives to make sure that low level commanders will have the ability to use nuclear weapons. It will make the North Koreans even more jumpy and have a way itchier trigger finger.” Lewis believes the North Korean strategy is to use a nuclear first strike to deter an attack aimed at regime change, a posture which makes for a particularly unstable balance of forces, with the adversaries motivated to act preemptively. “In a war they plan to use their weapons early,” Lewis said. “We plan to hit them before they do that, and the South Koreans plan to hit them before we have a chance to take too long to do that.” (Julian Borger, “U.S. to Deploy Missile Capable Drones across the Border from North Korea,” The Guardian, March 14, 2017)

3/15/17

Secretary of State Rex Tillerson will warn China’s leaders that the United States is prepared to step up missile defenses and pressure on Chinese financial institutions if they fail to use their influence to restrain North Korea’s nuclear and missile programs, according to several officials involved in planning his first mission to Asia. China has complained vociferously about the Trump administration’s recent decision to speed up the deployment of the Thaad antimissile system in South Korea, charging that it will undermine regional stability. But the Trump administration’s message is that the United States has run out of time to respond to North Korea’s military advances, and that the party the Chinese needs to complain to is in Pyongyang. One senior administration official involved in the planning called it “responsible” to increase the defenses of the United States and its allies against growing threats from North Korea. The official acknowledged that doing so would displease Beijing, but noted that China has the option of helping constrain and pressure the North. The tough message was shaped in a series of White House meetings before Tillerson’s departure for Japan today. It also followed more proposals at both ends of the spectrum — including opening up talks with North Korea and preparing for military action against its key missile and nuclear sites — that were set aside, at least for now. The result is that Tillerson is essentially adopting variants of the approaches that the Bush and Obama administrations took, though guided by Trump’s declarations that, unlike his predecessors, he will
The US Navy SEAL team that killed Osama bin Laden is reportedly set to join military training drills against North Korea for the first time. Along with other elite US units including the Army Rangers, Delta Force and the Green Berets, SEAL Team Six will take part in annual training exercises alongside South Korean forces, according to Yonhap. "A bigger number of and more diverse US special operation forces will take part in this year's Foal Eagle and Key Resolve exercises to practise missions to infiltrate into the North, remove the North's war command and demolition of its key military facilities," a South Korean official told Yonhap. SEAL Team Six would practice removing Kim Jong-un and destroying North Korea's weapons of mass destruction, South Korea’s Defense Ministry told the Joong Ang Ilbo. A ministry official told the newspaper it would send a “strong message” to the communist state. But US Navy Commander Gary Ross denied the US military would practice taking out the North Korean leader. "Foal Eagle is designed to enhance the Republic of Korea-US alliance's ability to defend the RoK," he said. F-35 fighter jets will also reportedly carry out strike simulations on key North Korean sites, while a joint amphibious landing drill involving the US and South Korea will begin next month. (Tom Embury-Dennis, “Navy SEAL Team That Killed Osama bin Laden ‘Taking Part in Military Drills against North Korea for First Time,’” The Independent, March 15, 2017)
denuclearization have failed,” noting that during those 20 years, the United States had provided $1.35 billion in assistance to North Korea to encourage it to abandon its nuclear program. “Part of the purpose of my visit to the region is to exchange views on a new approach,” Tillerson added, saying he would highlight the issue in Seoul and Beijing, the next stops on his trip. Tillerson, who took questions only from reporters who had been preselected by one of his press advisers, did not answer when asked for details of a new approach. In his prepared remarks, Tillerson took a markedly different tone than the secretary of defense, Jim Mattis, who said on a visit to Seoul in February that the use of nuclear weapons by North Korea would be met with an “overwhelming” response. Tillerson said “North Korea and its people need not fear the United States or their neighbors in the region who seek only to live in peace with North Korea.” He added, “With this in mind the United States calls on North Korea to abandon its nuclear and ballistic missile program and refrain from any further provocations.” Experts in the region said that while the United States had so far emphasized expanded missile defense with the deployment of the Terminal High Altitude Area Defense system, or THAAD, they wanted to hear what Tillerson had to say about diplomatic options, as well as cooperation within the region. “It was very important to show the deterrence capability,” said Watanabe Tsuneo, a senior research fellow at the Sasakawa Peace Foundation in Tokyo. “But at the same time we need to create a carrot-and-stick type signal to North Korea.” Watanabe said that in addition to coordination among the United States, Japan and South Korea, “we also need coordination with China.” Still, given that President Trump suggested during the campaign that he might pull back from American security commitments to allies in Asia, both Japan and South Korea are likely to remain anxious about American resolve. “There’s that sense that they are assured for the moment,” said Bruce Klingner, a senior research fellow for Northeast Asia at the Heritage Foundation in Washington, “but Japan and South Korea are like skittish small dogs that need constant reassurance and are constantly nervous.” Some Diet members have suggested that Japan needs to consider obtaining the ability to make pre-emptive strikes against missile launches. Kishida said that “Japan will assume larger roles and responsibilities,” but when asked by Adriana Diaz, Asia correspondent for CBS News, about pre-emptive capabilities, he said he did not understand the question and declined to allow her to clarify. (Motoko Rich, “Tillerson Calls for ‘Different Approach’ to North Korea,” New York Times, March 16, 2017)

Tillerson: “As President Trump and Prime Minister Abe expressed in their February 10th statement, a priority of ours is expanding trilateral cooperation with the Republic of Korea. Trilateral cooperation allows our three nations to coordinate actions on major regional and global problems, and more effectively counter the threats posed by North Korea. We intend to continue our coordination in regard to the implementation of UN Security Council Resolutions 2270 and 2231, which imposed robust and comprehensive sanctions on North Korea to inhibit its campaign to develop operational nuclear and missile capabilities. **North Korea and its people need not fear the United States or their neighbors in the region who seek only to live in peace with North Korea.** With this in mind, the United States calls on North Korea to abandon its nuclear and ballistic missile programs and refrain from any further provocations. The U.S. commitment to the defense of Japan and its other treaty allies through the full range of our military capabilities is unwavering. **Q:** (Via interpreter) My name is Takigawa from NHK. I have a question to both Minister Kishida and Secretary Tillerson. At the moment, the Trump administration is reviewing on the U.S. policy vis-a-vis North Korea. In your meeting, were you able to discuss that – the direction of the review? What was the position or the thinking as indicated from the U.S. side? And it is also said that the U.S. may re-designate the North Korea as a state sponsor of terrorism. So I would like to seek your thoughts on this. **KISHIDA:** (Via interpreter) So let me respond, first of all. As the United States is currently reviewing on the U.S. policy on North Korea, there seems to be a good progress. And today, I have conveyed Japan’s thoughts and position, and we were able to firmly align the policies of our two governments. It was very timely, I believe, and it was also very meaningful and relevant. But because of the nature of this issue, as to the specifics of what we have discussed, I would like to refrain from mentioning them. Now, as for the re-designation of North Korea as state sponsor of terrorism, you have asked this point as well. This is to do with how the legislations are interpreted and applied inside the United States, so ultimately, this is something to be decided by the U.S. Government. But between myself and Secretary
Tillerson, we have agreed that we should keep in close contact. …TILLERSON: Well, I think it’s important to recognize that the diplomatic and other efforts of the past 20 years to bring North Korea to a point of denuclearization have failed. So we have 20 years of failed approach, and that includes a period in which the United States provided $1.35 billion in assistance to North Korea as an encouragement to take a different pathway. That encouragement has been met with further development of nuclear capabilities, more missile launches, including those of the recent February 11th and March the 5th. In the face of this ever-escalating threat, it is clear that a different approach is required. The purpose of – part of the purpose of my visit to the region is to exchange views on a new approach.” (DoS, Secretary of State Rex W. Tillerson Press Availability with Foreign Minister Kishida Fumio, Tokyo, March 16, 2017)

The Trump administration is moving toward increasing pressure on North Korea. The United States has started deploying the advanced Terminal High Altitude Area Defense (THAAD) antimissile system to U.S. forces stationed in South Korea earlier than previously planned, and is considering deploying unmanned attack aircraft. But the Trump administration has not ruled out the possibility of having direct talks with Pyongyang. Some Japanese government officials are therefore wary. “The United States may start bilateral talks with North Korea and make a compromise deal, with Japan being left out,” a Foreign Ministry source said. Due to this concern, both Abe and Kishida, in separate meetings with Tillerson, asked for “close coordination” over the policy toward North Korea between Japan and the United States. As Abe and Tillerson agreed on the importance of the two countries sharing a strategic goal on North Korea, the Japanese side is relieved for now. The strained relationship between Japan and South Korea over the issue of comfort women has cast a shadow in dealing with North Korea. Depending on the result of the South Korean presidential election, it is possible that the South Korean government will take a stronger anti-Japan stance. During the talks with Tillerson, Kishida emphasized the importance of implementing the Japan-South Korea deal on the comfort women issue as the foundation of cooperation between Japan and South Korea and between Japan, the United States and South Korea. He thus urged Tillerson, who was scheduled to visit South Korea on Friday, to discuss the issue in Seoul. (Miyai Toshimitsu and Oki Seima, “Japan, U.S. Agree to Closely Coordinate on North Korea,” Yomiuri Shimbun, March 17, 2017)

North Korea’s remaining links to global banking networks via SWIFT have been severed, according to the Brussels-based international system that supports most of the world’s financial transactions. (Don Weinland, “SWIFT Severs Remaining North Korean Links to Global Banking,” Financial Times, March 17, 2017) A further four North Korean banks were blocked from the world’s primary financial messaging service, as they were not in-line with the organization’s membership criteria. The SWIFT (Society for Worldwide Interbank Financial Telecommunication) system allows banks and financial institutions to communicate about transactions and trades. But this month SWIFT has blocked seven DPRK banks from using its services. The Belgium-based group barred three banks designated by the UN on March 9, and another four that were not included on UN or EU blacklists. “The DPRK banks remaining on the network are no longer compliant with SWIFT’s membership criteria. As a result, these entities will no longer have access to the SWIFT financial messaging service,” a SWIFT spokesperson told NK News. “Given the increased ongoing international attention on the DPRK, SWIFT has informed the Belgian and EU authorities.” SWIFT did not reveal the names of the newly blocked banks to NK News, though an article from the Wall Street Journal in March listed four DPRK banks which were sanctioned by the U.S. Treasury Department which continued to use the service, the Foreign Trade Bank of the DPRK, Kumgang Bank; Koryo Credit Development Bank and North East Asia Bank. According to the U.S. Department of Treasury said the Foreign Trade Bank facilitates “transactions on behalf of actors linked to its proliferation network, which is under increasing pressure from recent international sanctions.” Reuters reported SWIFT’s actions were unusual given the banks were not sanctioned by the EU or UN, and the group had previously resisted pressure to cut off institutions from other countries in Washington’s crosshairs.

“Removing them was long overdue. Taking steps to deny services to other DPRK banks is prudent because the jurisdiction is identified as a money laundering threat,” William Newcomb, a former
Secretary of State Rex W. Tillerson ruled out opening any negotiation with North Korea to freeze its nuclear and missile programs and said for the first time that the Trump administration might be forced to take pre-emptive action “if they elevate the threat of their weapons program” to an unacceptable level. Tillerson’s comments in Seoul, a day before he travels to Beijing to meet Chinese leaders, explicitly rejected any return to the bargaining table in an effort to buy time by halting North Korea’s accelerating testing program. “The policy of strategic patience has ended,” Tillerson said, a reference to the term used by the Obama administration to describe a policy of waiting out the North Koreans, while gradually ratcheting up sanctions and covert action. Negotiations “can only be achieved by denuclearizing, giving up their weapons of mass destruction,” he said — a step to which the North committed in 1992, and again in subsequent accords, but has always violated. “Only then will we be prepared to engage them in talks.” His inconsistency of tone may have been intended to signal a tougher line to the Chinese before he lands in Beijing tomorrow. It could also reflect an effort by Tillerson, the former chief executive of Exxon Mobil, to issue the right diplomatic signals in a region where American commitment is in doubt. This afternoon, after visiting the Demilitarized Zone and peering into North Korean territory in what has become a ritual for American officials making a first visit to the South, Tillerson explicitly rejected a Chinese proposal to get the North Koreans to freeze their testing in return for the United States and South Korea suspending all annual joint military exercises, which are now underway. Tillerson argued that a freeze would essentially enshrine “a comprehensive set of capabilities” North Korea possesses that already pose too great a threat to the United States and its allies, and he said there would be no negotiation until the North agreed to dismantle its programs. Tillerson ignored a question about whether the Trump administration would double down on the use of cyberweapons against the North’s missile development, a covert program that . Obama accelerated early in 2014 and that so far has yielded mixed results. Instead, he referred vaguely to a “number of steps” the United States could take — a phrase that seemed to embrace much more vigorous enforcement of sanctions, ramping up missile defenses, cutting off North Korea’s oil, intensifying the cyberwar program and striking the North’s known missile sites. At a meeting of the “principals committee” of the National Security Council today, any discussion of military action was kicked down the road. The rejection of negotiations on a freeze would be consistent with the approach taken by President Barack Obama, who declined Chinese offers to restart the so-called six-party talks that stalled several years ago — which included North Korea, China, Russia, Japan, South Korea and the United States — unless the North agreed at the outset that the goal of the negotiations was the “complete, verifiable, irreversible” dismantling of its program. South Korea’s foreign minister, Yun Byung-se, repeated that formulation today; Tillerson did not. But classified assessments of the North that the Obama administration left for its successors included a grim assessment by the intelligence community: that North Korea’s leader Kim believes his nuclear weapons program is the only way to guarantee the survival of his regime and will never trade it away for economic or other benefits. The assessment said that the example of what happened to Col. Muammar el-Qaddafi, the longtime leader of Libya, had played a critical role in North Korean thinking. Colonel Qaddafi gave up the components of Libya’s nuclear program in late 2003 — most of them were still in crates from Pakistan — in hopes of economic integration with the West. Eight years later, when the Arab Spring broke out, the United States and its European allies joined forces to depose Colonel Qaddafi, who was eventually found hiding in a ditch and executed by Libyan rebels. Among many experts, the idea of a freeze has been favored as the least terrible of a series of bad options. Jon Wolfsthal, a nuclear expert who worked on Obama’s National Security Council, and Toby Dalton wrote recently in Politico, “A temporary freeze on missile and nuclear developments sounds better than an unconstrained and growing threat. It is also, possibly, the most logical and necessary first step toward an overall
agreement between the U.S. and North Korea. But the risk that North Korea will cheat or hide facilities during a negotiated freeze is great.” William J. Perry, who was secretary of defense under President Bill Clinton, said in Beijing that the Trump administration would have to offer North Korea security assurances if it wanted to escape an increasingly dangerous spiral of confrontation. Previous administrations had mistakenly based their policies on the assumption that North Korea would collapse on their watch, Perry told a small group of reporters. “I see very little prospect of a collapse,” he said. “For eight years in the Obama administration and eight years in the Bush administration, they were expecting that to happen. As a consequence, their policies were not very effective. I would think that the United States and other countries as well should stop expecting a collapse in North Korea.” Perry said that American policy makers needed to grasp that North Korea’s leaders regarded their own survival in power, and especially the continuation of the Kim dynasty, as more important than improving the economy. He said that as long as the goal of the United States remained completely eliminating North Korea’s nuclear weapons, “I think we will continue to be unsuccessful.” He said, “It will take initiative, primarily by the United States, to be willing to talk with North Korea.” (David E. Sanger, “Secretary of State Rejects Talks With North Korea on Nuclear Program,” New York Times, March 18, 2017, p. A-8)

In a post on his Twitter account, President Trump said, "North Korea is behaving very badly. They have been 'playing' the United States for years. China has done little to help!" It comes after US Secretary of State Rex Tillerson said military action against North Korea was an "option on the table." (Andrew Buncombe, “Donald Trump Says North Is Behaving 'Very Badly' and China Is Not Helping,” The Independent, March 17, 2017)

Tillerson-Yun: “FOREIGN MINISTER YUN: (Via interpreter) … Today's dialogue with the Secretary will be my third one in about a month's time. North Korea's latest provocations and additional threats will be analyzed, and our common actions forward will be forged upon this very important occasion. Especially the U.S. is still reviewing its North Korean policies. As such, Secretary Tillerson and I, in our phone conversations in early February, have discussed a joint approach on the response to North Korea's nuclear programs, and concretizing our approach in this regard will be the main agenda of our discussions today. In pursuing such coordination, our unchanging goal is something that has already been declared by both countries, and spelled out in relevant UNSC resolutions. It is a complete, verifiable, and irreversible dismantlement of North Korea's nuclear program CVID-based dismantlement. Under this unwavering shared goal for the denuclearization of North Korea, effective and comprehensive policy options will be discussed extensively. Furthermore, additional provocations of North Korea are anticipated (inaudible). The assassination of Kim Jong Nam with a chemical weapon has triggered an unprecedented turn of events. As such, in addition to Pyongyang’s nuclear and missile programs, its use of chemical weapons and human rights violations will be addressed as we will have in-depth discussions on ways to guide international collaboration regarding these overall North Korea matters. Our two governments, in a bid to counter North Korea’s threat, which is of a different dimension from the past, have been pushing for the USFK’s THAAD deployment based on the alliance decision. This is attributed to the North nuclear missile threats, and does not target any specific third country. This has been our clear position. To safeguard national security and our people's lives, the measure was taken as a self-defensive one against any bullying against us. Both our governments will respond bilaterally and on the global stage with clarity and resoluteness. The Korean Government welcomes the Trump Administration's announcement of its robust Asia engagement policy and its steadfast commitment to the defense of the ROK. Most notably, the President himself stated that, in a new administration, the ROK-U.S. alliance would be made even stronger. I am very appreciative to bolster the ROK-U.S. alliance, the lynchpin of peace and stability in the Asia-Pacific. We are committed to maintaining our close coordination with the U.S. in the coming months and years. I have no doubt that this meeting today will mark another milestone in developing our comprehensive alliance that contributes to peace and stability, not only on the peninsula, but also the entire world. …TILLERSON: … The U.S. and our allies have repeatedly reassured North Korea's leaders that we seek only peace, stability, and economic prosperity for Northeast Asia. As proof of our intent, America has provided $1.3 billion in
assistance to North Korea since 1995. In return, North Korea has detonated nuclear weapons, and dramatically increased its launches of ballistic missiles to threaten America and our allies. The U.S. commitment to our allies is unwavering. In the face of North Korea's grave and escalating global threat, it is important for me to consult with our friends, and chart a path that secures the peace. Let me be very clear: the policy of strategic patience has ended. We are exploring a new range of diplomatic, security, and economic measures. All options are on the table. North Korea must understand that the only path to a secure, economically-prosperous future is to abandon its development of nuclear weapons, ballistic missiles, and other weapons of mass destruction. We call on other regional powers and all nations to join us in demanding the North Korean Government choose a better path and a different future for its people. The United States is committed to supporting the defense of our allies, and we will continue to develop a comprehensive set of capabilities to counter the growing North Korean ballistic missile threat. That is why the United States and the Republic of Korea decided to take the defensive measure of deploying THAAD Missile Defense System. While we acknowledge China's opposition, its economic retaliation against South Korea is inappropriate and troubling. We ask China to refrain from such action. Instead, we urge China to address the threat that makes that necessary, that being the escalating threat from North Korea. The United States alliance with South Korea is built not only on security, but our commitment to our core principles that have enabled the success of our nations: a strong economic partnership, deep people-to-people ties, and democratic values. I am encouraged by our productive joint discussions, and pledge continued American support for the shared prosperity and security of our two nations. (Speaks in Korean.) Thank you. …

Q: (Via interpreter) I would like to pose this question to the Secretary Tillerson. You are saying that we need a new approach to North Korea in order to resolve North Korea's nuclear program problem. China probably needs to play a more active part. Have all of the tools in the tool kit probably have not been exhausted. What specific actions can we take, in your opinion? And the six-party talks were not fruitful, according to a press statement by the State Department. So I wonder — what will be the effective measures, going forward? And also, regarding a new approach, what will be the Korean Government's position on this new approach? I pose this question to Foreign Minister Yun.

TILLERSON: Well, as I indicated in my remarks, 20 years of talks with North Korea have brought us to where we are today. Both the ROK and the United States have been quite clear over these 20 years, that we seek nothing but a stable Korean Peninsula and an economically prosperous Korean Peninsula. North Korea has nothing to fear from the United States. But this 20 years of talking has brought us to the point we are today. So the track that we are now on is to use a number of steps with an ever greater number of actions ahead of us that involve sanctions, which the United Nations Security Council has already approved, including China, which voted for those sanctions. And then we are calling on all countries to now fully implement those sanctions. We are also calling upon China to fully implement those sanctions, as well, in compliance with the UN Security Council resolution that it voted for. We will be widening the circle of allies in response to North Korea's threats and their provocative actions, and asking others to join in. It is important that the leadership of North Korea realize that their current pathway of nuclear weapons and escalating threats will not lead to their objective of security and economic development. That pathway can only be achieved by denuclearizing, giving up their weapons of mass destruction. And only then will we be prepared to engage with them in talks. YUN: (Via interpreter) Yes, regarding this new approach, Secretary Tillerson has given you a comprehensive response. As such, I don't believe that there is much to add, myself. But, basically, our two ministers, as we stated in our opening remarks, the current North Korea nuclear and missile threats are of a different dimension from the past. It is an imminent and grave threat facing us. As such, this new approach that we are pursuing, this joint approach, will be against this imminent threat, and probably more than at any point in the past. We would be willing to utilize all of the means that are available to us. Diplomatic pressures will be one stream of such endeavors, but there could be other types of efforts. At the same time, as was mentioned by Secretary Tillerson, all of the stakeholders themselves, more than any point in time in the past, they should cooperate together to make sure that North Korea feels the pain for its wrongdoings, and pay the cost, pay the price. And for the aspects that were not up to our expectations, we should be collaborating further to ensure that there are tangible outcomes. In this process, one of the most important principles will be this: ROK and the U.S. will remain closely coordinating with each
other for a shared response. And, through that effort, we can demonstrate our strong alliance. Q: Thank you. Mr. Secretary — down here — you mentioned a range of options, but I'm hoping you can drill down into a few specifics that we know are on the table. So one, for example, is the possibility of stepped-up interdiction by China against shipping into North Korea. Another is the cyber campaign against the North Korean nuclear or ballistic missile program. And the third is the possibility of negotiating a freeze, though I'm wondering whether the program is too far along for a negotiated freeze. So, could you address the pluses and the minuses of those specific programs, and the possibility for action on those? And then, for the Foreign Minister, just a very simple question. Can you guarantee that THAAD will go ahead, regardless of who wins the presidential election? Thank you. TILLERSON: Well, I think with regard to escalating sanctions, I don't believe we have ever fully achieved the maximum level of action that can be taken under the UN Security Council resolution, with full participation of all countries. There also are other sources of revenue to North Korea that fall outside of the specific sanctions, and we know that other nations could take actions to alter their relationship with North Korea in support of our efforts to have them give up their nuclear weapons program. I think, in terms of talking about any kind of a freeze, I think it's premature for that. But at this stage I'm not sure we would be willing to freeze, with the circumstances where they exist today, given that that would leave North Korea with significant capabilities that would represent a true threat, not just to the region, but to American forces, as well. YUN: (Via interpreter) Yes, regarding the question that was posed by the journalist from Bloomberg, basically, on the Korean Peninsula, this threat that we face from North Korea, these grave circumstances, will not change, even with a change of the governments in Korea. That is the reality that we face. As such, national security and the people's lives should be safeguarded. And for that purpose, no matter which government comes into power in Korea in the future, such a gravity and urgency of the problem should be considered well for making a wise decision. In particular, the diplomatic policies and security policies should remain consistent. Responsible leaders of Korea would probably have the same view, similar view. MODERATOR: Thank you. Again, we would like to take a question from a Korean journalist from Arirang TV. Q: Welcome to South Korea, Mr. Secretary. I would like to ask you about the THAAD issue that you mentioned in your remarks. It seems like the THAAD deployment to South Korea is going to be completed before the new South Korean administration kicks in. And China has been imposing apparent retaliatory actions against South Korea for the deployment decision. When you meet Chinese President Xi Jinping and Foreign Minister Wang Yi in China, are you going to discuss the current difficulties that Seoul is facing? And is this issue going to be brought up during the U.S.-China Summit next month? TILLERSON: Well, I do believe that we will proceed with the installation of THAAD. And it's my expectation that the new government in South Korea will continue to be supportive of the THAAD system, because it is directed solely at the defense of the ROK. As to conversations with the Government of China, we will be discussing with them the serious threat that North Korea poses to peace and stability in the Korean Peninsula, but even beyond. North Korea is now pursuing programs that would allow them to present a clear threat to the continental United States and to other parts of the world. So we will be discussing with China what we believe they should be doing to help mitigate this threat, as well. As to their punitive actions against South Korea because of the agreement to install the THAAD system, as I indicated in my remarks, we believe these actions are unnecessary, and we believe they are troubling. We also believe it is not the way for a regional power to help resolve what is a serious threat to everyone. And so we would hope that China would alter its position on punishing South Korea for the THAAD system. As I said, we have emphasized many times it's purely defensive in nature, and we would hope that they would help us engage with North Korea to eliminate the reason a THAAD system is even required. MODERATOR: (Via interpreter) Yes, we are ready to take one more question from the members of the U.S. press. Yes, from CNN, please go ahead. Q: Mr. Secretary, is there a truly new or different approach that doesn't include a military option? At what point does a military option become truly necessary, considering the obvious threat of retaliation to more than 20 million people in the Seoul Metropolitan Area? Also, it seems that the State Department has rejected the Chinese suggestion of a negotiation with North Korea that would involve dropping the joint military drills. Is that a viable option? Is it something that could be discussed between you on this trip? And, in turn, when you arrive in Beijing, will you push officials there to cut off the oil to
North Korea? **TILLERSON:** As to — I will take the latter part of your question, first. As to the suggestion from the Chinese Government that we should stand down our joint military operations in exchange for engaging in talks, we do not believe the conditions are right to engage in any talks at this time. (Inaudible) and standing down our joint military operations. Those operations are an annual event. We've been carrying out these joint military operations for over 40 years. When those operations are to be undertaken, it is with clear transparency. We announce to the world that we are going to carry out these operations, so there is no surprise to anyone. And the purpose of those is made quite clear to the North Korean Government, as well. North Korea does not provide any of us the same type of transparency and forewarning when they choose to launch ballistic missiles. So, again, conditions must change before there is any scope for talks to resume, whether they be five-party or six-party. ...All of the options are on the table. Certainly, we do not want to — for things to get to a military conflict. We are quite clear in that, in our communications. But obviously, if North Korea takes actions that threatens the South Korean forces or our own forces, then that would be met with an appropriate response. If they elevate the threat of their weapons program to a level that we believe requires action, that option is on the table. But we are hopeful that, by taking these steps — and we have many, many steps we can take before we get to that point — we hope that that will persuade North Korea to take a different course of action. That is our desire.

Q: And the oil? **TILLERSON:** Well, I think, to the extent that China is supplying that oil — I think others are supplying oil, some of that oil comes from Russia, it comes from other sources — we will be calling on everyone to join in these actions. Certainly all of the regional players, but others who have commercial relationships with North Korea, we will be asking them to take steps, as well. (DoS, Secretary of State Rex Tillerson, Remarks with Foreign Minister Yun Byung-se Before Their Meeting, Seoul, March 17, 2017)

Japan launched a new spy satellite, the country’s space agency said, as the region grows increasingly uneasy over North Korea’s quickening missile and nuclear programs. (AFP-JIJI, “Japan Launches New Spy Satellite to Keep Eye on North Korea,” *Japan Times*, March 17, 2017)

3/18/17

Secretary of State Rex W. Tillerson signaled that the Trump administration was prepared to scrap nearly a decade of United States policy toward North Korea in favor of a more aggressive effort to eliminate the country’s nuclear weapons program. Whether that means pre-emptive action, which he warned was “on the table,” will depend a great deal on how China responds. Up to 40 percent of the North’s foreign currency — essential for buying goods abroad — comes from a network of about 600 Chinese companies, according to a recent study by Sayari Analytics, a Washington financial intelligence firm. Tillerson went to China today, a day after saying in Seoul that the United States would not negotiate with North Korea on freezing its nuclear and missile programs. In Beijing, Tillerson met with China’s top foreign policy official, Yang Jiechi, and the foreign minister, Wang Yi, today. He will see President Xi Jinping tomorrow. “We have committed ourselves to do everything we can to prevent a conflict from breaking out,” Tillerson said at a press conference after meeting Wang. The secretary said China and the United States “will work together” to see if they could make North Korea take “a course correction and move away from nuclear weapons.” Tillerson declined to specify the “number of steps” that would be taken to achieve that goal. His interactions with his hosts in Beijing, and whether he takes a hard line with China over its support for North Korea, will be closely watched — as will be China’s response. Last month, Beijing showed a new willingness to punish its longtime ally when it suspended imports of North Korean coal, saying it had reached the annual limit allowed under United Nations sanctions. Customs figures later showed that China had in fact imported only about 30 percent of the quota for 2017. Yang Xiyu, a veteran Chinese diplomat involved with North Korea, said Tillerson may be able to persuade Chinese leaders to do more when he meets with them in Beijing this weekend, particularly against Chinese companies that do business with the North. Yang cited as a potential model the case that United States officials built last year against a Chinese executive accused of selling North Korea a chemical that can be used in nuclear-enrichment centrifuges. While Beijing was not happy about the case, it eventually accepted it. “It wasn’t easy, but it was the right way to push the issue to a solution,” he said. When the United
States filed criminal charges against the businesswoman, Ma Xiaohong, the owner of the Dandong Hongxiang Industrial Development Company, other Chinese companies conducting similar transactions were apparently left untouched. But Yang, who was a top negotiator for China during six-nation talks with North Korea from 2003 to 2009, suggested that those companies may now be vulnerable. If the United States continues to present evidence of illegal activities that contravene China’s responsibilities under United Nations sanctions, “there is a great deal of room for cooperation,” he said. He noted that China had published five executive orders, totaling more than 900 pages, listing items banned from export to North Korea. “Such activities violate China’s adherence to those orders,” he said. Yang added: “The United States should say, ‘Let’s extend our cooperation to implementation of the United Nations resolutions on sanctions.’ They should say, ‘Starting with the Hongxiang case, let’s move forward.’” Anthony Ruggiero, a former United States Treasury official involved in sanctions enforcement against Pyongyang, told a congressional panel last month, “It is not a foregone conclusion that China’s leaders will shelter North Korea.” Ruggiero said the United States would be likeliest to achieve Chinese cooperation from a position of strength. In 2013, he noted, when the Treasury blacklisted North Korea’s primary foreign exchange bank for contributing to the proliferation of nuclear materials, the Bank of China, one of China’s major commercial banks, immediately closed its account with the North Korean outfit. Now, no major Chinese banks deal with North Korea for fear of being penalized by the United States, though smaller ones do, along with front companies operating along the North Korean border with few links to the United States financial system, according to American sanctions experts. “This is a good example of China acting to cut off North Korea’s activities inside China when those actions threaten China’s economic interests,” Ruggiero said of the Bank of China’s severance of its North Korea connections. A more recent episode that could serve as a model came last week, when the United States Department of Commerce fined ZTE, one of China’s biggest technology companies, $1.19 billion for breaking sanctions and selling electronics to Iran and North Korea. “This is what the U.S. should be doing, but finding it out ain’t easy,” said Stephan Haggard, a visiting fellow at the Peterson Institute for International Economics, which is based in Washington. “I think that Commerce pretty much had a gun to ZTE’s head.” Officials in the Trump administration have discussed putting pressure on Chinese banks through “secondary sanctions,” which would make it hard for any bank that did business with the North to also deal in American dollars. That technique worked against Iran, helping to force it to the negotiating table over its own nuclear program. But such measures are likely to have much less impact in North Korea, which is already isolated, than they did in Iran, a major trading nation, sanctions experts said. “North Korea has one of the smallest international trade profiles on earth,” said Joseph M. DeThomas, a former American ambassador who served as a State Department adviser on Iran and North Korea sanctions. “North Korea often has to end-run the entire financial system to move money. They do things the old-fashioned way: sending guys on airplanes with suitcases full of money.” In an opinion article this week in the New York Times, a former United States deputy secretary of state, Antony J. Blinken, said the Obama administration had quietly pressed countries to eject North Korean workers whose remittances help fund the country’s military. He did not say how successful that effort had been. Tens of thousands of such workers are employed in China’s northeastern cities like Dandong and Hunchun, along the North Korean border. But Marcus Noland, of the Peterson Institute for International Economics, said he believed the organized export of labor earned the North Korean government less than $2.5 billion annual earnings from the organized export of labor, remember not to believe everything you hear,” he said. Far more has been contributed in foreign currency by Chinese companies doing trade across the border, said Jessica Knight, director of analysis at Sayari Analytics. “Customs data indicates more than $8 billion in cross-border trade between China and North Korea since 2013, much of it in commodities like coal and steel,” she said. Whether any sanctions at all will deter the North from its nuclear pursuits is far from clear. The former United States defense secretary William J. Perry, who dealt with the North Korean problem during the Clinton administration, said on Friday in Beijing that he doubted they would. “We have sanctioned them a hundred times, and it didn’t stop developing nuclear weapons,” he said. “They seem to be prepared to suffer economic deprivation for the people so they can achieve the preservation of the regime, which they think that nuclear weapons is going to do for them.” (Jane
Perlez, “As U.S. Shifts on Korea, China Holds Cards,” *New York Times*, March 18, 2017, p. A-1) Chinese Foreign Minister Wang Yi pushed back against the tougher U.S. line on North Korea, reiterating his country’s view that the only way to rein in its reclusive neighbor is through talks. Wang spoke at a briefing in Beijing with U.S. Secretary of State Rex Tillerson. “The most important principle we have identified is that no matter what happens, we have to stay committed to diplomatic means as a way to seek a peaceful settlement,” Wang said on Saturday. “We hope all parties including our friends from the United States could size up the situation in a cool-headed and comprehensive fashion and arrive at a wise decision.” In his comments in Seoul, Tillerson laid out details of the U.S. approach, saying it would focus on getting China to better enforce United Nations sanctions against North Korea. His tone was more moderate when he spoke alongside Wang on Saturday, saying the countries had agreed to work together to confront North Korea. “I think we share a common view and a sense that tensions on the peninsula are quite high right now and things have reached a rather dangerous level,” Tillerson said. “We’ve committed ourselves to do everything we can to prevent any type of conflict from breaking out.” Wang said China has come up with proposals for all sides to study, though he didn’t detail them. While Tillerson has said a key component of his new effort involves pressing China to better enforce UN sanctions, Wang said the matter is primarily between the U.S. and Pyongyang. “The Korean peninsula nuclear issue in nature is an issue between the United States and the DPRK,” Wang said. “It is obliged upon all parties to implement the sanctions and restart the talks at the same time.” (Nick Wadhams, “China Pushes Back on U.S. Talk of ‘All Options’ over North Korea,” *Bloomberg*, March 18, 2017)

Tillerson-Wang: “TILLERSON: Nihao. Good afternoon. I’m pleased to be here this afternoon in Beijing to discuss the way forward in forging a constructive and results-oriented relationship between the United States and China. This is an important opportunity to follow up on the telephone conversation between President Trump and President Xi and to pave the way for continued productive high-level engagement. Since the historic opening of relations between our two countries more than 40 years ago, the U.S.-China relationship has been guided by an understanding of non-conflict, non-confrontation, mutual respect, and win-win cooperation. It is important that the leaders of our two countries engage in further dialogue to develop a common understanding that will guide our relationship for the next half-century. The United States and China are the world’s two largest economies, and we must both promote stability and growth. Our two countries should have a positive trading relationship that is fair and pays dividends both ways, and we will be working on that going forth. Foreign Minister Wang and I also spoke about the importance of safeguarding stability and security in Northeast Asia and the Asia Pacific region. We noted that efforts made over the last 20 years have so far not succeeded in curbing the threat posed by North Korea’s illegal weapons programs. Because China’s stated policy is denuclearization of the Korean peninsula, we renewed our determination to work together to convince the North Korean Government to choose a better path and a different future for its people. I discussed the importance of upholding a rules-based order in dealing with maritime disputes and freedom of navigation and overflight. And I made clear that the United States will continue to advocate for universal values such as human rights and religious freedom. I look forward on this visit to additional meetings today with State Counselor Yang and tomorrow with President Xi, and to continue to work together with my Chinese host to address shared challenges and opportunities. MODERATOR: Question goes to Bob Woodruff, ABC News. Q: Mr. Secretary, thank you very much for talking today. (Inaudible) in terms of all these terms – in terms of all these issues, North Korea is certainly at the top, and you’ve spoken this week, couple days ago, there is this possibility of a preemptive strike and that it’s “on the table,” quote/unquote. Exactly where’s the red line on this? What would cause this to happen, do you think? You probably don’t have to detail it, but what does North Korea have to do in order to have that possibility? And also, did you talk to China about that today, and has that given some pressure, to use some influence on them to give you anything new in terms of sanctions, et cetera, or any changes in laws to enforce some rules about trading with North Korea? Secondly, it also was tweeted by the President, President Trump, yesterday, where he said very clearly that North Korea’s bad and China has done very, very little. Did you know about that tweet when that went out? Did you have a chance to talk to him, and what was his reaction to you? Has he made your
job a lot harder? TILLERSON: As I indicated in my prepared statement, Foreign Minister Wang and I had a very extensive exchange on North Korea, and Foreign Minister Wang affirmed again China’s longstanding policy of a denuclearized Korean peninsula. We also exchanged views and I think we share a common view and a sense that tensions on the peninsula are quite high (inaudible) and that things have reached a rather dangerous level. And we’ve committed ourselves to do everything we can to prevent any type of conflict from breaking out, and we view there are a number of steps that we can take that are in front of us. And Foreign Minister Wang has agreed that we will work together to see if we cannot bring the government in Pyongyang to a place where they want to make a different course – make a course correction and move away from their development of their nuclear weapons. But it is with a certain sense of urgency that we both feel because of the current situation that we have on the peninsula. So I appreciated Foreign Minister Wang’s sincere expressions about how China sees the situation, and we had a very good exchange on that and we will continue to be talking with one another on what we can both do, along with working with others, to bring North Korea to a different place where we are hopeful we can then begin a dialogue. MODERATOR: (Via interpreter, in progress) — goes to the Chinese journalist from CCTV to Foreign Minister Wang. Q: (Via interpreter, in progress) — CCTV, and my question goes to Foreign Minister Wang. Recently, the situation on Korean peninsula is highly complex, and it is in a constant state of tension. And we have also noticed that some people are of the view that despite China has the biggest influence on Pyongyang, it has not done enough to address the issue of the peninsula. So how does China look at the cooperation between China and the United States on international and regional issues, especially the question of the Korean peninsula? WANG: (Via interpreter) Indeed, the Korean peninsula nuclear issue is of interest to everyone. And on this issue, I would like to say that China stays committed to the goal of denuclearization and upholds the Nuclear Nonproliferation Regime. We are for the settlement of this issue through dialogue and negotiations and the maintenance of peace and stability on the peninsula and the overall region. The Korean peninsula nuclear issue in nature is an issue between the United States and the D.P.R.K. China, as a close neighbor of the peninsula and a responsible major country, has over the years devoted a lot of energy and efforts to seek a settlement to this issue. Upon the request of the U.S. side, China has worked to facilitate and secure the establishment of the Three-Party Talks, which was expanded to become the Six-Party Talks later on. In fact, all these efforts were geared to create the conditions and provide support to the engagement and the discussions between the D.P.R.K. and the United States. The tremendous, important efforts China has thus made is visible to all. And after the Six-Party Talks ground to a halt, China again worked together with the United States and the other members of the UN Security Council to pass a series of D.P.R.K.-related resolutions and played an important role in containing D.P.R.K.’s nuclear and missile programs and controlling tension on the peninsula. Hereby, I would like to bring to your special notice here is the fact that while all Security Council resolutions related to D.P.R.K. have mapped out a series of increasingly tougher sanctions against Pyongyang, they have also at the same time included clear provisions calling for efforts to resume the talks, to de-escalate the tension, and to safeguard stability on the peninsula. Therefore, it is obliged upon all parties to implement the sanctions and restart the talks at the same time. The entire course of trying to seek a solution to the Korean peninsula nuclear issue up to date has both had successes and failures and both successful experience and hard lessons. The most important progress made is the September the 19th joint statement we reached in 2005, when we drafted a comprehensive roadmap for the D.P.R.K. to give up its nuclear and missile programs and realize denuclearization on the peninsula. And the most important experience we have learned is that only when the legitimate concerns of all parties are addressed in a synchronized and reciprocal fashion could we secure genuine progress in the talks. And the most important principle we have identified is that no matter what happens, we have to stay committed to diplomatic means as a way to seek peaceful settlement. The situation we face today is precisely caused by the very fact that the Six-Party Talks has ground to a halt and there was no means for diplomatic and political dialogues. Right now, the situation on the peninsula has arrived at a new crossroads. We could either let the situation continue to escalate and aggravate, which will finally lead to confronting conflicts, or we could continue to strictly implement the Security Council resolutions, and while we do so, try to seek a breakthrough point to restart the dialogues and come back to the right track of a negotiated
The quickest means to begin to develop their economy and to become a vibrant economy for the North Korean peninsula negates any thought or need for Japan to have nuclear weapons. We say all options are on the table, but we cannot predict the future. So we do think it's important that everyone in the region has a clear understanding that circumstances could evolve to the point that for mutual deterrence reasons, we might have to consider that. But as I said yesterday, there are a lot of steps and a lot of distance between now and a time that we would have to make a decision like that. Our objective is to have the regime in North Korea come to a conclusion that the reasons that they have felt they have had to develop nuclear weapons, those reasons are not well-founded. We want to change that understanding. With that, we do believe that if North Korea [were to] stand down on this nuclear program, that is their quickest means to begin to develop their economy and to become a vibrant economy for the North Korean peninsula.

Tillerson: “Q. First of all, let me just ask you since the South Korean newspaper reported that you cancelled dinner because of fatigue, and then they said you spent more time with the Japanese than the South Koreans. What happened? Tillerson: They never invited us for dinner, then at the last minute they realized that optically it wasn’t playing very well in public for them, so they put out a statement that we didn’t have dinner because I was tired. Q: So are you saying they lied about it? RT: No, it was just their explanation. … Q: Given the focus that they’re saying was on Japan, let me say broadly — it seems like there is an extraordinary focus on Japan from the administration, given the President’s two meetings with Abe, your visit, Mattis’ visit, and the vice president coming next month — Japan is getting more focus at a high level than any other country. It has to be more than just a reassurance mission. What do you want from the Japanese and what can you give the Japanese? RT: Well, let me correct a little bit just from the perspective on what you just said. There has been a high level visit with the Japanese because the Japanese prime minister is in place. South Korea’s government is not in place. So there's been no opportunity for a high level meeting, so let’s keep things in perspective. When Secretary Mattis came, [he] came to Korea also. So no preference given there. Vice President Pence’s trip next month — he’s going to both countries also. So there is no ... I don’t think anything should be made that there is some kind of imbalance in the relationship. I think it’s more of a reflection of the situation with the Korean government. The impeachment of the president — the Korean president — they have an interim government now. They’ll have a new government in place after elections in May. So in the meantime, the level of communication between our governments at the active ministerial level and active presence level has been very — it’s been frequent. Foreign minister Yun and I have met several times and have spoken on the phone several times, so I don’t think anything should be read into the amount of time with visits. I think people are making more of that than they should. … Q: You told Fox yesterday that ‘nothing is off the table’ with respect to the nuclearization of the Korean peninsula. In your confirmation hearing, you kind of said that South Korea and Japan don’t need to have nuclear weapons. Has your view changed, given the urgency of the situation with North Korea, particularly because Japan could finalize development of a nuclear weapon rather quickly if they needed to? RT: No, it has not, nor has the policy of the United States changed. Our objective is a denuclearized Korean peninsula. A denuclearized Korean peninsula negates any thought or need for Japan to have nuclear weapons. We say all options are on the table, but we cannot predict the future. So we do think it's important that everyone in the region has a clear understanding that circumstances could evolve to the point that for mutual deterrence reasons, we might have to consider that. But as I said yesterday, there are a lot of … there’s a lot of steps and a lot of distance between now and a time that we would have to make a decision like that. Our objective is to have the regime in North Korea come to a conclusion that the reasons that they have felt they have had to develop nuclear weapons, those reasons are not well-founded. We want to change that understanding. With that, we do believe that if North Korea [were to] stand down on this nuclear program, that is their quickest means to begin to develop their economy and to become a vibrant economy for the North Korean peninsula. Of course, one or two exchange of views like this will not arrive us at complete agreement, but the good thing is we have reached a fundamental consensus governing some of the overall general directions. As Mr. Tillerson has just said now – has said just now, both of us are firmly committed to the goal of a denuclearized Korean peninsula, and we are both ready to comprehensively and strictly implement the Security Council resolutions. And we both hope to find ways to restart the talks, and neither of us are ready to give up the hope for peace. And such discussions between China and the United States will keep going, and this is and will be an important aspect of China-U.S. cooperation.” (DoS, Secretary of State Rex Tillerson, Remarks with Chinese Foreign Minister Wang Yi at a Press Availability,” Diaoyutai, Beijing, March 18, 2017)
Korean people. If they don’t do that, they will have a very difficult time developing their economy. Q: Over the last couple of days, you’ve laid out a couple of options that you can take, saying that all options are on the table. But what is option one? RT: Well, option one is to send very strong messages to North Korea by way of the sanctions — sanctions which have already been imposed by the UN Security Council resolutions — and to ask that everyone fully implement those sanctions. And there are additional steps that we can take to increase the pressure on the regime in hopes that they will understand the path they’re on is simply not sustainable. Q: And those steps — what’s step one and what’s step two? RT: Well, the first steps are the UN sanctions. There are broader sanctions that we can consider. I think that there are additional actions that the UN, that we can consider. There are broader participation by other countries in putting pressure on North Korea. So, this is a staged approach in which we want to give the North Korean government time to understand what’s happening, time to make decisions and adjust. We’re not … it’s not our objective to force them into some brash action. It’s our objective for them to understand things only continue to get more difficult if they don’t change their path. We want to give you time to change your path. Q: Now the liberal opposition is likely to take office in South Korea, and the Chinese are obviously opposed to that. My understanding, though, is that in addition to the North Koreans trying to send a message complaining about U.S. military exercises, part of the reason that they deployed four missiles at the same time was to practice … beating missile defense systems. So, how do you get ahead of the North Koreans, particularly when the Chinese and the next administration in South Korea want more engagement and less of a military posturing? RT: Well that’s the point. We’re not sure if we can get ahead of them. If they just continue, you know, we’re headed to a place no one wants to be. And that’s why the actions are tending to cause them to pause and rethink the pathway you’re on. ‘Cause if they continue with their testing and continue the development of both their weapons and their delivery systems, then we’re going to find ourselves in a place that’s even more dangerous than we are today. …And we don’t want anyone to arrive at that destination. Q: How dangerous is the place we’re in today? The State Department just announced that Joseph Yun is on the way here for six days. What’s his mission? What are the next steps? How urgent is it right now? RT: Well, in terms of the urgency right now is to ensure that the regime of Pyongyang has heard the message. That’s why we’ve tried to be very clear and succinct with the message, which is, first, we do not intend to be a threat to you. We do not want to have a conflict with you. We want you to change your direction. And we want others in the region to help us help them make a different decision. That’s the first step. And then obviously that has to be backed up with action, so that they understand we’re serious. And that means soliciting others to help us with that message and backing that message up to North Korea: that you need to change directions. Q: Which includes the Chinese. Now hours before we took off for Beijing, the President got onto Twitter and said “North Koreans are behaving badly and China has done little to help.” So let me ask, did you know that was coming? Was that an intentional … you’re shaking your head, no. So you don’t know if that was an intentional bargaining chip (RT: No) to set a table with the Chinese? Does it complicate your mission this weekend? RT: No, it’s consistent with the discussions I had with the president before I left on this trip. I had a very good conversation with the president on the approach that I felt was necessary with North Korea, including all of the parties that we think have to be a part of this. So, I did not know that he was going to tweet anything out, but the message that he sent out was very consistent with the message that I’ve been delivering so far in Tokyo and in Seoul. And I don’t think it will come as any surprise to the Chinese government that we do not view that they have ever fully used all of the influence available to them to cause the North Korean regime to rethink its pursuit of these weapons, and that’s some of what I’ll be talking with the Chinese government about. And let’s do great powers. Let’s denuclearize the peninsula. That has been China’s stated policy for more than two decades — is a denuclearized Korean peninsula. They need to help solve this. (Transcript of Secretary of State Tillerson’s Interview with Erin McPike, Independent Journal Review, March 18, 2017. This interview was provided to the traveling press.)
North Korea heralded the successful development of a new “high-thrust engine” during a visit to the country’s rocket test site by leader Kim Jong Un, the reclusive nation’s state media said. Kim observed the test of the indigenously built high-powered engine at the North’s Sohae satellite facility in Dongchang-ri, according to KCNA. The facility is near the site where the isolated country launched four extended-range Scud missiles earlier this month as part of a practice exercise aimed at striking U.S. military bases in Japan. Kim said that the “development and completion of the engine would help consolidate the scientific and technological foundation to match the world-level satellite delivery capability,” the report said — an indication that the test was likely that of a long-range rocket engine. KCNA said the purpose of the test was to confirm the reliability of the engine’s features, including its thrust power in the combustion chamber and the movements of various valves. Rocket engines can be easily repurposed for use in missiles. In September, the North announced the successful ground test of a new type of “high-power engine,” ostensibly for launching satellites. State media said the engine could deliver 80 tons of thrust, making it likely the most powerful the country had ever seen. David Schmerler, a researcher at the Center for Nonproliferation Studies at the Middlebury Institute of International Studies, said today’s test was different from the engine tested last September. “This appears to be a single-nozzle engine with four vernier thrusters,” Schmerler said, referring to thrusters used to maneuver and stabilize a spacecraft. “We haven’t seen this configuration before in North Korea.” Schmerler said it could be a new second-stage engine for the North’s next satellite launch vehicle. “However, it may also have a dual use in their ballistic missile program,” he added. (Jesse Johnson, “North Korea Hails Test of Powerful New Rocket Engine,” Japan Times, March 19, 2017)

KCNA: “Kim Jong Un, chairman of the Workers' Party of Korea, chairman of the State Affairs Commission of the DPRK and supreme commander of the Korean People's Army, watched the ground jet test of Korean-style high-thrust engine newly developed by the Academy of the National Defense Science. After being told about the production of the new-type high-thrust engine, he personally visited the Sohae Satellite Launching Ground at dawn to learn in detail about the technical specifications of the engine and preparations for the test and guided it. The test was conducted to confirm the overall technical indices of the engine such as features of thrust power in the combustion chamber, accurate movement of turbine pump, control system and various valves and their structural safety and reliability. He mounted an observation post and gave an order to start the test. The results of the test confirmed the stable maintenance of technical indices of all systems such as starting and stopping features of a new-type high-thrust engine of Korean style designed and manufactured by the defense scientists and technicians by their own efforts and with indigenous technology, the features of the thrust power in the combustion chamber, turbine pump, control systems in the whole course of engine operation after accurately reaching the expected values, and the perfect guarantee of their structural reliability. He noted that the success made in the current test marked a great event of historic significance as it declared a new birth of the Juche-based rocket industry which has radically turned into a development-and creation-oriented industry both in name and in reality by completely doing away with dogmatism, conservatism and formalism left in the field of rocket industry and the dependence on the technology of other countries. He emphasized that the whole world will soon witness what eventful significance the great victory won today carries. The development and completion of a new-type high-thrust engine would help consolidate the scientific and technological foundation to match the world-level satellite delivery capability in the field of outer space development, he noted, adding with pleasure that today when a great leap forward has been made in the development of the rocket industry, the day to be always remembered, a historic day which can be called "March 18 revolution." He said that the field of munitions industry made a series of unprecedented successes this year as it did last year, instilling dynamism into the grand revolutionary advance of all the service personnel and people. Then he had a significant photo session with the officials, scientists and technicians in the field of defense science who took part in the test. He was accompanied by Ri Pyong Chol, Kim Jong Sik and other leading officials of the C.C. the WPK and scientists and technicians in the field of rocket research.” (KCNA, “Kim Jong Un Watches Ground Jet Test of Newly Developed High-Thrust Engine,” March 19, 2017)
John Schilling: “North Korea continues its new practice of releasing colorful audiovisual presentations of Kim Jong Un watching ground tests of rocket hardware, presumably as a way of signaling constant progress in the development of North Korean space and missile systems. This weekend’s test was of an integrated propulsion system for a large rocket or missile. Pyongyang claims that this “new-type high-thrust engine would help consolidate the scientific and technological foundation to match the world-level satellite delivery capability in the field of outer space development”—a bombastic way to say that this engine is meant for launching satellites, not missiles. Photographs released by KCNA shows a propulsion system consisting of one core engine surrounded by four verniers. We may have seen the core engine before; it is similar in size and appearance to an engine tested last September. That engine was assessed as producing approximately 160,000 pounds of thrust, using high-energy propellants, and being better suited for use in satellite launch vehicles than ballistic missiles. The engine tested in September included no visible steering mechanism, leading us to speculate that perhaps North Korea was planning to swivel the entire engine on gimbals. North Korea has traditionally used either jet vanes or separate vernier engines for steering—easier but less efficient practices—and it may be that they simply didn’t have the verniers ready last September. There are differences in the plume and the plumbing configuration between last September’s and this weekend’s engine tests. These may be due to the incorporation of the verniers, but we should not rule out the possibility that the core engine itself may be different. The new engine’s core may be slightly smaller than what was tested before. An upscaled derivative of North Korea’s old Nodong missile engine might fit what we are seeing, and while it would not be as efficient, it would probably be easier for North Korea to manufacture domestically. Whatever the underlying heritage of this engine, it appears that the combination of the core engine and verniers is too is too large to fit in any of North Korea’s known ICBM prototypes, or in any missile that could be carried on any of its mobile launchers.

Unfortunately, we cannot be 100 percent certain of that assessment from the photographs available so far. With four steering engines around a single core, the engine is probably meant to be used alone rather than clustered. Of the North Korean rocket and missile projects that we are currently aware of, the best fit for this engine would be as the second stage of the new satellite launch vehicle provisionally known as the “Unha-9.” However, we cannot rule out other possibilities, such as a yet-unknown ICBM design sized for this engine. But North Korea has been moving towards lighter mobile systems and solid propellants for their strategic missiles. Meanwhile, they have been promising us an ambitious new space program, which will require a large new satellite launch vehicle. They have made extensive upgrades to the Sohae Satellite Launching Station to support such a vehicle. Now they have shown us an engine that would be a good fit for this vehicle, and they have told us what they plan to do with it. The North Korean regime has never been shy when it comes to bragging about their missiles. This time, it seems they are bragging about space program. Whenever they get around to showing us their new satellite launcher, we’ll know for sure. (John Schilling, “A New Engine for a New Satellite Launch Vehicle?” 38North, March 20, 2017)

Secretary of State Rex W. Tillerson and President Xi Jinping of China cast aside their differences with a public display of cooperation, sidestepping areas of disagreement even as North Korea made another defiant statement by showing off a new missile engine. In the highest-level face-to-face meeting between the United States and China since President Trump took office, the two sides made no mention of other contentious issues, including possible punitive trade measures against China and Washington’s unhappiness with Beijing’s assertiveness in the South China Sea. At least in public, Tillerson adopted a far different tone than that of his boss, who said in a Twitter post on March 17 that China had “done little to help” on North Korea. Instead, Tillerson said the United States looked forward to stronger ties with China. Hours before the meeting, North Korea stuck its nose under the tent, announcing that it had tested a new high-thrust missile engine that analysts said could be used in an intercontinental missile. The missile engine created the “perfect test” of the red line drawn by Tillerson in Seoul, said Evans J. R. Revere, a former principal deputy assistant secretary of state specializing in North Korea. During his 24-hour stay in Beijing, Tillerson took the unusual step of repeating rosy Chinese language on the state of relations. The relationship is guided by “non-conflict, non-confrontation, mutual respect and win-win cooperation,” Tillerson said at a news conference with Foreign Minister Wang Yi. The Chinese
The Trump administration is considering sweeping sanctions aimed at cutting North Korea off from the global financial system as part of a broad review of measures to counter Pyongyang’s nuclear and missile threat, a senior U.S. official said. The sanctions would be part of a multi-pronged approach of increased economic and diplomatic pressure – especially on Chinese banks and firms that do the most business with North Korea – plus beefed-up defenses by the United States and its South Korean and Japanese allies, according to the administration official familiar with the deliberations. While the long-standing option of pre-emptive military strikes against North Korea is not off the table – as reflected by U.S. Secretary of State Rex Tillerson’s warning to Pyongyang during his Asia tour last week – the new administration is giving priority for now to less-risky options. The policy recommendations being assembled by President Donald Trump’s national security adviser, H.R. McMaster, are expected to reach the president's desk within weeks, possibly before a summit with Chinese President Xi Jinping in early April, the official said. North Korea is expected to top the agenda at that meeting. It is not clear how quickly Trump will decide on a course of action, which could be delayed by the slow pace at which the administration is filling key national security jobs. The White House declined comment. Trump met McMaster on March 18 to discuss North Korea and said afterward that the country's leader, Kim Jong Un, was...
"acting very, very badly." The president spoke hours after North Korea boasted of a successful rocket-engine test, which officials and experts think is part of a program aimed at building an intercontinental ballistic missile capable of hitting the United States. The administration source said U.S. officials, including Tillerson, had privately warned China about broader "secondary sanctions" that would target banks and other companies that do business with North Korea, most of which are Chinese. The move under consideration would mark an escalation of Trump's pressure on China to do more to contain North Korea. It was not clear how Chinese officials responded to those warnings but Beijing has made clear its strong opposition to such moves. In Beijing, Chinese Foreign Ministry spokeswoman Hua Chunying said the situation on the Korean peninsula was at a crossroads and there were two prospects. One, she said, was that the relevant parties could continue to "escalate toward conflict and potential war," Hua told a daily news briefing on March 21. “The other choice is that all sides can cool down and jointly pull the Korean nuclear issue back to a path of political and diplomatic resolution," China would strictly and comprehensively implement its duties under the U.N. Security Council resolutions, which meant implementing sanctions but also making efforts to get back to talks, she added. Analysts also have questioned whether such sanctions would be as effective on North Korea as they were on a major oil producer such as Iran, given the isolated nation's limited links to the world financial system. North Korea has relied heavily on illicit trade done via small Chinese banks. So, to be applied successfully, the new measures would have to threaten to bar those banks from the international financial system. Also under consideration are expanded efforts to seize assets of Kim and his family outside North Korea, the official said. Washington is increasingly concerned, however, that the winner of South Korea's May 9 presidential election might backtrack on the deployment and be less supportive of tougher sanctions. Another U.S. government source said Trump could also opt to escalate cyberattacks and other covert action aimed at undermining North Korea's leadership. "These options are not done as stand-alones," the first U.S. official said. "It's going to be some form of 'all of the above,' probably excluding military action." (Matt Spetalnick and David Brunnstrom, “Exclusive: Trump Administration Weighing Broad Sanctions on North Korea – U.S. Official,” Reuters, March 21, 2017)

DPRK FoMin spokesman’s “answer to a question raised by KCNA as regards the fact that the US administration tried to threaten the DPRK and impose pressure upon it, taking advantage of US Secretary of State Tillerson's tour of Japan, south Korea and China: Tillerson admitted the failure of the US efforts to denuclearize the DPRK for 20 years and the end of Obama's policy of "strategic patience" during his recent tour of those countries. He said that the US would militarily counteract to the DPRK's threat to the US and its allies. Now Tillerson is repeating what Obama touted much about sanctions until he left the White House. What matters is that neither Obama nor Tillerson knows the reason why the DPRK had to have access to nuclear weapons and why it is dynamically bolstering up the nuclear force. The nuclear force of the DPRK is the treasured sword of justice and the most reliable war deterrence to defend the socialist motherland and the life of its people. The US should face up to the situation of the world with its eyes wide open. The DPRK has the will and capability to fully respond to any war the US would like to ignite. If the businessmen-turned US authorities thought that they would frighten the DPRK, they would soon know that their method would not work on the latter. The world will soon witness what eventful significance the great victory won by the DPRK in the recent ground jet test of Korean-style high-thrust engine will carry." (Pyongyang News, “FM Spokesman Warns against U.S. Anti-DPRK Approach,” March 20, 2017)

3/21/17

Washington’s special representative for North Korea policy, Joseph Yun, arrived in Seoul last night and kicked off his three-day schedule by separately meeting with some of South Korea’s leading presidential contenders. Yun, a career diplomat who was born and raised in Seoul until the age of 10, met South Chungcheong Governor An Hee-jung this morning for about an hour in a closed-door meeting and had lunch with Rep. Yoo Seong-min of the minor conservative Bareun Party, a breakaway from former President Park Geun-hye’s Liberty Korea Party. Tomorrow, Yun plans to meet with Moon Jae-in’s chief diplomacy advisers Cho Byung-jae, former ambassador to Malaysia, and also Seo Hun, a former first deputy director at the National Intelligence Service.
Moon, former leader of the main opposition Democratic Party, who is currently leading in election polls with approval ratings above 30 percent, said he wasn't planning to personally meet Yun because that it “wasn't right on diplomatic protocol standards” for him to have discussions with the U.S. envoy before winning the primary, according to Lim Jong-seok, Moon’s senior secretary. Lim said Moon was contacted by the U.S. Embassy in Seoul for a possible meeting. Ahn Cheol-soo, former co-chair of the People’s Party, has no known plans of meeting Yun, which came as a surprise for local analysts because Ahn is another strong candidate in election polls, ranking third in the latest JoongAng Ilbo survey conducted over the past weekend. Moon ranked first with 34.7 percent, followed by South Chungcheong Governor An with 21 percent and Ahn with 13 percent. Rep. Yoo Seong-min, who met Yun today, did not make it into the top 5 in the JoongAng Ilbo poll but ranked the highest for a candidate from the Bareun Party. Ahn’s close aides said they didn’t receive any calls from the U.S. Embassy about a meeting with Yun. Kim Heung-kyu, a political science and diplomacy professor at Ajou University, who serves as Governor An’s diplomacy adviser, said the candidate explained to the American envoy his views on foreign affairs and national security, and heard what stances the Trump administration was reviewing to take against North Korea. Kim, who said he accompanied An in the meeting this morning, furthered it was a “good opportunity to form a consensus” on related issues. Tomorrow, Yun also planned to meet with his South Korean counterpart Kim Hong-kyun as well as other government officials to discuss North Korean provocations. A spokesman from the Foreign Affairs Ministry said the South Korean government was not involved in planning out Yun’s schedule. Yun, who arrived from Beijing after spending three days there, will be leaving Seoul March 23. The U.S. State Department said in a statement March 17 that Yun will meet his Chinese and South Korean counterparts to “continue our close coordination on North Korea policy.” While Yun’s schedule in Beijing only mentioned a meeting with Wu Dawei, China’s special representative for Korean Peninsula affairs, the State Department said the American envoy was planned to meet with Kim Hong-kyun, South Korea’s special representative, and also “senior ROK [Republic of Korea] officials and members of civil society to discuss a range of regional and bilateral issues.” Hua Chunying, spokeswoman of China’s Foreign Ministry, said yesterday during a regular press briefing that Yun and his Chinese counterpart had “candid and in-depth exchange of views on easing tension on the Korean Peninsula, maintaining peace and stability on the peninsula and moving forward the denuclearization of the peninsula,” according to transcripts provided online by the ministry. No further detail was mentioned. (Lee Sung-eun and Yoo Sung-woon, “U.S. Envoy for North Korea Seeks ‘Consensus,’” JoongAng Ilbo, March 22, 2017) "I had a chance to discuss (with China) the shape of our review on North Korea, which is ongoing, as well as the strong points that the secretary delivered both here and in Beijing on THAAD," Joseph Yun, the top U.S nuclear envoy, said at the start of talks with his South Korean counterpart Kim Hong-kyun on March 22. He came to Seoul from Beijing where he held talks with senior Chinese officials. "The secretary conveyed it very strongly to the Chinese side and the secretary also said in private meetings that really retaliating against a defensive system which China has done was something that was uncalled for and something of a growing concern for us. So I believe those points were well delivered by the secretary," he added. In what appears to be the latest provocation, the North test-fired a missile from its east coast that appears to have failed, Seoul's defense ministry said earlier in the day. After completing his talks with Kim, Yun said that he heard about the latest missile test, saying it hurts ongoing global efforts to tackle the nuclear stalemate. "It is not helpful at all. These are tests that have been banned by U.N. Security Council resolutions, so it's not very helpful," he said. Asked if Washington was considering a secondary boycott intended to penalize third-country firms doing business with the North in an effort to force Beijing to pressure Pyongyang, he said, "Those are all things we need to study." Meanwhile, during the talks with Kim, Yun emphasized the strong alliance and close communication between South Korea and the U.S., citing Tillerson's recent visit and the forthcoming trip to Seoul by Vice President Mike Pence. "I think that shows the highest level of engagement that we have done. I want to thank you on your part also making sure that the alliance relationship and our approach to North Korea is very closely coordinated," he said. Kim noted that Tillerson made a "very clear and strong statement" in Seoul last week on the "ironclad" alliance with South Korea, the "maximum level" of sanctions against the North and China's "inappropriate" economic retaliation over THAAD. In a press release after the talks followed by a meeting over lunch, the foreign ministry said that the
two condemned in unison the North's continued provocations, including the latest one on Wednesday, and agreed to step up the economic and diplomatic isolation of Pyongyang going forward. They also reconfirmed that it is not the right time to hold talks with the North given that it continues to carry out provocations, rather it is the time to apply more pressure on its regime until it changes its calculus. Yun delivered that position shared by Seoul and Washington during his trip to Beijing, the ministry said. A diplomatic source quoted Yun as saying during the talks in Seoul that he and his Chinese counterpart Wu Dawei shared that it is premature to seek negotiations with the North. Yun added that Tillerson also made it clear in Beijing that Washington will not hesitate to punish any Chinese firms for illegal transactions with the North, according to the source. (Yonhap, “Tillerson Told China Its Retaliation on S. Korea over THAAD Is ‘Uncalled for: U.S. Official,’” March 22, 2017)

A fast-attack nuclear-powered U.S. submarine has joined an annual combined military exercise in South Korea in the latest show of force against North Korea, a defense source here said. "The U.S. Navy's USS Columbus (SSN-762) is participating in the Foal Eagle exercise," the official said. It is the third high-profile strategic defense asset of the U.S. to be deployed here for the drill after aircraft carrier USS Carl Vinson and two B-1B bombers. (Lee Chi-dong, “U.S. Nuclear Submarine Joins Combined Exercise in S. Korea,” Yonhap, March 21, 2017)
firms for illegal transactions with the North, according to the source. (Yonhap, “Tillerson told China its retaliation on S. Korea over THAAD is ‘uncalled for’: U.S. official,” March 22, 2017)

Federal prosecutors are investigating North Korea’s possible role in the theft of $81 million from the central bank of Bangladesh that security officials fear could be a new front in cyberwarfare. The U.S. attorney’s office in Los Angeles has been examining the extent to which the North Korea government aided and abetted the bold heist in February 2016, according to a person briefed on the investigation who was not authorized to speak publicly. In the theft, the attackers, using a global payment messaging system known as Swift, were able to persuade the Federal Reserve Bank of New York to move money from the Bangladesh bank to accounts in the Philippines. The Swift system is used by some 11,000 banks and companies to transfer money from one country to another. In the months that followed the Bangladesh heist, it was disclosed that cyber thieves had also attacked banks in Vietnam and Ecuador using Swift. North Korea’s involvement in the attack on the Bangladesh bank had not been publicly known until the New York Times reported last May that security researchers had found evidence that pointed to the country. The researchers discovered that a rare piece of code used in the theft had also been used in the hacking attack on Sony Pictures in December 2014. Federal prosecutors in Los Angeles are also investigating the Sony breach, and what they uncovered in that inquiry led them to examine the bank theft. United States security officials have largely been quiet about whether North Korea was linked to the bank attacks, even as they have publicly attributed the Sony breach to Pyongyang. That reticence is now slipping, however. Yesterday, Richard Ledgett, a deputy director of the National Security Agency, noted the research that tied the two attacks “forensically” and said that if North Korea’s role in the bank robbery was confirmed, it would represent a troubling new front in cyberwarfare. “That is a big deal,” Ledgett said at an event sponsored by the Aspen Institute. John Carlin, the head of the Aspen Institute’s cybersecurity and technology program, who served as assistant attorney general for national security during the Obama administration, asked whether Ledgett believed that “nation states are now robbing banks.” Ledgett responded, “I do.” The renewed focus on North Korea’s cyber activities comes as the Trump administration seeks to take a tougher line on that country’s nuclear program. The breach of the Bangladesh central bank exposed how banks of all sizes are vulnerable to cyberattacks using the Swift network, once thought to be among the most secure messaging systems in the world. Investigators believe that the attackers gained access to the bank’s Swift credentials, possibly from someone who worked there. Using those credentials, the attackers then sent messages over Swift to the New York Fed, authorizing the release of the funds from the Bangladesh bank account there. The New York Fed released some of the $951 million to accounts in the Philippines, as requested by the attackers. But officials in New York halted the full transfer when they noticed that something seemed amiss. Swift has been urging the thousands of banks that belong to its network to take precautions. A Swift spokeswoman declined to comment today. Ledgett said yesterday that large companies and banks might be fundamentally outmatched by nation-state cyber attackers and suggested that the United States government needed to do more to help bolster their defenses. It is as if the “security guards at Home Depot and Target” are expected “to stand up to the North Korean Army,” said Ledgett, who plans to retire soon from the National Security Agency. “On the face of it, it doesn’t make sense.” News of the criminal investigation into North Korea’s role in the Bangladesh bank attack was reported earlier today by the Wall Street Journal. It was not clear whether any charges from the investigation were imminent. (Michael Corkery and Matthew Goldstein, “North Korea Is Said to Be Target of Inquiry over $81 Million Cyberheist,” New York Times, March 23, 2017, p. B-4) When hackers associated with North Korea tried to break into Polish banks late last year they left a trail of information about their apparent intentions to steal money from more than 100 organizations around the world, according to security researchers. A list of internet protocol addresses, which was supplied by the security researchers and analyzed by the New York Times, showed that the hacking targets were banks and other institutions spread across 31 countries and regions. including institutions like the World Bank, the European Central Bank and big American companies including Bank of America. While some of the Polish banks took the hackers’ bait, the scheme was detected fairly quickly, and there is no evidence that any money was stolen from the intended targets. Yet security researchers said the hit list, found embedded in the code of the attack on more than 20 Polish banks, were dozens of identifying IP addresses of intended targets,
which underlines how sophisticated the capabilities of North Korean hackers have become. Their goals have now turned financial, along with efforts to spread propaganda and heist data and to disrupt government and news websites in countries considered enemies. The list of targets, which has not been previously reported, is part of a growing body of evidence showing how North Korea, a country that is cut off from much of the global economy, is increasingly trying to use its cyberattack abilities to bring in cash — and making progressively bolder attempts to do so. North Korea’s hacking network is immense, encompassing a group of 1,700 hackers aided by more than 5,000 trainers, supervisors and others in supporting roles, South Korean officials estimate.

Because of the country’s poor infrastructure, the hackers typically work abroad, in places like China, Southeast Asia and Europe. Like other North Koreans allowed to work abroad, the hackers are constantly monitored by minders for possible breaches in allegiance to the government. The security firm Symantec said it believed that the hackers behind the Poland attack were also behind two other major breaches: the theft of $81 million from the central bank of Bangladesh and a 2014 attack on Sony Pictures, which rocked the film industry. “We found multiple links, which gave us reasonable confidence that it’s the same group behind Bangladesh as the Polish attacks,” said Eric Chien, a researcher at Symantec, which studied both attacks. The firm has not traced the attacks to a specific country’s government, but American officials have blamed North Korea for the Sony attack, partly based on intelligence that came from American breaches of North Korea’s computer systems. The list of targets uncovered in the Polish attack — including big American financial institutions like State Street Bank and Trust and the Bank of New York Mellon — is illuminating for its ambition, Chien added. “It’s one thing to go after Bangladesh,” he said, “but it’s a whole other thing to take on the U.S.” The Polish episode provides a case study of how North Korean cyberattack goals have escalated. The attack began around October when the hackers planted a virus on the website of the Polish financial regulator — then waited for banks to inadvertently download it when they visited the site. The perpetrators used what is called a watering-hole attack — named after the way predators ambush prey by lazing around a high-traffic spot — to go after the banks; in this case, the “watering hole” was the financial regulator’s website. When the visitors on the list landed on the page, they would be redirected to software that would attempt to download malware. The list of targets extended beyond Poland, investigators said, because the group intended to carry out similar attacks elsewhere. “This was a global list, but they hadn’t gotten around to making a watering hole for all these country banks,” Chien added, that the hackers appeared to have created watering-hole sites in Mexico and Uruguay, too. Symantec said it had blocked 14 attacks against computers in Mexico and 11 in Uruguay. The fact that the hackers were able to attack a specific site showed that their capabilities had improved, Chien said. The group also used its own modifications of code and exploits more broadly shared by cybercriminals, whereas before it had mostly built its own tools — another indication of evolution.

While Polish banks were the most numerous targets, the second-largest number was in the United States, including the American arm of Deutsche Bank. CoBank, which lends to agriculture and rural projects, was targeted, too. The central banks of Russia, Venezuela, Mexico, Chile and the Czech Republic were on the list. The only target associated with China: branches of the Bank of China in Hong Kong and America. North Korea has been carefully cultivating its cyberattack capabilities since the early 1990s, according to South Korean officials. Generally, the country selects young computer prodigies and trains them as hackers, according to people who have attended the South Korean government’s discussions of the North’s hacking operations. South Korean cybersecurity officials began detecting attacks attributed to North Korean hackers around 2009. Working overseas is a huge incentive for young hackers, since many North Koreans have little chance to leave their impoverished, isolated country. As long as the hackers meet their government-set targets, they are allowed to live abroad and often get the added perk of running illegal gambling sites online, generating profits they can share with supervisors. While North Korea lags developed countries in hacking capabilities, it has occasionally startled observers in South Korea. In 2011, investigators found that a South Korean bank had been hit by malware when an infected computer used by a maintenance-company employee was briefly hooked into the bank’s server network. South Korean hackers who forensically analyzed the attack were impressed not so much by the malware, but by the fact that North Korean hackers had been so constantly on alert, apparently for hours or days on end, waiting for the short window during which the infected computer was connected to the bank’s servers so that they could activate the virus. While the
Pentagon has recently warned that North Korea’s hacking abilities could be a cost-effective way of conducting military operations, the attacks on banks shows the country’s more prosaic goal of getting money. “In the past, North Korean hackers usually attacked government websites with the goal of destroying systems and triggering social confusion,” said Kim Seung-joo, a professor at the Graduate School of Information Security at Korea University in Seoul, who is an adviser for the South Korean government’s cybersecurity division. “Now they have shifted to making money, attacking banks and private companies, apparently because the North’s other means of raising foreign currency are increasingly blocked under United Nations sanctions,” Kim said. North Korean hackers have also begun using ransomware — viruses that encrypt all data in an infected computer or smartphone — to make money. The hackers demand a ransom, usually in Bitcoin, in return for providing victims with a decryption code. In July, the South Korean police said North Korea’s main intelligence agency had stolen the personal data of more than 10 million customers of Interpark, an online shopping mall in South Korea. Interpark did not learn about the breach until it received an anonymous message threatening to publicize the leak of personal data unless it paid the equivalent of $2.7 million in Bitcoin. South Korea attributed the attack to hackers belonging to North Korea’s Reconnaissance General Bureau, its main spy agency. In the end, no Bitcoin changed hands. Instead of paying the ransom, Interpark reported the attack to the police. (Paul J. Mozur and Choe Sang-hun, “North Korea’s Ambition Seen in North Korea’s Rising Ambition Seen in Bid to Breach Global Banks,” New York Times, March 26, 2017, p. A-1)

Sigal: “During Secretary of State Rex Tillerson’s first visit to Asia, David Sanger’s lede in The New York Times coming on March 17 was ominous: “Secretary of State Rex W. Tillerson ruled out opening any negotiation with North Korea to freeze its nuclear and missile programs and said for the first time that the Trump administration might be forced to take preemptive action “if they elevate the threat of their weapons program” to an unacceptable level.” The news about no negotiations may have been music to the ears of Tillerson’s hosts in the lame-duck South Korean government, but the mere mention of preventive war, given President Trump’s reputation for recklessness, set off alarm bells elsewhere in the front-line capital. Other news outlets took their cue from Sanger. Soon the airwaves and blogosphere were filled with portentous speculation. After all, compared to dull diplomacy, preventive war is so much more thrilling to contemplate; like Iraq—only this time with real nuclear weapons to attack. Of course, who knows where in North Korea they might be hidden. Sanger was never one to underplay his stories, but had Tillerson “ruled out” talks and ruled in “preemption” in his so-called press availability in Seoul? On the subject of negotiations, Tillerson seemed to allude to the Obama administration’s insistence that North Korea commit up front to denuclearization before talks could begin: “[I]n terms of talking about any kind of a freeze, I think it’s premature for that. But at this stage I’m not sure we would be willing to freeze, with the circumstances where they exist today, given that that would leave North Korea with significant capabilities that would represent a true threat, not just to the region, but to American forces, as well.” “Premature” is not exactly a rejection of negotiating a freeze. And he did not rule that out: “So, again, conditions must change before there is any scope for talks to resume, whether they be five-party or six-party.” Standing beside him, Foreign Minister Yun Byung-se spoke of CVID (complete, verifiable, and irreversible dismantlement) but Tillerson, noticeably, did not. What about “preemptive action” or, more precisely, preventive war? Well, Tillerson never actually uttered those words. Instead, he said: “All of the options are on the table. Certainly, we do not want to—for things to get to a military conflict. We are quite clear in that, in our communications. But obviously, if North Korea takes actions that threatens the South Korean forces or our own forces, then that would be met with an appropriate response. If they elevate the threat of their weapons program to a level that we believe requires action, that option is on the table. But we are hopeful that, by taking these steps—and we have many, many steps we can take before we get to that point—we hope that that will persuade North Korea to take a different course of action. That is our desire.” War, in short, lay way down a long road—if ever—and the policy review under way in Washington has reportedly already ruled out “preemptive action”—for now. The talk of war was also at odds with the reassuring words Tillerson had uttered in Tokyo the day before: “North Korea and its people need not fear the United States or their neighbors in the region who seek only to live in peace with North Korea.” Tillerson’s target audience for his remarks in Seoul seemed to be in Beijing, where he was heading next. Some
Rex W. Tillerson, the new secretary of state, offered the diplomatic understatement of the month: "inexperienced Tillerson could benefit by taking... the problem. In an article the next day, he had the effrontery to lecture how the... China has done little to help!" Tillerson acknowledged as much on March 18 in his only interview during the trip, which was made available to the press. When asked if Trump's tweet complicated his diplomacy, he replied: "No, it's consistent with the discussions I had with the president before I left on this trip. I had a very good conversation with the president on the approach that I felt was necessary with North Korea, including all of the parties that we think have to be a part of this. So, I did not know that he was going to tweet anything out, but the message that he sent out was very consistent with the message that I've been delivering so far in Tokyo and in Seoul. And I don't think it will come as any surprise to the Chinese government that we do not view that they have ever fully used all of the influence available to them to cause the North Korean regime to rethink its pursuit of these weapons, and that's some of what I'll be talking with the Chinese government about as well is, you know, they need to understand: what are they willing to do? How far are they willing to go? Can this be an area of mutual cooperation between two great powers to bring peace and stability to the Korean peninsula? And let's be great powers. Let's denuclearize the peninsula. That has been China's stated policy for more than two decades—is a denuclearized Korean peninsula. They need to help solve this." Caught in the shoals between the President's injunction and the need to keep a diplomatic option open, Tillerson had a tricky course to steer. The problem is, any delay in negotiations, a resort to tougher sanctions and the hint of war could provoke Pyongyang to conduct more missile and nuclear tests and could cause a breach with a soon-to-be elected government in Seoul. Cooperation with China also misconstrues North Korea's purpose in seeking talks with the United States: to end US enmity and reduce dependence on Beijing. If Tillerson's aim was to stampede the Chinese into tightening sanctions, there is no sign that he succeeded in Beijing. China was well aware that North Korea is open to talks—but not on US terms: that it first commit to denuclearization. In a joint "press availability" with Chinese Foreign Minister Wang Yi on March 18, Tillerson put the emphasis on China's support for stepped-up pressure to compel the North to accept that goal: "Foreign Minister Wang has agreed that we will work together to see if we cannot bring the government in Pyongyang to a place where they want to make a different course—make a course correction and move away from their development of their nuclear weapons." Wang's reaction seemed to echo the longstanding Chinese stance that the Americans and the North Koreans had made the problem and it was up to them solve it: "I would like to bring to your special notice here is the fact that while all Security Council resolutions related to the DPRK have mapped out a series of increasingly tougher sanctions against Pyongyang, they have also at the same time included clear provisions calling for efforts to resume the talks, to de-escalate the tension, and to safeguard stability of the peninsula. Therefore, it is obliged upon all parties to implement the sanctions and restart the talks at the same time." In Tillerson's view, past negotiations had failed: "We noted that efforts made over the last 20 years have so far not succeeded in curbing the threat posed by North Korea's illegal weapons programs." Wang had a very different take, one closer to the negotiating record: "The entire course of trying to seek a solution to the Korean peninsula nuclear issue up to date has both had successes and failures and both successful experience and hard lessons. ...The situation we face today is precisely caused by the very fact that the Six-Party Talks has ground to a halt and there was no means for diplomatic and political dialogues." Wang implied that there had been a meeting of minds on implementing Security Council sanctions and entering into negotiations: "As Mr. Tillerson has said just now, both of us are firmly committed to the goal of a denuclearized Korean peninsula, and we are both ready to comprehensively and strictly implement the Security Council resolutions. And we both hope to find ways to restart the talks..." Tillerson said nothing about finding ways to restart talks. Was Sanger inspired to interpret Tillerson's remarks by administration officials who whispered in his ear? In Sanger's view, the fact that that did not happen was the problem. In an article the next day, he had the effrontery to lecture how the inexperienced Tillerson could benefit by taking reporters along, the next time he traveled abroad: "Rex W. Tillerson, the new secretary of state, offered the diplomatic understatement of the month..."
on Saturday when he told the sole reporter he permitted on his airplane: ‘I’m not a big media press access person. I personally don’t need it.’ Perhaps, by breaking with a half-century of past practice and flying off without the regular State Department correspondents on board, Mr. Tillerson was hoping to continue to operate in a style that worked well for him as chief executive of Exxon Mobil. In that job, he could negotiate complex oil and gas deals behind closed doors and then inform his board of directors and shareholders afterward. Certainly, his predecessors at the State Department have all wished for more time, space and secrecy to work through some of the world’s knottiest problems. The North Korea crisis that dominated this trip is a prime example of one that, if mishandled, could easily veer into war. Yet long experience teaches that foreign policy is rarely made in the kind of media-free bubble that Mr. Tillerson wants. … The group that has covered the State Department is heavy with former foreign correspondents and war correspondents who have lived around the world, have sources in foreign capitals and write books about the global challenges the country faces. Their hotel-bar conversations have been known to run to wonkish topics like deterrence theory. So it might not be surprising that Mr. Tillerson doesn’t want them in the back of his airplane, talking to his staff and probing how the new administration’s approach to North Korea and China might differ from what predecessors tried.” Yet the novice secretary of state may have proved defter at delicate diplomacy than some seasoned reporters.” (Leon V. Sigal, “Misreading Tillerson,” 38North, March 22, 2017)

Mason Richey: “One overarching thread has remained true over the long period of North Korean nuclear weapons development and the various iterations of carrot-and-stick diplomacy that have accompanied it: for both the public at large and the leaderships of the United States, South Korea, and Japan, threat perceptions of a potentially nuclear-armed North Korea have been heightened by Pyongyang’s belligerent rhetoric. The regime’s Korea Central News Agency (KCNA) is infamous for English-language propaganda ranging from insulting to bellicose to ludicrous. A few examples include Kim Young-Sam, former South Korean president, referred to as a “thrice-cursed shabby US toady”; Japan’s government officials “are epileptic mentally deranged wretches”; George W. Bush, former US president, was a “cowboy buffoon”; South Korean President Park Geun-Hye “was a venomous swish of skirt”; North Korea will “turn Seoul into a sea of flame”; the North Korean military will “mercilessly annihilate the US”; and “Japan is planning nuclear attacks on the DPRK.” Over the study period (1997–2006), North Korea uttered 790 insults against the United States, South Korea, and Japan; issued 302 threats against them; and made 130 claims of being under imminent attack by the alliance partners. The United States was the referent for 788 of these instances; South Korea, 550; Japan, 96. … An analysis of insulting, threatening, hyperbolic rhetoric in English-language news articles disseminated over the period 1997–2006 via the Korea Central News Agency and targeting the United States, South Korea, and Japan is instructive with respect to these hypotheses. During this period, belligerent rhetorical statements in the articles trended downwards overall. Insults and threats diminished marginally, while statements claiming North Korea was imminently under attack by the United States, South Korea, or Japan, which compose a small number of total observations, clearly increased. The decline in rhetoric directed against South Korea roughly coincided with an increase against the United States and the initiation of the Sunshine Policy. Curiously, despite efforts at multilateral diplomacy, North Korean rhetoric claiming imminent attack by the United States, South Korea, and Japan increased by 170 percent after 2000. An ordinary least squares regression shows that the two major diplomatic efforts initiated by the international community—the Sunshine Policy and the Six-Party Talks—have a statistically significant, negative correlation with North Korea’s inflammatory rhetoric. In other words, diplomatic efforts are associated with a lower probability of inflammatory rhetoric by the Pyongyang regime. The reverse occurs—bellicose rhetoric increases—when Pyongyang’s leaders consider American and South Korean actions aggressive. Two classes of events are important: US overseas military operations, or expressions of hawkishness potentially leading to operations, that might indicate Washington’s appetite for strikes against rogue states like North Korea and US-led military exercises in the Asia-Pacific, particularly exercises involving the United States and South Korea. These two “US hawkishness” variables explain 20 percent of the variation in North Korea’s bellicose rhetoric. This is less than the independent variables indexing conciliation, but the coefficients are larger, which indicates greater effect intensity. North Korea’s belligerent rhetoric and independent variables Most people only notice
North Korea during episodes in which Pyongyang executes some form of provocation, such as nuclear bomb or ballistic missile tests, artillery bombardments of South Korean islands, attacks on South Korean navy vessels, and violent incursions on the southern side of the military demarcation line. Media reports about and government reactions to such actions are overwhelmingly accompanied by references to North Korea’s inflammatory rhetoric, particularly the threats. But is the incendiary rhetoric meaningfully associated with provocations, or does Pyongyang’s intemperate rhetoric merely appear correlated because popular attention focuses on the Korean peninsula only during such incidents? The data… suggest the latter is the case, as indeed there is no statistically significant relationship between North Korea’s provocations and belligerent rhetoric. This perceived correlation, as opposed to actual correlation, is true of all types of belligerent rhetoric taken together as well as threats and claims of imminent attack against North Korea taken individually.” (Mason Richey, “Turning It up to Eleven: Belligerent Rhetoric in North Korea’s Propaganda,” Parameters 46(4) Winter 2016–17)

3/24/17

North Korea has carried out another test of a rocket engine that U.S. officials believe could be part of its program to develop an intercontinental ballistic missile, officials told Reuters on March 27. The latest test follows one earlier this month, and is another sign of Pyongyang's advancing weapons program. It comes amid mounting U.S. concerns about additional missile and nuclear tests, potentially in the near future. Several U.S. officials said the test took place on the night of March 24 and the engine could possibly be used in an intercontinental ballistic missile (ICBM).

3/25/17

It’s easy to write off Kim Jong Un as a madman. What with the colorful nuclear threats, the gruesome executions of family members, the fact that he’s a self-appointed marshal who’s never served in the military. Indeed, Sen. John McCain (R-Ariz.) did it just this past week, calling Kim “this crazy, fat kid that’s running North Korea.” That came on the heels of a pronouncement from Nikki Haley, the U.S. ambassador to the United Nations, that “we are not dealing with a rational person” in Kim. It’s a relatively common view. World leaders, military chiefs and Hollywood have all painted him as an unhinged maniac. But this is not just wrong, North Korea watchers and dictatorship experts say. It also risks dangerous miscalculation. “North Korea has consistently been treated like a joke, but now the joke has nuclear weapons,” said John Park, director of the Korea Working Group at the Harvard Kennedy School. “If you deem Kim Jong Un to be irrational, then you’re implicitly underestimating him.” Writing off Kim Jong Un as a lunatic could equally be playing into his hands. Want proof that he’s no senseless madman? Exhibit A: “He’s still in power,” said Benjamin Smith, an expert on regime change at the University of Florida. “He and his father and grandfather have stayed in power through a series of American presidents going back to Truman.” Indeed, the 33-year-old has defied predictions that he would not be able to keep a grip on the authoritarian state that has been in his family’s control since 1948. December marked his fifth anniversary in power — a milestone that the democratically elected president in the South did not reach. In person, Kim is confident and well spoken, said Michael Spavor, a Canadian who runs Paektu Cultural Exchange, which promotes business, sports and tourism with North Korea. Spavor is one of the very few outsiders to have met Kim. “He was acting very diplomatically and professionally,” said Spavor, who accompanied Dennis Rodman, the basketball player, on his trips to North Korea. “He felt old beyond his years. He could be serious at times and fun at times but by no means did he seem weird or odd.” Smith pointed out that saying Kim is rational isn’t the same as saying “he’s a perfect guy who makes perfect decisions.” Kim’s decisions to date have enabled him to achieve his primary goal — so far — of staying in power by staying off threats, real or anticipated, from the elite. “He has reasons to be afraid of conspiracies in the top levels of his government, especially in the military and secret police,” said Andrei Lankov, a Russian scholar of North Korea who once studied at Kim Il Sung University in Pyongyang. “You can buy these people off, but they can still betray you. You have to terrify them, and that’s what he’s doing.” Kim has sent a message to the elites who keep him in power through a series of executions and purges that keep everyone fearful that they will be next. Kim has rid himself of 300-plus officials during his five years at the helm. He notably had
his own uncle, Jang Song Thaek, executed for disobeying orders and building his own power base. Other high-level figures have been killed — a defense minister was reportedly dispatched with antiaircraft fire — or purged. The state security minister is said to be under house arrest. “What’s irrational about that? Irrational is going to the ICC and surrendering,” Lankov said. A United Nations commission of inquiry has recommended referring Kim to the International Criminal Court for crimes against humanity. The assassination of Kim Jong Un’s half-brother, Kim Jong Nam, in Malaysia with a chemical weapon was a message to outside rivals that the young leader could hunt them down wherever they are, analysts say. To deal with threats from “hostile powers,” in North Korean parlance, having nuclear weapons makes sense for Kim, said Kongdan Oh of the Institute for Defense Analyses. “Steadily pursuing nuclear weapons is a very rational thing for him to be doing.” Kim has ordered three nuclear tests since he took power — claiming that one was a hydrogen bomb — and has overseen steady improvements in the missile program. North Korea has “entered the final stage of preparation” for the test launch of an intercontinental ballistic missile, Kim has told, referring to a missile capable of reaching the U.S. mainland. North Korea was established in vehement opposition to the American “imperialist aggressors” and their “puppets” in South Korea. So maintaining a sense of threat from both provides a rationale for the state’s existence and a shared menace to unite the elite and the common people. Then there’s the economy. The fact that it’s growing is a sign that the leadership knows what it’s doing, said Park of Harvard. “There’s a puzzle here: The regime is getting wealthier amid the increasing implementation of sanctions,” he said. While the North Korean economy is far from booming, it has been steadily expanding in recent years, as evidenced by all the construction in Pyongyang despite increasingly tight restrictions imposed by the outside world. It has done this through state-run trading companies that form partnerships with entities in China, enabling them to circumvent sanctions. “Look at the web of elite North Korean state trading companies. You can’t be irrational or somehow crazy to consistently run this system to either make money off it or procure what you need for the nuclear weapons program,” Park said. “That objectively shows that there is a game plan, and a pretty consistently implemented game plan.” But being rational is not the same as being predictable, and many analysts say that the youngest Kim appears to be temperamental and hotheaded. That worries American military leaders. “Combining nuclear warheads with ballistic missile technology in the hands of a volatile leader like Kim Jong Un is a recipe for disaster,” Adm. Harry Harris, the head of Pacific Command, said in December. There is reason to be concerned about this factor, said Jerrold Post, a psychiatrist who founded the CIA’s personality analysis center and has studied Kim and his father. Kim’s capacity for brutality and his apparent spontaneity could be compounded by President Trump’s own impulsive acts, he said. “This is all about big boys and their big toys,” Post said. “Will he actively threaten the U.S.? I tend to think not, but I must say I’m concerned about words leading to actions between him and President Trump.” (Anna Fifield, “North Korea’s Leader Is a Lot of Things – But Irrational Is Not One of Them,” Washington Post, March 25, 2017)

KCNA: “The U.S. imperialists and the south Korean puppet forces are busy staging madcap joint military drills for aggression with more than 300 000 troops, U.S. nuclear carrier Carl Vinson and B-1B and other nuclear strategic assets involved. The on-going saber-rattling under the simulated conditions of an actual war assumes more serious nature as its goal is to carry out the "special operation" aimed to eliminate in advance "the person" of the DPRK with "the right to issue an order" and destroy major strategic targets for the purpose of checking the rapid bolstering of nuclear deterrent of the army and people of the DPRK and depriving it of the right to use nukes. At least 3 000 U.S. troops or treble those involved last year are taking part in the "special operation" being conducted as part of the rehearsals. They include the Ranger Unit of the 75th Airborne Regiment of the U.S. Army, the Green Berets Special Units Nos. 1 and 19, the 353rd Special Warfare Corps of the Air Force, the 1st, 3rd 5th and 7th teams of the First Special Warfare Corps of the Navy, two battalions of the First Stryker Brigade of the 25th Division of the Army, one battalion of the 66th Armored Regiment and the 31st Naval Expedition Corps of the Marines. A particular mention should be made of the fact that Navy Seal and Delta Force belonging to the joint special warfare headquarters called "detached force of the White House" are hurled into the "operation" at the direct instruction of the U.S. president. The U.S. imperialists and the south Korean warmongers do not hide the fact that the scenario of the "special operation" being staged
by the ill-famed units is mainly aimed at carrying out the "beheading operation" for "removing the headquarters of the north" and the "preemptive attack" operation for blowing up the nuclear and rocket bases. Through a spokesman's warning statement, the General Staff of the Korean People's Army (KPA) on Sunday said that all moves assume more dangerous adventurous nature as they are nothing but last-ditch efforts and final gambling of the U.S. imperialists and the puppet military warmongers who are fated to meet destruction owing to the total bankruptcy of the hostile policy toward the DPRK and the policy of confrontation with the compatriots in the north. And it further said: The General Staff of the KPA warns the hideous provocateurs as follows with regard to the situation that has reached an extreme phase which should not be overlooked: 1. The General Staff declares the KPA's stand to mercilessly smash the enemy's moves with its own style of special operation and preemptive attack, now that the sinister aim of the U.S. imperialists and the south Korean war maniacs' "special operation" to hurt the dignity of the DPRK's supreme leadership has become clear and they disclosed even the dangerous attempt at "preemptive attack." They are sadly mistaken if their brigandish "special operation" and "preemptive strike" would work on this land guarded by the powerful revolutionary Paektusan army though they claim they proved successful in other countries and regions. 2. They should be mindful that the KPA will deal deadly blows without prior warning any time as long as the operation means and troops of the U.S. and south Korean puppet forces involved in the "special operation" and "preemptive attack" targeting the DPRK remain deployed in and around south Korea. The KPA will not remain a passive onlooker to hordes of robbers trying to hurt our people with daggers. 3. Once the enemy launches the said "operation and strike", they will only bring about a historic event in which the U.S. imperialists will face a miserable doom and the south Korean puppet forces a final ruin. It is the centuries-old tragedy that the U.S. and the south Korean forces still don't know how foolish and futile their attempts to hurt the supreme leadership of the DPRK and infringe upon its sovereignty are, though they have stood in standoff with the latter for decades. They should think twice about the catastrophic consequences to be entailed by their outrageous military actions. The KPA's warning is not hot air.” (KCNA, “KPA General Staff Warns U.S., S. Korean Forces on ‘Special Operations,’” March 26, 2017)

As the threat from North Korea’s missiles grows, so do the calls in Japan for a stronger military response are getting louder. An influential group of politicians is publicly arguing for technically pacifist Japan to acquire the ability to strike North Korea instead of having to rely on the United States for its defense. “Japan can’t just wait until it’s destroyed,” Imazu Hiroshi, the head of the ruling Liberal Democratic Party’s security committee and a proponent of the idea, said in an interview. “It’s legally possible for Japan to strike an enemy base that’s launching a missile at us, but we don’t have the equipment or the capability.” Nakatani Gen, defense minister until last year and a member of the committee, agrees. “I believe that we should consider having the capacity to strike,” he told the Washington Post. Their public pronouncements have not come out by accident, analysts say. Such senior members of the powerful ruling party would not raise the issue unless it was being promoted at the highest levels. Prime Minister Abe Shinzo publicly supports consideration of the idea. “I’d like to encourage the party to have this discussion and am keeping an eye on how it’s going,” he said in the Diet on Friday when asked whether he was in favor of acquiring the capability to strike. Under the American-written constitution imposed in the wake of its World War II defeat, Japan may defend itself if it comes under attack but is not allowed to go on the offensive. Imazu said that the current arrangement made Japan a “peculiar” country. “Our country is protected by other countries, but we can’t do anything to protect them. This is not acceptable in the international community anymore,” Imazu said. “We cooperate with the U.S. and other nations to protect our country and also to contribute to peace in East Asia. In this environment, it’s only proper that we should discuss how we could protect our country.” Abe has been trying to loosen the constitutional shackles on Japan’s military, notably with a 2015 law to allow Japan to come to the aid of the United States. He has signaled he would like to revise the constitution to allow Japan to have a normal military. North Korea is now giving Abe plenty of ammunition to bolster his case. It has been firing missiles at a steady clip into the Sea of Japan between the two countries, and three of the most recent salvo have landed inside Japan’s exclusive economic zone. The regime in Pyongyang said it was practicing to hit American military bases in Japan. Japan is now upgrading its PAC-3 Patriot missile batteries to double their range, and is
considering other defensive measures. At a forum in Washington last year, defense minister Tomomi Inada said that Japan was considering acquiring the Terminal High Altitude Area Defense antimissile system recently deployed to South Korea — she even went to Guam to see it — and the Aegis Ashore, a land-based version of the SM-3 interceptors that Japan already has mounted on its Aegis destroyers. “We know that North Korea’s missile capability has improved considerably,” said Onodera Itsunori, another former defense minister in the Abe administration and the chairman of an LDP committee on responding to the North Korean missile threat. “Right now, we are discussing how we can make sure to prevent them,” he said, adding that the committee could make a proposal as soon as this week. Onodera was particularly concerned by North Korea’s recent launch of missiles simultaneously, a move apparently designed to outsmart interception systems. “In that case, we would come under attack one missile after another unless we strike the enemy base and stop them,” he said. “So the discussion is around the need to neutralize the missile launch base.” Acquiring strike capability might be legally permissible under international law, but it will be difficult to sell to the Japanese public, the majority of whom have been resistant to the small changes Abe has made so far. Analysts say that senior politicians could be floating a trial balloon to test public reaction to the idea. “This discussion is not random,” said Brad Glosserman of the Center for Strategic and International Studies’ Pacific Forum, saying the likes of Onodera would not raise such an idea without the prime minister’s encouragement. “The bottom line is that a strike capability gives Japan more control over its destiny.” Discussion about acquiring a strike capability also arose during Abe’s first tenure as prime minister, in 2006-2007, a time that coincided with North Korea’s first nuclear test. “Now, the threat is more crystallized. Some in Japan are saying, ‘We want to have our own fingers on the trigger, we want to be able to defend ourselves,’” Glosserman said. But the Abe government has already taken one step that could take it halfway there — it decided to acquire 42 F-35 stealth fighter jets for air defense, which could be fitted with strike capability. “The question is whether to use the F-35 to its full extent,” said Michishita Narushige, a North Korea expert at the National Graduate Institute for Policy Studies in Tokyo. Another option is to buy Tomahawk cruise missiles from the United States. The U.S. Marine Corps already has 10 F-35Bs deployed at its air station in Iwakuni, in western Japan. “Abe is politically astute and realistic in understanding what he can do,” Michishita said, describing how the prime minister is harnessing the momentum provided by North Korea’s threats. “F-35s might not be enough, but they’re a good place to start.” Any change would not happen without extensive consultation with the Americans, said Nakatani, Inada’s predecessor as defense minister. “Japan doesn’t have the capacity to launch an attack on North Korea by ourselves,” he said. “In order for Japan to do that, it would take a lot of discussion with the U.S.” (Anna Fifield, “As North Korea Fires Missiles, Some in Japan Want the Ability to Launch Strikes,” Washington Post, March 27, 2017)

Prosecutors said that they were seeking to arrest former President Park Geun-hye of South Korea on criminal charges including bribery and abuse of power. Whether they can arrest Park, who was removed from office in a historic court ruling this month, will depend on whether the Seoul District Court will issue an arrest warrant. If arrested, Park would be the first former South Korean leader put behind bars since two former military dictators were imprisoned on corruption and mutiny charges in the mid-1990s. Today, prosecutors formally asked the court for the warrant. It usually takes several days before the court studies evidence and decides whether an arrest warrant is justified. Prosecutors have been discussing whether they have enough evidence to apply for an arrest warrant since they questioned her for more than 20 hours last week. Prosecutors accused Park of conspiring with a longtime confidante, Choi Soon-sil, to collect tens of millions of dollars from big businesses, including more than $38 million in bribes from Samsung. Both Choi and Samsung’s top executive, Lee Jae-yong, have been arrested and indicted on a number of charges, including bribery. When they indicted Choi and Lee, prosecutors had already identified Ms. Park as a criminal accomplice. “The suspect abused her power by using her tremendous status and authority as president to help collect funds from businesses,” prosecutors said in a statement today explaining why they thought she needed to be arrested. “Although there have been a number of pieces of evidence collected, the suspect has denied most of them, and there is a danger of her destroying incriminating evidence if she is not arrested.” (Choe Sang-hun, “Prosecutors Seek to Arrest Ousted South Korean Leader,” New York Times, March 27, 2017, p. A-8)
A ruling Liberal Democratic Party security policy panel urged the government to let Japan directly strike North Korean missile bases in the event Pyongyang stages a ballistic missile attack on the country. Specifically, the panel urged the government to procure long-range cruise missiles capable of striking North Korean sites. Panel members emphasized that Japan should only use such long-range missiles after the North fires a ballistic missile against Japan, given the war-renouncing Constitution that limits the use of force by Tokyo strictly to self-defense. Still, if the proposal is ever adopted by the government, it would mark a significant departure from Japan’s traditional defense posture, which has focused solely on the defense of its territory. Former Defense Minister Onodera Itsunori, a key member of the panel, said Pyongyang’s ballistic missile advancements and spate of recent test-firings into the Sea of Japan had prompted the body to make the “urgent proposal.” Japan currently has a two-layer missile-defense system, consisting of missile interceptors launched from Aegis destroyers and ground-based Patriot Advanced Capability-3 systems. The two-layer system would first be used to destroy any incoming ballistic missiles from the North, Onodera said during a press briefing at the LDP’s head office in Tokyo on Wednesday. However, Japan needs to bolster its capabilities to destroy missile bases in the North in order to prevent a second or third wave of attacks, he argued. Over a number of years, hawkish LDP lawmakers have repeatedly called on the government to procure powerful weapons that can directly strike North Korean missile bases, including long-range fighter jets and Tomahawk cruise missiles launched from Aegis destroyers. So far, however, top government officials have remained cautious on these proposals. Prime Minister Abe Shinzo told a Diet session last month that currently Tokyo has no plans to procure such arms although he said he would not rule out studies on the option. Some experts have argued that knocking out the North’s ability to strike Japan with missiles is nearly impossible since Pyongyang is believed to have already deployed as many as 200 Nodong ballistic missiles and dozens of mobile launchers that can easily be moved and hidden. The Nodong, one of the North’s go-to missiles, can strike most of Japan. Still, possessing weapons that can directly strike the North would be a rational option for Japan because it would raise the bar for Pyongyang when considering an attack on Japan, said Michishita Narushige, professor of international relations at the National Graduate Institute for Policy Studies in Tokyo. “North Korea is now trying to develop ballistic missiles that can reach the U.S.,” Michishita said. “If that goal is achieved, the United States would shift its priority to destroying missiles flying toward the U.S., and the defense of Japan would become a lower priority.” In that sense, he said, it would only be natural for Japan to boost its own defensive capabilities against the North, including one that would allow it to destroy the North’s missile sites. (Yoshida Reiji, “LDP Panel Urges Government to Let Japan Strike North Korean Missile Bases in Event of Attack,” Japan Times, March 29, 2017)

Bermudez and Liu: “New commercial satellite imagery of the Punggye-ri Nuclear Test Site from March 28 shows a heightened level of activity over the past few days. Despite the recent snowfall, there has been continued pumping of water out of the North Portal, presumably to keep the tunnels dry for communications and monitoring equipment; the removal of material (probably rubble) and dumping on the tailings pile immediately to the east of the portal; and the probable removal of one or more vehicles or equipment trailers from in front of the portal. This activity is consistent with previous reports, while the rest of the Punggye-ri Nuclear Test Site has been generally quiet. However, there is now one vehicle and a large contingent (70-100) of people standing in formation or watching in the courtyard of the Main Administrative Area. Such a gathering hasn’t been seen since January 4, 2013, which was followed by a nuclear test on February 12. The North Koreans know when commercial satellites are passing overhead and typically try to avoid activities during that time. The fact these formations can be seen suggests that Pyongyang is sending a political message that the sixth nuclear test will be conducted soon. Alternatively, it may be engaged in a well-planned game of brinkmanship.” (Joseph S. Bermudez, Jr. and Jack Liu, “Heightened Activity at North Korea’s Punggye-ri Nuclear Test Site,” 38 North, March 29, 2017)

South Korean Defense Minister Han Min-koo instructed troops not to hesitate to take retaliatory actions in the event of a North Korea attack. Inspecting a coastline guard post of the Army's 32nd Infantry Division, Han stressed the need for "perfect" combat posture both on the front lines and in
the rear. "There shouldn't be any disorder even by an inch in the military," he said. "Any provocation from the North should not be tolerated." (Yonhap, "Defense Chief Orders Immediate Retaliation to N.K. Provocations," March 29, 2017)

KCNA: “The U.S. is playing a cheap trick in its relations with the DPRK. Recently a high-ranking official concerned of the U.S. State Department "officially" told that the U.S. decided to exclude the idea of preemptive attack on the DPRK from its planned policy toward the DPRK now under examination. As if to prove it, the paid media trumpeted in unison that "U.S. shows softened attitude to north Korea." It is great irony to see the wolf whose nature is to bite off bleating. The U.S. rhetoric about "exclusion of preemptive attack" is nothing but a trick to calm down the DPRK taking the stand of the toughest counteraction and then attack it with surprise preemptive nuclear strike and thus put whole Korea under its control. Nothing surprising is the U.S. trite method by which it staged smear campaign to make its rival get relaxed and harbor illusion about the U.S. and then invade it through preemptive attack. On June 24, 1950, the U.S. trumpeted about weekend trips of the U.S. president and warmongers like the chief of the U.S. military advisory group in south Korea. On the other hand, it instigated the Syngman Rhee clique to release a false report that the two thirds of the south Korean puppet military had been on an outing and first-line officers and high-ranking officials of the ground army command had been indulged themselves in entertainment at an officers' club. Then on June 25, it provoked the Korean War without declaration of it. On the eve of the Iraqi war in the new century, the U.S. conducted smear propaganda campaign against Iraq 17 hours a day at five different frequencies for the purpose of weakening the will of resistance among the army and people of Iraq and creating illusion about the U.S. military among them. After that it started a war through preemptive attack by cruise missiles. The deception of the rhetoric about "exclusion of preemptive attack" made by the U.S. is proven with added clarity through the contents of the military operations pursued by the empire of evil against the DPRK, and performance and deployment of strike means. Now the U.S. is carrying out Key Resolve and Foal Eagle joint military exercises under the scenario of preemptive strike like OPLAN 5015 and OPLAN 4D targeting "precision strike" at key strategic strongholds including the supreme headquarters and nuclear and missile bases in the DPRK. They are openly describing the nuclear strategic assets involved in the exercises as "ideal preemptive strike means" and are unhesitatingly carrying out "special operation" drills targeting the headquarters of the Korean revolution by setting in motion heinous group of murderers. An assertion that preemptive attack has to be pushed forward in secrecy is heard from the U.S. policy-makers, a clear proof that the U.S. ambition to stifle the DPRK and its strategy for a preemptive attack remain unchanged and that the story now afloat is a prelude to an armed invasion. The U.S. is seriously mistaken if it thinks it can shake the will of retaliation of the army and people of the DPRK through such a trite trick and deceive the international community. The powerful revolutionary Paektusan army is closely following the every move of the hostile forces after putting the strongholds of aggression and provocation within the optical sight of its nuclear weapons. If the slightest sign of preemptive attack on the DPRK is detected, the revolutionary armed forces of the DPRK will punish the enemies with powerful preemptive nuclear strikes. The U.S. should clearly understand the catastrophic consequences to be entailed by the reckless attempt at preemptive strike and behave with discretion.” (KCNA, “U.S. Trick Will Not Work on DPRK: KCNA Commentary,” March 29, 2017)

Russia is seeking to deepen ties with the government of North Korean leader Kim Jong Un, seemingly unconcerned by raised eyebrows in the international community. In fact, Russia is now seen by many experts as closer to the North than Pyongyang's traditional ally, China. Russian President Vladimir Putin appears to have two motives: He may be trying to use his ties with North Korea as a diplomatic card in his dealings with the U.S. He is also eager to bring in North Korean labor to help with the development of the Russian Far East. Moscow has recently begun talks with Pyongyang on allowing more North Koreans to work in the country. According to Russia's Internal Affairs Ministry, the two countries held an intergovernmental meeting on migrant workers in Pyongyang on Wednesday. During the talks, the Russians laid out a medium- to long-term plan for accepting more North Korean workers. Representatives from state-owned Russian Railways
also visited North Korea in late January to negotiate expansion of rail links between the two countries. The two sides reached a deal under which more North Korean railway engineers will receive training at a Russian university. According to Russian officials, Moscow did not halt oil exports to the North after the latter conducted test-launches of ballistic missiles in February. In February, KCNA named Russia at the top of the list of countries to which Kim had sent lunar New Year greeting cards. Maria Zakharova, the Russian Foreign Ministry spokeswoman criticized Washington, saying the deployment of the U.S. anti-missile system known as Terminal High Altitude Area Defense had hurt regional stability. Experts believe Moscow hopes to use its increased influence with Pyongyang as a negotiating card as it deals with the administration of U.S. President Donald Trump. Vasily Mikheev, a deputy director at Russia's Institute of World Economy and International Relations, said he believes Moscow will maintain its pro-Pyongyang stance as a diplomatic leverage unless the U.S.-Russia relations improve. According to Russian government statistics, the number of North Koreans in Russia with work permits has doubled in the last five years to over 40,000. Many experts believe the actual number of migrant workers is far higher when illegal workers are included. A local official in Primorsky Krai, a territory in Russian Far East that shares a border with North Korea, said the country's diligent, tireless workers are seen as essential to moving infrastructure projects along in the Russian Far East, including those in Khabarovsk and Vladivostok. According to some analysts, Putin's government is also seeking to strengthen economic ties with South Korea, again using its Pyongyang ties as a bargaining chip. Putin is hoping relations with Seoul improve after the country's May presidential election. (Tanaka Takayuki, “Moscow Plays the North Korea Card,” Asian Nikkei Review, March 28, 2017)

Seoul has granted rival North Korea's women's ice hockey team permission to play in the South next week, the Unification Ministry said, a positive sign ahead of next year's Winter Olympics. Seoul's permission is required for all northern visits to the South, and for all trips by its citizens to the nuclear-armed North. "The visit to the South by the North Korean team was approved," the unification ministry said in a statement. The 30-member North Korean delegation will include 20 athletes and 10 coaches and support staff. Pyongyang boycotted the 1988 Seoul Games, but Lee Hee-Beom, the chief organiser of next year's event, has urged it to take part in a "peace" Olympics. (AFP, "Seoul Approves N. Korea Women's Hockey Visit," March 29, 2017)

DPRK FoMin spokesman’s statement “as regards the fact that the U.S. is driving the situation on the Korean peninsula to an ever more extreme phase through profound confusion of right and wrong: The statement recalled the fact that a spokesman for the U.S. State Department on Monday [March 27] malignantly pulled up the DPRK over the warning served by a spokesman for the General Staff of the Korean People's Army with regard to the "special operation" staged by the U.S. imperialists and the south Korean puppet forces, terming it "provocative act" and "inflammatory remarks." The warning is an entirely just measure for self-defense against the heinous provocateurs given the prevailing situation that has reached a phase which can never be overlooked. …After kicking off joint military drills involving hundreds of thousands of troops and nuclear strategic assets, the U.S. is staging a "special operation" drill, the keynote of which are a "beheading operation" for "eliminating the headquarters" of a sovereign state and a "preemptive strike" operation designed to destroy its nuclear and rocket bases. Clear is its ulterior design. The U.S. has worked hard to justify the war rehearsals, talking about their transparency, but it is no more than a paradox. Its trumpeting about transparency is just outbursts of a gangster to commit robbery in broad daylight. As the strategic depth of the DPRK is not big, the only way to defend itself from the sudden preemptive attack from the U.S. modern strategic assets and special warfare units is just to mount a resolute preemptive attack. In case a war breaks out on the Korean peninsula, the U.S. will be held wholly accountable for it, no matter who will launch a preemptive attack, as it is causing trouble by bringing lots of nuclear strategic assets and special warfare means, not content with persisting in its hostile policy toward the DPRK." (KCNA, “U.S. Will Be Held Accountable for Outbreak of War on the Korean Peninsula: Spokesman for DPRK Foreign Ministry,” March 29, 2017)
DPRK FoMin spokesman’s answer to the question raised by KCNA “as regards the frantic financial sanctions racket being kicked up by the U.S.-led hostile forces against the DPRK: The U.S.-led hostile forces at a plenary meeting of the International Financial Supervisory Body held in Paris in February last again staged a farce of re-listing the DPRK as a target of "countermeasure" for blocking its financial transactions with other countries. Then, they pressurized the Society for World Interbank Financial Telecommunication (SWIFT) headquartered in Belgium into terminating its financial communication service to the banks of the DPRK. The U.S. House of Representatives produced a "bill on escalating sanctions with respect to transactions with North Korea" after modifying and supplementing the "North Korea Sanctions and Policy Enhancement Act of 2016." It has gone the lengths of crying out for independent sanctions against banks and businesses of other countries dealing with the DPRK after inventing absurd pretexts. The recent racket kicked up by the U.S.-led hostile forces to tighten financial sanctions against the DPRK is no more than a stopgap measure of those being driven into a tight corner in the political and military standoff with the DPRK. A step was taken by SWIFT to ban its communication with the banks of the DPRK but the banks of the DPRK have not dealt with the SWIFT since a long time ago in actuality. As for the farce staged by the International Financial Supervisory Body to re-list the DPRK as a "target of countermeasure", it is just an unfair one taken under pressure from the U.S., as repeatedly clarified by the DPRK. The DPRK is doing its best after establishing the system of anti-money laundering and combating financing of terrorism in accordance with international standard. The independent sanctions the U.S. claims slapping against other countries dealing with the DPRK are also being opposed worldwide as an impudent act of wantonly violating international law. All facts go to clearly prove that the frantic racket of the U.S. is aimed to tarnish the international image of the DPRK and stir up the international atmosphere of ratcheting up sanctions and pressure upon it. The whole gamut of base actions the U.S. and its vassal forces are running to deprive the DPRK of its nuclear weapons under the pretexts of UN sanctions and independent sanctions would only result in bringing into bolder relief the unreasonable and immoral nature of the sanctions. They can never check the advance of the DPRK accelerating the building of a socialist power under the unfurled banner of self-reliance and self-development, firmly holding the nuclear deterrent, a treasured sword of victory.” (KCNA, “DPRK Foreign Ministry Spokesman Slams U.S. Racket of Tightening Financial Sanctions,” March 29, 2017)

3/30/17

Delegations from the Democratic People's Republic of Korea (DPRK) and Malaysia issued a joint statement on Thursday. The statement is as follows: “Delegations from the Democratic People's Republic of Korea (DPRK) and Malaysia recently held a meeting in Kuala Lumpur to resolve issues arising from the death of a DPRK national in Kuala Lumpur on 13 February, 2017. Both countries reaffirmed their desire to resolve the existing issues, based on the fundamental strength of their bilateral relations, which have been cultivated since the diplomatic relations were established in 1973. Both countries agreed on the importance of respecting the Vienna Convention on Diplomatic Relations, and full implement the provisions contained therein. As the DPRK has produced all necessary documentations related to the body of the deceased from the family, Malaysia agreed to facilitate the transfer of the body to the family of the deceased in DPRK. Both countries agreed to lift the travel ban imposed on citizens of the other country and guarantee their safety and security within their respective territory. This would allow the nine Malaysians presently in Pyongyang to return to Malaysia and the DPRK citizens in Kuala Lumpur to depart Malaysia. The importance of bilateral relations was reaffirmed. In this connection, both countries agreed to positively discuss the re-introduction of the visa-free system and work towards bringing the relations to a higher level.” (KCNA, “Joint Statement of DPRK and Malaysia,” March 30, 2017)

3/31/17

Former President Park Geun-hye was arrested, 21 days after she was removed from office by the Constitutional Court. Park became the nation's third president to be put behind bars facing criminal charges, following Chung Do-hwan and Roh Tae-woo in the 1990s. The Seoul Central District Court issued the warrant at 3:03 a.m. following a hearing that lasted nearly nine hours. “There are considerable reasons and need to arrest (Park) as key charges have been substantiated considerably and concerns over the destruction of evidence still prevail,” presiding Judge Kang
Bu-young said, approving the prosecution's request to arrest her. With Park in jail, the number of people who have been arrested because of the massive influence-peddling scandal involving her confidant Choi Soon-sil increased to 21. Park's arrest warrant is valid until April 19, and the prosecution plans to question her further during this period. It is unclear yet as to whether prosecutors will summon Park or visit the Seoul Detention Center to question her. The questioning of Park is likely to take place early next week. Because official campaigning for the presidential election begins April 17, the prosecution is expected to indict Park before then, to minimize the case's impact on the election. If Park is found guilty of the multiple charges laid against her, including bribery, she faces a minimum of 10 years in prison and possibly up to 45 years. She faces 13 charges in the scandal, including bribery, abuse of power, extortion and sharing state secrets with an unauthorized person, which is the largest number of charges faced by a former president. Park is suspected of having colluded with her long-time friend Choi to get Samsung Electronics Vice Chairman Lee Jae-yong to provide a total of 43.3 billion won in funds in exchange for Cheong Wa Dae assisting Lee in a smooth power transfer from his ailing father, Chairman Lee Kun-hee. She also faces allegations of collecting funds from over 50 other major conglomerates for the Choi-controlled K-Sports and Mir foundations. The prosecution's investigation is also focusing on whether the funds were in exchange for business favors. Moreover, Park allegedly pressured conglomerates to sign projects with companies owned by Choi and her acquaintances. In addition, she is suspected of having a hand in the creation of a blacklist of artists critical of the government to cut them off from subsidies, forcing culture ministry officials to resign and pressuring former CJ Vice Chairwoman Lee Mi-kyung to step down, due to her disapproval of the group's entertainment arm. Park also faces charges of giving classified documents to Choi, who did not hold a government post. Her accomplices in these charges – Choi, Lee and former aides Kim Ki-choon, An Chong-bum and Jeong Ho-seong, as well as former Culture Minister Cho Yoon-sun have been indicted and are currently on trial. At the hearing held for the arrest warrant, Park continued to deny all the charges against her. (Kim Bo-eun, “Ex-President Park Arrested,” Korea Times, March 31, 2017)

Korea Asia-Pacific Peace Committee’s statement “as regards the fact that the U.S. is running the whole gamut of intrigues to tighten its colonial domination over south Korea and persist in its hostile policy towards the DPRK as it feels uneasy about the increasing likelihood of the collapse of the pro-U.S. conservative "government" and the victory of the progressive and pro-reform forces in the coming "presidential" election. Shortly ago, the special representative for DPRK policy of the U.S. Department of State met figures of major opposition parties of south Korea to tap their attitude toward the deployment of THAAD and "nuclear issue of the north" and busied himself pressing them to accept its hostile policy toward the DPRK. Early in February the director general of the Atlantic Council of the U.S., one of the confidants of Trump, flew into south Korea in secret. When coming in touch with a "presidential" candidate from an opposition party, he tried to "verify" the former's "view on the U.S. and north Korea." The U.S. is openly wooing senior officials of the White House and the administration, congressmen and media into underscoring the need to prioritize the alliance with south Korea and strengthen it regardless of which regime appears there and steadily maintain the foundation of sanctions against the DPRK. It seeks to effect the deployment of THAAD before the "presidential" election so that the next regime may not reverse it. These moves are open high-handed practices for forcing the next regime to follow the policy of confrontation with the fellow countrymen pursued by the Park Geun Hye group of traitors in a bid to keep its system for domination, use south Korea as its permanent colony and outpost for carrying out its strategy for dominating Asia-Pacific. …The massive candlelight actions of south Korean people, which culminated in removing traitor Park Geun Hye from office, were an eruption of their bitter resentment against her "government's" despicable submission and sycophancy towards outside forces and an expression of their strong desire to win back the usurped sovereignty. The gangster-like U.S. is the chieftain who has inflicted untold pain and misfortune upon the south Korean people and arch criminal disturbing national reconciliation, unity and reunification and threatening peace and security on the Korean Peninsula and in the region. The tragic reality of south Korea goes to clearly prove that sycophancy towards the U.S. and submission to it lead to national ruin and destruction but national independence is the way to survive and achieve reunification.”
Donald Trump has warned that the U.S. will take unilateral action to eliminate the nuclear threat from North Korea unless China increases pressure on the regime in Pyongyang. High quality global journalism requires investment. In an exclusive interview with the Financial Times, the U.S. president said he would discuss the growing threat from Kim Jong Un’s nuclear program with Xi Jinping when he hosts the Chinese president at his Florida resort this week, in their first meeting. “China has great influence over North Korea. And China will either decide to help us with North Korea, or they won’t,” Trump said in the Oval Office. “If they do, that will be very good for China, and if they don’t, it won’t be good for anyone.” But he made clear that he would deal with North Korea with or without China’s help. Asked if he would consider a “grand bargain” — where China pressures Pyongyang in exchange for a guarantee that the US would later remove troops from the Korean peninsula — Trump said: “Well if China is not going to solve North Korea, we will. That is all I am telling you.” The White House views North Korea as the most imminent threat to the U.S. after Barack Obama warned his successor about the progress Pyongyang had made developing long-range missiles and nuclear weapons. The U.S. president says he has no regrets about his style and agenda but, as his 100-day anniversary approaches, governing is harder than he thought “There is a real possibility that North Korea will be able to hit the US with a nuclear-armed missile by the end of the first Trump term,” K.T. McFarland, the deputy White House national security adviser, told the FT in a separate interview. Ahead of the U.S.-China summit, Trump raised hopes that he would reach some kind of deal with Xi, despite heavy criticism about China’s trade surplus and exchange rate policy. “I have great respect for him. I have great respect for China. I would not be at all surprised if we did something that would be very dramatic and good for both countries and I hope so.” The National Security Council has completed a review of options on North Korea that Trump ordered after his inauguration, according to two people familiar with the review. One of those people said the review had been accelerated to have the options ready for the Trump-Xi summit. Barring a preemptive strike on North Korea, which the administration will not rule out since all options are on the table, many experts believe the U.S. needs Chinese help as Beijing has the most sway over Pyongyang. But Washington could consider alternatives, ranging from more effective sanctions to more controversial covert action. “What President Trump is trying to do here is to press the Chinese hard by warning them what comes next if they don’t help or join with the US to deal with this problem,” said Dennis Wilder, a former CIA China analyst who later served as the top White House Asia aide to George W Bush. Related article Donald Trump in his own words “What he is signaling is that the next step is to begin secondary sanctions, which we have avoided. They are sanctions on Chinese companies and individuals who deal with North Korea,” he added. Wilder said Trump could also pressure China not to use North Korean labor, which is a source of revenue for Pyongyang. “Then you get to the other options, which are much more controversial, like taking covert action against North Korea, for example using cyber.” Trump told the FT that it was “totally” possible for the U.S. to tackle North Korea without China. Asked if that meant dealing with Pyongyang one on one, he said: “I don’t have to say any more. Totally.” (Lionel Barber, Demetri Sevastopolu, and Gillian Tett, “If China Is Not Going to Solve North Korea, We Will,” Financial Times, April 3, 2017)

“We must deal with North Korea as it is, not as we wish it to be.” That was the key phrase in the preface of a report handed to the Japanese, South Korean and American leaders after then-U.S. defense chief William Perry’s unprecedented 1999 visit to Pyongyang. Nearly 18 years later, those words still ring true for Perry. The former defense secretary under President Bill Clinton has become one of the most visible faces of a growing movement urging Washington, as well as other key nations, to set realistic goals and again engage Pyongyang diplomatically over its burgeoning
nuclear and weapons programs. According to Perry, recent U.S. policies and strategies toward the North, lacking a clear understanding of Pyongyang’s aims, have failed out of the gate. The result has been a ramped-up level of progress in its weapons programs unforeseen by U.S. analysts and government officials alike. “I believe our policies ought to be oriented around that assessment of what their goals are,” Perry told the Japan Times in an interview. “I think our negotiations ought to be oriented around what their goals are and our policies, our strategies, ought to be oriented around minimizing dangers. I don’t think our negotiations or our policies have been.” This could include moves such as moratoriums or deals on halting long-range missile programs and nuclear tests in exchange for certain carrots like economic aid and recognition. Not acknowledging the motivations behind North Korea’s provocations, Perry alluded, could end up seeing the U.S., South Korea — and in turn Japan — embroiled in another Korean conflict. In a January commentary for the website Politico, he wrote that it is probably too late to dismantle the North’s nuclear program. Instead, he said, the goal must be shifted to containing them. Citing Siegfried Hecker, the former director of the Los Alamos National Laboratory who has made four visits to the North’s Yongbyon reactor, Perry wrote that negotiations are “doomed to continue to fail” if they are based on the premise that it will give up its nuclear weapons. He said the U.S. could start off with more modest goals using Hecker’s “Three Nos” (1. No new weapons; 2. No better weapons; and 3. No transfer of nuclear technology or weapons), in addition to incentives previously offered to Pyongyang. Achieving these goals would not only be of great security value, but could also be a “stepping stone” for follow-up negotiations with an ultimate goal of denuclearizing the Korean Peninsula, Perry said. In 1999, he delivered to the North a proposal by Clinton that the 50-year-old economic embargo against the country be lifted gradually in exchange for a series of major concessions, including an agreement to end its long-range missile program. Perry’s legwork laid the foundation for a flurry of visits by top officials from both countries and a growing view at the time that a deal could be reached. But as the Clinton administration wound down at the end of 2000, and new President George W. Bush prepared to enter the White House, that momentum dwindled. The U.S. had been “tantalizingly close” to sealing a deal with North Korea to eliminate its medium- and long-range missiles and end its missile exports, Wendy Sherman, former special adviser to the president and secretary of state for North Korea policy, wrote in a New York Times editorial in March 2001. She urged Bush to seize the chance. Ten months later, the ground had shifted. “President Bush deliberately stopped the one negotiations — which were almost completed — which conceivably could have prevented this problem,” Perry said. “He did that with the belief that he had better a negotiation underway. That negotiation obviously did not succeed nor did the negotiations of the Obama administration. “Without assessing the theoretical value of what they were doing, the result is pretty straightforward,” Perry said, noting the current state of affairs. In his 2015 book “My Journey at the Nuclear Brink,” Perry summed up the results of U.S. policy toward the North since the Clinton administration as “perhaps the most unsuccessful exercise of diplomacy in our country’s history.” “My own assessment of why it did not succeed in the case of the Bush administration is that I think they were just distracted by the Iraq War,” Perry said. “They didn’t put enough time or attention into it. Who knows what would have happened if they had really made it a priority and worked at it. But they did not.” Still, Perry said, that while the Bush administration was preoccupied with the Middle East, his successor, President Barack Obama, actually had a policy — under which the North’s nuclear and missile progress continued. “It was called ‘strategic patience,’ ” he said. “Nearly as I can determine, what strategic patience means is that ‘if we wait long enough, North Korea will collapse.’ I think that’s a forlorn hope. I’d be happy to see them collapse, but there’s no reason at all to believe that is going to happen.” Instead, what Perry fears may occur amid the tense security environment on the Korean Peninsula is the eruption of smaller-level hostilities into a wider conflict that drags in the U.S. and Japan. “If that happens, that is if we have a ‘new Korean war,’ the North would surely lose … and at that point, seeing the end of the regime, they might unleash an Armageddon with their nuclear weapons,” Perry said. “So in a sense they could blunder into a war and if they blunder into it, they could use nuclear weapons in a last ditch effort.” For Perry, this scenario is the most likely one among the various theories of how the North could spark a conflict. He rules out any kind of surprise attack against South Korea, Japan or the United States, saying such a move would be “suicidal” and would violate Pyongyang’s No. 1 goal: survival of the regime. “They’re not seeking martyrdom. They’re not an al-Qaeda or ISIL,” he said
“However they use their weapons will be based on a calculation that the use is oriented around …
first and foremost the survival of the regime, the sustaining of the Kim dynasty. That, I’m quite
confident, is their primary goal in life.” And while North Korean leader Kim Jong Un and his
regime has often been labeled as “crazy,” including by former GOP presidential candidate Sen.
John McCain last month, Perry believes this to be a false assumption. “People who say they are
crazy, I think they’re wrong,” Perry said. “They’re a pariah state. They take outrageous actions,
but those actions are all designed to strengthen their hold on power.” According to Perry, a grasp
of this is necessary however U.S. policy toward the North proceeds. New U.S. President Donald
Trump has vowed that his administration’s policy toward Pyongyang will differ from Obama’s,
with Secretary of State Rex Tillerson declaring the end of strategic patience. Brinkmanship aside,
Perry believes there is an opening for talks. “He might actually try to negotiate with them, which
would be a good thing — if he negotiated from some real understanding of where they are coming
from,” Perry said of Trump, cautioning that a good negotiator must strive to understand what
drives the other side. “I think I do understand what drives the other side, which makes me a little
pessimistic about a negotiation based on threats and bluster.” Beyond grasping what the North
hopes to achieve, Perry believes there is another compound that is essential for the U.S. to make a
serious run at negotiations with Pyongyang: China. “We need to do it in conjunction with China,
which we have never done in the past,” Perry said. “Even though we both sat in the six-party talks
together, we have never had a common understanding of the threat, we’ve never had a common
strategy for how to proceed.” Now — amid the North’s frosty ties with Beijing, its erstwhile
patron — may be an opportune time, he said. “I think what has happened in China over the last
couple of years is they have gotten a better understanding of what the danger is of North Korean
nukes,” he said. “I think they’re much more concerned about that than they were a few years ago.”
Given that, Perry said, there is a distinct a possibility at least of coming to a common negotiating
strategy. “If we could do that, it greatly improves our success in a negotiation,” he said. Some
experts, including Perry, say that if the U.S. fails to set reasonable goals, it could inadvertently risk
a disastrous situation in the region. One such result could see Japan and South Korea embarking
on a quest to develop their own nuclear weapons capabilities — something Trump hinted at while
campaigning — and further destabilizing the region. “I understand why the Japanese are
distressed, but I also want to think about what their real alternatives are,” Perry said. “One
alternative is for them to build nuclear weapons … so they could threaten a response themselves,
an assured response. … That, I think is a very bad idea, but it could happen.” Another option, he
said, would be to bolster Japanese confidence in the U.S. by asking Washington to make a
stronger statement about its policy of extended deterrence. “The surest way of doing it would be to
ask us to deploy some of our nuclear weapons in Japan,” Perry said, noting the example of
Germany. U.S. atomic weapons were first deployed there during the Cold War as a way of
displaying Washington’s commitment to protecting that country. “When you start talking tough,
you have to start thinking about what are the realistic alternatives,” Perry said. “None of them is
very attractive.” According to Perry, the U.S.-Japan strategy is moving toward reassurances of
extended deterrence and providing some limited ballistic missile-defense systems — a policy not
unlike that of Trump’s predecessor. For the former defense chief, this trajectory — a potential
return to the status quo — has proved maddening. “It’s frustrating to think that you understand the
issue and see it moving off in very different directions,” he said. “I could tell you what I think
could work, but I have no reason to believe it’s going to be tried.” (Jesse Johnson, “Former U.S.
Defense Secretary’s North Korea Strategy: Deal with It as It Is, Not as We Wish It to Be,” Japan
Times, April 3, 2017)

The online ad reads like something only a metallurgist could love: an offer to sell 22 pounds of
highly pure lithium 6 every month, set for delivery from the port of Dandong, China. But it caught
the attention of intelligence agencies around the world for a simple reason: Lithium 6 offers a fast
way to turn an ordinary atom bomb into a hydrogen bomb, magnifying its destructive power by up
to 1,000 times. The seller listed in the ad — who even provided his cellphone number — was
identified in a recent United Nations report as the third secretary in the North Korean Embassy in
Beijing. Experts say the lithium ad — with its implication that the North is happy to sell an excess
supply of the precious material — suggests that it is far too late to prevent the nation from
becoming an advanced nuclear power. It is unclear exactly what Trump means by “solve North
North Korea has already boosted," said Gregory S. Jones, a scientist at the RAND Corporation. "Bombs. Previously, the l

erase the North Korea problem makes it hard to imagine a shift toward acceptance of

its arsenal. But in private, even some of his closest aides have begun to question whether the goal

of “complete, verifiable, irreversible disarmament” — the policy of the Obama and Bush

administrations — is feasible anymore. “We need to change the fundamental objective of our policy, because North Korea will never willingly give up its program,” Michael J. Morell, a

former deputy director of the C.I.A., and James A. Winnefeld Jr., a retired admiral and a former vice chairman of the Joint Chiefs of Staff, wrote last week on the website The Cipher Brief.

“Washington’s belief that this was possible was a key mistake in our initial policy thinking,”

added the two men, experienced hands at countering the North. The United States and China, they

argue, should abandon the idea of denuclearizing the Korean Peninsula and turn to old-fashioned deterrence. Similarly, Robert Einhorn, a former senior State Department nonproliferation expert,

writes in a new report for the Brookings Institution that a “dual-track strategy involving both pressure and negotiations” would be more likely to “bring China on board.” The technique is

reminiscent of what was used to push Iran into nuclear negotiations. But Einhorn cautioned that

“while the complete denuclearization of North Korea would be the ultimate goal of negotiations, there is virtually no prospect that it could be achieved in the near term.” The Chinese appear

unlikely to make more than token efforts to squeeze North Korea, fearing the repercussions if the regime were to collapse, and Kim has made it clear that he is not about to negotiate away what he

sees as his main protection against being overthrown by the United States and its allies. “China will either decide to help us with North Korea, or they won’t,” Trump said in the Financial Times

interview. If the Chinese fail to act, he added, “It won’t be good for anyone.” It is unclear how close North Korea is to constructing a hydrogen bomb. But Siegfried S. Hecker, a Stanford

University professor who once directed the Los Alamos weapons laboratory in New Mexico, and

has visited the North’s main nuclear complex, said the ad for lithium 6, while surprising, was a

reminder that North Korea, though a backward country, was still capable of major technical advances. “I can’t imagine they’re not working on true thermonuclear weapons,” Dr. Hecker said

in an interview. As Trump and Xi meet on April 6-7, Kim, on the other side of the world, may

have a plan of his own for the summit meeting: Satellite photographs suggest he is preparing for a sixth nuclear test. Workers have dug a deep tunnel, which can block radioactive leaks if carefully

sealed, leaving intelligence experts struggling to estimate the North’s progress. American intelligence officials, and their South Korean and Japanese counterparts, are debating whether the

next blasts will mark major steps down the road to a true thermonuclear weapon. The lithium 6 ad

is evidence that Kim is following a road map that the United States drew up back in 1954. That is

when it tested its first thermonuclear weapon fueled by the isotope. The blast, code-named Bravo,

was the most powerful the United States ever detonated. In minutes, its mushroom cloud rose to a

height of 25 miles. Though difficult to make, hydrogen bombs became the symbol of Cold War

power — they are awesomely destructive and relatively cheap. The weapon relies on a small atom

bomb, inside a thick metal casing, that works like a match to ignite the hydrogen fuel. For

decades, bomb makers have used lithium 6 as a standard way of making hydrogen fuel for nuclear

arms. Last month, two Los Alamos scientists argued that the rocky North Korean test site the

United States monitors could confine explosions of up to 282 kilotons — roughly 20 times as

strong as the Hiroshima blast. Although a hydrogen bomb can be that powerful, so can large atom

bombs. Previously, the largest blasts at the site were in the Hiroshima range. “It’s possible that

North Korea has already boosted,” said Gregory S. Jones, a scientist at the RAND Corporation
who analyzes nuclear issues. Like other experts, he pointed to the nation’s two nuclear blasts last year as possible tests of small boosted arms. A next logical step would be for the North to turn the material it was advertising online, lithium 6, into a more complex kind of thermonuclear fuel arrangement for a much more powerful bomb. “It’s a big step,” Hecker, the Stanford professor, said of a true hydrogen bomb, adding that it was perhaps beyond the North’s skill. But overall, he said, the North had shown technical savvy in carefully pacing its nuclear tests, suggesting that it would eventually learn the main secrets of nuclear arms. “They’ve done five tests in 10 years,” he said. “You can learn a lot in that time.” As for the excess lithium 6, any interested buyers may have a hard time answering the ad. The street address given in the advertisement does not exist. The phone has been disconnected or no one answers. But if the operation really is being run out of the North Korean Embassy in Beijing, it should not be hard for Xi to find out: It is about two and a half miles down the road from the compound where he lives. (David E. Sanger and William Broad, “Ad from North Korea Yields Nuclear Clues,” New York Times, April 4, 2017, p. A-9)

4/3/17

The U.S. House of Representatives overwhelmingly passed legislation calling for relisting North Korea as a state sponsor of terrorism and a resolution condemning North Korea’s intercontinental ballistic missile development. The swift passage of the bipartisan measures, which came just five days after they passed through the House Foreign Affairs Committee, was seen as a message to China in the run-up to the first summit talks between U.S. President Donald Trump and Chinese President Xi Jinping. The North Korea State Sponsor of Terrorism Designation Act (H.R.479), which was introduced by Rep. Ted Poe (R-TX) in January, was approved in a 398-3 vote, while the resolution on the North’s missile development passed in a 394-1 vote. The terrorism bill requires the State Department to submit a report within 90 days after the bill’s enactment on whether Pyongyang meets the criteria for a terror sponsor. In the event the department determines the North doesn’t merit the designation, it should also offer a detailed justification for the decision. The resolution (H.Res.92) condemning the North’s ICBM development was introduced by Rep. Joe Wilson (R-SC) on February 17, just days after the North’s test-firing of a newly developed intermediate-range ballistic missile powered by solid fuel. The resolution was later updated to include an appeal to China to “immediately cease its diplomatic intimidation and economic coercion against South Korea” for Seoul’s decision to host the U.S. THAAD missile defense system. "The North Korean threat is urgent and real. Experts predict North Korea will be able to hit the U.S. with an ICBM in less than four years. Meanwhile, Kim Jong Un is taking aggressive steps to make North Korea a fully armed nuclear state," Rep. Ed Royce (R-CA), chairman of the House Foreign Affairs Committee, said in a statement. "It is time for us to ramp up the pressure. That is why I am supporting these measures today, which urge the State Department to relist North Korea as a state sponsor of terror and condemn North Korea’s development of an ICBM. By passing these measures, we are taking important steps to push back against North Korea’s dangerous ambitions," he said. (Yonhap, “U.S. Overwhelmingly Passes Resolution Calling for Relisting N. Korea as Terror Sponsor,” Korea Times, April 4, 2017)

4/4/17

The White House declared that “the clock has run out and all options are on the table” on the North Korea nuclear issue ahead of a key summit between U.S. President Donald Trump and Chinese President Xi Jinping in Florida April 6-7. This assertion came as North Korea fired an intermediate-range ballistic missile toward the East Sea. “The clock has now run out and all options are on the table for us,” a senior White House official said in a news conference, which came just ahead of the missile launch. “We would have loved to see North Korea join the community of nations,” said the official. He said that hadn’t happened “over different dialogues and offers over the course of four administrations.” Claiming North Korea is a “matter of urgent interest” for President Trump and his administration, the official added that Trump “has been pretty clear in messaging how important it is for China to coordinate with the United States, and for China to begin exerting its considerable economic leverage to bring about a peaceful resolution to that problem.” (Sarah Kim, Cha Se-hyeon, and Yoo Jee-hye, “All Eye on Trump-Xi Summit,” JoongAng Ilbo, April 5, 2017)
With Japan’s Ambassador to South Korea Nagamine Yasumasa returning to his post in Seoul today, the government appeared to accept that his recall failed to dent South Korea’s resolve not to remove the “comfort women” statue outside Japan’s consulate in the city of Busan and an older one near its embassy in Seoul. Nagamine was ordered home nearly four months ago in protest over the new statue. The monuments commemorate women forced to provide sex for Japanese troops before and during World War II. “I want to exert every effort in dealing with the present challenges as the ambassador to South Korea,” Nagamine told reporters after meeting with Prime Minister Abe Shinzo. He declined to give details about instructions he received from the prime minister. Had Japan refused to back down on the statue issue, it risked souring relations from the outset with South Korea’s next president, who will be chosen in a May 9 election to replace disgraced former leader Park Geun-hye, government officials said. “We lowered the fist we had raised,” a government source said yesterday after Nagamine’s return was announced. The saga leaves a muddled impression of the way Prime Minister Shinzo Abe’s administration conducts diplomacy. Bilateral relations had warmed under Park, with Japan and South Korea signing in December 2015 an accord aimed at “finally and irreversibly” resolving the issue. Under the deal, Japan deposited money into a fund that was to pay for care for the surviving women. Still, the statues have remained a sticking point. The Busan statue is of the same design as the one installed outside the embassy in Seoul in 2011 and in several locations abroad. Japan has repeatedly called on South Korea to “resolve” the issue of the statues following the 2015 agreement. Yesterday, Japanese officials reiterated that the next South Korean administration must “steadily implement” the deal. “The timeline and lineup of candidates for the South Korean presidential election have been set. This is the best time [for Nagamine to return],” a senior member of the Abe administration told reporters yesterday. At the time the official made the comment, it had become clear that the Democratic Party of Korea, South Korea’s largest opposition party, would choose Moon Jae-in as its presidential candidate. “Mr. Moon is the strongest candidate to become the next president,” a Foreign Ministry source said. “We will need to meet him quickly and communicate with him. Some have said we should have returned the ambassador earlier.” Nagamine will pursue a meeting with Moon, attempting to build up some sort of trust, before official campaigning in the election begins in the middle of this month. Upon returning to South Korea, Nagamine is set to meet acting President Hwang Kyo-ahn and urge the South Korean government to fully implement the deal. The decision to send Nagamine back ultimately came from Abe, who had put up a show of strength against South Korea for not pursuing the statue’s removal. After Park was arrested May 31 over the scandal that led to her impeachment and ousting, Abe summoned Foreign Minister Kishida Fumio to his office for an exchange of views. Chief Cabinet Secretary Suga Yoshihide, the government’s top spokesman, said the decision was made yesterday on the basis of a range of information Kishida had provided. But some in the government had questioned the recall from the time of Nagamine’s return on January 9, wondering whether the standoff would work in Tokyo’s favor. It was far from guaranteed that Park’s embattled administration would be able to overcome South Korean public opinion and set about removing the Busan statue. Lawmakers had already voted to impeach Park at that point, awaiting the finalization of the motion by the country’s Constitutional Court. But the retaliation over the statue went ahead. “South Korea was supposed to work for a resolution of the statue issue, based on the agreement between Japan and South Korea on the matter of the comfort women, but it didn’t do so,” a government source said. “The prime minister, who had lost face, couldn’t pull out even if he’d wanted to.” When South Korean Foreign Minister Yun Byung-se told Kishida in a meeting in Germany in February that his country would make “maximum efforts” over the statue issue, Kishida replied that Seoul needed to accompany its words with actions. Kishida’s response served as a message that the ambassador would not return until Seoul had begun efforts to remove the statue. But that turned out to be an empty threat, with the Park administration having done nothing on the statue, even as the presidential election drew near. Moon is considered more of a hard-liner toward Japan than Park and must be acutely aware of South Korean voters’ sensitivities to bilateral issues between the two nations. He has called for a review of the 2015 agreement and was recently photographed touching the hands of the Busan statue, where he said there is “a meaning to (the statue) being in this place.” It remains to be seen whether Moon would respond positively to Japan even if it calls for an improvement in bilateral relations or further coordination in dealing with North Korea. Asked yesterday what the four-month recall of Nagamine accomplished for
Despite North Korea’s accelerating efforts, Admiral Scott Swift, commander of the U.S. Pacific Fleet, Pyongyang is still “years away” from mastering the submarine-based ballistic missile technology, said, calling for the greater attention on the communist country’s progress on land-based ballistic missiles and warhead miniaturization development. Smith also expressed skepticism toward additional deployment of U.S. strategic assets to the Korean Peninsula, although he did not rule out the possibility for such a measure should North Korea’s military threats evolves further. “To launch the missiles under the water is very, very complicated. I think it is still years away before that technology is developed,” Swift said during an interview with the Korea Herald and other news outlets at the U.S. Naval Forces Korea command in Seoul. “It’s more important to focus on the general ballistic missile capability that North Korea is developing,” said the admiral, referring to Pyongyang’s latest launch of medium-range ballistic missiles that used SLBM technology and solid fuel technology. The admiral was in Seoul as part of a three-day trip to South Korea. On Tuesday, he attended an international forum to discuss amphibious operation in the Asia-Pacific region and met with South Korea’s military leadership, including Gen. Lee Sun-jin, chairman of South Korea’s Joint Chiefs of Staff. Despite speculation the North has inched closer to completing SLBM technology, he stressed that Pyongyang has yet to secure key elements crucial for a successful launch: the missile technology and the miniaturization of nuclear weapons. “There are two broad elements to focus on. One is missile technology itself: both the physics of developing the missile and its reliability as well as accuracy of the missile. The other element is miniaturization of nuclear capability.” Confronted with North Korea’s evolving nuclear and missile threat, the commander has been expanding the role of the 3rd Fleet by forward deploying its strategic assets to the 7th fleet, whose area of operation mostly encompasses South Korea, Japan and China. Last month, nuclear-powered aircraft carrier USS Carl Vinson was deployed to the Korean Peninsula after departing the home port of the 3rd Fleet in San Diego. After entering the 7th Fleet area of operation, the Nimitz-class aircraft carrier remains under the 3rd Fleet’s command and control. But the admiral said although the Navy will continue to expand its involvement in the Asian-Pacific region, there would be no additional “forward deployment” of aircraft carriers and other strategic assets to the Korean Peninsula. “One of the great advantages of naval power is its flexibility to deploy, but I don’t see any additional carriers being forward deployed. ... The challenge we have is the facility for maintaining and sustaining our ships.” “We will reach 60 percent of naval forces present in the Pacific by 2020. And all those decisions have been made and investments have been made. It’s probably 57 or 58 percent. But it fluctuates from day to day.” When asked about whether the US Navy would dispatch its stealthy destroyer Zumwalt — an idea reportedly floated by Adm. Harry Harris, commander of the US Pacific Command, during a meeting with South Korean lawmakers, Adm. Swift expressed skepticism, but added, “Anything is possible. We can have the entire US Navy move somewhere. But it is very, very premature to discuss the probability of that. I would not recommend forward deploying it until we have fully have worked through challenges,” he said. (Yeo Jun-suk, “N.K. SLBM Is ‘Years Away’: U.S. Commander,” Korea Herald, April 4, 2017)

4/5/17

The Pentagon now assesses North Korean missile launch was likely a failure. The missile did not go as far as intended, officials with knowledge of the latest intelligence reports said. It did not reach Japanese waters and may have “pinwheeled in flight,” according to one official. What's more, the missile was an older SCUD — not the advanced land version of a submarine-launched ballistic missile (KN-15), as first assessed by the U.S. Pacific Command last night, a U.S. defense official confirmed. (Lucas Tomlinson, “North Korean Missile Launch Likely a Failure, U.S.
Officials Say,” Fox News, April 5, 2017) North Korea fired a ballistic missile off its east coast on Wednesday, a day before President Trump was to host his Chinese counterpart, President Xi Jinping, at his Mar-a-Lago estate in Florida for their first summit meeting. The missile test is likely to intensify differences between Trump and Xi over how to deal with the recalcitrant government in North Korea. The timing is also a deep embarrassment for Xi as the leader of China, which for decades has been the North’s closest ally. China accounts for about 90 percent of the North’s trade and is a major supplier of oil for the country. But in the eyes of Washington, China has been reluctant to use its economic leverage forcibly enough to stop the North’s growing nuclear and missile threats. “The United States has spoken enough about North Korea,” Secretary of State Rex W. Tillerson said in a statement. “We have no further comment.” In Seoul, the South Korean capital, acting President Hwang Kyo-ahn ordered a meeting of security cabinet ministers to assess the test and the North’s growing missile menace. The missile took off from Sinpo, a town on North Korea’s east coast, and flew 37 miles before splashing into the sea, the South Korean military said in a statement. Initial assessments indicated that the type of missile was a KN-15, [?] said Cmdr. David Benham of the Navy, a spokesman for the United States Pacific Command. KN-15 is the name the United States uses to refer to the Pukguksong-2, a new nuclear-capable intermediate-range ballistic missile North Korea launched for the first time in February. “The North American Aerospace Defense Command determined the missile launch from North Korea did not pose a threat to North America,” Benham said. Before the summit meeting, Trump increased pressure on China, saying that it was time for Beijing to rein in its Communist ally. In an interview with the Financial Times published on April 2, he said, “If China is not going to solve North Korea, we will.” But he did not say how. But China has insisted that the United States should re-engage the North in dialogue to work out a compromise. Trump and Xi will probably use another missile test by the North to stress the merits of their conflicting approaches on the North. North Korea rattled the region in February when it successfully launched the Pukguksong-2, which uses a solid-fuel technology that American experts say will make it easier for the country to hide its arsenal in its numerous tunnels and launch its missiles on very short notice. Then, on March 6, the North launched four ballistic missiles into the sea near Japan. By firing the four missiles simultaneously, North Korea tried to flautn an ability to launch multiple missiles at American bases in Japan and at American aircraft carriers around the Korean Peninsula, South Korean defense officials said. The ability to launch a barrage of missiles increases the chances of breaching antimissile defenses. China, which had long considered the system a threat to its own security and strongly opposed it, warned that the deployment, in Seongju, South Korea, could set off a new arms race. China’s state-controlled news media, in angry editorials, urged boycotts of South Korean products, which led to protests against South Korean businesses in China and canceled tours to South Korea. The THAAD system has not won universal approval within South Korea. Moon Jae-in, a liberal candidate running to replace the ousted conservative president, Park Geun-hye, has expressed misgivings over the Thaad system, citing China’s fury. (Choe Sang-hun, “North Korea Fires Ballistic Missile a Day before U.S.-China Summit Meeting,” New York Times, April 5, 2017, p. A-4)

Briefing by Pottinger, Thornton: “POTTINGER: And I was going to answer the question on North Korea, that in terms of an area of cooperation, of course we would like to see China working closely with the United States to address the menace emanating from North Korea - their weapons programs, the provocations that we're seeing every week; missile launches, including one that we just had not too many hours ago. There is an opportunity for that to be an area of cooperation and to grow that. I think it's in Beijing's interest. I think that North Korea long ago ceased to be a strategic asset for China. It is now quite clearly a strategic liability, and it is one that is having an impact on the region. It is one that has the potential to destabilize not only the peninsula but really the region as a whole. … Q: Okay. Yeah, I'm Gyuoseok Jang, from Christian Broadcasting System. I'm from Korea. …And my question is … what does that mean when you're saying that the clock has running - the clock is running out? So yeah, if you - possible just to give us a little more explanation about that. …THORNTON: …I think you heard Secretary of State Tillerson. He was in Korea not long ago, made a trip to the Demilitarized Zone, had a press conference in Korea and spoke pretty clearly on the issue of where we stand on North Korea right now, that he said that the time for talking is now over - strategic patience has run out. This
problem has really become very urgent, and it is, as Matt said, destabilizing to the entire region and actually further than the region now, reaches across the globe with the progress that North Korea is making in developing an intercontinental ballistic missile. So I think the feeling on our side is that this problem has really now become urgent and we are going to be not only talking to the Chinese this week, but I think you saw on Monday [April 3], Ambassador to the UN Nikki Haley announced that we're going to be convening a ministerial meeting at which the Secretary of State is going to preside up in New York later this month to talk and galvanize a lot more support from our other partners and allies around the world on this issue and chart a way forward in a very urgent way, because we feel that this problem has now crossed a certain line and we can no longer hope for some kind of reversion to negotiations. We need to do something proactive to change the situation and get some results, and we hope that the Chinese are going to be involved in that. We'll certainly be talking to them about that in the next couple of days. Q: Thank you. Mariko de Freytas from Kyodo News. I wanted to ask about secondary sanctions. Would you be able to tell us whether the President or the Secretary of State will be discussing this issue at the summit? And if that's the case, what do you expect the outcome to be? And how ready are you to implement secondary sanctions? POTTINGER: Sure. So, I'm not going to go into the specifics of our approach on North Korea, but I will say that this is going to be an early topic of conversation during the summit, and we will not, sort of, broadcast talking points of the President in advance. But of course, the question of sanctions generally is very much a live one. It's an operative issue, because the situation's really boiled down to one of having to apply more pressure, and economic pressure is something that China has the ability to bring to bear in a way that no other single country can.” (Foreign Press Center Briefing with Susan A. Thornton, Acting Assistant Secretary, Bureau of East Asian and Pacific Affairs, and Matt Pottenger, Senior Director for Asia, NSC, April 5, 2017)

China carried out a naval training exercise in the Yellow Sea ahead of the first summit between U.S. President Donald Trump and Chinese President Xi Jinping. The training exercise involved the deployment of the Liaoning, China's only known aircraft carrier, the Global Times reported today. Quoting a Chinese navy announcement on Weibo, the Chinese social network, state news media said the Liaoning left its station in Qingdao on March 20 and conducted "annual naval drills" in the Yellow and Bohai Seas, off the coast of northeastern China. China also deployed the Shenyang J-15, also known as the "Flying Shark," a carrier-based fighter jet most likely based on the Soviet-designed Sukhoi Su-33. The Navy carried out tasks including midair refueling, aerial combat and target strikes during aircraft deployment. A helicopter conducted night landing drills and search missions, according to the report. Although the exercises took place in March, they are being made public this week, a day ahead of the first summit between China and the United States. The drills took place near North Korea, a possible sign Beijing is getting its navy ready for any potential instability on the peninsula, South Korean news agency Yonhap reported. The deployment of the Liaoning to the area also coincides with the deployment of the U.S. aircraft carrier USS Carl Vinson to the peninsula during joint training exercises. The Chinese navy said the training was a regular occurrence and part of plans to connect the navy and the air force, and further advance "technical tactical and operational training." (Elizabeth Shin, “Report: China Carried out Naval Drill near North Korea,” UPI, April 5, 2017)

Warning the U.S. could act alone, President Donald Trump has vowed to deliver an ultimatum to Chinese leader Xi Jinping to rein in North Korea when the two men come face-to-face for the first time this week. But Trump's early retreat on Taiwan already has chipped away at his standing with Beijing, and another bluff could leave him looking the way he hates most: Weak. Trump warned this week, "If China is not going to solve North Korea, we will." He didn't elaborate, but his administration is looking at sanctions against Chinese banks and companies that provide North Korea access to the international financial system, a move strongly backed by Congress. And on a recent trip to Asia, Secretary of State Rex Tillerson reminded the region that the U.S. also retains the option of pre-emptive military force. Trump "is making it seem like we are prepared to go to war or use military action ... and I don't think that is going to be viable," said Kurt Campbell, top U.S. diplomat for the region during former President Barack Obama's first term. The devastation could be dramatic. South Korea's capital, Seoul, lies within retaliatory range of North Korean
artillery and missiles. "The key about using leverage in negotiation is that you have to be credible," Campbell said. Of Trump's ultimatum, he said, "I think the Chinese are likely to see through this." In his two-and-a-half-months in office, Trump has backed off on one sensitive issue with China: Taiwan. As president-elect, Trump said he didn't feel "bound" by existing U.S. policy toward the self-governing island that China considers part of its territory, demanding concessions from Beijing in trade and other areas. Within weeks, Trump reaffirmed Washington's commitment to the 4-decade-old "one China" policy, smoothing the way for a February phone call with Xi. Asked if Taiwan was up for negotiation, Thornton said Wednesday: "We have basically moved on from there." Winston Lord, the U.S. ambassador to China under former President Ronald Reagan and top diplomat to the region under former President Bill Clinton, said he assumes Trump isn't bluffing this time. "Trump is right that China is a problem on North Korea and has got to do more. He's right to stir their anxieties on what the U.S. might do unilaterally if they don't act," Lord said. But he said Trump's back-pedaling on Taiwan made him look like a "paper tiger." Dennis Wilder, a China specialist who served under former Presidents George W. Bush and Obama, likened Trump's approach to Obama's before a Xi summit in 2015. Then, the U.S. was threatening sanctions unless China stopped commercial cyberthefts. A bilateral agreement ensued and has had some impact, though the problem persists. Wilder said past U.S. administrations preferred to be toughest with Beijing behind closed doors — something he said Bush did effectively. But he said Trump's more forceful approach may now be necessary. "We have been trying the softly-softly approach on the Chinese for years on North Korea," Wilder said. The Chinese have never gone far enough, as a result, to have "a meaningful impact on the situation," he said. So can Trump succeed where his predecessors have failed? He faces some disadvantages. Beijing has highly skilled negotiators and their position on North Korea is deeply entrenched. Trump's administration, by comparison, is thinly staffed and divided on China, Campbell said. Lord, who participated in historic U.S.-Chinese meetings in the 1970s, said an informal summit with Xi allows for strategy and red lines to be exchanged. But he worried about Trump's knowledge of the issues and ability to negotiate solo. "I think he may end up being too soft," Lord said. (Matthew Pennington, "Trump Presses China on North Korea; Another Bluff Could Hurt Him," Associated Press, April 5, 2017) True to his inimitable style, Trump has been talking — and tweeting — tough on North Korea. He had hinted repeatedly that he would support military action to prevent North Korea from developing an intercontinental ballistic missile capable of reaching the United States. "Well if China is not going to solve North Korea, we will. That is all I am telling you," Trump cryptically told the Financial Times in an interview published this week. Blustering aside, Trump presumably knows that unilateral military action against Pyongyang could start a war with devastating consequences. The calculus hasn’t changed much since 1994, when the Clinton administration considered striking the North Koreans’ main nuclear facility at Yongbyon. South Koreans produced a computer simulation projecting 1 million dead if a war broke out with North Korea. Although all the war games showed North Korea would be quickly defeated, the costs were deemed too high. Trump is also unlikely to follow through on an off-hand suggestion he made at a campaign rally in Atlanta to invite the rotund young leader, Kim Jong Un, out for a hamburger. So that leaves Trump stuck dealing with China. Beijing has been reluctant to enforce United Nations sanctions against North Korea or to shut down North Korean trading companies in China that handle money for the leadership and import weapons. At military parades in Pyongyang, the North Koreans have shamelessly displayed Chinese-made trucks converted into missile launchers. The Bank of China’s Singapore branch was implicated in a criminal case last year in the island city-state in which a shipping company was convicted of helping North Korea import weapons from Cuba. “North Korea has faced very few impediments to establishing front companies in China that do global business busting sanctions,” said William Newcomb, formerly the American representative on the U.N. panel that enforces North Korea’s sanctions. “I suspect the [Chinese] Ministry of State Security knows everything about North Korea’s activities, and the fact that they are allowed to continue is pretty disgraceful.” Going into the meeting Thursday, Trump has the advantage of dealing directly with the only person in China capable of deciding to crack down on the North Koreans. China’s North Korea policy is handled by the Communist Party Central Committee’s secretive International Liaison Department, often bypassing the Foreign Ministry. It is not dissimilar to the way that Trump has taken some foreign policy matters away from the State Department to be handled in the White House by his closest associates, including son-in-law Jared
Kushner. “You have two alpha males who will be in the same room. Trump wants to come out of this meeting with something tangible that he has achieved,” said Jonathan Pollack, a senior fellow at the Brookings Institution in Washington. And for all their differences, he said, “their grievances about North Korea are not wildly dissimilar.” However, the Chinese balk at any measures that could lead to the collapse of North Korea, an important buffer between its borders and U.S.-allied South Korea. And Trump will have more than met his match when negotiating with Xi, analysts say. “Xi obviously has not-insignificant amounts of experience dealing with American leaders. He is going to come in better briefed, more knowledgeable of the history and the record and more prepared to deflect critiques and beseeching by the United States,” said Pollack. Joshua Stanton, a lawyer specializing in North Korea sanctions, said the best leverage that the United States has in the negotiation is to implement so-called “secondary sanctions” against Chinese banks and businesses doing business with North Korea. “What I hope to see out of this meeting is not Trump and Xi coming out shaking hands and smiling. That probably means that Xi has made a promise he has no intention of fulfilling,” said Stanton. “We all know that [Trump’s book is] ‘The Art of the Deal,’ but the Chinese read that book too,” said Scott Snyder of the Council on Foreign Relations. “They are well-positioned to call Trump’s bluff.” However, Trump’s bluster and inexperience dealing with the erratic North Korean regime have unnerved Korea specialists who fear that a chain of misunderstandings could lead to another war on the Korean peninsula. “I don’t like bluffing unless I’m playing for small stakes,” said Robert Gallucci, a professor at Georgetown University who served in the State Department during the 1994 crisis. Gallucci said that any military response, such as trying to strike a missile on a launch pad, would likely be ineffective because North Korean weapons facilities are hidden underground and scattered around the country. “You couldn’t ever, ever assume that the North Koreans would just suck it up, and there are vulnerabilities in the South, which is where they would retaliate,” said Gallucci. “We would be involved in a military engagement, and people would die.” Gallucci believes that the United States must rely on the same strategies of deterrence used during the Cold War. “The Russians had 30,000 nuclear weapons. The North Koreans have 12,” he said. Military analysts disagree on how close North Korea is to being able to launch an ICBM capable of reaching the West Coast of the United States or to mount a nuclear warhead, but most agree it is making rapid progress. “The breakneck pace of North Korean nuclear ballistic missile and nuclear testing in the past few years means that a North Korean missile tipped with a nuclear warhead, capable of reaching our homeland, is no longer a distant hypothetical, but an imminent danger,” Gen. John E. Hyten, commander of the U.S. Strategic Command, told a congressional panel on April 4. (Barbara Demick, “Trump’s Tough Talk on North Korea Will Be Put to the Test in His Meeting with Chinese Leader,” Los Angeles Times, April 6, 2017)

When Trump explored a presidential run back in 1999, he wrote an op-ed in the Wall Street Journal in which he suggested he would bomb North Korea if it didn't end its nuclear weapons program. "I would let Pyongyang know in no uncertain terms that it can either get out of the nuclear arms race or expect a rebuke similar to the one Ronald Reagan delivered to Muammar Gadhafi in 1986," he wrote, referring to the U.S. bombing of Libya under Reagan's administration. Trump followed up those comments with a passage about North Korea in his 2000 book, "The America We Deserve." In the book, Trump called US policy towards North Korea "weak-minded," and explicitly said he would bomb the country's nuclear facilities. "Am I ready to bomb this reactor? You're damned right," Trump wrote. "When the Israelis bombed the Iraqi nuclear reactor they were condemned by the world community. But they did what they had to do to survive. The Korean nuclear capability is a direct threat to the United States. As an experienced negotiator, I can tell you that negotiation with these madmen will be fruitless once they have the ability to lob a nuclear missile into Chicago, Los Angeles, or New York. I don't advocate a thermonuclear war, but if negotiations fail, I advocate a surgical strike against these outlaws before they pose a real threat." In the book, Trump also dismissed concerns about nuclear fallout from the strike. "When I advocated the possibility of a surgical strike against the North Koreans on Meet the Press, moderator Tim Russert asked me about the possibility that nuclear fallout might pollute Asia as a consequence of our taking action. Russert quoted a former secretary of defense saying that a surgical strike was not an option for this reason. After all, Israel attacked a similar facility in Iraq with no fallout. (Within days of the Meet the Press broadcast I had two phone calls
from officers very high up in our military who both assured me— off the record— that such a strike could be successful. Because both men are still on active duty, neither one wants to be identified.)" Throughout the 2000s, Trump would identify North Korea as an area of concern. In January 2003, Trump said on Fox News, "North Korea may be a bigger problem than Iraq." Three years later, Trump told CNN that the US should get out of Iraq, especially with Iran and North Korea developing nuclear weapons. In a 2015 interview with "60 Minutes" Trump was asked about his prior calls for a strike on North Korea's nuclear facilities. "You would drop a bomb on their nuclear reactor?" asked Scott Pelley. "I would do something," Trump responded. "You have to do something about North Korea. Now, what I would do is I would make China respect us because China has extreme control over North Korea." He added, "And if they don't do that, they have to suffer economically because we have the engine that makes China work. You know, without the United States or without China sucking out all our money and our jobs, China would collapse in about two minutes." (Andrew Kaczynski, “Trump Once Said He Would Bomb North Korea’s Nuclear Reactors,” CNN, April 5, 2017)

4/6/17

DPRK FoMin memorandum: “The level of political, military and economic pressure and aggressive schemes of the U.S. against the DPRK is now beyond the danger limit. It is without any hesitancy that heinous acts are committed to insult our supreme dignity. "Special operations" aimed at "getting rid of the headquarters of the north" are in an open preparation in the real stage. The U.S. is now staging military exercises against the DPRK at our doorstep, mobilizing the largest-ever aggression forces and state-of-the art nuclear striking means. They even threw off the deceptive veil as they said the military exercises were of "defensive nature." Not content with this, the U.S. is trying to disturb our socialist construction by imposing the toughest economic sanctions and blockades. Furthermore, it has revealed its open bid to cause economic suffocation against the DPRK. The situation on the Korean peninsula has come to the pass where it is no longer in control due to extreme provocative and aggressive war moves conducted by the U.S., which followed the path of getting worse. If the war sparks off on the Korean peninsula, there will come up with the issue of accounting for war provocation and postwar follow-up. It is against this background that the Ministry of Foreign Affairs (MFA) of the DPRK releases this memorandum in order to lay open the gravity and illegality of the aggressive schemes of the U.S. which is now driving the Korean peninsula situation to the thermonuclear war as well as the justness and legality of the inevitable defensive choice of the DPRK to cope with the U.S. schemes.

1. It is more often than not that the DPRK has already warned the grave aggressive acts would be considered as declaration of war whenever the U.S. and its vassal forces committed grave provocations. It also made it clear that the provokers should be held accountable for all the grave consequences arising from them. Following examples are telltale evidence of all of them.

- The Bush administration, after taking its office, declared as its state policy to negate our system by designating the DPRK as an "axis of evil". It even declared openly nuclear war against the DPRK by putting it as a target of preemptive nuclear strike. (2003.1.10 statement of DPRK government)

- The U.S. is engrossed in mean tricks of smear campaign to tarnish the image of the DPRK system, groundlessly charging it with drug smuggling, counterfeiting of money, suppression of religious freedom, exodus of refugees, human traffic, training of computer hackers and arms sale, etc. At the same time, it is hampering the routine service of DPRK-flagged trading vessels under various pretexts. This hostile act is, in fact, little short of sea blockade against the DPRK. No matter how desperately the U.S. may try to cover up these moves, they are, in the final analysis, acts of scrapping the Armistice Agreement and a declaration of war. In the long run, it is an act of war. (2003.6.18 statement of the MFA spokesman)

- The Bush administration was undisguised in its attempt to seek a "regime change" in those countries including the DPRK which stood independent and are not obedient to what it had dictated upon them by means of preemptive strike while labeling them "outposts of tyranny". The "National Security Strategy Report" announced this time reveals, in a nutshell, the U.S. intention to start a war to prevent nuclear proliferation, "combat terrorism" and "spread democracy." It is, therefore, nothing but a brigandish document declaring a war as it is an indication that the Bush regime will not rule out even a war to bring down those countries which
refuse to follow its ideology and value by branding them as enemies without exception. (2006.3.21 statement of the MFA spokesman)

- The U.S. has become more frantic in its military exercises and arms build-up on the peninsula and in its vicinity for the purpose of launching the second Korean War since it made a de facto "declaration of war" against the DPRK through the recent brigandish adoption of a UNSC resolution. At the same time it is making desperate efforts to internationalize the sanctions and blockade against the DPRK by leaving no dastardly means and methods untried in a foolish attempt to isolate and stifle it economically and bring down the socialist system chosen by its people themselves. The Bush administration has gone the length of making ultimatum that it would punish the DPRK if it refuses to yield to the U.S. within the timetable set by it. (2006.10.3 statement of the MFA)

- The United States instigated the UN Security Council to pass another "resolution" calling for harsh international sanctions and blockade against the DPRK, unreasonably describing its nuclear test for self-defense as a "threat" to international peace and security. The UNSC "resolution," needless to say, cannot be construed otherwise than a declaration of a war against the DPRK. (2006.10.17 statement of the MFA spokesman)

- The United Nations Security Council, at the instigation of the U.S., has finally adopted a "resolution on sanctions" against the DPRK over its second nuclear test. An attempted blockade of any kind by the U.S. and its followers will be regarded as an act of war and met with a decisive military response. (2009.6.13 statement of the MFA)

- Human rights precisely mean the right to independence and the national sovereignty of a relevant country. Therefore, the brigandish "resolution" against the DPRK's genuine human rights means the most undisguised war declaration to infringe upon its sovereignty. (2014.11.23 statement of the DPRK National Defense Commission)

- The Obama administration, too, excluded the DPRK from the list of the "nuclear non-use" in April of 2010, fully revealing its scenario for mounting a preemptive attack on the DPRK. Through this, it has revealed its open bid to launch a nuclear preemptive strike against the DPRK. It continues even now to profess about it. U.S. has staged large-scale joint military drills every year and made practical preparations for a nuclear attack on the DPRK by mobilizing various types of nuclear hardware to be used in the war.

The aggressive nature and danger of this exercises lies in the fact that the U.S. threw off the deceptive mask of "annual" and "defensive" it has veiled so far and is examining the "decapitation raid" aiming our supreme headquarters and the tactics of "high-density strike at our strategic strike means in practice and openly committing reckless provocations like "precision strike drill" to destroy the office room of our supreme headquarters — herein lies the aggressive and dangerous character of the co-military exercise.

There is no country or government in the world which tolerate such challenge of maniacs running amuck to eliminate the headquarters of a sovereign state through special operations. (2016.3.31 statement of the MFA spokesman)

- What's more serious is that various types of offensive operations, including the "decapitation raid" aiming at our supreme headquarters, the "operation for advancing into Pyongyang" and "precision strike drill" aimed to destroy the office of our supreme leadership, have been carried out in actual maneuvers in accordance with "OPLAN-5015." The war rehearsals were the largest-ever maneuvers hostile to the DPRK as it was manifested in the drills that the U.S. scenario and moves to physically eliminate the DPRK reached an extremely dangerous phase. It is tantamount to an open declaration of war against the DPRK that the U.S., kicking off the drills, openly revealed its attempt to mount a preemptive attack on the DPRK after discarding even the spurious mask of "defensive". (2016.4.30 statement of the MFA spokesman)

- The supreme leadership of the DPRK its servicepersons and civilians have safeguarded at the cost of their lives while following with all sincerity represents the dignity and sovereignty of the DPRK and the destiny of the Korean army and people. But the U.S. dared to challenge the dignity of the DPRK supreme leadership, an act reminiscent of a new–born puppy knowing no fear of a tiger. This is the worst hostility and an open declaration of war against the DPRK as it has gone far beyond the confrontation over the "human rights issue".

Now that the U.S. has overstepped "red line" in the showdown with the DPRK by perpetrating such thrice-cursed crime, the DPRK came to have the legitimate rights to take all necessary
countermeasures. (2016.7.7 statement of the MFA)

- The General Staff of the Korean People's Army (KPA) warns the hideous provocateurs as follows with regard to the situation that has reached an extreme phase which should be no longer overlooked:

1. The General Staff declares the KPA's stand to mercilessly smash the enemy's moves with its own style of special operation and preemptive attack, now that the sinister aim of the U.S. imperialists and the south Korean war maniacs "special operation" to hurt the dignity of the DPRK's supreme leadership has become clear and they disclosed even the dangerous attempt at "preemptive attack."

2. They should be mindful that the KPA will deal deadly blows without prior warning any time as long as the operation means and troops of the U.S. and south Korean puppet forces involved in the "special operation" and "preemptive attack" targeting the DPRK remain deployed in and around south Korea.

3. Once the enemy launches the said "operation and strike", they will only bring about a historic event in which the U.S. imperialists will face a miserable doom and the south Korean puppet forces a final ruin. (2017.3.26 warning by spokesman for the KPA General Staff)

Our serious warning goes not to each U.S. administration. It rather goes to U.S. itself. Despite this, the U.S. gets more intensive in its act to run counter to our repeated warning in defiance of them. Provocative remarks viciously picking on our supreme dignity, which are as grave as declaration of the war, are pouring out from the U.S. without hesitation. The U.S. threw off its veil of "defensive nature" used at the time of the past joint military exercises and is now mobilizing the nuclear strategic assets like striking groups of nuclear carrier Carl Vinson and strategic bomber B-1B thus to cause the worst threat of nuclear preemptive strike against the DPRK. Worse still, it does not hide the fact that the scenario of "special operation" being staged by the ill-famed special warfare units is mainly aimed at carrying out the "beheading operation" for "removing the headquarters of the north" and "preemptive attack" operation for blowing up the nuclear and rocket bases.

While cooking up the illegal "sanctions resolutions" and forcing other countries to carry them out, the U.S. is now enforcing separate sanctions to stamp out the DPRK's right to existence and development by all possible means. They are making frantic efforts to isolate and stifle the DPRK as evidenced by the adoption of three "sanctions resolutions" against the DPRK on March 29 alone.

Nuclear threat and blackmail, sanctions and blockade by the U.S. have never stooped even for a day. But it was never waged as of now in its frantic nature. All this means that its moves have gone over the hostile act into a full scale of war.

The present U.S. administration is committing itself to its anti-DPRK campaign in an unprecedented way. Because of this, the Korean peninsula is now in the war situation. It is from this that the DPRK was compelled to put into practice the repeated warning it had so far sent to the U.S. while displaying its maximum restraint.

1. According to universally accepted international laws, the heinous acts of the U.S. and its vassal forces to stifle the DPRK are an apparent act and crime of war.

Code of offences against peace and security of mankind, adopted at the 6th session of the International Law Commission (June 3rd - July 28th, 1954) defined the preparation for use of arms by one state against another state as a crime against peace and security of mankind.

Paragraph 4 of the Article 2 of the UN Charter stated that "All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any State, or in any other manner inconsistent with the Purposes of the United Nations." And Convention on the Rights and Duties of States stated in Article 9 that "Each state has an obligation of refraining itself from the use of war as a means of state policy, stand against territorial integrity and political independence of another state or threat or use of arms through other means inconsistent with international law and order."

The London Treaty on Definition of Aggression as well as the resolution of the 29th session of the UN General Assembly "Definition of Aggression" defined the sanctions entailing blockade of a sovereign State in time of peace as an act of aggression and illegal.

The Article 2 (definition of aggression) of this Treaty stipulated that a State first committing acts, without a declaration of war, such as the attack by its land, naval and air forces on other's
territory, ship or airplane as well as the naval blockade of the other's coast or port is regarded as an aggressor state in terms of international disputes according to the existing convention between disputing parties.

The 58th session of the UN General Assembly adopted resolution to condemn any act of armed aggression or threat or use of force against peoples, their elected Governments or their legitimate leaders.

Paragraph 15, Article II of the Korean Armistice Agreement (KAA) stipulated as follows; "This Armistice Agreement shall apply to all opposing naval forces, which naval forces shall respect the water contiguous to the Demilitarized Zone and to the land area of Korea under the military control of the opposing side, and shall not engage in blockade of any kind of Korea."

However, the U.S. has imposed an ever-intensive blockade on the DPRK — thus scraping off even the paragraph for banning naval blockade, the last one of KAA which had been valid merely for the form's sake.

As seen above, the U.S. is now performing practical acts of aggression and war against the DPRK through extreme military threats and blackmalls and blockade-style sanctions, blatantly violating universally accepted international laws.

3. It is a legitimate right of the DPRK to make a resolute preemptive attack to thoroughly frustrate the moves for imminent and full-phased aggression and war made by the U.S. against the DPRK.

Article 51 "Right of Self-Defense" of the UN Charter and Article 12 of the Declaration on the Rights and Obligations of States clearly stipulated that every state is entitled to the inherent right of individual or collective self-defense.

The Declaration on the Strengthening of International Security, adopted on December 16, 1970, stipulated that "the States must fully respect the sovereignty of other States and the right of peoples to determine their own destinies, free of external intervention, coercion or constraint, especially involving the threat or use of force, overt or covert, and restrain from any attempt aimed at the partial or total disruption of the national unity and territorial integrity of any other State or country."

Article 40 of the Hague Convention on Laws and Customs of War on Land also provided that violation of the armistice by one of the parties gives the other party the right of denouncing it, and even, in cases of urgency, of recommencing hostilities immediately.

The option taken by the DPRK to defend itself from the moves of hostility and war of the U.S. would be a great war of justice to completely remove the bases of aggression and achieve national reunification, the long-cherished desire of the Korean nation.

The DPRK was founded by the general election involving both the north and south of Korea and by the general will of the entire Korean population. Since the south Korean authorities have flatly rejected the DPRK's proposal to found a reunified federal state leaving the ideologies and systems existing in the north and the south intact, the DPRK's great war of justice would be a fair and righteous exercise of the sovereign right of the state to reclaim the territory occupied by foreign forces, and it can never be condemned as "an act of aggression" on any account.

In case a war breaks out in the Korean peninsula, the U.S. will be held totally accountable for it, no matter who launched a preemptive attack, as it has constantly escalated its hostile policy toward the DPRK and drove the situation to the outbreak of war by deploying huge amount of nuclear strategic assets and special warfare means in the Korean peninsula.

The DPRK's mode of attack, once launched, would be the precision strike to destroy only the military bases of the U.S. and its vassal forces targeting the DPRK and the DPRK will abide by the relevant provisions of the Geneva Convention of August 12, 1949, as a signatory to it.

As already declared, the DPRK will also take all responsible measures for protecting the legal economic interests of other countries that they hold in south Korea. The international community should clearly understand the gravity of the situation created in the Korean peninsula by the US moves for aggression and war, and respect the option taken by the DPRK to defend itself.” [No mention of deterrent?] (KCNA, “Memorandum of DPRK Foreign Ministry,” April 6, 2017)

South Korea has recently succeeded in test-firing a homegrown ballistic missile, tentatively dubbed Hyunmu-2C, with a 800-km range, a military source said. It was test-fired at a test site of
Tillerson-McMaster briefing: “Q: What is an overriding message here? Is it that it's not clearly a declaration of war, but is it that for President Trump and his administration the credible threat of military force is back on the table? Was this articulated or explained in any way to President Xi prior to the President's remarks? And do you see this as in any way sending a message more broadly on your policy towards North Korea that the President is willing to take decisive action? And both of you weigh in. TILLERSON: Well, I think as you just simply stated, this clearly indicates the President is willing to take decisive action when called for. And I think in this particular case, the use of prohibited chemical weapons, which violates a number of international norms and violates existing agreements, called for this type of a response, which is a kinetic military response. I would not in any way attempt to extrapolate that to a change in our policy or our posture relative to our military activities in Syria today. There's been no change in that status. But I think it does demonstrate that President Trump is willing to act when governments and actors cross the line, cross the line on violating commitments they've made, and crossed the line in the most heinous of ways. I think it is clear that President Trump has made that statement to the world tonight.” (DoS, Secretary’s Remarks with National Security Adviser McMaster, Palm Beach, April 7, 2017)

The missiles were being prepared even before the two men finished dinner, disrupting the carefully choreographed proceedings. The American attack on Syria unraveled China’s well laid plans for a summit meeting that would present President Xi Jinping as a global leader on par with President Trump, at once stealing the spotlight from Xi and putting him in a difficult position: choosing between condoning the kind of unilateral military action that China has long opposed, or rebuking his host. Xi’s dilemma was also acute because China has generally sided with Russia in defending Syria’s president, Bashar al-Assad, and because it worries that Trump might be prepared to order a similar strike on North Korea, Chinese and Western analysts said. “Xi can’t fail to be impressed by Trump’s resolve,” said Alan Dupont, an Australian military analyst who worked for that country’s Defense Department. “Xi will have to reassess what the Trump presidency means for Chinese interests in East Asia, particularly North Korea and the South China Sea.” The American strikes on Syria would quite likely make Xi be more amenable about the White House’s demand that China squeeze North Korea’s economy, analysts said. “I suspect Xi will treat Trump’s threat against North Korea as more serious than before this, provided the behind-the-scenes-body language does not counteract it,” said Douglas H. Paal, vice president for studies at the Carnegie Endowment for International Peace. Beijing has long been fairly confident that the United States would not risk an attack on North Korea, a much more dangerous target than Syria because of its nuclear arsenal and its capacity to hit Japan and South Korea, two American allies, Chinese analysts said. But China’s leaders are still trying to figure out Trump, and his quick decision to strike Syria may cause them to reconsider that assumption. The first evening between Xi and Trump looked warm and welcoming on Chinese state-run television, with lavish
photographs of them chatting informally on an elegant sofa at Mar-a-Lago. The news shows also broadcast images of the two leaders sitting side by side at a vast dining table set with candelabra, and of Trump’s 5-year-old granddaughter, Arabella, singing in Chinese to Xi and his wife, Peng Liyuan, before dinner. The Chinese reports approvingly noted that the granddaughter did a three-part performance, singing a Chinese song, “Jasmine,” and reciting the “Three Character Classic” and some Tang poetry. Trump accepted Xi’s invitation to visit China at an “early date,” the state-run news agency Xinhua reported, a gesture that showed the two men had established the rapport that the Chinese leader was seeking to show his people at home. Then after dinner, with Xi safely back at his nearby hotel, Trump stepped to a podium to announce the strikes, making comments punctuated with emotional descriptions of the children killed by the Syrian government’s chemical weapons attack. Trump informed Xi of the attack during dinner, Secretary of State Rex W. Tillerson said in remarks to the news media on Friday afternoon. At the Foreign Ministry in Beijing, the spokeswoman, Hua Chunying, noted China’s opposition to the use of chemical weapons and added that it was necessary to seek a political solution in Syria. “It is imperative to prevent the further deterioration of the situation,” she said. China has maintained a longstanding policy opposing unilateral military action. But Trump’s decision to order the strikes at the very moment Xi was visiting inevitably put the focus on North Korea. Despite Trump’s action against Syria in the middle of Xi’s visit, there was not an exact parallel between Syria and North Korea, said Jin Qiangyi, director of the Center for North and South Korea Studies at Yanbian University in Jilin Province, which borders North Korea. Syria does not possess the capacity to hit back after the missile strikes, but North Korea, with its arsenal of weaponry and its nuclear program, does, Jin said. “The North’s nuclear capacity has reached such a level that any unilateral action from the U.S. would be extremely difficult,” he said. “The Americans have been saying a lot recently about attacking North Korea, but it is us who will be suffering from the consequences.” The northeast area of China where Jin teaches has become increasingly fearful of radiation leaks from North Korea’s nuclear operations. An attack by the United States would be “catastrophic for the region,” he said. Another consequence for China of the Syrian attack could be an increase in the disaffection for North Korea among the population, and among those in the government and think tanks that consider the North a strategic liability. Beijing believes that the leader of North Korea, Kim Jong-un, is insurance against a unified Korean Peninsula dominated by the American military. But a quiet debate has grown inside the Chinese government over the wisdom of hanging onto North Korea, an increasingly troublesome ally that functions because of China’s largess.

China supplies North Korea with almost all of the oil needed to keep its bare-bones economy afloat, and 90 percent of North Korean trade passes through China. Some Chinese companies trade with North Korea in contravention of United Nations sanctions. The White House is trying to persuade China that its support for the North is counterproductive, an argument that Trump was prepared to make to Xi during their talks, a senior administration official told reporters before the meeting. The Syrian strike could serve to make that point, but it would not be definitive in changing China’s strategic thinking, said Andrei Lankov, a historian of North Korea who visits China. “Yes, North Korea is a liability for China,” he said. “But in the real world, the status quo is the least unpleasant option.” If the talks with Trump go badly, Xi will be able to use the Syrian airstrikes against the American president by telling the Chinese people that they were the action of a weak leader, some Chinese analysts said. “Trump is frustrated with his own critics,” said Shi Yinhong, professor of international relations at Renmin University. “This airstrike was a defensive measure to deal with criticism against him. The message from Xi to the Chinese public could be: ‘This is Trump, you know he is not so good for China.’” (Jane Perlez, “An Unexpected Change of Subject at an Elegant Diplomatic Dinner,” New York Times, April 8, 2017, p. A-16) Chinese President Xi Jinping asked President Donald Trump for a 100-day grace period to deal with North Korea’s military provocations during their talks in Florida in early April, according to several U.S. and Japanese sources. Trump asked Xi to strengthen economic sanctions against Pyongyang over its repeated ballistic missile and nuclear tests. The U.S. president said that if Beijing did not cooperate, Washington was prepared to implement new sanctions against Chinese companies that have business dealings with North Korea, including several financial institutions, according to the sources. Xi may have asked for the grace period to prevent such U.S. sanctions from making it difficult for the targeted Chinese companies to continue their business transactions with U.S. financial institutions and companies. Sources said Xi indicated to Trump that Beijing would take
stronger action to persuade Pyongyang to halt its military provocations, such as restricting transfers of funds from companies in China to North Korea as well as limiting petroleum exports to North Korea. Both Trump and Xi agreed to implement independent sanctions in the event North Korea went ahead with a major provocation, the sources said. At the summit, Xi and Trump agreed to compile a plan over a 100-day period to correct the trade imbalance between the two nations. The same deadline was apparently used for the national security issue. Although there have been signs of a possible sixth nuclear test, North Korea has not gone ahead with that move. U.S. officials apparently feel that Chinese pressure was behind North Korea’s apparent reluctance to conduct a nuclear test, and some have suggested a shift in U.S. strategy to one emphasizing dialogue. Defense Secretary Jim Mattis, for example, on May 19 expressed a cautious stance toward immediate military action against North Korea. The 100-day grace period asked for by Xi would end around the time the Group of 20 summit is held in Germany in July. (Asahi Shimbun, “Xi Asked Trump for ‘100 Days’ to Deal with North Korea,” May 23, 2017)

The National Security Council has presented President Donald Trump with options to respond to North Korea’s nuclear program — including putting American nukes in South Korea or killing dictator Kim Jong-un, multiple top-ranking intelligence and military officials told NBC News. Both scenarios are part of an accelerated review of North Korea policy prepared in advance of Trump's meeting with Chinese President Xi Jinping this week. The first and most controversial course of action under consideration is placing U.S. nuclear weapons in South Korea. The U.S. withdrew all nuclear weapons from South Korea 25 years ago. Bringing back bombs — likely to Osan Air Base, less than 50 miles south of the capital of Seoul — would mark the first overseas nuclear deployment since the end of the Cold War, an unquestionably provocative move. "We have 20 years of diplomacy and sanctions under our belt that has failed to stop the North Korean program," one senior intelligence official involved in the review told NBC News. "I'm not advocating pre-emptive war, nor do I think that the deployment of nuclear weapons buys more for us than it costs," but he stressed that the U.S. was dealing with a "war today" situation. He doubted that Chinese and American interests coincided closely enough to find a diplomatic solution. "I don't think that [deploying nuclear weapons] is a good idea. I think that it will only inflame the view from Pyongyang," retired Adm. James Stavridis told NBC News. "I don't see any upside to it because the idea that we would use a nuclear weapon even against North Korea is highly unlikely." Two military sources told NBC News that Air Force leadership does not necessarily support putting nuclear weapons in South Korea. As an alternative, it's been practicing long-range strikes with strategic bombers — sending them to the region for exercises and deploying them in Guam and on the peninsula as a show of force. Mark Lippert, the former U.S. ambassador to South Korea, said nuclear deployment there is a concept that's been embraced by a growing number of Koreans. "Some polls put it at well over 50 percent," he said. "It's something that's being debated, and support for it over time, at least at this point, is climbing." Still, he thinks it's a bad idea, undermining the U.S. objective of a nuclear-free zone and "South Korea's moral authority toward denuclearization of the peninsula." Another option is to target and kill North Korean leader Kim Jong-un and other senior leaders in charge of the country's missiles and nuclear weapons and decision-making. Accepting such an objective has huge downsides, said Lippert, who also served as an assistant defense secretary under President Barack Obama. "Discussions of regime change and decapitation...tend to cause the Chinese great pause of concern and tends to have them move in the opposite direction we would like them to move in terms of pressure," he said. Stavridis, a former NATO commander, said that "decapitation is always a tempting strategy when you're faced with a highly unpredictable and highly dangerous leader." "The question you have to ask yourself," he said, "is what happens the day after you decapitate? I think that in North Korea, it's an enormous unknown." A third option is covert action, infiltrating U.S. and South Korean special forces into North Korea to sabotage or take out key infrastructure — for instance, blowing up bridges to block the movement of mobile missiles. The CIA, which would oversee such operations, told NBC News it could offer "no guidance" on this option. But Stavridis said that he felt it was the "best strategy" should the U.S. be forced to take military action. He described such action as: "some combination of special forces with South Korea and cyber." Last year, South Korea announced the creation of a special operations unit called Spartan
The two sides noted the urgency of the threat of North Korea’s weapons program, reaffirmed their commitment to a denuclearized Korean Peninsula, and committed to fully implement U.N. Security Council resolutions. They agreed to increase cooperation and work with the international community to convince the DPRK to peacefully resolve the issue and abandon its illicit weapons programs. The two sides had candid discussions on regional and maritime security. President Trump noted the importance of adherence to international norms in the East and South China Seas and to previous statements on non-militarization. He also noted the importance of protecting human rights and other values deeply held by Americans. The two Presidents agreed to elevate existing bilateral talks to reflect the importance of making progress on issues. They established a new high-level framework for negotiations. The U.S.-China Comprehensive Dialogue will be overseen by the two Presidents, and it will have four pillars: the diplomatic and security dialogue; the comprehensive economic dialogue; the law enforcement and cybersecurity dialogue; and the social and cultures issues dialogue. The two sides agreed to
undertake an ambitious agenda and schedule to show progress and achieve meaningful results. President Trump welcomed President Xi’s invitation to visit China for a state visit at a future date. They agreed to work together in the interim to ensure successful and results-focused visits. … Q. Secretary of State Tillerson, can I ask you about North Korea? Did the President say that he might use trade against China if they do not rein in North Korea? And did you get any specific commitments from China to do something about the North Korea problem? TILLERSON: The Presidents’ discussions — President Trump and President Xi — on North Korea were very wide-ranging, very comprehensive, and more focused entirely on both countries’ previous commitments to denuclearize the peninsula. There was no kind of a package arrangement discussed to resolve this. I think President Xi, from their part, shared the view that this has reached a very serious stage in terms of the advancement of North Korea’s nuclear capabilities. They discussed the challenges that introduces for both countries, but there’s a real commitment that we work together to see if this cannot be resolved in a peaceful way. But in order for that to happen, North Korea’s posture has to change before there’s any basis for dialogue or discussions. President Trump indicated to President Xi that he welcomed any ideas that President Xi and China might have as to other actions we could take and that we would be happy to work with them, but we understand it creates unique problems for them and challenges and that we would, and are, prepared to chart our own course if this is something China is just unable to coordinate with us.” (White House, Office of the Spokesman, Briefing by Secretary Tillerson, Secretary Mnuchin, and Secretary Ross on President Trump's Meetings with President Xi of China, Palm Beach, April 7, 2017)

Trump: “I have a very, very good meeting with President Xi of China. I really liked him. We had a great chemistry, I think. I mean at least I had a great chemistry - maybe he didn't like me, but I think he liked me. We were going to have a 10 or a 15 minute sit-down. It lasted for three hours. Then the next day, it was another schedule, because everything is very orderly with the Chinese, frankly. And we had meetings scheduled. Well, the 15 minutes on the first day lasted for three hours. The 15 minutes on the second day lasted for two hours, just one-on-one, the two of us with interpreters. And I mean we understand each other. I think he's, you know, a person that I got along with really well. We had a good chemistry, yes. BARTIROMO: Did he give you any suggestion that he would help...with North Korea? …TRUMP: The first thing I brought up was North Korea. I said you've got to help us with North Korea, because we can't allow it. And it's not good for you. And you have a tremendous power because of trade. Now, he then explains thousands of years of history with Korea. Not that easy. In other words, not as simple as people would think. They've had tremendous conflict with Korea over the years. Now, his father was in China four times. He was never in China. So I said, look, you have a tremendous power because of trading through the border. If they don't get food, they don't get, you know, they can't sell their coal. In fact, I hear today two massive coal ships from North Korea were sent back to North Korea, heading to China. They were sent back, which is a very good sign. But I think China can help us. I hope China can help us. We talked about trade and I can tell you, China will do much better on trade if they help us with North Korea. BARTIROMO: And you think he knows that? TRUMP: I think he knows that. I told him that, yes. BARTIROMO: When you were with the president of China, you're launching these military strikes. TRUMP: Yes. BARTIROMO: Was that planned? How did that come about that it's happening right then, because right there, you're saying a reminder, here's who the superpower in the world is, right? TRUMP: You have no idea how many people want to hear the answer to this. I have had - I have watched speculation for three days now on what that was like (INAUDIBLE). … But I will tell you, only because you've treated me so good for so long, I have to (INAUDIBLE) right? I was sitting at the table. We had finished dinner. We're now having dessert. And we had the most beautiful piece of chocolate cake that you've ever seen and President Xi was enjoying it. And I was given the message from the generals that the ships are locked and loaded, what do you do? And we made a determination to do it, so the missiles were on the way. And I said, Mr. President, let me explain something to you. This was during dessert. We've just fired 59 missiles, all of which hit, by the way, unbelievable, from, you know, hundreds of miles away, all of which hit, amazing. BARTIROMO: Unmanned? Brilliant. TRUMP: It's so incredible. It's brilliant. It's genius. Our technology, our equipment, is
DPRK FoMin spokesman: “The Trump administration on April 7 mounted a massive missile attack on an air-force base of the Syrian government army under the pretext that it killed civilians by using chemical weapons ... an act of aggression on a sovereign state that can never be tolerated. Through the recent U.S. military attack on Syria, the world clearly sees who is disturber and wrecker of peace. ... The successive U.S. administrations have perpetrated strikes at those countries which do not have nukes only, styling themselves a superpower and the same is true of the Trump administration. Some forces are loud-mouthed that the recent U.S. military attack on Syria is an action of "warning" to the DPRK, but the latter is not frightened at such threat. What happened in Syria once again taught a bitter lesson that no one should have an illusion about the imperialists and one can defend oneself from the imperialist aggression only when one has one's strength. Our tremendous military muscle with a nuclear force as its pivot serves as a treasured sword of justice for foiling the U.S. shameless high-handed and arbitrary practices and aggression moves and protecting the sovereignty of the country and the right of the nation to existence. The reality today goes to prove that any aggression should be countered with force only and that the DPRK's choice is entirely just as it has bolstered up its nuclear force remarkably. The DPRK will increase in every way its military capability for self-defense to cope with the U.S. evermore reckless moves for a war and will defend itself with its own force.” (KCNA, “U.S. Missile Strike on Syria Unpardonable: DPRK FM Spokesman,” April 8, 2017)

Adm. Harry B. Harris Jr., the head of the military’s Pacific Command, diverted the aircraft carrier Carl Vinson and its wing of fighter jets from a planned series of exercises and port calls in Australia, the command said in a statement. The Vinson and three guided-missile destroyers and cruisers steamed out of Singapore on Saturday for their new mission in the Western Pacific. Asked why the Navy ships were being redirected toward the Korean Peninsula, the president’s national security adviser, Lt. Gen. H. R. McMaster, said it was a “prudent” step to take. “North Korea has been engaged in a pattern of provocative behavior,” General McMaster said on “Fox News Sunday.” “This is a rogue regime that is now a nuclear-capable regime. The president has asked to be prepared to give him a full range of options to remove that threat to the American people and to our allies and partners in the region.” Military and intelligence officials said the timing of the ship movements was also intended to anticipate a milestone event coming up on the Korean Peninsula: the anniversary on Saturday of the birth of Kim Il-sung, North Korea’s founder and the grandfather of the country’s current leader, Kim Jong-un. North Korea has a history of testing missiles and generally taking provocative actions during such events. Administration officials said...
the strike by 59 cruise missiles on Syria might have strengthened Trump’s hand as he called on the Chinese to put more pressure on North Korea. Although officials noted that North Korea poses a different and in some ways more daunting, challenges than Syria, the parallel of a rogue government that possesses weapons of mass destruction was not lost on the Chinese. Xi told Trump during their meetings at Mar-a-Lago that he agreed that the threat posed by North Korea had reached a “very serious stage,” Secretary of State Rex W. Tillerson said. Speaking on ABC’s “This Week,” Tillerson expanded on what the rest of the world should take away from the missile strikes in Syria: “The message that any nation can take is if you violate international norms, if you violate international agreements, if you fail to live up to commitments, if you become a threat to others, at some point, a response is likely to be undertaken.” Tillerson continued: “In terms of North Korea, we have been very clear that our objective is a denuclearized Korean Peninsula. We have no objective to change the regime in North Korea; that is not our objective.” Asked how close North Korea was to developing a weapon that could reach the United States, Tillerson said on ABC: “The assessments are, obviously, somewhat difficult, but clearly, he has made significant advancements in delivery systems. And that is what concerns us the most.” Tillerson added: “The sophistication around their rocket launch programs, their sophistication around the type of fueling that they use, and they’re working their way towards the test of an intercontinental ballistic missile. And these are the kinds of progress that give us the greatest concerns.” In the meetings between Xi and Trump, the Chinese made no new offers about how to deal with Kim’s government, according to an American official. (Eric Schmitt, “U.S. Reroutes Aircraft Carrier and Missile Ships toward North Korea,” New York Times, April 10, 2017, p. A-11)

National Security Advisor H.R. McMaster said that President Donald Trump has ordered him to prepare “a full range of options” to the nuclear and missile threats North Korea poses to the U.S. and its allies. McMaster also said on "Fox News Sunday" that it was a "prudent" decision to send the San Diego-based USS Carl Vinson strike group toward the Korean Peninsula, a move designed to warn Pyongyang against additional provocations. "North Korea has been engaged in a pattern of provocative behavior. This is a rogue regime that is now a nuclear capable regime, and (Chinese) President Xi (Jinping) and President Trump agreed that that is unacceptable, that what must happen is the denuclearization of the Korean Peninsula," McMaster said. "And so, the president has asked us to be prepared to give him a full range of options to remove that threat to the American people and to our allies and partners in the region," he said. During their first summit talks April 7, Trump and Xi noted the urgency of the threat of the North's weapons program and agreed to increase cooperation to convince the North to abandon its illicit weapons programs, according to the White House. Secretary of State Rex Tillerson also said that the two sides are committed to working together to resolve the standoff in a peaceful manner, but "in order for that to happen, North Korea's posture has to change before there's any basis for dialogue or discussions." The top American diplomat also said that the U.S. is prepared to chart "our own course if this is something China is just unable to coordinate with us," echoing Trump's repeated warning that the U.S. will take on the North on its own unless China helps rein in the North. (Yonhap, “McMaster: Trump Orders ‘Full Range of Options’ on N. Korea,” April 9, 2017) "I think even China is beginning to recognize that this presents a threat to even China's interests," Tillerson said during an interview on CBS' "Face the Nation." He was asked about how North Korea was discussed during last week's summit between President Donald Trump and Chinese President Xi Jinping. "President Xi clearly understands, and I think agrees, that the situation has intensified and has reached a certain level of threat that action has to be taken," Tillerson said. Tillerson did not offer specifics on what those actions might be. Despite Tillerson's assessment, China hasn't signaled any change in its approach to Pyongyang in the wake of the landmark summit. China's Ministry of Foreign Affairs didn't mention North Korea in two statements it released after the two leaders met, and on April 10 ministry spokeswoman Hua Chunying stuck to Beijing's usual script. "China's position on the Korean Peninsula issue has been consistent," she said. "During the China-US presidential summit at Mar-a-Lago, both sides said they were committed to the goal of denuclearizing the peninsula, would continue to comprehensively carry out UN Security Council resolutions related to North Korea, and agreed to keep close communication and coordination on the issue." Earlier this year, China called on both North Korea
and the US to ease tensions on the Korean Peninsula — Pyongyang by suspending its nuclear weapon and missile program and Washington by stopping military exercises with South Korea that antagonize Pyongyang. Hua reiterated this approach at her briefing. South Korea and China also agreed to take measures against North Korea if the country were to carry out another nuclear test or launch an intercontinental ballistic missile. "Both sides agreed that despite the international community's warning if North Korea makes strategic provocations such as a nuclear test or an ICBM launch, there should be strong additional measures in accordance with UN Security Council resolutions," said Kim Hong-kyun, South Korea’s special representative for Korean Peninsula peace and security affairs. (Brad Lendon and Steven Jiang, “U.S., China Agree on North Korea Nuclear Threat,” CNN, April 10, 2017) President Trump’s deployment of an aircraft carrier to the waters off the Korean Peninsula has raised tensions across East Asia. But the show of American force conceals a lack of better options for dealing with the provocations of the rogue government in North Korea. China’s president, Xi Jinping, did not make any public commitment to tighten the pressure on North Korea during his meeting in Palm Beach, Fla., last week with President Trump. Even privately, officials said, he was circumspect. And an attack on North Korea carries far greater risk than the missile strike that Trump ordered last week to punish President Bashar al-Assad of Syria for his deadly chemical weapons attack. That leaves the White House in a bind on a security issue that Trump has described as the most pressing of his presidency. Trump warned before the meeting with Xi that the United States would act alone against North Korea if China did not join his pressure campaign. A senior administration official expressed hope that the productive tone of the meeting would eventually lead to further Chinese actions. But Trump’s missile strike, which came while he and Xi were having dinner, could play both ways: Administration officials said it would convince the Chinese leader of Mr. Trump’s resolve, while some experts said it would reinforce fears in Beijing that he is erratic and unpredictable. Flexing America’s military muscle alone is not likely to deter North Korea’s dictator, Kim Jong-un, from testing nuclear bombs and ballistic missiles. Former President Barack Obama ordered the aircraft carrier George Washington into the Yellow Sea twice to intimidate Kim’s father, Kim Jong-il, without persuading him to change his behavior. “This is déjà vu all over again,” said Jeffrey A. Bader, who advised Mr. Obama on China. “They’ve signaled a new approach, but they’re discovering that the new approaches are not particularly attractive.” The White House is likely to pursue so-called secondary sanctions, which target Chinese firms and banks that help North Korea earn foreign currency and finance its weapons programs. The question is whether the Chinese government will cooperate with the effort, and if it does not, whether Trump will impose the sanctions unilaterally, even at the risk of rupturing the relationship between Washington and Beijing. On April 9, Secretary of State Rex W. Tillerson said Xi agreed with Trump that “the situation has intensified and has reached a certain level of threat that action has to be taken.” There is also evidence of a tougher line toward North Korea among the Chinese elite, Bader said, though it has not yet filtered into the government’s policy. China has taken modest steps to increase the pressure. It agreed with South Korea on April 10 to impose tougher sanctions on North Korea if it carries out nuclear or intercontinental ballistic missile tests, a senior South Korean diplomat said. The announcement seemed intended to dissuade North Korea from conducting a test to mark a national holiday this week. Wu Dawei, the top Chinese envoy for international efforts to end North Korea’s nuclear weapons program, met with his South Korean counterpart, Kim Hong-kyun, in Seoul, the South’s capital, to discuss what to do about the North’s advancing nuclear and missile programs. Kim said he and Wu did not discuss a possible American military strike against North Korea. Analysts and officials in South Korea fear that a pre-emptive military attack against North Korea — even one limited to taking out nuclear and missile bases — could set off a catastrophic retaliation and a full-scale war. Seoul lies within range of North Korean artillery and rockets amassed along the border. Military planners in the Pentagon share those fears. “While the military is very focused on maintaining a strong deterrence posture on the peninsula, it is acutely aware of the dangers of escalation,” said Derek H. Chollet, a former assistant secretary of defense for international security affairs. The risk of escalation in Syria was lower, Chollet said, because Assad is weaker than Kim and there was less concern about Syria’s stockpile of weapons of mass destruction falling into the wrong hands. “A nuclear-armed North Korea is a different story,” he said. In South Korea, the prospect of a pre-emptive strike has long been dismissed as unrealistic. But “under President Trump, we are afraid that that may not necessarily be so anymore,” said Cheong Seong-chang, an
China and South Korea agreed to slap tougher sanctions on North Korea if it carries out nuclear or long-range missile tests, a senior official in Seoul said, as a U.S. Navy strike group headed to the region in a show of force. However, South Korea’s chief nuclear envoy Kim Hong-kyun said there was no mention of any military option in his talks with China’s Special Representative for Korean Peninsula Affairs, Wu Dawei. The two also did not discuss any possible strike against the North by the Trump administration, he said. “Both sides agreed that despite the international community’s warnings, if North Korea makes strategic provocations such as a nuclear test or an ICBM launch, there should be strong additional measures in accordance with U.N. Security Council resolutions,” Kim told reporters. Kim added the two sides agreed “an even stronger U.N. resolution” will have to be adopted in the event of additional weapons test by North Korea. Wu did not speak to reporters. In Tokyo, the feasibility of U.S. military action was downplayed, while South Korea said the focus remained on deterrence and readiness. “It probably is not realistic for the U.S. to attack North Korea,” a Japanese defense ministry source said. “If America says it is going to attack, both Japan and South Korea will probably put a stop to it,” said the source, who declined to be identified. A senior Japanese military source added: “If the U.S. military was to attack, there could be a request to Japan for rear-guard logistics support but there has been no talk of such preparations.” (Ju-Min Park and Nobuhiro Kubo, “China, South Korea Discuss More Sanctions on North Korea amid Talk of Trump Action,” Reuters, April 10, 2017)

President Trump, frustrated by China’s inaction on North Korea, opened the door to concessions on his trade agenda with Beijing in exchange for greater Chinese support in pressuring Pyongyang. In doing so, he lashed together two sharply different issues in an already complex relationship. “I explained to the President of China that a trade deal with the U.S. will be far better for them if they solve the North Korean problem!” Trump declared in a morning Twitter post. Minutes later, he warned: “North Korea is looking for trouble. If China decides to help, that would be great. If not, we will solve the problem without them! U.S.A.” Trump’s threat rattled nerves in South Korea, where the government reassured the public that the United States would not launch an attack without first consulting Seoul. But the American president’s suggestion of a grand bargain with Beijing crystallized his quandary in dealing with North Korea. Only China, with its vast economic leverage over its reclusive neighbor, can realistically force a change in the behavior of North Korea’s dictator, Kim Jong-un. Yet despite its own rising frustration with Kim, the Chinese government has so far been unwilling to tighten the vise on him. President Xi Jinping of China did not offer Trump any public commitments on North Korea or trade when they held their first meeting last week at Mar-a-Lago. Even in private conversations, officials said, the Chinese
leader was noncommittal. Several former American officials said China was again unlikely to respond as Trump now wants. “He’s clearly groping for leverage over China,” said Evan S. Medeiros, a former top China adviser to President Barack Obama who is now head of Asia research at Eurasia Group. But Medeiros added: “Linking such distinct issues seldom works because each involves different actors and different interests in each system. Linkage can also be counterproductive by reinforcing China’s worst instincts.” Administration officials said they hoped Trump’s meeting with Xi would lead to further Chinese pressure on North Korea. Their meeting was punctuated by the missile strike on a Syrian airfield, which the officials said sent a message of resolve about Trump’s readiness to use force to defend American interests. “The last thing we want to see is a nuclear North Korea that threatens the coast of the United States, or, for that matter, any other country,” the White House press secretary, Sean Spicer, said Tuesday. “We need stability in that region, and I think he has put them on notice.” Trump ordered a Navy carrier strike group into the waters off the Korean Peninsula in a show of force that previous presidents have used, but which fanned regional fears that the United States would consider a pre-emptive military strike on North Korea. With anxiety and rumormongering rife among South Koreans, officials in Seoul said the United States would never attack the North without first consulting the South Korean government. “The United States makes it clear that it will not take a new policy or measure without consultations with us,” Cho June-hyuck, a spokesman of the South Korean Foreign Ministry, said. Moon Jae-in, a leader of the main opposition Democratic Party, issued his own warning against the possibility of an American pre-emptive strike carried out unilaterally. “The safety of South Korea is as important as that of the United States,” he said in a Facebook post. “There should never be a pre-emptive strike without South Korean consent.” Moon is vying with another opposition leader, Ahn Cheol-soo, for the May 9 election to choose the successor to former President Park Geun-hye. “Neighboring countries are taking advantage of the absence of a president in South Korea to try to exclude us and handle issues on the Korean Peninsula according to their own understanding,” Mr. Moon said, without blaming the Trump administration by name. Still, Trump’s explicit linkage of North Korea and trade suggested that the president was more likely to seek a deal with China than to proceed unilaterally. Under pressure from the United States on trade, China proposed a 100-day plan during the summit meeting that would overhaul the trade relationship between the countries. In his first concrete move on trade with China, Trump is preparing an executive order in coming weeks targeting countries that dump steel into the American market, a measure that would be aimed mainly at Beijing. But it is not yet clear which side has the initiative in the evolving debate over trade. During his meeting with Xi, administration officials said, Trump warned that China needed to address its yawning trade imbalance with the United States immediately. But the Chinese did not bring any trade-related gestures to the meeting, as many experts expected. Instead, they countered with the 100-day plan. While Trump embraced the idea, the commerce secretary, Wilbur L. Ross, noted that the plan would have “way stations” to measure progress, suggesting the White House was not willing to wait the full 100 days for results. Spicer said that deploying a carrier strike force to the region would act as a deterrent, as well as give the president more options. For Trump, however, an attack on North Korea would be a far riskier undertaking than the strike on Syria, given the North’s nuclear arsenal, fleet of missiles and proximity to huge population centers in South Korea. It is also clear that North Korea has no intention of forsaking nuclear arms. Top officials gathered in Pyongyang on Tuesday, the fifth anniversary of Kim’s election as leader of the ruling Workers’ Party, and vowed to uphold his policy of strengthening the North’s nuclear arsenal. Also, Ri Su-yong, a Politburo member, former foreign minister and adviser and childhood mentor to Mr. Kim, was given another powerful position in Parliament. Last year, Ri, 82, told Chinese officials that North Korea’s nuclear weapons expansion was “permanent.” (Mark Landler, “Trump Sees China in Arbiter's Role,” New York Times, April 12, 2017, p. A-1)

Defense Secretary Jim Mattis said the U.S. aircraft carrier Carl Vinson is traveling toward the Korean Peninsula “because that’s where we thought it was most prudent to have her at this time.” Mattis, however, said at a news conference that the Pentagon does not see "a specific demand signal or specific reason" for sending the carrier and several other warships toward the peninsula. (Kyodo, “Trump Says U.S. Ready to Solve N. Korea Issue without China,” April 11, 2017)
South Korea's leading presidential candidate Moon Jae-in said that he doesn't think the United States will preemptively strike North Korea, insisting Washington must first consult with Seoul before taking any such action. "The United States is talking about a preemptive strike as one of the available options, but I do not believe it will actually happen," Moon said in a press conference in Ulsan, 410 kilometers southeast of Seoul. The presidential front-runner insisted the U.S. was only trying to bring Pyongyang back to the dialogue table. "However, it could lead to an undesirable and unfortunate outcome should such talk of conflict be repeated and the United States and China's show of force continue," he said. Moon's remarks came after the U.S. sent a nuclear-powered aircraft carrier, USS Carl Vinson, to waters near the Korean Peninsula in an apparent warning against North Korea over its possible nuclear test. "No matter what decision the United States makes, we own issues that are related to the Korean Peninsula, and we are the concerned party in the North Korean nuclear issue," Moon told the press briefing. "No matter what decision the United States makes, it must first thoroughly discuss its move with South Korea in advance," he added. (Yonhap, “Moon Says He Doesn’t Think U.S. Will Preemptively Strike N. Korea,” April 11, 2017)

Japan has asked the United States to consult with it prior to any military action U.S. forces might take against North Korea, and the U.S. government has indicated its intention to accept the request, a source in the Japanese government said April 12. A high-ranking Japanese government official said: “If [the United States] undertakes military action, we have asked them to offer prior consultation. The U.S. side understands this.” If the United States attacks North Korea, it is possible that Japan will be targeted by North Korea in retaliation. Thus the Japanese government judged it necessary to get the United States’ commitment that it will give consideration to Japan in its decision making. The Japanese government has repeatedly asked the U.S. government to coordinate their North Korea policies. As part of these efforts, Japan has asked the United States to offer prior consultation if Washington takes a step toward military action. (Yomiuri Shimbun, “Japan Seeks U.S. Notice on N. Korea,” April 12, 2017)

The Russian foreign ministry, in a statement ahead of Secretary of State Rex Tillerson’s visit, said it was concerned about many aspects of U.S. foreign policy, including on Libya, Yemen and Syria, but said it was particularly concerned about North Korea. "We are really worried about what Washington has in mind for North Korea after it hinted at the possibility of a unilateral military scenario," the statement said. "It's important to understand how that would tally with collective obligations on de-nuclearizing the Korean peninsula, something that is underpinned in U.N. Security Council resolutions." (Andrew Osborn, “Russia, Ahead of Tillerson’s Visit Says Worried U.S.A. May Attack North Korea,” April 11, 2017)

North Korea appears to have a placed a device in a tunnel at its nuclear test site that could be detonated April 15 or even sooner, U.S. government and other sources said. "U.S. intelligence is always on alert for a possible North Korean weapons test," a U.S. intelligence official told VOA. "Kim Jong Un wants his country to be validated as a nuclear power and a test would further that goal." North Korea on Saturday will observe the "Day of the Sun," marking the 105th birth anniversary of its founder, Kim Il Sung. The nuclear test facility is "primed and ready" for what would be North Korea's sixth nuclear test, according to an analysis by Joseph Bermudez Jr. and Jack Liu at 38 North. South Korea has no indications a military provocation by the North is imminent, Joint Chiefs of Staff spokesman Roh Jae-chun told reporters in Seoul on Thursday morning. (Steve Herman, “N. Korea Nuclear Test Could Come Saturday or Sooner, Sources Say,” Voice of America, April 13, 2017)

Chinese President Xi Jinping urged President Trump to find a peaceful solution to the crisis on the Korean Peninsula during a telephone call between the two leaders early today, state media reported. The phone call comes just four days after the pair held face-to-face talks in Florida and hours after Trump tweeted that North Korea was “looking for trouble,” and the United States would “solve the problem” with or without China’s help. “Xi Jinping stressed that China insists on realizing the goal of denuclearization of the peninsula, insists on maintaining peace and stability
on the peninsula, advocates resolving the problem through peaceful means and is willing to maintain communication and coordination with the U.S. side on the issue of the peninsula,” People’s Daily wrote. In a sign of its own growing discomfort at being caught in the middle, China’s Foreign Ministry also weighed in soon after. “It is irresponsible and even dangerous to take any actions that may escalate the tension,” spokesman Lu Kang told a regular news conference. “All relevant parties should exercise restraint and keep calm, ease the tension instead of provoking each other and adding fuel to the fire.” Lu said Xi had placed the telephone call, at Trump’s request. The Pentagon sent a Navy strike group led by the USS Carl Vinson aircraft carrier toward the Korean Peninsula over the weekend to “maintain readiness” amid concerns the regime in Pyongyang could be preparing for more missile launches and a possible sixth nuclear test. The Carl Vinson is accompanied by a carrier air wing, a guided-missile cruiser and two destroyers, which Trump described as “an armada, very powerful,” to Fox Business Network. “We have submarines. Very powerful. Far more powerful than the aircraft carrier. That I can tell you,” Trump said. According to Chinese state media, Xi said he and Trump had “enhanced mutual understanding,” and established a good working relationship. On Syria, Xi said “any uses of chemical weapons are unacceptable,” and also urged for a political settlement, as well as “solidarity” and unanimity at the United Nations Security Council. Foreign ministry spokesman Lu said Xi had made the phone call. But Lv Chao, a North Korean studies expert at Liaoning Academy of Social Sciences, said the situation on the Korean Peninsula appeared to top the agenda, warning that it had become a “very serious standoff” after the U.S. carrier had entered nearby waters. “The concerned parties should really signal red lights and hit the brake to defuse the situation,” Lu said. “Otherwise, it would be very easy for this to accidentally turn into a conflict. Though it’s very unlikely to have a full-scale war on the peninsula, it’s still very dangerous.” With typical bravado, Pyongyang has also raised the stakes by warning that it could “hit the U.S. first” with nuclear weapons. “Our military is keeping an eye on the movement of enemy forces while putting them in our nuclear sights,” declared Rodong Sinmun, adding North Korea will use its “mighty nuclear weapons” to “obliterate” the United States. While China continues to call for dialogue and a peaceful settlement to the crisis, there is no doubt it has become steadily more impatient with North Korea. Two days ago, a senior South Korean official said China had agreed to slap tougher sanctions on North Korea, through a stronger U.N. resolution, if it carries out nuclear or long-range missile tests. U.S. officials have stressed that stronger sanctions are likely to come first, but that military options are not off the table. But experts say a military strike by the United States remains unlikely, partly because it is not clear where to strike, and partly because North Korea would probably respond with a devastating attack on the South Korean capital Seoul. That won’t stop both sides from saber-rattling, though. In another show of force, Japan’s navy plans to dispatch several destroyers to conduct joint military drills with the USS Carl Vinson as it enters the East China Sea, Reuters reported, citing two sources. China says it has suspended coal imports from North Korea to comply with U.N. resolutions, but also urges a resumption of talks to find a peaceful settlement. It will not support any action that undermines or could topple the regime in Pyongyang. Nevertheless, its frustration with North Korea is increasingly evident. Yesterday, Global Times urged Pyongyang to stop its nuclear and missile program for its own security, arguing that a sixth nuclear test or intercontinental ballistic missile test would be seen as a “slap in the face” of the U.S. government and increase the chances of U.S. military action. “Not only is Washington brimming with confidence and arrogance following the missile attacks on Syria, but Trump is also willing to be regarded as a man who honors his promises,” the paper wrote. “The U.S. is making up its mind to stop the North from conducting further nuclear tests. It doesn’t plan to coexist with a nuclear-armed Pyongyang,” it said. “Pyongyang should avoid making mistakes at this time.” Global Times editorials do not represent official government policy, but they do often reflect a strain of thinking within the Communist Party. The paper also said China would seek stronger action by the Security Council if North Korea continued to conduct tests. “If the North makes another provocative move this month, Chinese society will be willing to see the UNSC adopt severe restrictive measures that have never been seen before, such as restricting oil imports to the North,” the paper said, warning that the regime’s “gamble” could backfire. “Pyongyang’s nuclear weapons program is intended for securing the regime, however, it is reaching a tipping point.” (Simon Denyer, “China’s Xi Calls Trump, Urges Peaceful Approach to North Korea,” Washington Post, April 12, 2017) China’s
leader, Xi Jinping, and President Trump spoke by phone about the escalating tensions with North Korea as a prominent Chinese state-run newspaper warned the North that it faced a cutoff of vital oil supplies if it dared test a nuclear weapon. The phone call, reported by CCTV, came hours after Trump cautioned Beijing in a Twitter message and a television interview that it needed to help Washington rein in North Korea, a Chinese ally. During the call, which was initiated by Trump, Xi said that the matter should be solved through peaceful means, the state news agency Xinhua reported. In an unusually strong editorial, Global Times said Beijing would support stiffer United Nations sanctions, including “strictly limiting” oil exports to North Korea should it conduct a nuclear test. The editorial, indicating nervousness about what the North might do on April 15, said that the peninsula was the closest to “military clashes” since 2006. “China, too, can no longer stand the continuous escalation of the North Korean nuclear issue at its doorstep,” the editorial said. “Instead of accepting a situation that continues to worsen, putting an end to this is more in line with the wish of the Chinese public.” The newspaper called on Pyongyang to avoid a “head-on collision” with Trump by suspending its provocative activities. If the government made “a huge mistake, it may be difficult to have another chance to correct its strategy,” it said. Global Times also wrote, “Not only is Washington brimming with confidence and arrogance following the missile attacks on Syria, but Trump is also willing to be regarded as a man who honors his promises,” Global Times wrote. The CCTV account of the call did not mention new actions China might take against North Korea. But the two leaders most likely had a substantive conversation about addressing the situation, a Chinese expert on North Korea said. “We don’t know the real content of the conversation,” said Cheng Xiaochu, an associate professor of international relations at Renmin University. “China used to be in a passive mode. China’s policies towards North Korea are becoming increasingly proactive.” (Jane Perlez, “Xi and Trump Discuss Rising Korean Tensions,” New York Times, April 13, 2017, p. A-8)

China is not obliged to help defend North Korea from military attack if the reclusive state developed nuclear weapons, according to Chinese diplomatic and military observers. The assessment comes as senior officials in Washington warn of a strike against the Pyongyang regime. China and North Korea signed a mutual aid and cooperation treaty in 1961 as they sought to mount a united front against Western powers. It specifies that if one of the parties comes under armed attack, the other should render immediate assistance, including military support. But the treaty also says both nations should safeguard peace and security. For China, North Korea’s development of nuclear weapons in violation of the United Nations treaty on non-proliferation could amount to a breach of their pact, leaving Beijing with no obligation to lend a hand, observers said. China could also have a get-out clause if any US military intervention was not deemed an armed attack. “It’s hard to say how China would assist North Korea militarily in case of war, since North Korea is developing nuclear weapons, an act that might have already breached the treaty between the two nations,” said Li Jie, a retired Chinese naval colonel. Shanghai-based military analyst Ni Lexiong said China would need to provide military assistance to North Korea if US land forces invaded, but Pyongyang’s violation of the UN non-proliferation treaty was a “strong reason” for Beijing to choose not to help. (Kristin Huang, “China’s Nuclear Get-Out Clause over Defense of North Korea,” South China Morning Post, April 13, 2017)

South Korea’s leading presidential candidates were united Thursday in opposing an armed clash on the Korean Peninsula as tensions escalated over a possible U.S. strike on North Korea. During their first TV debate, the five contenders explained what they would do if North Korea carries out a major provocation, such as a nuclear test, and the United States responds with a threat to strike the communist country. Moon Jae-in, the front-runner and nominee of the liberal Democratic Party, said he would first call U.S. President Donald Trump to make it clear he must not carry out a pre-emptive strike without South Korea’s consent. Then he said he would order a state of emergency and urge Pyongyang through various channels to stop all provocations that could trigger a pre-emptive strike by the U.S. Ahn Cheol-soo of the center-left People’s Party said his first step would be to make phone calls to the leaders of the U.S. and China. He said he would tell Trump that there can be no war and ask Chinese President Xi Jinping to put pressure on Pyongyang to halt its reckless behavior. After that, the former software mogul vowed to issue a
statement urging the North to immediately stop its actions. Hong Joon-pyo of the conservative Liberty Korea Party also underscored the importance of first preventing a pre-emptive strike through talks with Washington and Beijing. If the U.S. goes ahead anyway, Hong said he would put the armed forces on emergency alert and prepare for battle. Yoo Seong-min of the splinter conservative Bareun Party stressed the importance of close coordination with the U.S. to ensure any strike on the North is carried out by consensus after thorough military preparations. He said a pre-emptive strike would be a preventive, self-defense measure in the event of an imminent threat of attack from the North. Meanwhile, Sim Sang-jeung of the minor progressive Justice Party said she would first give a special address as president and then hold talks by phone with the U.S. and Chinese leaders. And if necessary, she would dispatch a special envoy to make a case for the principle of keeping peace on the peninsula, she said. (Yonhap, “Presidential Candidates Voice Opposition to War with N. Korea,” April 13, 2017)

North Korea might already possess the ability to strike Japan using ballistic missiles armed with deadly chemical weapons like sarin, Prime Minister Abe Shinzo warned the security committee of the Upper House when asked about a proposal by his ruling Liberal Democratic Party to have Japan pursue the capability to directly attack North Korean military bases. Abe emphasized that Tokyo has no plan to acquire such powerful weapons and would never launch a pre-emptive strike against any country. But the government at the same time should conduct “various studies” for defense and strengthen the Japan-U.S. military alliance, Abe said. “It’s possible that North Korea has the ability to hit (Japan) with a ballistic missile carrying sarin in its warhead,” he said. He also noted that “nearly 100 innocent people, including children and babies, were victimized” by chemical weapons in Syria. “We need to squarely look at a reality like that, and firmly maintain the deterrence power to not let such things happen” to Japan, Abe said. The South Korean Defense Ministry has estimated that Pyongyang, which reportedly started producing chemical weapons in the 1980s, now owns 2,500 to 5,000 tons of chemical weapons, including the lethal nerve agents sarin and VX. At a news conference later in the day, Chief Cabinet Secretary Suga Yoshihide said Tokyo believes North Korea has “multiple numbers of plants” producing chemical weapons and possess “considerable amount” of them. (Yoshida Reiji, “North Korea May Have Sarin-Tipped Missiles, Abe says,” Japan Times, April 13, 2017)

Despite ongoing concerns that Washington may ultimately resort to military action, U.S. President Trump, the self-styled deal-maker, let on he will use trade as a bargaining chip with China as an incentive to put pressure on North Korea. In an interview with the Wall Street Journal yesterday, Trump said he pointed out the United States’ tremendous trade deficit with China, worth hundreds of billions of dollars, which he said can be overlooked if Beijing solves the problem in North Korea. “I said, you know, we’re not going to let that go ahead,” he said on the trade deficit. “But you want to make a great deal? Solve the problem in North Korea. That’s worth having deficits. And that’s worth having not as good a trade deal as I would normally be able to make.” Washington “cannot allow” a country like North Korea to have nuclear weapons, he continued, warning of “mass destruction.” He said while North Korean leader Kim Jong-un doesn’t have the delivery systems yet, “you know he will.” Trump also told the newspaper that he and Chinese President Xi Jinping “have a very open dialogue on North Korea,” admitting, “We like each other.” He also said that the Chinese “are not currency manipulators,” walking away from a campaign promise to label Beijing as such early in his presidency.” President Xi “wants to do the right thing,” Trump said in a joint press conference with NATO Secretary General Jens Stoltenberg yesterday, saying they bonded well in their summit. “I think we had a very good chemistry together. I think he wants to help us with North Korea.” He said he told Xi: “The way you’re going to make a good trade deal is to help us with North Korea. Otherwise, we’re just going to go it alone. That’d be all right, too. But going it alone means going it with lots of other nations.” Trump went on to laud China for sending back ships carrying North Korean coal exports this week, saying, “That’s a big step, and they have many other steps that I know about.” China banned all imports of coal from North Korea in mid-February after Pyongyang’s launch of an intermediate-range ballistic missile. The president said, “I really think that China’s going to try very hard and has already started.” But he acknowledged that such steps “may not be effective.”
And in such a case, he said, “If it’s not effective, we will be effective, I can promise you that.” While Trump has repeatedly said that all options are on the table, which could include military action, he has indicated he will for now let China try to restrain the North while leaving room open for Washington, if this strategy fails, to take military action or even conduct a pre-emptive attack on the North. In addition to implementing stronger sanctions on Pyongyang in the case of further provocations such as a sixth nuclear test, the Trump administration may also implement secondary sanctions on Chinese entities involved in illegal dealings with North Korea. China, North Korea’s traditional ally and largest trading partner, said it will also support strong sanctions and pressure on North Korea if it conducts additional provocations, a message conveyed by top nuclear envoy Wu Dawei during his visit to Seoul this week. “China has never before shown such will to work toward resolving the North Korea issue because of pressure,” a government official in Seoul told the *JoongAng Ilbo.* “Stating all options are on the table and claiming that Washington definitely will attack North Korea are completely different issues.” In an attempt to assuage fears in Seoul that Washington may be considering a pre-emptive strike on Pyongyang, South Korean Minister of Foreign Affairs Yun Byung-se said that Washington will definitely consult with Seoul first before taking any important security measures related to Pyongyang. “The United States has recently revealed to us its position that it will definitely consult and mediate with the South Korean government on important security policy involving North Korea,” Yun told the National Assembly’s Foreign Affairs and Unification Committee. He said, “South Korea and the United States are cooperating closer than at any time in the past. There is no need to worry too much over ‘Korea passing,’” a slogan expressing the fear that Seoul may be left out crucial decisions. Yun said that the South Korean government through official meetings and unofficial channels communicated its position during the Trump administration’s review of its North Korea policy - which he said was “considerably reflected” in the U.S.-China summit one week ago. He added that Washington “has confirmed numerous times” with Seoul important decisions on Pyongyang and that when important actions are undertaken, the United States always first explains them before and after. “In the case of an upsurge of military tension on the Korean Peninsula and if there is an accidental clash, this becomes a problem for all Korean people,” Democratic Party Rep. Park Byeong-seug, a fifth-term lawmaker, told the committee. “We need to hammer into the United States and China that no matter what happens, there cannot be any decision on the fate of the Korean Peninsula without the involvement of the Republic of Korea.” On Xi and Trump’s phone conversation the previous day, Cho June-hyuck, spokesman for the South Korean Foreign Ministry, said in a briefing, “What was clearly revealed through such a phone call is that the United States and China at their highest level recognize the gravity and urgency of the North Korean nuclear problem, and confirmed domestically and internationally that the two countries leaders share the same understanding and volition to resolve this issue.” Cho added, “In addition, our government sees that [Washington] has showed strong intention to lead China, and through close cooperation between South Korea and the United States, we plan to continue efforts to enable China to play an even more active and constructive role on North Korea.” (Sarah Kim, “Trump Attempts a Deal on North Korea,” *JoongAng Ilbo,* April 14, 2017)

Amid sharply rising tensions over North Korea’s nuclear arms program, China said that its trade with the country had expanded, even though it had complied with United Nations sanctions and stopped buying North Korean coal, a major source of hard currency for Pyongyang. The data released today showed that China’s trade with North Korea grew 37.4 percent in the first quarter of this year from the period in 2016. Chinese exports surged 54.5 percent, and imports increased 18.4 percent, the General Administration of Customs said at a news conference in Beijing. China buys iron ore, zinc and other minerals from North Korea, as well as growing amounts of seafood and garments manufactured in the North’s well-equipped textile factories. China reported that its imports of North Korean iron were up 270 percent in January and February compared with the period in 2016. But imports of coal dropped 51.6 percent in the first three months of 2017 compared with the first quarter of last year, said Huang Songping, a spokesman for the customs agency. Coal has been the biggest hard-currency earner among North Korea’s fairly limited menu of exports. China agreed to stiffer United Nations sanctions last November, after the United States said Beijing’s coal purchases were helping to pay for the North’s nuclear weapons program. The coal, used in China’s steel mills, earns the North about a billion dollars a year, according to
The Trump administration has settled on its North Korea strategy after a two-month review: "Maximum pressure and engagement." U.S. officials said the president's advisers weighed a range of ideas for how to get North Korea to abandon its nuclear program, including military options and trying to overthrow the isolated communist dictatorship's leadership. At the other end of the spectrum, they looked at the notion of accepting North Korea as a nuclear state. In the end, however, they settled on a policy that appears to represent continuity. The administration's emphasis, the officials said, will be on increasing pressure on Pyongyang with the help of China, North Korea's dominant trade and military partner. The officials weren't authorized to speak publicly on the results of the policy review and requested anonymity. The U.S. officials emphasized that no engagement of North Korea is currently taking place, and that the focus now was on pressure. While China advocates for diplomatic outreach, the officials said the goal of engagement would have to be North Korea's denuclearization. It cannot lead to an arms control agreement or reduction of the North's atomic arsenal that would imply American acceptance of North Korea as a nuclear power. The officials are hopeful China and Russia would agree to tighter U.N. sanctions on North Korea if it conducts another nuclear test. They pointed to a recent editorial in a state-run Chinese newspaper advocating tighter restrictions on selling oil to North Korea. Beijing's decision earlier this year to cut off coal imports from North Korea also are being seen as a hopeful sign. Coal sales are an important source of revenue for Kim Jong Un's government, and the U.S. says China has turned back some shipments in recent days. Russia and China are critical to any pressure campaign on North Korea because they both hold veto power on the U.N. Security Council. Trump, who last week acted unilaterally in ordering a cruise missile strike on Syria, has been using America's military might to send a message to Kim. An aircraft carrier, the USS Carl Vinson, is heading to waters off Korea in a show of force. Trump has repeatedly issued ambiguous threats that if Beijing isn't willing to do more to squeeze the North, the U.S. might take the matter into its own hands. But a U.S. military official, who requested anonymity to discuss planning, said the U.S. doesn't intend to use military force against

"Maximum pressure and engagement." U.S. officials said the president's advisers weighed a range of ideas for how to get North Korea to abandon its nuclear program, including military options and trying to overthrow the isolated communist dictatorship's leadership. At the other end of the spectrum, they looked at the notion of accepting North Korea as a nuclear state. In the end, however, they settled on a policy that appears to represent continuity. The administration's emphasis, the officials said, will be on increasing pressure on Pyongyang with the help of China, North Korea's dominant trade and military partner. The officials weren't authorized to speak publicly on the results of the policy review and requested anonymity. The U.S. officials emphasized that no engagement of North Korea is currently taking place, and that the focus now was on pressure. While China advocates for diplomatic outreach, the officials said the goal of engagement would have to be North Korea's denuclearization. North Korea in response to either a nuclear test or a missile launch. The official said plans could change in the unlikely event a North Korean missile targets South Korea, Japan or U.S. territory. (Matthew Pennington, “Trump Strategy on N. Korea: ‘Maximum Pressure and Engagement,’” Associated Press, April 14, 2017) Tensions couldn’t be higher as the regime of Kim Jong Un signals that it may soon detonate its sixth nuclear bomb and North Korean officials say they are ready to “go to war” if provoked by the United States. The United States has moved significant military assets into the region, and officials are even signaling that the United States is capable of launching a preemptive strike. But behind the scenes, the Trump administration has completed a two-month comprehensive review of the North Korea policy that was approved by all of the top National Security Council officials this month, a senior White House official who has read the policy confirmed to me. The policy calls for “maximum pressure” against the North Korean regime to try to halt its illicit missile and nuclear activity, through sanctions and other diplomatic means. The policy does not call for “regime change” but in facts calls for engagement with the North Korea regime, and when it changes its behavior. “The administration’s priority is to end the threat of a North Korean regime armed with nuclear weapons. That is our goal,” the senior White House official said. “The national security interest of the United States in this case is the threat of the regime to us and our allies in the region and so our focus is on that. If and when regime change comes to the northern part of the peninsula, we’ll deal with that then, but for now we are focused on the shorter-term threat.” Top administration officials have begun briefing experts on the new policy review, including at a private dinner yesterday in Washington featuring a top administration North Korea policy official who talked about the new approach. The senior White House official confirmed to me that the goal of the policy is “denuclearization,” not simply a halt or freeze of some of North Korea’s tests or other illegal activities. The policy provides for the potential of secondary sanctions on Chinese companies and banks that aid the North Korean regime, but not upfront. First, China is offered the opportunity to voluntarily increase its own pressure on North Korea. President Trump tweeted this point Thursday, saying: “I have great confidence that China will properly deal with North Korea. If they are unable to do so, the U.S., with its allies, will! U.S.A.” Vice President Pence will discuss the North Korean situation with leaders in Seoul and Tokyo when he travels to both Asian capitals next week. Senior administration officials who briefed reporters about the trip on background said that they expected North Korea to come up in every discussion Pence has while in northeast Asia. The administration is prepared to respond to another North Korean nuclear test and has a range of options at its disposal, the officials said, adding that nothing is off the table but that the United States won’t telegraph its response in advance. “Do we anticipate it? Possibly. But are there options already developed? Absolutely,” one senior administration official said. “Unfortunately, it’s not a new surprise for us. He continues to develop this program. He continues to launch missiles into the Sea of Japan. So with that regime it’s not a matter of ‘if,’ it’s ‘when.’ … So we’re well prepared to counter that.” (Josh Rogin, “Trump’s North Korea Policy Is ‘Maximum Pressure’ But Not ‘Regime Change,’” Washington Post, April 14, 2017)

President Donald Trump’s tweets are adding fuel to a “vicious cycle” of tensions on the Korean Peninsula, North Korea’s vice foreign minister told Associated Press in an exclusive interview. The official added that if the U.S. shows any sign of “reckless” military aggression, Pyongyang is ready to launch a pre-emptive strike of its own. Vice Minister Han Song Ryol said Pyongyang has determined the Trump administration is “more vicious and more aggressive” than that of Barack Obama. He added that North Korea will keep building up its nuclear arsenal in “quality and quantity” and said Pyongyang is ready to go to war if that’s what Trump wants. This year’s joint war games between the U.S. and South Korean militaries are the biggest so far — the USS Carl Vinson aircraft carrier has been diverted back to the waters off Korea after heading for Australia, and U.S. satellite imagery suggests the North could conduct another underground nuclear test at any time. Pyongyang recently tested a ballistic missile and claims it is close to perfecting an intercontinental ballistic missile and nuclear warhead that could attack the U.S. mainland. Many experts believe that at its current pace of testing, North Korea could reach that potentially game-changing milestone within a few years — under Trump’s watch as president. Despite reports that Washington is considering military action if the North goes ahead with another nuclear test, Han did not rule out the possibility of a test in the near future. “That is something that our headquarters
decides,” he said during the 40-minute interview in Pyongyang, which is now gearing up for a major holiday — and possibly a big military parade — on Saturday. “At a time and at a place where the headquarters deems necessary, it will take place.” The annual U.S.-South Korea military exercises have consistently infuriated the North, which views them as rehearsals for an invasion. Washington and Seoul deny that, but reports that exercises have included “decapitation strikes” aimed at the North’s leadership have fanned Pyongyang’s anger. Han said Trump’s tweets have also added fuel to the flames. Trump posted a tweet Tuesday in which he said the North is “looking for trouble” and reiterated his call for more pressure from Beijing, North Korea’s economic lifeline, to clamp down on trade and strengthen its enforcement of U.N. sanctions to persuade Pyongyang to denuclearize. “Trump is always making provocations with his aggressive words,” Han said. “It’s not the DPRK but the U.S. and Trump that makes trouble.” He added: “We will go to war if they choose.” Han said the sanctions approach is misguided and cited the opening ceremony of a sprawling new high-rise residential area in Pyongyang on Thursday as evidence that sanctions have failed to ruin the country’s economy. Leader Kim Jong Un presided over the ceremony before about 100,000 residents and a large contingent of foreign journalists who have been allowed in to cover the holiday. Han dismissed the suggestion Trump made last year during his presidential campaign that he was willing to meet Kim Jong Un, possibly over hamburgers. “I think that was nothing more than lip service during the campaign to make himself more popular,” Han said. “Now we are comparing Trump’s policy toward the DPRK with the former administration’s and we have concluded that it’s becoming more vicious and more aggressive.” Han said North Korea changed its military strategy two years ago, when the reports of “decapitation strike” training began to really get attention, to stress pre-emptive actions. “We’ve got a powerful nuclear deterrent already in our hands, and we certainly will not keep our arms crossed in the face of a U.S. pre-emptive strike,” he said. “Whatever comes from the U.S., we will cope with it. We are fully prepared to handle it.” South Korea’s Foreign Ministry said Han’s remarks on the North’s readiness to conduct a nuclear test and even go to war reveal the “true colors of North Korea’s government that is bellicose and a breaker of regulations.” The ministry issued a statement saying North Korea will face strong punishment it will find hard to withstand if it makes a significant provocation, such as another nuclear test or an ICBM launch. (Eric Talmadge, “N. Korea Official: Ready for War If Trump Wants It,” Associated Press, April 14, 2017)

KPA General Staff statement “as regards the extremely dangerous situation prevailing on the Korean peninsula due to the Trump administration’s reckless military provocation: The Trump administration of the U.S. began to disclose its brigandish nature timed to coincide with Key Resolve and Foal Eagle nuclear war games now under way in across south Korea. …The DPRK policy shaped by the Trump administration is first to put high-intensity sanctions and pressure together with someone, second to constantly keep tactical nuclear weapons deployed in south Korea and third to launch an independent military action aimed at "beheading operation" against the leadership of the DPRK and "preemptive strike." In actuality, the Trump administration, which made a surprise cruise guided missile strike at Syria on April 6, has entered the path of open threat and blackmail against the DPRK, describing it as "a strong warning message" to it. The U.S. State secretary, Defense secretary and other officials concerned with security of the U.S. are openly crying out more often than not for launching an independent military action against the DPRK. Under the prevailing situation where the Trump administration's serious military hysteria has reached a dangerous phase which can no longer be overlooked, the KPA General Staff re-clarifies its principled stand as follows upon authorization: 1. All the brigandish provocative moves of the U.S. in the political, economic and military fields pursuant to its hostile policy toward the DPRK will thoroughly be foiled through the toughest counteraction of the army and people of the DPRK. Our toughest counteraction against the U.S. and its vassal forces will be taken in such a merciless manner as not to allow the aggressors to survive. Under the prevailing grave situation, the U.S. has to come to its senses and make a proper option for the solution of the problem. The army and people of the DPRK will as ever courageously counter those who encroach upon the dignity and sovereignty of the DPRK and will always mercilessly foil all the provocative options of the U.S. with Korean-style toughest counteraction.” (KCNA, “U.S. Provocative Action Will Meet Toughest Counteraction of DPRK: KPA General Staff,” April 14, 2017)
China warned that tensions on the Korean Peninsula could spin out of control, as North Korea said it could test a nuclear weapon at any time and a United States naval group neared the peninsula—an American effort to sow doubt in Pyongyang over how President Trump might respond. “The United States and South Korea and North Korea are engaging in tit for tat, with swords drawn and bows bent, and there have been storm clouds gathering,” China’s foreign minister, Wang Yi, said in Beijing, according to Xinhua. “If they let war break out on the peninsula, they must shoulder that historical culpability and pay the corresponding price for this,” Wang said. The comments were unusually blunt from China, which has been trying to steer between the Trump administration’s demands for it to do more to stop North Korea’s nuclear weapons program and its longstanding reluctance to risk a rupture with the North. The remarks also reflected, American experts said, an effort by the Chinese to avoid responsibility for what happens back on Washington, after Trump declared, in several Twitter messages, that it was up to the Chinese to contain their neighbor and sometime partner. In a telephone conversation with Trump on April 12, China’s president, Xi Jinping, also called for restraint. But behind the scenes, officials said, Trump and Xi had reached some preliminary understandings, during their meeting at the president’s Mar-a-Lago resort a week ago, about what the Chinese might do to change the behavior of the North’s leader, Kim Jong-un. According to officials who have seen notes of the conversations, the Chinese have agreed to crack down on their second-tier banks that have helped finance the North’s trade. But it is unclear what that crackdown would look like: While much has been made by Trump about North Korean “boats” of coal that have been turned away by China, the most recent statistics show a significant increase in overall trade between the two countries. American officials contend that the two countries have also agreed to share some intelligence—a highly unusual step—about suspected North Korean shipments of arms and other illicit goods. That would improve the chances that those shipments can be intercepted, perhaps when they make port calls. The Bush administration began such a program, called the Proliferation Security Initiative, more than a decade ago, but attention to it has waxed and waned. The North Korean military issued a statement yesterday threatening to attack major American military bases in South Korea, as well as the presidential Blue House, warning that it could annihilate those targets “within minutes.”

Administration officials flatly denied a report on NBC News that the United States was planning for a preemptive strike ahead of any nuclear test. It was unclear what American forces would strike, and the nuclear test site where the North has conducted its five previous tests would make a hard-to-hit target. Moreover, they noted, Vice President Mike Pence is scheduled to visit Seoul this weekend, and it is almost impossible to imagine a strike occurring while he was consulting with the South’s acting president about how to respond to the crisis. Even if a nuclear test occurs this weekend or in coming weeks, officials say, the response is likely to be diplomatic, with a ramping up of economic pressure and the deployment of more military assets. A carrier group, led by the aircraft carrier Carl Vinson, is headed to the waters off the peninsula. It includes Aegis cruisers with antimissile ability. That is notable because administration officials say they are more concerned about a test of an intercontinental ballistic missile that could reach the United States—a feat the North has never come close to accomplishing—than another nuclear test. According to one official, it’s the combination of a missile and a warhead that is most worrisome. The North, for its part, issued a statement that denounced what it called the Trump administration’s “maniacal military provocations,” including the deployment of the carrier group. “Nothing will be more foolish if the United States thinks it can deal with us the way it treated Iraq and Libya, miserable victims of its aggression, and Syria, which did not respond immediately even after it was attacked,” a spokesman for the general staff of the North’s People’s Army said in a statement carried by KCNA. North Korea’s vice foreign minister, Han Song-ryol, said on Friday that the United States was “becoming more vicious and aggressive” under Trump and that “we will go to war if they choose.” Han told The Associated Press that whether North Korea holds another nuclear test would be “something that our headquarters decides.” But he added an ominous coda: “At a time and at a place where the headquarters deems necessary, it will take place.” The speculation about an imminent underground detonation arises from satellite photographs that show the test site is fully prepared, and that holes into the site have been plugged, usually a last step to contain radiation. But at times the North, knowing it is under space surveillance, has readied the site but waited to conduct the test. Russia, another neighbor of North Korea, echoed China yesterday in urging all parties to exercise caution. A Kremlin spokesman, Dmitri S. Peskov, called
“strategic assets” to the peninsula and “pushing the situation there to the brink of war.” This has send a naval flotilla to the region, North Korea accused the United States of introducing “publicly speculate on possible scenarios.” Alluding to the Trump administration’s decision to launch an intercontinental ballistic missile, it would suffer an “unbearably strong punishment.” All the major candidates in the presidential election set for next month have called on the United States not to do anything that might initiate war on the peninsula without first seeking the consent of South Korea, its military ally. In his remarks in Beijing, Wang said there was still hope for renewed negotiations with North Korea on its weapons program. “There can also be flexibility about the form of renewed talks,” he said. The Chinese made much of their announcement two months ago that they were suspending coal imports from North Korea. But while those shipments seem to have dried up, Chinese overall trade rose 37.4 percent in the first quarter of 2017, compared with the same period in 2016. Chinese news outlets reported on Friday that Air China, the country’s main international airline, would suspend flights to Pyongyang starting April 17, leaving only Air Koryo of North Korea operating regular flights between Pyongyang and Beijing or other Chinese cities. The move appeared to have been in the works for some time; NK News reported last month that the suspension was likely, saying that Air China’s services were underused and that its flights were often canceled. Later, Air China issued a statement saying it had not entirely abandoned the route from Beijing to Pyongyang, and would arrange flights if there was enough demand. (Gerry Mullany, Chris Buckley, and David E. Sanger, “Korea Tensions Could Overheat, China Declares,” New York Times, April 15, 2017, p. A-1)

China warned that tensions on the Korean Peninsula could run out of control, after North Korea said it could test a nuclear weapon whenever its top leader, Kim Jong-un, decided, and as an American naval group neared the peninsula in a show of resolve. “The United States and South Korea and North Korea are engaging in tit for tat, with swords drawn and bows bent, and there have been storm clouds gathering,” China’s foreign minister, Wang Yi, said in Beijing, according to Xinhua. “We urge all sides to no longer engage in mutual provocation and threats, whether through words or deeds, and don’t push the situation to the point where it can’t be turned around and gets out of hand.” Wang said after meeting with his visiting French counterpart, Jean-Marc Ayrault, according to Xinhua. “No matter who it is, if they let war break out on the peninsula, they must shoulder that historical culpability and pay the corresponding price for this,” Wang said. As Pyongyang’s weapons technology rapidly advances and the United States is led by an unpredictable new president, some of its neighbors were examining worst-case scenarios. The Japanese news media reported that the government’s National Security Council had been discussing the possible evacuation of an estimated 57,000 of its citizens in South Korea, should war break out. “We will take all necessary steps to protect our people’s lives and assets,” said Suga Yoshihide, Japan’s chief cabinet secretary. The Kyodo news agency said the council was concerned about the possibility of North Korean refugees arriving in boats on its shores. Prime Minister Abe Shinzo expressed concern yesterday that North Korea could have the capability to deliver missiles equipped with sarin, the nerve agent whose recent use against civilians in Syria prompted Mr. Trump to order a missile strike there. A Kremlin spokesman, Dmitri S. Peskov, called on “all the countries to refrain from any actions that could amount to provocative steps,” Reuters reported. In South Korea, whose people have lived through saber-rattling involving the North for decades, there were few signs of panic. Nonetheless, all major candidates in the presidential election next month called on the United States not to do anything that might initiate war on the peninsula without first seeking the consent of South Korea, its military ally. Further raising fears was a report by NBC News that the United States was prepared to take pre-emptive military action against North Korea if it became convinced that the North was preparing to test a nuclear weapon. The report, which cited unidentified intelligence officials, was vigorously denied by the people in the Trump administration. The Defense Department said only that it would not “publicly speculate on possible scenarios.” Alluding to the Trump administration’s decision to send a naval flotilla to the region, North Korea accused the United States of introducing “nuclear strategic assets” to the peninsula and “pushing the situation there to the brink of war.” “This has
created a dangerous situation in which a thermonuclear war may break out any moment on the peninsula,” said a statement attributed to the Foreign Ministry’s Institute for Disarmament and Peace. In his remarks in Beijing, Wang said there was still hope for renewed negotiations with North Korea on its weapons program. “There can also be flexibility about the form of renewed talks,” he said. “As long as there’s dialogue, formal or informal, first-track or second-track, bilateral, trilateral, quadrilateral, China is willing to support this.” The United States has said it will not negotiate with the North unless it first shows that it is serious about ending its nuclear arms program and not merely playing for time. The Chinese Foreign Ministry said yesterday that the Trump administration should not expect China to risk instability in North Korea by going along with choking sanctions. “China and the North Korea are neighbors with traditional friendly ties, including normal trade activities,” a spokesman for the Foreign Ministry, Lu Kang, told reporters. “We strongly hope that all parties concerned will not pin all their hopes on sanctions only.” (Gerry Mullany and Chris Buckley, “China Warns of ‘Storm Clouds Gathering’ in U.S.-North Korea Standoff,” New York Times, April 14, 2017)

The bomb that the United States dropped on an Islamic State cave complex in Afghanistan was big — at 22,000 pounds, the most powerful conventional weapon in the American arsenal. Arguably, even bigger were the messages it sent, whether by design or not. To potential adversaries like Syria and North Korea, the bombing could signal deterrence. For the American public, it underscored the Pentagon’s more aggressive stance under President Trump than under his predecessor, whose administration never even debated using the weapon. Dozens of militants were killed, Afghan officials said. American commanders said that the bomb was chosen because it fit the target, a series of tunnels with dug-in positions nearby used by militants in a remote part of eastern Afghanistan, and that it posed little or no risk to civilians. The bombing spared troops from fierce fighting in caves. It also illustrated how Trump is releasing commanders from Obama-era restrictions on the use of force and how the top United States commander in Afghanistan, Gen. John W. Nicholson Jr., was seeking to showcase Afghanistan’s myriad threats. General Nicholson, who has requested reinforcements to the 8,500 American troops stationed there, drew his bosses’ attention by dropping what the Pentagon has nicknamed the “mother of all bombs.” “Another promise kept,” Donald J. Trump Jr., the president’s son, said on Twitter, noting his father’s campaign promise to vigorously strike the Islamic State and using an emoji of a bomb with a lit fuse. Using the weapon, called the GBU-43/B Massive Ordnance Air Blast, or MOAB, presents special challenges. It can obliterate everything within a 1,000-yard radius. The ordnance contains almost 19,000 pounds of Composition H6, an explosive compound that is roughly one-third stronger than an equivalent weight of TNT. In Afghanistan, with its rural and agrarian economy, civilians who are engaged in food-gathering, woodcutting, farming or tending herds are often near or beside concentrations of militants. The blast radius of an explosion of this size could pose risks to people far from the center of the target. For that reason, President Barack Obama’s administration did not consider using the bomb, American officials said. Early in the Iraq war in April 2003, during the administration of President George W. Bush, American commanders weighed using the weapon to try to kill President Saddam Hussein, who was on the run from United States troops who had toppled his government. But commanders discarded the option when analysts estimated that the bomb’s blast would also kill thousands of civilians. “The collateral damage would have been massive,” said Marc Garlasco, who led a team in the military’s Joint Staff that was seeking to target Hussein. While some analysts said the bombing sent a stern symbolic message to Syria and North Korea, it has little real utility against those countries, or Iran or Russia, because it is pushed out of a lumbering cargo plane that can operate safely only over nations that have no effective air defenses or air forces. Some critics said the bombing could send an unintended message to North Korea that may unnecessarily rattle nerves in Pyongyang at a time of high tension for no clear strategic reason, while failing to advance a long-term strategy in Afghanistan. “Let’s not confuse this tactic for a strategy,” said Representative Seth Moulton, a Massachusetts Democrat and former Marine Corps captain who served four tours in Iraq. At the Pentagon, military officials said that they did not need to request authorization for the strike from Trump, although three officials also acknowledged that if Obama had still been in charge, the Defense Department would probably have sent the proposal to the White House before proceeding. But instead of the deliberative processes in place during the Obama administration
Worries about a potential military conflict continue to rise on the Korean Peninsula as Pyongyang declares it is ready to conduct another nuclear weapons test at any time and the USS Carl Vinson strike group steams toward waters off North Korea. U.S. officials continue to assert that “all options are on the table,” which presumably includes a preemptive strike. In response, in an interview yesterday, North Korean Vice Minister Han Song Ryol said “we will go to war if they choose.” In public, officials in Tokyo have welcomed Washington’s tough stance. But in private, reactions are mixed. Japanese officials affirm that attacking North Korea is easier said than done, and the senior officials do not appear to seriously believe Washington will soon launch a military strike against Pyongyang. At least for now. “The situation is not like that,” a senior Japanese government official said Friday when asked whether Tokyo needs to start preparing to evacuate Japanese residents from South Korea. As of today, Japan had not issued any warnings to nationals in or traveling to South Korea, although “numerous” Japanese had contacted the Foreign Ministry to ask how serious the security situation on the peninsula really is, they said. When asked if the report was “over-hyped,” the official, who spoke on condition of anonymity, answered in the affirmative. “We know the situation is tense. But you need to calmly watch and analyze the situation at a time like this,” the official said. (Yoshida Reiji, “U.S.-Korea War Hype Rings Hollow as Verbal Josting Continues,” Japan Times, April 15, 2017)

North Korea unveiled what appears to be launch tubes for a new intercontinental ballistic missile (ICBM) during a military parade in the capital of Pyongyang to celebrate the 105th birthday of the country’s late founder Kim Il Sung. South Korea’s military said. Local authorities said further analysis would be required to determine conclusively whether the missile in the tubes was an ICBM. If so, it would be the first time North Korea has publicly displayed the weapon. Officials in South Korea’s Joint Chiefs of Staff said the launch tubes displayed during the parade were longer than the North’s intermediate-range ballistic missiles, leading them to believe it might have intercontinental strike capability. The parade was aired live on KCNA’s YouTube channel. KCNA has yet to mention anything about an ICBM at the parade. Kim did not deliver a message at Kim Il Sung Square, but Choe Ryong-hae, vice chairman of the ruling Workers’ Party of Korea, said in defiant speech that the North was “prepared to respond to an all-out war” and use its nuclear weapons. The reappearance of Kim Won-hong, the state security minister whom South Korean officials believed was purged earlier this year, also caught the attention of local authorities. The South Korean government believed Kim Won-hong had been sent to a “political re-education” prison camp for sending false reports to Kim Jong-un. On Saturday, the spy chief was seen standing just a few steps away from Kim Jong-un on video released by the KCNA. South Korea’s Ministry of Unification, which handles inter-Korea relations, said Kim Won-hong might have completed his term at the prison camp and been reinstated, though he was absent during a parliamentary meeting in Pyongyang on April 11. (Lee Sung-yun, “North Korea Parades What Appears to Be New ICBM,” JoongAng Ilbo, April 15, 2017) North Korea put on a jaw-dropping military display Saturday, when the regime celebrated its most important day of the year: "the Day of the Sun," the anniversary of its founder, Kim Il Sung. So experts were anticipating a big show Saturday, but even they were stunned by the range of apparently new missiles on display, and the sheer number of them. As the finale for the parade, the North Korean military wheeled two sets of huge missile canisters through Kim Il Sung Square. These are the canisters that hold the missiles, not the missiles themselves, and it’s anyone’s guess what was inside the canisters. “But if it’s not an ICBM itself, it’s bridge to an ICBM,” Lewis said. One set of canisters appeared to be the right size for the KN-08, a three-stage missile that North Korea calls the Hwasong-13. With a theoretical range of about 7,500 miles, this missile could reach all of the United States from North Korea. “The natural reaction is: What the hell is that?” Lewis said of the canister. “Maybe there is a KN-08 inside it, maybe there’s some new missile inside it, or maybe it’s nothing. It’s a
North Korea launched a ballistic missile this morning from near its submarine base in Sinpo on its east coast, but the launch failed, according to American and South Korean military officials. The timing was a deep embarrassment for the North’s leader, Kim Jong-un, because the missile appeared to have been launched to show off his daring as a fleet of American warships approached his country to deter provocations. Cmdr. Dave Benham, a spokesman for the United States Pacific Command, said the military had “detected and tracked what we assess was a North Korean missile launch at 11:21 a.m. Hawaii time April 15.” The missile blew up almost immediately, and the type of missile involved is still being assessed, he said. Yesterday, what analysts said were three types of intercontinental ballistic missiles rolled through Pyongyang, the North’s capital, as the country tried to demonstrate that its military reach was expanding at a time of heightened tensions with the United States. During the parade in Pyongyang, Kim watched from a platform surrounded by mystery.” The second set of “giant” canisters looked similar to those for the Topol-M, the Russian intercontinental ballistic missile, he said. “What’s inside is a mystery too.” “My guess is that what it’s intended to convey is that there are more ICBMs coming, more solid-fuel missiles,” Lewis said. The North Korean military displayed six ballistic missiles that can be launched from a submarine, which the United States calls the KN-15 but which North Korea calls the Pukguksong-1 (or “Polaris-1.”) North Korea fired one of these missiles from a submarine near its east coast port of Sinpo in August, and it flew about 300 miles before falling into the sea inside Japan’s air-defense identification zone, the area in which Tokyo controls aircraft movement. Kim described it as “the greatest success” at the time and said North Korea has “joined the front rank of the military powers fully equipped with nuclear attack capability.” Analysts were surprised to see six of these missiles in the parade. “It looks like a real missile,” Lewis said. “They could go to all the trouble of manufacturing a perfect copy, but if you’re doing that, it’s just as easy to make the real missile.” North Korea also displayed — for the first time — its KN-15, the land-based version of its submarine-launched ballistic missile, which North Korea calls the Pukguksong-2 (or “Polaris-2.”) This is also powered by solid fuel. North Korea launched this missile for the first time earlier this month, firing it from a land base near Sinpo, home to a known North Korean submarine base. The missile did not appear to go very far, but still, analysts described the development as “scary” because of the solid-fuel component. This is what Lewis’s colleague Melissa Hanham said at the time: “Solid fuel is very significant because they can launch these missiles much faster and with a smaller entourage than with liquid-fueled missiles, making them much harder for the United States, South Korea and Japan to spot from satellites.” There were black-and-white missiles that looked like KN-08s, the intercontinental ballistic missile, but slightly smaller, Lewis said. And they were rolled out on missile vehicles usually used for the medium-range Musudan missile. Yonhap reported in January, citing military officials, that North Korea had probably built two ICBMs that were less than 50 feet long. That would make them shorter than the two known ICBMs, which are between 60 and 65 feet long. “I think this is that,” said Lewis. Lewis and his team were not sure about one type of missile that was on show, painted in camouflage and transported on a tank. It could be an extended-range Scud or a Rodong, capable of flying up to 800 miles. But what they were sure was that the missile had fins on it, meaning that the reentry vehicle on the missile could be controlled on the way down – in other words, the warhead could be maneuvered to hit a target. If the extended range Scud was a “super Scud,” this is a “super-duper Scud,” said Lewis. Then there were the canisters on top of tracked vehicles that North Korea displayed at the very start of the parade. These appeared to be for anti-ship cruise missiles, a North Korean version of Russia’s Kh-35 missile. “In any other year, North Korea having a coastal defense cruise missile and showing it to us for the first time would have made us say ‘Wow’,” said Lewis. “But this year, with all this other stuff, nobody cares about something that can go only 100 or 200 km,” he said. (That’s 62 to 125 miles.) If this wasn’t enough, here’s one more observation. North Korea showed a large number of transporters during the parade, many of them an indigenous tank that North Korea can build at home, rather than having to import through China. This means that North Korea increasingly has the ability to move its missiles around and, with the road-mobile missile launchers they are now favoring over old-fashioned gantries, launch them from anywhere. As Lewis puts it: “They want us to know that their missile program is pretty far along.” (Anna Fifield, “Here Are the Missiles North Korea Showed off, One by One,” Washington Post, April 15, 2017)
elderly military officers as long columns of goose-stepping soldiers marched through a large plaza, accompanied by tanks, missiles and rocket tubes. It was the 105th anniversary of the birth of Kim Il-sung. Making their parade debut on launcher trucks with huge wheels were very large missiles encased in tubes or canisters. Analysts said the tubes appeared to have been designed for two other kinds of long-range ballistic missiles. There were multiple examples of each tube; it was impossible to see what was in them, but analysts said it was likely that they contained missiles that were either completed or under development. Militaries use such canisters to “cold launch” missiles, ejecting them high into the air before their fuel ignites. If North Korea perfected that technology, it would help the nation better protect its mobile missiles from environmental damage while being driven around and from fiery exhaust during launch. The method can also make missiles harder to detect once fired. “They’re not just showing off missiles that are hard to build,” said Jeffrey Lewis, a North Korea specialist at the Middlebury Institute of International Studies at Monterey, in California. “They’re showing off all the associated technologies you need for credible deployments.” Kim Dong-yub, a missile expert at the Institute for Far Eastern Studies at Kyungnam University in Seoul, said one kind of tube appeared to be for the KN-14, a modified version of the KN-08 that was first displayed in a parade in 2015, during which the North claimed that its missiles were tipped with nuclear warheads. The other tube design was new to the analysts. “Given the size, it looks like it contains a new ballistic missile with a range of at least 6,000 kilometers,” or 3,700 miles, making it potentially an intercontinental threat, said Shin In-kyun, a military expert who runs the Korea Defense Network, a civic group specializing in military affairs. “Officials in the region will scramble to figure out whether this is a new solid-fuel, long-range ballistic missile the North was believed to be developing.” The Pukguksong-2, an intermediate-range ballistic missile that the North tested in February, uses solid-fuel technology. That missile was displayed in a parade for the first time on Saturday. So were the Pukguksong-1 — the North’s first submarine-launched ballistic missile, which was successfully tested in August — and the Scud-ER, a Scud with an extended range, designed to reach American military bases in South Korea and Japan. North Korea kept up its defiant rhetoric yesterday. “If they attempt a full-scale war, we will respond with a full-scale war,” Choe Ryong-hae, a senior official in the ruling Workers’ Party and a key aide to Kim, said in a speech before the parade. “If they start a nuclear war, we will respond with nuclear strikes.” (Choe Sang-Hun, David E. Sanger, and William J. Broad, “North Korea Flaunts Missiles in Military Parade amid Rising Tensions,” New York Times, April 16, 2017, p. A-9)

H.H. McMaster: “RADDATZ: And how close do you think North Korea is to having a nuclear weapon capable of reaching the United States? McMASTER: Well, you know, estimates in these sorts of things vary widely. What is clear is, as long — as long as their behavior continues, as long as they continue missile development — even though this was a failed missile, they get better and they learn lessons. So what’s critical is for them to stop this destabilizing behavior, stop the development of these weapons, and denuclearize. And that is the best interests of everyone in the region, and ultimately it’s in the best interests of the North Korean people as well. RADDATZ: North Korea’s Vice Foreign Minister said Friday that the Trump administration is more vicious and more aggressive than the Obama administration, saying that Trump’s aggressive tweets were making trouble. Does the aggressive language increase the likelihood of conflict? MCMASTER: I think it should make clear to the North Korean regime that it is in their best interest to stop the development of these weapons, to stop the development of these missiles, and to denuclearize the peninsula. And so I think while it’s unclear — and want to — do not want to telegraph in any way how we’ll respond to certain incidents, it’s clear that the president is determined not to allow this kind of capability to threaten the United States. And our president will take action that is in the best interest of the American people. RADDATZ: You know, one of the big concerns here, General McMaster, is how North Korea would respond to aggressive action or some sort of preemptive strike. How do you think they would respond? MCMASTER: Well, that’s what particularly difficult about — about dealing with this regime, is that it is unpredictable. This is someone who has demonstrated his brutality by murdering his own brother, by murdering others in his family, by imprisoning large numbers of people in horrible conditions for no reason, for political reasons. So this regime has given the world reason for concern. And that includes — that includes the Chinese people and the Chinese
When a North Korean missile test went awry on Sunday, blowing up seconds after liftoff, there were immediate suspicions that a United States program to sabotage the test flights had struck again. The odds seem highly likely: Eighty-eight percent of the launches of the North’s most threatening missiles have self-destructed since the covert American program was accelerated three years ago. But even inside the United States Cyber Command and the National Security Agency, where the operation is centered, it is nearly impossible to tell if any individual launch is the victim of a new, innovative approach to foil North Korean missiles with cyber and electronic strikes. Bad welding, bad parts, bad engineering and bad luck can all play a role in such failures — as it did in the United States’ own missile program, particularly in its early days. And it would require a near impossible degree of forensic investigation to figure out an exact cause, given that the failed North Korean missiles tend to explode, disintegrate in midair and plunge in fragments into faraway seas. But this much is clear, experts say: The existence of the American program, and whatever it has contributed to North Korea’s remarkable string of troubles, appears to have shaken Pyongyang and led to an internal spyhunt as well as innovative ways to defeat a wide array of enemy cyber strikes. By all accounts, the program that President Barack Obama stepped up in 2014 has been adopted with enthusiasm by the Trump administration. President Trump’s national security aides are eagerly hoping that the Chinese, among others, will get North Korea to freeze or reverse its program. Yet they have no compunctions about using this new class of weapon against missile tests that the United Nations has already prohibited. Speaking in Moscow last week, Rex W. Tillerson, the secretary of state, was put on the defensive by a Russian reporter who challenged American complaints of interference in the American election, despite Washington’s cyberattacks
against Iran’s nuclear program and North Korea’s missile program. “Cybertools to disrupt weapons programs — that’s another use of the tools, and I make a distinction between those two,” Tillerson argued back, without specifically confirming their use against Pyongyang. Perhaps taken by surprise at the question, Tillerson never took the next step to voice the argument that some of his Trump administration colleagues make in private: that since the United Nations Security Council has banned North Korean missile tests, any effort to interfere with them would have some basis in international law. But the question for the United States’ intelligence agencies is whether this new tool is as effective as many have hoped. While billions of dollars have been poured into new offensive cyber weapons, touting a success in thwarting North Korea — whether it is real or imagined — can be turned into an argument for more. It is a particularly difficult question in light of today’s botched test, because it is still unclear exactly what missile was launched. By nature, missiles teeter on the brink of failure, and new designs are often accident prone. At their best, missiles are dense welters of pipes, engines, valves, pumps, volatile fuels, relays, explosive bolts, wires, sensors and circuit boards that suddenly emit blistering flames and roar skyward with such shattering violence that they often quickly hit the breaking point. Things can easily go wrong, and frequently do. But the sheer frequency of North Korean missile mishaps suggests that sabotage lies behind at least some of the recent failures. So does the timing. Typically, countries encounter high failure rates when they start their rocket programs. As the programs mature, and engineers gain experience, spectacular failures decline and success tends to become a habit. In North Korea, the situation has been the exact reverse. By and large, the North was a reliable maker of missiles in the 1980s, ’90s and into the 2000s. Then came the effort to launch the Musudan, an intermediate-range missile that Pyongyang first displayed in a military parade in late 2010. It was 5 feet wide and 40 feet long — remarkably small compared with the North’s big rockets. But it represented an enormous threat. Carried on a truck, it could be hauled on country roads through forested regions or kept in tunnels, making it easy to hide and, as a target, difficult to find and destroy. Last year, the North conducted eight flight tests. Only one succeeded, giving the missile an overall failure rate of 88 percent. It was after the last failure that the North Korean leader, Kim Jong-un, was reported to have ordered an investigation into whether the United States was sabotaging his country’s test flights, searching for spies in his system. Experts say that the best way to slow a program is to send a country scrambling for the causes of failures. “Disrupting their tests,” William J. Perry, defense secretary in the Clinton administration, said at a meeting this year in Washington, would be “a pretty effective way of stopping their ICBM program.” But more recently, the effectiveness of the United States’ sabotage has grown increasingly uncertain. Some new North Korean missile designs, using solid fuels, have had a higher success rate. Moreover, the North Koreans, as sophisticated cyber operators, have grown better at defense. John Schilling, a technical expert on North Korea’s missile program, expressed skepticism on Tuesday about the efficacy of the foreign cyberattacks against Pyongyang’s missiles. “We haven’t seen anything yet pointing to cyber specifically,” Schilling said on a conference call organized by 38 North. An easier target of sabotage, Schilling added, would be the parts and supplies that North Korea imports to feed its factories that make the missiles. Longtime North Korea watcher Martyn Williams, who runs a California-based blog called North Korea Tech, recently reported that the North’s scientists have developed a quantum encryption device that could completely secure communications systems from hackers, eavesdroppers and saboteurs. The effort, Williams wrote this month, has the potential to “hamper the ability of foreign intelligence agencies to monitor and affect North Korean systems in real time.” (David E. Sanger and William J. Broad, “Hand of U.S. Leaves North Korea’s Missile Program Shaken,” New York Times, April 19, 2017, p. A-10)
was finally playing a more active role in pressuring the North — a strategy that, if successful, could obviate the need for American military action. “There’s a lot of economic and political pressure points that I think China can utilize,” Sean Spicer, the White House press secretary, said at his daily briefing. “We’ve been very encouraged with the direction in which they’re going.” Spicer pointed to China’s cutback of coal imports from North Korea as evidence of its new resolve to curb the provocative behavior of its neighbor. But the Chinese government made the decision to stop purchasing North Korean coal before President Xi Jinping of China met with Trump this month at Mar-a-Lago. The administration has teed up additional sanctions on North Korea — from grounding its state airline to banning exports of its seafood — depending on its behavior, according to officials briefed on the policy. The White House is also considering targeting Chinese banks that do business with North Korea, these people said. But it is holding off on that step, which would antagonize Beijing, until it sees what China does. Few of the unilateral sanctions are likely to change North Korea’s behavior, and most would simply be recycled proposals from the Obama administration. So despite insisting it has mothballed the previous administration’s policy of “strategic patience” on North Korea, the Trump administration finds itself in the familiar position of waiting. Pence even held out the possibility of opening talks with the North Korean regime, noting that Washington was seeking security “through peaceable means, through negotiations.” The Trump administration’s mixture of resolve and ambiguity attested to its quandary with North Korea. Though the North Korean dictator, Kim Jong-un, refrained from detonating a nuclear device and suffered another failed missile test this weekend, the United States has not yet found a way around the limited options against the North that constrained his predecessors and put it on the path to becoming a nuclear power. Trump essentially has three choices: a military strike that could ignite a full-blown war; pressure on China to impose tougher sanctions to persuade the North to change course, an approach that failed for Barack Obama as president; or a deal that could require significant concessions, with no guarantee that North Korea would fulfill its promises. The question is whether his apparent willingness to consider both war and a deal may be enough carrot and stick to persuade China to change its approach and apply enough pressure to bring the North to the table. The State Department’s acting assistant secretary for East Asian and Pacific affairs, Susan Thornton, said that North Korea would need to make a definitive change in its nuclear or missile programs before the United States would consider renewed talks. The administration wants “a signal that they realize the current status quo is not sustainable,” Thornton said, although she refused to specify what signal would be acceptable. “Without a signal like that, I think the international community is going to resolve to just ratchet up the pressure.” The United States has a long history of failed attempts at negotiations with North Korea, reaching back to the Clinton administration and extending through the George W. Bush and Obama administrations. But Trump has made it clear that this problem can no longer be postponed. Kim already has enough fissile material for 20 to 25 nuclear weapons, and he may be able to produce sufficient fissile materials — plutonium and highly enriched uranium — for six to seven new weapons a year, according to Siegfried S. Hecker, a former director of the Los Alamos National Laboratory. Should the North conduct its sixth nuclear test, it would move closer to having a hydrogen bomb, or a two-stage thermonuclear weapon, Hecker said, with up to a thousand times more power than the Hiroshima-style weapons Kim has detonated so far. With that level of firepower, Hecker said he worried about a “nuclear catastrophe” on the peninsula resulting from either “escalation of military activities” or poor security around the North’s nuclear arsenal. Talks are needed immediately, he said, just to deal with the threat to Japan and South Korea, both American allies. The logic for diplomacy should be compelling to the Trump administration, Chinese experts say, even as Washington stakes out a policy of “maximum pressure” and has deployed a naval flotilla led by the aircraft carrier Carl Vinson to the coast of the Korean Peninsula, though it is still thousands of miles away. North Korea reacted to the latest warnings from the White House by accusing the Trump administration of applying “gangster-like logic” and promising “tough counteraction” to any military threats. Pyongyang’s deputy ambassador to the United Nations, Kim In-ryong, spoke from prepared remarks, four pages long and peppered with familiar statements condemning American “imperialism” and defending “sovereignty.” He referred to his remarks even when trying to answer half a dozen questions posed by reporters. The closest he came to answering a question was to say that another nuclear test would be carried out “at the time, at the place where our headquarters deemed necessary.” (Mark Landler and Jane
Perlez, “Pence Talks Tough on North Korea, but U.S. Stops Short of Drawing Red Line,” New York Times, April 18, 2017, p. A-8) Vice President Pence warned North Korea not to test U.S. military might by pursuing its nuclear weapons program, citing recent strikes in Syria and Afghanistan as proof of American “strength and resolve.” The stark warning, delivered in Seoul after the vice president went to the military demarcation line that separates the two Koreas, could revive speculation that the White House is considering military action against the regime in Pyongyang. Pence said the Trump administration wants to persuade North Korea to abandon its nuclear weapons “through peaceful means,” but he repeated the administration’s warning that “all options are on the table.” Pence arrived in South Korea just hours after North Korea launched its latest ballistic missile — which exploded within a few seconds — and amid a weekend of fanfare in North Korea, during which the regime showed off what appeared to be new missiles designed to reach the United States. During a trip to the Demilitarized Zone between North and South Korea and later in remarks to journalists, he issued strong warnings to Pyongyang. “Just in the past two weeks, the world witnessed the strength and resolve of our new president in actions taken in Syria and Afghanistan,” Pence said after delivering a statement to the media alongside Hwang Kyo-ahn, South Korea’s acting president. Neither took questions. “North Korea would do well not to test his resolve or the strength of the armed forces of the United States in this region,” Pence said. In Beijing, Foreign Ministry spokesman Lu Kang called for international talks with North Korea to ease tensions. Russia, too, warned that the Trump administration was on what Foreign Minister Sergei Lavrov called a “very risky path.” “I hope there will be no unilateral actions like those we saw recently in Syria,” Lavrov told reporters in Moscow. Administration officials said the situation has become more dangerous but that no decision has been made about how to react to any new provocation by North Korea. They stress their desire to ensure that the situation does not escalate out of control, but at the same time they are not ruling out military action. “As our secretary of defense made clear here in South Korea not that long ago,” Pence said today, “we will defeat any attack, and we will meet any use of conventional or nuclear weapons with an overwhelming and effective response.” (Anna Fifield, “Pence Tells North Korea Not to Test American Resolve, Offering Syria and Afghanistan Strikes as Examples,” Washington Post, April 17, 2017) Vice President Mike Pence warned North Korea not to test American resolve, but he also raised the possibility that the Trump administration could pursue talks. The message, delivered by Pence on a visit to South Korea that included a stop at the demilitarized zone that divides the Korean Peninsula, showed that the administration, while talking tough, was not ruling out negotiations. North Korea should not test “the strength of the armed forces of the United States in this region,” Pence said in Seoul. Yet, he also noted that Washington was seeking security “through peaceable means, through negotiations.” Though North Korea refrained from detonating a nuclear device and saw another missile test fail this weekend, the Trump administration has not yet found a way around the limited options against the North that constrained his predecessors and put it on the path to becoming a nuclear power. Trump essentially has three choices: a military strike that could ignite a full-blown war; pressure on China to impose tougher sanctions to persuade the North to change course, an approach that failed for his predecessors; or a deal that could require significant concessions, with no guarantee that North Korea would fulfill its promises. Thus far, Trump has tried to signal both resolve and ambiguity, suggesting at various times that he is open to all three options. The question is whether his apparent willingness to consider both war and a deal may be enough carrot and stick to persuade China to change its approach and apply enough pressure to bring the North to the table. Talks have long been China’s preference, and now that Mr. Trump seems to be relying on Beijing to an extraordinary degree, Pence may have been signaling that the United States is open to negotiations. China’s chief objective is to get talks — of any kind — started to avoid conflict so close to home. War on the peninsula is a nightmare for China that could lead to at least one million casualties, according to some estimates, ravage the Koreas and set back Beijing’s climb to global pre-eminence. In his most flexible language yet, China’s foreign minister, Wang Yi, on April 14 appealed again for negotiations. “As long as it is a talk, China is willing to support it: either it is formal or informal, one-track or dual-track, bilateral, trilateral or quadrilateral,” Wang said in Beijing. “We are also willing to stay open-minded and accept the good advice from others.” North Korea’s leader, Kim Jong-un, already has enough fissile material for 20 to 25 nuclear weapons, and he may be able to produce sufficient fissile materials — plutonium and highly enriched uranium — for six to seven
new weapons a year, according to Siegfried S. Hecker, a former director of the Los Alamos National Laboratory. Should the North conduct its sixth nuclear test, it would move closer to having a hydrogen bomb, or a two-stage thermonuclear weapon, Hecker said, with up to a thousand times more power than the Hiroshima-style weapons Kim has detonated so far. With that level of firepower, Hecker said he worried about a “nuclear catastrophe” on the peninsula resulting from either “escalation of military activities” or poor security around the North’s nuclear arsenal. Talks are needed immediately, he said, just to deal with the immediate threat to Japan and South Korea, both American allies. Today, North Korea reacted to the latest warnings from the White House by accusing the Trump administration of applying “gangster-like logic” and promising “tough counteraction” to any military threats. Pyongyang’s deputy ambassador to the United Nations, Kim In-ryong, spoke from prepared remarks, four pages long and peppered with familiar statements condemning American “imperialism” and defending “sovereignty.” He referred to his remarks even when trying to answer a half-dozen questions posed by reporters. The closest he came to answering a question was to say that another nuclear test would be carried out “at the time, at the place where our headquarters deemed necessary.” A major purpose of any new diplomacy would be to halt the North’s nuclear program. The longer the country is allowed to test its weapons, the more lethal they become. Capping the arsenal at its current stage is one of more palatable among several unpalatable options, American and Chinese experts say. The North’s freedom to conduct underground tests gives it the chance to significantly improve its weapons by using less fissile material per weapon and producing greater explosive yields, said David Albright, a physicist who oversees the Institute for Science and International Security in Washington. Chinese experts say they detect an opening for negotiations. “Mr. Trump said something interesting during his campaign — that if necessary he could meet with Kim Jong-un and have a sandwich with him,” said Yang Xiyu, a former diplomat from China who led his country’s delegation to the so-called six-party talks on North Korea in the mid-2000s. “We can see that as a shortcut to solve the issue in a peaceful manner.” The idea of a meeting between Trump and Kim, who has been treated with obvious disdain by Xi, is not so far-fetched, Yang said. Before Kim came to power in 2011, North Korea participated in the six-party talks with China and the United States, but the North always sent an official who lacked the power to decide on substantive issues. Now is the time to remove that obstacle and go to Kim directly, Yang said. “There is only one person who has the authority to make a fundamental decision — yes or no — and that’s Kim,” Yang said. “China can facilitate a three-way dialogue among the top leaders of China, North Korea and the United States so we can at least try the shortcut,” he added. Kim would have to be persuaded that the United States would not attack the North if he gave up his weapons, Yang said. The fate of the Libyan leader, Col. Muammar el-Qaddafi, who was driven from power and then killed after he gave up the components of his nuclear weapons program, was foremost in Kim’s mind, Yang said. Robert Carlin, an American expert who served in the Clinton administration and favors talks as a way to control the North’s weapons development, contends that negotiations based on the premise of the denuclearization of the Korean Peninsula are possible. In 2016, North Korea’s official spokesman, one of the “highest on the North’s ladder of authority,” spoke of denuclearization as “the steadfast will of our party, army and people,” Carlin wrote in suggesting that the opening should be seized. (Jane Perlez, “Pence Warns North Korea, But He Also Doesn’t Rule out Talks,” New York Times, April 17, 2017) Pence told reporters that Trump was hopeful China would use its "extraordinary levers" to pressure the North to abandon its weapons program, a day after the North’s failed missile test launch. But Pence expressed impatience with the unwillingness of the North to move toward ridding itself of nuclear weapons and ballistic missiles. Pointing to the quarter-century since the United States first confronted North Korea over its attempts to build nuclear weapons, he said a period of patience had followed. "But the era of strategic patience is over," he declared. "President Trump has made it clear that the patience of the United States and our allies in this region has run out and we want to see change. We want to see North Korea abandon its reckless path of the development of nuclear weapons, and also its continual use and testing of ballistic missiles is unacceptable." Trump himself appeared to reinforce the message at the White House, replying "Gotta behave" when a CNN reporter asked what message he had for North Korean leader Kim Jong Un. In New York, the North's deputy U.N. ambassador, Kim In Ryong, said that U.S.-South Korean military exercises being staged now are the largest-ever "aggressive war drill." He said his country "is ready to react to any mode of war
Prime Minister Abe Shinzo emphasized that diplomatic efforts to defuse rising tensions over North Korea’s nuclear and missile programs are necessary, despite the latest military muscle-flexing by Pyongyang. “Needless to say, it’s important to maintain peace through diplomatic efforts,” Abe told a Lower House session of the Diet. “At the same time, dialogue for the sake of dialogue would be meaningless. We need to put pressure on North Korea so that it will seriously respond to calls for dialogue,” Abe said. At the Diet session, Abe also said Tokyo has already conducted studies on how to deal with possible refugees in the event of a major armed conflict on the Korean Peninsula. “We assume we would take a series of actions, including processes to admit landing, set up and manage accommodations, and screen (refugees) to decide whether we should protect them or not,” Abe said. Japanese officials have long feared a massive influx of refugees to Japan should ever a second Korean war break out on the peninsula. Since the 1990s, Tokyo has conducted studies and simulations on how to deal with refugees while also evacuating numerous Japanese nationals from South Korea. “The government is responsible for protecting and rescuing Japanese citizens if they face crises overseas,” Abe said. On April 27, the prime minister is scheduled to visit Russia to meet that country’s leader, Vladimir Putin. Abe said he will urge Moscow to “play a constructive role” in helping to defuse the ongoing crisis on the Korean Peninsula. (Yoshida Reiji, “Abe Urges Diplomatic Tack on North Korea, But Rules out ‘Dialogue for Dialogue’s Sake,’” Japan Times, April 17, 2017)

South Korean prosecutors indicted jailed former President Park Geun-hye as they wrapped up a six-month probe into the corruption and influence-peddling scandal that brought her down last month. Park has been charged with bribery, abuse of power, coercion and leaking government secrets in 18 suspected crimes, mostly involving her long-time friend Choi Soon-sil and former key aides. Park became the country’s third former president to stand trial over corruption allegations, after Chun Doo-hwan and Roh Tae-woo. In the indictment, the prosecutors accused Park of taking and soliciting bribes worth 59.2 billion won ($52 million) from three conglomerates — Samsung, Lotte and SK — for herself or her friend. If convicted, she could face a prison term ranging from 10 years to life. (Yonhap, “Ex-President Park Guen-hye Indicted in Corruption Probe,” April 17, 2017)

When China’s best-known historian of the Korean War, Shen Zhihua, recently laid out his views on North Korea, astonishment rippled through the audience. China, he said with a bluntness that is rare here, had fundamentally botched its policy on the divided Korean Peninsula. China should abandon the stale myths of fraternity that have propped up its support for North Korea and turn to South Korea, Mr. Shen said at a university lecture last month in Dalian. “Judging by the current situation, North Korea is China’s latent enemy and South Korea could be China’s friend,” Shen said, according to a transcript he published online. “We must see clearly that China and North Korea are no longer brothers in arms, and in the short term there’s no possibility of an improvement in Chinese-North Korean relations.” Shen has gone much further than other scholars in calling for a reset. “The fundamental interests of China and North Korea are at odds,” he said in his lecture. “China’s fundamental interest lies in achieving a stability on its borders and developing outward. But since North Korea acquired nuclear weapons, that periphery has never been stable, so inevitably Chinese and North Korean interests are at odds.” He derided China’s opposition to the THAAD antimissile system as shrill and self-defeating, needlessly alienating South Korean opinion. “What we’ve done is exactly what the Americans and North Koreans would like to see,” he said. Shen’s views have incensed Chinese ultranationalists, who have accused him of selling out the country’s ally in Pyongyang. His views and the debate about them have not been reported in Chinese state news media. But Shen’s speech remains on the website of the Cold War history research center at East China Normal University in Shanghai, where he works. He has also restated his views at lectures in Shanghai and, last week, in Xi’an in northwest China, he said. In the past, articles in China critical of North Korea have been quickly censored. Shen said the tolerance — so far — for his views suggested that the government might be willing
to tolerate greater criticism of North Korea and debate about the relationship. “Many people have asked me, ‘Teacher Shen, why hasn’t your speech been taken down?’” Shen said in a telephone interview from Shanghai. “At least it shows that there can be different views about the North Korea issue. It’s up to the center to set policy, but at least you can air different views in public, whereas before you couldn’t,” he said. The “center” refers to China’s central leadership. Shen acknowledged that shifting direction on North Korea would carry risks. If political cooperation between Beijing and Washington fails to constrain North Korea, he said, the two governments should cooperate in a military response. “If North Korea really does master nuclear weapons and their delivery, then the whole world will have to prostrate itself at the feet of North Korea,” he said in the interview. “The longer this drags out, the better it is for North Korea.” In South Korea yesterday, Vice President Pence held out the possibility of opening talks with the North Koreans, noting that Washington was seeking security “through peaceable means, through negotiations.” His office added that any talks would include Japan, South Korea, other allies in the region and China. (Chris Buckley, “Chinese Historian Bluntly Criticizes Beijing’s Policy on North Korea,” New York Times, April 19, 2017, p. A-11)

North Korea will continue to test missiles despite international condemnation and growing military tensions with the U.S. Vice-Foreign Minister Han Song-ryol told the BBC’s John Sudworth. “We’ll be conducting more missile tests on a weekly, monthly and yearly basis,” He said that an "all-out war" would result if the US took military action. Han told the BBC: “If the US is planning a military attack against us, we will react with a nuclear preemptive strike by our own style and method.” Han told the BBC that North Korea believed its nuclear weapons “protect” it from the threat of US military action. “If the US is reckless enough to use military means it would mean from that very day, an all-out war,” he said. (BBC, “North Korea ‘Will Test Missiles Weekly,’ Senior Official Tells BBC,” April 18, 2017) North Korea’s deputy UN representative Kim In-ryong held a press conference in New York, accusing Washington of turning the Korean Peninsula into “the world’s biggest hot spot” and “pushing the situation to the brink of war.” “If the US dares opt for a military action, (North Korea) is ready to react to any mode of war desired by the US,” he said. “It has created a dangerous situation in which thermonuclear war may break out at any moment on the peninsula and poses a serious threat to world peace and security.” Kim said the Trump administration’s re-dispatch of the Carl Vinson nuclear carrier strike group toward the peninsula once again “proves the US’ reckless moves for invading the DPRK (North Korea) have reached a serious phase of its scenario.” “The prevailing grave situation proves once again that the DPRK was entirely just when it increased in every way its military capabilities for self-defense and pre-emptive attack with a nuclear force as a pivot.” In Pyongyang, North Korean Vice Foreign Minister Han Song-ryol said despite the outside world’s censures, the country will continue to conduct more tests “on a weekly, monthly and yearly basis according to our own schedule.” “If the US goes on with their reckless option of using military means then that would mean from that very day, an all-out war,” he said in an interview with broadcaster BBC in Pyongyang. “If the US encroaches upon our sovereignty then it will provoke our immediate counter-reaction, and if it is planning a military attack against us, we will react with a nuclear pre-emptive strike by our own style and method.” The weapons are needed to protect the government and system, Han said, noting the country has learned the “lesson” from Libya and Syria where “people are suffering from great misfortune” due to US-led attempts at regime change. “If the balance of power is not there, then the outbreak of war is imminent and unavoidable,” he said. “If one side has nukes and the other side doesn’t, and they’re on bad terms, war will inevitably break out.” (Shin Hyon-hee, “After U.S. Warning, N.K. Responds with Threats,” Korea Herald, April 18, 2017)

Just over a week ago, the White House declared that ordering an American aircraft carrier into the Sea of Japan would send a powerful deterrent signal to North Korea and give President Trump more options in responding to the North’s provocative behavior. “We’re sending an armada,” Mr. Trump said to Fox News April 11. The problem was that the carrier, the Carl Vinson, and the three other warships in its strike force were that very moment sailing in the opposite direction, to take part in joint exercises with the Australian Navy in the Indian Ocean, 3,500 miles southwest of the
Korean Peninsula. White House officials said Tuesday that they had been relying on guidance from the Defense Department. Officials there described a glitch-ridden sequence of events, from an ill-timed announcement of the deployment by the military’s Pacific Command to a partially erroneous explanation by the defense secretary, Jim Mattis — all of which perpetuated the false narrative that a flotilla was racing toward the waters off North Korea. By the time the White House was asked about the Carl Vinson, its imminent arrival had been emblazoned on front pages across East Asia, fanning fears that Trump was considering a pre-emptive military strike. It was portrayed as further evidence of the president’s muscular style days after he ordered a missile strike on Syria that came while he and President Xi Jinping of China chatted over dessert during a meeting in Florida. With Trump himself playing up the show of force, Pentagon officials said, rolling back the story became difficult. The story of the wayward carrier might never have come to light had the Navy not posted a photo online April 17 of the Carl Vinson sailing south through the Sunda Strait, which separates the Indonesian islands of Java and Sumatra. It was taken on Saturday, four days after the White House press secretary, Sean Spicer, described its mission in the Sea of Japan. Now, the Carl Vinson is finally on a course for the Korean Peninsula, expected to arrive in the region next week, according to Defense Department officials. White House officials declined to comment on the confusion, referring questions to the Pentagon. “Sean discussed it once when asked, and it was all about process,” a spokesman, Michael Short, said of Spicer. Privately, however, other officials expressed bewilderment that the Pentagon did not correct its timeline, particularly given the tensions in the region and the fact that Spicer, as well as the national security adviser, Lt. Gen. H. R. McMaster, were publicly answering questions about it. “The ship is now moving north to the Western Pacific,” the Pentagon’s chief spokeswoman, Dana White, said Tuesday. “This should have been communicated more clearly at the time.” The miscues began on April 9 when the public affairs office of the Navy’s Third Fleet issued a news release saying that Adm. Harry B. Harris Jr., the Pacific commander, had ordered the Carl Vinson, a Nimitz-class nuclear-powered carrier, and its strike force — two destroyers and one cruiser — to leave Singapore and sail to the Western Pacific. As is customary, the Navy did not say exactly where the carrier force was headed or its precise mission. Given the timing, it hardly needed to: Trump had just wrapped up a two-day summit meeting with Xi at his Palm Beach club, Mar-a-Lago, with a message that the United States had run out of patience with North Korea’s dictator, Kim Jong-un, and its nuclear and missile programs. On April 16 General McMaster told Fox News that the deployment was a “prudent” move, designed to give the president “a full range of options to remove” the threat posed by Kim. What the Navy did not say was that the Carl Vinson had to carry out another mission before it set sail north: a long-scheduled joint exercise with the Australian Navy in the Indian Ocean. South Korean and Japanese news media, as well as the New York Times, reported Admiral Harris’s order as evidence that the crisis was intensifying. While an aircraft carrier is not the weapon of choice for a strike on North Korea — such an operation would more likely involve long-range bombers and cruise missiles — it sends a vivid message of military might. In July 2010, President Barack Obama ordered the aircraft carrier George Washington to the Sea of Japan to intimidate the North after it had torpedoed a South Korean Navy corvette, killing 46 sailors. When his defense secretary, Robert M. Gates, asked him to reroute the carrier to the Yellow Sea, to send an additional message to Beijing, Obama resisted. “I don’t call audibles with aircraft carriers,” he said, using a football metaphor to reject the midcourse correction. By all accounts, Trump is less worried than Obama about making such calls on the fly. His aides have praised this unpredictability as a virtue in dealing with rogue leaders in North Korea and Syria. In South Korea, though, fears of a full-blown war erupted. The government rushed to reassure the public that the Carl Vinson was coming only to deter North Korean provocations. April 15 is the birthday of Kim Il-sung, the nation’s founder and the grandfather of Kim Jong-un — an occasion the North typically uses to conduct celebratory weapons tests. On April 11, Trump stoked the fears of military action with an early-morning Twitter post: “North Korea is looking for trouble. If China decides to help, that would be great. If not, we will solve the problem without them! U.S.A.” Later that day, Mr. Spicer was asked by a reporter, who assumed the Carl Vinson was on its way north, why the United States had decided to dispatch the carrier group to the Sea of Japan. “A carrier group is several things,” Spicer replied. “The forward deployment is deterrence, presence.” He added, “I think when you see a carrier group steaming into an area like that, the forward presence of that is clearly, through almost every instance, a huge deterrence.” Spicer did
not point out that the Carl Vinson was not, in fact, steaming into the area and would not be for 14 more days. A senior administration official said the press secretary was using talking points supplied by the Pentagon. He was discussing the rationale for sending a carrier, this official said, not confirming the ship’s schedule. An hour after Spicer left the podium, Mattis, the defense secretary, reinforced the perception of ships racing to the scene. Speaking at the Pentagon, he said the Navy disclosed the Carl Vinson’s itinerary in advance because the exercise with the Australians had been canceled. “We had to explain why she wasn’t in that exercise,” he said. Mattis, however, had conflated two things: Admiral Harris had canceled only a port call for the Carl Vinson in Fremantle, Australia, according to Pentagon officials, because he feared that images of sailors on shore leave would be unseemly at a time when North Korea was firing missiles. Navy officials said Harris never meant to suggest he was canceling the naval exercise. Organizing such exercises is a complicated effort that takes months. One official described it as a high-end exercise, raising the possibility that the two navies practiced scenarios to counter China, or tested new missile defenses or cyber operations. Some officials expressed irritation with Harris, saying he did not think through the consequences of announcing the deployment of an aircraft carrier during a period of high tension. Mattis sent mixed signals about the mission. He stressed the need for the Navy to operate freely in the Pacific but added, “There’s not a specific demand signal or specific reason why we’re sending her up there.” After a week of war drums, fueled by the reports of the oncoming armada, tensions subsided when the weekend passed with only a military parade in Pyongyang and a failed missile test. (Mark Landler and Eric Schmitt, “Aircraft Carrier Was Not Heading Where U.S. Said,” New York Times, April 19, 2017, p. A-1)

Analysts who examine satellite images of North Korea reported that they had spotted some unexpected activity at the country’s nuclear test site: active volleyball games in three separate areas. The surprising images were taken on April 16 as tensions between the United States and North Korea seemed to spike. The Korean Peninsula pulsed with news that the North was preparing for its sixth atomic detonation and that American warships had been ordered into the Sea of Japan as a deterrent, even though the ships turned out to have sailed in the opposite direction. The volleyball games, played in the middle of that international crisis, were probably intended to send a message, analysts said, as the North Koreans are aware that the nuclear test site is under intense scrutiny. But what meaning the North wanted the games to convey is unclear. “It suggests that the facility might be going into a standby mode,” Joseph Bermudez told reporters on a conference call organized by 38 North, a research institute at the Johns Hopkins University School of Advanced International Studies. “It also suggests that these volleyball games are being conducted with the North Koreans knowing that we’ll be looking and reporting on it.” Bermudez, a veteran North Korean analyst, emphasized the ambiguity of North Korean intentions. “They’re either sending us a message that they’ve put the facility on standby, or they’re trying to deceive us,” he said. “We really don’t know.” (William J. Broad, “North Korea Sends Signal At Test Site: Men at Play,” New York Times, April 20, 2017, p. A-8)
Pyongyang. “The Trump administration, having looked at the options, is speaking out of both sides of its mouth, which if done deliberately is good policy,” said Patrick Cronin, an Asia expert at the Center for a New American Security. “The idea is that we have the means of striking back, we’re certainly going to protect our allies . . . but we’re not going to make the mistake of starting a war,” he said. Standing at the demilitarized zone between the two Koreas this week, Vice President Pence issued his latest warning to North Korea. “The patience of the United States and our allies in this region has run out, and we want to see change,” he said. But even as they highlight Trump’s willingness to use force in new ways in Syria and elsewhere, Pence and other officials have also expressed a preference for a negotiated disarmament for North Korea. “Our hope is that we’ll be able . . . to achieve this objective through peaceable means,” the vice president said, adding that he hoped for a resumption of negotiations. The double-barreled comments from Pence, like those from national security adviser H.R. McMaster and other senior officials, also indicate the importance that China, which Trump hopes will play an instrumental role in persuading Kim to abandon his nuclear plans, holds in the administration’s strategy.

Analysts said the White House is betting that its tough talk will convince Chinese President Xi Jinping that Trump is willing to use force to shatter the long standoff with Pyongyang, prompting Beijing to use the weight of its trade ties with North Korea to help avoid a huge conflict on its border. Trump himself has issued repeated warnings to North Korea on Twitter, calling on China for help but promising to act unilaterally if need be. “I have great confidence that China will properly deal with North Korea,” Trump tweeted on April 13. “If they are unable to do so, the U.S., with its allies, will!” Bruce Klingner, a scholar at the Heritage Foundation, said such statements appeared to be out of sync with the Trump administration’s preferred course. “It’s a message at a much higher volume and intensity than would seem warranted, if the focus is going to be on stronger sanctions” and a renewed diplomatic process, he said. The use of bellicose rhetoric, even when paired with messages of continuity, could bring unanticipated results.

Already, North Korea has ratcheted up its rhetoric against the United States, threatening its own preemptive strike. Rodong Sinmun declared this week that North Korea would use nuclear arms to “obliterate” the United States if it made a move suggesting a first use of military action. Perhaps with that in mind, officials at the Pentagon and State Department have attempted to ratchet down speculation about potential conflict. Some of that was fueled last week ahead of a major North Korean anniversary by news of the carrier strike group’s deployment and media reports suggesting a preemptive U.S. attack might be in the works. While they have drawn up a range of actions that the United States might want to take in the event of a provocative move by North Korea — such as a nuclear test or strike on its southern neighbor — the officials indicate their hope is that diplomacy will prevail. Those options probably include stepped-up cyber and electronic activity, which would be more easily denied and less likely to trigger a North Korean response.

“Diplomacy is only effective if it’s backed up by credible options,” said a defense official, who spoke on the condition of anonymity to discuss administration deliberations. Officials at the State Department have signaled that a resolution to the standoff could be well off in the future. “I think there’s not going to be an answer tomorrow or the day after that. It’s going to take more time,” Susan A. Thornton, acting assistant secretary for East Asia and Pacific affairs, told reporters this week. “Our preference is to put pressure on the North Korean regime so that they will undertake to cease this threatening behavior and roll back their illegal programs,” she said. It is not clear what effect the news that the Carl Vinson has been thousands of miles away in the Indian Ocean, rather than bearing down on the Korean Peninsula, will have in Pyongyang. While the belief that the Carl Vinson was heading toward Korea was reported as fact by media outlets around the world — Trump last week said he was “sending an armada, very powerful” — there were hints it was perhaps not steaming there as fast as many supposed. On April 11, U.S. Naval Institute News reported that although the carrier had canceled port calls in Australia, it had not scrubbed training events to move faster toward the Korean Peninsula and would still take more than a week to enter waters near Korea — a point that was lost amid heated talk of “war.” Other photographs released by the Navy showed the Carl Vinson in the South China Sea from April 12 to 14. In any case, the carrier strike force appears to be finally steaming in that direction now. A spokesman for the U.S. military’s Pacific Command said the carrier strike group is “heading north to the Western Pacific as a prudent measure.” The spokesman did not provide a comment about why confusion about the ship’s location persisted, even as Trump and Defense Secretary Jim Mattis appeared to confirm
last week it was heading in that direction. (Missy Ryan, Simon Denyer and Emily Rauhala, “U.S. Tough Talk Belies Its Focus on Diplomacy to Contain Kim,” Washington Post, April 19, 2017) In early April, officials at U.S. Pacific Command were developing plans to respond to a sharp rise in tensions with North Korea. Defense Secretary James Mattis ordered PACOM Commander Adm. Harry Harris to come up with “robust and sustainable” options for North Korea if President Trump ordered a strike on the rogue regime, according to four defense officials who spoke on background. Harris was traveling in Washington away from his Hawaii base of operations, something that he dislikes because, in his view, something always seems to happen when he’s not in his office. At one point that week, top PACOM officials called Harris to recommend that Vinson cancel its upcoming trip to Australia and make its way back to the waters near North Korea where the carrier had just been in March, thus serving as one of the responses to Mattis’s directive that they explore military options for the Trump administration. The plan was to truncate a secretive exercise with the Australians near Indonesia, to cancel Vinson’s visit to Perth and then head the direction of the Korean Peninsula — meaning Vinson would be off North Korea by the end of the month. Changing an aircraft carrier’s schedule is not a small muscle movement. Host nations expecting a visit from the mighty U.S. big decks have to do a fair amount of leg work to prepare for the visit. Furthermore, a good number of sailors had family flying out to Australia to meet their sailors. An Australia port visit is the holy grail for sailors on a Western Pacific deployment. The easiest thing to do, PACOM officials decided, would be send out a press release announcing the canceled port visit — making it easier for families to get their money back from airlines and letting all parties know why the Vinson wouldn’t be visiting the Land Down Under. And it would have another effect: it would put North Korea on notice by announcing the plans in a press release, which included language that not-so-subtly dropped that Harris had “directed the Carl Vinson Strike Group to sail north and report on station in the western Pacific Ocean after departing Singapore April, 8,” roughly the direction North Korea lies from Singapore. A press release, PACOM officials thought, was the perfect solution to wrap up all the loose ends from the carrier’s schedule change. Sending the release with the thinly veiled language would be a message to North Korea and nervous allies alike: The Navy’s big guns were on the way so behave accordingly. “A press release was really the only option,” one official said. This behind-the-scenes account is based on interviews with nearly a dozen defense officials in Washington, and in the Pacific, all of whom spoke to Navy Times on the condition of anonymity to relay in candid terms how the carrier's movement blew up from a routine Navy operation to a full-on crisis. The war drums began beating on April 8, the day a press release came out from U.S. 3rd Fleet announcing the carrier’s move. U.S. 3rd Fleet has operational control of Vinson during its tour of the Pacific. But two hours before the 3rd Fleet's press statement hit the streets, Reuters news agency published a story that said the Vinson Strike Group, which was visiting Singapore at the time, would proceed to the waters of North Korea to send a message to the rogue Korean regime, which is poised to detonate the country’s sixth nuclear bomb test. (David B. Larter, “Carried Away: The Inside Story of How the Carl Vinson’s Cancelled Port Visit Sparked a Global Crisis,” Defense News, April 23, 2017)

When Vice President Pence spoke at the Korean demilitarized zone on April 17, he said that the United States sought to solve the North Korean crisis “through peaceable means and negotiations,” after increasing pressure on the Pyongyang regime. But in an interview with me on Wednesday afternoon, he adopted a harder line: The Trump administration, he said, demands that North Korea abandon its nuclear and ballistic missile programs without any promise of direct negotiations with the United States. If the United States is unwilling to negotiate with North Korea, and the regime is unwilling to abandon its nuclear and missile programs based on pressure alone, the prospect of the United States using military action to prevent North Korea from developing the capability to strike the continental United States becomes more likely. Also, the Trump administration could open a gap with its key allies as well as China, who all anticipate an eventual return to something akin to the previous multilateral negotiations with Pyongyang. “I think the path of negotiations with North Korea has been a colossal failure now for more than 25 years,” Pence told me. “We believe that through discussions and negotiations among nations apart from North Korea that we may well be able to bring the kind of economic and diplomatic pressure that would result in North Korea finally abandoning its nuclear ambitions and its ballistic missile
program.” He pointed to North Korea’s violations of the 1994 Agreed Framework negotiated by the Clinton administration and the violations of the 2005 denuclearization agreement negotiated by the administration of George W. Bush. “All of those negotiations and discussions failed, miserably,” Pence said. “The time has come for us to take a fresh approach. And the approach President Trump has taken is not engagement with North Korea but renewed and more vigorous engagement with North Korea’s principle economic partner [China].” Pence acknowledged that if North Korea doesn’t abandon its programs on its own, and the United States is unwilling to negotiate with the regime, military action against the regime may be necessary. “When the president says all options are on the table, all options are on the table,” said Pence. “We’re trying to make it very clear to people in this part of the world that we are going to achieve the end of a denuclearization of the Korean peninsula — one way or the other.” (Josh Rogin, “Pence: The United States Is Not Seeking Negotiations with North Korea,” Washington Post, April 19, 2017)

Trump told a news conference "some very unusual moves have been made over the last two or three hours", and that he was confident Chinese President Xi Jinping would "try very hard" to pressure North Korea over its nuclear and missile programs. Trump gave no indication of what the moves might be. None of the U.S. officials who told Reuters about the heightened level of activity by Chinese bombers suggested alarm or signaled that they knew the precise reason for such activity. Chinese Foreign Ministry spokesman Lu Kang referred questions about the air force to the Defense Ministry, which has yet to publicly comment. Asked about Trump's comment about Xi trying hard, Lu said Xi and Trump had had a full and deep discussion about North Korea when they met this month. "I can only say that via deep communications between China and the U.S. at various levels including at the highest levels, the U.S. now has an even fuller and more correct understanding of China's policy and position and has a more rounded understanding of China's efforts. We feel very gratified about this." China Daily said there was optimism about persuading the North to end its pursuit of a nuclear program without the use of force, "now that even the once tough-talking Donald Trump is onboard for a peaceful solution." "Beijing has demonstrated due enthusiasm for Washington's newfound interest in a diplomatic solution and willingness to work more closely with it." In Russia's Far East, some media have cited residents as saying they have seen military hardware being moved toward North Korea but Kremlin spokesman Dmitry Peskov said deployment of Russian troops inside Russia were not a public matter. (Ju-min Park and Ben Blanchard, “South Korea on High Alert as North Readies Army Celebration,” Reuters, April 21, 2017) President Trump said “some very unusual moves” have been made by China over the past several hours, adding that he was confident Chinese President Xi Jinping would try to pressure North Korea over its nuclear and missile program. “I can say that all of the pundits out there are saying they’ve never seen China work like they’re working right now,” Trump said in a joint press conference with Italian Prime Minister Paolo Gentiloni at the White House. He added, “Some very unusual moves have been made over the last two or three hours,” without elaborating. “And I really have confidence that the president will try very hard,” in reference to the Chinese leader. His remarks came after a report was released about China preparing military aircraft and bombers for potential contingencies in North Korea, amid heightened military tension on the Korean Peninsula. “I actually told him,” said Trump, “You’ll make a much better deal on trade, if you get rid of this menace, or do something about this menace of North Korea.” Trump also said, “As far as North Korea is concerned, we are in very good shape. We’re building our military rapidly.” The U.S. and South Korean militaries have been holding their large-scale annual Max Thunder exercises over the past two weeks, involving some 100 fighters and reconnaissance planes, including South Korea’s F-15K andKF-16 jets and U.S. F-16s and U-2 reconnaissance aircraft. The biannual aerial exercise from an air base in Gunsan, North Jeolla, involved a simulation-based precision strike drill, honing in readiness against enemies and coordination in case of emergency. A South Korean intelligence source said Friday that there has not been any unusual movement by North Korea overnight. (Sarah Kim, “Trump Suggests China May Stand up to North,” JoongAng Ilbo, April 22, 2017) After U.S. Secretary of State Rex Tillerson said the United States was looking at ways to bring pressure to bear on North Korea over its nuclear program yesterday, Rodong Sinmun did not mince its words. "In the case of our super-mighty preemptive strike being launched, it will completely and immediately wipe out not only U.S. imperialists' invasion forces in South Korea and its surrounding areas but the U.S. mainland and reduce them to ashes," it said.
Tillerson told reporters in Washington that the United States was "reviewing all the status of North Korea, both in terms of state sponsorship of terrorism as well as the other ways in which we can bring pressure on the regime in Pyongyang." House of Representatives Speaker Paul Ryan said during a visit to London the military option must be part of the pressure brought to bear.

"Allowing this dictator to have that kind of power is not something that civilized nations can allow to happen," he said in reference to Kim. Ryan said he was encouraged by the results of efforts to work with China to reduce tension, but that it was unacceptable North Korea might be able to strike allies with nuclear weapons. South Korea's acting president, Hwang Kyo-ahn, at a meeting with top officials repeatedly called for the military and security ministries to maintain vigilance. The defense ministry said U.S. and South Korean air forces were conducting an annual training exercise, codenamed Max Thunder, until April 28. North Korea routinely labels such exercises preparations for invasion. "We are conducting a practical and more intensive exercise than ever," South Korean pilot Colonel Lee Bum-chul told reporters. "Through this exercise, I am sure we can deter war and remove our enemy's intention to provoke us." South Korean presidential candidates clashed on Wednesday night in a debate over the planned deployment in South Korea of a U.S.-supplied Terminal High Altitude Area Defense (THAAD) anti-missile system, which has angered China. The United States and Russia clashed at the United Nations yesterday over a U.S.-drafted Security Council statement to condemn North Korea's latest failed ballistic missile test. Diplomats said China had agreed to the statement. Such statements by the 15-member council have to be agreed by consensus. Previous statements denouncing missile launches "welcomed efforts by council members, as well as other states, to facilitate a peaceful and comprehensive solution through dialogue." The latest draft statement dropped "through dialogue" and Russia requested it be included again. "When we requested to restore the agreed language that was of political importance and expressed commitment to continue to work on the draft ... the U.S. delegation without providing any explanations cancelled the work on the draft," the Russian U.N. mission said in a statement. The United States said it had cut the words because they "would overly narrow the means by which the international community could arrive at a peaceful and comprehensive solution to the North Korean nuclear problem," the United States told council members, according to diplomats. Chinese Foreign Ministry spokesman Lu Kang said China believed in the Security Council maintaining unity. "Speaking with one voice is extremely important to the Security Council appropriately responding to the relevant issue on the peninsula," he told reporters. (Ju-min Park, “North Korea Warns of ‘Super-Mighty Preemptive Strike’ As U.S. Plans Next Move,” Reuters, April 20, 2017)

China has put bombers on "high alert" in preparation for a potential contingency in neighboring North Korea, a US defense official was quoted as saying. CNN cited the unidentified official as saying that Chinese air force land-attack, cruise-missile-capable bombers were put "on high alert" yesterday. The official also said that the U.S. has seen an extraordinary number of Chinese military aircraft being brought up to full readiness through intensified maintenance as part of an effort to "reduce the time to react to a North Korea contingency." (Yonhap, “China Puts Bombers on ‘High Alert’ to Prepare for N.K. Contingency: CNN,” Korea Herald, April 21, 2017)

When news broke less than two weeks ago that the Trump administration was sending the aircraft carrier Carl Vinson to the Korean Peninsula, many South Koreans feared a war with North Korea. Others cheered for Washington, calling the deployment a powerful symbol of its commitment to deterring the North. Yesterday, after it was revealed that the carrier strike group was actually thousands of miles away and had been heading in the opposite direction, toward the Indian Ocean, South Koreans felt bewildered, cheated and manipulated by the United States, their country’s most important ally. “Trump’s lie over the Carl Vinson,” read a headline on the website of JoongAng Ilbo. “Xi Jinping and Putin must have had a good jeer over this one.” “Like North Korea, which is often accused of displaying fake missiles during military parades, is the United States, too, now employing ‘bluffing’ as its North Korea policy?” the article asked. The episode raised questions about whether major allies of the United States, like South Korea and Japan, had been informed of the carrier’s whereabouts, and whether the misinformation undercut America’s strategy to contain North Korea’s nuclear ambitions by using empty threats. Compounding their anger over the Carl
Vincent episode, many South Koreans were also riled at Trump for his assertion in a Wall Street Journal interview last week that the Korean Peninsula “used to be a part of China.” Although Korea was often invaded by China and forced to pay tribute to its giant neighbor, many Koreans say the notion that they were once Chinese subjects is egregiously insulting. “The 50 million South Koreans, as well as many common-sensical people around the world, cannot help but feel embarrassed and shocked,” said Youn Kwan-suk, spokesman of the main opposition Democratic Party, which is leading in voter surveys before the May 9 presidential election. Critics accused the ministry of sparking among South Koreans before the May 9 election, in which North Korea’s behavior has been a central issue — as have Seoul’s close military ties to Washington.

“There is no way for South Korea not to have known that the Carl Vinson would not be in Korean waters last Saturday,” said Kim Dong-yub, a former navy officer and defense analyst at the Institute for Far Eastern Studies at Kyungnam University in Seoul. “Still, they kept mum, doing nothing to ease the anxiety when security was a key election issue.” Kim added: “What they did was nothing short of trying to influence the election. The whole episode is a reminder of how fettered South Korea remains to its alliance with the United States.” Shin In-kyun, a military expert who runs the civic group Korea Defense Network, said that Trump appeared to have used the Carl Vinson as a feint aimed at preventing North Korea from conducting a nuclear test. “It would have been very awkward for the South Korean military to come out and clarify when they knew that Trump was bluffing,” Shin said. “The bluffing worked, in fact. North Korea didn’t do a nuclear test last Saturday.” Coupled with Trump’s order to strike a Syrian air base with dozens of missiles, and repeated warnings from his senior aides that “military options” were not off the table in dealing with North Korea, news that the Carl Vinson was rushing back to Korean waters stirred anxiety in South Korea. The fear was that if North Korea were to conduct a nuclear or long-range missile test on April 15 to commemorate the 105th anniversary of the birth of Kim Il-sung, the North’s founding president and the grandfather of Kim Jong-un, the Carl Vinson would be in Korean waters by then to launch a pre-emptive strike. North Korea, never one to be outdone in tough talk, accused the United States of bringing war to Korea and vowed to respond with nuclear attacks on American military bases in South Korea and Japan. This week, it unveiled a video depicting its missiles engulfing an American city in flames, shown as a backdrop for the Kim Il-sung celebration. In South Korea, all major candidates for the presidential election issued statements warning that a preemptive American strike would set off a full-scale war on the Korean Peninsula. They intensified their bickering over who was best suited to keep the peace on the peninsula. Kim Ky-bae, who runs the nationalist South Korean website Minjokcorea, expressed fear that the Carl Vinson episode would damage Mr. Trump’s credibility among South Koreans. “Trump may say this was part of his smoke-screen tactic,” he said. “But the impression we get is that the Trump administration still doesn’t know what it is really trying to do with North Korea, and has no clear and efficient line of communication.” “Whatever the case, whether it was deliberate misinformation or a miscommunication between the Pentagon and the White House, it’s quite serious,” said Michishita Narushige, a specialist in international security at the National Graduate Institute for Policy Studies in Tokyo. “It undermines the credibility of U.S. leadership.”

The Carl Vinson is now actually headed to the Korean Peninsula and is expected to arrive in the region next week, Pentagon officials say. April 25 is another major anniversary in North Korea, the birthday of the Korean People’s Army, and some analysts say the North might try to celebrate with a major provocation. In a Facebook post yesterday, Rear Adm. James W. Kilby, commander of the Carl Vinson carrier strike group, said its deployment “has been extended 30 days to provide a persistent presence in the waters off the Korean Peninsula.” (Choe Sang-hun, “South Koreans Perplexed by U.S. Strategy,” New York Times, April 20, 2017)

in violation of the relevant Security Council resolutions and comply fully with its obligations under these resolutions. The members of the Security Council agreed that the Security Council would continue to closely monitor the situation and take further significant measures including sanctions, in line with the Council’s previously expressed determination. The members of the Security Council stressed that the Democratic People’s Republic of Korea’s illegal ballistic missile activities are contributing to its development of nuclear weapons delivery systems and are greatly increasing tension in the region and beyond. The members of the Security Council further regretted that the Democratic People’s Republic of Korea is diverting resources to the pursuit of ballistic missiles and nuclear weapons while Democratic People’s Republic of Korea citizens have great unmet needs. The members of the Security Council emphasized the vital importance of the Democratic People’s Republic of Korea immediately showing sincere commitment to denuclearization and stressed the importance of working to reduce tensions in the Korean Peninsula and beyond. To that end, the Security Council demanded the Democratic People’s Republic of Korea conduct no further nuclear tests. The members of the Security Council strongly urged all Member States to significantly accelerate their efforts to implement fully the measures imposed on the Democratic People’s Republic of Korea by the Security Council, particularly the comprehensive measures contained in resolutions 2321 (2016) and 2270 (2016). The members of the Security Council reiterated the importance of maintaining peace and stability on the Korean Peninsula and in North-East Asia at large, expressed their commitment to a peaceful, diplomatic and political solution to the situation, and welcomed efforts by Council members, as well as other States, to facilitate a peaceful and comprehensive solution through dialogue.”

DPRK FoMin spokesman’s statement: “The situation on the Korean Peninsula and in the region has reached an extremely dangerous phase due to the mad-cap nuclear war provocations of the U.S. to violate the sovereignty and vital rights of the DPRK at any cost. Recently, the authorities of the Trump Administration are spouting a load of rubbish calling for browbeating the DPRK by force of arms every day. They are crying out for settling the issue with the help of someone, seeking to bring nuclear aircraft carrier strike groups one after another to the waters off the Korean Peninsula. Such intimidation and blackmail can never frighten the DPRK. The invincible revolutionary Paektusan army, closely following the maneuvers of the U.S., is waiting for an order only after rounding off its full preparedness to counter them immediately. It is an unshakable will of the DPRK to go to the end if the U.S. wants to remain unchanged in its confrontational stance. The army of the DPRK has already clarified that its heaviest counteractions include a sudden preemptive attack involving maneuvers on the ground, in seas, under waters and in the air and various other methods and the Korean-style tough counter-actions will be promptly taken to cope with the provocations of any forms and levels from the U.S. The world will clearly witness this time the fact that gone are the days never to return when the U.S. forced its will upon other countries. The DPRK, a peace-loving socialist state, is setting great store by peace. But it neither fears a war nor wants to avoid it. The DPRK is a nuclear power capable of countering any option and means of the U.S. and will not avoid any option made by it. As the DPRK had access to a powerful nuclear deterrent to protect itself from the U.S. nuclear threat, the DPRK will react to a total war with an all-out war, a nuclear war with nuclear strikes of its own style and surely win a victory in the death-defying struggle against the U.S. imperialists.” (KCNA, “U.S. Muscle-Flexing Can Never Browbeat DPRK: Foreign Ministry Spokesman,” April 21, 2017)

KCNA: “The following is the full text of "Are you good at dancing to the tune of others," a commentary written by Jong Phil Friday [April 21]: Not a single word about the U.S. act of pushing the situation on the Korean peninsula to the brink of a war after introducing hugest-ever strategic assets into the waters off the Korean peninsula is made but such rhetoric as "necessary step" and "reaction at decisive level" is openly heard from a country around the DPRK to intimidate it over its measures for self-defense. Particularly, the country is talking rubbish that the DPRK has to reconsider the importance of relations with it and that it can help preserve security of the DPRK and offer necessary support and aid for its economic
prosperity, claiming the latter will not be able to survive the strict "economic sanctions" by someone. Its official media claimed on April 18 that the DPRK's pursuance of nuclear and missile program made the U.S., which had been its rival in the past, its supporter now. Then question is what the DPRK should call that country and how the DPRK should deal with it in the future. The DPRK's nuclear deterrence for self-defense, its army and people built by tightening their belts to defend the sovereignty and right to existence of the nation, is by no means a bargaining chip for getting something. The DPRK has been so far exposed to economic sanctions but it has kept to the path of justice chosen by it with its own efforts. **The present world ruled by the jungle law makes the DPRK realize once again the iron truth that there is nothing but its own strength to rely on and that self-reliance and self-development are the only way out.** If the country keeps applying economic sanctions on the DPRK while dancing to the tune of someone after misjudging the will of the DPRK, it may be applauded by the enemies of the DPRK but it should get itself ready to face the catastrophic consequences in the relations with the DPRK. The DPRK will defend its dignity and build a paradise for the people with its own efforts, rallied close around the respected Supreme Leader.” (KCNA, “Are You Good at Dancing to Tune of Others?: Jong Pil,” April 21, 2017)

John Schilling: “Cyberwarfare is only effective against cybernetic targets; North Korea makes only limited and selective use of computers, and when they do, they use custom operating systems designed with a paranoid concern for security. The North maintains a cadre of extremely skilled cyber warriors, most of whom are likely playing defense. The exploits that enable skilled adversaries to readily subvert the relatively open networks of the Western democracies will be of little use north of the DMZ. Finding the narrow vulnerabilities that may exist in North Korea’s systems, developing the tools to exploit them, and infiltrating Northern networks while remaining concealed from Pyongyang’s security services, is going to be an exceedingly tedious process. Undoubtedly, the NSA, CIA and others have been working on this for many years, but it will take them longer to tap Kim Jong Un’s phone than it did for Angela Merkel’s, and some targets will remain forever beyond reach. Ballistic missiles may be among them. A ballistic missile is literally and figuratively air-gapped to an extreme degree—that is, thoroughly insulated from any attacker. The only connection to the outside world is a hardwired connection to a secure launch control center; however, once a launch is initiated, even that narrow path is severed. Even within the missile, and particularly the 1960s-style ballistic missiles favored by North Korea, there will be very little in the way of digital electronics with programmable software. Engines, warheads and the like will probably use hardwired, analog controllers. The guidance system might also be hardwired except for the details of the trajectory to be flown. One potential vulnerability, though, is North Korea’s known use of foreign commercial electronics components in the guidance control systems of their space launch vehicles, and presumably its more advanced missiles as well. Commercial generally means insecure when it comes to electronics, so it may be possible to find or create vulnerabilities in these components, effectively hacking the missile before it is even built. That is, if we can determine exactly which components are being used, and how, and find a path to them through North Korea’s sparse and secure networks. And that’s just too many “ifs” to be at all confident of success. A successful attack, then, will likely be aimed at something other than the missile itself. Note that the highly-publicized “Stuxnet” attack did not target Iran’s (probably nonexistent) nuclear weapons, but the uranium enrichment facility that would be used to manufacture them. North Korea positively brags about its computer-controlled milling machines; these can, in principle, be hacked to produce parts that aren’t exactly what the designer intended. Ovens used to temper and anneal alloys might also be computer-controlled, and subtle changes to the temperature profile can lead to parts that are visually perfect but will fail under load. There are numerous possibilities, and while most will not be practical to exploit, perhaps some will be vulnerable. North Korea’s factories might, perhaps, be “hacked” to produce defective missiles. Another possibility would be to attack the test program. Missile trajectories can be planned by pencil-and-paper calculation, but this is sufficiently tedious and imprecise that North Korea’s engineers are almost certainly allowed foreign-built computers for this purpose. Deciphering telemetry and analyzing the results of a test is also best done by a programmable computer. If every successful test is misinterpreted as a failure, if every test that results in excessive vibration or impacts twenty miles off course is falsely reported as a success, North Korea’s engineers may
be induced to develop a missile precisely calibrated to deliver damaged warheads far from their targets. There is evidence that U.S. military and intelligence agencies are hard at work trying to exploit possibilities like these; possibly South Korea and Japan have similar programs. What we do not know is how much they have accomplished. Even if they have not yet succeeded, they may well do so in the future. What might that look like? An attack on the manufacturing process will most likely result in defective components that fail even in ground testing. We would likely never know about this, except to wonder why the ground test phase is taking so long. Interestingly, North Korea’s KN-08 ICBM was first seen in mock-up form in 2012, but there was not a single successful ground test until last year. That may not be the result of a cyberattack, but it is at least what a cyberattack would look like. It would be preferable if the failures occurred in flight, and ideally late in flight, leaving the defective hardware out of reach of North Korean investigators. But this cannot be accomplished reliably—defects subtle enough to survive ground testing would cause some missiles to fail but leave others to complete their mission successfully. And, with properly realistic testing, some failures will still occur on the ground, leaving the North Korean engineers to connect the failed parts with the machines that built them. Such an attack can delay North Korea’s acquisition of advanced ballistic missiles, but will not prevent it in the long run. Attacks on the test process might be more subtle. At the gross level, it might be possible to induce test launches to veer off course and maybe break up in flight. But the ideal outcome, as alluded to earlier, would be for North Korea to believe that its missiles have passed all tests when they instead harbor some defect that will prove crippling in operation. Such a deception cannot be maintained forever; the North will eventually reach the point of highly realistic operational tests. But, while it lasts, the results will necessarily appear to us as they are made to appear to Pyongyang, as a successful test series. What we would not expect to see, from any plausible cyberattack, would be missiles exploding on the launch pad. The parts of the missile with the potential to explode, are most likely not controlled by software. And if we could somehow tailor built-in defects in the hardware that precisely, we wouldn’t want to. If the missile explodes within sight of North Korean engineers and cameras, they’ll have too many clues as to what went wrong. Similarly, while there are plausible attacks that could result in a defective guidance system or an improperly-calculated trajectory, anyone delivering such an attack would prefer the error be small enough that the missile is well out of sight before it goes visibly off course. If we are seeing North Korean missiles fail very early in flight, as has been the case in two recent incidents, we should probably be looking for something other than a cyberattack. And we don’t have to look far. Consider the Vanguard rocket, intended to be America’s first satellite launch vehicle, which on its first flight ascended four feet, fell back to the launch pad and exploded—and then exploded six more times in seven launches over the course of a year. The first Atlas ICBM reached 10,000 feet before tumbling and exploding in mid-air. The next six flights suffered four more failures, though at least some of those flew far enough that the explosions weren’t visible to the crowds of spectators. The Titan ICBM, intended as a counter to Atlas’s unreliability, destroyed the launch pad on its first two tests, succeeded on the third, and then went on to a string of downrange failures. This is literally rocket science. It is the epitome of a hard problem. And it becomes even harder when political pressure demands more than the hardware can yet deliver, then tries to wash away the embarrassment of failure by demanding an immediate retest without allowing time to investigate the original failure. We didn’t need cyberattacks to cause North Korea’s Musudan missile to fail in seven out of eight tests last year, and we don’t need cyberattacks for two conspicuous failures this year. Kim Jong Un will happily deliver those failures for us, just like we did for ourselves with Vanguard and Atlas and Titan, by imagining successful rocket tests can be conjured out of political dictates rather than tedious engineering. The young Kim’s father was generally more patient about this sort of thing. But eventually, North Korean engineers probably will get this right no matter who is calling the shots. Cyberwarfare might slow that process down and it may already be slowing that process down, without our knowing about it. If so, we shouldn’t expect it to buy us more than a few years. And any cyber warriors responsible should expect to wait decades before receiving their deserved acclaim. That’s the price for playing the long game and playing to win.” (John Schilling, “How to Hack and Not Hack a Missile,” 38North, April 21, 2017)
Denuclearization of the Korean peninsula can still be achieved peacefully because of Washington's new engagement with China, U.S. Vice President Mike Pence said. "We truly believe that, as our allies in the region and China bring that pressure to bear, there is a chance that we can achieve a historic objective of a nuclear-free Korea peninsula by peaceful means," Pence said. "We are encouraged by the steps that China has taken so far," he said at a joint news conference with Australian Prime Minister Malcolm Turnbull in Sydney. (Roberta Rampton and Colin Packham, “Peaceful Outcome for Korean Peninsula Still Possible: Pence,” Reuters, April 22, 2017)

Pence: “For more than a generation there has been a consensus in the world community for a nuclear-free Korean Peninsula. In the 1990s, it was a subject of negotiations and an agreed framework was arrived at. Six-Party Talks would follow sometime later. The last administration embraced a policy of strategic patience. All along the way the regime in North Korea answered the entreaties of the world community with broken promises and with continued pursuit — headlong pursuit of their nuclear and ballistic missile ambitions. And as President Trump has made clear, and I've made clear as I've traveled on this behalf throughout the region, the era of strategic patience is over. Under the President's leadership and working closely with our allies, with Prime Minister Turnbull, in my meetings with Prime Minister Abe, and with acting President Hwang in South Korea, and others, the United States is determined to bring economic and diplomatic pressure to bear working with all of our allies — and China — to ensure that we achieve a nuclear-free Korean Peninsula. Now all options are on the table, and the United States is prepared to do what's necessary in conjunction with our allies to see to the security of this region and of our own people. But we are hopeful — in fact, in President Trump's words, we have great confidence that China, with the encouragement of the United States, of our allies, and we're grateful to say with the strong encouragement of the leadership here in Australia, that China will take advantage of the unique position and relationship that it has with North Korea to bring an end to their nuclear program and to their ballistic missile programs. We call on them to do that. The President observed recently that China in a very real sense is the economic lifeline for North Korea. They've already taken steps, which we greatly welcome — intervening in coal shipments and intervening in commercial travel. But we believe China can do more, and on behalf of the President, I'm just very grateful that even this week, Australia has taken steps to engage with China directly and encourage them to take even more steps to bring that economic and diplomatic pressure to bear. But make no mistake about it, the United States of America is committed to seeing this way forward and achieve what's eluded the world community for a generation. And that is to achieve the denuclearization of the Korean Peninsula. …Q. Mr. Vice President, the administration is ramping up pressure on North Korea at the same time you seem to have ruled out talks. I'm wondering what you think the endgame is here. What makes you believe that the regime will give up the weapons systems and weapons that it has to ensure its — are perhaps guarantee of its own survival? …Pence: This is just a very serious time. And the President sent me to this region to engage with our allies to reaffirm the alliances that we enjoy, but also to make it very, very clear that the era of strategic partnership — strategic patience is over; that the United States of America is determined to work with our allies and especially with China to achieve the objective of a nuclear-free Korean Peninsula. We believe that that can occur peaceably, largely owing to the new engagement of China. In this regard, I think the world is seeing President Trump's leadership in high relief. He is in a very real sense — like the Prime Minister of Australia — he is a bottom-line person that likes to get to the point. And in his meeting with President Xi, they had a very candid conversation about a broad range of issues. But on the issue of North Korea, the President made it very clear to President Xi that we were looking to China to step up and use that unique relationship that it has with North Korea to achieve an end to the nuclear ambitions and the ballistic missile ambitions of that regime. And as I said, we're encouraged by the steps that China has taken thus far. That being said, we also wanted to make it clear that all options are on the table, and that the United States is prepared to work with our allies to ensure the security of our allies in the region, and ensure the security of the people of the United States of America. Nuclear weapons in the hands of the regime in Pyongyang with a ballistic missile program and with the potential for intercontinental ballistic missiles represents a threat to the stability and security of this region, and potentially a
threat to the continental United States. And continuing on the path the world has been on with North Korea over the last 25 years is just unacceptable. **But again, we continue to be hopeful and continue to have great confidence that we can finally after a generation achieve a peaceable solution.** And I want to reiterate again the gratitude of the United States of America for the strong support that our ally here in Australia has provided to this effort; even this week, meeting with high-ranking officials from China urging them to do more to bring economic and diplomatic pressure to bear on China is welcome. We truly believe that as our allies in the region and China bring that pressure to bear that there is a chance that we can achieve a historic objective of a nuclear-free Korean Peninsula by peaceable means.” (Office of the Vice President, Remarks by Vice President Mike Pence and Prime Minister Malcolm Turnbull, Sydney, April 22, 2017)

4/23/17

North Korea has detained a U.S. citizen, officials said Sunday, bringing to three the number of Americans now being held there. Tony Kim, who also goes by his Korean name Kim Sang-duk, was detained on Saturday, according to Park Chan-mo, the chancellor of the Pyongyang University of Science and Technology. Park said Kim, who is in his 50s, taught accounting at the university for about a month. He said Kim was detained by officials as he was trying to leave the country from Pyongyang's international airport. The Swedish Embassy in Pyongyang said it was aware of a Korean-American citizen being detained recently, but could not comment further. Park said Kim had taught at the Yanbian University of Science and Technology in China before coming to Pyongyang. He said he was informed that the detention had "nothing to do" with Kim's work at the university but did not know further details. Though no details on why Kim was detained have been released, the detention comes at a time of unusually heightened tensions between the U.S. and North Korea. (Eric Talmadge, “N. Korea Detains U.S. Citizen, the 3rd American Being Held There,” Associated Press, April 23, 2017)

4/24/17

China’s president, Xi Jinping, has urged President Trump in a phone conversation this morning in Beijing to show restraint toward North Korea despite signs that the North may be preparing a nuclear test. In the latest call, the third between the two leaders, Xi indicated to Trump that China opposed any such test by North Korea, but he also nudged Trump to avoid a tit-for-tat response to the North’s fiery threats, according to a report on Chinese television. “China adamantly opposes any actions in contravention of the United Nations Security Council resolutions,” Xi said, according to the report, evidently referring to a series of decisions by the council to punish North Korea for its nuclear and missile programs. “At the same time, it is hoped that all sides exercise restraint and avoid doing things that exacerbate tensions on the peninsula,” Xi said, referring to the Korean Peninsula. “Only if all sides live up to their responsibilities and come together from different directions can the nuclear issue on the peninsula be resolved as quickly as possible.” The comments reflected growing Chinese fears that the tensions between North Korea and the United States and its Asian allies could spiral into outright military conflict. That widening rift is presenting China with confounding choices between its longstanding ties to North Korea and its hopes for steady relations with the United States. KCNA responded over the weekend in a comment that warned China of “catastrophic consequences” for their relationship if economic sanctions continued, reported Yonhap. But today, a spokesman for the Chinese Foreign Ministry stuck to pleas for calm from all sides when asked repeatedly about North Korea, its threats to China and the possibility of another nuclear test. “The situation on the peninsula is complicated and sensitive,” the spokesman, Geng Shuang, said when asked about a possible North Korean nuclear test. “We strongly urge all sides to stay calm and restrained, and don’t take any actions that could escalate tensions.” The South Korean Defense Ministry said today that it was also considering holding joint drills with the Carl Vinson and accompanying ships, Reuters reported. Trump also spoke with Prime Minister Abe Shinzo of Japan this morning in Tokyo, Abe told reporters. Abe told the president that he strongly endorsed Trump’s position that all options were “on the table.” “North Korea’s nuclear and missile program is an extremely serious threat to security not only in the international community but also for our country,” Abe said. “We will continue to closely cooperate and maintain the high level of warning and surveillance. We will respond resolutely.” In their latest call, Xi told Trump, “International circumstances are changing rapidly, and it’s extremely necessary for China and the United States to maintain close contacts.
President Donald Trump said the U.N. Security Council must be prepared to impose new sanctions on North Korea as concerns mount that it may test a sixth nuclear bomb as early as tomorrow. "The status quo in North Korea is also unacceptable," Trump told a meeting with the 15 U.N. Security Council ambassadors, including China and Russia, at the White House. "The council must be prepared to impose additional and stronger sanctions on North Korean nuclear and ballistic missile programs." "This is a real threat to the world, whether we want to talk about it or not. North Korea is a big world problem and it's a problem that we have to finally solve," he said. "People put blindfolds on for decades and now it's time to solve the problem." U.S. officials have told Reuters tougher sanctions could include an oil embargo, banning North Korea's airline, intercepting cargo ships and punishing Chinese banks and other foreign doing business with Pyongyang. The State Department said U.S. Secretary of State Rex Tillerson would chair a special ministerial meeting of the Security Council on North Korea on April 28 to discuss ways to maximize the impact of existing sanctions and show "resolve to respond to further provocations with appropriate new measures." Tillerson and U.S. Secretary of Defense Jim Mattis, Director of National Intelligence Dan Coats and General Joseph Dunford, chairman of the Joint Chiefs of Staff, will also hold a rare briefing on North Korea at the White House on April 26 for the entire U.S. Senate, Senate aides said. Administration officials routinely travel to Congress to address lawmakers but it is unusual for the entire 100-member Senate to go to such an event at the White House, and for those four top officials to be involved. The White House said Trump and German Chancellor Angela Merkel discussed the "urgent security challenge" posed by North Korea in a phone call today. In an earlier phone conversation with Trump, Chinese President Xi Jinping called for all sides to exercise restraint, as Japan conducted exercises with a U.S. aircraft carrier strike group headed for Korean waters. Angered by the approach of the USS Carl Vinson carrier group, a defiant North Korea, which has carried out nuclear and missile tests in defiance of successive rounds of U.N. sanctions, said the deployment was "an extremely dangerous act by those who plan a nuclear war to invade." "The United States should not run amok and should consider carefully any catastrophic consequence from its foolish military provocative act," Rodong Sinmun said in a commentary. Two Japanese destroyers have joined the U.S. carrier group for exercises and South Korea said it was in talks about holding joint naval drills. (Steve Holland and Ben Blanchard, "Trump Calls for New Security Council Sanctions against North Korea,” Reuters, April 24, 2017) Trump's comments come as the USS Michigan, one of US's most powerful submarines, arrived in South Korea in an apparent show of force and senators have also been summoned to the White House to be briefed tomorrow by top officials about the threat posed by North Korea. The US president later told a reception of conservative journalists that Kim wasn't the strong leader he likes to portray himself as. "I'm not so sure he's so strong like he says he is, I'm not so sure at all," Trump told the reception in comments confirmed to CNN by the White House. The flurry of activity comes as North Korea marks the 85th anniversary of the founding of its army Tuesday — a significant date in the country's calendar, which it used to conduct a "large-scale" live-fire military drill. Commentators said that Trump, with his strong rhetoric, was backing himself into a corner over North Korea, leaving him in a potentially dangerous position. "It's been all about pressure and brinkmanship and military tools and tactics and chess something, and now to literally, directly taunt the leader of North Korea is like poking the hornet's nest yet again," said Paul Carroll, program director at the Ploughshares Fund, a group working to eliminate nuclear weapons. "If you do this kind of ratcheting (up) of rhetorical tensions but also sending military hardware into the region, if you do that absent of any kind of off ramp or door or window for the North Koreans to consider walking through and reengaging in any sort of discussions, bad things are going to happen," he added. (Ben Westcott, “Is U.S. President Donald Trump Backing Himself into a Corner on North Korea,” CNN, April 25, 2017) Behind the Trump administration’s sudden urgency in dealing with the North Korean nuclear crisis lies a stark calculus: a growing body of expert studies and classified intelligence reports that conclude the country is capable of producing a nuclear bomb every six or seven weeks. That
against it with a sword of justice and cut the windpipe of the U.S. imperialists by people. As the U.S. has unsheathed a dagger to stifle the DPRK at any cost, the DPRK will stand.

engagement" without any elementary sense about the reality, far from recognizing the changed root cause of pushing the DPRK to have acc
department of the U.S. is working hard to stoke the international atmosphere for pressurizing the DPRK: The strategy emerging from Trump’s national security team comes down to this: Apply overwhelming pressure on the North, both military and economic, to freeze its testing and reduce its stockpile. Then use that opening to negotiate, with the ultimate goal of getting the North Koreans to give up all their weapons. Many experts, however, believe that is a fantasy, because Kim regards even a small arsenal as critical to his survival. The upside of the strategy, if it works, is that the “nuclear freeze” would delay for years the day the North can fit a small, reliable, well-tested weapon atop a large, reliable, well-tested missile. The downside is that it would leave the North Koreans with a small, potent arsenal — one the United States would be essentially acknowledging, if not accepting. (David E. Sanger and William J. Broad, “As North Korea Builds Bombs, Time Dwindles,” New York Times, April 25, 2017, p. A-1)

Top envoys from Japan, the United States and South Korea held a trilateral dialogue aimed at discussing measures to “maximize” pressure on North Korea over its nuclear and missile programs. Kanasugi Kenji, director-general of the Foreign Ministry’s Asian and Oceanian Affairs Bureau, told reporters that the three countries agreed to further cooperate in their effort to take “resolute” actions against nuclear provocations by the North. Kanasugi said the trio also shared the recognition that China — the largest trade partner with the North — has a “significant” role to play in reining in Pyongyang’s saber-rattling. He did not elaborate. South Korea’s envoy on North Korean nuclear issues, Kim Hong-kyun, warned that Pyongyang’s failure to discontinue its missile and atomic tests will be met with “unbearable” punitive sanctions, and that the three countries will seek to “maximize” pressure against the reclusive state. Kanasugi is scheduled to meet his visiting Chinese counterpart, Wu Dawei, special representative for Korean Peninsula Affairs, tomorrow. In meeting with Wu, Kanasugi said he will discuss the possibility of China cutting off its supply of oil to North Korea. Meanwhile, the three envoys agreed to “continue to work very closely with China” and “coordinate all actions — diplomatic, military, economic — regarding North Korea,” Joseph Yun, special representative for North Korea policy from the U.S., told reporters after the meeting. “We really do not believe North Korea is ready to engage us toward denuclearization,” Yun said. “We make clear among ourselves that denuclearization remains the goal and we very much want North Korea to take steps toward that.” (Osaki Tomohiro, “Japan, South Korea, U.S. Diplomats Discuss Ways to ‘Maximize’ Pressure on North Korea,” Japan Times, April 25, 2017)

DPRK FoMin spokesman answer to the question raised by KCNA Tuesday “as regards the fact that the U.S. is working hard to stoke the international atmosphere for pressurizing the DPRK: Recently, the U.S. is seeking to gain public support at home and abroad for a newly worked out policy called "maximum pressure and engagement" in a bid to isolate and stifle the DPRK. U.S. President Trump personally invited the delegates of the member states of the UN Security Council to the White House to discuss the issue of the DPRK. A closed-door briefing on the new policy toward the DPRK will be reportedly held in the White House for the senators in the presence of high-ranking officials including the State and Defense secretaries. Against this backdrop, the U.S. secretary of State is going to sponsor a ministerial meeting concerning the denuclearization of the DPRK at the UN Security Council. This is just a risky act little short of lighting the fuse of a total war under the present touch-and-go situation on the Korean peninsula as they openly cried out for ratcheting up pressure on the DPRK. The policy pursued by the U.S. to isolate and stifle the DPRK and the nuclear threat posed by the U.S. to the DPRK for more than half a century are the root cause of pushing the DPRK to have access to nukes. The Trump administration has gone so ridiculous and foolhardy to devise the policy characterized by the "maximum pressure and engagement" without any elementary sense about the reality, far from recognizing the changed strategic position of the DPRK and the thousand-fold retaliatory will of its service personnel and people. As the U.S. has unsheathed a dagger to stifle the DPRK at any cost, the DPRK will stand against it with a sword of justice and cut the windpipe of the U.S. imperialists by dint of the strong
revolutionary forces with the nuclear force, an almighty treasured sword, as their pivot. The present reality helps the DPRK keenly realize once again that it was entirely just when it opted for bolstering the nuclear force both in quality and quantity under the uplifted banner of the great line of simultaneously developing the two fronts. There is a saying that those who are fond of playing with fire are destined to perish in the flames. The same can be said of the U.S.” (KCNA: “U.S.-Led Pressure Can Never Work on DPRK: Foreign Ministry Spokesman,” April 25, 2017)

The United States, Japan and other countries surrounding North Korea are on high alert over the nation’s provocative actions, including the possibility it would conduct its sixth nuclear test, as Tuesday marked the 85th anniversary of the foundation of its Korean People’s Army. According to Reuters and other media, the USS Michigan, an Ohio-class nuclear submarine, arrived in Busan, South Korea, on the day. The Michigan is one of the U.S. Navy’s largest submarines. According to South Korean government sources, North Korea conducted a large-scale drill with live ammunition today, using long-range artillery units, in an area around Wonsan in the east of the country. Kim Jong Un, chairman of the Workers’ Party of Korea, inspected the drill, Yonhap News Agency said. The USS Michigan is known for its strong attack capabilities — it can launch up to 154 Tomahawk cruise missiles. It is also used for carrying U.S. Navy SEALs and serves as their base for conducting special operations. Fox News cited multiple U.S. military sources as saying the USS Michigan was scheduled to join the strike group of the USS Carl Vinson in the Sea of Japan after undergoing maintenance. The Michigan was to participate in a joint military exercise later. (Oka Seima, “Japan, U.S. on High Alert over N. Korea,” Yomiuri Shimbun, April 25, 2017)

South Korea said it has decided to purchase two advanced early warning radars on incoming ballistic missiles as North Korea's threats have grown. The plan was approved at a regular meeting on arms procurement projects presided over by Defense Minister Han Min-koo, according to the Defense Acquisition Program Agency (DAPA). It plans to import the radars in the project starting within this year. The South Korean military has two Israel-made Green Pine land-based radars in operation. It is seeking to acquire radars with the maximum range of more than 800 kilometers to better detect ballistic missiles fired by the North. Initially, the defense authorities earmarked budget for the purchase of one more radar. But they have revised a mid-term defense plan to buy two more. The DAPA also said it will push for the production of special ships to support an operation by commandos to remove the enemy's leadership, while continuing the development of indigenous ship self-defense guided missiles. (Yonhap, “S. Korean Military to Buy Two More Anti-Ballistic Missile Radars,” Korea Herald, April 25, 2017)

The United States military started installing a controversial anti-missile defense system in South Korea overnight, triggering protests and sparking criticism that it was rushing to get the battery in place before the likely election of a president who opposes it. The sudden and unannounced move came only six days after U.S. Forces Korea secured the land to deploy the system, known as the Terminal High Altitude Area Defense, or THAAD. Moon Jae-in, a liberal candidate who has a strong lead in the polls ahead of the May 9 presidential election, has promised to review South Korea’s decision to host the anti-missile battery. A spokesman for Moon, the Democratic Party’s candidate for president, criticized the sudden moves overnight. “Moon Jae-in has been consistent in his position on the THAAD deployment: that it must be decided by the next administration after enough public discussion and by national consensus,” Park Kwang-on said in a statement. “Any deployment that completely ignores appropriate processes must be suspended now and the final decision should be made after consultation between South Korea and the U.S.,” he said. Moon has a solid 10-point lead over his closest rival in the most recent polls and political scientists expect him to be South Korea’s next president, barring any dramatic developments. “There’s a sense in Seoul that THAAD deployment has been rushed based on the timetable of South Korea’s presidential election, rather than North Korea's threats,” said John Delury, a professor of international relations at Yonsei University in Seoul. “To some extent, the acceleration of THAAD deployment has ‘worked,’ limiting the next South Korean leader’s room for maneuver,” Delury said. “But there’s the danger of a backlash among the South Korean public feeling like a pawn in
the game of ‘America First.’” South Korea’s Ministry of National Defense said that South Korea and the United States had been working “to secure the swift operational capability of the THAAD system against North Korea’s nuclear and missile threat.” “South Korea’s military plans to secure full capability of the THAAD system operation within the year,” the ministry said in a statement. Each THAAD battery includes at least six truck-mounted launchers that carry up to eight missiles each. They are designed to shoot down enemy ballistic missiles like the ones that North Korea has been launching at a steady clip over the past year. Residents in the Seongju area, where the battery will be deployed, have also been protesting, worried that the system’s presence will make them a target for North Korea’s missiles. According to local reports, six trailers carrying the X-band radar, mobile launchers and other parts of the system were seen entering the site about midnight. A group of residents protested against the move and tried to stop the equipment from being taken onto the site, clashing with police, the Yonhap news agency reported from Seongju, in the southeast of South Korea. They waved placards saying “No THAAD, No War” and “Hey, U.S.! Are you friends or occupying troops?” “Police let THAAD equipment pass through [protesters] by repressing them,” Kang Hyun-wook, a religious leader who was leading the protest, told Yonhap. “The THAAD deployment is illegal and should be nullified.” (Anna Fifield, “U.S. Military starts to Deploy Controversial Anti-Missile Battery in South Korea,” *Washington Post*, April 25, 2017) The surprise delivery of two THAAD launchers in Seongju, North Gyeongsang Province, on the eve of the presidential election in late April was made at the request of the South Korean government rather than under US pressure, it was recently confirmed. The effort to set the THAAD deployment in stone after then-President Park Geun-hye was ousted from office was orchestrated by Kim Kwan-jin, then head of the National Security Council Standing Committee and the chief of the Blue House National Security Office. On October 10, Democratic Party lawmaker and National Assembly Defense Committee member Rhee Cheol-hee shared a document with the Hankyoreh titled “Reference Materials in Connection with the US Forces Korea THAAD System Deployment,” which was drafted by the Ministry of National Defense shortly after President Moon Jae-in took office in May. That document along with eyewitness accounts show that Kim pressured the ministry to twice move up the THAAD deployment schedule, citing the “deepening crisis on the Korean Peninsula.” Initially, South Korea and the US developed a plan for a temporary deployment in September 2017 and complete operational capabilities as of 2018, according to an agreement drafted in November 2016. But Kim subsequently began efforts to hasten the deployment after Park’s impeachment motion was approved by the National Assembly on December 9, 2016. Witnesses in the Ministry of National Defense and Blue House at the time said Kim gave orders after the impeachment for the ministry to consider moving the THAAD deployment date four months up to May 2017. During an NSC meeting attended in late December 2016, Kim was also reported to have sternly rebuked a senior ministry official who compared the respective pros and cons of the Sept. 2017 and May 2017 deployment plans and concluded there was “no advantage to moving up the date.” Around ten days later on January 8, Kim visited the US to discuss an “unhindered” THAAD deployment with then-White House National Security Adviser nominee Michael Flynn. After his return, Acting President Hwang Kyo-ahn hinted that the deployment could be sped up during a New Year’s press conference on January 23. “It would be good to go good [the THAAD deployment] as soon as possible,” Hwang said at the time. With Seoul demanding the deployment be hurried along, the US military presented a revised plan in early February, which included a temporary deployment in May 2017 and full deployment as of 2018. But Kim, who had previously ordered examination of a May deployment, once again changed his position, telling then-Minister of Defense Han Min-koo the date should be moved up even further. In a March 1 telephone conversation, Han told US Secretary of Defense James Mattis that Seoul was “pursuing unhindered preparations for THAAD’s early operation.” On the evening of March 6, just ahead of the Constitutional Court’s Mar. 10 decision on the impeachment case, USFK airlifted part of the THAAD equipment into Osan Air Base. On March 15, Kim once again visited the US and held discussions with National Security Advisor H. R. McMaster on the THAAD system’s “unhindered deployment.” A second bilateral agreement reached in early March put the temporary deployment date in late April 2017 and the completion of full deployment within 2017. Early in the morning on April 26 came the surprise delivery of two THAAD launchers in Seongju. (Kim Tae-kyu, Choi Hye-jung, and Um Ji-
Joint Statement by Secretary of State Rex Tillerson, Secretary of Defense James Mattis, Director of National Intelligence Dan Coats: “Past efforts have failed to halt North Korea’s unlawful weapons programs and nuclear and ballistic missile tests. With each provocation, North Korea jeopardizes stability in Northeast Asia and poses a growing threat to our Allies and the U.S. homeland. North Korea’s pursuit of nuclear weapons is an urgent national security threat and top foreign policy priority. Upon assuming office, President Trump ordered a thorough review of U.S. policy pertaining to the Democratic People’s Republic of Korea (D.P.R.K.). Today, along with Chairman of the Joint Chiefs of Staff Gen. Joe Dunford, we briefed Members of Congress on the review. The President’s approach aims to pressure North Korea into dismantling its nuclear, ballistic missile, and proliferation programs by tightening economic sanctions and pursuing diplomatic measures with our Allies and regional partners. **We are engaging responsible members of the international community to increase pressure on the D.P.R.K. in order to convince the regime to de-escalate and return to the path of dialogue.** We will maintain our close coordination and cooperation with our Allies, especially the Republic of Korea and Japan, as we work together to preserve stability and prosperity in the region. **The United States seeks stability and the peaceful denuclearization of the Korean peninsula. We remain open to negotiations towards that goal.** However, we remain prepared to defend ourselves and our Allies.” (DoS, Office of the Spokesman, Media Note, April 26, 2017)

U.S. national security leaders emphasized economic sanctions and diplomacy to persuade North Korea to dismantle its nuclear weapons and ballistic missile programs, even as the Pentagon ramps up its military presence in the region with an aircraft carrier battle group and submarine. “North Korea’s pursuit of nuclear weapons is an urgent national security threat and top foreign policy priority,” according to a joint statement by Secretary of State Rex Tillerson, Defense Secretary James Mattis and Director of National Intelligence Dan Coats. “The United States seeks stability and the peaceful denuclearization of the Korean peninsula. We remain open to negotiations towards that goal.” The statement followed warnings by the Pentagon’s top commander in the Pacific that Pyongyang is making steady progress toward developing ballistic missiles that can hit the U.S. Kim Jong Un’s regime is testing those missiles and nuclear devices with growing frequency and aggressiveness, Admiral Harry Harris said in testimony before the House Armed Services Committee. “The words and actions of North Korea threaten the U.S. homeland and that of our allies in South Korea and Japan,” Harris said in his prepared testimony. The U.S. “must be prepared to fight” on short notice, he said. Harris also endorsed Trump administration statements that the U.S. goal wasn’t to topple Kim’s regime. “We want to bring Kim Jong Un to his senses, not to his knees,” he said. Pressed by lawmakers, Harris wouldn’t discuss publicly scenarios for a pre-emptive strike against North Korea, though he did address the risk that U.S. action could be met by a response that would kill many South Koreans, Japanese and U.S. troops in the region. “A lot more Koreans and Japanese and Americans die” if Kim’s regime reaches its nuclear arms goals, Harris said. “The military is obviously planning for a number of contingencies, a number of options, as well they should, running the full range from a more minimal military action to a far more significant military action,” Republican Senator Ted Cruz, of Texas, said after the White House briefing. “It is the hope of the administration, the hope of Congress, that military action does not prove necessary, that economic and diplomatic pressure will cause a change in behavior of the regime.” Democratic Senator Chris Coons, of Delaware, called the White House briefing “sobering,” adding that the North Korean threat “should be the top priority of the administration.” Senator Cory Gardner, a Colorado Republican, told reporters a military strike should be well down the administration’s list of alternatives. “There’re so many options that we need to be taking that are a long ways away from a strike,” he said, adding that diplomatic steps should include “secondary sanctions on Chinese individuals, entities and companies that are doing business with the North Korean regime.” House Foreign Affairs Chairman Ed Royce said that Congress would pursue legislation to crack down on financial institutions that have ties to the North Korean government. “There is additional legislation which we are going to move very quickly that will
also choke off some of the hard currency that this regime uses for its nuclear program,” the California Republican said after attending a separate administration briefing on North Korea for House members. But Representative Brad Sherman, a Democrat from California who serves on the House Foreign Affairs Committee, said the Trump administration wasn’t applying enough pressure on China to use its influence to rein in North Korea. “What was lost in the discussion is that they are unwilling to do anything that would put real pressure or China or use our ability to impose tariffs,” Sherman told reporters Wednesday. “Because these are things that Wall Street would reject.” (Nick Wadhams, Steven T. Dennis, and Terrence Dopp, “U.S. Pushes Sanctions, Diplomacy as North Korea Threat Grows,” Bloomberg News April 27, 2017)

An unarmed Minuteman 3 intercontinental ballistic missile was launched from California early in a test of the weapon system that is part of the U.S. nuclear force. The missile blasted off from a silo at 12:03 a.m. from Vandenberg Air Force Base and delivered a single re-entry vehicle to a target approximately 4,200 miles (6,759 kilometers) away at Kwajalein Atoll in the Pacific Ocean, the Air Force Global Strike Command said. The launch command was issued via an air launch control system aboard a Navy E-6 Mercury jet. “Tonight’s launch was an important demonstration of our nation’s nuclear deterrent capability,” Col. John Moss, commander of Vandenberg’s 30th Space Wing, said in a statement. “Test launches like this one are vital to validating the effectiveness and readiness of our operational nuclear systems, so it is critical that they are successful.” Operational tests of Minuteman 3 missiles are conducted regularly but the timing of Wednesday’s launch amid U.S. tensions with North Korea over its nuclear and missile programs drew criticism from the Nuclear Age Peace Foundation. “When it comes to missile testing, the U.S. is operating with a clear double standard: It views its own tests as justified and useful, while it views the tests of North Korea as threatening and destabilizing,” David Krieger, president of the organization, said in a statement on its website two days ago. (Associated Press, “U.S. Test Launches Unarmed Intercontinental Ballistic Missile,” April 26, 2017)

The Eighth U.S. Army started moving its headquarters out of the old garrison in Seoul to Pyeongtaek, Gyeonggi Province, further away from the tense inter-Korean border. The Eighth Army, which forms the core of the U.S. Forces Korea, held a symbolic ceremony at the Yongsan Garrison on Tuesday morning to take down a statue of Gen. Walton Walker (1899-1950) and ship it to Camp Humphreys in Pyeongtaek, the new USFK headquarters. A 300-strong force started relocating in May last year and completed the process this March. Other key units hope to complete their relocation by late June, and the entire process is going to be complete in November. Only Combined Forces Command headquarters, some support units and the Dragon Hill Lodge will remain at Yongsan until the end of this year. The 2nd U.S. Infantry Division scattered in Uijeongbu and Dongducheon, Gyeonggi Province will relocate to Pyeongtaek late next year. Once the relocation is complete, USFK troops, who have used outdated facilities in 91 locations nationwide, will be concentrated in Pyeongtaek and Osan in the central region and Daegu, Waegwan, and Gimcheon in the south. (Yu Yong-ween, “8th U.S. Army Starts Pulling out of Seoul,” Chosun Ilbo, April 26, 2017)

Sigal: “The drums of war are threatening to drown out the whispers of diplomacy with North Korea. Lost in the reverberations is the fact that Pyongyang is willing to negotiate — though not on US terms. Indeed, in early March the Trump administration opened the door to talks by extending visas to North Korean diplomats to come to New York — only to cancel them at the last minute. After the North revealed preparations for a nuclear test and launched missiles, administration officials claimed that a carrier battle group was dispatched to Korean waters, which has yet to arrive. North Korea responded with missile launches aimed at strengthening its deterrent. Amid much tough talk out of Washington and Pyongyang, a US Minuteman III was launched in the North’s general direction and a US submarine bristling with Tomahawk missiles arrived in the South. As Wednesday’s White House briefing suggests, the American show of force is just that — a show — which has two purposes. The first is to reassure allies made jittery by candidate Donald Trump’s questioning of US commitments. The net effect seemed more alarming than reassuring to Asian countries. The second purpose is even more questionable: to press China
President Donald Trump said a major conflict with North Korea is possible in the standoff over its nuclear and missile programs, but he would prefer a diplomatic outcome to the dispute. "There is a chance that we could end up having a major, major conflict with North Korea. Absolutely," Trump told Reuters in an Oval Office interview ahead of his 100th day in office on April 29. Nonetheless, Trump said he wanted to peacefully resolve a crisis that has bedeviled multiple U.S. presidents, a path that he and his administration are emphasizing by preparing a variety of new economic sanctions while not taking the military option off the table. "We'd love to solve things diplomatically but it's very difficult," he said. In other highlights of the 42-minute interview, Trump was cool to speaking again with Taiwan's president after an earlier telephone call with her angered China. He also said he wants South Korea to pay the cost of the U.S. THAAD anti-missile defense system, which he estimated at $1 billion, and intends to renegotiate or terminate a U.S. free trade pact with South Korea because of a deep trade deficit with Seoul. Asked when he would announce his intention to renegotiate the pact, Trump said: "Very soon. I'm announcing it now." Trump said North Korea was his biggest global challenge. He lavished praise on Chinese President Xi Jinping for Chinese assistance in trying to rein in Pyongyang. The two leaders met in Florida earlier this month. "I believe he is trying very hard. He certainly doesn’t want to see turmoil and death. He doesn’t want to see it. He is a good man. He is a very good man and I got to know him very well. With that being said, he loves China and he loves the people of China. I know he would like to be able to do something, perhaps it's possible that he can't," Trump, asked if he considered North Korean leader Kim Jong Un to be rational, said he was operating from the assumption that he is rational. He noted that Kim had taken over his country at an early age. "He's 27 years old. His father dies, took over a regime. So say what you want but that is not easy, especially at that age. I'm not giving him credit or
not giving him credit, I'm just saying that's a very hard thing to do. As to whether or not he's rational, I have no opinion on it. I hope he's rational," he said. (Stephen J. Adler, Steve Holland and Jeff Mason, “Exclusive: Trump Says ‘Major, Major’ Conflict with North Korea Possible, But Seeks Diplomacy,” Reuters, April 28, 2017) President Donald Trump said he wants South Korea to pay for the US$1 billion deployment of the U.S. Terminal High Altitude Area Defense (THAAD) battery, a missile defense system the allies are currently fielding here, he said in an interview with Reuters reported. Trump also said he will "renegotiate or terminate" the U.S. free trade agreement with South Korea. "I informed South Korea it would be appropriate if they paid. It's a billion-dollar system," Reuters quoted Trump as saying. According to the interview, Trump questioned why the U.S. was paying for the THAAD system to defend against a potential missile attack from North Korea. South Korea's Ministry of National Defense, however, said there is no change in the two countries' official position that the U.S. funds the deployment while the South provides the land. A diplomatic official here also said the government has not been "informed" of the cost issue. "The official position remains unchanged that our government provides the land and other infrastructure while the U.S. covers the burden of cost of deploying and maintaining the THAAD system according to the regulations of the Status of Forces Agreement (SOFA)," the ministry said in a brief press release shortly after the report. Ever since their first announcement of the deployment plan on February 7 last year, the ministry and U.S. Forces Korea have said the deployment will be carried out under the SOFA. The SOFA requires South Korea to supply plots of land and infrastructure for American forces stationed here and the U.S. to finance the operations of its forces and military assets. South Korea is currently sharing the cost of maintaining 28,500 U.S. troops stationed in South Korea by renewing the bilateral Special Measure Agreement (SMA) every five years. Under the latest SMA signed in early 2014, South Korea is contributing nearly 1 trillion won ($879 million) every year. The allies are expected to initiate their negotiations late this year or early next year to renew the agreement which will expire at the end of 2018. In the interview, Trump also called the Korea-U.S. free trade agreement "horrible." "It is unacceptable, it is a horrible deal made by Hillary," Trump said, putting the blame on his former presidential rival Hillary Clinton. "It's a horrible deal, and we are going to renegotiate that deal or terminate it." Asked when he would announce the renegotiation, he said, "Very soon. I'm announcing it now." (Yonhap, “Trump Says He Wants S. Korea to Pay US$1 bln. THAAD Deployment: Report,” April 28, 2017)

Tillerson: “Steve Inskeep: I want to begin with North Korea. We heard when you said, "the era of strategic patience is over," so we know what your policy is not. Is there a word or phrase you can give us to say what your approach to North Korea is? Secretary of State Rex Tillerson: Yes, our approach to North Korea is to have them change their posture towards any future talks. And I think when we say the era of strategic patience is over — in the past I think we have always negotiated our way to the negotiating table. Now when they act up, we would negotiate our way to get them to come to the table, and then decide what we're going to give them to have them behave. We don't have the running room left to do that now, given how far advanced their program has become. So this is an approach that is to put pressure on them through implementation of all the sanctions, as well as other diplomatic pressures, and calling on others to cause them to change their view of what will really allow them to achieve the security that they say they seek. Inskeep: Do you intend to direct talks with North Korea? Is that your goal? Tillerson: Obviously, that would be the way we would like to solve this. But North Korea has to decide they're ready to talk to us about the right agenda — and the right agenda is not simply stopping where they are for a few more months or a few more years and then resuming things. That's been the agenda for the last 20 years. Inskeep: Well help me understand what success is from your point of view. What does the goal have to be? Well our goal is the same as that of China, which is a denuclearized Korean peninsula. Inskeep: No nuclear weapons for North Korea? A denuclearized Korean Peninsula. Tillerson: It's very clear: That's China's stated policy, it has been our stated policy, it's been the stated policy of our allies in the region. And I would quickly add, you know, we did our part — we took our nuclear weapons out of the Korean Peninsula. It's time for North Korea to take their weapons out as well. Inskeep: Is that a realistic goal? Tillerson: It is our goal. It is our only goal. Inskeep: And would you go so far as to say that is an absolute goal? I'm thinking of the way that President Obama during the nuclear negotiations with Iran said
Iran will not have a nuclear weapon, period. Are you prepared to say: North Korea will not end this process with nuclear weapons, period? We must have a denuclearized Korean Peninsula. **Tillerson:** That is our goal, pure and simple. **Inskeep:** Nothing less? Nothing less. **Inskeep:** Regardless of the methods? **Tillerson:** I'm not sure what you mean when you say regardless of the methods... **Inskeep:** I guess I'm asking if that's a red line for you — North Korea keeping any nuclear weapons at all. **Tillerson:** **We don't have any red lines.** I think what you're talking about perhaps is — how do we get there? And we say: **We can't begin the process of getting there until North Korea comes to the table with a willingness to talk about how we get there — and how they achieve their objective.** **Tillerson:** You know, if you listen to the North Koreans and the regime of Pyongyang, their reason for having nuclear weapons is, they believe it is their only pathway to secure the ongoing existence of their regime. What we hope to convince them is: You do not need these weapons to secure the existence of your regime. **Inskeep:** Meaning you could assure the existence, or the continued existence of the regime? **We have been very clear as to what our objectives are. And equally clear what our objectives are not. And we do not seek regime change, we do not seek a collapse of the regime, we do not seek an accelerated reunification of the peninsula. We seek a denuclearized Korean Peninsula — and again that is entirely consistent with the objectives of others in the region as well. **Inskeep:** Mr. Secretary, people will know that you're trying to work through China on this and make sure that China is applying the appropriate pressure — one of many things you're trying to deal with China on. I'd like to ask about the relationship between the president and the president of China, Xi Jinping. **Tillerson:** Mr. Secretary, people will know. **Inskeep:** Mr. Secretary, people will know that you're trying to work through China on this and make sure that China is applying the appropriate pressure — one of many things you're trying to deal with China on. I'd like to ask about the relationship between the president and the president of China, Xi Jinping. How important is that personal relationship between the two leaders? **Tillerson:** Well it's extraordinarily important, first to just the broader relationship of where U.S.-China relations are going to find themselves over the next two to three to four decades. I think we are at a bit of an inflection point in the U.S.-China relationship. Now, North Korea is a threat that presents itself right up front to both of us, and in our conversations with the Chinese — and we have been very clear to them. I was on my initial trips to Beijing, and then in the visit of President Xi to Mar-a-Lago, the president and I were able to be very clear to them that things have to change in North Korea. And we need their help doing that. Now, we like for them to help, we want them to help. If they believe for their own reasons they cannot help, then if they'll just let us know, we'll take that into consideration as we go forward. I think to this point, what China is beginning to re-evaluate is whether North Korea is any kind of an asset to them, or whether North Korea themselves and the regime have become a liability to China's own security. Because as I've said to my Chinese counterparts, those missiles go in all directions. And whether this regime is one that they feel is reliable for them to continue to work with.” (NPR, Transcript: NPR Interviews Secretary of State Rex Tillerson, April 28, 2017)

The United States ambassador to the United Nations, Nikki R. Haley, has often been the first, most outspoken member of the Trump administration to weigh in on key foreign policy issues, on everything from military strikes on Syria to sanctions against Russia and how to approach human rights. Much of that has come as a surprise to the State Department, and the Secretary of State, Rex W. Tillerson, has often been far from the limelight. Now, in an apparent attempt to foster greater coherence in American foreign policy, State Department officials are urging her aides to ensure her public remarks are cleared by Washington first. An email drafted by State Department diplomats urged Haley’s office to rely on “building blocks” written by the department to prepare her remarks. Her comments should be “re-cleared with Washington if they are substantively different from the building blocks, or if they are on a high-profile issue such as Syria, Iran, Israel-Palestine, or the D.P.R.K.,” added the email, the text of which was seen by the Times. The White House is riven by feuds, with various cabinet members vying for prominence, and while Trump has a business-centric reverence for Tillerson, he is said to like Haley. There was a hint of that tension on April 24 during the White House lunch for the Security Council diplomats. “Now, does everybody like Nikki?” the president asked his lunch guests. “Because if you don’t, otherwise, she can easily be replaced.” The guests laughed a little. “No, we won’t do that, I promise,” the president said. “We won’t do that. She’s doing a fantastic job.” That evening came praise from the president’s daughter Ivanka. On Twitter, she posted a photograph of Haley surrounded by the Security Council diplomats and wrote: “The world is in good hands under her leadership.” Haley
Trump spoke with Reuters in his office just a day after key components of the Terminal High Altitude Area Defense battery were installed in the early morning hours yesterday on a golf course in Seongju County, North Gyeongsang. “On the THAAD system, it’s about a billion dollars. I said, ‘Why are we paying? Why are we paying a billion dollars? We are protecting. Why are we paying a billion dollars?’” Trump said. “So I informed South Korea it would be appropriate if they paid.” The South Korean government said it was not informed of such intentions by the U.S. government before the interview and that nothing has changed in the terms of agreements in the bilateral Status of Forces Agreement (SOFA). “The Korean government stands by the agreements in the SOFA, in that the Korean government provides the land and basic infrastructure, while the U.S. government pays for expenditures incident to the maintenance of the U.S. armed forces here,” the Ministry of National Defense said in a statement April 28. “It is agreed that the United States will bear for the duration of this Agreement without cost to the Republic of Korea all expenditures incident to the maintenance of the United States armed forces in the Republic of Korea, except those to be borne by the Republic of Korea,” the agreement states, adding that South Korea should pay for use of facilities and areas for the U.S. forces here. Opposition lawmakers issued statements requesting explanations from the incumbent administration. “The Liberty Korea Party and Bareun Party [comprising lawmakers from the former ruling Saenuri Party] and the Ministry of National Defense has been saying that the Thaad’s deployment and management will be paid for by the United States,” said Democratic Party Rep. Youn Kwan-suk, also communications director of the presidential campaign of Moon Jae-in. “If media reports are true, then it seems that the decision to deploy the THAAD system has been flawed from the beginning. The Defense Ministry and former ruling party must explain what kind of agreements were in place concerning THAAD, and all procedures to deploy the battery must be put to a stop until the next administration.” Presidential front-runner Moon has been opposing the deployment of the U.S.-led antimissile defense system in Korea. “The deployment and management of the THAAD system must be paid for by the U.S. government, as agreed upon initially between the two governments,” said People’s Party Rep. Son Kum-ju, chief spokesman of the presidential campaign of Ahn Cheol-soo. “But if there were disagreements on the bilateral agreement to deploy the defense system, the agreement must be tabled for approval at the National Assembly.” The Park Geun-hye administration last July said the deployment requires no approval by the National Assembly, but liberal opposition parties that are against the placement said the matter should be deliberated and ratified by the lawmakers. “The People’s Party also opposes renegotiating the Korea-U.S. FTA. It is only right that two countries stick to agreements they have reached together,” Son added. Some lawmakers went so far as to request the cancellation of the agreement over Thaad. “We would rather the U.S. government take back the Thaad battery if it’s going to make the South Korean government pay for it,” said Rep. Sim Sang-jeung of the Justice Party, also a candidate for the presidential election, in a campaign speech on Friday at Hongik University Station in western Seoul. “The South Korean people have not asked for THAAD.” “[The 1.5 trillion won ($1.3 billion) for Thaad] will be paid by the U.S. forces,” Defense Minister Han Min-koo said in a meeting of the National Defense Committee on July 11, 2016. (Esther Chung, “Trump Wants Seoul to Pay $1 Billion for THAAD,” JoongAng Ilbo, April 28, 2017)
Prime Minister Abe Shinzo and Russian President Vladimir Putin agreed that the two countries will send a joint public-private survey mission to northwestern Pacific islands at the center of the two countries’ territorial row as early as in May as part of efforts to materialize joint economic activities there. At their 17th summit, held about three hours and 10 minutes at the Kremlin in Moscow, Abe and Putin also confirmed that aircraft will be used for travel to the islands by former residents for visiting the graves of their ancestors. Aircraft has never been used for such travel. The use of aircraft is aimed at easing the burden of former islanders, many of whom are aging.
A North Korean ballistic missile apparently failed shortly after launch, South Korea and the United States said, the third test-fire flop just this month but a clear message of defiance as a U.S. supercarrier conducts drills in nearby waters. The timing of the North's test was striking: Only hours earlier the U.N. Security Council held a ministerial meeting on Pyongyang's escalating weapons program. North Korean officials boycotted the meeting, which was chaired by U.S. Secretary of State Rex Tillerson. President Donald Trump said on Twitter, "North Korea disrespected the wishes of China & its highly respected President when it launched, though unsuccessfully, a missile today. Bad!" He did not answer reporters' questions about the missile launch upon returning to the White House from a day trip to Atlanta. North Korea didn't immediately comment on the launch, though its state media yesterday reiterated the country's goal of being able to strike the continental U.S. South Korea's Joint Chiefs of Staff said in a statement that the missile flew for several minutes and reached a maximum height of 71 kilometers (44 miles) before it apparently failed. It didn't immediately provide an estimate on how far the missile flew, but a U.S. official, speaking on condition of anonymity to discuss sensitive matters, said it was likely a medium-range KN-17 ballistic missile. It broke up a few minutes after the launch. Japan's Chief Cabinet Secretary Suga Yoshihide, speaking after a meeting of Japan's National Security Council, said the missile is believed to have traveled about 50 kilometers (30 miles) and fallen on an inland part of North Korea. Analysts say the KN-17 is a new Scud-type missile developed by North Korea. The North fired the same type of missile April 16, just a day after a massive military parade where it showed off its expanding missile arsenal, but U.S. officials called that launch a failure. Some analysts say a missile the North test fired April 5, which U.S. officials identified as a Scud variant, also might have been a KN-17. U.S. officials said that missile spun out of control and crashed into the sea. Moon Seong Mook, a South Korean analyst and former military official, says that the North would gain valuable knowledge even from failed launches as it continues to improve its technologies for missiles. The South Korean and Japanese assessments about Saturday's launch indicate that the North fired the missile from a higher-than-normal angle to prevent it from flying too far, he said. "They could be testing a variety of things, such as the thrust of the rocket engine or the separation of stages," Moon said. "A failure is a failure, but that doesn't mean the launch was meaningless." The two earlier launches were conducted from an eastern coastal area, but Saturday's missile was fired in the west, from an area near Pukchang, just north of the capital, Pyongyang. South Korea's Foreign Ministry denounced the launch as an "obvious" violation of United Nations resolutions and the latest display of North Korea's "belligerence and recklessness." "We sternly warn that the North Korean government will continue to face a variety of strong punitive measures issued by the U.N. Security Council and others if it continues to reject denuclearization and play with fire in front of the world," the ministry said. Yesterday, the United States and China offered starkly different strategies for addressing North Korea's escalating nuclear threat as Tillerson demanded full enforcement of economic sanctions on Pyongyang and urged new penalties. Stepping back from suggestions of U.S. military action, he even offered aid to North Korea if it ends its nuclear weapons program. Tillerson said the U.S. does not seek regime change in North Korea, and he signaled American openness to holding direct negotiations with Pyongyang. The U.S. also could resume aid to North
Korea once it "begins to dismantle its nuclear weapons and missile technology programs," he said. Yet illustrating the international gulf over how best to tackle North Korea, several foreign ministers on the 15-member council expressed fears of a conflict on the Korean Peninsula, which was divided between the American-backed South and communist North even before the 1950-53 Korean War. Foreign Minister Wang Yi said China would adhere to past U.N. resolutions and wants a denuclearized peninsula. But he spelled out no further punitive steps his government might consider, despite Tillerson's assertions in an interview hours ahead of the council meeting that Beijing would impose sanctions of its own if North Korea conducts another nuclear test. Wang put forward a familiar Chinese idea to ease tensions: North Korea suspending its nuclear and missile activities if the U.S. and South Korea stop military exercises in the region. Tillerson said the North must take "concrete steps" to reduce its weapons threat before talks could occur. Six-nation nuclear negotiations with North Korea stalled in 2009. The Obama administration sought to resurrect them in 2012, but a deal to provide food aid in exchange for a nuclear freeze soon collapsed. "In a nutshell, (North Korea) has already declared not to attend any type of talks which would discuss its nuclear abandonment, nuclear disarmament," Kim In Ryong, North Korea's deputy U.N. ambassador, told The Associated Press. His government declined to attend yesterday's council meeting. (Foster Klug and Kim Tong-Hyung, “North Korean Missile Test Fails Hours after UN Meeting on Nukes,” Associated Press, April 29, 2017) North Korea fired another ballistic missile early this morning, but it exploded within seconds of being launched, American and South Korean defense officials said. Today’s launch marked the 75th missile test since Kim Jong Un became leader of North Korea at the end of 2011, according to a Nuclear Threat Initiative database. American and South Korean defense officials said that the unidentified missile appears to have exploded soon after being launched at about 5 a.m. North Korea time. “The missile did not leave North Korean territory,” U.S. Pacific Command spokesman Dave Benham said in a statement. But analysts said not to be consoled. “This test may have failed, but Kim Jong Un’s overall missile test record is 58 successful flight tests and 17 failures,” said Shea Cotton of the James Martin Center for Nonproliferation, who compiled the Nuclear Threat Initiative database. (Anna Fifield, “North Korea Fires Another Missile, 75th of Kim Jong Un’s Tenure,” Washington Post, April 28, 2017)

Schilling: “Details are still scarce on [today’s] missile test, but it appears to have been the missile provisionally named “KN-17” and described in sensational press reports as a “Carrier-Killer.” We have seen this missile before, certainly in the April 15 parade celebrating Kim Il Sung’s birthday, and possibly in two previous tests. All of these tests were reported by allied intelligence agencies as failures, and none were accompanied by the propaganda footage with which North Korea reports successful missile tests and demonstrations. Still, the North usually does manage to recover from test failures, and the consequences of an anti-ship ballistic missile in North Korean hands are worth considering. But we should also consider the possibility that the missile is intended for use against targets on land, which is a more plausible near-term threat. The KN-17 appears to be a Scud derivative with small fins on the reentry vehicle, presumably for steering during the last seconds of flight. Such Maneuvering Reentry Vehicles (MaRV) are not new; the American Pershing II missile deployed in from 1983 to 1991 used such a warhead. So does the Chinese DF-21D, an anti-ship ballistic missile that clearly is intended to threaten US aircraft carriers. But there are other reasons to deploy such a system. The Pershing II was never intended for use against naval targets, and used its MaRV for precision attacks on land targets such as airbases and command and logistics centers. MaRvs have also been proposed, and possibly deployed, as a means of evading enemy missile defenses. All three of these prospects would be of clear interest to North Korea. If Pyongyang does intend to use the KN-17 against naval targets, it would face a particularly difficult targeting problem. Allied military bases in South Korea and Japan can be reliably mapped in peacetime, and aren’t going to move. Aircraft carriers at sea are much more difficult to find. North Korean surveillance radar and coastal naval forces can probably track enemy warships within a few dozen miles of the North Korean coast, but while smaller allied warships may sometimes approach to such a distance, aircraft carriers will have little reason to do so. Long-range reconnaissance platforms like aircraft or submarines would need a great deal of luck to find a specific warship with the entire East Sea to hide in, particularly in wartime where the North’s planes and submarines would likely be destroyed long before they came close enough.
to spot an aircraft carrier. The ideal solution would be a constellation of satellites designed for maritime surveillance, but North Korean satellite technology isn’t up to that task yet. Pyongyang would also need an active radar guidance system capable of surviving a ballistic missile’s flight environment and providing precise guidance data during a steep, hypersonic terminal descent, which is also beyond their demonstrated capabilities. Another problem with attacking aircraft carriers with the KN-17 is that the missile doesn’t work, at least not yet. But if the recent tests were failures, they were curious failures. The April 5 test reached a height of 169 kilometers, while travelling only 60 kilometers downrange. The US Pacific Command (PACOM) claims that the missile “pinwheeled” during flight. The performance, however, is about what we would expect from a successful Scud launch on a lofted trajectory, and beyond what would be possible from any missile that tumbled during powered flight. One possibility is that PACOM, not yet being aware of the KN-17’s experimental MaRV, instead tracked the missile’s larger booster. Once the MaRV separated, the expended booster would likely tumble randomly through the sky. But if we credit PACOM with tracking the right target, they may have been able to track the MaRV itself tumbling out of control during the terminal guidance phase. In either case, a MaRV test would explain the unusual trajectory – North Korea doesn’t need to use a high-angle trajectory to keep a mere Scud from e.g. overflying Japan, but they would want the impact region for a MaRV test to be someplace they could observe very closely. The test on April 16 apparently exploded shortly after launch, and may not have been a KN-17 at all. We don’t yet have all the details on the April 28 test, but it may have been a repeat of the April 5 test. The maximum altitude of 71 kilometers was a bit lower than that of the earlier test, but still beyond anything a missile that failed during powered flight would be likely to reach. And the launch, from a west coast launch site, may have been an attempt to use a more traditional shallow-angle Scud trajectory by overflying the country with the warhead impacting just off the east coast. It isn’t surprising that a MaRV would experience failures in early testing. North Korea’s missiles usually fail in their first tests, and a MaRV is a trickier sort of rocketry than most. But North Korea usually does get their missiles working in the long run, and they appear to be taking the conservative approach of using a proven Scud missile as the basis for their first MaRV system. North Korea probably won’t be able to sink any American aircraft carriers with the KN-17, not because the missile will never work, but because they won’t be able to find the carriers in the first place. There’s also the small matter that American aircraft carriers are closely accompanied by a pair of Aegis cruisers or destroyers, possibly the most capable missile defense platforms in existence. But we shouldn’t overlook the threat an operational KN-17 would pose to targets on land in South Korea. A missile capable of hitting a maneuvering warship at sea would be even more accurate against fixed targets on land, and could possibly evade defending Patriot missiles during its terminal attack. We’ve long considered North Korea’s hundreds of conventional Scud missiles to be mostly a harassment weapon due to their inaccuracy, but if they can reliably deliver half a ton of high explosives directly onto a crowded barracks, an ammunition dump or USFK headquarters, we might have a real problem. It might be time to start testing the Patriot system against maneuvering reentry vehicles. (John Schilling, “North Korea’s ‘Carrier-Killer’ May Be No Such Thing,” 38North, May 1, 2017)

KCNA: “The U.S. is bluffing after firing dozens of missiles at Syria and dropping a GBU-43 bomb on Afghanistan. During his recent junket to Asia, U.S. Vice-President Pence, saying the world witnessed the "bold decision of the president" through the military actions in Syria and Afghanistan, behaved so arrogant as to urge the DPRK not to misjudge the will of the U.S. and test the decision of Trump and muscle of the U.S. forces. Dignitaries including the U.S. ambassador to the United Nations also noisily talk about "strong warning" to someone every day, asserting that the era of "strategic patience" has come to an end and all options including military action are on the table. This is just a bluff of the U.S. keen on flexing its muscle by striking non-nuclear countries and weak nations only. Such an act can never irritate the DPRK. The U.S. should not misjudge its rival. Since it won a victory in the past total war with the U.S. imperialists, the DPRK has cemented its national strength in every way for decades, resolved to stage a final sacred struggle against the U.S. imperialists. The last Korean War was just like the confrontation between rifle and A-bomb. But the DPRK inflicted a bitter defeat upon the aggressors by winning the war the U.S. imperialists ignited by mobilizing mercenaries from their 15 satellite countries,
When President Trump called President Rodrigo Duterte of the Philippines, White House officials saw it as part of a routine diplomatic outreach to Southeast Asian leaders. During their “very friendly conversation,” the administration said in a late-night statement on April 30, Trump invited Duterte, an authoritarian leader accused of ordering extrajudicial killings of drug suspects in the Philippines, to visit him at the White House. Administration officials said the call to Duterte was one of several to Southeast Asian leaders that the White House arranged after picking up signs that the leaders felt neglected because of Mr. Trump’s intense focus on China, Japan and tensions over North Korea. On April 30 Trump spoke to the prime ministers of Singapore and Thailand; both got White House invitations. (Mark Landler, “Trump Officials Brace for Anger at Duterte Call,” New York Times, May 1, 2017, p. A-1) 4/29/17 President Trump labeled North Korean dictator Kim Jong Un a “madman with nuclear weapons” during a private phone conversation with Philippine President Rodrigo Duterte last month, just days before stating publicly that he would be “honored” to meet with Kim. Most of Trump’s conversation with Duterte focused on how to deal with North Korea and whether China can exert more leverage on Kim’s regime, according to a transcript made by the Philippine government May 2 and obtained May 23 by the Washington Post from a person who asked not to be identified because the transcript, labeled by the Philippine government as “confidential,” is not intended for public release. Trump sought Duterte’s input on whether Kim is “stable or not stable” and expressed some satisfaction in North Korea’s recent failed missile tests, noting that “all his rockets are crashing. That’s the good news,” Duterte responded that Kim is “playing with his bombs, his toys” and offered that “his mind is not working well, and he just might go crazy one moment.” That prompted Trump to point out that the United States has “a lot of firepower over there,” including “two nuclear submarines” sent by the Pentagon to the region last month. Later in the call, Trump raised the stakes of the escalating tensions on the Korean Peninsula when he observed: “We can’t let a madman with nuclear weapons let on the loose like that. We have a lot of firepower, more than he has, times 20 — but we don’t want to use it.” The focus between Trump and Duterte on North Korea comport with a brief public readout of the call from the White House on the day it took place. But the details of their conversation, first reported here, offer a deeper view of the urgency with which Trump is attempting to enlist foreign leaders to ramp up pressure on Pyongyang to halt its nuclear and ballistic missile programs. A senior Trump administration official acknowledged that the transcript is accurate but declined to speak on the record about “a leaked document from a foreign government.” Trump is “rallying as much support as he can on North Korea,” the administration official said. “Regional support is extremely meaningful. This is how he’s trying to proactively manage a very difficult situation.” Trump acknowledged after meeting Chinese President Xi Jinping in mid-April that “it’s not so easy” for Beijing to alter Pyongyang’s behavior. But when Trump asked Duterte whether China has “power over” Kim, the Philippine president responded: “Yes, at the end of the day, the last card, the ace, has to be with China. It’s only China.” Trump told Duterte he hopes “China solves the problem. ... But if China doesn’t do it, we will do it.” Duterte then offered to call Xi and emphasize the importance of altering Pyongyang’s behavior. “You can tell him I am counting on him,” Trump replied. “I have a very good relationship with
him. I had him in Florida for two days and got to know him well. He is a good guy.” (David Nakamura and Barton Gellman, “Transcript Shows Trump Called Kim Jong Un a ‘Madman’ in Call with Duterte,” *Washington Post*, May 24, 2017, p. A-10) The comments were part of a Philippine transcript that was circulated on May 23, under a “confidential” cover sheet, by the Americas division of the Philippine Department of Foreign Affairs. In Washington, a senior administration official confirmed that the transcript was an accurate representation of the call. Duterte wanted to discuss North Korea. He told Trump that “as long as those rockets and warheads are in the hands of Kim Jong-un we will never be safe as there’s not telling what will happen next.” That led Trump to inquire whether Kim is “someone who is stable or not stable.” Duterte offered up the opinion that Kim was unstable, noting that he is always seen laughing in pictures of missile and nuclear tests. Trump seemed to try to reassure Duterte. Kim, he said, “has got the powder, but he doesn’t have the delivery system — all his rockets are crashing.” The president said nothing of the American-led program to sabotage the launches, though in some tests both before and after the call, the North has conducted several successful launches. “We have a lot of firepower over there,” Trump noted. “We have two submarines — the best in the world. We have two nuclear submarines, not that we want to use them at all.” The two men talked about China’s potential influence and Duterte promised to call President Xi Jinping. Trump noted the two men had met at his Florida resort, and called Xi “a good guy.” (David E. Sanger and Maggie Haberman, “Trump Praises Philippine President in Call Transcript,” *New York Times*, May 24, 2017, p. A-12)

Trump-Duterte telephone call: “…POTUS: So how is everyone doing? How is the Philippine Islands doing? DUTERTE: We are doing fine Mr. President but in the ASEAN Summit every member state was really nervous about situation in Korean peninsula but we would like to tell you that we support you and keep on on the pressure because as long as those rockets and warheads are in the hands of Kim Jong Un we will never be safe as there’s not telling what will happen next. POTUS: What’s your opinion of him Rodrigo? Are we dealing with someone who stable or not stable? DUTERTE: He is not stable, Mr. President, as he keeps smiling when he explodes a rocket. He has even gone against China which is the last country he should rebuke. But it seems from his face that he’s laughing always and there’s a dangerous toy in his hands which could create so much agony and suffering for all mankind. POTUS: Well, he has got the powder, but he doesn’t have the delivery system. All his rockets are crashing. That’s good news. But eventually when he gets that delivery system … What do you think about China? Does China have power over him? DUTERTE: Yes, at the end of the day, the last card, the ace, has to be with China. He’s playing with his bombs, his toys and from the looks of it, his mind is not working well, and he just might go crazy one moment. China should make a last ditch effort to tell him to lay off. China will play a very important role there. POTUS: We have a lot of firepower over there. We have two submarines — the best in the world. We have two nuclear submarines, not that we want to use them at all. I’ve never seen anything like they are but we don’t have to use this but he could be crazy so we will see what happens. DUTERTE: Every generation has a mad man – in our generation is Kim Jong Un – you are dealing with a very delicate problem. POTUS: We can handle it. DUTERTE: But you can keep the pressure on him. POTUS: I hope China solves the problem. They really have the means because a great deal of their stuff comes through China. But if China doesn’t do it, we will do it.” DUTERTE: I will try to call President Xi Jinping and I will try to tell him that if we remain to be peaceful, China has the card. The other option is a nuclear blast which is not good for everybody. POTUS: “You can tell him I am counting on him. I have a very good relationship with him. I had him in Florida for two days and got to know him well. He is a good guy. DUTERTE: I will do that. I will call the ambassador here and will make an appointment to call him. It will be good if you can keep the pressure on Kim but actually we are all worried as we are all within striking distance of his rockets. We are all afraid. POTUS: We can’t let a madman with nuclear weapons let on the loose like that. We have a lot of firepower, more than he has, times 20, but we don’t want to use it. You will be in good shape. DUTERTE: We believe it. We know it all along. I will try to make a call tmrw to China. POTUS: Pls call China and tell them we are all counting on China. Tell the President – we became friends for two days – he was great.” (Confidential Transcript of April 29 Phone Call of the President with the POTUS, Office of American Affairs, Philippines Department of Foreign Affairs, May 2, 2017)
JOHN DICKERSON: Mr. President, you and the administration said to North Korea, "Don't test a missile." They have tested a missile. Is the pressure not working? PRESIDENT DONALD TRUMP: Well, I didn't say, "Don't test a missile." He's going to have to do what he has to do. But he understands we're not going to be very happy. And I will tell you, a man that I've gotten to like and respect, the president of China, President Xi, I believe, has been putting pressure on him also. But so far, perhaps nothing's happened and perhaps it has. This was a small missile. This was not a big missle. This was not a nuclear test, which he was expected to do three days ago. We'll see what happens. DICKERSON: You say, "Not happy." What does that mean? TRUMP: I would not be happy. If he does a nuclear test, I will not be happy. And I can tell you also, I don't believe that the president of China, who is a very respected man, will be happy either. DICKERSON: Not happy mean military action? TRUMP: I don't know. I mean, we'll see. DICKERSON: The Chinese, our allies, have been allies with North Korea. How are you sure that they're not using this as a way to test you? TRUMP: You can never be sure of anything, can you? But I developed a very good relationship. I don't think they want to see a destabilized North Korea. I don't think they want to see it. They certainly don't want to see nuclear on — from their neighbor. They haven't liked it for a long time. But we'll have to see what happens. The relationship I have with China, it's been already acclaimed as being something very special, something very different than we've ever had. But again, you know, we'll find out whether or not President Xi is able to affect change. …I hope he is. DICKERSON: Why do these missiles keep blowing up? TRUMP: Well, I'd rather not discuss it. But perhaps they're just not very good missiles. But eventually, he'll have good missiles. DICKERSON: You don't want to discuss it because maybe we have something to do with it? TRUMP: I just don't want to discuss it. And I think you know me very well, where you've asked me many times over the last couple of years about military. I said, "We shouldn't be announcing we're going into Mosul." I said, "We shouldn't be announcing all our moves." It is a chess game. I just don't want people to know what my thinking is. So eventually, he will have a better delivery system. And if that happens, we can't allow it to happen. DICKERSON: What do you make of the North Korean leader? TRUMP: I have — I really, you know, have no comment on him. People are saying, "Is he sane?" I have no idea. I can tell you this, and a lot of people don't like when I say it, but he was a young man of 26 or 27 when he took over from his father, when his father died. He's dealing with obviously very tough people, in particular the generals and others. And at a very young age, he was able to assume power. A lot of people, I'm sure, tried to take that power away, whether it was his uncle or anybody else. And he was able to do it. So obviously, he's a pretty smart cookie. But we have a situation that we just cannot let — we cannot let what's been going on for a long period of years continue. And frankly, this should've been done and taken care of by the Obama administration. Should've been taken care of by the Bush administration. Should've been taken care of by Clinton. … TRUMP: No, they were doing it before. I mean, there was no question. I mean, they were absolute currency manipulators before. But somebody said, "Oh, you didn't call him a currency manipulator." Now, you and I are just talking about how he's working — I believe that President Xi is working to try and resolve a very big problem, for China also. And that's North Korea. Can you imagine if I say, "Hey, by the way, how are you doing with North Korea? Also, we're going to announce that you're a currency manipulator tomorrow." So the mainstream media never talks about that. They never say that. And that's, you know, unfortunate. It's just — it's just one of many things, John. DICKERSON: You're a negotiator. If you need something from somebody, you need China to help you with North Korea, doesn't that send a message to China, "We're not going to bug you about human rights, about intellectual property. In the South China Sea we're not going to put too much heat on you"? Aren't you breaking one of your own negotiating rules? TRUMP: No. I think that, frankly, North Korea is maybe more important than trade. Trade is very important. But massive warfare with millions, potentially millions of people being killed? That, as we would say, trumps trade. …Okay? You understand what I'm saying. And if I can use trade as a method to get China, because I happen to think that China does have reasonably good powers over North Korea. Now, maybe not, you know, ultimate, but pretty good powers. Now, if China can help us with North Korea and can solve that problem — that's worth making not as good a trade deal for the United States, excuse me, right?" (CBS, Transcript: President Donald Trump’s Interview with “Face the Nation,”” April 30, 2017)
President Donald Trump said he would meet with North Korean leader Kim Jong Un amid heightened tensions over his country’s nuclear weapons program if the circumstances were right. “If it would be appropriate for me to meet with him, I would absolutely, I would be honored to do it,” Trump said in an interview with Bloomberg News. “If it’s under the, again, under the right circumstances. But I would do that.” Kim has never met with a foreign leader since taking charge after his father’s death in 2011 and hasn’t left his isolated country. “Most political people would never say that,” Trump said of his willingness to meet with the reclusive Kim, “but I’m telling you under the right circumstances I would meet with him. We have breaking news.” (Margaret Talev and Jennifer Jacobs, “Trump Says He’d Meet with Kim under Right Circumstances,” Bloomberg News May 1, 2017)

DPRK FoMin spokesman’s statement: “[T]he touch-and-go situation, created on the Korean peninsula due to the U.S. DPRK-targeted joint military exercises for aggression and the military threat, has left a serious lesson. The confrontation between the DPRK and the U.S. has lasted for more than half a century but the U.S. aggression hysteria has never reached such a height and the situation on the Korean peninsula has never inched close to the brink of nuclear war as in the period of the recent drills. ...The situation on the Korean peninsula proves once again that the U.S. is the chieftain of aggression and war, and harasser of peace who is escalating tension and that the DPRK was just and far-sighted when it opted for bolstering its powerful nuclear deterrence for self-defense under the uplifted banner of the simultaneous development of the two fronts. If the DPRK had not had access to the powerful nuclear force and had not gotten itself ready to counter the U.S. and its vassal forces’ provocation with merciless military counteraction, the U.S. would have committed without hesitation the same brigandish aggression act in Korea as what it committed against other countries. In order to check such high-handed and arbitrary practices and defend the sovereignty and the right to existence of the country and the nation, and to contribute to regional peace and security and genuine international justice, the DPRK has been bolstering its nuclear deterrence despite manifold difficulties. The recent confrontation with the U.S. reminds us once again of the iron truth that one has to build one's own strength in order to defend oneself from the whirlwind of history in which it is neither aided nor sympathized by anyone. Now that the U.S. is kicking up the overall racket for sanctions and pressure against the DPRK, pursuant to its new DPRK policy called "maximum pressure and engagement," the DPRK will speed up at the maximum pace the measure for bolstering its nuclear deterrence. The DPRK is fully ready to respond to any option taken by the U.S., and unless it withdraws its hideous hostile policy toward the DPRK and nuclear threat and blackmail, the DPRK will continue to bolster its military capabilities for self-defense and preemptive nuclear attack with the nuclear force as a pivot. The DPRK’s measures for bolstering the nuclear force to the maximum will be taken in a consecutive and successive way at any moment and any place decided by its supreme leadership.” (KCNA: “DPRK Will Boost Nuclear Deterrence at Maximum Speed: Foreign Ministry Spokesman,” May 1, 2017)

Despite decades of sanctions and international isolation, the economy in North Korea is showing surprising signs of life. Scores of marketplaces have opened in cities across the country since the North Korean leader, Kim Jong-un, took power five years ago. A growing class of merchants and entrepreneurs is thriving under the protection of ruling party officials. Pyongyang, the capital, has seen a construction boom, and there are now enough cars on its once-empty streets for some residents to make a living washing them. Reliable economic data is scarce. But recent defectors, regular visitors and economists who study the country say nascent market forces are beginning to reshape North Korea — a development that complicates efforts to curb Kim’s nuclear ambitions. Even as President Trump bets on tougher sanctions, especially by China, to stop the North from developing nuclear-tipped missiles capable of striking the United States, the country’s improving economic health has made it easier for it to withstand such pressure and to acquire funds for its nuclear program. While North Korea remains deeply impoverished, estimates of annual growth under Kim’s rule range from 1 percent to 5 percent, comparable to some fast-growing economies unencumbered by sanctions. But a limited embrace of market forces in what is supposed to be a classless society also is a gamble for Kim, who in 2013 made economic growth a top policy goal on par with the development of a nuclear arsenal. Kim, 33, has promised his long-suffering people
that they will never have to “tighten their belts” again. But as he allows private enterprise to expand, he undermines the government’s central argument of socialist superiority over South Korea’s capitalist system. There are already signs that market forces are weakening the government’s grip on society. Information is seeping in along with foreign goods, eroding the cult of personality surrounding Kim and his family. And as people support themselves and get what they need outside the state economy, they are less beholden to the authorities. “Our attitude toward the government was this: If you can’t feed us, leave us alone so we can make a living through the market,” said Kim Jin-hee, who fled North Korea in 2014 and, like others interviewed for this article, uses a new name in the South to protect relatives she left behind. After the government tried to clamp down on markets in 2009, she recalled, “I lost what little loyalty I had for the regime.” Since 2010, the number of government-approved markets in North Korea has doubled to 440, and satellite images show them growing in size in most cities. In a country with a population of 25 million, about 1.1 million people are now employed as retailers or managers in these markets, according to a study by the Korea Institute for National Unification in Seoul. Unofficial market activity has flourished, too: people making and selling shoes, clothing, sweets and bread from their homes; traditional agricultural markets that appear in rural towns every 10 days; smugglers who peddle black-market goods like Hollywood movies, South Korean television dramas and smartphones that can be used near the Chinese border. At least 40 percent of the population in North Korea is now engaged in some form of private enterprise, a level comparable to that of Hungary and Poland shortly after the fall of the Soviet bloc, the director of South Korea’s intelligence service, Lee Byung-ho, told lawmakers in a closed-door briefing in February. Eighty percent of consumer goods sold in North Korean markets originate in China, according to an estimate by Kim Young-hee, director of the North Korean economy department at the Korea Development Bank in the South. But Kim Jong-un has exhorted the country to produce more goods locally in an effort to lessen its dependence on China, using the word jagang, or self-empowerment. His call has emboldened manufacturers to respond to market demand. Shoes, liquor, cigarettes, socks, sweets, cooking oil, cosmetics and noodles produced in North Korea have already squeezed out or taken market share from Chinese-made versions, defectors said. Regular visitors to Pyongyang, the showcase capital, say a real consumer economy is emerging. “Competition is everywhere, including between travel agencies, taxi companies and restaurants,” Rüdiger Frank, an economist at the University of Vienna who studies the North, wrote recently after visiting a shopping center there. A cellphone service launched in 2008 has more than three million subscribers. With the state still struggling to produce electricity, imported solar panels have become a middle-class status symbol. And on sale at some grocery stores and informal markets on the side streets of Pyongyang is a beverage that state propaganda used to condemn as “cesspool water of capitalism” — Coca-Cola. When Kim Jong-un stood on a balcony reviewing a parade in April, he was flanked by Hwang Pyong-so, the head of the military, and Pak Pong-ju, the premier in charge of the economy. The formation was symbolic of Kim’s byungjin policy, which calls for the parallel pursuit of two policy goals: developing the economy and building nuclear weapons. Only a nuclear arsenal, Kim argues, will make North Korea secure from American invasion and let it focus on growth. Kim has granted state factories more autonomy over what they produce, including authority to find their own suppliers and customers, as long as they hit revenue targets. And families in collective farms are now assigned to individual plots called pojeon. Once they meet a state quota, they can keep and sell any surplus on their own. The measures resemble those adopted by China in the early years of its turn to capitalism in the 1980s. But North Korea has refrained from describing them as market-oriented reforms, preferring the phrase “economic management in our own style.” In state-censored journals, though, economists are already publishing papers describing consumer-oriented markets, joint ventures and special economic zones. It is unclear how much of recent increases in grain production were due to Kim’s policies. Defectors say factories remain hobbled by electricity shortages and decrepit machinery while many farmers have struggled to meet state quotas because they lack fertilizer and modern equipment. More broadly, the economy remains constrained by limited foreign investment and the lack of legal protections for private enterprise or procedures for contract enforcement. Plans to set up special economic zones have remained only plans, as investors have balked at North Korea’s poor infrastructure and record of seizing assets from foreigners, not to mention the sanctions against it. But there is evidence that the state is growing increasingly dependent on the
private sector. Cha Moon-seok, a researcher at the Institute for Unification Education of South Korea, estimates that the government collects as much as $222,000 per day in taxes from the marketplaces it manages. In March, the authorities reportedly ordered people selling goods from their homes to move into formal marketplaces in an effort to collect even more. “Officials need the markets as much as the people need them,” said Kim Jeong-ae, a journalist in Seoul who worked as a propagandist in North Korea before defecting. Donju is the word North Koreans use to describe the new class of traders and businessmen that has emerged. Called “red capitalists” by South Korean scholars, donju invest in construction projects, establish partnerships with resource-strapped state factories and bankroll imports from China to supply retailers in the marketplaces. They operate with “covers,” or party officials who protect their businesses. Some are relatives of party officials. Others are ethnic Chinese citizens, who are allowed regular visits to China and can facilitate cross-border financial transactions, and people with relatives who have fled to South Korea and send them cash remittances. Whenever the state begins a big project, like the new district of high-rise apartment buildings that Kim Jong-un unveiled before foreign journalists in April, donju are expected to make “loyalty donations.” Sometimes they pay in foreign currency. Sometimes they contribute building materials, fuel or food for construction workers. “Kim Jong-un is no fool,” said Kang Mi-jin, a defector who once ran her own wholesale business. “He knows where the money is.” Donju often receive medals and certificates in return for their donations, and use them to signal they are protected as they engage in business activities that are officially illegal. They import buses and trucks and run their own transportation services using license plates obtained from state companies. Some donju even rent farmland and mines, working them with their own employees and equipment, or open private pharmacies, defectors said. “Donju wear the socialist hide, operating as part of state-run companies,” Ms. Kang said. “But inside, they are thoroughly capitalist.” Before Kim Jong-un took power, the government made a last attempt to rein in donju and control market forces. It called on citizens to shop only in state stores, banned the use of foreign currency and adopted new bank notes while limiting the amount of old notes that individuals could exchange. The move wiped out much of the private wealth created and saved by both donju and ordinary people. Market activity ground to a near halt. Prices skyrocketed, and protests were reported in scattered cities. The government eventually retreated and is believed to have issued an apology when officials convened villagers for their weekly education sessions. It also executed the country’s top monetary official, Pak Nam-gi. The crisis is widely considered the moment when the government concluded it could no longer suppress the markets. A year later, Pak Pong-ju, a former prime minister who had been ousted for pushing market-oriented policies, was restored to power. He now manages the economy under Kim. As the markets develop, growing numbers of North Koreans will see the vastly superior products made overseas and perhaps question their nation’s backward status. “Thanks to the market, few North Koreans these days flee for food, as refugees in the 1990s did,” said the Rev. Kim Seung-eun, a pastor who has helped hundreds of defectors reach South Korea. “Instead, they now flee to South Korea to have a better life they learned through the markets.” Jung Gwang-il, who leads a defectors’ group in Seoul called No Chain, said that with more North Koreans getting what they needed from markets rather than the state, their view of Kim was changing. “North Koreans always called Kim Jong-un’s grandfather and father ‘the Great Leader’ or ‘the General,’” Mr. Jung said. “Now, when they talk among themselves, many just call Jong-un ‘the Kid.’ They fear him but have no respect for him.” “They say, ‘What has he done for us?’” Jung said. (Choe Sang-hun, “As Markets Spring up, Leader’s Grip on North Korea Slackens,” New York Times, May 1, 2017)

Heavyweight US Republican senators and former Democratic presidential nominee Hillary Clinton expressed concern after President Donald Trump said he would be "honored" to meet with North Korean leader Kim Jong-un. “I don't understand it and I don't think that the president appreciates the fact that when he says things like that it helps the credibility and the prestige of this really outrageous strongman,” John McCain, chairman of the Senate Armed Services
Committee, said on MSNBC. "The largest gulag left on earth is in North Korea. And we all know about their human rights abuses and others." Sen. Lindsey Graham (R-SC) also said such a meeting could "empower" the North's dictator. "I'd find it very hard for me to sit down across the table from a guy who makes Bashar Assad look like a choir boy," Graham said on CNN. "If you understand what he (Kim) does to his own people, you'd be repugnant to be in the room with him." Graham also told reporters later that he would caution about such a meeting "because you empower anybody you meet." "But if (President Trump) can find a way to stop North Korea from developing an ICBM with a nuclear weapon on top of it to hit America and that includes meeting him, count me in," he said. Clinton said the US should be careful about negotiations with the North. "The North Koreans are always interested, not just Kim Jong-un but his father before him, were always interested in trying to get Americans to come to negotiate to elevate their status and their position. And we should be very careful about giving that away," Clinton said at a Women for Women International event. "Negotiations are critical, but they have to be part of a broader strategy, not just thrown up on a tweet some morning that, 'Hey let's get together and, you know, see if we can get along and maybe we can come up with some sort of a deal.' That doesn't work," she said. Rep. Ed Royce (R-CA), chairman of the House Foreign Affairs Committee, said that the "right circumstances" for Trump's talks with the North's leader should be for the regime to "stop its atomic weapons program and for North Korea to change its policies in terms of its treatment of its people." "If Kim Jong-un changes his policies and allows political prisoners to be released and stopped his nuclear weapons program, I think we're in concurrence that we would be able to have these discussions," Royce told reporters after receiving a medal from South Korea's government for his contributions to the Korea-US alliance. "Obviously, now is not the time. Now is not the time for those discussions because right now is the time to work with Beijing and the rest of the international community in order to put pressure on North Korea to stop its nuclear weapons program," he said. (Yonhap, “Clinton expresses Concern about Trump’s Willingness to Meet with Kim Jong Un,” Korea Herald, May 3, 2017)

North Korea's nuclear weapons development may be designed to take over archrival South Korea and coerce the United States into abandoning its close ally, a senior White House official said Tuesday, questioning the North's stated purpose of warding off a U.S. invasion. Ruminating about Pyongyang's possible motivations, Matt Pottinger, the Asia director on President Donald Trump's National Security Council, said there may be some truth to claims that the North wants a nuclear deterrent to protect its communist dictatorship. But Pottinger said the country's robust conventional military has worked as a deterrent for decades. Pottinger suggested other "disturbing" explanations for the North's development of "an arsenal of the worst weapons in the world." "They have made no secret in conversations they have had with former American officials, for example, and others that they want to use these weapons as an instrument of blackmail to achieve other goals, even including perhaps coercive reunification of the Korean Peninsula one day," Pottinger told a a panel discussion organized by Sasakawa USA in Washington. The North, he added, also wants to coerce the United States "to leave the peninsula and abandon our alliances." Echoing other Trump administration officials, Pottinger said the U.S. isn't seeking regime change in North Korea. Rather, he said the U.S. wants an end to North Korea's nuclear weapons program. "We really have no choice but to increase pressure on North Korea to diplomatically isolate them, to bring a greater economic pain to bear until they are willing to make concrete steps to start reducing that threat," he said. (Matthew Pennington, “U.S.: North Korea’s Nukes May Be a Tactic for Taking over South Korea,” Associated Press, May 2, 2017)

Moon Jae-in: “WP: Let's start with THAAD. The U.S. has brought in the THAAD system very quickly and ahead of schedule. Do you view this as the Americans interfering with the election? MOON: I don't believe the U.S. has the intention, but I do have reservations. It is not desirable for the South Korean government to deploy THAAD hastily at this politically sensitive time with the presidential election, without going through the democratic process, an environmental assessment or a public hearing. One of the biggest problems with this THAAD deployment decision was that it lacked democratic procedure, and it has resulted in
a wide division of the nation and aggravated foreign relations. If the South Korean government were to push this issue further, it would only make matters worse, and it would be more difficult to find a solution to this problem. I hope the U.S. government will fully consider these issues. If the same were to happen in the U.S., would this have happened just by the administration’s unilateral decision without democratic procedure, ratification or agreement by Congress? If South Korea can have more time to process this matter democratically, the U.S. would gain a higher level of trust from South Koreans and therefore the alliance between the two nations would become even stronger. If this matter can be reviewed by the next administration, the new government would look for a reasonable solution based on the alliance between South Korea and the U.S. that can secure the national interest as well as a national consensus. South Korea and the U.S. share common interests with regard to the North Korean nuclear issue, so I promise that South Korea will fully consult with the U.S. on the deployment of THAAD. WP: In the policy document you released at the weekend, you said that nothing is more dangerous than letting another country decide for you. Is that an indication that you want to rebalance the alliance? Do you feel that the U.S. has too much say over what happens in South Korea? MOON: The answer is no. I believe the alliance between the two nations is the most important foundation for our diplomacy and national security. South Korea was able to build its national security thanks to the U.S., and the two nations will work together on the North Korean nuclear issue. However, I believe we need to be able to take the lead on matters in the Korean Peninsula as the country directly involved. I do not see it as desirable for South Korea to take the back seat and watch discussions between the U.S. and China and dialogues between North Korea and the U.S. I believe South Korea taking the initiative would eventually strengthen our bilateral alliance with the U.S. However, when I say ‘take the initiative,’ I do not mean that South Korea will approach or unilaterally open talks with North Korea without fully consulting the U.S. beforehand. WP: You said in an interview last December that you would go to Pyongyang before you would go to Washington as a sign of the importance of the North Korean issue. Do you still stand by that today? MOON: First of all, that news report is absolutely not true. I intended to say that, if it would help resolve the nuclear issue, I could go to North Korea after sufficient prior discussions with the U.S. and Japan. I do not know when I will be able to have talks with the North on scrapping its nuclear program, but if I become the president I believe I need to meet with President Trump first to discuss the issue in depth and reach an agreement with him on the measures to abolish North Korea’s nuclear program. With that agreement we can, on the one hand, put pressure on and attempt to persuade North Korea and on the other hand, seek cooperation from China, so we can try to resolve the nuclear issue with the U.S. In that process, I could sit down with Kim Jong Un, but I will not meet him for the sake of meeting him. I will meet Kim Jong Un when preconditions of resolving the nuclear issue are assured. I think I am on the same page as President Trump. President Trump judged the Obama administration’s policy of strategic patience as a failure with regard to North Korea, so he has stressed the need for a change in North Korean policy. WP: I didn’t come here today expecting you to agree with Trump! MOON: Trump talks about strenuous pressure, sanctions and even the possibility of a pre-emptive strike, but I believe his ultimate goal is to bring North Korea back to negotiations for the s nuclear program. In that respect, I share the same opinion as President Trump. Both the Lee Myung-bak and Park Geun-hye administrations completely failed in resolving the North Korean nuclear issue. I agree with President Trump’s method of applying sanctions and pressure to North Korea to bring them out to negotiate. If that happens, I would meet with Kim Jong Un to secure the nuclear program. I believe President Trump is more reasonable than he is generally perceived. President Trump uses strong rhetoric toward North Korea but, during the election campaign, he also said he could talk over a burger with Kim Jong Un. I am for that kind of pragmatic approach to resolve the North Korean nuclear issue. We need to take a staged approach to resolve this problem. The first stage is for North Korea to not engage in any further nuclear provocations such as additional nuclear tests. The second stage is preventing the North from advancing its nuclear capability any further. Finally, the third stage is for North Korea to completely scrap its program. I think President Trump would agree with these measures. WP: What would you say in your first call or meeting with President Trump, especially regarding how to deal with North Korea? MOON: I suppose he’ll congratulate me for being elected to the presidency, so I would thank him for that. I would tell him that I would like to meet with him at the earliest
When North Korean leader Kim Jong Un sent Lunar New Year greetings this year, the first card went to Russian President Vladimir Putin, ahead of leaders from China and other allies of the isolated country, according to KCNA. Some academics who study North Korea argue Kim could be looking for Russia to ease any pain if China, which accounts for about 90 percent of North Korea's trade, steps up sanctions against the isolated country as part of moves to deter its nuclear and missile programs. There is no sign of any sustainable increase in trade between Russia and North Korea, but business and transport links between the two are getting busier. A new ferry service starting next week will move up to 200 passengers and 1,000 tonnes of cargo six times a month between North Korea and the Russian port of Vladivostok. Shipping data on Thomson Reuters Eikon shows there has been a recent steady flow of oil tanker traffic from Vladivostok into North Korean east coast ports. On April 27, five North Korean-flagged oil tankers had loaded up at Vladivostok-area ports and identified North Korean ports as their destination. It was not known what products they were carrying. Earlier this year, Russian government officials visited Pyongyang to discuss more cooperation in rail transport, according to media reports. A Russian-built railway link between the Russian eastern border town of Khasan and the North Korean port of Rajin has been used to carry some coal, metals and various oil products. "North Korea does not care about China's pressure or sanctions because there is Russia next door," said Leonid Petrov, a North Korea expert at Australia National University. "Pyongyang has been playing off Beijing and Moscow for half a century, letting them compete for the right to aid and influence North Korea." Russia, especially Vladivostok, is also home to one of the largest overseas communities of North Koreans in the world, and they send home tens of thousands of dollars in much-needed hard currency each month. Trump and Putin spoke in a telephone call today and discussed North Korea, among other issues, both sides said. There was no word of any agreement. Samuel Ramani, a Russia expert at Oxford University, said support for the Pyongyang regime could bring economic benefits for Moscow. It would demonstrate Russia was "a loyal partner to anti-Western regimes facing international isolation and sanctions", he said. "As Russia has close economic links with other countries at odds with the West, like Iran, Venezuela and Syria, this symbolic dimension of the Russia-North Korea relationship has strategic significance." China exports about 500,000 tonnes of crude and 270,000 tonnes of products each year, oil industry sources in China say. Russia, the other major supplier of oil to North Korea, exported about 36,000 tonnes of oil products in 2015, the latest year for which figures are available, according to U.N. data. Russia has already taken over the supply of jet fuel to North Korea after China halted exports two years ago, according to the industry sources in China. Russia is also the source of foreign exchange for North Korea, mostly from Vladivostok. The city of 600,000 people, just about 100 km (60 miles) from the border with North Korea, is home to thousands of North Koreans who mainly work on construction or do home renovations. A city web site advertises "Korean Professional Contractors" and says they work "Cheaply and Fast." One North Korean man, who works as a handyman, told Reuters he was obliged to hand over a portion of his income - $500 – to the North Korean state each month. Thin and in his 30s, he did not disclose his monthly income, but said he charged 4,000 roubles (about $70) for a day’s labor. The man said he had worked in Russia for 11 years, leaving his wife and daughter back home whom he only saw on rare visits. Like all North

possible opportunity to discuss measures for scrapping North Korea’s nuclear program so that North Korea completely gives up its nuclear ambitions. WP: What do you say to the people in Washington, sitting there and thinking back to the Roh Moo-hyun era and looking at you as a liberal, soft-on-North-Korea politician. What is your message to them? MOON: When we reflect on the Roh Moo-hyun administration, South Korea decided to dispatch troops to Iraq and sealed the Korea-U.S., which broadened the bilateral alliance from a military alliance to an economic alliance. Also, the six-party talks reached an agreement for completely abolishing the North Korean nuclear program under the close cooperation between South Korea and the U.S. Although the agreement has not been properly implemented since the Lee Myung-bak administration, I would like to stress that our two nations reached an agreement on the North Korean nuclear issue during the Roh administration. Therefore, I would like to stress that the Roh administration brought South Korea and the U.S. closer in that era, contrary to the general perception in Washington.” (Anna Fifield and Yoonjung Seo, “Interview with Moon Jae-in, Set to Be South Korea’s Next President,” Washington Post, May 2, 2017)
Koreans, he wore a badge on his lapel bearing the portrait of late North Korean leader Kim Il-Sung. "It's better here than in North Korea," said the man, who did not want to be named. "It's a very difficult life there. Here you can make money." But the most symbolic upturn in ties between Russia and North Korea is the start of regular trips of the Mangyongbong ferry from yesterday between Vladivostok and the North Korean town of Rajin. Vladimir Baranov, the head of Vladivostok-based Investstroitrest company, told Reuters his company had chartered the Mangyongbong and would be the general agent for the ferry route. The aging boat used to ferry tourists between Japan and North Korea, but Tokyo banned its visits in 2006 as part of sanctions against Pyongyang. Still, despite the differences with the United States and the existing links with North Korea, experts say Russia is unlikely to sharply increase trade with Pyongyang because of its low foreign exchange reserves and general unreliability. "All trade with North Korea has to be subsidized," said Andrei Lankov, a Russian North Korea expert at Seoul's Kookmin University. "I do not see the Russian government spending its dwindling currency reserves to support the regime they despise and see as incurably ungrateful, and also prone to risky adventurism." (James Pearson and Alexei Chernyshev, “As U.S. and China Find Common Ground on North Korea, Is Russia the Wild Card?” Reuters, May 3, 2017)

5/3/17

The Trump administration is just at the beginning stages of its campaign to pressure North Korea to give up developing nuclear weapons, Secretary of State Rex Tillerson told State Department employees in a wide-ranging discourse on applying “America first” principles to foreign policy. Tillerson said the administration is 20 percent to 25 percent of its way into a strategy that includes preparing more sanctions against government officials and individuals, convincing other countries to apply existing U.N. sanctions more rigorously and “leaning hard” on China to use its influence to get North Korea to change direction. “It’s a pressure campaign that has a knob on it,” he said to a packed auditorium of employees while thousands of others watched his remarks via live stream. “We’re at dial setting five or six now.” Tillerson said Washington would negotiate with Pyongyang “when conditions are right” but added a caveat: “We are not going to negotiate our way to the negotiating table. That is what Pyongyang has done for the last 20 years, is cause us to have to negotiate to get them to sit down. We’ll sit down when they’re ready to sit down under the right terms.” (Carol Morello and Anne Gearan, “Tillerson Says Putting Pressure on North Korea Is Just the Beginning,” Washington Post, May 3, 2017)

Tillerson: “…So I give you that as kind of an overarching view of how I think about the President’s approach of “America first.” We must secure the nation. We must protect our people. We must protect our borders. We must protect our ability to be that voice of our values now and forevermore. And we can only do that with economic prosperity. So it’s foreign policy projected with a strong ability to enforce the protection of our freedoms with a strong military. And all of you that have been at this a long time understand the value of speaking with a posture of strength – not a threatening posture, but a posture of strength. People know we can back it up. So with that in mind, let me just quickly walk around the world and give you my assessment of where we are in some of the early stages of policy that’s underway and some that’s yet to be developed. So as all of you clearly understand, when we came in to the State Department, the administration came in, was sworn in, immediately confronted with a serious situation in North Korea. Now, the prior administration, as all of you know, President Obama told President Trump this was going to be your greatest threat that you’re going to have to manage, and he was right. So it was – it’s right on the doorstep. And so it got immediate attention. It was the first policy area that we began to develop in terms of what is our overarching strategic approach and how do we want to execute against that. In evaluating that, what was important to us and to me to understand was, first, where are our allies? And so engaging with our allies and ensuring that our allies and we see the situation the same – our allies in South Korea, our allies in Japan. And then, secondly, it was to engage with the other regional powers as to how do they see it. And so it was useful and helpful to have the Chinese and now the Russians articulate clearly that their policy is unchanged; they – their policy is a denuclearized Korean Peninsula. And of course we did our part many years ago. We took all the nuclear weapons out of South Korea. So now we have a shared objective, and that’s very useful, from which you then build out your policy approaches and your strategies. So many
people are saying, well, gee, this is just the same thing we’ve tried over and over – we’re going to put pressure on the regime in Pyongyang, they’re not going to do anything, and then in the end we’ll all cave. Well, the difference, I think, in our approach this time is we’re going to test this assumption, and when the – when folks came in to review the situation with me, the assumption was that China has limited influence on the regime in Pyongyang, or they have a limited willingness to assert their influence. And so I told the President we’ve got to test that, and we’re going to test it by leaning hard into them, and this is a good place to start our engagement with China. And so that’s what we’ve been doing, is leaning hard into China to test their willingness to use their influence, their engagement with the regime in North Korea. All of it backed up by very strong resolve on our part to have a denuclearized peninsula with a commitment to our security alliances on the peninsula and in the region to our important allies Japan and South Korea. So it’s a pressure campaign that has a knob on it. I’d say we’re at about dial setting 5 or 6 right now, with a strong call of countries all over the world to fully implement the UN Security Council resolutions regarding sanctions, because no one has ever fully implemented those. So we’re going to lean into people to fully implement them. We’ve told them we’re watching what you’re doing. When we see you not implementing, we see companies or we see individuals that are violating these sanctions, we’re going to contact you and we’re going to ask you to take care of it. If you can’t take care of it or you simply don’t want to take care of it for your own internal political reasons, we will. We’ll sanction them through third-country sanctions. So we are being very open and transparent about our intentions, and we’re asking our partners around the world to please take actions on your own. We want you to control how that happens. We’re not trying to control it for you, but we have an expectation of what you will do. So we’re putting that pressure on. We are preparing additional sanctions, if it turns out North Korea’s actions warrant additional sanctions. We’re hopeful that the regime in North Korea will think about this and come to a conclusion that there’s another way to the future. We know they have – they’re – they aspire to nuclear weapons because it’s the regime’s belief it’s the only way they can secure their future. We are clear – we’ve been clear to them this is not about regime change, this is not about regime collapse, this is not about an accelerated reunification of the peninsula, this is not about us looking for an excuse to come north of the 38th Parallel. So we’re trying to be very, very clear and resolute in our message to them that your future security and economic prosperity can only be achieved through your following your commitments to denuclearize. So this is where we are. We’re at – I would say we’re at about the 20 to 25 percent stage of this strategy. Thus far, our assessment is it is going like we had hoped for in terms of the response we’re getting from others, but we’ve got a lot of work left to do to keep that pressure on. And so that’s what the folks that are in the bureaus and out in the missions are doing to help us right now, is to continue this steady, resolute message and continue to talk out here to the North Koreans, but not here, yet, about what our intentions are and what we want. We are ready and prepared to engage in talks when conditions are right. But as you’ve heard me say, we are not going to negotiate our way to the negotiating table. That is what Pyongyang has done for the last 20 years, is cause us to have to negotiate to get them to sit down. We’ll sit down when they’re ready to sit down under the right terms. So that’s North Korea.” (Secretary of State Rex Tillerson, Remarks to U.S. Department of State Employees, Washington, May 3, 2017)

KCNA: “Kim Chol released a commentary [today], urging Chinese newspapers to refrain from making reckless remarks undermining the DPRK-China relations. Noting that a string of absurd and reckless remarks are now heard from big neighboring countries, perhaps frightened at the U.S. blackmail and war racket, everyday only to render the acute situation of the Korean peninsula more strained, the commentary says: The People's Daily and the Global Times, widely known as media speaking for the official stand of the Chinese party and government, have recently carried commentaries asserting that the DPRK's access to nukes poses a threat to the national interests of China. They shifted the blame for the deteriorated relations between the DPRK and China onto the DPRK and raised lame excuses for the base acts of dancing to the tune of the U.S. Those commentaries claimed that the DPRK poses a threat to "the security in the northeastern region of China" by conducting nuclear tests less than 100 km away from its border with China. They even talked rubbish that the DPRK strains the situation in Northeast Asia and "offers the U.S. excuses
Cracks in the alliance between North Korea and China widened Thursday as Pyongyang labeled its longtime communist ally a traitor, while Beijing expressed skepticism about renewing a 56-year old friendship and mutual assistance treaty. The North’s state-run Korean Central News Agency issued a commentary yesterday that included a rare and blunt attack on China. The commentary said China had violently crossed a “red line” in their relationship. “It is a “disloyal and betraying act,” it said. The North “will never beg for the maintenance of friendship with China, risking its nuclear program which is as precious as its own life, no matter how valuable the friendship is,” the commentary also said. In an attempt to avoid a formal diplomatic feud, the
North issued the commentary in the name of a private citizen, Kim Chol, rather than having it come from a government official or entity. The statement was the North’s response to China’s intensifying pressure over its nuclear arms program. After a series of strategy meetings by top Chinese officials including Foreign Minister Wang Yu and Fu Ying, chairwoman of the Foreign Affairs Committee of the National People's Congress, Beijing reportedly decided to bolster its sanctions and pressure on the North while creating a mood for talks at the same time. A series of measures were taken since late April to implement the plan. At UN Security Council ministerial talks on the North Korean nuclear crisis, Wang presented the idea on April 28. Fu also published an essay on the Brookings Institution website earlier this week to send a message to both the North and the United States. “Powerful states may have greater influence over the international situation, but they should also bear the consequences of what they say or do. Smaller or weaker states may counter or respond to pressure from powerful states, but there is a price to pay for doing so,” she wrote. China’s pressure on the North includes implementation of new trade sanctions. All cargo to the North is being checked at the North Korea-China border, a change from random checks, Radio Free Asia reported. The searches were conducted without increasing the number of customs officials. The new inspection policy will create a serious bottleneck for North Korean trucks, which formerly arrived at Dandong, China, in the morning and returned home in the afternoon. Smuggling goods and cash into the North will also become much harder, the report said. After Pyongyang issued its direct criticism of Beijing, China also responded angrily. Global Times expressed skepticism today about the need to maintain the Sino-North Korean Mutual Aid and Cooperation Friendship Treaty. In an editorial, the newspaper said the treaty was intended to promote bilateral cooperation and friendship as well as regional peace and security, and the North’s nuclear development goes against those principles. The newspaper said the treaty, signed in 1961, was automatically extended in 1981 and 2001. It will expire in 2021. “Since 2001, the conflicts between Pyongyang and Beijing over the North’s nuclear arms program grew, and voices grew inside and out of China to question the effectiveness of the treaty,” it said. “The North’s nuclear and missile provocations are in violation of the treaty by posing greater threats of a war.” China is expected to continue its efforts to pressure the North while promoting dialogue at the same time. Chinese Foreign Ministry spokesman Geng Shuang said yesterday that UN Security Council had an in-depth discussion last week on the North Korea issue and “most of the Security Council members put stress on both nuclear non-proliferation and peace talks.” (Shin Kyung-jin and Ser Myo-ja, “Relationship between Pyongyang and Beijing Sharply Deteriorates,” JoongAng Ilbo, May 4, 2017)

In a rare and surprisingly pointed criticism of China, North Korea’s state-run news agency warned in a commentary that the country would continue its nuclear weapons program even if it risked losing a friendly relationship with its longtime ally. The angry commentary, attributed to a writer named Kim Chol and carried by KCNA, came as President Trump was pressing China to increase the enforcement of sanctions against its neighbor to contain its nuclear and long-range missile programs. “One must clearly understand that the D.P.R.K.’s line of access to nukes for the existence and development of the country can neither be changed nor shaken,” the commentary said. “And that the D.P.R.K. will never beg for the maintenance of friendship with China, risking its nuclear program which is as precious as its own life, no matter how valuable the friendship is.” It is unusual for the state news media of North Korea to issue such a direct criticism of China, which accounts for 90 percent of its external trade and provides almost all of the country’s oil imports. A spokesman for the Chinese Foreign Ministry, Geng Shuang, sounded conciliatory when asked about the commentary at a regular news briefing today. “China’s position on denuclearizing the Korean Peninsula is consistent and clear, and so is our position on developing good-neighborly and friendly relations with the D.P.R.K.,” Geng said. The commentary was published as a rebuttal to a series of commentaries and editorials in the state-controlled Chinese news media, including Global Times, which had criticized the North’s nuclear weapons program and called for Beijing to cut off oil supplies if the North conducted another nuclear test. Today, Global Times responded to the KCNA piece, saying the North was “grappling with some form of irrational logic” over its weapons programs. In February, KCNA carried another commentary bitterly critical of China after Beijing announced that it was suspending all coal imports from North Korea for the rest of the year. But at the time, it did not mention China by name. The commentary on Wednesday did not
directly attack the government or the Communist Party of China, instead criticizing “commentaries” and “some ignorant politicians and media persons” in China. But it pointedly noted that these opinions were carried in publications “widely known as media speaking for the official stand of the Chinese party and government” and accused China of “insincerity and betrayal.” In the North Korean state media, a commentary by an individual writer does not carry as much weight as an official government statement. But such bylined commentaries closely follow an official script, and the government in Pyongyang often uses them to voice its view indirectly. Kim Chol's commentary is the latest sign that North Korea fears China will acquiesce to American pressure for more vigorous sanctions enforcement, especially after Trump’s summit meeting last month with the Chinese president, Xi Jinping. Last month, the Associated Press reported from Pyongyang that drivers were scrambling to fill their tanks as gas stations began limiting services, an apparent response to reports that Beijing might use its oil supplies as leverage to force North Korea to stop developing nuclear weapons. The KCNA commentary on Wednesday was the North’s most bitter and categorical criticism of China in recent memory, said Cheong Seong-chang, a longtime North Korea analyst at the Sejong Institute, a South Korean think tank. “It has been a long-established tradition between North Korea and China that even if they held grudges against each other, they didn’t voice them in public,” Cheong said. “This shows that the current North Korea-China relations are bad enough for both sides to break that tradition.” Cheong said that to avoid economic overdependence on China, North Korea would try to strengthen ties with Russia and South Korea, where a liberal candidate more supportive of dialogue and economic exchanges with the North was likely to win a presidential election May 9. It has been a long-running strategy of North Korea to drive a wedge between the powers surrounding it and find room for maneuvering in the rift. Vice Foreign Minister Han Song-ryol of North Korea met with the Russian ambassador in Pyongyang on April 30, and both sides "agreed to boost cooperation in various fields in line with the longstanding friendly relations," KCNA reported. A North Korean delegation also visited the Russian Far East last month to discuss cooperation, according to KCNA. Analysts in South Korea have said that North Korea was trying to import more Russian oil to lessen its fuel dependence on China. The North is also believed to send workers to Russia to earn foreign currency. (Choe Sang-hun, “In Rebuke of China, North Korean Media Says Nuclear Program Will Go on,” New York Times, May 5, 2017, p. A-8)

Secretary of State Rex Tillerson urged Southeast Asian foreign ministers to do more to help cut funding streams for North Korea's nuclear and missile programs and to minimize diplomatic relations with Pyongyang. In his first ministerial meeting with all 10 members of the Association of Southeast Asian Nations (ASEAN), Tillerson also called on nations with competing claims in the South China Sea to cease all island building and militarization while talks aimed at creating a maritime code of conduct were under way. Patrick Murphy, U.S. deputy assistant secretary of state for East Asia, said Tillerson stressed Washington's security and economic commitment to the region, amid doubts raised by President Donald Trump's "America First" platform and withdrawal from the Trans Pacific Partnership (TPP) trade pact. Tillerson called on ASEAN countries to fully implement U.N. sanctions on Pyongyang, which is working to develop a nuclear-tipped missile capable of reaching the United States, and to show a united front on the issue, Murphy said. "We think that more can be done, not just in Southeast Asia," he told reporters. "We are encouraging continued and further steps across all of ASEAN." Last week, Tillerson called on all countries to suspend or downgrade diplomatic ties with Pyongyang, saying that North Korea abuses diplomatic privileges to help fund its arms programs. Tillerson also warned that Washington would sanction foreign firms and people conducting business with North Korea if countries did not act themselves. All ASEAN members have diplomatic relations with North Korea and five have embassies there. Murphy said Washington was not encouraging ASEAN states to formally cut ties, but to examine the North Korean presence “where it clearly exceeds diplomatic needs.” He said some countries were already doing this and also looking at the presence of North Korean workers, another significant revenue earner for Pyongyang. Some officials of ASEAN members, speaking to reporters, acknowledged concerns about North Korea, but also cited concerns about trade relations with the United States. Philippine acting Foreign Affairs Secretary Enrique Manalo, whose country currently chairs ASEAN, said of the U.S. call to minimize relations with Pyongyang, "We haven’t really discussed that among the ASEAN countries, so that's probably
something we will look at. Our immediate concern is to try and ensure the tension on the peninsula doesn't increase. ... The last thing we would like to see is to have a conflict break out due to some miscalculation," Manalo said. Singapore's foreign minister, Vivian Balakrishnan, said sanctions would have to be fully implemented, but North Korea's presence in his country is already minimal. Asked if that could be further reduced, he said: "I won't say never, but at this point in time that's not the issue - we will stick with the U.N. Security Council's resolutions."

Balakrishnan, whose country signed the TPP, stressed the importance of U.S.-ASEAN business ties - annual trade of $100 billion supporting half a million U.S. jobs and $274 billion of U.S. investment. "Southeast Asia is replete with economic opportunities and it's too big to miss out on," he said. His remark highlighted growing concern in Asia that Trump has ditched former President Barack Obama's economic "pivot" to the region by abandoning the TPP, something analysts say has led to more countries being pulled into China's orbit. Diplomats say U.S. pressure has caused some irritation in ASEAN, including Malaysia, which has maintained relations with Pyongyang in spite of the assassination of North Korean leader Kim Jong Un's estranged half-brother at Kuala Lumpur International airport in February. (David Brunnstrom, “Tillerson Urged ASEAN to Cut North Korea Funding, Minimize Ties,” Reuters, May 4, 2017)

Determined to exert greater economic pressure on North Korea, the Republican-led House voted 419-1 to impose new sanctions on Pyongyang targeting its shipping industry and use of slave labor. The legislation sponsored by Rep. Ed Royce of California, the Republican chairman of the House Foreign Affairs Committee, and Rep. Eliot Engel of New York, the committee’s senior Democrat, is aimed at thwarting North Korea’s ambitions by cutting off access to the cash the regime needs to follow through with its plans. The bill bars ships owned by North Korea or by countries that refuse to comply with U.N. resolutions against it from operating in American waters or docking at U.S. ports. Goods produced by North Korea’s forced labor would be prohibited from entering the United States, according to the legislation. Anyone who uses the slave labor that North Korea exports to other countries would be subject to sanctions under the International Emergency Economic Powers Act, the bill states. At times when the nation is facing unusual or extraordinary threats, the president has wide authority under the law, including the power to block or prohibit transactions involving property located in the U.S. Goods produced by North Korean forced labor would be barred from entering the United States, under the bill. Royce said companies from Senegal to Qatar to Angola import North Korean workers, who send their salary back to Pyongyang, earning the regime billions of dollars in hard currency each year. “This is money that Kim Jong-un uses to advance his nuclear and missile program, and also pay his generals, buying their loyalty to his brutal regime,” he said. “That is what the high-level defectors that I meet with say. So let’s squeeze his purse.” The bill also requires the Trump administration to determine within 90 days whether North Korea is a state sponsor of terrorism. Such a designation would trigger more sanctions, including restriction on U.S. foreign assistance. (Richard Lardner, “House Overwhelmingly Passes New Sanctions on North Korea,” Associated Press, May 4, 2017)

Ministry of State Security statement: “The last-ditch effort of the hostile forces, taken aback by the strong spirit of the DPRK dashing toward the final victory of the cause of Juche revolution, has gone beyond the limits after reaching the extreme phase. The recent hysteria about "beheading operation" and "preemptive attack", openly staged by the U.S. imperialists and the south Korean puppet military warmongers at the doorstep of the DPRK, is just the tip of the iceberg of those moves. The Central Intelligence Agency (CIA) of the U.S. and the Intelligence Service (IS) of south Korea, hotbed of evils in the world, hatched a vicious plot to hurt the supreme leadership of the DPRK and those acts have been put into the extremely serious phase of implementation after crossing the threshold of the DPRK. A hideous terrorists’ group, which the CIA and the IS infiltrated into the DPRK on the basis of covert and meticulous preparations to commit state-sponsored terrorism against the supreme leadership of the DPRK by use of bio-chemical substance, has been recently detected. The murderous demons of the IS who conspired with the CIA ideologically corrupted and bribed a DPRK citizen surnamed Kim, the then worker of the timber industrial branch in the Khabarovsk Territory of Russia in June 2014, and turned him into a terrorist full of repugnance and revenge against the supreme
leadership of the DPRK. They hatched a plot of letting human scum Kim commit bomb terrorism targeting the supreme leadership during events at the Kumsusan Palace of the Sun and at military parade and public procession after his return home. They told him that assassination by use of biochemical substances including radioactive substance and nano poisonous substance is the best method that does not require access to the target, their lethal results will appear after six or twelve months, bio-chemical substance can be added in cooperation with the CIA if one single correct information is obtained, the component of terrorism-purposed bio-chemical substance is the know-how of the CIA and it is only the CIA that can produce such substance, and that hardware, supplies and funds needed for committing terrorism against the supreme leadership will completely be borne by the IS. Then they handed him over 20,000 U.S. dollars on two occasions and a satellite transmitter-receiver and let him get versed in it. In the end, they gave him assurances of IS that they would keep his duty concerning terrorism against the supreme leadership as secret, and infiltrated him after appeasing and blackmailing him that his families would not be scot-free in case he fails to carry out the duty. In January, May, August and September of 2016 IS agents had satellite contacts with Kim who resided in Pyongyang. The IS agents gave instructions to choose and report the most effective and safe method with high probability of success while presenting him various terrorist methods using biochemical substances along with operational code of terrorism against the supreme leadership, the ways of bribing an object who would directly carry out the terrorist act and ways of entering the grounds of events. On August 12, 2016 they gave him an instruction to collect and send as much information as possible concerning the surrounding environment of event ground where celebrations are held frequently, guard situation there and orders observed at times of events, saying that once concrete and detailed data are given, they would study the most reasonable way in cooperation with the CIA. Urging him to set up an overseas liaison center for the safe introduction of equipment, materials and fund for the terrorist acts, they financed him 100,000 U.S. dollars on two occasions for setting up the center and bribing terrorist accomplices. In March and April last an IS agent Jo Ki Chol and his secret agent Xu Guanghai, director general of the Qingdao NAZCA Trade Co. Ltd., met the terrorist accomplice in Dandong of China and handed him over new satellite transmitter-receiver and 50 000 U.S. dollars. They signed a "contract" on setting up the overseas liaison center and let the necessary equipment and materials be introduced as the first installment in early May. On April 7 a guy surnamed Han, chief of the IS team, taught Kim the way of bribing terrorist accomplices, saying that "even the U.S. CIA uses gradual engagement with due consideration given to the greed and mentality of persons depending on which class and strata they belong" and told him to use it as a reference in engaging terrorist accomplices to be infiltrated to the event ground. On November 4, 2016 and on April 13, 17 and 20 this year they let Kim know that they officially confirmed the types of bio-chemical substance and hardware to be used for committing terrorist act against the supreme leadership and requested it to the CIA, and instructed him to restudy the "creed" of the terrorist executor and reconfirm the state of "brainwashing" of him and report about them. They also repeatedly instructed him to take the best measure for the examination and preparations for the terrorist operation, as there can be such catastrophic incident as a war once the fact about terrorist means and funds provided by the IS is known. The chief of the south Korean puppet Intelligence Service Ri Pyong Ho praised the terrorist as a "very valuable existence for the nation and 'IS'" and directly organized the terrorist operation and let the chief of the IS team Han and agent Jo Ki Chol take the lead in executing it. The puppet forces gave the terrorist more than 80 instructions for the execution of the operation. Recently the CIA and the IS actively spread the story about "emergency situation in the north" while trumpeting about advantages of terrorism by use of biochemical substances as such way can minimize the adverse effect on the executor and the back-stage manipulator and help evade retaliation against the assailant side and international denunciation. Lurking behind the story was the heinous plot that has been pushed forward in top secrecy. The DPRK Ministry of State Security clarifies as follows upon authorization since the hysteria of the U.S. and the south Korean puppet intelligence institution aimed to hurt the dignity of the DPRK supreme leadership has reached the dangerous phase which can no longer be overlooked: 1. We will ferret out and mercilessly destroy to the l institution aimed to hurt the dignity of the DPRK supreme leadership has reached the dangerous upon authorization since has been pushed forward in top secrecy.
media are concerned that the consecutive ICBM tests by the U.S. can push the acute situation on nothing to do with the DPRK's nuclear and long ICBM test at a time when the situation on the Korean peninsula has reached the extremely dangerous phase carried out inter Institute for American Studies of DPRK Foreign Ministry spokesman’s statement: “The U.S. Merciless Punishment: Ministry of State Security,” May 5, 2017) miserable end i DPRK's warning and common desire of humankind, they are bound to meet nothing but the most put the criminals to a death penalty. If they continue to make challenges in disregard of the group of traitors should clearly see their dirty looks as bloodstained homicidal maniac and make ruthlessly trample down their desire for peace and stability. The U.S. and the south Korean puppet joint struggle to put an end to all sorts of inhumane plots, arbitrariness outrageous destroyers of the earth. The honest peaceourean case was the most vicious challenge and the declaration of a war aimed to hurt the mental mainstay that all the Korean people absolutely trust and repose and to eclipse the eternal sun of the DPRK. It is the fixed will of the army and people of the DPRK that they can never tolerate even dreaming about such a crime. Criminals going hell-bent to realize such a pipe dream cannot survive on this land even a moment. This is a stern punishment made on behalf of the human conscience and in the name of all Koreans. The Ministry of State Security whose mission is to safeguard the leader, the social system and the people will ferret out to the last one the organizer, conspirator and followers of the recent hideous state-sponsored terrorism even by ransacking the whole earth, in reflection of the will of the army and people of the DPRK burning their hearts with hatred and wrath against the hideous murderous devils, no matter at which corner of the planet they may be. 2. Korean-style anti-terrorist attack will be commenced from this moment to sweep away the intelligence and plot-breeding organizations of the U.S. imperialists and the puppet clique, the most mean and brutal hideous terrorist group in the world. Even though we wipe out all those villains involved in the recent hideous state-sponsored terrorism, there is no vouch that the enemies would stop maneuvering as long as the chiefitans and the plot-breeding bases remain. It is not a secret that the U.S. imperialists and the puppet group of traitors are getting all the more reckless with each passing day and their moves are spearheaded against the supreme headquarters of the Korean revolution. It is as clear as noonday that such heinous crime targeting the supreme headquarters of the Korean revolution would continue to be attempted, as long as the U.S. imperialists and the south Korean puppet group of traitors remain unchanged in their hostile policy toward the DPRK and there are CIA and IS running amuck as a spearhead in executing the policy. Therefore, it is our determination to root up all the dens of plot and trick like CIA and IS, the source of all evils in the world, and a series of more powerful our-style anti-terrorism striking actions will begin immediately. 3. All the countries and peoples of the world that value justice and peace should resolutely turn out in the sacred struggle to terminate the heinous terrorist act committed by the U.S., kingpin of terrorism and chief of plot, and the south Korean puppet group of traitors. The present international situation proves that terrorism is a common enemy to humankind and the world would have no moment of peace unless terrorism is eradicated. The bloody terrorist acts of CIA and IS backed by the U.S., the empire of evil, in different parts of the world surpass terrorism which is said to be perpetrated by "Islamic State" forces. Nevertheless, the U.S. imperialists and the south Korean puppet group of traitors have often brought charge of "terrorism" to anti-U.S. states and resorted to unprecedentedly hideous terrorism without hesitation under the pretexts of "anti-terrorism war", "opposition to biochemical weapons", "sponsor of terrorism", etc. The heinous crime, which was recently uncovered and smashed in the DPRK, is a kind of terrorism against not only the DPRK but the justice and conscience of humankind and an act of mangling the future of humankind. The world free from fear of terrorism is no more than a daydream, as long as there exist in it such groups of bloodthirsty felons as CIA and IS, common enemies hoodwinking and trifling the humankind and outrageous destroyers of the earth. The honest peace-loving peoples of the world should wage a joint struggle to put an end to all sorts of inhumane plots, arbitrariness and evildoings that ruthlessly trample down their desire for peace and stability. The U.S. and the south Korean puppet group of traitors should clearly see their dirty looks as bloodstained homicidal maniac and make an apology to the DPRK for their atrocious state-terrorism and inhumane crime and immediately put the criminals to a death penalty. If they continue to make challenges in disregard of the DPRK’s warning and common desire of humankind, they are bound to meet nothing but the most miserable end in history.” (KCNA, “DPRK Warns U.S., S. Korean Intelligence Agencies of Merciless Punishment: Ministry of State Security,” May 5, 2017)

Institute for American Studies of DPRK Foreign Ministry spokesman’s statement: “The U.S. carried out inter-continental ballistic missile test-fire on May 3 in the wake of the one on April 26 at a time when the situation on the Korean peninsula has reached the extremely dangerous phase due to the largest-ever joint military drills waged by the U.S. after introducing huge nuclear strategic assets, and the military provocation moves conducted by it. The U.S. claims the two ICBM test-fires conducted just in a little over one week were planned one year ago and they have nothing to do with the DPRK's nuclear and long-range ballistic missile launch but many world media are concerned that the consecutive ICBM tests by the U.S. can push the acute situation on
the Korean peninsula to graver phase. The U.S. maintains it may carry out missile launches but the DPRK cannot and that its launches are "contribution" to peace and security while the DPRK's are "provocation" straining tension. This sophism is the height of double-dealing standards. The UN Security Council has kept mum about the U.S. test-fire of ICBM which flew more than 6 000 km across the ocean, even while crying out for "denunciation" and "sanctions" as for ballistic rocket test-fires the DPRK carried out in its own territorial land and waters. The UN Security Council which calls into question only the DPRK's ballistic rocket test-fires while turning an unseeing eye to the U.S. ICBM test-fires under the pressure of Washington's high-handed and arbitrary practices deserves the name of "double-dealing standards Security Council" or "U.S. Security Council." In order to realize genuine international justice and build a fair and peaceful world, the U.S. double-dealing yardstick must be broken and the UN Security Council moving at the beck and call of the U.S. must be reformed. The DPRK will bolster the capabilities for Korean-style preemptive nuclear attack at remarkably higher pace as it has already clarified as long as the U.S. continues its hostile policy toward the DPRK and vicious nuclear threat and blackmail. If the UN Security Council does not call the U.S. to account for its aggressive and provocative large-scale joint military exercises and ICBM launches, the DPRK will not recognize any UNSC's "resolution" taken over the DPRK's ballistic rocket launches but continue to disclose the absurdity of the UN "sanction resolutions." No one is entitled to find fault with the DPRK's exercise of its just right to defend its sovereignty and right to existence.” (KCNA, “Institute for American Studies of DPRK Foreign Ministry Condemns U.S. ICBM Test-Fires,” May 5, 2017)

Disarmament and Peace Institute of DPRK Foreign Ministry study report “disclosing the danger of the heinous moves the U.S. has persisted while resorting to military adventure to push the situation on the Korean peninsula to the point of explosion of a thermonuclear war, and clarifying the validity of the principled stand of the DPRK to firmly defend the peace and stability on the peninsula and in the region. The U.S. military provocation moves have reached the height with Key Resolve and Foal Eagle 17 joint military drills as occasions. …The U.S. hurled 300 000-strong troops into the aggression war drills including troops from the U.S. military bases in areas around the Korean peninsula and even its mainland, to say nothing of those troops present in south Korea and the south Korean puppet forces. Through the joint military drill the U.S. posed an open military threat to the DPRK and, in actuality, planned to put preemptive attack and aggression war into practice. Under the active patronage and instigation of the U.S. the south Korean puppet forces conducted provocation in the hotspot waters in the West Sea of Korea in real earnest to ignite a war. Due to the U.S. extreme military provocation moves, the acute situation on the peninsula has lasted even after the joint military drills. Timed to coincide with the end of the drills, the U.S. introduced Carl Vinson carrier task force, Michigan nuclear submarine and other strategic assets into the Korean peninsula, ratcheting up military tension to the maximum. On May 1, just one day after joint military drills came to an end, B-1B nuclear strategic bomber formation was brought into the sky over south Korea to hold the drill of dropping nuclear bombs. From May 3 the U.S. staged joint military drills in areas around the Korean peninsula together with Japan, Britain and France, rendering tenser the situation on the peninsula, over which dark clouds of a nuclear war hang heavily. The evil cycle of escalation of tension has continued on the Korean peninsula to the point of explosion of a thermonuclear war, and clarifying the danger of the DPRK carried out in its own territorial land and waters. The UN Security Council has kept mum about the U.S. test-fire of ICBM which flew more than 6 000 km across the ocean, even while crying out for "denunciation" and "sanctions" as for ballistic rocket test-fires the DPRK carried out in its own territorial land and waters. The UN Security Council which calls into question only the DPRK's ballistic rocket test-fires while turning an unseeing eye to the U.S. ICBM test-fires under the pressure of Washington's high-handed and arbitrary practices deserves the name of "double-dealing standards Security Council" or "U.S. Security Council." In order to realize genuine international justice and build a fair and peaceful world, the U.S. double-dealing yardstick must be broken and the UN Security Council moving at the beck and call of the U.S. must be reformed. The DPRK will bolster the capabilities for Korean-style preemptive nuclear attack at remarkably higher pace as it has already clarified as long as the U.S.

North Korea's coal exports sharply declined in March compared with the amounts tallied for the previous two months, a U.N. website showed. An unidentified country reported to the U.N.
committee that it imported 6,300 tons of North Korean coal valued at some US$570,000 in March, according to the website. The unspecified nation is presumed to be China. For January and February, a country believed to be China reported that it imported 1.44 million tons and 1.23 million tons of coal from the North, respectively. The March data may reflect China's calculation of some coal that was earlier imported but compiled later, experts said. A possibility of a third country importing North Korean coal cannot be ruled out, they added. (Yonhap, “N. Korea’s Coal Exports Fall Sharply in March; U.N. Website,” May 5, 2017)

KCNA: “Supreme Commander of the Korean People's Army Kim Jong Un, chairman of the Workers' Party of Korea and chairman of the State Affairs Commission of the DPRK, inspected the defense detachment on Jangjae Islet and the Hero Defense Detachment on Mu Islet located in the southernmost part of the waters off the southwest front. He looked at Yonphyong Island at the observation post of the defense detachment on Jangjae Islet. After receiving a report from Pak Jong Chon, director of the Artillery Bureau, on the recent movements of the enemy of the Command for the Defense of Northwestern Islands of the south Korean puppet army and the situation of the reinforced unit on Yonphyong Island, he acquainted and examined the plan for fire strike of the newly organized forces at the objects of the enemy. He said that the KPA elite artillery group defending the southwest front should keep highly alert to break the backbone of the enemy once ordered. Going round the firing area and gun shelters, he acquainted himself with combat readiness. Looking round the newly-built room for turning seawater into fresh water, he acquainted himself with the production and supply of the fresh water. He also went round the barracks, mess hall and newly-built vegetable greenhouse and stables. He had a photo session with the service members and families of officers of the defense detachment on Jangjae Islet. Then he inspected the Hero Defense Detachment on Mu Islet. Going round the observation post, gun shelter and the position of gun no.1 honored with the title of DPRK Hero, he acquainted himself with the combat duty. He said that the Hero Defense Detachment on Mu Islet smashed the reckless and provocative shelling by the south Korean puppet warmongers with the merciless shower of shells to turn Yonphyong Island into a sea of fire, thus showing the spirit of the artillery of the KPA before the enemy. The Yonphyong Island shelling was the most delightful battle after the ceasefire and the feat of the service members of the Defense Detachment on Mu Islet is the brilliant military service to hand down through the generations along with the history of the Workers' Party of Korea, he said, adding that the recruits should steadfastly carry on the baton of the praiseworthy feats and demonstrate the mettle of the hero defense detachment in the future battle once again. After receiving a report that the gun no. 1 of the defense detachment came first in the artillery firing contest held in March last, he encouraged the service members of the gun to take the lead in the whole army and then posed for a picture with them with the hero gun for a background. Dropping in at the newly-built room for turning seawater into fresh water at the defense detachment on Mu Islet, he personally drank water. Going round the barracks, education room, wash-cum-bath room, etc., he took warm care of the service members. He had a photo session with the servicemen and the families of officers of the Hero Defense Detachment on Mu Islet. He was greatly satisfied with the combat readiness and the soldiers' living of the two defense detachments, he noted, adding that he confirmed that all the combat positions are fully ready for combat and to go into action. He was most pleased to see that the issue of drinking water for the soldiers on those islets has been completely solved. The duty of the two defense detachments are very important, he said, giving instructions for rounding off combat readiness at the defense detachments. Accompanying him were KPA Vice Marshal Hwang Pyong So, director of the General Political Bureau of the KPA, Army General So Hong Chan, first vice-minister of the People's Armed Forces, Army Col. General Pak Jong Chon, director of the Artillery Bureau of the KPA, Army Col. General Ri Song Guk, commander of the 4th Corps of the KPA, Army Major General Ri Yong Chol, political commissar of the corps, and O Il Jong and Jo Yong Won who are senior officials of the Central Committee of the WPK.” (KCNA, “Kim Jong Un Inspects Defense Detachment on Jangjae Islet and Hero Defense Detachment on Mu Islet,” May 5, 2017)

President Donald Trump’s administration has told China he is open to welcoming North Korean leader Kim Jong Un for a meeting in the United States if Pyongyang abandons its nuclear and
missile programs, according to diplomatic sources. The idea is among a set of proposals that the U.S. floated during recent discussions with Chinese officials on how best to deal with the North Korean nuclear issue. The U.S. administration has also said it would not resort to military action and would provide a security guarantee for Kim’s regime if the weapons programs are scrapped, the sources said today. U.S. officials have said all options, including a military strike, are on the table in trying to curb North Korea’s nuclear ambitions. But they have said at the same time that the door for dialogue is open. The U.S. proposals center on four promises. In return for North Korea ceasing its development of nuclear and missile technologies, the United States would not seek regime change, regime collapse or an accelerated reunification of the Korean Peninsula, nor would it look for an excuse to advance north of the 38th parallel, the de facto inter-Korean border. China is believed to have already informed North Korea of the U.S. proposals. North Korea does not hide its willingness to return to the negotiating table with the United States. A senior North Korean diplomat in charge of U.S. affairs is scheduled to meet soon with former U.S. government officials in Norway, according to separate diplomatic sources. Choe Son Hui, head of the North Korean Foreign Ministry’s U.S. affairs bureau, is almost certain to discuss bilateral and nuclear issues with the former officials. However, it is highly unlikely for North Korea to stop its nuclear and missile programs any time soon and before the United States provides a security guarantee to the regime in concrete terms. For many years, North Korea has argued its pursuit of nuclear weapons is essential to deter U.S. military action. (Kyodo, “Trump Reportedly Open to Meeting Kim Jong Un in U.S. If North Korea Abandons Nuclear Weapons Program,” Japan Times, May 9, 2017) A South Korean foreign affairs official who spoke on the condition of anonymity said the ministry was "told by the U.S. State Department and the National Security Council that the report was groundless," though which part of the story was wrong wasn't specifically mentioned. "South Korea and the U.S. agree that now isn't the right time for talks" with North Korea, the official said, highlighting Pyongyang's ceaseless threats to carry out a nuclear attack. (Lee Sung-eun and Yoo Jee-hye, “Trump Offers Kim Jong Un Summit with Big Conditions: Japan Times, JoongAng Ilbo, May 9, 2017)

North Korean officials began informal talks with a group of American experts in Oslo, Norway, amid speculation that Washington may seek dialogue with Pyongyang, diplomatic sources said Tuesday. It's their first Track II meeting in half a year. The previous session was held in Geneva. Dialogue between North Korean government officials and US civilian experts opened today in a suburb of Oslo and it will continue through Tuesday (local time), a source said. The North Korean delegation is reportedly led by Choe Son-hui, director-general of the North America bureau chief of the communist nation's foreign ministry. Her counterpart is Suzanne DiMaggio, director and senior fellow at New America, a think tank based in Washington DC, according to another source. DiMaggio is known as an Iran specialist well versed in the Obama administration's nuclear talks with the Middle Eastern nation. The US government will not attach any special meaning to the Track II dialogue. "Track-two meetings are routinely held on a variety of topics around the world and occur independent of US government involvement," a State Department official said. But North Korea watchers took note of the timing of the meeting this time, saying it may provide the two sides with a chance for a type of "exploratory" talks. (Yonhap, “N. Korean Officials Meet U.S. Experts in Oslo,” Korea Herald, May 9, 2017)

Moon Jae-in, Minjoo (Democratic Party), wins South Korean presidential election 13,423,800, 40.1%; Hong Jun-pyo Liberty Korea Party, 7,852,849, 24.0%; Ahn Cheol-soo, People’s Party, 6,998,342, 21.4%; Yoo Seung-min, Bareun Party, 2,208,771, 6.8%; Sim Sang-jung, Justice Party, 2,017,458, 6.2%

President Moon Jae-in inaugurated.

Moon’s inaugural address: “I will solve the security crisis promptly. I will go anywhere for the peace of the Korean Peninsula. If necessary, I will fly straight to Washington. I will go to Beijing and Tokyo and under the right circumstances go to Pyongyang as well. I will do whatever I can to establish peace on the Korean Peninsula. I will further strengthen the ROK-U.S. alliance.
Meanwhile, I will negotiate earnestly with the U.S. and China to solve the THAAD problem. Strong security depends on robust defense capabilities. I will try hard to strengthen our independent defense power. I will also lay the foundation for the resolution of the North Korean nuclear issue. I will provide a turning point to lower tensions on the peninsula by firmly establishing a Northeast Asia peace regime.” (Yonhap, “President Moon Jae-in’s Inaugural Address,” May 10, 2017)

In his first day in office, Moon rushed to build his government, appointing Lee Nak-yon, a provincial governor, as his prime minister. He also selected Suh Hoon, a former intelligence official, as director of the National Intelligence Service. Moon said he expected Suh to play a role in resolving the North Korean nuclear crisis. Suh said that another inter-Korean summit meeting was “necessary,” but that it would be premature to discuss it when military tensions remained high on the peninsula. “What we need the most is to find a breakthrough for resolving the North Korean nuclear issue,” Suh said. “When such conditions mature, I think we can go to Pyongyang.” (Choe Sang-hun, “South Korean Leader Aims to Build Trust with North,” New York Times, May 11, 2017, p. A-9) Suh Hoon, who was named the new head of South Korea's intelligence agency today, is a well-known expert on North Korea who played a key role in helping arrange summit talks between the two Koreas in the 2000s. His appointment as President Moon Jae-in’s first spy chief is widely seen as aimed at backing up the new leader's bid to improve long-strained inter-Korean ties. Suh, 63, made behind-the-scene contact with North Korea in preparing for the landmark summits held in June 2000 and October 2007, respectively. He is known as a South Korean who met with former North Korean leader Kim Jong-il the most. He stayed in North Korea for two years in 1997 as a head of the field office of the Korean Peninsula Energy Development Organization (KEDO), during which he learned how to negotiate with North Korean officials. KEDO was set up to implement a 1994 deal with North Korea under which Pyongyang promised to freeze and then ultimately dismantle its nuclear program in exchange for energy-producing light water reactors and other concessions from the U.S. and other partners. After returning from North Korea, Suh was involved in making secret contact with North Korea for summit talks in 2000 between then-President Kim Dae-jung and the North's Kim Jong-il. During the administration of former President Roh Moo-hyun, Suh accompanied then-spy chief Kim Man-bok in visiting North Korea to prepare for a summit in 2007. (Yonhap, “Secret Negotiator for Two Inter-Korean Summits Tapped as Spy Chief,” May 10, 2017)

President Donald Trump invited newly-elected Korean President Moon Jae-in to Washington at the earliest possible date in their first phone call today, and Seoul is working to arrange a bilateral summit as soon as next month. Trump and Moon held a 30-minute phone call at 10:30 p.m. in which they also agreed to freely call each other if a crisis arises before they meet. The White House said in a statement, “President Trump said he looks forward to working with President Moon and invited him to visit Washington at an early date,” adding Moon accepted the invitation. While Moon and Trump will have an occasion to meet at the G-20 summit in Hamburg, Germany, on July 7 and 8, officials in Seoul think a summit shouldn’t wait. The Moon administration has yet to appoint foreign affairs and security teams, however diplomatic sources still believe that the first Korea-U.S. bilateral summit could happen as early as June. According to the Blue House in a statement, Moon said to Trump that the South Korea-U.S. alliance “is more important than at any other time given the growing uncertainties over the security situation of the Korean Peninsula.” Moon said, “The South Korea-U.S. alliance is the foundation of our diplomatic and security policy, and will continue to be so,” adding he appreciates that President Trump has prioritized deterring North Korea’s provocations on his security agenda. Moon said that he looked forward to working with Trump, whom he described as showing “strong leadership.” Moon said he will send a special envoy to the United States soon, and that he wishes to “visit Washington at the earliest date possible to meet with President Trump and exchange heart-to-heart opinions.” Trump replied that he would send a high-level advisory team to Seoul to discuss Moon’s visit to the United States. Moon said he would like to hold a phone conversation if a situation arises before their summit. Trump told Moon he looked forward to meeting in person and that he should feel free to call whenever necessary. Seoul is likely to send a special delegation to Washington to schedule a
summit later this month. “A special envoy, often a politician, is usually sent during the transition period to key countries like the United States, China and Japan, but the situation is slightly different because there was no transition before the inauguration,” said a Foreign Ministry official in Seoul May 11. “The president said he will send a special envoy in the phone conversation, so we will be ready to carry out preparations as soon as he calls for it.” Cho June-hyuck, spokesman of the Korean Ministry of Foreign Affairs, said in a briefing May 11 that a U.S.-Korea bilateral summit will “be planned through close negotiations between the two countries.” Trump has also declared that he would be “honored” to meet with North Korean leader Kim Jong-un “under the right circumstances.” The two leaders may not see eye-to-eye on what could comprise the right circumstances. Trump has also been calling for a renegotiation of the bilateral free trade agreement (FTA) and for Seoul to shoulder a larger cost of maintaining U.S. troops in Korea and pay for a $1 billion antimissile system. On the afternoon of the 11th, Moon held phone conversations with the leaders of Korea’s closest neighbors, China and Japan, discussing North Korea as well as points of bilateral contention. Chinese President Xi Jinping called Moon to congratulate him on his election at noon, and the two had a 40-minute conversation in which they agreed to improve bilateral relations at a time of tensions over the deployment of the Terminal High Altitude Area Defense battery in Korea. This was the first time the Chinese leader has called a South Korean president to congratulate him or her on an election victory, said Yoon Young-chan, Moon’s press secretary, at a press briefing. The two leaders agreed that their common goal is denuclearization of the Korean Peninsula. They also agreed that efforts are needed by all parties to ease tension on the Korean Peninsula and resolve the North Korea nuclear issue. Moon emphasized that resolving the North Korean nuclear problem has to happen in a “comprehensive, phase-by-phase manner, with pressure and sanctions applied at the same time as negotiations go on.” He added that the goal of the sanctions on North Korea is to lead Pyongyang to negotiations to ultimately scrap its nuclear program, and Xi was said to have expressed agreement. Moon acknowledged China’s concerns over the deployment of the THAAD system, but went on to request Xi to take a special interest in the concerns of Korean citizens and businesses in China that are suffering from a backlash over the THAAD deployment, asking for the restrictions and sanctions to be “resolved amicably.” Moon said he hopes the two sides could continue discussions on the THAAD issue. The two leaders also agreed to exchange special envoys as soon as possible. Moon said he plans to send separate delegations to discuss the THAAD issue and the North Korean nuclear problem to China. They also agreed to meet in person as soon as possible, while Xi officially invited Moon to Beijing. In his conversation with Japan’s leader, Moon noted “that most Korean people have difficulty accepting” the 2015 bilateral agreement to resolve the issue of the Japanese military’s sexual slavery of Korean women during World War II. Moon’s phone conversation with Japanese Prime Minister Abe Shinzo started at 2:25 p.m. and lasted 25 minutes, said Yoon. The two countries’ foreign ministries struck a deal to resolve the so-called comfort women issue on Dec. 28, 2015, consisting of an apology by the Japanese prime minister and a 1 billion yen ($8.98 million) fund for the victims. Moon said he hoped the two countries could “work together to wisely overcome historical issues.” Abe repeated his position calling for the faithful implementation of the comfort women deal to build constructive, “future-oriented” bilateral relations. Moon did not mention renegotiating the deal in this initial conversation, according to his aides, though he called for that during his campaign. The two leaders agreed to meet as soon as possible. (Sarah Kim, “Moon, Trump Agree to Meet Very Soon,” JoongAng Ilbo, May 12, 2017) South Korea’s new president launched international efforts to defuse tension over North Korea’s weapons development, urging both dialogue and sanctions while also aiming to ease Chinese anger about a U.S. anti-missile system. Moon Jae-in first spoke to Chinese President Xi Jinping and later to Japanese Prime Minister Shinzo Abe, with how to respond to North Korea’s rapidly developing nuclear and ballistic missile programs, in violation of U.N. Security Council resolutions, dominating talks. “The resolution of the North Korean nuclear issue must be comprehensive and sequential, with pressure and sanctions used in parallel with negotiations,” Moon’s spokesman, Yoon Young-chan, quoted Moon as telling Xi. “Sanctions against North Korea are also a means to bring the North to the negotiating table aimed at eliminating its nuclear weapons,” Yoon told a briefing, adding that Xi indicated his agreement. Moon has taken a more conciliatory line with North Korea than his conservative predecessors and advocates engagement. He has said he would be prepared to go to Pyongyang “if the conditions are right.” "Threats from
North Korea's nuclear and missile development have entered a new stage," Japan's Abe told Moon in their telephone call, according to Japanese Deputy Chief Cabinet Secretary Hagiuda Koichi. "How to respond to North Korea ... is an urgent issue. I would like to closely cooperate with the president to achieve the denuclearization of North Korea," Abe told Moon. But Abe also said "dialogue for dialogue's sake would be meaningless" and he called on North Korea to demonstrate "sincere and concrete action," Hagiuda said, adding that Moon shared Abe's views. Japan has been concerned that Moon will take a tough line on feuds stemming from the bitter legacy of its 1910-1945 colonization of the Korean peninsula and could fray ties at a time when cooperation on North Korea is vital. Moon told Abe to "look straight at history" and not make the past "a barrier", though he raised South Korea's dissatisfaction with a 2015 agreement meant to put to rest a dispute over Japanese compensation for South Korean women forced to work in Japanese brothels before and during World War Two, Korea's presidential office said. In the first direct contact between the South Korean and Chinese leaders, Xi explained China's position, Yoon, the South Korean presidential spokesman said, without elaborating. "President Moon said he understands China's interest in the THAAD deployment and its concerns, and said he hopes the two countries can swiftly get on with communication to further improve each other's understanding," Yoon told a briefing. Xi told Moon South Korea and China should respect each other's concerns, set aside differences, seek common ground and handle disputes appropriately, China's foreign ministry said in a statement. Moon explained the difficulties faced by South Korean companies that were doing business in China and asked for Xi's "special attention" to ease those concerns, Yoon said. China has also denied it is doing anything to retaliate against South Korean businesses. (Ju-min Park and Christine Kim, "South Korea Urges 'Parallel' Talks and Sanctions to Rein in South Korea," Reuters, May 11, 2017) "President Moon noted the reality was that most of his people could not accept the agreement over the sexual slavery issue," Moon's chief press secretary Yoon Young-chan said of the president's telephone conversation with Japanese Prime Minister Abe. (Yonhap, “S. Korean President Hints at Scrapping Deal with Japan over Sexual Slavery,” May 11, 2017) Prime Minister Abe called on new South Korean President Moon Jae In May 11 to steadily implement the 2015 bilateral agreement on the issue of “comfort women.” According to Japanese officials with access to the leaders’ 25-minute telephone talks, Abe said it is important to carry out the agreement, which was praised by the international community, “in a responsible manner.” “I want to appropriately manage the Japan-South Korea relations, including the bilateral agreement,” Abe was quoted as saying. He also expressed hope for building forward-looking bilateral relations. In response, Moon said he would like to exercise wisdom to resolve various issues so the two East Asian neighbors can develop a good relationship. As some people in South Korea have cautious stances on the comfort women agreement, history issues need to be resolved in a wise manner for the development of both countries, Moon pointed out. On North Korean problems, Abe said he hopes to closely cooperate with Moon in denuclearizing the Korean Peninsula. Noting that "dialogue for the sake of dialogue is meaningless," Abe underscored the importance of having Pyongyang show "serious intention and concrete action" toward scrapping its nuclear program. Moon said he thinks so, too. The Japanese and South Korean leaders agreed to meet with each other as soon as possible. Abe also told Moon that Tokyo wants to hold a Japan-China-South Korea summit at an early date. (Jiji, “Abe Urges Moon to Implement Accord,” Japan Times, May 11, 2017) With South Korea hosting the 2018 Winter Olympics in PyeongChang, the Moon Jae-in government is seeking to use the event as a platform to kick-start dialogue with the North and set the tone for a nuclear moratorium in return for a restart of economic cooperation, a presidential adviser told the Korea Herald. But Choi Jong-kun, a professor in political science and international studies at Yonsei University in Seoul, emphasized that any thaw in relations with Pyongyang should be premised on its “explicit steps” toward denuclearization such as a halt in further nuclear and missile tests, as well as public consensus at home. “How to use the PyeongChang Olympics is extremely important for us. It’s held in Gangwon Province and (will be) the first major international event to be hosted by the new government, and there’s less burden because of its non-political nature and the Olympic spirit,” he said in an interview, referring to a region that shares a border with North Korea. “It could serve as a crucial platform for us to start talks with the North.” Given heightened tension and the absence of cross-border communication
channels, the event could set the stage for Seoul to sound out Pyongyang’s willingness to engage in negotiations. The plan is to increase exchanges, such as through reunions of separated families, and then extract the moratorium in exchange for “corresponding” measures such as on the Kaesong and Kumkangsan projects, Choi said. Mindful of potential diplomatic and domestic backlash, the Moon administration will take the measures only after Pyongyang does its part and reverse them if it backpedals on its promises. The initiative would also require consultations with the US and other neighbors given controversy over whether the projects infringe upon the UN Security Council resolutions and independent sanctions adopted by past Seoul governments and Washington, he noted. “If we could manage to perk up the mood through the Olympics and then expand interactions, we will be able to send a meaningful signal about our intention,” Choi said. “And if the North takes explicit steps on denuclearization, we may take our own regarding Kaesong and Kumkangsan.” Yet the president will not be bent on rushing talks for the sake of talks, he said, adding there are “lots of procedures to undergo, and nationwide consensus should be built before we get there.” The professor has been working with Moon since long before he launched his second presidential bid. His name is currently being floated for top diplomatic jobs including foreign minister. The president, who served in ranking posts in the Roh Moo-hyun administration, is widely expected to carry on with the late liberal leader’s strategy of pursuing greater political and economic cooperation with the North. On the campaign trail, Moon had pledged to revive the Kaesong district and Kumkangsan tours. Choi said the Moon government would never defy UNSC resolutions for its own political interests nor create a crack in international coordination on the nuclear program, though it may give more weight to negotiations than its predecessors. “The new government will begin its own policy review after house cleaning and a buildup for a couple of months, but I assume it will no longer apply strict reciprocity as previous ones did,” he said. “Yes, the possibility and resolve for dialogue is higher than before, and the signal should be sent to the North. Our aim is to take the lead in one of the two prongs of international cooperation — negotiations and contact — while the UNSC continues to steer the other. Otherwise, there won’t be any breakthrough to foster peace and stability on the peninsula.” Despite skepticism over leader Kim Jong-un’s unruliness and will for denuclearization, dialogue is all the more necessary now than ever to comprehend the precise situation, he said. “North Korea under Kim Jong-il and North Korea under Kim Jong-un are quite different. Since we haven’t have any access to Pyongyang for the past decade, we don’t know who they are and they don’t know who we are, which is why there are sustained doubts,” Choi said. “What the Moon government wants to do is conduct empirical research, getting to know about their vision for denuclearization, how they want to resolve the situation, and how big and broad the gap is between ours and theirs. With that, we can only figure out whether we should talk or sanction or completely isolate them.”

The Central Intelligence Agency said it opened a mission center at an undisclosed location that’s sole task is to monitor North Korea. Many of the details about the center are not yet known. It is led by an unnamed CIA veteran, who was tapped as the new assistant director for Korea. The CIA offshoot will work closely with the intelligence and national security community, the agency said. “Creating the Korea Mission Center allows us to more purposefully integrate and direct CIA efforts against the serious threats to the United States and its allies emanating from North Korea,” CIA Director Mike Pompeo said in a statement. “It also reflects the dynamism and agility that CIA brings to evolving national security challenges.” (Ryan Gaydos, “CIA to Focus on North Korean Threat with New Mission Center,” Fox News, May 11, 2017)

South Korea will dispatch a veteran politician with close ties with President Moon Jae-in to join a key Chinese government forum to be held in Beijing next week, the presidential office said, heralding a possible recovery of the bilateral relations marred by the deployment of an American-built defense system here. At the invitation of China, a delegation led by Rep. Park Byeong-seug of the Democratic Party will attend the Belt and Road Forum for International Cooperation that will kick off on April 14 for a two-day run, senior presidential secretary for press Yoon Young-chan said in a briefing. "The dispatch of the delegation is what (Chinese) President Xi Jinping
asked when President Moon held a telephone conversation with him yesterday," Yoon said, referring to the first telephone talks between the presidents yesterday. The delegation will also include two other ruling party lawmakers, Vice Foreign Minister Lim Sung-nam and a high-level official from the finance ministry, the Ministry of Foreign Affairs said. "Through the latest forum, the South Korean side plans to explore ways to cooperate bilaterally for regional co-prosperity, including its participation in the Chinese government-led the One Belt, One Road initiative, the ministry said. The delegation will leave for Beijing tomorrow to join the forum, another government official said earlier in the day. "An official invitation came from China recently," he said on condition of anonymity. "We decided to send a delegation comprised of Rep. Park and other government officials." Park, a five-term veteran lawmaker, served as co-chairman of Moon's presidential campaign team. His delegation is expected to meet key Chinese government officials on the sidelines of the forum to discuss ways to repair their bilateral ties strained over the deployment of THAAD in South Korea, the official said. An encounter with North Korean participants may not be ruled out as Pyongyang is also sending its delegation led by the external economy minister to the Chinese forum, according to the official. The forum is part of China's so-called "One Belt, One Road" project that focuses on its economic connectivity and cooperation with the countries in Eurasia and as far as Europe and Africa. (Yonhap, “S. Korea to Dispatch Veteran Politician to China Forum for Possible Fence-Making,” May 13, 2017)

DPRK Permanent Mission to the United Nations press statement “to clarify the stand of the DPRK government over the fact that the anti-DPRK moves of the U.S. and the abuse of power by the UNSC Committee, established pursuant to resolution 1718(2006) on the DPRK, have gone to the extremes. Nowadays the U.S. resorts to the foolish scheme to encourage the increased environment for implementation of the "sanction resolutions" against the DPRK, staging such closed briefings by the Committee for each regional group countries at the UN Headquarters one after another, which are unprecedented ever in the UN history. …The U.S. raises its voice before the member states, claiming that many countries are not fully engaged in implementation of the "sanction resolutions" against the DPRK and even intimidating others into the implementation, openly threatening that member nations would be faced with "strong measures of sanction" if they do not implement or show less interest in fulfilling their obligation to implement the "sanction resolutions." This only shows illegality and injustice of the "sanction resolutions" cooked up and imposed by the U.S. against the DPRK. It is self-evident truth that there is no need going to the trouble of begging or blackmailing others into the implementation of "resolutions", if they were regarded reasonable, fully based on justice and clear with their legal ground that could be accepted by the international community. Besides, there is no other way but to interpret it as the behavior of arrogation that the Security Council Committee established pursuant to resolution 1718(2006) on the DPRK raised questions even on normal trading deals and operation of restaurants between countries as "illegal acts" by overturning interpretation of the UN "resolution", which clearly stipulates that it is not intended to have adverse humanitarian consequences for the civilian population of the DPRK or to affect negatively those activities, including economic activities and cooperation. It will be only a laughing stock of the international community that with hysteria about sanctions, the U.S. has mistaken even ordinary restaurants run by the DPRK abroad for nuke or ballistic rocket manufacturers, so frightened at the tremendous military strength of the DPRK with nuclear force as a pivot, and the Security Council Committee established pursuant to resolution 1718(2006) on the DPRK has been reduced to the mere tool of executing U.S. hostile policy toward the DPRK. If the UNSC considers that its "sanction resolutions" are legitimate, then there will be no reason for it not to meet the repeated demand of the DPRK for an international forum of legal experts to clarify the legal basis of the ‘resolutions.’ The UNSC, before it forces other countries to implement the "resolutions", should reconsider why they are not being implemented and should try to clarify their legality in the proposed forum. The DPRK government determines such crazy hostile acts being committed by the U.S. and the Security Council Committee established pursuant to resolution 1718(2006) on the DPRK under the pretext of sanctions as a heinous crime against humanity aimed to trample down the sovereignty of the DPRK and its people's right to existence and thus pull the country back into the life of dark age, disregarding the basics of the international law and common sense of legitimate trade deals among
countries, and therefore totally rejects such kinds of ‘resolutions.’” (KCNA, “DPRK Permanent Mission to UN Issues Press Statement,” May 13, 2017)

5/13/17

Choe Son-hui, director-general of the North America bureau chief of North Korea's foreign ministry, told reporters at the Beijing Capital International Airport that her country "will hold dialogue under right conditions" with the U.S. administration. Choe led a North Korean delegation that met with a group of American experts, headed by Suzanne DiMaggio — director of the U.S. think tank New America — in Oslo, Norway, earlier this week, according to South Korean diplomatic sources. DiMaggio is known as an Iran specialist well-versed in the Obama administration's nuclear talks with the Middle Eastern nation. Thomas Pickering, former U.S. envoy to the U.N., and Robert Einhorn, U.S. State Department's former special adviser for nonproliferation and arms control, were also among the American experts' group. The diplomat was in Beijing and was returning to Pyongyang. When asked what she discussed with Pickering, Choe answered, "I met with Pickering and I will discuss it when given the opportunity in the future." When asked whether Pyongyang is preparing to hold dialogue with Seoul's Moon administration, Choe replied, "We will observe the situation." The U.S. government has stated that it will not attach any special meaning to the so-called "track two" dialogue in Oslo. "Track-two meetings are routinely held on a variety of topics around the world and occur independent of U.S. government involvement," a State Department official said. (Yonhap, “Pyongyang Will Talk to Washington under Right Conditions: N.K. Diplomat,” May 13, 2017)

Despite seven rounds of United Nations sanctions over the past 11 years, including a ban on “bulk cash” transfers, large avenues of trade remain open to North Korea, allowing it to earn foreign currency to sustain its economy and finance its program to build a nuclear weapon that can strike the United States. Fraudulent labeling helps support its garment industry, which generated more than $500 million for the isolated nation last year, according to Chinese trade data. North Korea earned an additional $1.1 billion selling coal to China last year using a loophole in the ban on such exports, and researchers say tens of thousands of North Koreans who work overseas as laborers are forced to send back as much as $250 million annually. Diplomats estimate the country makes $70 million more selling rights to harvest seafood from its waters. China accounts for more than 80 percent of trade with North Korea, and the Trump administration is counting on Beijing to use that leverage to pressure it into giving up its nuclear arsenal. The Chinese government took a big step in February by announcing that it was suspending imports of coal from the country through the end of the year. But China has a long record of shielding North Korea from more painful sanctions, because it is afraid of a regime collapse that could send refugees streaming across the border and leave it with a more hostile neighbor. In addition, Beijing now has a sympathetic ear in South Korea, whose newly elected president, Moon Jae-in, echoes its view that sanctions alone will not be enough to persuade Pyongyang to abandon its nuclear program. While North Korea remains impoverished and dependent on food aid, its economy appears to be growing, partly because of a limited embrace of market forces since its leader, Kim Jong-un, took power more than five years ago. Foreign trade, primarily with China, has surged, too, more than doubling since 2000, though it has slipped in the past three years. In theory, North Korea’s greater openness to trade makes it more vulnerable to sanctions, with new potential targets and pressure points. But it also highlights the limits of an approach to sanctions — defined largely by China at the United Nations — that aims to punish North Korea’s military and ruling elite while sparing its people. As trade expands, the lines have blurred. For decades, North Korea has been accused of sending workers abroad and confiscating most of their wages, an arrangement that activists liken to slave labor. Researchers say the practice has expanded since Kim took power, with more than 50,000 workers now toiling in up to 40 countries. In Dandong, the local government boasts that 10,000 North Koreans are employed in its apparel factories, working 12- to 14-hour shifts, with just two to four days off each month and a monthly wage of no more than $260. “They are well disciplined and easy to manage,” says the website of the Dandong commerce bureau, noting that the workers have been vetted before arrival. “There is no such thing as absenteeism or interfering with management, no using illness to shun work or procrastination and losing work time.” Paul Tjia, managing director of GPI Consultancy, a Dutch company that offers advice on doing business in
North Korea, said that some European clients had ordered hundreds of thousands of garments and that “Made in China” labels could be justified by additional work put into the clothes inside China. China has kept North Korea’s garment sector off the list of industries targeted by United Nations sanctions, arguing that punishing it would hurt ordinary people and not military programs. It has protected North Korea’s seafood industry using the same argument. But it is difficult to say who benefits from this trade, in part because even private enterprise in North Korea is overseen by state officials who extract taxes and bribes. “Whether the proceeds from the textile industry support the nuclear program is an open question,” said Joseph M. DeThomas, a professor at Pennsylvania State University and a former American ambassador involved in sanctions policy. “Money is fungible.” At least one North Korean enterprise controlled by the atomic energy bureau, the Korea Kumsan Trading Corporation, ran a garment factory that added embroidery and beading to clothing, according to a North Korean government trade website. And South Korean officials say the millions paid by Chinese companies to fish in North Korean waters go primarily to firms controlled by the North’s military. Sanctions also do not cover the organized export of labor. The United States has urged countries to eject North Korean workers, saying that their remittances benefit the military, not their families. But China, Russia and other nations continue to hire them. American sanctions against North Korea began with a near-total economic embargo adopted in 1950, at the start of the Korean War. Over the years, some sanctions were eased and others added, including after the cyberattack on Sony Pictures in 2014 that Washington attributed to the North. The United Nations Security Council did not impose sanctions until July 2006, when, after a series of missile tests, it banned countries from selling material for missiles or weapons of mass destruction to North Korea. The North detonated its first nuclear device months later, followed by additional tests in 2009 and 2013, and two in 2016. The Security Council tightened sanctions after each test, as well as after a satellite launch in 2013. It targeted military supplies and luxury goods, shut Pyongyang out of the international financial system and, most recently, banned a range of mineral exports. But loopholes abound. Resolutions called for searches of vessels carrying cargo to North Korea but have failed to stop its use of ships sailing under foreign flags. And when the Security Council banned its top export, coal, China insisted on an exception for transactions judged to be for “livelihood purposes.” New measures seek to limit North Korea’s ability to make money through its embassies. In Berlin, for example, the authorities are closing a hostel run out of former diplomatic quarters. But the North has responded to such crackdowns by shifting business to countries with weaker enforcement. “How much cooperation will the international community get from Cuba, Russia, Iran or even Pakistan, Bangladesh or Laos?” asked Stephan Haggard, an expert on the North Korean economy at the University of California, San Diego. The United States has also urged a boycott of Air Koryo, the North Korean airline, but it still flies to China and Russia. Chinese tourism to North Korea is booming, said Cha Yong Hyok, whose company, Indprk, takes groups by train to Pyongyang and will soon use new flights from Dandong. The North often circumvents sanctions using front companies and agents overseas, and North Koreans routinely send and receive payments using Chinese intermediaries who take a commission, despite the ban on “bulk cash” transfers. “We can and should go after these targets, but turning this into a game of financial cat-and-mouse will never achieve the level of pressure needed,” said Daniel L. Glaser, a former Treasury Department official involved in sanctions enforcement. Ultimately, he argued, that pressure will come only if China makes a strategic decision to truly squeeze the North. “Though China has taken helpful steps at times,” he said, “it has never been willing to go all in.” Many of China’s best-known companies have done business with North Korea even as they have sought customers and investors in the United States or relied on American-made parts and materials. ZTE, the mobile phone and electronics manufacturer, for example, shipped about $15 million of goods to the North in 2015, according to Chinese customs records viewed via the global trade database company Panjiva. The company agreed to pay $1.19 billion in March for violating American sanctions against Iran and North Korea, in part by sending 283 shipments of electronics with American-made components to the North. ZTE has pledged to improve oversight. But many Chinese companies sell products to North Korea without such problems. The electric car and battery maker BYD, in which Warren E. Buffett’s Berkshire Hathaway owns a 10 percent stake, has shipped $14 million in goods to North Korea since 2012, including rubber products in January and vehicles in December, customs records show. BYD and Berkshire Hathaway didn’t immediately respond to a request for comment. Just about every big
Chinese appliance maker does business with North Korea, too, shipping refrigerators, air-conditioners, televisions and other electronics. The major Chinese automakers sell vehicles to the North as well. Even Tsingtao Brewery shows up in customs records, delivering $20,000 worth of beer in the summer of 2014. United Nations sanctions prohibit the sale of luxury goods to North Korea, but countries are generally left to define what that means. The resolutions list jewelry, luxury automobiles, sports equipment and snowmobiles but make no mention of televisions, consumer electronics or home appliances. In some cases, Chinese companies with access to advanced technology are doing business with North Korea. Subsidiaries of the defense manufacturer Norinco made seven shipments, mostly of electronic and optical goods, worth a total of $1.5 million, in the second half of last year, records say. Norinco did not respond to a request for comment. Matthew Brazil, a security consultant and former diplomat for the United States who investigated Chinese trade controls in the 1990s, said it was often impossible to get China to follow up on leads suggesting Chinese firms were violating restrictions. “Three months later, if you’re lucky, the visit is scheduled, and many times, visits weren’t scheduled at all,” he said. Brazil said the problem had persisted, and “any level of control of American electronics has completely collapsed because this technology can be so easily shipped from China to North Korea.” On AliExpress, an e-commerce platform run by the Chinese internet giant Alibaba, six of the nine shipping services list North Korea as a potential destination. Alibaba declined to comment. The manager of a shipping firm in Dandong who asked to be identified only by her surname, Li, because of the nature of her work said shipping a package of electronics to North Korea was straightforward “as long as it doesn’t have obvious labels” and meets weight requirements. In fact, a delivery is more likely to run into problems on the North Korean side of the border than with customs inspectors in China. “The key,” she said, “is to make sure everything is fine with the people on the other side.” (Jane Perlez, Yufan Huang, and Paul Mozur, “The Art of Living under Sanctions,” New York Times, May 13, 2017, p. A-1)

North Korea launched a ballistic missile this morning that fell into the Sea of Japan in defiance of international warnings, in what a Japanese official branded as possibly a new type of missile. The latest launch, which may have a range exceeding 4,000 kilometers that would put the Pacific island of Guam within range, came hours before the start of an international forum in Beijing promoting Chinese President Xi Jinping's "One Belt, One Road" plan to expand regional trade routes. While the U.S. Pacific Command said the missile's flight was not consistent with that of an intercontinental ballistic missile, Sunday's launch may be a step forward to an ICBM test Pyongyang is believed to be preparing for. In Tokyo, Japanese Defense Minister Inada Tomomi told reporters that the missile "may be of a new type" and is estimated to have reached an altitude of over 2,000 km during its flight, apparently the first to fly that high. This raises the possibility it was launched at a steep "lofted" trajectory. Deliberately firing the missile at such an angle could allow North Korea to test its capabilities without it landing closer to Japan. The Japanese government's top spokesman, Suga Yoshihide, told a press conference the missile flew for around 30 minutes, traveling some 800 km before landing in the Sea of Japan about 400 km off North Korea's eastern coast. But it did not reach the exclusive economic zone ringing Japan's territorial waters, the chief Cabinet secretary said. According to a Japanese government source, today's missile is seen to have a capability exceeding that of the intermediate-range Musudan ballistic missile, which has a potential range of between 2,500 and 4,000 km and could reach U.S. bases on Guam. In Washington, the White House said in a statement the missile fell "so close to Russian soil — in fact, closer to Russia than to Japan" that President Donald Trump "cannot imagine that Russia is pleased." Describing North Korea as a "flagrant menace," the White House called for the international community to implement "far stronger sanctions" against the country. North Korea's move was immediately condemned by neighbors Japan and South Korea and could also be seen as a loss of face for China, Pyongyang's longtime political and economic benefactor. The North has sent a delegation to the forum, which China has carefully arranged as the year's most important diplomatic event. Xi did not mention Pyongyang's latest missile launch in his speech at the event. South Korea's Joint Chiefs of Staff said the missile was launched at around 5:27 a.m. near Kusong, North Pyongan Province, in North Korea's northwest. Japanese Prime Minister Shinzo Abe also condemned the launch, telling reporters North Korea's repeated missile tests are "a grave threat to our country and are in clear violation of U.N. Security Council resolutions." (Kyodo, “N. Korea
The missile took off from the northwestern city of Kusong and flew more than 430 miles before landing in the sea between North Korea and Japan, the South Korean military said in a statement. Data on the launch was still being analyzed by the South to determine the type of missile. Saying that North Korea had been “a flagrant menace for far too long,” the White House said in a statement late Saturday in Washington that the test served “as a call for all nations to implement far stronger sanctions” against Pyongyang. “The United States maintains our ironclad commitment to stand with our allies in the face of the serious threat posed by North Korea,” the statement said. The missile reached an altitude of more than 1,245 miles during its 30-minute flight time, the Japanese government said. That data, combined with the announcement by South Korea that the projectile covered a distance of 430 miles, showed that it was an intermediate-range ballistic missile that could target key United States military bases in the Pacific, including those in Guam, missile experts said. The North’s launch took place as its biggest supporter, China, was hosting delegations from around the world at its “One Belt One Road” forum in Beijing. President Xi Jinping and his Russian counterpart, Vladimir V. Putin, who was at the forum, had a “fairly detailed talk” about the situation of the Korean Peninsula, including the North’s missile test, said a Putin’s spokesman, Dmitri S. Peskov, according to the Russian news agency Interfax. “Mutual concern was expressed about how this situation is developing, and about growing tensions.” Peskov said. Hours after President Trump’s comment, Russia’s Defense Ministry said the North Korean missile posed “no danger” to Russia because it flew at a “significant distance” from the coast, Interfax said, citing a ministry statement. Russia’s ballistic missile early-warning system tracked the North Korean missile for 23 minutes before it fell into the sea, about 310 miles off the Russian coast, while its air-defense systems were “on combat duty as usual,” the statement said. In South Korea, President Moon Jae-in ordered an urgent meeting of top security officials during which he condemned the missile launch as “a clear violation of United Nations Security Council resolutions” and ordered his military to be prepared for provocations by the North. Moon said the move was “deeply regrettable” only days after he took office calling for dialogue with the North. “We keep our door open for dialogue with North Korea, but we must act decisively against North Korean provocations so that it will not miscalculate,” Moon was quoted as saying by his office. “We must show that dialogue is possible when the North changes its attitude.” (Choe Sang-hun, “North Korea Launches a Ballistic Missile,” New York Times, May 14, 2017, p. A-14) South Korean President Moon Jae-in strongly condemned North Korea for its latest missile launch, describing it as a grave threat to regional security and a clear violation of the U.N. Security Council resolutions. He also called on Pyongyang to reverse its course of provocations for the resumption of dialogue while warning that his administration would deal resolutely with its provocations in order to ensure it would not "miscalculate" the situation. "Even if dialogue is possible, (we) should show (to North Korea) that it's possible only in case of North Korea changing its attitude," Moon said during a session of the National Security Council at the presidential compound Cheong Wa Dae. He called it a "grave challenge" to the peace and security of the Korean Peninsula and the international community, presidential spokesman Yoon Young-chan told reporters. In particular, Moon took issue with the timing of the North's missile firing, which is the second in two weeks and came just four days after the launch of the new South Korean government. Moon expressed "deep regret over North Korea's reckless provocation" and ordered his troops to bolster deterrence against its military threats on the basis of the robust alliance with the United States. He especially instructed the military to speed up the establishment of South Korea's own missile defense system, called the Korea Air and Missile Defense (KAMD). The South's foreign ministry issued a statement denouncing the North's behavior. "The government strongly warns North Korea not to test the will of our government and the international community, including the U.S. and China, for enduring peace and the denuclearization of the Korean Peninsula," the ministry said. It demanded that Pyongyang stop provocative acts and return to the path of negotiations for denuclearization. The JCS also issued a strong warning message, urging the North to immediately stop its nuclear and missile development programs. The JCS warned that the North would face “strong retaliations” from the allies if it continues to ignore their warning messages and sticks to provocations. South Korea's National Security Office Chief Kim Kwan-jin and his U.S. counterpart H.R. McMaster had a 25-minute phone conversation, jointly condemning Pyongyang's latest provocation. Kim and
McMaster also agreed to bolster efforts to seek the denuclearization of North Korea. The two also vowed to maintain a thorough military readiness against Pyongyang based on the strong Seoul-Washington alliance. The foreign ministry said Seoul's chief negotiator on the North Korean nuclear issue also had phone talks with his U.S. and Japanese counterparts, Joseph Yun and Kenji Kanasugi, to share assessments on the latest missile firing and discuss how to respond to it. “The top nuclear envoys agreed to closely consult with each other about future responses including measures to be taken by the United Nations Security Council,” a ministry official said. China also expressed its opposition to the North’s provocation and called on all sides to refrain from heightening regional tensions. "China opposes the DPRK's violation of the Security Council's resolutions. All relevant parties should exercise restraint and refrain from further aggravating tensions in the region," the foreign ministry said in a statement. The missile launch was widely viewed as a test of Moon's resolve. It also tried out the Moon government's handling of the North's provocation, with many conservatives in the South questioning its capability on the national security front. Forty-one minutes after the missile firing, Moon received a related report in person from his chief of staff Im Jong-seok. He was quick in giving instructions to his security aides and issuing a direct warning message for the North, presiding over the NSC meeting joined by defense, foreign and unification ministers, and the national intelligence chief appointed by his predecessor Park Geun-hye, Im told reporters. It is rare for Cheong Wa Dae to swiftly make public such a specific timeline on the president's activities related to national security. (Yonhap, “Moon Condemns N.K. Missile Test, Urges It to Halt Provocations for Dialogue,” May 14, 2017) On May 14, a rocket launched by North Korea soared to an altitude five times higher than the International Space Station, and an analysis of publicly available data by Reuters shows how that may have brought leader Kim Jong Un closer to his goal of producing a missile capable of hitting the United States. The principle, experts say, is that the higher a rocket can travel, the further it can reach. “To avoid firing long-range missiles into or over Japan, the North Koreans have been launching them nearly straight up instead,” said Joshua Pollack, editor of the Washington-based Nonproliferation Review. “They fly much higher into space that way, but come back down relatively close to their launch points.” North Korea is not unusual in sending rockets to high altitudes — or “lofting” them — to test their range, but does so more than other countries because it is surrounded by other states, he said. Kim watched the May 14 launch of the Hwasong-12 rocket early on a Sunday morning on North Korea’s east coast. The missile splashed down just 787 km from the launch site, but reached an altitude of 2,111.5 km, according to North Korean state media. The South Korean and Japanese governments measured similar distances at the time. Had the Hwasong-12 been fired at a shallower angle, it would have flown more than 4,800 km, according to David Wright, co-director of the Global Security Program at the Union of Concerned Scientists, which works to reduce the risk of nuclear use. That would fall short of the mainland United States, but Wright’s calculations put parts of Alaska within range. North Korea has test-fired missiles at lofted trajectories in the past, but none as high as the Hwasong-12. It has used larger and more powerful rockets for space launches, but the Hwasong-12 is smaller, more mobile — and harder to detect. The rocket has a powerful engine. Photos of the launch show the missile had four additional steering engines as well as its main engine, giving slightly more power and accuracy, according to Ralph Savelsberg, writing on the 38 North website. After the May 14 launch, North Korean state media said the missile had been launched at such a high angle “in consideration of the security of neighboring countries.” As Jong Un has accelerated his missile program and developed more mobile rockets with longer ranges, he has launched them ever higher. This has other benefits, according to Pollack: It puts more stress on the nose cone as it re-enters the atmosphere, providing a more rigorous test than an ordinary trajectory. For a missile to become a threat, its nose cone has to be able to carry a nuclear warhead, and that warhead has to withstand the incredible stresses of re-entering the Earth’s atmosphere from space. Missiles that land closer to home also make it easier for North Korea to collect and analyze data to improve the missile program, according to Pollack. As threatening as these developments sound for the United States, it took North Korea 20 years to finish developing the rocket which eventually put a satellite in space in 2012, said German aerospace engineer Markus Schiller, who has closely followed the North’s missile development program. “It will be even longer until they have a real weapon deployed — if ever,” he said. A “real weapon” means an intercontinental ballistic missile that can be reliably launched under any circumstances, he added. But if North Korea were to win support
from outside enabling it to buy in rocket parts, he said, “they could have an ICBM next month.” (James Pearson, “North Korea Uses ‘Lofting’ Technique to Bring It Ever Close to Long-Range Missile Goal,” Reuters, July 2, 2017)

KCNA: “A test-fire of new ground-to-ground medium long-range strategic ballistic rocket Hwasong-12 was successfully carried out on Sunday by scientists and technicians in the field of rocket research, who are bravely advancing toward a new goal to be proud of in the world, true to the far-sighted idea of Kim Jong Un, chairman of the Workers' Party of Korea, chairman of the State Affairs Commission of the DPRK and supreme commander of the Korean People's Army, for building a nuclear power. Kim Jong Un guided the test-fire on the spot. Looking at Hwasong-12, he expressed his satisfaction over the possession of another "Juche weapon", a perfect weapon system congruous with the military strategic and tactical idea of the WPK and the demand of the present times. The test-fire was conducted at the highest angle in consideration of the security of neighboring countries. The test-fire aimed at verifying the tactical and technological specifications of the newly-developed ballistic rocket capable of carrying a large-size heavy nuclear warhead. According to the order of Kim Jong Un, the new rocket Hwasong-12 was launched at 04:58 on Sunday. The rocket accurately hit the targeted open waters 787km away after flying to the maximum altitude of 2111.5km along its planned flight orbit. The test-fire proved to the full all the technical specifications of the rocket, which was newly designed in a Korean-style by defense scientists and technicians, like guidance and stabilization systems, structural system and pressurization, inspection and launching systems and reconfirmed the reliability of new rocket engine under the practical flight circumstances. It also verified the homing feature of the warhead under the worst re-entry situation and accurate performance of detonation system. Kim Jong Un hugged officials in the field of rocket research, saying that they worked hard to achieve a great thing. And he had a picture taken with officials, scientists and technicians who took part in the test-fire. Highly appreciating again their devotion for manufacturing the Korean-style medium long-range strategic ballistic rocket, he gave a special thanks to them on behalf of himself. He said with confidence that the successful test-fire of Hwasong-12, a demonstration of high-level defense science and technology of the DPRK, is of great and special significance for securing peace and stability in the Korean peninsula and the region and is the greatest victory of the Korean people. He declared that the DPRK is a nuclear power worthy of the name whether someone recognizes it or not. He stressed the DPRK will keep strict control over those engaging themselves in nuclear blackmail with its nuclear deterrence which has been unimaginably and rapidly developed. The U.S. massively brought nuclear strategic assets to the vicinity of the Korean peninsula to threaten and blackmail the DPRK, but the coward American-style fanfaronade militarily browbeating only weak countries and nations which have no nukes can never work on the DPRK and is highly ridiculous, he said, stressing that if the U.S. dares opt for a military provocation against the DPRK, we are ready to counter it. The most perfect weapon systems in the world will never become the eternal exclusive property of the U.S., he said, expressing the belief that the day when the DPRK uses the similar retaliatory means will come. He continued that on this occasion, the U.S. had better see clearly whether the ballistic rockets of the DPRK pose actual threat to it or not. If the U.S. awkwardly attempts to provoke the DPRK, it will not escape from the biggest disaster in the history, he said, strongly warning the U.S. not to disregard or misjudge the reality that its mainland and Pacific operation region are in the DPRK's sighting range for strike and that it has all powerful means for retaliatory strike. He gave the scientists and technicians in the field of rocket research the order to continuously develop more precise and diversified nukes and nuclear striking means, not content with the successes, and make preparations for more tests till the U.S. and its vassal forces make a proper choice with reason.” (KCNA, “Kim Jong Un Guides Test-Fire of New Rocket,” May 15, 2017)

It looks as if Kim Jong-un, the North’s 33-year-old leader, has a different plan — one intended to improve his ability to strike the United States without setting off an American military response. Instead of going for distance, he has stepped up the testing of missiles that fly high into space, one reached a height of more than 1,300 miles — and then plunge down through the atmosphere, mimicking the kind of fiery re-entries a nuclear warhead would undergo if fired over a much
longer distance. Instead, the payload lands in waters a few hundred miles or so from North Korea’s coast. “They can simulate an ICBM warhead on this kind of trajectory,” David C. Wright, a senior scientist at the Union of Concerned Scientists, a private group in Cambridge, Mass., said in an interview. “It’s a kind of steppingstone.” The best guess of nongovernmental experts puts an ICBM debut at roughly 2020. But military and intelligence officials regularly say the lack of a proven capability is different from the absence of a long-range threat to the continental United States, and they say commanders have to assume the worst given the North’s progress to date. “We think they’ve had enough time to mate a nuclear weapon to a missile,” Michael Morell, a Central Intelligence Agency deputy director in the Obama administration, recently told “CBS This Morning.” “So the threat is now.” Analysts said Sunday’s test flight, if conducted on a normal rather than a high trajectory, would have traveled about 3,000 miles, enough to reach as far as the Aleutian Islands off Alaska. That is well beyond the sprawling American base at Guam, some 2,200 miles away. More important, it would make the flight distance the longest to date for one of the North’s military missiles. Charles P. Vick, an expert on the North’s missiles at GlobalSecurity.org, a private research group in Alexandria, Va., said the United States had a history of using high missile trajectories as a way to intensify the returning warhead’s trial by fire. “Going really high,” he said, “gives you a very fast and very brutal re-entry.” Still, he and Dr. Wright of the Union of Concerned Scientists cautioned that the method raised subtle questions that only a longer-range test could answer. For instance, the fiery heating, while as intense as that for an ICBM warhead, was of shorter duration. “You learn something but not everything,” Dr. Wright said. He added that in three or four of the North’s recent successful tests, missiles have flown to unusually high altitudes. Dr. Schilling suggested that the successful missile, which the North Koreans call the Hwasong-12, appeared to be a smaller version of the KN-08, a code name for Korea North Type 8. Identified by analysts as an intercontinental ballistic missile, the KN-08 made its debut in a military parade in 2012 and appears to have never undergone a successful flight test. Schilling said the smaller version appeared in a military parade last month, adding that it had been expected to have roughly the same performance as the test flight. “It clearly shares a common heritage” with the larger missile, he wrote. Schilling called the most interesting feature of the new vehicle its potential for “demonstrating technologies and systems to be used in future ICBMs,” including the KN-08 and a related long-range missile known as the KN-14. Repeated flights of the new missile, he wrote, “would allow North Korea to conduct at least some of the testing necessary to develop an operational ICBM, without actually launching ICBMs, particularly if it includes the same rocket engines.” Wright agreed that the successful test flight represented a major step forward. “If they’ve got a system with a new engine and can scale that up,” he said, “they’ve got a pretty believable path to an ICBM.” In political signaling, he added, what the North’s test is telling the West is: “Hey, we’re on our way. If you want to talk, now’s the time to do it.” (William J. Broad and David E. Sanger, “North Korea Missile Test Tiptoes over U.S. Tripwire,” New York Times, May 16, 2017, p. A-6)

Schilling: “North Korea’s latest successful missile test represents a level of performance never before seen from a North Korean missile. The missile would have flown a distant of some 4,500 kilometers if launched on a maximum trajectory. It appears to have not only demonstrated an intermediate-range ballistic missile (IRBM) that might enable them to reliably strike the US base at Guam, but more importantly, may represent a substantial advance to developing an intercontinental ballistic missile (ICBM). Given speculation over the past months about the possibility of military action by the Trump administration to prevent Pyongyang from acquiring such a weapons, the possible testing of ICBM subsystems in this low-key manner may be a North Korean hedge against the possibility of such action. We are still awaiting more details on this test, and if the North Koreans follow their usual practice we can expect photographs soon. But unless Pyongyang is hiding something completely new, there’s only one real candidate for this missile. During last month’s parade, one genuinely new missile was revealed – one that looks very much like a small, two-stage version of their three-stage KN-08 ICBM prototype, on displayed on a mobile launcher previously used for the “Musudan” intermediate-range ballistic missile. We don’t have a name for this missile yet; the “KN-17” designation has been used for both this system and for a Scud-derived short-range ballistic missile with a maneuvering reentry vehicle displayed in the same parade. But whatever the name, it would be expected to have about the same
performance as the missile just launched. While the April 15 parade may be the first time this missile was seen, and yesterday’s test may be its first successful flight, there have been earlier indications that such a missile was under development. In January this year, intelligence sources reported that North Korea had deployed two prototype ICBMs at a test site, just under 15 meters long. All of North Korea’s ICBM prototypes and mock-ups are well over that size, which left us puzzled. But this new missile comes in at just under 15 meters, and while its performance doesn’t quite reach ICBM standards it clearly shares a common heritage with the KN-08 ICBM. Quite likely this was the missile that was reported in January. It may have been tested on other occasions. Two failed missile tests from Kusong in October were presumed to be Musudans, but there was no solid evidence to confirm that – and the Musudan had recently been tested successfully, so it would be somewhat surprising for it to fail twice in a row. It wouldn’t be at all surprising for a new missile to fail twice, and if the missile were launched from a Musudan TEL, it might well be mistaken for a Musudan. Another failed test, on April 16, was initially ascribed to a new maneuvering reentry vehicle system, but may have been this missile instead – both were initially displayed in the parade the previous day, and a successful test of either one would neatly highlight the propaganda event. While this missile appears to share a common heritage with the KN-08 ICBM, it isn’t simply a KN-08 with the third stage removed. The first two stages also appear to be reduced in scale. Unfortunately, we have little detail about the missile’s design. We do not, for example, know if it uses the same twin-engine propulsion system as the first stage of the KN-08. But the more important question is, what is the new missile for? One possibility is that it is meant to replace the Musudan IRBM which represents an attempt to stretch a Cold War vintage Russian missile to reach the US base at Guam, some 3500 km from North Korean launch sites. But the Musudan has proven unreliable in testing, with only one success in at least six attempts, and its performance is marginal for reaching Guam. The Musudan may have been the best North Korea could manage ten years ago, but that level of performance really calls for a two-stage missile. Now, it appears that they have one. But existing North Korean missiles are already capable of reaching targets anywhere in South Korea or Japan, and extending that reach to perhaps 4500 kilometers won’t greatly change the strategic balance – aside from Guam, there aren’t really any interesting targets in that range. What would change the strategic balance is an ICBM capable of reaching the US mainland. This is not that missile but it might be a testbed, demonstrating technologies and systems to be used in future ICBMs like the KN-08 and KN-14. A full three-stage KN-08 would be very unlikely to work the first time it was tested, and the failure would be both expensive and very provocative. This missile would allow North Korea to conduct at least some of the testing necessary to develop an operational ICBM, without actually launching ICBMs, particularly if it includes the same rocket engines. If North Korea has already conducted a successful test using the engines and other components of the first two stages of the KN-08, it may be closer to an operational ICBM than had been previously estimated. US cities will not be at risk tomorrow, or any time this year since some tests have to be done with the full-scale system. With only one test of this reduced-scale system Pyongyang is probably some time from even beginning that process. But given this test and the possible North Korean path forward, a closer look will be needed to see how much progress has been made, and what technologies the North may have demonstrated, as will a reassessment of their ICBM program in that new light.” (John Schilling, “North Korea’s Latest Test: Advancing toward an Intercontinental Ballistic Missile (ICBM) While Avoiding U.S. Military Action,” 38 North, May 14, 2017) By now, we have at least learned the name of the new missile North Korea tested on May 14: the Hwasong-12. We also have photos of the launch, as we have come to expect from the North following a successful high-profile missile test. Those photos provide us with some information about this new missile but still leave us uncertain about key technical issues and particularly whether or not this test advanced North Korea’s worrying intercontinental ballistic missile (ICBM) program. Could the Hwasong-12 engine be used in advancing development of an ICBM? One obvious feature of this new missile is the engine: a single nozzle with four verniers. This is not an ex-Soviet R-27 engine as is used on the Musudan, but neither is it the dual R-27 system they developed for the KN-08 missile and tested last year. While it is difficult to tell from the photos released, the Hwasong-12 engine looks very much like a new engine North Korea tested in March, which we assessed at that time as a probable space launch vehicle engine, in large part because there didn’t seem to be a missile appropriate for it. They may still use it in their next space launch vehicle, for which it
would be quite appropriate, but it seems they are using at least a variant of it in this missile. The engine used on the HS-12 might not have quite enough thrust for an ICBM, but it was likely designed to demonstrate key technologies and components for a new ICBM engine. **It won’t take long to modify this design for ICBM use,** if that is North Korea’s goal. What propellant powered the rocket? The propellant combination isn’t entirely clear either, as the North Koreans have been tinkering with the color balance on some of their photos for aesthetic effect. It is certainly a liquid propellant engine, and the most likely propellant candidates seem to be inhibited red fuming nitric acid (IRFNA) and unsymmetrical dimethylhydrazine (UDMH). This is slightly less efficient than the Musudan’s nitrogen tetroxide (NTO) and UDMH, but easier to store in the field. But we can’t rule out that the new engine uses the more efficient NTO/IRFNA, or even the old IRFNA/kerosene combination of the Nodong missile. **Until we know exactly what propellant was used, we can’t make a more precise estimate of the engine’s performance.** Was this a single stage or two stage rocket? Less obvious but more curious is something we can’t see. There is no sign of a stage separation joint or mechanism on the Hwasong-12. This has led to suspicion that we are seeing a single-stage missile. However, the lack of a visible separation joint is not proof. North Korea’s traditional stage separation techniques would have been clearly visible even at the coarse resolution of the launch imagery, but there are more advanced designs where the system is largely internal and invisible. We had better imagery from the parade last month, which on examination also doesn’t show a visible joint, but parade missiles are almost always mock-ups and may not have all the detailed features of a real missile. If this is a one-stage missile, it would be remarkable. The demonstrated performance, equivalent to a range of more than 4,500 km, may be unprecedented for a one-stage system. The only historic single-stage missile that might have matched the Hwasong-12’s performance is the old Soviet R-14 (aka SS-5), which with its lightest warhead could reach about 4,500 km—but that was an 80-ton behemoth, whereas the Hwasong-12 weighs perhaps only 20 tons. In order to deliver such performance from a package the size of a Hwasong-12, North Korea would have to couple an engine more efficient than any they have built before, with a structure far lighter than they have ever built before. Even with these enhancements, the Hwasong-12 almost certainly could not have reached the reported 2,100 km apogee with anything more than an empty fairing where the reentry vehicle and warhead should be. Essentially, this would make the entire exercise a pointless stunt—they don’t have a missile until they test the reentry vehicle, and they won’t be fooling the allied intelligence agencies that have detailed radar tracking of the acceleration profile. More likely this was a two-stage missile with a heavy payload and a new stage separation mechanism. Does this test advance North Korea’s ICBM program? A new engine, a new structural design and maybe a new stage separation mechanism is a lot of work for a missile that can target nothing farther than Guam. Make no mistake, Guam is an important target, but it’s not “design-a-new-missile-from-scratch” important. North Korea is likely going to use the technologies demonstrated here in its ongoing ICBM development program. The new engine would be helpful. The dual R-27 engine system offered adequate performance for an ICBM, but barely so, and it was always going to have reliability problems in service. The new engine may offer better performance, and will almost certainly offer greater reliability. It also seems to be an engine North Korea can manufacture for itself, where they may have been drawing from a limited stockpile of surplus Soviet hardware for the R-27. A new stage separation mechanism will make little difference unless it came as part of an improved structural technology, which could improve the performance of North Korea’s KN-08 and KN-14 ICBMs. Alternately, it could be used to make the missiles more rugged and readily transportable while keeping performance constant. These advantages may mean two steps forward and one step backward for the ICBM program. They come with a cost: the missile will have to be substantially redesigned to use the new technologies. That means throwing out years of effort already put into the old design. And it means waiting until the Hwasong-12 has finished testing, before going forward with the final design of the ICBMs. We may have to concern ourselves with a more robust and capable ICBM system, but we shouldn’t be too concerned about it entering service next year. While the success of the Hwasong-12 may advance the North Korean ICBM program by perhaps a year, deployment of an operational ICBM prior to 2020 is still unlikely. (John Schilling, “North Korea’s New Hwasong—12 Missile,” *38North*, May 24, 2017)
David Wright: “As North Korea continues its missile development, a key question is what it may have learned from its recent missile test that is relevant to building a reentry vehicle (RV) for a long-range missile. The RV is a crucial part of a ballistic missile. A long-range missile accelerates its warhead to very high speed—16,000 mph—and sends it arcing through space high above the atmosphere. To reach the ground it must reenter the atmosphere. Atmospheric drag slows the RV and most of the kinetic energy it loses goes into heating the air around the RV, which then leads to intense heating of the surface of the RV. The RV absorbs some of the heat, which is conducted inside to where the warhead is sitting. So the RV needs to be built to (1) withstand the intense heating at its outer surface, and (2) insulate the warhead from the absorbed heat that is conducted through the interior of the RV. The first of these depends on the maximum heating rate at the surface and the length of time that significant heating takes place. Number (2) depends on the total amount of heat absorbed by the RV and the amount of time the heat has to travel from the surface of the RV to the warhead, which is roughly the time between when intense heating begins and when the warhead detonates. I calculated these quantities for the two cases of interest here: the highly lofted trajectory that the recent North Korean missile followed and a 10,000 km missile on a normal (MET) trajectory. …The maximum heating rate (q) is only about 10% higher for the 10,000 km range missile than the lofted missile. However, the total heat absorbed (Q) is nearly twice as large for the long-range missile and the duration of heating (τ) is more than two and a half times as long. This shows that North Korea could get significant data from the recent test—assuming the RV was carrying appropriate sensors and sent that information back during flight, and/or that North Korea was able to recover the RV from the sea. But it also shows that this test does not give all the data you would like to have to understand how effective the heatshield might be before putting a nuclear warhead inside the RV and launching it on a long-range missile. The rate of heat transfer per area (q) is roughly proportional to ρV², where ρ is the atmospheric density and V is the velocity of the RV. Since longer range missiles reenter at higher speeds, the heating rate increases rapidly with missile range. The total heat absorbed (Q) is the integral of q over time during reentry. This calculation assumes the ballistic coefficient (β) of the RV is 48 kN/m² (1,000 lb/ft²). The heating values in the table roughly scale with β. A large value of β means less atmospheric drag so the RV travels through the atmosphere at higher speed. That increases the accuracy of the missile but also increases the heating. The United States worked for many years to develop RVs with special coatings that allowed them to have high β and therefore high accuracy, but could also withstand the heating under these conditions. The results in the table can be understood by looking at how RVs on these two trajectories slow down as they reenter. Figs. 1 and 2 plot the speed of the RV versus time; the x and y axes of the two figures have the same scale. The maximum deceleration (slope of the curve) is roughly the same in the two cases, leading to roughly the same value of q. But the 10,000 km range missile loses more total energy—leading to a larger value of Q—and does so over a longer time than the lofted trajectory.” (David Wright, All Things Nuclear, Union of Concerned Scientist Blog, May 17, 2017)

Ralph Savelsberg: “On May 14, North Korea flight-tested a new ballistic missile, the Hwasong-12. This missile was first revealed during the April 15 military parade commemorating Kim Il Sung’s 105th birthday, and has since been the subject of much scrutiny as North Korea watchers try to assess its dimensions and capabilities, as well as what it contributes to the North’s overall ballistic missile program. At a first glance, the successful flight-test of the Hwasong-12 appeared to have implications for North Korea’s efforts to develop an intercontinental ballistic missile (ICBM), but to what extent is still unclear given the limited information available. In this article, I have run computer simulations to help assess the missile’s range and performance. The missile’s parameters were estimated based on close examination of the available photographs and missile trajectory, with a large focus on engine performance. Based on the results of the simulations, it would seem that the Hwasong-12 is simply a larger variant of the existing Hwasong-10 or Musudan intermediate-range ballistic missile (IRBM) with a similar engine and a lighter construction, offering only slight gains in range but with limitations on mobility. While the new missile may serve as a testbed for some of the technology intended for an ICBM, the flight-test did not provide evidence of a major step forward in North Korea’s ICBM program. North Korea has displayed supposedly road-mobile ICBMs, known as the KN-08 and KN-14, during past military parades, and while Kim Jong Un announced in his 2017 New Year’s Address that the
country was close to being ready to flight-test an ICBM, no test has taken place to date. The most powerful rocket that North Korea has flight-tested is its Unha-3, which was used to successfully launch small satellites into orbit in 2012 and 2016. In 2006, an attempted launch of an ICBM based on this rocket, known as the Taepodong-2, ended in failure; the Taepodong-2 is also too large for mobile use. The Unha-3 uses four Nodong engines for its first stage; a smaller missile with an intercontinental range will require more advanced rocket engines. So far, the most powerful liquid-fuelled engine that North Korea is known to have flight-tested is the engine used in the Hwasong-10 or Musudan IRBM. This engine is closely related to the one used in the Soviet R-27 submarine-launched ballistic missile (SLBM). By itself, it does not have sufficient thrust to lift the mass of an ICBM, so using this type of engine for an ICBM would require combining at least two of them. However, because the R-27 engine was uniquely tailored for use in a very compact SLBM, building a rocket stage that incorporates two is an immensely complicated task. Photographs of ground tests of what appear to be two R-27 engines mounted very close together were published in 2016, but this combination does not appear to have been test-flown. Some experts speculate that the engine used in this test was the new engine North Korea tested in March, but it is difficult to confirm this based on the photographs alone. Additionally, North Korea has yet to demonstrate a working re-entry vehicle (RV) with a heat shield suitable for an ICBM. An ICBM’s RV enters the atmosphere at a much higher velocity than North Korea’s known IRBMs and is therefore subject to much higher temperatures and stresses that cannot be fully replicated in ground tests. Flight-testing an RV design on the trajectory flown by the Hwasong-12 could provide more realistic conditions, but a truly convincing demonstration would have to involve even higher velocities. During the test-launch of the Hwasong-12, the missile reportedly flew on a lofted trajectory, covering a range of in roughly 30 minutes and reaching apogee at an altitude of 2,000 km. This performance has led to speculation that the missile is closely related to North Korea’s efforts to build a road-mobile ICBM, and it may have indeed used the engines intended for this. Based on photographs of the test released by North Korean state media, the Hwasong-12 appears to be a single-stage missile powered by a single large engine coupled to four vernier engines (see Figure 1). A single uninterrupted cable raceway is clearly visible on the outside of the missile, running from just below the re-entry vehicle towards the engine compartment at the bottom. This routes wires connecting the guidance system to the vernier engines along the outside of the propellant tanks. If the missile had multiple stages, one would expect the raceway to be interrupted near the location where the stages separate. Other photographs show that the missile was transported on a transporter-erector-launcher (TEL) similar to the vehicle used to launch the Musudan. Video footage of the launch shows that the missile was not launched from the vehicle, but from a detachable launch table. To assess the Hwasong-12’s performance, I have run computer simulations of its trajectory. Parameters were estimated based on available photographs and baseline parameters of the Musudan. The diameter of the missile is similar to that of the Musudan at roughly 1.5 m, but it is longer and slightly flared at the base. Including the warhead, its approximate length is 15.7 m. The booster length is approximately 12.4 m. I assume that the single main engine is essentially an R-27 engine, as flown in the Musudan, but with the addition of two more verniers. This leads to a small increase in the mass flow and thrust. For the propellant, I assume dinitrogen tetroxide (N2O4) as the oxidizer and unsymmetrical dimethyl hydrazine (UDMH) as the fuel, with corresponding values for the specific impulse—a measure of the fuel’s effectiveness. This is the same propellant combination as used in the R-27. The length of the missile allows estimating the propellant volume and propellant mass …Simulations of the lofted flight of the Musudan, in June 2016, showed that this was most likely flown with an empty re-entry vehicle, with a mass of 150 kg for just the empty heat shield. I assume that this was the case for the Hwasong-12 as well. The model for calculating the trajectory is the same as that used for the earlier analysis of the Musudan. With these parameters, a lofted trajectory over a distance of 700 km was simulated, with a launch originating from Kusong. The initial heading was 70 degrees. The simulation includes the effects of Earth rotation. The maximum altitude reached during the flight is 2,000 km and the total flight time is close to 30 minutes, both similar to the reported values …In order to obtain this performance, the structural mass of the booster had to be reduced to 7 percent of the total booster mass. The lengthening of propellant tanks tends to decrease this number, but its low value means that the construction of the propellant tanks is unusually light. The equivalent number for the R-27, for instance, is closer to
10 percent. The use of a TEL to transport the Hwasong-12 suggests that it is meant to be a mobile weapon, but given these parameters, one can expect the missile airframe to be quite fragile and unsuitable for transport and erection with propellant inside. This means that the missile would have to be fueled after being positioned vertically on its launch table, which dramatically increases launch preparation time. The presumed N2O4 oxidizer also has a very limited temperature range in which it can be safely stored and used, further limiting the missile’s usefulness as a mobile system. Inhibited fuming red nitric acid (IFRNA) could serve as an alternative oxidizer since it is easier to handle safely, but this would result in a lower specific impulse. Therefore, if the Hwasong-12 had used IFRNA, it would not have had sufficient thrust for the trajectory it flew during the flight test. The lofted trajectory of the test flight is atypical for a ballistic missile. However, the Musudan, during its single successful flight in 2016, flew a similarly lofted trajectory over a distance of 400 km, reaching an altitude of more than 1,000 km. The Hwasong-12 flew both farther and higher. Consequently, if it were to be flown on a minimum-energy trajectory, which maximizes the range, it can cover a longer distance than the Musudan. With a payload of 650 kg (equivalent to the payload of the R-27, including the heat shield, but likely lighter than a North Korean nuclear warhead), its simulated maximum range is more than 3,700 km (on a 70 degree heading, including Earth rotation). Provided that North Korea has a sufficiently accurate guidance technology, this would theoretically allow the Hwasong-12 to reach Guam, at a distance of roughly 3,400 km—a target that cannot be reached by the Musudan. In the simulation of the lofted trajectory, the velocity during the re-entry peaks at 5.4 km/s. This is only marginally higher than the maximum of 5.2 km/s reached in the simulation of the minimum-energy trajectory. Therefore, testing a new heat shield for the re-entry vehicle is not a likely explanation for the choice of a lofted trajectory. The more likely reason for this choice is that the missile cannot be flown on minimum-energy trajectories without violating the airspace of other countries in the region, such as Japan. The velocity is a lot higher than the peak velocity reached by the Musudan, however, and is closer to ICBM velocities. Based on photographs and computer simulations, the Hwasong-12 appears to be a longer, lighter version of the Musudan. However, the main engine is not significantly more powerful than engines North Korea has already test-flown. The missile does have a higher performance than the Musudan, being able to deliver a payload as far as Guam, but its light construction and fuel/oxidizer mix mean that it is ill-suited for mobile use. Additionally, despite its light construction, it is still heavy compared to the thrust of this engine, which means that there is little room for further growth. While the new missile may serve as a testbed for some of the technology intended for an ICBM—for instance the heat shield—the May 14 flight test of the Hwasong-12 did not provide evidence of a major step forward in North-Korea’s ICBM program.” (Ralph Savelsberg, “A Quick Technical Analysis of the Hwasong-12,” 38North, May 19, 2017)

South Korea’s delegation to an international economic forum in Beijing said it held a brief meeting with its North Korean counterpart and expressed concern over Pyongyang’s latest missile provocation. Rep. Park Byung-seug of the ruling Democratic Party, who leads the delegation, said he had a short conversation with Kim Yong-jae, Pyongyang’s minister of external economic relations, at the Belt and Road Forum for International Cooperation that runs in Beijing through tomorrow. Earlier in the day, North Korea launched a ballistic missile from a site about 100 kilometers north of Pyongyang. “We strongly condemned North Korea’s launch of the missile,” Park said. The lawmaker said he had a conversation on various issues with his North Korean counterpart. He added that he got the impression that Pyongyang is looking forward to having a summit with Seoul, while not providing details. (Yonhap, “Two Koreas’ Delegations Meet during Beijing Forum,” May 14, 2017)

Russian President Vladimir Putin is urging foreign leaders to keep a cool head on North Korea. Speaking in China, Putin condemned North Korea’s latest missile launch as “dangerous.” But he also cautioned against “intimidating” the country, comments almost certainly directed at Washington. “I would like to confirm that we are categorically against the expansion of the club of nuclear states, including through the Korean Peninsula,” Putin told reporters. “We are against it and consider it counterproductive, damaging, dangerous.” In 2014, Moscow wrote off 90 percent
of Pyongyang's $11 billion Soviet-era debt. More recently, Russia and North Korea have considered a slew of economic deals, including an expansion of railway links between the two countries, a new ferry service that will cart people and cargo, and advanced training opportunities for North Korean engineers at Russian universities. Despite international sanctions, Siberian oil companies have sold fuel to North Korea. According to a report by the private intelligence firm Stratfor, “When China recently threatened to cut off fuel exports to North Korea if it conducted its sixth nuclear weapons test, Russia hinted it could replace at least some of that supply.”

Pyongyang has returned the favor. In a February Lunar New Year greeting card, leader Kim Jong Un listed Russia as the country most friendly toward North Korea. North Koreans frequently travel (or are shipped off) to Siberia to help with construction projects. “The idea that Russia is once again superseding China as North Korea’s major international patron bodes well when viewed through the prism of North Korea’s Cold War-era tactics of playing China and the USSR off of each other,” Russia-Korea analyst Anthony Rinna wrote in a note at the Institute of Asia and Pacific Studies at the University of Nottingham. Russia hopes to use its cozier ties with North Korea to exert influence on the world stage. “If Russia can be instrumental in resolving a key international dispute like North Korea, they will want to parry that into something else, to use it as a bargaining chip,” said the chief of CNN's Moscow bureau, Matthew Chance. (Amanda Erickson, “Russia Warns against ‘Intimidating’ North Korea after Latest Missile Launch,” Washington Post, May 15, 2017)

Intelligence officials and private security experts say that new digital clues point to North Korean-linked hackers as likely suspects in the sweeping ransomware attacks that have crippled computer systems around the world. The indicators are far from conclusive, the researchers warned, and it could be weeks, if not months, before investigators are confident enough in their findings to officially point the finger at Pyongyang’s increasingly bold corps of digital hackers. The attackers based their weapon on vulnerabilities that were stolen from the National Security Agency and published last month. Security experts at Symantec, which in the past has accurately identified attacks mounted by the United States, Israel and North Korea, found early versions of the ransomware called WannaCry that used tools that were also deployed against Sony Pictures Entertainment, the Bangladesh central bank last year and Polish banks in February. American officials said that they had seen the same similarities. All of those attacks were ultimately linked to North Korea. The computer code used in the ransomware bore some striking similarities to the code used in those three attacks. That code has not been widely used, and has been seen only in attacks by North Korean-linked hackers. Researchers at Google and Kaspersky, a Moscow-based cybersecurity firm, confirmed the coding similarities. Those clues alone are not definitive, however. Hackers often borrow and retrofit one another’s attack methods, and government agencies are known to plant “false flags” in their code to throw off forensic investigators. “At this time, all we have is a temporal link,” said Eric Chien, an investigator at Symantec who was among the first to identify the Stuxnet worm, the American- and Israeli-led attacks on Iran’s nuclear program, and North Korea’s effort to steal millions from the Bangladeshi bank. “We want to see more coding similarities,” he said, “to give us more confidence.” In a blog post on Microsoft’s website over the weekend, Brad Smith, the company’s president, asked what would happen if the United States military lost control of “some of its Tomahawk missiles” and discovered that a criminal group was using them to threaten a damaging strike. It was a potent analogy, and an unusually public airing of the newest split in the Silicon Valley-Washington divide. Over the past few months, it has become clear that the intelligence community’s version of Tomahawks — the “vulnerabilities” the N.S.A. and C.I.A. have spent billions of dollars to develop to break into foreign computers and foil Iranian nuclear programs or North Korean missiles — are being turned against everyday computer users around the world. “We have seen vulnerabilities stored by the C.I.A. show up on WikiLeaks,” Smith wrote, “and now this vulnerability stolen from the N.S.A. has affected customers around the world.” The N.S.A.’s tools were published last month by a hacking group calling itself the Shadow Brokers, which enabled hackers to bake them into their ransomware, which then spread rapidly through unpatched Microsoft computers, locking up everything in its wake. There is no evidence that the North Koreans were involved in the actual theft of the N.S.A. hacking tools. But hackers quickly seized on the published vulnerabilities to wreak havoc on computer systems that were not “patched” in recent months, after the N.S.A.
quietly told Microsoft about the flaw in their systems. At a news conference at the White House today, Thomas Bossert, President Trump’s Homeland Security adviser, told reporters, “This was not an exploit developed by the N.S.A. to hold organizations ransom,” he said. “This was a vulnerability exploit that was part of a much larger tool put together by the culpable parties.” The weapons used in the attacks that started May 12, government officials insist, were cobbled together from many sources. And the fault, they argue, lies with whoever turned them into weapons — or maybe with Microsoft itself, for not having a system in place to make sure that when they issue a patch that neutralizes such attacks, everyone around the world takes the time to fix their systems. Or with the victims, who failed to run their security updates made available two months ago, or who continue to use so-called “legacy” software that Microsoft no longer supports. When asked about the source of the attack, Bossert said, “We don’t know.” He told reporters at the White House. “Attribution can be difficult. I don’t want to say we have no clues. But I stand assured that the best and brightest are working on this hack.” As Bossert was speaking, yet another N.S.A. hacking tool, very similar to the one used in the weekend’s ransomware attacks, was being retrofitted by cybercriminals and put up for sale on the underground dark web. In private hacking forums, cybercriminals were discussing how to develop more than a dozen other N.S.A. hacking tools for criminal use. (Nicole Perlroth and David E. Sanger, “In Computer Attacks, Clues Point to Frequent Culprit: North Korea,” New York Times, May 16, 2017, p. A-1) They take legitimate jobs as software programmers in the neighbors of their home country, North Korea. When the instructions from Pyongyang come for a hacking assault, they are believed to split into groups of three or six, moving around to avoid detection. Ever since the 1980s, reclusive North Korea has been known to train cadres of digital soldiers to engage in electronic warfare and profiteering exploits against its perceived enemies, most notably South Korea and the United States. In more recent years, cybersecurity experts say, the North Koreans have spread these agents across the border into China and other Asian countries to help cloak their identities. The strategy also amounts to war-contingency planning in case the homeland is attacked. Now this force of North Korean cyber hacking sleeper cells is under new scrutiny in connection with the ransomware assaults that have roiled much of the world over the past four days. New signs have emerged not only that North Koreans carried out the attacks but also that the targeted victims included China, North Korea’s benefactor and enabler. As evidence mounts that North Korean hackers may have links to the ransom assaults that destroyed more than 200,000 computers, their motives appear twofold: financial gain — which does not appear to be turning out so well — and proof that Pyongyang has the means to cause significant damage, with or without a nuclear weapon. Cyberattacks are also a way for the country to inflict damage with little risk of a military response. They are inexpensive and hard to trace, and they can be profitable. Until last year, nation states rarely used cyberattacks for financial gain. China has been tied to attacks aimed at stealing trade secrets. A handful of countries, including Russia, the United States, Iran and North Korea, have also used cyber weapons. North Korea has been tied to gunrunning, jewel smuggling, illegal gambling and counterfeiting to pay for its military and the lifestyle of the government, but as foreign nations have clamped down on those activities Pyongyang has turned to cyberattacks for badly needed funds. “North Korea was always a state criminal, sheltered behind sovereignty, and now they’ve moved this into cyberspace,” said James A. Lewis, a cybersecurity expert at the Center for Strategic and International Studies in Washington. And while it is still too early to point the finger definitively at Pyongyang, clues in the attack code and attackers’ machines suggest that the ransom attacks were the work of the same group of North Korean hackers, or of someone masquerading as them. Though the North Korean hacking group that security experts call the Lazarus Group has been known to use different infection methods, the group’s telltale code, techniques and tools were seen in the ransomware attacks. So far, the ransomware attacks, called WannaCry, have not proved very profitable. According to the latest tally of payments made to attackers’ Bitcoin wallets, victims have paid only $75,000 in ransom. North Korea has in the past timed cyberattacks to coincide with its banned weapons tests — like the ballistic missile launched on Sunday — as a way of subtly flaunting its technology advances despite its global isolation. It also is possible that North Korea had no role in the attacks, which exploited a stolen hacking tool developed by the National Security Agency of the United States. Early Tuesday, the Shadow Brokers, the hacking group that spread the tool and is not believed to be linked with North Korea, threatened in an online post to start a “Data Dump of the Month” club, in which it would release
more N.S.A. hacking methods to paying subscribers. Security officials in South Korea, the United States and elsewhere say it is well known that the North Korean authorities have long trained squads of hackers and programmers, and that when superiors in North Korea issue instructions, these hackers are activated to attack targets. Boo Hyeong-wook, a research fellow at the Korea Institute for Defense Analyses, said the scale of the recent attacks was large enough that it was likely to have been supported on a national level. He also said it would be a logical extension of the growing boldness of North Korean hackers. While North Korean hackers have for years operated out of China, defectors and South Korean officials say they have been spreading to Southeast Asian countries, where government monitoring is less intense. In countries like Malaysia, many North Korea hackers are believed to work undercover at technology companies and other jobs. Sometimes, the hackers will also run online gambling sites or even make use of ransomware to raise funds for themselves. North Korea began training electronic warfare soldiers well before the internet era, according to defectors and South Korean officials. They selected math prodigies when they were 12 or 13 and trained them to become software developers, online psychological warfare experts and hackers. They were also trained in foreign languages so they could operate abroad. North Korea sends students to study in Russia, China and, more recently, India to learn software and programming techniques. They return home and some are hired as hackers. If the North Korean hackers were responsible for the disruptions suffered by Chinese computer users, it would constitute an extraordinary assault on North Korea’s most important neighbor. Boo said the changing dynamics in the relationship between China and North Korea, which once described themselves as close as “lips and teeth,” could be why China was attacked. “China has dialed up the pressure on North Korea,” he said. “Pyongyang faces the increased possibility that Beijing could abandon it. It made a loud statement.” (Choe Sang-hun, Paul Mozur, Nicole Perlroth, and David Sanger, “Focus Turns to North Korea Sleeper Cells as Possible Culprits,” New York Times, May 17, 2017, p. A-10) A couple of things about the WannaCry cyberattack are certain. It was the biggest in history and it’s a scary preview of things to come — we’re all going to have to get used to hearing the word "ransomware." But one thing is a lot less clear: whether North Korea had anything to do with it. Despite bits and pieces of evidence that suggest a possible North Korea link, experts warn there is nothing conclusive yet — and a lot of reasons to be dubious. Why, for example, would Pyongyang carry out a big hack that hurt its two closest strategic partners more than anyone else? And for what appears to be a pretty measly amount of loot — as of Friday the grand total of ransom that had been paid was less than $100,000. Within days of the attack, respected cybersecurity firms Symantec and Kaspersky Labs hinted at a North Korea link. Google researcher Neel Mehta identified coding similarities between WannaCry and malware from 2015 that was tied to the North. And the media have since spun out stories on Pyongyang's league of hackers, its past involvement in cyberattacks and its perennial search for new revenue streams, legal or shady. But identifying hackers behind sophisticated attacks is a notoriously difficult task. Proving they are acting under the explicit orders of a nation state is even trickier. When experts say North Korea is behind an attack, what they often mean is that Pyongyang is suspected of working with or through a group known as Lazarus. The exact nature of Lazarus is cloudy, but it is thought by some to be a mixture of North Korean hackers operating in cahoots with Chinese "cyber-mercenaries" willing to at times do Pyongyang's bidding. Lazarus is a serious player in the cybercrime world. It is referred to as an "advanced persistent threat" and has been fingered in some very sophisticated operations, including an attempt to breach the security of dozens of banks this year, an attack on the Bangladesh central bank that netted $81 million last year, the 2014 Sony wiper hack and DarkSeoul, which targeted the South Korean government and businesses. "The Lazarus Group's activity spans multiple years, going back as far as 2009," Kaspersky Labs said in a report last year. "Their focus, victimology, and guerrilla-style tactics indicate a dynamic, agile and highly malicious entity, open to data destruction in addition to conventional cyberspy operations." But that's not — or at least hasn't been — the way North Korean hackers are believed to work. "This is not part of the previously observed behavior of DPRK cyberwar units and hacking groups," Michael Madden, a visiting scholar at the Johns Hopkins School of Advanced International Studies and founder of North Korea Leadership Watch, said in an email to The Associated Press. "It would represent an entirely new type of cyberattack by the DPRK." Madden said the North, officially known as the Democratic People's Republic of Korea, if it had a role at all, could have instead been involved by
giving or providing parts of the packet used in the attack to another state-sponsored hacking group with whom it is in contact. "This type of ransomware/jailbreak attack is not at all part of the M.O. of the DPRK's cyberwar units," he said. "It requires a certain level of social interaction and file storage outside of those with other hacking groups that DPRK hackers and cyberwar units would not engage. Basically they'd have to wait on Bitcoin transactions, store the hacked files and maintain contact with the targets of the attack." Other cybersecurity experts question the Pyongyang angle on different grounds. James Scott, a senior fellow at the Institute for Critical Infrastructure Technology, a cybersecurity think tank, argues that the evidence remains "circumstantial at best," and believes WannaCry spread due to luck and negligence, not sophistication. "While it is possible that the Lazarus group is behind the WannaCry malware, the likelihood of that attribution proving correct is dubious," he wrote in a recent blog post laying out his case. "It remains more probable that the authors of WannaCry borrowed code from Lazarus or a similar source." Scott said he believes North Korea would likely have attacked more strategic targets — two of the hardest-hit countries, China and Russia, are the North's closest strategic allies — or tried to capture more significant profits. Very few victims of the WannaCry attack appear to have actually paid up. As of Friday, only $91,000 had been deposited in the three Bitcoin "wallet" accounts associated with the ransom demands, according to London-based Elliptic Enterprises, which tracks illicit Bitcoin activity. More importantly, Scott said, the rush to blame North Korea distracts from bigger issues — software vulnerabilities resulting from manufacturers' refusal to incorporate security into their software development, organizations' failure to protect their systems and client data and the responsibility of governments to "manage, secure, and disclose discovered vulnerabilities." "Global attacks are the new normal," he wrote. (Eric Talmadge, "Experts Question North Korea Role in WannaCry Cyberattack," Associated Press, May 19, 2017) There are now hard links connecting a group of North Korean hackers that experts call the Lazarus Group to the ransomware known as WannaCry, according to researchers at the security company Symantec. “From all that we see, the technical evidence points to the fact that this is Lazarus,” Eric Chien, an investigator at Symantec, said in an interview May 22. Chien and his colleagues found the first known case of a WannaCry ransomware attack on a computer in February. But the hackers left behind a trail of digital crumbs that Chien and his colleagues had traced to previous attacks by the Lazarus Group, which United States government officials have said works at the behest of Pyongyang. The most conclusive evidence researchers have found is in what researchers say is the attackers’ "command-and-control" infrastructure. The WannaCry attacks used the same command-and-control server used in the North Korean hack of Sony Pictures Entertainment in 2014, which wiped out nearly half of the company’s personal computers and servers. Researchers also say the same tools used in previous Lazarus attacks on banks and media companies in South Korea in 2013 were used in the WannaCry ransomware episode. Those tools have evolved, but are what researchers call “variants” of the same tools used in the other attacks. Researchers also said they saw heavy crossover between the computer code in the earlier attacks and WannaCry. That crossover provided what Chien said was yet another “hard link.” Other digital crumbs linking the North Korean group to WannaCry include a tool that deletes data that had been used in other Lazarus attacks. The hackers behind WannaCry also used a rare encryption method and an equally unusual technique to cover their tracks. “We don’t see that used anywhere else,” Chien said. In May, another group of hackers that call themselves the Shadow Brokers published the details of National Security Agency hacking tools that the WannaCry hackers were able to use to add muscle to their attacks. They used a leaked N.S.A. hacking tool to automatically spread from server to server, eventually infecting hundreds of thousands of machines around the world, most notably in Europe and Asia. Before the latest evidence came out today, James Scott, a senior fellow at the Institute for Critical Infrastructure Technology, called the early attribution “shoddy” in an online post, and said the “attribution to North Korea is premature and likely false.” Some also pointed to the small sums the attack was generating as proof that the attacks were the haphazard work of unsuccessful cybercriminals, rather than government-backed hackers. By May 22, only 223 victims of more than 200,000 had paid ransoms, generating $109,270 to the attackers’ Bitcoin wallets, according to Dell SecureWorks. The attackers were forced to issue a reminder on victims’ computer screens to pay up. But despite the financial letdown, the researchers say they are confident the technical evidence points to the Lazarus group. (Nicole

The United Nations Special Rapporteur on the rights of persons with disabilities, Catalina Devandas-Aguilar, welcomed a number of positive steps on disability issues taken by the Government of the Democratic People’s Republic of Korea, but noted that “there is still a long way to go to realize the rights of persons with disabilities in the DPRK.” “The Government has shown openness to disability issues in particular through the ratification of the Convention on the rights of persons with disabilities and some progress in other areas, including the recognition of the Korean sign language as an official language of the DPRK,” said the expert, who undertook the first visit ever to DPRK by an independent expert designated by the Human Rights Council, from 3 to 8 May. “However, there is a range of challenges in realizing these rights for all persons with disabilities; not only for the blind and the deaf, or those with physical impairments,” the expert said. “For instance, the medical model of disability -which attempts to ‘cure’ and ‘rehabilitate’ persons with disabilities- remains prevalent and influences the way in which they are perceived and treated by society.” Devandas-Aguilar encouraged the Government to take measures to raise awareness about the dignity and capabilities of persons with disabilities, and to progressively implement an inclusive quality education system for all learners with disabilities. She also called on the authorities to improve physical accessibility of public infrastructure, and increase the participation of persons with disabilities in society, including women with disabilities. Among her recommendations, the UN Special Rapporteur stressed the need to revisit legislation that currently does not recognize the full legal capacity of all persons with disabilities. Devandas-Aguilar visited the cities of Pyongyang and Pongchon in the South Hwanghae Province, where she met with Government officials, the Korean Federation for the Protection of the Disabled, associations of persons with disabilities, the UN Country Team, international cooperation actors and the diplomatic community. (UN Office of the High Commissioner on Human Rights, “UN Disability Expert Welcomes Opportunity for Constructive Dialogue on Human Rights in north Korea,” May 15, 2017)

5/16/17

South Korea and the United States agreed to work toward the "complete" denuclearization of North Korea, also vowing to seek new and practical ways to rid the communist North of its nuclear weapons, Seoul officials said. The agreement came at a meeting between South Korean officials and U.S. National Security Council (NSC) officials. "The United States reaffirmed its strong commitment to the security and defense of South Korea," Yoon Young-chan, the top press secretary of South Korean President Moon Jae-in, told reporters. The sides agreed to exert joint efforts for a "complete" disposal of North Korea's nuclear weapons, he added. "First, they agreed that their ultimate goal was the complete disposal of North Korean nuclear weapons. Second, they agreed to mobilize all available means, including sanctions and dialogue," the South Korean official said. Tuesday's meeting involved NSC’s senior director for East Asia Matt Pottinger and NSC director for Korea Allison Hooker. Chung Eui-yong, Seoul's former ambassador to Geneva, headed the South Korean side. Chung currently heads a special advisory group for President Moon Jae-in on security and diplomatic issues. The sides said dialogue with the communist North was possible under the right conditions, Yoon said. However, Pottinger, speaking to reporters later, said now may be not be the right time for dialogue. "Right now, we certainly do not see the right conditions in light of the provocations," he said. North Korea launched what is believed to be an intermediate-range missile on Sunday, prompting fresh condemnation from both Seoul and Washington, as well as the U.N. Security Council. "We would want to see concrete movement to reduce the threat. Right now the threat is gathering," Pottinger said. Apparently to finally put an end to the decades old dispute over North Korea's nuclear ambitions, the officials from Seoul and Washington also agreed to look for new "bold and practical" means to rid North Korea of its nuclear weapons, Yoon said. Tuesday’s meeting also sought to arrange schedules for a summit between Moon and his U.S. counterpart Donald Trump. Yoon said the sides have agreed to hold the summit in Washington in late June. During a courtesy call by the U.S. delegation, the new South Korean president said his upcoming meeting with the U.S. president will show the strong alliance between their countries, according to Yoon. "The summit will be a chance to once again
display, not only to the people of our two countries but to the entire world, the strength of the Korea-U.S. alliance," Moon was quoted as telling the visiting U.S. officials. "Also, I wish the countries will continue to work closely to resolve the North Korean nuclear issue," he added, according to Yoon. Seoul's presidential office earlier said Moon has named a special envoy to the United States to arrange and set agendas for his proposed summit with Trump. Hong Seok-hyun, a former ambassador to the U.S. and also a former chief of a prominent local media group, was set to head to Washington tomorrow, according to diplomatic sources. (Yonhap, “S. Korea, U.S. Agree to Seek New ‘Bold’ Ways to Denuclearize North Korea,” May 16, 2017)

The American ambassador to the United Nations called for stiffening sanctions against North Korea and perhaps even punishing those who continue to help it, even as she acknowledged that there was no consensus yet with the North’s powerful backers in China. “We have to turn around and tell the entire international community: You either support North Korea or you support us,” the ambassador, Nikki R. Haley, told reporters. “The United States is not past looking at third-country entities who are helping North Korea and putting sanctions against them. If you’re supporting North Korea, you’re against the rest of the international community.” Haley’s comments came as the United Nations Security Council met to discuss how to respond to North Korea’s latest ballistic missile test over the weekend. Asked if China had agreed to new sanctions, Haley said: “We don’t have it done yet. We are working with Beijing along with South Korea as well as Japan.” She also pointedly reminded Russia that the North’s latest missile test had reached close to Russia’s border. “You either support North Korea or you don’t,” she said. “But you have to choose; you have to pick a side.” She added, “Not one country is immune to the threat from North Korea.” (Somini Sengupta and Choe Sang-hun, “U.S. Envoy Calls for Tougher Action on North Korea,” New York Times, May 17, 2017, p. A-10)

Who made North Korea a nuclear power: Dr A Q Khan or Pakistan? On 4 February 2004, Khan appeared on the television and confessed to have supplied nuclear technology and components to North Korea, Iran and Libya. During the telecast, Khan accepted his crimes in English and not in Urdu, which is the language understood by most Pakistanis. That telecast was actually for the international audience, specially the United States and European intelligence agencies. Khan explicitly mentioned that this proliferation network was entirely of his own and the Pakistani government or authorities were never involved. But was it true? Pakistan had left the plutonium route long ago in 1975 when Khan brought stolen centrifuge technology from Europe where he was working for URENCO as a technical translator. Apart from China, Pakistan was the only major country in the world that not only maintained diplomatic relations with North Korea but received weaponry from them as well. But the cooperation in Nuclear and missile field started in late 1980s. Investigative journalists Adrian Levy and Catherine Scott-Clark did a commendable job while investigating Pakistan’s quest to acquire nuclear weapons and their proliferation. Their book Deception explains it all. In 2006, they interviewed Benazir Bhutto in Dubai. She revealed some interesting facts. This idea of proliferation for monetary gains was the brain child of the Pakistani Army Chief General Mirza Aslam Beg. Towards the end of 1989, Benazir was the Prime Minister and in a meeting (attended by Gen Jahagir Karamat, DG-MI and Gen Hamid Gul, DG-ISI) Gen Beg briefed her about the Kashmir situation and suggested ways to fuel the insurgency by setting up more training camps, providing weaponry and logistic support, infiltrating 100,000 battle hardened Afghan Mujahedeen. Benazir was already under pressure due to poor economic state of the country and from the United State. She did not agree to escalate the situation; however she agreed to let Pakistan Army continue the low level insurgency. Beg’s second proposal was far more dangerous. To run the low level insurgency, Pakistan needed money independent of IMF funding, US aid etc. This was the first time when he suggested selling off the nuclear technology and assistance to likely customers. Bhutto was stunned and could not believe her ears. But the only customer she could thought of were Iraq, Iran and may be Libya. She then told the General that IMF gave around $200 million a year to Pakistan and how many ‘customers’ he thought would give Pakistan that big amount. And for how many years? What would happen when those customers have got what all they needed? What will happen when international community learns about this proliferation? Bhutto rejected the idea and a disappointed General left her office. Bhutto
claimed she had no clue about when happened later as military would keep her away from the KRL (Khan Research Laboratory) and the nuclear program. But the General did not stop. In a 2006 interview, Robert Oakley, Ambassador of the United States in Pakistan from 1988 to 1991, informed the authors of the book that soon after the meeting with Bhutto, Gen Beg went to Iran to get their support in Pakistan’s proxy war in Kashmir and in return offered Iranians support in their nuclear program. Oakley had informed US administration about this development but considering the Afghan Jihad, the US administration kept quiet. Benazir also revealed that Pakistani Army and AQ Khan did not lose hope. In December 1993, she was to visit Beijing and AQ Khan approached her again. He met Benazir and requested her to visit Pyongyong with a special request. Khan wanted Benazir to ask North Korean dictator for NoDong missiles. He argued that Pakistan was developing short range missiles which were not good enough to hit deep inside India. He said that “we have the bomb but we can’t deliver it.” Benazir was again shocked, but agreed for a short trip to North Korea on her way back. She discussed Khan’s proposal to her then Counsel – Hussain Haqqani. He advised her not to fall in the trap of security establishment but Bhutto did not want to cross Army’s way again. She tried earlier during her first term as the PM and she was accused of being a threat to the national security and her government was dismissed. Bhutto did not want that to happen again. She claimed that she believed that missile deal would be against cash and had no clue about Army and Khan’s plan to exchange nuclear technology instead. Bhutto flew to Pyongyong on 29 Dec 1993 and during the dinner, a nervous Benazir leaned over North Korean dictator and said "Give my country NoDong missile’s blue prints, we need those missiles". Kim stared at her while she repeated the request. After a few moments’ silence, he agreed. Bhutto came back with a bag full of technical papers and disks. Soon the Army and Khan got what they wanted – NoDong missiles. They repainted the missile hurriedly and test fired it. Dr. Shafiq, son of Brig Sajawal who was in-charge of facilities administration of KRL, revealed to Adrian Levy and Catherine that ‘there was so much excitement that no one cared to notice that paint on the missile was still wet’. Leading newspaper The Guardian had reported the same while quoting David Wright, the co-director of the global security programme at the Union of Concerned Scientists "The first result was the Ghauri, a missile with a range of 1,500kms (930 miles). Basically, it was a repainted North Korean missile." An evil deal had started where Pakistan’s Uranium Enrichment technology was being exchanged for North Korean missile technology and some “cash”. In 1995, former US ambassador to Pakistan Robert Oakley (mentioned above) held a conference in Washington where he invited three persons from Pakistan – former vice-chief Gen (R) Arif, Agha Murtaza Poya - editor-in-chief of the newspaper ‘The Muslim’ and famous Pakistani journalist and editor of The Friday Times, Najam Sethi. During the conference, Oakley surprised all of them by showing photos of Pakistani Air Force’s C-130 planes unloading centrifuges and loading NoDong missile components. But Pakistan again denied conducting any such exchange. Soon there was plenty of other proof. Khan and PAF C-130s started making frequent trips to North Korea. CIA and other agencies tightened their grip over Pakistan’s network. The U.S. administration could no longer resist pressure from State Department and intelligence agencies, who were giving irrefutable proof of Pakistani security establishment’s (Army leadership and Khan) one stop shop that was supplying everything to North Korea, Iran and Libya – from the blue print to the actual centrifuges, technical support, bomb design and trigger mechanism. Everything was on offer for dollars – most of the amount went to Pakistan/Pakistani Army treasury and some of it went to personal pockets. In 2011, Washington Post reported that Khan had released a copy of a letter from a North Korean official, dated 1998. The letter had details of the transfer of $3 million to former Pakistani army chief Jehangir Karamat and $500,000 plus some jewellery to another military official, Lt-Gen. Zulfiqar Khan. Finally in 2002, the US officially announced that they had proof that Pakistan/AQ Khan’s network had exported the centrifugal technology to North Korea. But Pakistani President Musharraf did not hand over Khan for any investigation. When pressure kept mounting, the Pakistani Security Establishment persuaded Khan to take the sole responsibility in country’s “national interests”. Khan was assured that there would be no trial, no one would be allowed to question him and at most, he would be under house arrest. The rest is history. But the Pakistan-North Korea cooperation never stopped. As per Sunday Guardian report, some sources suspect that North Korea is conducting nuclear tests for Pakistan to provide vital data to Pakistan. This crucial data is needed to perfect the tactical nuclear weapon designs and their mating with the North Korean missiles. Interestingly China, the
President Donald Trump told a special envoy of South Korean President Moon Jae-in that he looks forward to working closely with Moon to resolve the North Korean nuclear issue and is willing to make peace through engagement with Pyongyang if conditions are right, the envoy said. Trump, however, stressed during a 15-minute meeting with special envoy Hong Seok-hyun that he won't hold talks with the North for the sake of talks, the envoy said. Also in attendance at the meeting were Vice President Mike Pence, National Security Advisor H.R. McMaster and Trump's son-in-law and senior adviser, Jared Kushner. It was the first time Trump has met with a South Korean official since taking office. "(President Trump) talked about sanctions on North Korea and cooperative relations with China. And he said he looks forward to cooperating closely with President Moon in resolving the North Korean nuclear issue so as to produce an outcome," Hong said. "Though we're now at the stage of pressure and sanctions, he said he has a willingness to make peace through the so-called engagement if certain conditions are right."

He said, however, that what he's willing to do is not talk for talk's sake but for talks that produce an outcome," the envoy said. Hong said he handed Moon's letter to Trump and expressed thanks for supporting South Korea's security and inviting Moon to visit Washington. Trump was quoted as saying that he very much looks forward to next month's summit. "President Trump talked mainly about big pictures, and emphasized that we can achieve an outcome through the strong unity of the alliance and international cooperation," Hong said. Hong also said he held a separate meeting with McMaster and talked briefly about the THAAD deployment. "I said there is a controversy about procedural problems in the course of the deployment, and I talked about the need for this issue to be discussed at the National Assembly," Hong said. In response, McMaster said the U.S. is aware of and understands various talks about such procedural problems, Hong said, adding that the meeting was mostly about the North Korean nuclear issue. The issue of THAAD's cost didn't come up during the meeting, he said. (Chang Jae-soon, “Trump Willing to Make Peace with N. Korea though Engagement: S. Korea Envoy,” Yonhap, May 17, 2017) President Donald Trump expressed his support for engagement with North Korea to make peace - under the right conditions - to President Moon Jae-in’s special envoy to Washington. “Though we are now at the stage of pressure and sanctions, [President Trump] said he has a willingness to make peace through so-called ‘engagement’ if certain conditions are right,” said Hong Seok-hyun, the special envoy to the United States, to reporters after his meeting with Trump at the White House. “He said, however, that rather than holding talks simply for the sake of talks, he is willing to hold talks that produce some outcome.” This marks the first time Trump has publicly proposed “to make peace” with Pyongyang in reference to the North Korea issue. The Trump administration is also indicating a shift in the possibility of dialogue with Pyongyang, leaving room for cooperation with the Moon administration on engagement of North Korea in the future. Hong, chairman of the Korean Peninsula Forum and a former U.S. ambassador, led the Korean delegation to Washington, the first meeting of an envoy of the new Moon administration with Trump. Hong delivered a letter from Moon, who took office last week, to Trump. The special envoy added he conveyed Moon’s gratitude for the United States’ continuous consideration of South Korea’s security as well as thanks for President Trump’s invitation to an early bilateral summit to be held next month. Trump was said to have remarked upon receiving Moon’s letter, “It’s beautiful.” Trump expressed “great expectations for the summit with President Moon in June.” The U.S. president went onto say that he “looks forward the outcome of working in close cooperation with President Moon to resolve the North Korea issue in the future,” according to Hong. “President Trump generally talked about the bigger picture, emphasizing that we can achieve an outcome through unity in our sturdy alliance and international cooperation.” In his 40-minute talks with McMaster, Hong underscored that Korean conservatives and liberals stand in unity on security issues. “The new administration
has the willingness to solve the North Korean nuclear issue based on a solid security and the [South Korea-U.S.] alliance,” Hong told McMaster. Hong went onto convey Seoul’s understanding of the Trump administration’s strategy of maximum pressure and engagement toward North Korea. He emphasized Seoul agreed with Washington on the importance of sanctions and pressure on North Korea, adding that when conditions are matured, dialogue also has to be appropriately used. McMaster also was said to have agreed to this principle, adding South Korea and the United States will have to cooperate and hold further discussions on the conditions necessary for dialogue with the North. He called for bilateral working-level talks on this. Hong also lauded Trump’s efforts to pressure China to resolve the North Korea nuclear issue. He added, “We are well aware how much effort President Trump has put into leading China” to more actively rein in North Korea, emphasizing the importance of the South Korea-U.S. alliance in that process. Hong, a longtime advocate of Korean Peninsula issues, arrived in Washington for a four-day visit and is expected to hold meetings with U.S. Secretary of State Rex Tillerson, Defense Secretary James Mattis and other senior U.S. government officials, as well as opinion leaders. “President Trump remarking that he will not hold talks for the sake of talk, and only under the right conditions, shows again the shared understanding between the two countries,” said Cho June-hyuck, spokesman of the South Korea’s Ministry of Foreign Affairs May 18. He added that this is in line with Moon’s statement at a Sunday meeting of the South Korean National Security Council that dialogue is possible only if and when there is a change in North Korea’s behavior. “There will be close cooperation between us ... for a resolute and pragmatic plan for our joint goal toward the complete scrapping of North Korea’s nuclear program,” said Cho. (Sarah Kim, “Trump Discusses North with Moon Envoy,” JoongAng Ilbo, May 18, 2017)

A special envoy of new South Korean President Moon Jae In agreed with Japanese Foreign Minister Kishida Fumio to pursue “future-oriented” ties but noted that a bilateral accord on the "comfort women" issue was widely viewed as unacceptable. "We discussed that our leaders should meet frequently in a future-oriented manner and make efforts toward that end," envoy Moon Hee Sang said after the talks at the Foreign Ministry. Moon, who arrived in Tokyo earlier in the day, will meet with Japanese Prime Minister Abe Shinzo. The envoy said he did not ask for a renegotiation of the 2015 bilateral agreement, under which the countries confirmed they had "finally and irreversibly" settled the protracted row over Korean women who were forced to work in wartime Japanese military brothels. But he said that he told Kishida that "most of the South Korean people are emotionally unable to accept" the agreement. (Kyodo, “South Korea Envoy Tells Japan Majority Opposed to ‘Comfort Women’ Deal,” May 17, 2017)

President Moon Jae-in said he would not tolerate further provocations by North Korea or its nuclear weapons programs during his first visit to the Ministry of National Defense as commander in chief. “The firing of a ballistic missile is a serious provocation that violates United Nations Security Council resolutions and poses a serious challenge to peace on the Korean Peninsula as well as to the international community,” said Moon during his meeting with military commanders at the Defense Ministry in Seoul. “I will not tolerate the North’s provocations and nuclear threats.” The newly elected leader also stressed that South Korea’s military was capable of “stern retaliation against an enemy’s provocation” in any form. “Our military is maintaining an utmost readiness posture against any form of enemy provocation,” added the president in a surprise choice of words to describe the North Korean military - “enemy” - given his refusal to do so during the campaign. On the third presidential debate in April, Moon refused to define the North as the “primary enemy state” of the South, saying such a characterization was inappropriate for a presidential aspirant. Moon also noted the North’s military and nuclear program had “advanced dramatically” and become “real threats.” To deter it from further provocative acts, Seoul will actively work in cooperation with the international community, he said. (Kang Jin-kyu, “Moon Talks Tough about ‘Enemy,’” JoongAng Ilbo, May 17, 2017)

South Korea’s unification ministry expressed a need to reopen an inter-Korean communication hotline, which was severed early last year following North Korea's nuclear and missile tests. In February 2016, North Korea cut off two inter-Korean communication channels as it expelled
remaining South Koreans from a joint industrial park in response to South Korea's closure of the Kaesong complex. One of them is a hotline at a liaison office located at the truce village of Panmunjom, which was set up in 1971. It had been periodically disconnected when inter-Korean ties seriously worsened. Technically speaking, the communication lines are not physically cut, but the dialogue channel is not operating as North Korea has not responded to South Korean officials' daily contact over the phone. "The government has kept the stance that the inter-Korean dialogue channel should be reopened. The ministry has been reviewing ways to restore it," Lee Duk-haeng, ministry spokesman, told a regular press briefing. "But there are no specific steps in the offering." Lee also called on North Korea to heed the international community's call for ending provocations as Pyongyang claimed that its latest missile test is to help ensure safety and security on the divided peninsula. "North Korea should pay attention to its call and have clear understanding about what the problem is," the spokesman said. (Yonhap, “S. Korea Calls for Reopening Inter-Korean Communication Channel,” May 17, 2017)

5/18/17 Secretary of State Rex Tillerson said Washington has no intention for a regime change or invasion of North Korea, urging it to abandon its nuclear program in return for regime security and an end to hostility, according to Seoul’s special envoys. Tillerson made the remarks during his meeting with Hong Seok-hyun, a former chairman of JoongAng Media Network who is visiting Washington as President Moon Jae-in’s special envoy. During the 40-minute talks, Tillerson expressed the country’s willingness to return to dialogue with Pyongyang if it shows sincerity through actions such as a halt in nuclear and missile tests, an official at Hong’s delegation said. “The secretary said (the Donald Trump administration’s) policy goal is not to pursue a regime change or aggression but to ensure regime security,” the official told reporters after the talks, calling the Kim Jong-un regime to “trust us, instead of using back channels.” “But he said Washington will only openly send messages, rather than hold closed-door talks, emphasizing the North should take action to cease nuclear and missile tests.” Tillerson’s comments echo Trump’s remarks a day ago that he is willing to engage the communist state, but not for the sake of talks without the “right conditions.” The secretary also said during a press interview last month that the administration has “no objective to change the regime” but seeks a denuclearized Korean Peninsula. But the official said Tillerson’s remarks did not appear to mean any easing of preconditions for dialogue, with the ultimate goal of eliminating the North’s nuclear program remaining unchanged. “The US’ first-stage objective is that Pyongyang does not carry out additional nuclear and missile tests,” he said. “I think the level of preconditions is quite high, and North Korea is supposed to take substantial activity first by refraining from the tests for a while before the atmosphere for talks starts to form.” Hong also quoted Tillerson as saying there are a multitude of US businesses willing to invest in the North which would help rebuild the crumbling economy if it makes the right choice. “I was most impressed to see the US’ resolve for engagement that it pursues sanctions and pressure not to harass North Korea but to foster an opportunity for its development by opening its doors and abolishing its nuclear program in the long term,” Hong said. Tillerson noted Beijing is moving to relax its sanctions on Lotte Group, which provided land for the THAAD, another delegation member said. “China knows that THAAD poses absolutely no threat to its own security,” Tillerson was quoted as saying. “The issue regarding the range of X-Band radar is not a problem China should be worried about.” On his second day in Washington, Hong held a series of meetings with congressional leaders including Ed Royce, chairman of the House Foreign Affairs Committee, Rep. Ted Yoho and Sens. Cory Gardner and Ben Cardin. Yesterday, Hong also met with National Security Advisor H.R. McMaster ahead of his visit to Trump. He is also scheduled for talks with John McCain and Mac Thornberry, who respectively head the Armed Services Committees at the Senate and House, think tank seminars and other events tomorrow. (Shin Hyon-hee, “Tillerson Promises N.K. Regime Security, Appeals for Trust: Envoy,” Korea Herald, May 18, 2017)

CIA Director Mike Pompeo discussed the potential for fomenting an insurrection against the Kim Jong Un regime in North Korea with Thae Yong Ho, one of the highest-ranking North Korean officials to defect to South Korea, according to U.S. intelligence officials. The meeting between Pompeo and took place during the CIA director's visit to South Korea from April 29 to May 2.
Disclosure of the meeting between the CIA chief and the defector comes as tensions remain high on the peninsula. A CIA spokeswoman declined to comment on Pompeo’s meeting with Thae, citing a policy of not discussing the director’s overseas travel. During the session with Thae, Pompeo discussed whether conditions inside North Korea were ripe for an uprising against Kim by the military, security, or political officials, according to intelligence officials familiar with the meeting. Thae responded that he believed conditions within North Korea were conducive to such an insurrection. The CIA director, according to the officials, is taking steps to strengthen the CIA’s espionage and covert action branch and increase its foreign operations capabilities. The Directorate of Operations was weakened under Pompeo’s predecessor, Obama administration appointee John Brennan, the officials said. Under Brennan, CIA clandestine and covert operations capabilities were limited severely, mainly by agency lawyers who limited overseas activities to less risky endeavors. Pompeo is said to be taking steps to strengthen the directorate of operations with increased resources, training, and personnel. (Bill Gertz, “CIA Director Met with High-Level North Korean Defector,” Washington Free Beacon, May 18, 2017)

Arms Control Wonk: “The assassination in February of Kim Jong Un’s half-brother Kim Jong Nam at Kuala Lumpur airport has turned international attention to North Korea’s other shady activities in Malaysia. A Reuters investigation has already revealed that a North Korean company has been marketing military radios from offices in Kuala Lumpur. It turns out that military radios may be the tip of the iceberg in terms of DPRK sales shenanigans in Malaysia. Open source investigations reveal that North Korea has also been involved – albeit to an unclear degree – with a Malaysian company apparently marketing North Korean designed military vessels including miniature submarines. Evidence, including a recent US sanctions listing in 2016 and a flashy Youtube video, suggest that the company – Kay Marine Sdn Bhd – has collaborated with North Korean partners and may have marketed North Korean designed military vessels since the UN arms embargo first entered force in 2006. In 2016, the US State Department designated several companies under the Iran, North Korea, and Syria Nonproliferation Act including Kay Marine Sdn Bhd, whose designation slipped attention at the time. Kay Marine is a shipbuilding company that has supplied vessels to customers including the Malaysian and Australian governments. The US has not provided a reason for Kay Marine’s designation – although it must be due to evidence of the company trading with Iran, Syria or North Korea. A search of Kay Marine’s details under the Malaysian corporate registry shows no evidence of North Korean ownership. However, other evidence suggests that Kay Marine may have been collaborated with North Korea, and has possibly marketed North Korean designed products. Hints of Kay Marine’s involvement with the DPRK have previously appeared in the Malaysian press. A November 2006 interview with Kay Marine’s managing director suggested that the company had supplied North Korea in the past – the MD even stated that “the company was awaiting word from North Korea on a contract that would use technology from that country”. He also noted that “North Korea needs small patrol boats to guard against infiltration”. The previous month the UN had passed Security Council Resolution 1718, which prohibited the export of various arms to North Korea, including “war ships.” In 2007, another Malaysian news article reported that Kay Marine’s Chairman had stated that “the company was also forging cooperation with North Korean experts to manufacture assault boats.” YouTube, of all places, is where Kay Marine’s apparent relationship with North Korea gets really interesting. In 2011, a video was posted on a YouTube account apparently belonging to Kay Marine which raises further questions regarding Kay Marine’s activities. Against a soundtrack of non-descript 1980s rock music featuring intolerably long guitar solos (the video’s backing music is apparently provided by Grammy nominated guitarist Joe Satriani) the video features a selection of marine hardware. The first half of the video features a selection of civilian boats, including rigid inflatable boats, speed boats, a ferry-style “landing craft”, a self-righting “search and rescue boat” and an aluminum coast guard patrol boat. The video lists Kay Marine’s alleged customers including the Malaysian armed forces, Royal Malaysian Police and a variety of companies. So far, it’s all pretty mundane and consistent with the company’s broader digital footprint. However, halfway through the film, the screen fades to black and a second video begins, again starting with the company’s logo. This time the title page states “Advanced Military Boats from Kay Marine.” The video proceeds to feature around six military craft showing off their paces – from a “small patrol boat,” to a large military hovercraft, and a miniature “small submarine.”
The video ends with a periscope-like electronic sensor object (all vessels are provided with names/designations in the video). Analysis of the video and comparison of these vessels with existing designs provides interesting results. Except for one generic-appearing patrol boat, these vessels all bear uncanny similarities to products designed in North Korea and used by DPRK clients including Iran. The first vessel bears a striking resemblance to the Iranian Peykaap patrol boat which the US Office of Naval Intelligence (ONI) suggests was based on a North Korean design. Some images of Iran’s Peykaap craft from state media have been assembled here. The video suggests the boat carries an “armament” of “2Rounds x 324mm Torpedo.” The second vessel – with its distinctive three strutted spoiler – bears a strong resemblance to the Taedong-C torpedo boat (Iranian designation Gahjae class). The US ONI has suggested that two DPRK-designed semi-/submersible vessels were transferred to Iran by North Korea in the early 2000s. There’s an image and schematic of the Taedong-C here. The third vessel bears a strong resemblance to the Kajami submersible torpedo boat currently in service in Iran. This may be the second semi-/submersible boat that Iran received from North Korea in the early 2000s, according to ONI. There is a nice image and schematic of a Kajami here. The fourth vessel is difficult to identify. What appears to be three different types of hovercraft are displayed in the fifth segment of the video, including one that bears a strong resemblance to those displayed in a 2013 exercise (the footage of which was apparently also digitally manipulated). The final vessel displayed – the most exciting – looks to be a Yono type miniature submarine. The sub’s dimensions in the video (2.75m beam and 29m length) are consistent with dimensions listed online. A nice image of a Yono class can be found here. The sub is clearly the “piece de resistance.” Sat in a yard on a cradle on rails, the sub is filmed from different angles with the anchor seductively raised and lowered, and a small external propeller (likely for small scale maneuvers) rotated. The boat bears a strong resemblance to the Yono class submarine, a type that South Korean reports suggested was a strong candidate for having sunk the South Korean ROKS Cheonan corvette in 2010, killing 46 sailors. Interestingly, the products shown in the video are consistent with the product line of notorious North Korean arms trading firm, Green Pine Associated. Green Pine was listed under UN sanctions in 2012, with the summary concluding: “Green Pine has been identified for sanctions for exporting arms or related material from North Korea. Green Pine specializes in the production of maritime military craft and armaments, such as submarines, military boats and missile systems, and has exported torpedoes and technical assistance to Iranian defense-related firms.” Finding evidence which supports any hypothesis that any of these vessels are actually being manufactured in Malaysia – as opposed to simply being marketed from there – has been difficult. The midget Yono class submarine is certainly the most distinctive piece of equipment shown in the video. That this submarine in the video (despite its rather dodgy looking welds) may have been manufactured in Malaysia by Kay Marine is a far-fetched idea to say the least. Kay Marine’s online profile suggests that the company employs around 120 people and has six sites – mostly offices, one warehouse or industrial unit (away from the water) and one shipyard. The shipyard has a slipway around 50m long and was fairly simple for us to geo-locate using open source techniques. This shipyard, which is definitely not the one hosting the submarine in Kay Marine’s YouTube video, features in a second video hosted on Kay Marine’s YouTube account. This second video documents the launch of a research ship, the RV Discovery, that Kay Marine company built for a local university (the ship was marred by a corruption scandal, but that’s another story…). A news article detailing defects with the RV Discovery perhaps provides some insights into Kay Marine’s capability (or willingness to cut costs): “Among the defects were: the installation of an electronic cable beneath a generator (making it a fire hazard); failure to encase the high pressure oil hose with an anti-splashing tape; the lamps in the steering gear compartment not working; and the life rackets [sic] exceeding their life expectancy. This was on top of broken air conditioners, closed-circuit television (CCTV) and general shipping equipment.” This RV Discovery video featuring Kay’s shipyard, along with another filmed by students as part of a college project, suggests that the capability possessed by Kay Marine at this site and within a warehouse at an unclear location is pretty basic. In fact there is no evidence to suggest that the company has the capability to manufacture even the most simple patrol boats of North Korean design featured in the video. The final item advertised in the Kay Marine YouTube sales video is an outlier – a piece of equipment, rather than a maritime vessel. This “PASSIVE INFRARED DETECTOR” appears to be a periscope used on submarines similar to the Yono. While virtually
no close-up images are available online of North Korean submarines, a comparative examination can be made of images of Iranian Ghadir submarines, with Iran being an export partner of North Korea for Yono type submarines since the early 2000s. Indeed, Iran’s former president Ahmadinejad inspected a Ghadir submarine at an Iranian naval base in 2008, and was pictured emerging from a hatch right next to a very similar looking detector. The sensor is featured in the video sat behind a table next to a box (likely holding electronics), a basic looking computer screen and a joystick. The sensor is apparently demonstrated, with a screenshot of its interface showing a ship in regular optical mode, and then white, apparently in a heat-signature mode. The screen also shows the sensor pointed at a moving vehicle and some people wearing glasses. Following the sinking of the ROKS Cheonan, South Korean media quoted intelligence sources as noting that the Yono included advanced sensors: the Yono “is similar to the shark-class submarine and was built recently for export, equipped with night-vision equipment and other high-tech gadgets, as well as a unique structure to enhance its stealth capabilities.” Is it possible that the DPRK is exporting submarines to customers abroad, as the Kay Marine YouTube video suggests? Historical evidence suggests that it is. In 1996, a strapped for cash North Korea exported two Yugo class (predecessor of the Yono class) midget submarines to Vietnam. Two further incidents (covered in Andrea Berger’s Target Markets) suggest North Korea’s interest in – or openness to – submarine export. According to a leaked State Department cable, the North Korean deputy Defense Minister visited Nigeria offering to sell “anything in its inventory” in 2004 including “missiles and submarines” because Pyongyang needed hard currency. In the 2000s, North Korea exported the Yono class to Iran, with US government sources suggesting Iran had seven by 2007. The issue of submarine parts trafficking has been raised more recently following the 2011 interdiction of a shipment of submarine parts in Taiwan, which was noted by the UN Security Council’s Panel of Experts in their 2013 report. The Panel’s 2015 report noted these parts were brokered by Green Pine Associated Corporation and allegedly procured in the US. The 2016 report provides further detail, noting that: “The consignments were shipped from Vienna by an Austrian national, Josef Schwartz, through his company, Schwartz Motorbootservice & Handel GmbH. He had traded with the Democratic People’s Republic of Korea on multiple occasions in the past, including violations and attempted violations of the luxury goods ban. The Panel confirmed that he had assisted Green Pine in evading the arms embargo.” There is also evidence that Green Pine has exported services relating to marine craft and patrol vessels, having assisted Angola with revamping some of its Mandune class naval patrol vessels according to the Panel’s 2017 report. Further evidence also presented by the Panel suggests that the company explored Sri Lankan interest in ships. Growing evidence of Green Pine’s role in conventional and broader proliferation activities resulted in the UN Security Council’s designation of Green Pine in 2012. Green Pine’s ongoing activities also led the Panel to warn that states should enhance vigilance for possible trafficking of “Maritime electronics (radars, sonars, compasses and the like) that can be used for naval vessels” in 2016. Considering North Korea’s submarine-launched ballistic missile program, the Panel suggested in 2017 that “Member States should be vigilant regarding the export of dual-use commercial items that could contribute to the submarine programme.” South Korea also produced a “Tailored watch list for submarine parts” in late 2016. In sum, two questions remain: what is the true nature Kay Marine’s relationship with North Korea (indeed if any has endured)? And what is this strange YouTube video with midget submarines and squealy guitar solos? The alleged comments by the managing director and chairman of Kay Marine in the mid-2000s suggest that there were prospects for a relationship or contract with North Korea working on assault vessels after UN sanctions were put in place in 2006. It is unclear whether this contract came to fruition. Other comments by Kay Marine officials suggest that Kay Marine exported vessels to North Korea, although this was likely before UN sanctions came into place in 2006. However, the 2016 sanctioning of Kay Marine by the US suggests that the company was still in some way involved with its North Korean partners. The 2011 YouTube video raises red flags in this respect. A marketing film of unclear origin, branded with the Kay Marine’s logo, and including at least five weapons systems which appear to be of North Korean design. The origins of the footage are unclear, although certainly prior to 2011 when it was posted online. It is possible that separate segments of the film featuring different vessels may have originated in different time periods. The resemblance of the submarine and stated dimensions (29m, 2.75m) suggest that it is a Yono (not a Yugo) class. With North Korean efforts to export to Iran beginning in the early 2000s, this
segment could date to this period or earlier. The design of the vessels, and the lack of similar images in the public domain, suggests that the footage originated in North Korea. All the available evidence suggests that Kay Marine has marketed arms on behalf of North Korea, possibly for the benefit of Green Pine Associated, a company which has a track record of exports and international collaboration in marine markets. North Korea is known to have marketed arms before using “hard-copy” marketing material (See Target Markets). The Reuter’s investigation also revealed a 2017 marketing video (complete with a dodgy techno soundtrack) which has been posted by James Pearson on Twitter. However, this video is both significant because of its age and its contents. It appears to be custom made for or by Kay Marine because its logo is attached (alongside footage of seemingly legitimate products in the first half). While the full story of Kay Marine’s involvement is unclear, at the very least it would be prudent to suggest that the UN Panel of Experts investigate the issue further in their 2018 report.” (Daniel Salisbury, “A Malaysian Shipyard with North Korean Connections?” Arms Control Wonk, May 18, 2017)

North Korea will rapidly strengthen its nuclear strike capability as long as the United States maintains its "hostile policy" toward the country, the country's deputy U.N. ambassador said. Kim In Ryong told a news conference that if the Trump administration wants peace on the Korean Peninsula, it should replace the Armistice Agreement that ended the 1950-53 Korean War with a peace accord and halt its anti-North Korea policy, "the root cause of all problems." Kim also dismissed allegations that the DPRK was behind the recent wave of global cyberattacks as "ridiculous." "Whenever something strange happens it is the stereotype way of the United States and the hostile forces that kick off noisy anti-DPRK campaign deliberately linking with DPRK," he said. Kim singled out as "more serious" the push by the U.S. for a new sanctions resolution and the Trump administration's demand for all countries "to decide whether they support for DPRK or U.S." He reiterated that "the current situation on the Korean Peninsula is often engulfed in a touch and go state to the brink of war." North Korea will never abandon its "nuclear deterrence for self-defense and pre-emptive strike capability" even if the U.S. ratchets up sanctions and pressure "to the utmost," Kim said. "The U.S. should mind that the DPRK nuclear striking capability will be strengthened and developed at a rapidly high speed as long as the U.S. insists its anti-DPRK policy, nasty nuclear threats and blackmails, sanction and pressure," he said. (Edith M. Lederer, “North Korea Links Nuclear Advances to ‘Hostile’ U.S. Policy,” Associated Press, May 19, 2017)

North Korea's deputy U.N. envoy said the United States needed to roll back its "hostile policy" toward the country before there could be talks as Washington raised concern that Pyongyang could be producing a chemical used in a nerve agent. "As everybody knows, the Americans have gestured (toward) dialogue," North Korea's deputy U.N. ambassador, Kim In Ryong, told reporters on Friday. "But what is important is not words, but actions." "The rolling back of the hostile policy towards DPRK is the prerequisite for solving all the problems in the Korean Peninsula," he said. "Therefore, the urgent issue to be settled on Korean Peninsula is to put a definite end to the U.S. hostile policy towards DPRK, the root cause of all problems." U.S. Ambassador to the United Nations Nikki Haley raised concern on Friday about an application by North Korea to patent a process to produce sodium cyanide, which can be used to make the nerve agent Tabun and is also used in the extraction of gold. "The thought of placing cyanide in the hands of the North Koreans, considering their record on human rights, political prisoners, and assassinations is not only dangerous but defies common sense," Haley said in a statement. North Korea submitted the patent application to a U.N. agency, the World Intellectual Property Organization (WIPO), for processing. The agency does not grant patents. U.N. sanctions monitors said they are investigating the case for any violations. Under U.N. sanctions, states are banned from supplying North Korea with sodium cyanide and Pyongyang has to abandon all chemical and biological weapons and programs. WIPO said in a statement that it has strict procedures to ensure full compliance with U.N. sanctions regimes. It noted that "patent applications are not covered by the provisions of U.N. Security Council Resolutions." Haley said: "We urge all U.N. agencies to be transparent and apply the utmost scrutiny when dealing with these types of requests from North Korea and other rogue nations." (Michelle Nichols, “North Korea Says U.S. Has to Roll Back ‘Hostile Policy’ before Talks Can Begin,” Reuters, May 19, 2017)
Defense Secretary Jim Mattis said that any military solution to the North Korea crisis would be "tragic on an unbelievable scale" and Washington was working internationally to find a diplomatic solution. "We are going to continue to work the issue," Mattis told a Pentagon news conference. "If this goes to a military solution, it's going to be tragic on an unbelievable scale. So our effort is to work with the U.N., work with China, work with Japan, work with South Korea to try to find a way out of this situation." Mattis appeared to defend China's most recent efforts, even as he acknowledged Pyongyang's march forward. "They (North Korea) clearly aren't listening but there appears to be some impact by the Chinese working here. It's not obviously perfect when they launch a missile," Mattis said, when asked about the May 14 launch. Mattis acknowledged that Pyongyang had likely learned a great deal from the latest test of what U.S. officials say was a KN-17 missile, which was believed to have survived re-entry to some degree. "They went to a very high apogee and when it came down obviously from that altitude they probably learned a lot from it. But I'm not willing to characterize it beyond that right now," Mattis said. (Phil Stewart and David Brunnstrom, “U.S.: Military Solution Would ‘Tragic on an Unbelievable Scale,’” Reuters, May 19, 2017)

North Korea sent a critical message via its official media to the newly launched liberal South Korean government over its policy that pursues the North's denuclearization and seeks dialogue at the same time, claiming that dialogue can never be compatible with confrontation. "Confrontation in parallel with dialogue is an incompatible sophistry," KCNA said in a commentary contributed by an individual named Kim Myong-chol. The late former South Korean President Park Chung-hee's biggest crime was to have abandoned basic inter-Korean unification agreements and clung to vicious plots to instigate inter-Korean confrontation, while talking big over "confrontation in parallel with dialogue," said the commentary, titled "(Moon) should learn a lesson from its dictator's (Park) sin against inter-Korean unification." It said, "It's obvious that (the two Koreas) can never achieve national reconciliation and improve inter-Korean relations while instigating fratricidal animosity and confrontation." National independence and peaceful unification also cannot be materialized as long as the South follows foreign forces that plot to divide the Korean Peninsula permanently and invade the North, the commentary said. "(The Moon government) should make a resolute departure from an outdated era of mistrust and hostility if it really wants to better inter-Korean ties and realize reunification," it said. (Yonhap, “N. Korea Criticizes Moon’s Dual-Track Policy toward It,” May 19, 2017)

The U.S. Navy confirmed that two of its aircraft carriers are operating in the Western Pacific region amid unrelenting tensions on the Korean Peninsula over the North's provocation. "USS Carl Vinson and USS Ronald Reagan are in the Western Pacific, but they are not in close proximity to each other," the Pacific Fleet said in a statement. It's not routine for the U.S. to deploy two aircraft carriers simultaneously in a single theater abroad. Earlier in the day, a government source here said the two may hold joint drills with South Korea's Navy in the East Sea early next month. The USS Ronald Reagan (CVN 76) and its Carrier Air Wing Five, featuring fighter jets and early warning aircraft, began its spring patrol earlier this week, according to the Pacific Fleet. They are currently focused on "flight deck and carrier qualifications," as the flattop, which has its homeport in Japan, resumed its mission after months of regular maintenance, it added. Another U.S. naval strike group, led by the USS Carl Vinson (CVN-70), has been also operating in waters near Korea since late last month. The Vinson of the 3rd Fleet, headquartered in San Diego, reportedly had its regional mission extended through the end of June following the North's ballistic missile test last weekend. (Yonhap, “Two U.S. Carriers Set for Drills in East Sea: Sources,” May 19, 2017)

State airline Air Koryo’s twice-weekly shuttle service between Pyongyang Sunan International Airport and China’s Dandong International Airport has been suspended, an official told NK News on Friday. Dandong International Airport confirmed the development in a call with NK News, stating that Air Koryo would no longer be operating out of the airport and there would be no more flights on the route. But while the airports’ spokesperson wouldn’t confirm the reason for the suspension, other sources suggested it was either linked to government or the result of financial issues. “China is stopping it: it’s a Chinese government decision,” one informed travel
source explained, who requested anonymity due to the sensitivity of speaking to media. “This would relate back to the sanctions the Chinese are enforcing a lot on Air Koryo, where they’re restricting the amount of times (the airline) fly between the same route in one day.” (Chad O’Carroll, “Air Koryo Dandong to Pyongyang Service Suspended, Airport Confirms,” NKNews, May 19, 2017)

South Korea and Japan have agreed to resolve a row over a 2015 deal on Japan's wartime sexual enslavement of Korean women in a future-oriented manner, President Moon Jae-in's special envoy said Saturday. Moon Hee-sang relayed that Japan said that it understood South Koreans' negative sentiment toward the controversial deal reached by the former South Korean government and Japan. His remarks came after returning from his four-day trip to Japan where he delivered Moon's letter to Japanese Prime Minister Abe Shinzo on May 18. "We did not mention scrapping the agreement, but made it clear that most South Koreans cannot accept the deal," Moon told reporters, upon arrival in Seoul. "I've heard some comments from Japan that can be viewed as Tokyo's understanding of South Koreans' (sentiment)." (Yonhap, “S. Korea, Japan Agree to Wisely Resolve Row over Sex Slave Deal: Korean Envoy,” May 20, 2017)

DPRK FoMin spokesman’s statement: “The U.S. is trying hard to create international atmosphere for sanctions against the DPRK over the test-fire of its ground-to-ground medium-to-long range strategic ballistic rocket Hwasong-12. What is ridiculous is that the U.S. and its vassal forces advertise that more than 20 countries and international bodies denounced the launch of rocket Hwasong-12, claiming that their anti-DPRK moves were enjoying international support. A spokesman for the Foreign Ministry of the DPRK in a statement on Friday branded such behavior as a cynical ploy of making profound confusing of right and wrong. …Now several times more countries than stated by the hostile forces oppose the U.S. hostile policy and its frantic joint military drills, nuclear threats and military adventurous moves which have aggravated the situation in the Korean peninsula and the region and compelled the DPRK to bolster up its nuclear force. At a recent UN Security Council emergency meeting, the U.S. representative complained that some countries mislead the public opinion, contending that the U.S. threatens north Korea. This shows the position of the U.S. floundering in a dilemma. No matter how hard the U.S. may try, it can never cover up its criminal nature as aggressor and provocateur disturbing peace and security in the region and the rest of the world. When lies and fabrications did not work on the international community desirous of independence and justice, some maniacs of the Trump administration forced other countries to make decision for supporting north Korea or the U.S. They have behaved rudely, reigning over the UN, threatening that the U.S. would impose strict sanctions upon any country, organization or individual and take issue with any international body, when they support north Korea. If such high-handed and arbitrary practices are allowed in the international arena, neither independent development of sovereign countries nor genuine international justice can be ensured and the world would become a barren land where the robber-like U.S. rules the supreme. The tightened pressure upon the DPRK by the U.S. misleading the world public would only compel the DPRK to bolster up its nuclear deterrent for justice.” (KCNA, “FM Spokesman Hits Behavior of U.S. and Its Vassal Forces,” May 20, 2017)

President Moon Jae-in announced his picks for the new finance and foreign ministers, chief of the National Security Office and two special envoys on security and diplomatic issues. Kang Kyung-hwa, special advisor on policy to the U.N. Secretary-General Antonio Guterres, has been named to head the foreign ministry. Moon expressed hope that she would wisely handle sensitive pending diplomatic issues based on her expertise and network that she has built on the global diplomatic stage since she began working for the United Nations in 2006. The appointment of the diplomatic expert as foreign minister is also meaningful in achieving gender equality in the Cabinet, the president said. Chung Eui-yong, a former lawmaker and former ambassador to Geneva, has been appointed to head the National Security Office. Chung has been leading a special security advisory group for Moon since the president came into office on May 10. He also worked as head of the International Labor Organization (ILO). Moon said he picked Chung to the post in recognition of his "strong sense of security and diplomatic ability." Moon Chung-in, emeritus professor at Seoul's
North Korea fired a [KN-15] midrange ballistic missile, U.S. and South Korean officials said. The rocket was fired from an area near Pukchang, in South Phyongan Province, and flew eastward about 500 kilometers (310 miles), said South Korea’s Joint Chiefs of Staff. It did not immediately provide more details. The White House said it was aware that North Korea had launched a midrange ballistic missile. White House officials traveling in Saudi Arabia with President Donald Trump said the system, which was last tested in February, has a shorter range than the missiles launched in North Korea’s most recent tests. (Kim Tong, “North Korea Fires Ballistic Missile, South Korean Officials Say,” Associated Press, May 21, 2017) The United States Pacific Command said it had “detected and tracked” a medium-range ballistic missile that was launched by the North around 9:59 a.m. Hawaii time and landed in the Sea of Japan. It said that “the missile launch from North Korea did not pose a threat to North America.” In a statement, the White House said: “We are aware that North Korea launched an MRBM. This system, last tested in February, has a shorter range than the missiles launched in North Korea’s three most recent tests.” The Japanese military said it was analyzing the height and trajectory of the missile. Prime Minister Abe Shinzo said that by conducting another test just a week after the last one, the North was “trampling on the international community’s efforts aimed at a peaceful settlement.” North Korea said the missile was a Pukguksong-2 [Polaris-2], a ground-to-ground, medium-range missile. The state-run Korean Central News Agency said Kim had watched the test, which it called successful, and had ordered rapid mass production of the missile system for deployment. The North last test-launched a Pukguksong-2 on February 12. North Korea has said a Pukguksong-2 could carry a nuclear payload. The missile was also fired from a mobile-launch vehicle and used a solid-fuel technology that experts say will make it easier to hide and launch on short notice. (Choe Sang-hun, “North Korea Launches 2nd Missile in a Week,” New York Times, May 22, 2017, p. A-4)
sanctions against the communist state. "We will have to try and gradually resume dialogue, starting with working-level talks," Chung Eui-yong, the head of the National Security Office, told reporters. "I believe we must review the possibility as I believe we could resume exchanges in various areas, such as personnel, social, cultural and sports, as long as they do not undermine the international framework of sanctions against North Korea," he added. Chung's remarks came after his visits with political parties earlier, one day after his appointment. Chung reaffirmed Seoul will not reward the North for its provocations, but again stressed the need for dialogue. "We will sternly deal with any provocation. It is also important to enhance our defense capability to deter and prevent North Korea's additional provocations," he said. Still, he insisted "we must restore dialogue (with North Korea) at an early date for a fundamental reduction of tension." (Yonhap, “Moon’s Top Security Adviser Points to Need for Dialogue with N. Korea,” May 22, 2017)

During a news briefing, a spokesman for the South Korean military, Col. Roh Jae-cheon, said that the Pukguksong-2 was believed to be a medium-range missile. Medium-range missiles are classified as having a maximum range of about 620 to 1,900 miles. “Based upon the analysis of related authorities, the missile cannot reach” Guam, he said. Guam lies about 2,000 miles from North Korea. The test of the ground-to-ground Pukguksong-2 missile appeared to have provided North Korea with meaningful data that it could use to advance its missile programs, they said. It was fired from a mobile launch vehicle. And unlike most North Korean missiles, it used solid fuel, rather than liquid. But it remained unclear how far the missile could fly. North Korea calls it a “mid-to-long-range” ballistic missile. But during the test, the missile flew 310 miles while reaching an altitude of 348 miles, according to South Korean officials. Flown on a standard trajectory, the same missile carrying a similar payload would have a range of about 780 miles, according to David Wright, co-director of the Global Security Program at the Union of Concerned Scientists. “If this test were conducted with a very light payload, as North Korea is believed to have done in past tests, the actual range with a warhead could be significantly shorter,” Wright wrote in a blog post. On May 22, Rodong Sinmun released pictures that it said were sent from a camera attached to the warhead of the Pukguksong-2. The images showed the Earth lying a great distance below. North Korea said that such photographs helped missile scientists check the warhead’s positioning and steering functions after it separated from the missile. The Pukguksong-2 could be a key steppingstone toward building an ICBM, said Kim Dong-yub, a defense analyst at the Institute for Far Eastern Studies at Kyungnam University in Seoul. By combining two or more engines of the type used on the Pukguksong-2, the North could create an engine powerful enough to carry an ICBM, he said. But most analysts say that North Korea is still years away from building a reliable ICBM. One of the challenges is to master “re-entry” technologies that can protect a nuclear warhead from intense heat and vibrations as it crashes through the Earth’s atmosphere. An ICBM warhead must endure far greater heat than a shorter-range ballistic missile like the Pukguksong-2. “South Korean and United States intelligence authorities believe that through yesterday’s test, North Korea has collected data meaningful in improving the reliability of its missile technologies,” Colonel Roh said. “But we need more analysis to determine whether the warhead had a stable atmospheric re-entry.” (Choe Sang-hun, “North Korea Missile Test Was Short but Informative, South Says,” New York Times, May 23, 2017, p. A-8)

KCNA: “Kim Jong Un, chairman of the Workers' Party of Korea (WPK), chairman of the DPRK State Affairs Commission and supreme commander of the Korean People's Army, supervised a test-fire of ground-to-ground medium-to-long range strategic ballistic missile Pukguksong-2. The test-fire of Pukguksong-2 was aimed to finally verify all the technical indexes of the weapon system and thoroughly examine its adaptability under various battle conditions, before its deployment at military units for action. The Supreme Leader issued an order to launch the missile at the observation post. Together with officials, he analyzed the results of the test-launch and expressed his great satisfaction over them, saying it is perfect. Saying with pride that the missile's hitting accuracy is very high and Pukguksong-2 is a successful strategic weapon, he approved the deployment of this weapon system for action. Now that its tactical and technical data met the requirements of the Party, this type of missile should be rapidly mass-produced in a serial way to arm the KPA Strategic Force, he said. He set forth the strategic tasks for
bolstering up the country's nuclear force. He expressed belief that the national defense scientists and workers at the munitions factories intensely loyal to the WPK would produce better and more Juche weapons, nuclear offensive means of Korean style. He had a photo taken with all the national defense scientists, technicians, workers and officials who carried out the successful test-launch. Accompanying him were Ri Pyong Chol, Kim Jong Sik, Jong Sung Il, Yu Jin, Jo Yong Won and other senior officials of the C.C., WPK and General Kim Rak Gyom, commander of the KPA Strategic Force.” (KCNA, “Kim Jong Un Supervises Test-Fire of Ballistic Missile,” May 22, 2017)

UNSC: “The members of the Security Council strongly condemned the most recent ballistic missile launch conducted by the Democratic People’s Republic of Korea on 21 May 2017. The members of the Security Council expressed their utmost concern over the Democratic People’s Republic of Korea’s highly destabilizing behavior and flagrant and provocative defiance of the Security Council by conducting this ballistic missile launch in violation of its international obligations under United Nations Security Council resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), and 2321 (2016). The members of the Security Council agreed that the Security Council would continue to closely monitor the situation and take further significant measures including sanctions, in line with the Council’s previously expressed determination. The members of the Security Council vowed to fully and comprehensively implement all measures imposed on the Democratic People’s Republic of Korea by the Security Council and strongly urge all other member states to do so in an expeditious and serious manner, particularly the comprehensive measures contained in resolutions 2321 (2016) and 2270 (2016), in response to the Democratic People’s Republic of Korea’s flagrant act of defying the will of the Security Council to denuclearize the Democratic People’s Republic of Korea emphasized on April 28 at the Ministerial Security Council meeting. The members of the Security Council called on the 1718 Committee to redouble its efforts to improve global implementation of all measures, including by implementing the relevant feasible recommendations of the Panel of Experts as soon as possible. The members of the Security Council stressed that the Democratic People’s Republic of Korea’s illegal ballistic missile activities are significantly contributing to its development of nuclear weapons delivery systems and are greatly increasing tension in the region and beyond. The members of the Security Council further regretted that the Democratic People’s Republic of Korea is diverting resources to the pursuit of ballistic missiles and nuclear weapons while Democratic People’s Republic of Korea citizens have great unmet needs. The members of the Security Council emphasized the vital importance of the Democratic People’s Republic of Korea immediately showing sincere commitment to denuclearization through concrete action and stressed the importance of working to reduce tensions in the Korean Peninsula and beyond. To that end, the Security Council demanded the Democratic People’s Republic of Korea conduct no further nuclear and ballistic missile tests. The members of the Security Council reiterated the importance of maintaining peace and stability on the Korean Peninsula and in North-East Asia at large, expressed their commitment to a peaceful, diplomatic and political solution to the situation, and welcomed efforts by Council members, as well as other States, to facilitate a peaceful and comprehensive solution through dialogue.” (UN Spokesperson, Security Council Press Statement on Democratic People’s Republic of Korea’s Ballistic Missile Launch, May 22, 2017)

“We mean to carry out a flexible review of private-sector exchange and other key issues dealing with inter-Korean relations in a way that does not damage the international community’s framework of sanctions against North Korea,” said Unification Ministry spokesperson Lee Duk-haeng. Lee’s remarks are noteworthy considering that they come amid a series of applications for contact with North Korea that organizations providing humanitarian aid to North Korea have submitted around the time of Moon Jae-in’s inauguration. “We believe the current rupture in inter-Korean relations is not desirable for the stability of the Korean Peninsula,” Lee said. Amid growing hopes that inter-Korean relations will improve under the new administration, a series of groups organizing social and cultural exchange and groups providing aid to North Korea have filed applications for contact, starting with the Korean Sharing Movement. In addition, the Korea NGO Council for Cooperation with North Korea (chairman Lee Je-hoon), a coalition of groups
providing aid to North Korea, filed an “indirect contact request” on May 10. They want permission to contact the North Korean office of the Korean Council for Reconciliation and Cooperation to discuss various aspects of humanitarian aid to the North. “While we cannot resume full-fledged dialogue at the present time because of a number of circumstances, I do think we should quickly reopen the communication network and the hotline at Panmunjom,” said Blue House National Security Advisor Chung Eui-yong when asked about inter-Korean dialogue. Chung made the comments while speaking to reporters following a meeting with the floor leaders of opposition parties at the National Assembly today. “We will gradually need to make an attempt to initiate dialogue, starting at the working level. And since it is our view that we can move forward with people-to-people exchange and social, cultural and sports exchange while respecting the system of sanctions against North Korea, we’ll have to start carefully reviewing those options now.” Moon has made clear on several occasions, both before and after his election, that he intends to use improved inter-Korean relations to work with neighboring countries to tackle the North Korean nuclear and missile issues. A report titled “The Governing Conditions and Orientation of the New Government” that was jointly completed on May 17 by the Minjoo Party’s election committee and the Democratic Institute called for expanding exchange: “Depending on the improvement of inter-Korean relations, it will be necessary to adopt a liberal stance toward private-sector cooperation and exchange with North Korea.” “Given the current rupture in inter-Korean relations, the new government just needs to provide the minimum amount of aid to North Korea permitted by international norms,” suggested Kim Yeon-cheol, a professor at Inje University. “The international agreements on sanctions against North Korea are outlined in the sanctions by the UN Security Council. To begin with, we should slowly and progressively permit what is permissible, taking the Security Council sanctions as guidelines.” Chung Eui-yong also told reporters that “we’re currently reviewing the idea of setting up a task force in the National Security Office to look into National Defense reform, the THAAD issue and how to strengthen the South Korea-US alliance.” (Jung In-hwan, “Moon Administration Considers Reopening Private Sector Inter-Korean Exchange,” May 23, 2017)

DPRK FoMin spokesman’s answer to a question raised by KCNA “over the fact that the U.S. and its followers are faulting the DPRK's test-launch of strategic ballistic missile Pukguksong-2: The officials in the field of national defense science and technology and the workers in the munitions field of the DPRK successfully carried out the test-launch of ground-to-ground medium-to-long range strategic ballistic missile Pukguksong-2 amid continued measures for bolstering the nuclear force of the country. As reported, the recent launch was aimed to finally confirm the technical specifications of the overall weaponry system of Pukguksong-2 series and fully examine their adaptability to various combat conditions before their deployment for action. This is part of the normal process for bolstering the military capabilities for self-defense and a process that has to be gone through for deployment. But the U.S. and its followers again published a UN Security Council press statement peppered with such rhetoric as "sanctions" and "denunciation." We flatly reject the press statement taking the advantages of the U.S. hostile policy toward the DPRK. Nothing favorable can be expected from the U.S. and its followers obsessed by inveterate repugnancy and hostility toward the DPRK. But it is absolutely ridiculous to see them finding fault with the DPRK’s every measure for self-defense. The DPRK substantially displayed the capabilities for mounting a nuclear attack at Hawaii housing the U.S. pacific forces command and the Pacific operational theatre including Alaska, and has built full capabilities for attacking the U.S. mainland, the stronghold of aggression. The U.S. and its followers' despicable act of taking issue with the DPRK's measures for bolstering nuclear force will only result in increasing our hostility to them and furt ering the efforts to diversify and modernize our own nuclear force.” (KCNA, “Foreign Ministry Spokesman Refutes U.S. Act of Criticizing Test Launch of Strategic Missile,” May 23, 2017)

China’s imports of North Korean goods in April fell below $100 million to the lowest in nearly three years, data showed, after China stopped buying coal from the isolated country and as calls mount for further economic sanctions. The world’s second-largest economy bought goods worth $99.3 million in April from North Korea, the lowest monthly tally since at least June 2014,
according to Chinese customs data. That compares with $114.6 million in March and $167.7 million a year earlier. A fifth of the April total was iron ore imports, which hit 285,000 tonnes, their highest since August 2014. That was up 10 percent from a month earlier and 2-1/2 times higher than a year earlier. The value of imports from North Korea has fallen month-on-month since December, the data showed. China's exports to North Korea eased to $288.2 million in April, down 12 percent from March. Exports for the first four months of the year were up 32 percent at $1 billion. Diesel shipments to North Korea in April more than halved from March to 2,606 tonnes and gasoline sales dropped 6 percent to 13,496 tonnes. (Josephine Mason, “China’s Imports from North Korea Sink as Coal Ban Bites,” Reuters, May 23, 2017) Is China really punishing North Korea for its repeated missile tests and its threats to the outside world? President Trump says yes, but economists poring over the data suggest the picture is far from definitive. “It’s not completely clear that China has quit North Korea cold turkey,” said Kent Boydston of the Peterson Institute for International Economics. Almost all of North Korea’s exports go to China, and coal makes up 40 percent of the total. But recent visitors to the Chinese-North Korean border report seeing coal trucks and trains crossing into China, and experts are not seeing signs that a major financial lifeline has suddenly severed. The exchange rate for North Korea’s won has been “remarkably stable,” Boydston said, as have rice prices. Both are considered key barometers in the extremely secretive country. “It doesn’t seem like there is any sort of distress in North Korea,” he said. According to China’s customs service, overall North Korean exports to China fell to $99.3 million last month, the lowest in almost three years. However, for the first four months of the year, exports from North Korea were roughly the same as last year, at almost $600 million. This included almost two full months of coal trade at relatively high prices. Coal exports to China in March and April were apparently zero, although Boydston suggested taking Chinese statistics with a “rock of salt.” Experts say Beijing can finagle its trade figures or categorize trade as something else to suit its political purposes. Exports of another key commodity, iron ore, skyrocketed. They were up 10 percent from March and 159 percent from the previous year, according to the data. North Korea’s imports have not significantly contracted. They were down between March and April but were up a whopping 32 percent to $1 billion in the first four months of this year, compared with the same period in 2016. “North Korea is running a bigger-than-ever deficit with China,” said William Brown, a North Korean analyst who teaches at the Georgetown University School of Foreign Service. How is North Korea supporting such an apparently large trade deficit? Economists are scratching their heads. It is not like Pyongyang has access to the international financial system. But in the meantime, proponents of tougher sanctions are waiting to see whether China will agree to sanctions through the United Nations Security Council to prohibit oil being supplied North Korea. “China has been hurting them on the earnings side and threatening to hurt them on the oil side,” Brown said. “The key thing is not the oil itself but the free oil that China provides as aid.” China provides almost all of North Korea’s oil, sending it through pipelines, and considers cutting it off an extreme measure. But as the missiles keep flying, Beijing has threatened that oil could be next. “If the North makes another provocative move this month, the Chinese society will be willing to see the UNSC adopt severe restrictive measures that have never been seen before, such as restricting oil imports to the North,” Global Times wrote in an editorial last month — three missile launches ago. (Anna Fifield, “China Says It Hasn’t Imported Any Coal for Two Months,” Washington Post, May 23, 2017)

Worried over what they described as President Trump’s erratic response to North Korea’s behavior, 64 Democratic legislators urged him to talk directly to the North Koreans — and warned that he would need congressional approval for any pre-emptive military strike. “Few decisions are more needing of debate than a move to launch attacks, or declare war, on a nuclear-armed state such as North Korea,” read a letter signed by the lawmakers, led by Representative John Conyers Jr. of Michigan, the last Democrat in Congress to have served in the 1950-53 Korean War. “In such a volatile region, an inconsistent or unpredictable policy runs the risk of unimaginable conflict.” The letter was sent against the backdrop of divergent signals from the Trump administration in recent weeks regarding North Korea’s nuclear and missile tests and its increasingly strident threats to use the “nuclear sword of justice” against the United States. The letter from congressional Democrats said Tillerson’s approach was the “preferred solution” and strongly urged Trump to adhere to it. “We respectfully request more information about the steps
your administration is taking to advance the prospects or direct negotiations that could lower the potential for catastrophic war and ultimately lead to the denuclearization of the peninsula," the letter said. It also asked Trump to specify steps he would take toward the reunification of Korean families long separated by the armistice that halted the Korean War, and the retrieval of the uncollected remains of American soldiers who had died in the conflict. Aides to Conyers said the 64 signatures on the letter symbolized the 64 years since the armistice was signed. They also pointed to an Economist/YouGov poll conducted from April 29 to May 2 that found that 60 percent of Americans, regardless of political affiliation, supported direct negotiations between the United States and North Korea. (Rick Gladstone, “Democrats Warn Trump against Preemptive Strike on North Korea,” New York Times, May 23, 2017)

President Moon Jae-in named two senior officials at the National Security Office (NSO), the presidential office said. Lee Sang-chul, a professor at Seoul’s Sungshin University and former defense ministry official, has been appointed the first vice chief of the NSO. Kim Ki-jung, a political science professor from Yonsei University, has been named the second vice chief. Cheong Wa Dae said. (Yonhap, “President Names Two Senior Officials at National Security Office,” May 24, 2017)

Hazel Smith: “The focus on Kim Jong Un as supreme leader is misplaced and dangerous. It obscures and prevents discussion of where real power lies in North Korea. State power today lies with a number of key individuals who are engaged in savage intra-elite political competition and who exercise power via control of North Korea’s security institutions. In turn, those institutions are used by powerful individuals to fight for political and physical survival. These zero-sum political competitions are also struggles for who controls the nation’s new foreign trading companies – the North Korean ‘chaebols’ – and the access to personal wealth and enhanced power offered by such economic leverage. The conventional prism of leadership omnipotence – the same prism that the North Korean leadership propaganda tries very hard to sell at home and abroad – is not very helpful. It precludes investigating who holds substantive power and why, and how power can shift. We must rethink intra-elite conflict in North Korea and the consequences of these conflicts for security planners dealing with North Korea. Our character sketches of Kim Jong Un are entirely speculative – and have virtually zero evidential foundation. Equally without authoritative foundation is the assumption that Kim’s holding of specific offices equates to the holding of actual, untrammelled power. Anyone who has ever had any contact with North Korea – diplomats, humanitarian officials, businesses – knows that the person in charge is rarely the formal office-holder. In Kim’s case, the jury is still out. In some ways, it is understandable why global analysts have focused entirely on Kim Jong Un in trying to analyze North Korean decision-making. They assume that, even if there were differences of opinion within North Korea’s power elite, then both the common interests of the elite and the concentration of power in the leader would make these differences inconsequential in terms of political decision-making in North Korea. Yet today both these assumptions are moot. There is a mass of evidence to show intra-elite divisions on a scale that has not been seen since the 1950s and there is, equally, not much evidence to suggest that Kim Jong Un has direct control over important levers of state power. There are few indications that any single individual has unchallenged domination of state institutions, although we see the continuing dominance of Hwang Pyong-so within key state, party and, most importantly, military security institutions. Hwang is one of the three vice-chairmen of the State Affairs Commission, whose chair is Kim Jong Un, and which replaced the National Defense Commission in 2016 as the senior executive body in the DPRK. Hwang also controls the surveillance and security mechanism of the military as director of the General Political Bureau [GPB] of the Korean People’s Army [KPA]. Hwang’s power appears to have been institutionally enhanced in 2016 when the Military Security Office (formerly Military Security Command) – responsible for rooting out anti-regime activity in the military and civilian sectors, which formerly reported directly to the National Defense Commission (the predecessor of the State Affairs Commission) – was subordinated to the General Political Bureau under Hwang’s authority. Hwang’s ascent to power came via brutal intra-elite warfare that involved principals and their families. Hwang’s wife is reported to have died, in either 2010 or 2012, as a result of an
interrogation ordered by Kim Won Hong, who was himself deposed as minister of State Security in 2017. It is also reported that in 2014 and 2015, Hwang had the Military Security Office arrest Kim Won Hong’s son, Kim Cheol, who, again reportedly, suffered a stroke during his interrogation. South Korean intelligence officials have recently stated that an ally of Kim Won Hong, Kim Yeong Cheol, former head of the powerful Reconnaissance General Bureau, one of a number of powerful military intelligence organizations, was forced to undertake ‘re-education’ in 2016. Intra-elite North Korean conflict is not founded on ideological differences. The largely unquestioned ideology is not communism but a lowest common denominator nationalism, not dissimilar in objective and articulation from the nationalism espoused in South Korea. The aim is unification and the underpinning ideology is that all Koreans share a nearly 5,000-year history that can be traced back to the national founder, Tangun, and are distinctive in blood line and culturally homogeneous. Today, as in South Korea, North Koreans live in a capitalist economy (although not a liberal one). Neither is intra-elite competition about state goals, the most important of which is to prevent regime change. The common understanding is that the nuclear ‘deterrent’ does just that – it deters military intervention from abroad. Another shared goal is that of economic development and an awareness that foreign investment is necessary to achieve this goal. It is this economic goal that may propel North Korea to respond positively to overtures from South Korean President Moon Jae-in to reopen negotiations on denuclearization – with the hope of a substantial package deal involving eradicating sanctions, gaining public capital inflows, and encouraging private international investment. Nor are regime rivalries fundamentally conflicts of bureaucratic interest of the different state institutions – e.g., the army, the Party, the security apparatus – although these institutions are mobilized in intra-elite conflict. In the war between the different centers of power in North Korea, control over the military security apparatus is paramount. The military is the only organization of the state that has maintained continuous funding and organizational capacity since the economic collapse of the 1990s (and even this is relative, as there are indications of some degradation of command and control systems). KPA security officials, because of their subordination to military discipline, have fewer opportunities than their civilian counterparts to participate in individual market activities, which effectively involve local security officials flouting the law to sustain their own living standards. The motor force of the new capitalist economy in which all of North Korea – government, institutions, and individuals – is embedded is provided by the North Korean foreign trading companies that grew fairly spontaneously from the ashes of the command economy that was destroyed by the famine and economic collapse of the 1990s. Similarly to the chaebol in South Korea or the zaibatsu in Japan, the most important of these enterprises established themselves (and defeated competition from other incipient capitalist businesses) as a result of their ability to secure backing from influential political individuals. In North Korea trading companies are legalized by the ‘waku’ or licensing system. Foreign trading companies must receive a ‘waku’ from an official entity – of the Party, military or the state, or a part of those entities, for example the different security apparatuses. The official in charge of these agencies acts as ‘patron’ of the individual trading company and, to a greater or lesser extent, the fortunes of those companies and the individuals who provide the license become interchangeable. There are many important trading companies, many of which are, in the context of analyzing intra-elite struggles, matter because they add another dimension to complexity in the power plays in Pyongyang. Capitalism breeds competition for profits and markets that in turn fuels political rivalries between key players among North Korea’s political elite. Lines of control of the big trading companies in North Korea are, predictably, somewhat murky but it is thought that Kim Won Hong’s son, Kim Yeong Chol, controlled the important Cheongbong Trading Group and his father controlled the Shinheung Trading Group. Hwang’s political attacks on father and son therefore constituted an attack on family economic security. Illustrative of the nexus of power/wealth and family struggles is the fate of the Seungri Trading Group, which was formerly controlled by Kim Jong Un’s uncle, Jang Song Thaek. After Jang’s execution in 2013, Seungri Trading was incorporated into the Korea Songsan Economic and Trading Group, today controlled by Hwang Pyong-so and de facto managed by his foster daughter, Ri Yeong-ran. The focus on Kim Jong Un misses a trick – perhaps the trick. The febrile, fragmented, and brutal competition between power-holders in North Korea looks by no means to be over and explains much more about North Korea’s decision-making than any assumption of omniscient leadership. This is well-illustrated by the recent arrests of US citizens in Pyongyang – perhaps best explained by one set of
security institutions demonstrating muscle, not to the outside world but to rival security institutions. The killing of Jang Song Thaek in 2013 and Kim Jong Nam in 2017 may be signs of a ruthless young leader eager to demonstrate his hardline credentials. An equally plausible explanation is that these were power plays by experienced political players designed to show to the inexperienced Kim Jong Un that the Kim family is no longer exempt from the fray. Given the intensity and ferocity of today’s intra-elite rivalries, rational actor behavior, in the sense of state-directed means-ends behavior in which the central state holds together all state institutions in the pursuit of a nationally determined strategy, is extraordinarily difficult. Internecine rivalry has also likely degraded command and control systems to the extent that coherent and consistent state security decision-making and implementation cannot be guaranteed. Elite priorities remain that of survival and that has come to mean physical survival in the face of internal enemies, which must seem much more imminently threatening than the long-anticipated intervention from abroad. “

5/25/17

Washington has recently finalized a four-point policy plan on North Korea that calls for applying “all available sanctions and pressure” to incite the country to change its course and ultimately resolve the nuclear standoff through dialogue, South Korean lawmakers said. Joseph Yun, special representative for North Korea policy at the US State Department, introduced the plan to a group of visiting lawmakers led by Rep. Kim Kwan-young of the minor opposition People’s Party. The department established four principles on North Korea: it will not recognize the communist country as a nuclear weapons state; impose all available sanctions and pressure; pursue no regime change; and resolve the problem through dialogue. President Donald Trump approved a comprehensive report detailing the strategy about two weeks ago, Kim quoted Yun as saying. While leaving open the possibility for talks, Yun stressed the current focus should stay on sanctions and pressure and that there would be no dialogue before Pyongyang shifts its attitude toward denuclearization. “The department officials questioned the possibility that the North would agree to talks, saying we should continue the sanctions campaign given no change in the North’s position,” the lawmaker told reporters in Washington. This may indicate possible future discord between Seoul and Washington, with President Moon Jae-in looking to a restart of inter-Korean dialogue and economic and humanitarian exchanges including the Kaesong industrial park and tours to Mount Kumgang. The lawmakers also expressed concerns about the confusion in South Korea over the ongoing deployment here of the Terminal High Altitude Area Defense system. Moon has pledged to seek parliamentary approval for the program but his ruling Democratic Party of Korea remains opposed to it. “It seemed if the THAAD dispute escalates to the extent where the deployment decision may be reversed, the US officials would take it very seriously,” Kim said, noting that if put up for a vote, the plan will likely pass. “The US officials apparently didn’t understand why we debate about a defensive weapon,” said Rep. Jun Hee-kyung of the main opposition Liberty Korea Party. Democratic Party Rep. So Byung-hoon conveyed skepticism among U.S. academics toward a resumption of the Kaesong and Mount Kumgang initiatives in the face of North Korea’s provocations and nuclear development. “Some of those at think tanks were very negative about their restart, asking what economic benefits South Korea would gain from that,” So said. (Shin Hyon-hee, “Trump’s N.K. Policy Calls for Utmost Pressure until Talks: Lawmakers,” Korea Herald, May 26, 2017)

5/26/17

The U.S. wants to “pre-negotiate” with China a tough new United Nations sanctions regime against North Korea before Pyongyang conducts another missile or nuclear weapons test, a senior U.S. state department official said. “We’re discussing with them a new UN Security Council resolution that would be pre-negotiated so we wouldn’t have to undergo this very lengthy delay between the time that something happens and the time we can actually draw up a [resolution],” Susan Thornton, acting assistant secretary for east Asian and Pacific affairs, told reporters in Beijing. She added that Washington had spoken with Beijing about targeting “specific companies” that were the “biggest money earners for the [North Korean] regime”. U.S. negotiations are likely to focus on China as the toughest of the five permanent members of the Security Council, which would impose any new sanctions. In a departure from the practice of previous administrations, in
April Trump appeared to link progress on Sino-US security matters, such as resolution of the North Korean nuclear crisis, to trade and economic issues. “I explained to [Xi] that a trade deal with the U.S. will be far better for them if they solve the North Korean problem!” the president said at the time in a tweet. Thornton said there was no “clear-cut” linkage between Sino-US security and economic issues but also admitted that the two spheres could not be completely separated from each other. “If China is not working with us on this major regional security threat of North Korea, where they hold a lot of cards and leverage, then there are going to be problems in other parts of our relationship,” she said. “It's not a clear-cut linkage but... either you’re helping on this major problem that we have and if you’re not then why would we be holding back [punitive measures] on anything else?” Despite the escalation in the North Korean nuclear crisis over recent months, Chinese officials have maintained their official position that Pyongyang and Washington are both to blame for the tensions, and urged the two sides to hold negotiations. Beijing fears the potential consequences, including a refugee crisis along its border with North Korea, if Kim Jong Un’s regime were to suddenly collapse. “Chinese tolerance for potential instability [in North Korea] is low,” Thornton said. “They don’t want to cut off the livelihoods of the North Korean people.” Sino-US relations have been strained over the past week by the Trump administration’s first protest to the Chinese military over an aerial encounter between the two countries’ air forces. That was followed yesterday, by the U.S. Navy’s “freedom of navigation operation” challenging Beijing’s maritime claims in the South China Sea since Trump took office. Thornton said Washington’s South China Sea policy had not changed under Trump’s administration. In another sign of Washington’s willingness to dial up the rhetoric, the assistant secretary spoke on the record. Embassy officials had previously indicated it would be an off-the-record briefing. (Charles Clover and Tom Mitchell, “U.S. Seeks to ‘Pre-Negotiate’ North Korea Sanctions, Financial Times, May 26, 2017) On North Korea, the U.S. has seen a "shift in emphasis" in China's approach to its fellow communist neighbor, Thornton said. "They've said that they have stepped up border inspections, beefed up sort of the policing function on the border, stepped up customs inspections," she said. Beijing has also done "a number of other things on companies" that have dealings with North Korea, Thornton said, without giving details. The U.S. has been talking to Beijing about taking action against specific firms and is waiting to see what sort of action China will take, she said. China has signed on to U.N. sanctions and suspended coal imports from North Korea through the rest of the year, but has been generally reticent about what other steps it may be taking to use its leverage as Pyongyang's most important trading and diplomatic partner. Asked about Thornton's remarks, Chinese foreign ministry spokesman Lu Kang said China remained committed to "strictly implementing" U.N. sanctions but offered no details or what other measures it might be taking. Lu also reiterated China's call for a renewal of six-nation denuclearization talks that have been on ice since 2009, saying the parties should "be flexible, meet each other halfway, and return to the negotiating table as soon as possible." Thornton said the U.S., China and others were also in talks on a future U.N. resolution on North Korea in order to cut the time needed to take action following another nuclear or missile test. "So we're looking at trying to get going on the next set of major measures that would be taken in the wake of another provocation," Thornton said. Such measures could include ratcheting up economic pressure on the North by targeting trade in consumer goods, possibly including textiles, she said. Despite Lu's comments later in the day, Thornton said Beijing officials now realize more pressure is needed before dialogue can be restored. "And so they know now that they don't have, I think, as much time to try to bring the North Koreans to the table, get their calculus changed and get them to the negotiating table as they may have previously thought," she said. Adding to that, Beijing also seems to have recognized that North Korea's actions were "undermining China's own security in pretty major ways," Thornton said. "They do recognize that it's going to be pretty hard to have a dialogue while the North Koreans are shooting off missiles," she said. (Christopher Bodeen, “U.S. Diplomat: China Tightened Border Controls with N. Korea,” Associated Press, May 26, 2017)

The Ministry of Unification approved private person-to-person contact with North Koreans by approving the nongovernmental organization Korean Sharing Movement’s humanitarian program, the first such contact approved in the Moon Jae-in administration and the first since the fourth nuclear test by the North last year. “The government will respond firmly to provocations from the
North but will also maintain a flexible stance in reviewing possible humanitarian support and exchanges at the private-level, within the boundaries set up by the international sanctions on North Korea,” said Lee Yoo-jin, deputy spokesperson of the Unification Ministry. “The ministry has approved Korean Sharing Movement’s malaria prevention program at the border areas.” Some 10 private organizations have requested and are awaiting the ministry’s approval for humanitarian programs into the North. “The preventive measures against malaria need to be executed from the end of May for them to be effective,” said Kang Young-sik, secretary-general of the Korean Sharing Movement. “We will try to contact the North via fax messages and try our best to deliver the goods as soon as possible.” The Unification Ministry will have to dole out additional approval for the delivery of goods to the North, which in the case of malaria prevention, includes insecticide and basic medical kits. “The preventive measures on the border areas is needed for the people of both the South and the North,” said a ministry official. “There will likely be a positive review for goods to be delivered onto the North for the program.” The Ministry of Unification in its report to the Moon administration’s advisory committee for state affairs planning on Friday mentioned possible policies to improve the bilateral relations between the North and the South. “[The committee and the ministry] agreed that the ministry needs to play a more engaged role in leading a new type of bilateral relations for peace on the Korean peninsula,” said the Democratic Party Rep. Park Kwang-on, spokesman of the advisory committee for state affairs planning. “We will be systematically reviewing the policies of the new administration together.” The ministry is also looking to establish a type of bilateral bill of rights with the North, which was one of the campaign pledges of President Moon to organize the existing agreements between the North and the South, including the July 4, 1972, South-North Joint Communiqué and the 1991 inter-Korean Basic Agreement, to create a renewed and re-established agreement. (Jeong Yong-soo and Kim Rok-hwan, “Inter-Korean Contact Improved,” JoongAng Ilbo, May 26, 2017) Foreign Minister nominee Kang Kyung-wha, who served in various human rights-related posts at the UN, also said Thursday that humanitarian aid should be provided apart from political consideration, calling it a “universal value of mankind.” Last year, the government gave the green light only to Eugene Bell Foundation Korea, an international organization that specializes in providing tuberculosis medication to the impoverished country. The KSM said it will discuss the shipment of malaria prevention goods with its North Korean counterparts via fax and email. Together with Gyeonggi Province, the group has since 2008 been undertaking joint prevention projects with North Korean authorities, dishing out fumigator trucks, diagnostic kits, mosquito nets, drugs and other supplies. If the work proceeds smoothly, it plans to dispatch officials in mid-June to the North, including Rep. Won Hye-young of the ruling Democratic Party of Korea who co-heads the group, according to its Secretary-General Kang Young-sik. “Malaria prevention is a project that’s necessary for both Koreas, because disease and insect pests come and go across the border, so the work should be done in the North to ensure no one contracts malaria in the border areas in the South,” Kang told the Korea Herald. According to Gyeonggi Province, the number of malaria patients in border regions here sharply dropped from 1,616 in 2007 to 339 in 2013. Kang says the joint efforts played a “decisive role.” Since the program’s halt in 2013, the figures have surged again, reaching 458 in 2014, 545 in 2015 and 492 in 2016. “We’ve been unable to carry out the activity for the past four years, and if this vacuum continues for a few more years, the figures would skyrocket again in both the North and South,” Kang said, adding the goods should be shipped no later than May or June, given higher risks of malaria in summer. (Shin Hyon-hee, “South Korea Oks First Aid to North Korea since Moon Took Office,” Korea Herald, May 26, 2017)

"President Moon is highly interested in" inter-Korean economic cooperation. Lee Su-hoon, professor at Kyungnam University who heads the security affairs section at the State Affairs Planning Advisory Committee, said ahead of the Ministry of Unification's policy report to the committee. “The Korean Peninsula new economy map is a very important key” in solving the job shortage issue as well as rejuvenating the economy,” Lee said, referring to Moon's policy vision released while he headed the then opposition New Politics Alliance for Democracy party in 2015. The policy vision centers on forming a joint economic community between the two Koreas as a means to revive economic growth and bring peace to the peninsula. Lee said now is the time to openly search for ways to unify the two Koreas in collaboration with the public, hinting at the Moon administration’s focus on expanding engagement with the North.” The (option of) forging
North Korea launched a new short-range ballistic missile, similar to a Scud, which flew about 280 miles to land inside Japan’s exclusive economic zone. This launch is North Korea’s third in three weeks and its 12th this year. “The firing of the ballistic missile of this time is extremely problematic in terms of safety of aircraft and ships,” Suga Yoshihide, Japan’s chief cabinet secretary, told reporters in an emergency news conference. “It also clearly violates resolutions adopted by the United Nations Security Council.” The missile was launched shortly after 5 a.m. local time from an airfield near Wonsan, on North Korea’s east coast, according to the U.S. Pacific Command and South Korea’s joint chiefs of staff. “The missile was tracked for six minutes until it landed in the Sea of Japan,” Pacific Command said in a statement, adding that it was working to assess the missile. “We continue to monitor North Korea’s actions closely,” Moon Jae-in, South Korea’s new president, ordered an emergency national security council meeting to discuss the latest launch, and his Joint Chiefs said that the South Korean military was “maintaining full preparedness.” Before the latest launch, U.S. Defense Secretary Jim Mattis said that war with North Korea would “probably be the worst kind of fighting in most people’s lifetimes.” “The bottom line is it would be a catastrophic war if this turns into a combat if we’re not able to resolve this situation through diplomatic means,” Mattis told CBS News’s “Face the Nation” yesterday. (Anna Fifield, “North Korea’s Latest Ballistic Missile Launch Lands in Japan’s Economic Zone,” Washington Post, May 29, 2017)

KCNA: “Respected Supreme Leader Kim Jong Un guided a test-fire of ballistic rocket equipped with precision guidance system. At a launching site, he looked round a caterpillar self-propelled launching pad vehicle and a ballistic rocket based on precision guidance system. He learned in detail about the tactical and technical specifications of the rocket and expressed satisfaction over the fact that its preparatory process before launching was further automated than the preceding Hwasong serial rockets to complete the system for markedly reducing the launching time so as to rapidly contain the enemies’ armed provocations. After being reported about its test-fire program at the command post, he ordered the launch of ballistic rocket. The test was conducted in the way of medium range firing for minute remote observation to the last-stage guidance of warhead. It is aimed to verify the technical indices of new-type precision guided ballistic rocket capable of making ultra-precision strike on the enemies’ objects at any area and examine the reliability of caterpillar self-propelled launching pad vehicle, newly designed to operate under various battle conditions. The ballistic rocket flew toward the east sky where the day was breaking and correctly hit a designated target point with deviation of seven meters after flying at the medium range. The test-fire verified the flight stability of ballistic rocket loaded with fin-controlled warhead in the active flying section and reconfirmed the accuracy of velocity correction and attitude stabilization system by a small heat jet engine in middle flying section. It also verified the accuracy of ultra-precision guidance in the re-entry section by more precise late-stage guidance system and fully confirmed the running features in different geographical conditions of newly-developed caterpillar self-propelled launching pad vehicle and features of its automated launching preparation process. Seeing the successful test-fire of ballistic rocket, he said that the rocket, which appeared for the first time at the square of military parade marking the Day of the Sun, seems to be sharp shooter’s arms of precision hitting a target and such accurate hit would dig
against North Korea’s nuclear and missile systems, recognition, officials say, that the efforts had solidified the North had “caught the U.S. unaware.” The C.I.A. disputes that, saying it has been tracking newer ones by solids.

year that Washington had given two kinds of submarine missiles a surprise. Jeffrey Lewis, an expert in North Korean rocketry at the Middlebury Institute, noted last year: “It can give you less warning time.” Missile experts say the North’s preparation time for an attack can drop from hours to minutes. “It’s concerning,” Dr. Coyle said. American military surveillance planes and satellites could track missile transporters and convoys of fuel trucks. The test, scheduled for tomorrow, is of the more classic antimissile defenses that the United States has struggled to make work since the Eisenhower administration. Yet it is the first since Trump took office vowing to “solve” the North Korea problem, and since he began talking about ratcheting up economic sanctions and raising military pressure on the North. But Trump is discovering what Obama learned before him: Intercepting intercontinental missiles over the Pacific is exquisitely hard, even when the tests, like the one scheduled for this week, are designed to give the interceptor its best shot. Incoming warheads move extraordinarily fast — more than four miles a second. In war, the interceptors in Alaska and California would race skyward and release speeding projectiles meant to obliterate incoming warheads by force of impact — what experts call hitting a bullet with a bullet. Critics warn that the system would do worse in war, since the flight tests are highly scripted. They note that no mock weapon has moved nearly as fast as a true enemy warhead. Portraying this week’s test as more realistic, Vice Adm. James D. Syring, the director of the Pentagon’s Missile Defense Agency, has called it “the first intercept of an ICBM-range target.” That means it is meant to approach the warhead speed of a true intercontinental ballistic missile. While mock enemy missiles are always launched from Kwajalein, an atoll in the Pacific, North Korea uses large trucks to move around the intercontinental missiles it is developing, adding elements of surprise. Paul Bracken, a Yale military expert who is working on a book about mobile missiles, said foreign states saw movable arms as inherently safer from American strikes. In the past, the North’s reliance on liquid-fueled missiles eased the targeting job for antimissile interceptors. American military surveillance planes and satellites could track missile transporters and convoys of fuel trucks. The process of fueling a missile takes several hours, making it vulnerable to a pre-emptive strike, and giving the antimissile systems on the West Coast time to lock in on expected trajectories. With the new generation of weapons, the solid fuels are packed into the missile body in the factory, eliminating the need for fueling in the field. So the preparation time for an attack can drop from hours to minutes. “It’s concerning,” Dr. Coyle said. “It can give you less warning time.” Missile experts say the North’s shift to solids came as a surprise. Jeffrey Lewis, an expert in North Korean rocketry at the Middlebury Institute, noted last year that Washington had given two kinds of submarine missiles — one fueled by liquids, and a newer one by solids — the same identifier code. The lack of a distinction, he said, suggested that the North had “caught the U.S. unaware.” The C.I.A. disputes that, saying it has been tracking solid-fuel developments closely. Nonetheless, when the new C.I.A. director, Mike Pompeo, took office, his first organizational step was to create a unit to unify all analysis and covert operations against North Korea’s nuclear and missile systems, recognition, officials say, that the efforts had
5/30/17

DPRK FoMin spokesman’s answer to a question raised by KCNA: “At the summit held in Sicily of Italy on May 26-27, the U.S. and its followers made public a joint statement slandering the DPRK. It is those seven nations which carried out most of the nuclear and missile tests that have been and who render regional situation extremely tense through competitive sales of war means like attack missiles to south Korea. Yet, they are urging the DPRK to scrap its nuclear deterrence meant for self-defense of the country. This is like a guilty party filing the suit first. The G-7 summit is a place where those nuclear- and missile-haves put their heads together to discuss how to pressure weak countries and those incurring their displeasure. The U.S. and its followers are seriously mistaken if they think they can deprive the DPRK of its nuclear deterrence, the nation's life and dignity, through sanctions and pressure. The increased sanctions and pressure will compel the DPRK to further step up its moves for diversifying and modernizing its nuclear force.” (KCNA, “DPRK Foreign Ministry Spokesman Refutes G-7 Summit Joint Statement,” May 30, 2017)

South Korean President Moon Jae-in and his Japanese counterpart Abe Shinzo Abe agreed on the need for more sanctions and pressure on North Korea, saying now is not the time for dialogue during a 20-minute phone conversation one day after the North's new ballistic missile test, Moon's spokesman Park Soo-hyun said. “I agree with the prime minister's words that now is not time for dialogue with North Korea, but a time to heighten sanctions and pressure," Park quoted Moon as saying. The president added, however, that the ultimate goal of sanctions and pressure is to bring Pyongyang back to negotiations on its complete denuclearization, the spokesman said. “That is why the international community must on the one hand respond firmly and on the other hand continue to send the message that dialogue is possible if North Korea gives up its nuclear development,” Moon said, according to Park. (Yonhap, “Moon, Abe Agree on Need for More Sanctions on N. Korea,” May 30, 2017)

KCNA: “The gangster-like U.S. imperialists are making all the more desperate in their moves to ignite a nuclear war despite the repeated warnings of the DPRK. On May 29, the U.S. imperialists committed a grave military provocation by letting a formation of infamous B-1B nuclear [?] strategic bombers fly over south Korea once again to stage a nuclear bomb dropping drill. The formation of B-1B took off Guam at the dawn of the day and flew over the 80kms of the east of Kangrung on the East Sea of Korea near the Military Demarcation Line. It frantically staged a joint drill making a precision strike against the DPRK's major objects together with pursuit and assault planes on nuclear aircraft carrier Carl Vinson which is conducting a joint naval drill with the puppet navy on the East Sea of Korea. And air pirates of the U.S. imperialists waged a drill for getting familiar with order of joint action when flying over the Korean peninsula with fighters of the puppet air force. Such military provocation of the U.S. imperialists is a dangerous reckless racket for bringing the situation on the Korean peninsula to the brink of a war. What should not be overlooked is that they staged the nuclear bomb dropping drill with nuclear strategic bombers involved once again, timed to coincide with the war drill against the DPRK with the Carl Vinson and Ronald Reagan nuclear aircraft carrier strike groups deployed on the East Sea of Korea. The U.S. imperialists' ever-more reckless military provocation clearly proves that their talk about
proved that an initial draft report contained information saying six launchers were stored in a four additional launchers.

Defense Ministry officials questioned by the Blue House acknowledged the omission, and that the security adviser for President Moon Jae-in, of the four launchers in the briefing. Yoon said that all Defense Ministry officials questioned by the Blue House acknowledged the omission, and that the four additional launchers were, in fact, mentioned in a draft of a report for the briefing. "Our probe proved that an initial draft report contained information saying six launchers were stored in a

"dialogue" is nothing but hypocrisy to disarm the DPRK and their wild ambition to eliminate the DPRK with nukes remains unchanged even a bit. Their nuclear war provocation redoubles the will of our army to revenge the warmongers hell-bent on a war against the DPRK. The U.S. imperialist warmongers should not forget even a moment that their increasing danger of a nuclear war on the Korean peninsula would precipitate a disaster whereby the U.S. mainland turns into a scorched-earth.” (KCNA, “U.S. Imperialists’ Reckless Military Provocation under Fire,” May 30, 2017)

The Blue House said the Ministry of National Defense intentionally failed to mention four additional launchers for the U.S.- antimissile system known as Terminal High Altitude Area Defense (thaad) system at a briefing May 27. “After our investigation, we have confirmed that the Defense Ministry intentionally omitted the delivery of the launchers in its report [to the National Security Office],” said Yoon Young-chan, senior presidential secretary for public relations, in the Blue House press room. The Blue House’s claim is a direct contradiction of the Defense Ministry. Yesterday, it claimed it informed Chung Eui-yong, chief of the security office and de-facto security adviser for President Moon Jae-in, of the four launchers in the briefing. Yoon said that all Defense Ministry officials questioned by the Blue House acknowledged the omission, and that the four additional launchers were, in fact, mentioned in a draft of a report for the briefing. “Our probe proved that an initial draft report contained information saying six launchers were stored in a
military camp. But after reviews [by senior defense officials], we learned those lines were taken out,” Yoon continued. “Instead, it vaguely stated [the equipment] had been brought in [to the country].” Asked how vague the briefing was, a Blue House official said a person who read the final report would not know the four launchers had been delivered. The Blue House official said Lee Sang-chul, first deputy chief of the National Security Office, grew suspicious about the final report and asked a defense ministry official for more details following the briefing. He learned that the four launchers had been brought into Korea. Lee reported it to Chung the next day. After being tipped off about the four additional launchers, Chung asked Defense Minister Han Min-koo during a luncheon Sunday whether they had indeed been delivered to Korea in addition to the two launchers already deployed to Seongju in North Gyeongsang in April. “I heard that four launchers were transferred here,” Chung was quoted as saying to Han by Yoon. The military chief didn’t acknowledge it, but instead asked Chung, “Have they really?” according to the Blue House. The conversation between Han and Chung fueled suspicion that the military was trying to keep President Moon and his office in the dark over the THAAD deployment, knowing that the Moon government is not in favor of it. If Han lied to the top security adviser to the president on May 28, it could raise serious questions about breach of trust as the top military official. The Blue House official did not rule out the possibility that the minister had lied, saying reporters should ask Han about it. Yesterday, the Blue House revealed that the Defense Ministry had not reported the transfer of the four launchers to the Presidential Advisory Commission on State Affairs Planning during a briefing on May 25, and that Moon belatedly confirmed delivery of the four launchers on May 29 in a telephone conversation with minister Han. Moon was quoted as saying it was “extremely shocking” that the four launchers were brought in clandestinely. In response to the Blue House’s statement, Defense Minister Han said today he did not order descriptions of the delivery of the launchers to be omitted from the briefing. “I did not make such an order (to omit the delivery part),” the minister told reporters at the Defense Ministry. Han said lower level officials might have taken the information out, thinking that the transfer of the four launchers was implied in the final report. On his luncheon with security adviser Chung, Han signaled that his chat with Chung might have been taken out of context, saying, there could have been subtle “differences in nuance and perspective.” The Blue House acknowledged today that some details about the deployment should be hidden from the public for national security’s sake. But it stressed misleading the presidential office was a far graver issue. The Blue House’s aggressive moves in dealing with the THAAD controversy suggest that President Moon will order an extensive reshuffle of the military leadership, with Minister Han likely to be the first head to roll. Moon could also use the very public controversy over the four launchers as a negotiating card during his summit meeting with President Donald Trump, expected to be held later this month in Washington. Trump has said Seoul should pay $1 billion for the THAAD, although other members of his administration have rejected that claim. He also said he wants the United States to give his administration some more time to conduct an environmental impact assessment and discuss the matter at the National Assembly. “Even if it takes time, it is an expense that we have to pay as a democracy,” Moon was quoted as saying. The U.S. Forces Korea began installing key components of the THAAD battery on a former golf course in Seongju County, North Gyeongsang on April 26 - less than two weeks before the May 9 presidential election. Despite protests by Beijing and Moscow, Seoul and Washington agreed on the deployment in July last year, during the presidency of Park Geun-hye. The rushed deployment of the antimissile system took place while the country was under the leadership of an acting president after Park was impeached and removed from office in March. A THAAD battery typically consists of six truck-mounted launchers, 48 interceptors (eight per launcher), a fire control and communications unit, and powerful AN/TPY-2, or X-band, radar. The deployment in April included the radar system and two missile launchers and interceptors used with them. During the campaign, Moon made clear his objection to the rushed deployment. He maintained on the campaign trail the Thaad deployment should be reviewed by the National Assembly and an incoming government before a conclusion was reached on the contentious issue. Park Soo-hyun, presidential spokesman, said Moon met with Senator Richard Durbin, the Democratic whip, who paid a visit to the Blue House as part of a trip to Korea. Asked by Durbin about the latest series of news reports concerning the THAAD deployment, Moon said he does not treat lightly the agreement between Seoul and Washington to deploy the battery, although it was made by his predecessor. “My order for the
South Korea decided to permit a civic group to contact North Koreans to prepare for a joint event to mark an inter-Korean summit 17th anniversary slated for next month. It may lead to the first joint commemoration of the 2000 summit in nine years despite heightened tensions over the North’s nuclear and missile programs. Yesterday, the non-government organization made the request for government approval for a plan to meet its North Korean counterpart to discuss the anniversary of the first meeting of the two Korean leaders held on June 15, 2000. The two sides agreed during a meeting in China in February to hold the event in Pyongyang or Kaesong in North Korea. The NGO officials contacted the North Koreans without government approval. (Yonhap, “S. Korea OKs NGO’s Contact with N. Korea on Summit Anniversary,” May 31, 2017)

A U.S.-rafted resolution circulated to the U.N. Security Council would add 15 North Korean individuals and four entities linked to the country’s nuclear and missile programs to a U.N. sanctions blacklist. The resolution would not impose any new sanctions over North Korea’s missile tests, something that China has opposed. The final draft, obtained today by the Associated Press, is expected to be put to a vote tomorrow afternoon, diplomats said, speaking on condition of anonymity ahead of an announcement. The proposed resolution would impose a global travel ban and asset freeze on a range of North Koreans from the man believed to head overseas espionage operations and foreign intelligence collection to officials who control the media and key government and military appointments. The Vietnam representative of a bank and the heads of two companies would also face sanctions. The draft would also freeze the assets of two trading companies, a bank and the Strategic Rocket Force of the Korean People’s Army, which is in charge of all ballistic missile programs. The Security Council has already imposed six rounds of sanctions on North Korea, and the United States has been pushing for new and tougher measures. But China’s U.N. ambassador, Liu Jieyi, made clear last week that Beijing’s top priority is to restart talks with North Korea following its multiple tests to try to reduce tensions, rather than impose new sanctions. The draft resolution doesn’t call for any new sanctions, but it would add significantly to the U.N. blacklist of individuals and entities with links to North Korea’s missile and nuclear programs. That list currently names 39 individuals and 42 entities and groups subject to sanctions. One diplomat said all five permanent veto-wielding members — the U.S., China, Russia, Britain and France — had agreed to the proposed additions. The first individual on the proposed new blacklist is Cho Il U, believed to be the overseas espionage and intelligence chief who is identified as the director of the Fifth Bureau of the Reconnaissance General Bureau. Another key figure on the list is Kim Chol Nam, president of Korea Kumsan Trading Co., which procures supplies for North Korea’s atomic energy department and serves as “a cash route” to North Korea. The company would also be added to the sanctions list. Others facing possible sanctions include: Kim Tong-Ho, Vietnam representative for Tanchon Commercial Bank, which is North Korea’s main “financial entity for weapons and missile-related sales;” Pak Han Se, vice chairman of the government committee that oversees ballistic missile production and directs activities of Korea Mining Development Corp., the country’s “premier arms dealer and main exporter of goods and equipment related to ballistic missiles and conventional weapons;” Ri Yong Mu, vice chairman of the State Affairs Commission, which directs and guide all military, defense and security-related affairs in the country, “including acquisitions and procurement.” The draft resolution expresses “serious concern” that North Korea continues to violate U.N. resolutions with repeated launches and attempted launches of ballistic missiles, noting that these tests contribute to development of its nuclear weapons delivery systems. It expresses “gravest concern” that the North’s nuclear and missile activities are generating “increased tension in the region and beyond” and continue to threaten international peace and security. The proposed resolution would condemn North Korea’s nuclear and ballistic activities “in the strongest terms” and reaffirm the Security Council’s demand that Pyongyang abandon all nuclear weapons and programs and halt all nuclear and missile tests. It would also reiterate the importance of maintaining peace and stability on the Korean peninsula and in northeast Asia, express the council’s commitment “to a peaceful,
diplomatic and political solution to the situation,” and welcome efforts “to facilitate a peaceful and comprehensive situation through dialogue.” (Edith M. Lederer, “Draft U.N. Resolution Would Add 15 North Koreans to Blacklist,” Associated Press, June 1, 2017)

The U.S. Department of the Treasury has unveiled several new North Korea sanctions designations on both Russian and North Korean individuals and entities, a press release published on Thursday reveals. The new designations from the Treasury’s Office of Foreign Assets Control (OFAC) pertain to Executive Orders (EO) 13382, 13687 and 13722. The EO’s and Thursday’s sanctions target WMD proliferators, the Government of North Korea, the Worker’s Party of Korea and their supporters, as well as the country’s revenue earned from its commodity, energy and financial service industries. “The United States will continue to target individuals and entities responsible for financing and supporting North Korea’s nuclear weapons and ballistic missile programs, and will continue to increase pressure on this hostile regime,” said John E. Smith, Director of OFAC, according to the press release. The designations target a Russian individual and entities, including the Independent Petroleum Company (IPC), a company worth USD$4 billion, according to Bloomberg News. “IPC is a Russian company that has signed a contract to provide oil to North Korea and reportedly has shipped over $1 million worth of petroleum products to North Korea,” the OFAC statement read. “IPC also may have been involved in circumventing North Korean sanctions. OFAC also designated one of IPC’s subsidiaries, AO NNK-Primornefteproduct.” NK News previously identified Primornefteproduct as a possible North Korea oil supplier in 2015. A Russian national – Igor Aleksandrovich Michurin – and a Moscow-based company called Ardis-Bearings LLC, for which Michurin is listed as director, was also added to the list. According to OFAC, Ardis-Bearings LLC supported the Korea Tangun Trading Corporation, sanctioned by the UN in 2009 for “being engaged in or providing support for, including through other illicit means, DPRK’s nuclear-related, other weapons of mass destruction-related and ballistic missile-related programs.” The Korean People’s Army (KPA), Ministry of People’s Armed Forces (MPAF) and the State Affairs Commission (SAC) were included in the latest round of sanctions for being controlled entities of the North Korean Government and for their involvement in military, nuclear and WMD programs. OFAC also targeted the Korea Computer Center (KCC), North Korea’s primary software developer. “The KCC generates money for the North Korean regime through software development and programming … The KCC is reported to have overseas locations in Germany, China, Syria, India, and the Middle East,” OFAC said. “As of 2014, KCC allegedly earned foreign currency for the UN- and U.S.-designated Munitions Industry Department, which is responsible for overseeing North Korea’s ballistic missiles,” it added. Two North Korean individuals identified as Su Kwang Kim and Song Hyok Ri, were also added to the designation list. Kim, OFAC says, is an official of the North Korean intelligence organization – the Reconnaissance General Bureau (RGB). Kim was previously identified by a UN Panel of Experts (PoE) in 2015 as an RGB operative who had infiltrated the World Food Program (WFP) in Rome. Ri was designated for activities pertaining to North Korea’s financial services, and according to OFAC, was a Beijing-based official for the already designated Koryo Bank and Koryo Credit Development Bank. Ri “has reportedly established several front companies in order to procure items and conduct financial transactions on behalf of North Korea,” OFAC said. North Korea’s Songi Trading Company and the Korea Zinc Industrial Group were also designated for being involved in exporting coal and zinc separately from the DPRK. UN Security Council Resolution 2321, adopted in November 2016, also prohibits the export of coal and zinc from North Korea. (Hamish Macdonald, “U.S. Designates Russian Individuals, Entities in New N. Korea Sanctions,” NKNews, June 1, 2017)

Richard Haass: “Every new U.S. administration takes several months to staff itself properly, master new and often unfamiliar responsibilities, and develop a comprehensive strategy for American foreign policy. The Trump administration’s start has been especially rocky. But the administration has already executed a noticeable course shift on foreign policy and international affairs, exchanging some of its early outsider rhetoric and personnel for more conventional choices. If it can continue to elaborate and professionalize its new approach, it could achieve a number of successes. But for that to happen, the administration will have to act with considerably
greater discipline and work to frame its policies toward regional and global issues as part of a coherent, strategic approach to international relations that benefits the United States, its allies and partners, and the world at large. President Donald Trump has properly concluded that the greatest threat to U.S. national security is North Korea’s accelerating nuclear and missile programs, which may give Pyongyang the ability to launch nuclear-tipped missiles at the continental United States in a matter of months or at most years. The president also seems to have concluded, correctly, that several decades of U.S. policy, mostly consisting of sanctions and on-again, off-again negotiations aimed at ridding North Korea of nuclear weapons, have failed. The challenge now is to choose among the three plausible alternative options for moving forward: acceptance, military intervention, or more creative diplomacy. A fourth possibility, that of regime change, does not qualify as a serious option, since it is impossible to assess its chances or consequences. In theory, the United States and other powers could accept a North Korean nuclear capability and rely on deterrence to lower the risk of an attack and missile defenses to reduce the damage should one occur. The problem is that deterrence and defenses might not work perfectly—so the acceptance option means living with a perpetual risk of catastrophe. Moreover, even if Pyongyang were deterred from using the weapons it developed, it would still be able to transfer them to other actors for the right price. And even if its nuclear capability were never used or transferred, acquiescence to North Korea’s continued possession of nuclear weapons would further dilute the nonproliferation regime and conceivably lead Japan and South Korea to rethink their nonnuclear postures. Military intervention could be either preventive (moving deliberately to destroy a gathering threat) or preemptive (moving quickly to head off an immediate one). The problem here is that any such strike would be a huge leap into the unknown with possibly devastating consequences. Officials could not know in advance just what a military operation would accomplish and how the North Koreans would react. Given Pyongyang’s ability to destroy large parts of Seoul using conventional, nonnuclear forces, the South Korean government is understandably leery of the intervention option, and so any moves along these lines would need to be planned and coordinated with extreme care. The unattractiveness of both acceptance and intervention is what keeps bringing policymakers back to the third option, trying to cap and reverse the North Korean nuclear threat through negotiations. But as decades of failed efforts have proved, diplomacy is no panacea. So the challenge on this front is not just getting back to the table but also figuring out how to make rapid progress once there. This could be done by breaking the issue’s resolution into two stages, with an interim deal that would freeze Pyongyang’s nuclear and missile programs, followed by longer-term efforts to reduce and eliminate the programs entirely. The interim deal could best be executed as a bilateral agreement between the United States and North Korea, with other governments kept involved and informed through consultations. The negotiations should have a deadline for reaching agreement, to ensure that Pyongyang doesn’t use the talks simply to buy time for further progress on its weapons programs. The North would have to agree to pause its testing of warheads and missiles while the negotiations continued, and the United States and South Korea would have to agree not to strike North Korea during the same period. In exchange for accepting a comprehensive, open-ended freeze on its nuclear and missile programs, intrusive inspections designed to ensure that the freeze was being honored, and a ban on any transfers of nuclear materials or missile technology to third parties, North Korea would get some sanctions relief and an agreement formally ending the Korean War, a form of de facto recognition. Follow-on talks would deal with denuclearization and other concerns (such as human rights) in exchange for an end to the sanctions and the normalization of ties. An interim agreement would not solve the North Korean nuclear problem, but it would keep it from getting any worse and lower the risks of war and instability—as positive a result as one could imagine in the current circumstances. Since Chinese pressure on North Korea would be essential to achieve such a deal, this option would build logically on the administration’s early investment in good relations with its counterpart in Beijing. And even if diplomacy failed again, at least the United States would have demonstrated that it tried negotiations before turning to one of the other, more controversial options. Over time, “America First” will lead others to put themselves first. As for the U.S. relationship with China itself, the administration’s primary goal should be to emphasize cooperation over North Korea, the most urgent item on the national security agenda. The two countries’ economic integration gives both Washington and Beijing a stake in keeping relations on course. China’s leaders are likely to focus for the foreseeable future on domestic
concerns more than foreign policy ones, and the United States should let them do so. That means leaving in place long-standing U.S. policies on bilateral issues such as Taiwan, trade, arms sales, and the South China Sea; the Trump administration should avoid adopting positions on these issues that could either trigger a distracting crisis or compromise U.S. interests. The result would be a “North Korea first,” but not a “North Korea only,” U.S. policy toward China. Regarding the Asia-Pacific more generally, the administration should reassure U.S. allies about the United States’ continued commitment to the region—something that has been called into question by Trump’s abrupt withdrawal from the Trans-Pacific Partnership and by various statements from the president and other administration officials. It would have made more sense for Washington to work with the other signatories to amend the TPP (as it appears to be doing in regard to the North American Free Trade Agreement) and join the modified pact. This remains an option, although it may be difficult to achieve. Failing that, the administration could attempt to work out an understanding with Congress that would allow the United States to join the TPP but commit the country to certain courses of punitive action in specific circumstances (currency manipulation, intellectual property theft, large government subsidies, and so on), similar to what was done when it came to U.S.-Soviet arms control agreements. The understanding would be codified and voted on at the same time as the trade agreement itself, as a binding package, to reassure the agreement’s critics. …Trump clearly prefers an informal decision-making process, with various voices included and many points of entry, and presidents get their way. But such an approach has downsides as well as upsides, and if the administration wants to avoid the dangers that come with excessive improvisation, it needs to ensure that the formal National Security Council policy process dominates the informal one—and that significant informal deliberations are ultimately integrated into the formal process rather than carried on separately. The president also clearly prefers to be unpredictable. This can make sense as a tactic, but not as a strategy. Keeping foes off balance can be useful, but keeping friends and allies off balance is less so—especially friends and allies that have put their security in American hands for generations. The less steady they judge those hands to be, the more they may decide to look out for themselves, ignoring Washington’s requests and considering side deals to protect their interests. Frequent policy reversals, even those that are welcome, come at a substantial cost to the United States’ credibility and to its reputation for reliability. Down that route lies the unraveling of the postwar order that the United States has worked so hard to create and maintain. It is important not to forget that the United States has been remarkably well served by this order. Where things have gone the most wrong—in Korea, when U.S. forces marched north of the 38th parallel in what would become a costly and unsuccessful effort to reunify the peninsula by force, in Vietnam, in Iraq—it was because of overreach by U.S. policymakers rather than a requirement to act on behalf of the order. But that order is now in decline. Many of its components need to be modernized or supplemented, and new rules and arrangements are needed to deal with the various challenges of globalization. But the international project should be a renovation, not a teardown. New challenges may have arisen, but the old challenges have not gone away, so the old solutions to them are still necessary even if they are no longer sufficient. The strategic focus for U.S. foreign policy should be preservation and adaptation, not disruption, so that the United States and those willing to work with it can better contend with the regional and, even more, the global challenges that increasingly define this era. The EU is imperfect in many ways, but it remains a source of peace and prosperity on the continent. In that regard, the president’s campaign slogan of “America First” was and is unfortunate, because it appears to signal a narrower U.S. foreign policy, one lacking in a larger purpose or vision. It has been interpreted abroad as suggesting that friends and allies now come second, at best. Over time, “America First” will lead others to put themselves first, which in turn will make them less likely to take into account (much less give priority to) American interests and preferences. The slogan also unfortunately reinforces the mistaken notion that there is a sharp tradeoff between money and effort spent on international affairs and those spent on domestic concerns. In a global world, Americans will inevitably be affected by what happens beyond their country’s borders. The United States needs both guns and butter, and national security is determined by how well a country meets its external and internal challenges alike. The good news is that the United States, which now spends only half the percentage of its wealth on defense that it did during the Cold War, can afford both. If the administration does decide to retain the phrase, it should at least recognize its shortcomings and counteract them. This means finding ways to make
clear that although the United States does follow its own interests, it does not do so at its friends’ and partners’ expense. American patriotism can be defined and operationalized in ways compatible with responsible global leadership. And figuring out how to do that from here on in is the Trump administration’s central challenge.” (Richard Haass, “Where to Go from Here,” Foreign Affairs July/August 2017, pp. 2-9)

6/2/17

U.S. officials said that naval maneuvers this week off the Korean Peninsula were the first in two decades to involve two American aircraft carriers in those waters and were intended as a “message of reassurance” to the region. The new details about the exercises, which also involved Japanese warships, were disclosed as Defense Secretary Jim Mattis arrived in Singapore for a security conference organized by the International Institute for Strategic Studies. “This is about readiness,” said David F. Helvey, a senior adviser on Asian security issues to Mattis. “This demonstrates that the United States has military capabilities across the western Pacific, including in the Sea of Japan.” He added: “It sends a message of reassurance, and it does send a message of resolve. But this is part of our routine actions and our presence.” Mattis declined to discuss security issues on the record with reporters who traveled on his plane from Washington. But he read a short statement outlining themes he planned to address in a speech on Saturday, including the importance of “strengthening alliances,” “upholding international law” and “maintaining stability.” The carriers involved in the exercise are the Carl Vinson, which has been operating in the region for the past several weeks and whose home port is San Diego, and the Ronald Reagan, which is based in Japan. Each carrier leads a strike group of destroyers, cruisers and submarines, which are also participating in the drill. The Japanese have joined the exercise with two ships, including a helicopter carrier. The naval exercise, which is expected to last several days, is intended to reassure worried allies and demonstrate the reach of American forces. “I don’t expect this to change North Korea’s behavior,” said Helvey, who noted that the Trump administration was relying primarily on diplomatic and economic pressure to try to persuade North Korea to curtail its nuclear and missile programs. Operations involving two carrier strike groups have taken place in the western Pacific before. Last year, the John C. Stennis and the Reagan carried out drills together in the Philippine Sea. But the current exercise is the first time it has happened in the waters between Japan and the Korean Peninsula since the late 1990s, Helvey said. One issue that may come up in discussions with South Korea is the THAAD antimissile system. The new president of South Korea, Moon Jae-in, has complained that he was not told when the four remaining antimissile launchers were brought into his country. American officials have generally portrayed the debate as a matter of internal South Korean politics, and Helvey insisted that the United States had been forthright with South Korea. The plan had always been to deploy all six launchers, he said. “I can’t get into the specifics of what was communicated by whom and when,” he said. “We have been consulting with the R.O.K. government throughout this entire process to get the entire Thaad battery to the Korean Peninsula, which includes six launchers,” he added, using the acronym for the Republic of Korea. “We have been very transparent.” (Michael Gordon, “U.S. Naval Exercise off Korea Intended as a ‘Message of Reassurance,’” New York Times, June 2, 2017)

KPA Strategic Rocket Force spokesman’s answer to the question raised by KCNA “over a recent mock ICBM shoot-down test of the U.S. imperialists. The U.S. imperialists conducted a test Tuesday simulating the interception of an ICBM from the DPRK at the Vandenberg Air Force Base in California State. … This is just a serious military provocation that brings to light the U.S. imperialists' wild ambition for igniting a nuclear war. Such risky act is a sign that their preparations for unleashing a nuclear war against the DPRK have reached the final phase. Their foolhardy moves go to clearly prove that the DPRK's step for bolstering the nuclear force for self-defense is entirely just. They are now bluffing, bragging about the "success" in the test and the efficiency of the missile interception system. But the DPRK considers it just as a foolish act of those driven to despair. They are sadly mistaken if they think such missile interception system can prevent the shower of nuclear strike by the Strategic Force of the KPA. The last-ditch gambling of the Trump administration for a nuclear war will only bring earlier the day when
the U.S. mainland will turn into ashes.” (KCNA, “Spokesman for Strategic Force of KPA on U.S. Mock ICBM Interception Test,” June 2, 2017)

In a month filled with missile tests that are certain to have a profound impact on the strategic balance of the Korean peninsula, Kim Jong Un attended what is claimed to be the final testing of an advanced new air defense system that is now ready to enter full-scale production and service with the Korean People’s Army Air and Anti-Air Defense Forces. The new design, which is heavily based on the infamous Russian S-300PMU Surface-to-Air Missile (SAM) system, appears to have been produced almost entirely indigenously, despite the hard to master technologies it utilizes. First showcased during the 65th anniversary of the Workers’ Party in 2010, the system, designated Pongae-5 in North Korea and given the U.S. DoD designation of KN-06, introduces capabilities to the KPA that will severely complicate the aerial operations of its opponents during a potential conflict. First tested in June 2011 to a range of 150 kilometers, it is believed to be comparable to the S-300PMU, offering a very large engagement range as well as a high kill probability. Still, the Pongae-5 appears to have been developed in part by North Korea itself (possibly with Russian assistance), and comparison with footage from a previous test in April 2016 shows that several incremental improvements have been implemented to increase the system’s reliability and capabilities. For one, the cold launch, which is employed to eject the sizeable missile from its canister, is much more powerful than on Russian S-300 variants, mirroring the cold launch used by Chinese S-300 copies. Also notable is the fact that the cap of the canister is now jettisoned before launch instead of broken up, another indication of an innovation introduced after last year’s tests. KCNA, North Korea’s state media outlet, also confirmed these improvements, citing remarks made by Kim Jong Un: “He told KPA commanding officers and officials of the academy that the weapon system’s efficiency to detect and track targets has remarkably improved and its hitting accuracy has also increased, compared with those of last year. Some defects in the weapon system, discovered last year, were perfectly overcome to stand the test, he said...” Due to these differences, the characteristics of the North Korean design are likely to diverge from the system from which it was derived, possibly complicating attempts to counter it in wartime. Perhaps even more significant than the introduction of the system itself, however, is the radar suite it employs to detect and track its targets. These radars, one of which is the powerful 30ND “Flap Lid” (based on a North Korean-Russian Taebaeksan-96 truck), are a great improvement over most other types in use by the KPA, and will surely enhance North Korea’s aerospace awareness. More alarming still was the presence of a new type of large phased array radar that appears to have been developed by the DPRK itself, referenced in Kim Jong Un’s remark about the weapon’s increased efficiency in detecting and tracking targets. The production of such systems is notoriously difficult (requiring an advanced electronics industry) and if it gains traction it could bring powerful new capabilities to the table for the KPA. The coverage of the new test also referenced a visit made by the late Kim Jong Il to a facility that stored the Pongae-5 prototypes, likely before the 2010 parade. In Kim Jong Un’s description of this visit, images of which show the Pongae-5’s Transporter Erector Launcher (TEL) before it even received a paint job, the importance that was attached to this project is clearly referenced: “Seeing such a perfect new-type anti-aircraft guided weapon system, I miss the General more a lot. That weapon system is a posthumous one the development of which had been guided by him with much effort since the start. The General would have been very glad to see this perfect weapon system as he had put his heart and soul into the work to bolster up the state anti-aircraft capability until the last moments of his life.” It is likely that Kim Jong Il did indeed invest substantial effort in securing the technology behind the system, which has been the subject of much controversy abroad – for instance in the case of Iran’s acquisition efforts. In this context, the S-300 is often touted as a potent deterrent aimed at preventing enemy air forces from operating successfully, due to its long range and perceived effectiveness. The first indication that North Korea was indeed looking to buy the coveted SAM came in 2001, with reports covering a visit by Kim Jong Il to Russia indicating that the leader was looking to purchase a range of new weapons systems, including “assistance and permission to produce S-300 SAMs.” It appears that this process has now finally been completed, with the production of the Pongae-5 likely to ramp up as a result. (Joost Oliemans and Stijn Mitzer, “North Korea’s Pongae-5 Anti-Air Missile: What Do We Know?” NKNews, June 2, 2017)
South Korea’s government approved an additional eight requests by local aid providers and religious groups to have contact with North Koreans over inter-Korean exchanges. The Ministry of Unification said that it gave the green light to plans by two humanitarian aid providers and six religious groups to come in contact with North Korea as the government decided to revive civilian exchanges with the North. “The approval came as the government will flexibly review civilian exchanges between the two Koreas to an extent that the move would not hamper the international sanctions regime,” Lee Eugene, vice spokesperson at the ministry, told a regular press briefing. The groups receiving approval included agencies that seek to provide nutrition support and medication to North Korean children, the ministry added. (Yonhap, “S. Korea OKs Additional Civilian Exchanges with N. Korea,” Korea Herald, June 2, 2017)

North Korean diplomats who attended an informal meeting with former U.S., South Korean and Japanese officials and academics may have expressed interest in denuclearization. Izumi Hajime, an international relations professor at Tokyo International University, told Japanese newspaper Asahi Shimbun that officials from Pyongyang had not abandoned the aim of denuclearizing the peninsula espoused by former leader Kim Jong Il. Izumi met with North Koreans during the forum held at Sweden’s Institute for Security and Development Policy on June 1-2, according to the report. North Korea stressed the development of nuclear weapons was for the sake of “self-defense” during the dialogue, while demanding the United States not to deploy nuclear weapons to the peninsula, the analyst said. The report did not identify the North Korean officials who attended the informal Track 1.5 talks. Ahead of the meeting, Hankyore reported the officials were from the North Korean foreign ministry’s disarmament and peace institute. From the United States, former CIA analysts Sue Mi Terry and Bruce Klingner were in attendance, and Shin Bong-ki, a visiting professor at South Korea’s Yonsei University Graduate School of International Studies, went on behalf of Seoul. Asahi also reported North Korean officials said at an international conference held in Ulaanbaatar, Mongolia, on June 14-16, that the Armistice Agreement that brought truce to the peninsula after the 1950-53 Korean War should be replaced with a peace treaty. (Elizabeth Shim, “Japanese Analyst: North Korean Diplomats Open to ‘Denuclearization,’” UPI, June 21, 2017) Klingner and Terry: “…This month, we were part of a group of delegates from the United States, Japan, China and South Korea who met in Sweden with representatives of North Korea to explore possible grounds for resuming the six-party talks that collapsed in 2009. After many hours with the North Korean delegation at these “1.5 track” talks, we left more pessimistic than when we arrived. North Korean officials made unambiguously clear that Pyongyang will not be deterred from augmenting its nuclear arsenal or test-launching an intercontinental ballistic missile that could eventually threaten the U.S. homeland. There were no signals of flexibility or willingness to negotiate on these programs. Throughout, the North Korean message was that denuclearization is off the table. Pyongyang’s representatives declared: “The most perfect weapons system will never become the exclusive property of the United States.” We tried repeatedly to ascertain whether any combination of economic and diplomatic benefits or security reassurances could induce Pyongyang to comply with its previously negotiated commitments and with U.N. resolutions. The answer was an emphatic, unwavering no. Citing the fates of Iraq’s Saddam Hussein and Libya’s Moammar Gaddafi, the North Koreans repeatedly said that their nuclear program is the ultimate life preserver for the regime. Our North Korean interlocutors presented a stark choice: “First accept us as a nuclear state, then we are prepared to talk about a peace treaty or fight. We are ready for either.” The North Koreans weren’t saying that they would initiate hostilities but that they would fight if provoked. A peace treaty ending the Korean War and legitimizing the North Korean state is a long-standing goal for Pyongyang, which sees it as a catalyst for the removal of all U.S. forces from the peninsula. Strikingly different from similar meetings in the past was the self-confidence, even cockiness, of the North Koreans, clearly a result of the recent successes of their nuclear and missile programs. The North Koreans also made clear that their nuclear program is a response to the general “U.S. hostile policy.” As such, nothing Seoul could offer would alter Pyongyang’s commitment to its nuclear arsenal. The North Koreans won’t even deign to negotiate with the South Koreans, whom they described repeatedly as “puppets” of the United States. Thus, the new South Korean president, Moon Jae-in, is in for a major disappointment if he tries to resurrect the “sunshine policy” of unconditional engagement pursued by previous progressive
DPRK FoMin spokesman’s statement “as regards the fact that the hostile forces are getting hell-bent on the sinister moves for sanctions and pressure on the DPRK: Hostile forces are now in a flurry, being disconcerted over the gunfire of victory set off by the DPRK's self-defense industry in numbers and in succession. Pressing this panic button, they are desperate in their vicious attempts to put sanctions and pressure to bear upon against the DPRK. On June 3, the United Nations Security Council again framed up "sanctions resolution" taking an issue of the DPRK's launch of ballistic rocket which is aimed to bolster up its nuclear forces. This "resolution", which is said to have been drafted after a long "consultation" between the U.S. and China, places entities and individuals related with the DPRK's nuclear and rocket program as a target of "additional sanctions." Earlier, the U.S. took its own way of announcing "unilateral sanctions" against the DPRK and included in it "secondary boycott" with a target of businesses and individuals of even Russia and other third countries which are alleged to have links with the DPRK. The DPRK Ministry of Foreign Affairs gives a strong condemnation and rejection to the UNSC's another campaign of sanctions as it is a crafty hostile act with the purpose of putting a curb on the DPRK's buildup of nuclear forces, disarming it and causing economic suffocation to it. The U.S. steps up its military buildup including the modernization of nuclear weapons just in order to obtain the exclusive and permanent possession of the most sophisticated weapon system in the world. But, other country can't be allowed to test or launch any object which goes with the words of nuclear or "ballistic." This is really the height of shameless arrogance, self-righteousness and double standards. Two countries railroaded "sanctions resolution" at the UNSC after having drafted it in the backroom at their own pleasure and are enforcing it upon others just paving it as "the general will of the international society". It is a bare expression of high-handed and arbitrary act in pursuit of their own interests trampling upon the international justice. The buildup of nuclear forces by the DPRK is all too natural an exercise of its sovereignty to thwart what the U.S. imposed nuclear threat against the DPRK in an unprecedented way. It is also to achieve genuine international justice let alone the fact that it is to ensure peace and security on the Korean peninsula and in the region. It is a fatal miscalculation if the countries, which have had a hand in the frame-up of the "sanctions resolution", would even think that they can delay or hold in check the eye-opening development of the DPRK's nuclear forces even for a moment. They would squarely see that their mean and indiscreet act would go in just opposite direction to what they want for. They kept saying about "dialogue" this time. But, it does not make any sense to profess about dialogue with unjust preconditions attached and by applying "maximum pressure." No matter what others say, whatever sanctions and pressure may follow, we will not flinch from the road to build
up nuclear forces which was chosen to defend the sovereignty of the country and the rights to national existence and will move forward towards the final victory. The "Juche Rocket", ultra precision and diversified, will continue to thunder and skyrocket in full blast in numbers and in succession until the moment when the U.S. and its followers are brought to reason about the root cause and a solution to the nuclear issue of the Korean peninsula and take their right choices.” (KCNA, “DPRK Foreign Ministry Spokesman Slashes at Another UN ‘Sanctions Resolution,’” June 4, 2017)

The Korean Sharing Movement said that it will delay shipments to North Korea of pesticide and medical supplies to fight malaria and its visit to North Korea as Pyongyang took issue with U.N. sanctions against the North. Kang Young-sik, the secretary-general of the group, said that Pyongyang took issue with the South Korean government's attitude toward the latest adoption of U.N. sanctions against the North. "We've decided to put off our plans to deliver the supplies' shipments and to visit North Korea for cooperation," Kang said. (Yonhap, “N.K. Rejects S. Korean Aid Provider’s Inter-Korean Exchanges, Citing Sanctions,” June 5, 2017)

South Korea's Ministry of Unification said it has approved an additional four requests for contacts with North Koreans as it has decided to flexibly resume civilian inter-Korean exchanges. The move raised the total number of the government's such approvals to 15 since liberal President Moon Jae-in took office in May, it added. "The ministry approved them based on the stance that it will flexibly review the resumption of civilian inter-Korean exchanges to an extent that the move does not hamper the international sanctions regime," Lee Duk-haeng, ministry spokesman, told a regular press briefing. NGO Green One Korea plans to discuss insect controls and forest cooperation with North Korea, and an association of the two Koreas' historians will contact their North Korean counterparts for ways to preserve cultural heritages, the ministry said. Two others applying for the ministry's approval for international conferences were the World Taekwondo Federation (WTF) and the Korean Council for Reconciliation and Cooperation, a pro-unification group of civilians and politicians. (Yonhap, “S. Korea OKs Four More N.K. Contacts over Inter-Korean Exchanges,” June 5, 2017)

Japan will strengthen inspections of cargo to and from North Korea to ensure the nation does not receive any help in developing its nuclear and missile programs, Foreign Minister Fumio Kishida said. The measures, a new phase of an existing United Nations sanction, will start by the end of June at the earliest. “To put pressure on North Korea, we must stop the transfer of items and technologies related to nuclear and missile developments there, and cut their foreign currency acquisitions,” Kishida said in a speech in Kanazawa on June 4. He told reporters that he has instructed related agencies to complete procedures to introduce the new policy. Based on sanctions outlined in a U.N. Security Council resolution, the Japan Coast Guard and other agencies have been inspecting cargo to and from North Korea according to a list of items related to nuclear and missile development. Under the new policy, authorities would be able to search for items that are not included on the list, and inspections would be carried out more strictly. As for its own next-level sanction, the Japanese government has started discussions on widening its asset-freeze measure against organizations and individuals related to Pyongyang’s nuclear and missile programs. (Asahi Shimbun, “Japan to Tighten Inspections of North Korea Cargo,” June 5, 2017)

Deputy Minister for Defense Policy Wee Seung-ho will be excluded from duty for his part in withholding THAAD-related information from the presidential office, Cheong Wa Dae announced. According to Cheong Wa Dae, Wee ordered the fact that four THAAD launchers were in store at a US military base in South Korea to be removed from the Ministry of National Defense’s report to the presidential transition team on May 25. “In the process of reviewing the report, Deputy Minister for Defense Policy Wee Seung-ho ordered phrases (that clarified the number of THAAD launchers) to be deleted,’’ Yoon Young-chan, chief presidential press secretary, said, saying that the initial draft clearly stated that six THAAD launchers were in South Korea, four of which were stored at a US military base. The draft was first compiled before the presidential election, Yoon said, adding that the motives for withholding information is still
unclear. Yoon added that the phrases were replaced with ambiguous wording designed to prevent those being briefed from fully understanding the situation in the final version. According to Cheong Wa Dae, Wee claimed that the details were removed due to an agreement with the US military to maintain secrecy, and that he had planned to give an oral report elaborating on the details. “(The nondisclosure agreement with the US military) is an issue separate from the commander in chief. It has been confirmed that the introduction of additional launchers were reported to the previous administration, and the acting president was aware of the issue.” (Choi He-suk, “Deputy Defense Chief to Be Excluded from Duty over THAAD Report,” Korea Herald, June 5, 2017)

Kim Ki-jung, second vice chief of President Moon Jae-in’s national security team, submitted his resignation, twelve days after he was appointed, following ongoing rumors about his unethical behavior at Yonsei University, where he teaches political science and diplomacy. Yoon Young-chan, senior presidential secretary for public relations, said in a statement that Kim felt a “moral responsibility” to step down and that “his health steeply deteriorated due to the heavy workload.” Kim reportedly was hospitalized. Yoon did not mention whether Kim’s resignation was accepted or whether the Blue House was planning to approve it. Hankyore, which broke the news, reported that the presidential office decided to sack him and informed him of its decision last night. “The civil affairs office at the Blue House had been thoroughly looking into the rumors,” Hankyoreh quoted a senior official of the Democratic Party as saying. “President Moon has critical issues to deal with, like the upcoming bilateral summit, but he came to the conclusion that it wasn’t right to keep [Kim] on the team.” Kim did not report for work today. Sources from the ruling Democratic Party told the JoongAng Ilbo that Kim was practically fired for “inappropriate behavior” at Yonsei University, without elaborating. One official said there were “numerous reports from people” at the school, including “a lot of backlash from local women’s groups.” Moon has been struggling to redeem himself as his nominees for top government posts face tough hurdles to confirmation. When it was revealed that Prime Minister Lee Nak-yon’s wife used a fake address in 1989 to be assigned to a more favorable teaching position, Moon admitted his investigation procedures were botched last week and implored “understanding” from opposition lawmakers and the public. The Yonsei professor was known as an advocate of inter-Korea reconciliation and a more balanced alliance with the United States and assisted Moon during his campaign. In February, Kim visited Washington as Moon’s envoy when the candidate soared in the polls. Kim conveyed Moon’s foreign and security visions to the U.S. government, Congress and think tanks. (Kang Tae-wha, “Senior Security Adviser Resigns amid Rumors,” JoongAng Ilbo, June 6, 2017)

President Moon Jae-in named Lim Sung-nam as vice foreign minister and Suh Choo-suk as vice defense minister to fill the vacuum in his administration as his national security team is reeling from a crisis ahead of his trip to Washington later this month for a summit with U.S. President Donald Trump. Lim, an elite diplomat who served in various key posts of the Foreign Ministry, will keep his post as the first vice minister. He is known as a veteran strategist who served in the Roh Blue House as a staffer from June 2006 to January 2007. Suh is a researcher who served as the senior national security secretary and strategy planning director of the National Security Council of the Roh Blue House. Park said Suh will be tasked to oversee defense reform. During his service in the Blue House, Suh was labeled a member of a faction that promoted independent national defense while lessening the country’s heavy reliance on the United States. (Ser Myo-ja, “Vice Ministers Named to Fill up Cabinet Vacuum,” JoongAng Ilbo, June 7, 2017)

President Donald Trump expressed fury over South Korea's decision to delay the full deployment of the US THAAD missile defense system pending an environmental assessment, a senior official said on June 11. Trump’s reaction came when he discussed the matter with Secretary of State Rex Tillerson and Defense Secretary Jim Mattis at the White House on June 8, the official told Yonhap. The revelations, if true, raise concern that the issue could affect the first summit meetings between President Moon Jae-in and Trump set for June 29-30 at the White House, though it is not clear if it would be on the agenda. (Yonhap, “Trump Expresses Fury over Korea’s Decision to Delay THAAD: Official,” Korea Herald, June 19, 2017)
North Korea fired a salvo of surface-to-ship cruise missiles into the East Sea this morning. They flew about 200 km each. The South Korean military believes the missiles were carried by a four-tube launch vehicle that made its debut during a parade in Pyongyang on May 15 marking the 105th anniversary of regime founder Kim Il-sung's birthday. They flew at a relatively low altitude of 2 km, a military spokesman here said, apparently to avoid enemy radar, and are thought to be an improved version of the KN-01 missile adapted from the Russian-made Kh-35 Uran. The Kh-35 was developed in the mid-1990s and has been sold to Burma, India and Vietnam. It has a range of about 130 km and can withstand some electronic disturbance. But their range seems to have been extended by about 70 km. "The latest launch seems to be a show of force to display the North's precision-strike capability against ships in response to South Korea-U.S. joint maritime exercises with a U.S. Navy strike group," a Joint Chiefs of Staff spokesman here said. (Yu Yong-woon, "N. Korea Lobs Missiles into East Sea," Korea Times, June 9, 2017)

North Korea has yet to invite a South Korean civic group for an inter-Korean summit anniversary event in Pyongyang slated for next week, officials said, raising the possibility of the joint event falling through. The two Koreas’ civic groups have been seeking to hold a joint celebration to mark the first summit on June 15, 2000, after new liberal President Moon Jae-in's government said it would flexibly consider resuming civilian inter-Korean exchanges. The South's group last week accepted the North's offer to hold it in Pyongyang, instead of the North Korean border city of Kaesong. "We sent a fax on June 5 stating our acceptance of North Korea's proposal, but the North has yet to send an invitation to us," said an official at the preparatory group. North Korea has recently turned down South Korean civic and religious groups’ move to revive inter-Korean exchanges. Instead, it called on Seoul to implement two inter-Korean summit declarations on reconciliation in 2000 and 2007 before it seeks to resume exchanges. South Korea's unification ministry cast a prudent stance over its possible approval of civilians' visit to North Korea for the event. The government said it will take into account the event's purpose, inter-Korean ties and the international environment in reviewing its approval. The group is known to want to send a 100-member delegation via a flight route over waters off the country's west coast. A ministry official said that it would be impossible to reopen the route, given that strained inter-Korean ties cut off communication channels. "Given the tight schedule, it may be hard to hold a joint event next week," said the official at the South's group. "It is also uncertain whether the government will approve our officials' visit to Pyongyang." (Yonhap, “Inter-Korean Summit Celebration Event Likely to Fall through,” June 8, 2017)

Amid Washington’s escalating frustration toward the stalled deployment of a U.S. antimissile system in Korea by President Moon Jae-in’s order for an environmental study, Chung Eui-yong, head of the National Security Office of the Moon Blue House, told a press briefing that the administration has no intention to defy the arrangement reached in line with the Korea-U.S. alliance. The remarks were made as U.S. President Donald Trump held a meeting at the White House with his top officials to address the issue. “First of all, the Moon administration has no intention to fundamentally reverse the agreement reached in line with the Korea-U.S. alliance,” Chung said, adding that the government will not treat it lightly just because the decision was made by the predecessor. Since he took office in May, Moon made a series of moves that will effectively delay the deployment schedule. Challenging the previous administration’s assessment that the deployment was urgent enough to skip a proper environmental study, Moon ordered a full survey, which may take up to two years. He also said the THAAD deployment issue should be taken to the National Assembly for discussion. The move is seen as a strategy to use the THAAD deployment as a bargaining chip in negotiations with Washington and Beijing. Chung defended Moon’s order by saying that the administration wants to take necessary domestic steps to ensure the deployment’s democratic and procedural legitimacy and transparency. “The environmental impact study, in particular, must be transparently carried out through reasonable and lawful means,” he said. “We will also consider Korea’s national interest and security needs above everything.” Chung also said he met with top officials in Washington earlier this month to arrange a presidential summit, but refused to make clear if the Thaad issue is an agenda. Moon will meet with U.S. President Donald Trump at the end of this month in Washington. “The two leaders are
Defense Secretary Jim Mattis declared North Korea the “most urgent and dangerous threat to peace and security,” before the House Armed Services Committee, moving Kim Jong Un’s regime past Russia as the No. 1 threat that the United States faces. The statement was included in the defense secretary’s prepared opening statement, five months after Mattis identified Russia as first among threats facing the United States. “North Korea’s continued pursuit of nuclear weapons and the means to deliver them has increased in pace and scope,” Mattis said. “The regime’s nuclear weapons program is a clear and present danger to all, and the regime’s provocative actions, manifestly illegal under international law, have not abated despite United Nations’ censure and sanctions.” Last week, Navy Vice Adm. James Syring, the director of the Missile Defense Agency, declined to say before the House subcommittee on strategic forces that the United States is “comfortably ahead” of the threat North Korea poses with an intercontinental ballistic missile. “It is incumbent upon us to assume that North Korea today can range the United States with an ICBM carrying a nuclear warhead,” he said. “Everything that we are doing plans for that contingency … in addition to looking ahead to what might be developed or what is possible over the next five to 10 years.” Mattis, asked today about the threat posed by ballistic missiles, said that the threat is growing but that existing missile-defense systems stationed at Fort Greely in Alaska and Vandenberg Air Force Base in California pose an adequate amount of protection as the Pentagon examines long-term options. Among them is adding a missile-defense site somewhere on the East Coast, he added. “Every time they fire one of these, they’re learning something more, so it’s a worsening situation,” Mattis said. “But we can buy the time right now.” Dunford, asked about the threat, said the United States balances its missile-defense systems with other ways to counter North Korea, including cyberwarfare, Navy weapons and intelligence collection. (Dan Lamothe, “Pentagon Chief Declares North Korea the New Top Threat to U.S. Security,” Washington Post, June 12, 2017)
Former Defense Secretary William Perry, 89, said that the THAAD missile defense system would be little use for defending against North Korean missile attacks and that THAAD should be removed if the administration of President Moon Jae-in doesn’t want it. Perry made the remarks during a Q&A session following his keynote address in a seminar about how to bring peace to the Korean Peninsula that was held in Washington under the joint auspices of the Institute for Korean Studies at George Washington University and the Korea Peace Network. The Korea Peace Network was established on Oct. 3, 2015, by groups such as the American Friends Service Committee, Women Cross DMZ and the National Association of Korean Americans (Naka) that have worked for private-sector exchange with North Korea and for peace on the Korean Peninsula. Perry began by expressing his doubts about the utility of the missile defense system, mentioning that “there are very wrong views about the missile defense system as a whole.” “Worst of all, there are doubts about the only major reason for providing THAAD to South Korea,” he said. THAAD is being deployed in South Korea, Perry said, because the previous administration under former president Park Geun-hye (2013-16) had accepted it. “It’s very unclear whether the current administration [under President Moon Jae-in] wants it [THAAD] or not. If they don’t want THAAD, the US ought to be gracious and remove it,” he said. Perry also made a few remarks about THAAD’s usefulness. “The US probably gave South Koreans a positive impression about THAAD’s defensive capabilities. But objectively speaking, THAAD probably wouldn’t be that good at defending against a North Korean missile attack,” he said. The former defense minister explained why: “THAAD is known to have had some problems even in interception tests. In particular, it’s completely defenseless against North Korean decoys.” “We don’t know whether North Korea has developed decoys, but it’s really easy to make them,” Perry went on to say. “So if the South Korean government or public were to ask if THAAD could defend against an attack by a North Korean missile, I would say no.” American missile experts such as MIT professor Theodore Postol have argued that THAAD and other American missile defense systems are fundamentally limited in their ability to distinguish an incoming missile’s actual warhead from its decoys. If powerful explosives placed in the missile were used to break it into multiple fragments at a high altitude, interceptor missiles that had already been launched and were approaching the missile would be completely unable to distinguish between the real warhead and the harmless missile fragments, these experts say. “The North Korean regime may be reckless, but it’s not crazy. North Korea’s first goal is the preservation of the Kim dynasty; its second goal is earning the respect of the international community; and its third goal is economic recovery. But North Korea can sacrifice its economy for the survival of the regime. Pyongyang has said it’s developing an ICBM [intercontinental ballistic missile] that can reach the continental US. That [the development of an ICBM] is no longer a matter of if, but when,” he said, stressing the urgency of finding a solution. “If we manage to combine a stick with a diplomatic approach through cooperation with China, we can successfully freeze North Korea’s nuclear weapons and long-range missile programs. The diplomatic approach means listening and listening some more. We first need to hear what North Korea’s primary interest is,” Perry said. “We need to create meaningful dialogue [with North Korea] and ultimately normalize relations with them.” In related news, the Wall Street Journal reiterated its hardline stance on North Korea in a June 13 editorial titled “South Korea’s Defense Blunder.” “Mr. Moon wants to play a balancing role between the regional powers and convince North Korea to negotiate an entente. This naivete puts South Korea’s security in peril,” the editorial said. It also stated, “Mr. Moon still has time to fix his mistake before he meets President Trump in Washington later this month. Environmental assessments can and should be waived when national security is at stake.” (Yi Yong-in, “Former U.S. Defense Secretary Says THAAD Should Be Removed If Moon Doesn’t Want It,” Hankyore, June 15, 2017)

Cho Myoung-gyon, a veteran North Korea policymaker who accompanied the late President Roh Moo-hyun during his one-on-one talk with the late North Korean leader Kim Jong-il in 2007, was nominated today to head the Ministry of Unification. Cho passed the public servant exam in 1979 and started his career at the National Tax Service. He joined the Ministry of Unification in 1984 and devoted most of his career to North Korea policy. He served various key posts of the ministry and joined the Roh Blue House in 2006 as the unification, foreign and security policy secretary. Cho has participated in both of the inter-Korean summits. In 2000, he participated in the historic summit as a supporting staff member. He also accompanied Roh to Pyongyang in October 2007,
when Roh had only a few months left in his presidency, for the second summit between the two
Koreas. At the time, he attended Roh’s exclusive talk with Kim as a record keeper. Moon was the
presidential chief of staff at the time and also head of the inter-Korean summit arrangement team.
Cho left the public service after the conservative Lee Myung-bak administration was launched in
2008. During the presidential election in 2012, in which Moon competed against Park Geun-hye,
the summit became the subject of a fierce controversy. The Park campaign claimed Roh had
disavowed the Northern Limit Line, the de facto border in the Yellow Sea, in his conversation
with Kim, and the allegation dealt a critical blow to Moon’s campaign. An investigation by the
prosecution also took place in 2013 after it was revealed that the original transcript of the summit
has mysteriously vanished from the National Archives. Prosecutors concluded that Roh ordered
Blue House aides to delete it and indicted Cho and Baek Jong-chun, former chief presidential
secretary for unification, foreign and security policies. Moon was also investigated but prosecutors
found no evidence that he was involved. The case is still ongoing. Cho was acquitted in the initial
trial and the first appeal and is currently waiting for the Supreme Court’s ruling. “He is an expert
of inter-Korean talks and North Korea strategy,” Park said. “He has an in-depth understanding in
the new government’s policy toward the North and the pending inter-Korean issues.” Cho will
likely advance denuclearization of the peninsula and the creation of a new economic map, Park
said. Moon has largely recruited officials who worked in the Roh administration to arrange the
2007 summit. Suh Hoon, the new head of the National Intelligence Service, was involved in
planning and arranging the 2000 and 2007 summits. Moon also named Chun Hae-sung, a veteran
negotiator, as the vice minister of unification. These appointments indicate Moon’s intention
to engage North Korea. Inter-Korean relations rapidly deteriorated during the conservative
presidencies in the South. “We didn’t artificially plan it,” a presidential aide said. “But if their
experiences are well harmonized and bring about improvement in the inter-Korean relations, we
can expect a good outcome.” (Ser Myo-ja, “Roh’s Aide Returns to Unification,” JoongAng Ilbo,
June 14, 2017)

Targeting just a few pivotal Chinese companies could severely disrupt North Korea’s ability to
circumvent international sanctions and buy illicit goods — and could even cause its entire
overseas network to collapse, according to a report out today. The new report, by Washington-
based research group C4ADS, lays out multiple ways for Beijing to cut off North Korea’s trading
routes to the outside world, if it wanted to. It also found a Chinese citizen who was conducting
large amounts of trade with North Korea while serving as president of a company in the United
States — a status that would allow him to open bank accounts and send or receive shipments. “By
being centralized, limited and ultimately vulnerable North Korean overseas networks are, by their
nature, ripe for disruption,” C4ADS researchers wrote in the report, titled “Risky Business.” Since
taking office, Trump has urged China to deal with its neighbor using whatever means necessary,
and Beijing says it has cut off imports from North Korea of coal, one of the regime’s biggest
exports. There is still plenty more to be done, C4ADS writes. “Although to date economic
coercion has been ineffective in persuading North Korea to abandon its pursuit of nuclear
weapons, this does not mean it cannot work,” the researchers say. On the contrary, targeting key
companies could cripple multiple networks across multiple countries simultaneously, they write,
because so many of these firms are intertwined. “While on the surface we may see shrubs, below
are roots that are remarkably deep and interconnected with other root systems,” said John Park, a
sanctions expert at Harvard’s Kennedy School who advised C4ADS for its report. To take one
example: A Chinese trading company based on the border with North Korea, Dandong Dongyuan
Industrial, exported $790,000 worth of radio navigational aid equipment to North Korea in June
2016, according to Chinese customs records. This category of equipment includes navigation
systems used in vehicles — the category into which guidance devices for ballistic missiles would
also fit. It is not known exactly what was in that shipment, but North Korea often uses licit trading
avenues to move illicit goods. That means the real potential is in the network. Dandong
Dongyuan shipped $28.5 million worth of material to North Korea between 2013 and 2016,
C4ADS reported. Chinese business registry filings show that the majority shareholder of Dandong
Dongyuan, with a 97 percent stake, is a Chinese citizen named Sun Sidong. A complicated
ownership trail of a freighter called the Jie Shun suggests further intertwining of Chinese business
people carrying out deals with North Korea. In 2014, the ship was owned by a company of which
Sun was a principal owner. Two years later, it was owned by a company controlled by a Chinese national named Sun Sihong, who listed her residential address as an apartment in the same complex as Sun Sidong, C4ADS reported, noting that it could not ascertain the relationship between them. On Aug. 11, 2016, the Jie Shun was intercepted near the Suez Canal by Egyptian authorities and found to be hiding 30,000 rocket-propelled grenades and sub-components — 132 tons of weapons in all — under a cargo of 2,300 tons of iron ore. The ship had left the North Korean port of Nampo and made no port calls before being intercepted, according to shipping data analyzed by C4ADS. The United Nations’ panel of experts on North Korea reported this year that, although there was no indication of where the cargo was heading, North Korean RPGs had previously been identified in Syria and Lebanon. Sun Sidong is also listed as the president of a company based in the United States, according to the report, allowing him to conduct business with firms around the world with no obvious ties to a Chinese company focused on North Korea. “In principle, it would also provide him the ability to register for business services within the United States, including sending or receiving shipments, establishing bank accounts, or applying for employment visas,” the report stated. Business registration records show that the American entity is called Dongyuan Enterprise USA and is based in Flushing, N.Y. Still, the paper trail continues. Chinese business registry filings show that Dandong Dongyuan shared an email address with another company based on the Chinese side of the North Korean border, Dandong Zhicheng Metallic Material. Dandong Zhicheng alone accounted for 9.2 percent of North Korea’s total exports to China last year, according to documentation that C4ADS reviewed. Almost all — 97 percent — of this was North Korean coal, totaling about $250 million annually. The shared email address does not necessarily prove collusion or the existence of illicit activity, the report said. “However, it demonstrates again what has been consistently apparent: that the limited North Korean trading system is much more inter-connected than it at first appears, and that, because of links to illicit actors, it may be vulnerable to systemic disruption in the face of targeted enforcement action,” it said. The companies did not respond to emails seeking comment. C4ADS researchers said focusing on these kinds of logistical “chokepoints” could cut off North Korea’s centralized, global system of illicit finance. For example, the Dandong Hongxiang Industrial Development Co., which was sanctioned by the U.S. Treasury Department last year — sending a sudden chill through the border city that acts as North Korea’s main commercial gateway to the outside world — is one of 18 companies that make up the Liaoning Hongxiang Group. This suggests the potential for an indirect effect if one company is stopped from helping North Korea, perhaps disrupting numerous other linked companies. “Based on what we’re seeing in the data in terms of the reach and scope of these networks and the limited nature of the system that they live in, and the contamination with illicit activity, there is inherent value to enforcement actions,” said David Thompson, a senior analyst at C4ADS. (Anna Fifield, “North Korea’s Trading Partners Are Linked, and That Could Make Them Vulnerable,” Washington Post, June 12, 2017)

C4ADS: “In the face of continued pressure and growing political will, the international community has struggled to understand how the Kim regime has remained steadfast in its development of WMD’s. The answer lies in large part with North Korea’s overseas networks, that have grown into a complex overseas financing and procurement system over the past decade, earning hard currency through reported schemes as diversified as sales of military equipment, cybercrime, printing of counterfeit currency, rhino horn smuggling, and narcotics trafficking. These networks have shown a deep understanding of how the systems of international trade, finance, and transportation work and, thus, how to nest their illicit activities within them. They have increasingly evolved into large-scale operations. C4ADS’ previous report, In China’s Shadow, profiled the Liaoning Hongxiang Group and identified how its parent company, Dandong Hongxiang Industrial Development Co. Ltd. had transacted over $500 million in trade with North Korea. Yet, the regime’s global reach is closely intertwined with the work of its intelligence services, North Korean agents in Malaysia recently murdered the half-brother of Kim Jong Un using chemical weapons, where a large-scale military equipment network, violating sanctions to raise hard currency for the regime, was discovered weeks earlier. These networks even extend as far as the United States. In 2015, a North Korean agent was convicted for attempting to buy night vision goggles from a federal agent in Hawaii. The man in question, Kim Song Il, had businesses in Hong Kong, China, and Russia, with at least two different Cambodian passports. His network
was also reportedly instrumental in the shipment of military equipment from North Korea, through China, to the Angolan Navy—a potential violation of international sanctions. …The continuing misperceptions of North Korea as the “Hermit Kingdom” or “the most sanctioned country in the world,” are fueling the narrative behind the narrowing of non-military options on the Korean peninsula. In truth, the North Korean regime, far from being isolated, is globally active through its overseas networks. The impact of these misperceptions is considerable, most notably in the false belief that sanctions cannot succeed on a “closed” country like North Korea. Many companies have been unwittingly exposed to North Korean proliferation activity because of the broad misunderstanding of North Korean infiltration of the licit commercial system of trade, allowing regime agents to thrive in an environment of obfuscation and uncertainty. A concerted effort by the international community to target specific sanctions violating entities is needed to curb the North Korean WMD program. We intend to spearhead this effort. Using open source research and data, this report aims to provide system-level analysis to map how these networks operate today. In an increasingly constrained environment, North Korea’s options are limited, and although the system of North Korean sanctions evasion is adaptive, it is not necessarily flexible enough to overcome certain principles in the system’s design. Using public information, our study finds that the North Korean overseas regime financing and procurement system is centralized, limited, and vulnerable, and thus ripe for disruption. North Korean overseas networks are centralized around key commercial facilitators who act as control nodes across multiple networks. As their role in illicit activity is uncovered, they often create new webs of shell and front companies to continue operations. North Korean overseas networks have helped the regime circumvent sanctions for the past decade. However, they are comprised of a limited number of commercial facilitators and regime agents, who freely conduct business within the licit global commercial system. Because of the layers of shell and front companies they employ to hide their actual purpose, everything from procuring proliferation material, to selling sanctioned conventional weapons, to purchasing Hennessey, enough obscurity exists for them to operate mostly unaffected by international sanctions. This creates a situation where a centralized group of regime linked individuals can repeatedly conduct illicit behavior abroad on behalf of North Korea. This can be seen in no better example than that of the seizure of the ship the Jie Shun. Intercepted on August 11, 2016 on route to the Suez Canal, the Jie Shun was seized with 30,000 PG-7 rocket propelled grenades and subcomponents hidden under a cargo of 2,300 tons of iron ore. According to Egyptian authorities, the cargo, 132 tons of weapons in total, was entirely manufactured in North Korea. Ship tracking software available to C4ADS shows the ship leaving the North Korean port of Nampo on June 16, 2016 and making no additional port calls before being intercepted. According to the UN Panel of Experts, there was no indication of the ultimate destination of the cargo, however, North Korean rocket propelled grenades have been identified in Syria and Lebanon. What is perhaps more striking than the shipment itself are the members of the network that sent it. The 2017 United Nations Panel of Experts report states that the holder of the document of compliance for the Jie Shun was a Chinese national named Fan Mintian. Mr. Fan, a veteran North Korean commercial facilitator, has played a role in multiple overseas networks, gaining his first mention in a United Nations Panel of Experts report in 2014 as an owner of Dalian Sea Glory Shipping. In 2011, the company in question reportedly operated the ship MV Light, which was interdicted by the United States Navy, suspected of carrying missile components to Myanmar. Another of Mr. Fan’s companies, V-Star Ships Ltd., was later referenced in the April 2016 court case of Chinpo Shipping in Singapore. Chinpo Shipping provided financial assistance to the ship Chong Chon Gang, which was seized while transiting the Panama Canal transporting weapons from Cuba to North Korea. The company was charged with transferring “financial assets or resources that may reasonably be used to contribute to the [North Korean] nuclear related programs,” as well as carrying out unlicensed remittances. Court transcripts included emails sent by employees of Chinpo Shipping regarding an attempted payment to V-Star Ships Ltd. of US$41,560, cancelled for “compliance considerations” by Wells Fargo on July 9, 2013, six days before the Chong Chon Gang was seized. Emails sent on July 11, 2013 in response to the cancellation state, “Please do not send us any instructions for outward and inward remittances to and from V-Star Ships Limited and Cuba so as to avoid being blacklisted.” Fan Mintian was active in networks surrounding some of the largest weapons seizures in North Korean sanctions history, including the Jie Shun and Chong Chon Gang, as well as the interdiction of the MV Light. Mr. Fan is not an anomaly. The repeated
use of the same commercial facilitator across multiple major weapons shipments is indicative of the limited nature of North Korean overseas networks and thus their potential vulnerability to large-scale disruption through the removal of specific tactical nodes within these networks. Unfortunately, to date, the ability of individuals involved in multiple instances of illicit North Korean weapons proliferation to openly move from network to network, even after repeated seizures, is telling of the lack of effective implementation and rigorous enforcement of UN Security Council sanctions measures. The case of the _Jie Shun_ should be especially reprehensible given its implications. Repeated sales of weapons by North Korean overseas agents, potentially headed into some of the most conflict-ridden areas in the world, whose proceeds could be used to fund the development of the North Korean nuclear weapons, should be unacceptable to the international community. While complex webs of shell and front companies can be used to obscure North Korean assets, the purchases they conduct on behalf of the regime require a centralized financing system. This financing must work outside the traditional North Korean banking system, which is now under significant scrutiny and pressure. To achieve this, North Korea has begun to increasingly rely on a small number of “gateway firms” based in foreign countries. Positioned overseas to avoid the restrictions of sanctions, these firms are vital to allowing North Korea to both monitor the funds being deployed for procurement, as well as to access the international financial system. The clearest example to date is that of the Liaoning Hongxiang Group and its parent company, Dandong Hongxiang Industrial Development Co. Ltd (DHID). DHID, now sanctioned by the US Treasury for acting on behalf of a sanctioned North Korean financial entity, had conducted over US$500 million in North Korea trade over the past five years and had nearly four dozen companies under the control of its Chairwoman, Ma Xiaohong. These included companies specializing in trading and logistics, information technology, restaurants, hotels, shares in financial institutions, and Chinese-North Korean joint ventures. It is important to first understand the unique role that Dandong Hongxiang Industrial Development, and the Liaoning Hongxiang Group, played in the broader system of China-North Korea trade. According to documents released by the Department of Justice in light of the action taken against the network, DHID described itself as, “an enterprise that conducts Sino-North Korea import and export,” that “accounted for more than 20% of market share.” It was able to satisfy procurement orders for North Korean government organizations and purchase hundreds of millions of dollars of North Korean commodities that it moved through domestic Chinese distribution channels. In addition to its position as a large-scale trade firm on the border of North Korea, DHID played an additional, and likely much more valuable role for North Korea, as a means for the sanctioned North Korean financial institution Korea Kwangson Banking Corp. (KKBC) to access the global financial system. Designated since 2009 for its role in allegedly facilitating transactions for some of North Korea’s most notorious weapons proliferators, as part of North Korean banking’s foreign exchange infrastructure, KKBC needed to maintain access to the international financial system, especially the US dollar, to pay its various counterparties around the world. Department of Justice documents state, “DHID Entities served as financial intermediaries for US dollar transactions between North Korea based entities who were financed by KKBC and suppliers in other countries to evade the restrictions on US dollar transactions.” The documents further state “that over two separate time periods...a total of US$11,127,580.60 was remitted to DHID through this KKBC account. Of which approximately $8,324,067.00 were cash withdrawals for DHID, and $2,803,513.60 were designated as wire transfers to DHID.” To maintain records of KKBC in the broader set of DHID’s own financial documents, Department of Justice documents allege that DHID employed a “ledger system” to record transactions. This system, a parallel set of matching financial records held at DHID and KKBC, would likely allow for KKBC to settle the accounts of its various customers within North Korea without having to actually transfer money out of DHID host accounts. Court documents from the Chinpo Shipping court case in Singapore state that Chinpo was running a similar scheme, acting as a means by which North Korean entities could make payments to other parties. The documents reference a separate excel spreadsheet among the company’s financial documents in which Chinpo “kept track of [North Korean] deposits and payments.” In its ledger, Chinpo held sums varying from $3.6 million to almost $6.8 million between 2008 and 2012 on behalf of North Korean entities. To complicate the trail leading back to KKBC, DHID maintained a number of front companies in countries around the world. All in all, the network consisted of 43 total business entities and was
present in six business jurisdictions on four continents. Department of Justice documents state that DHID used at least 22 companies to engage in US dollar transactions, moving nearly US$75 million through the United States financial system. Far from being isolated, the scope of the network allowed sanctioned North Korean entities to conduct financial transactions that would appear to US and European correspondent banks as coming from companies based in the British Virgin Islands, Seychelles, England, Wales, or Hong Kong. In spite of the steps taken to obfuscate transactions made on behalf of KKBC and the various levels of front companies employed, the system relied on DHID as its cornerstone. Its licit trading activities allowed for large transfers of value, via commodity sales, to come from North Korea, likely replenishing its DHID host accounts, and gave the regime a fleet of foreign flagged ships with which to send goods back. Since 2013, DHID imported over US$250 million in North Korean coal alone, and in that same time period sent nearly US$210 million of goods to the Kim regime. In addition, the ledger system allowed the Kim regime to monitor and control flows of money in and out of its accounts, maintaining its ability for centralized management of these funds. Targeted international action against entities like DHID strike at where the North Korean overseas financing system is most vulnerable, at key “chokepoints,” where licit and illicit activities converge. Firms playing a similar role to DHID should not be characterized as Chinese companies acting on behalf of the Kim regime, but rather as what they really are, North Korean regime assets assisting in the violation of international sanctions. Using loopholes and countermeasures, North Korea has been able to insert itself into border trade firms that act as proxies and enter the commercial system undisturbed. By targeting action against these host companies, as the US and China did in the case of DHID in September, 2016, the international community is doing more than simply freezing the assets of a single host. They are preventing the regime from accessing to the global financial system. China, the largest market exploited by North Korean overseas networks, represents about 85% of total North Korean trade. Yet, this entire trading system has consisted of only 5,233 companies from 2013 to 2016. Top firms by revenue in this dataset not only play a disproportionately large role, they also have begun to consolidate among themselves. North Korean overseas networks have been extremely adaptive to the combined pressures of international sanctions, in large part due to their ability to nest and disguise their illicit business within the licit trade. Like the cover material of iron ore over the RPG’s aboard the Jie Shun, or the dual role played by Dandong Hongxiang, the problem is particularly acute in the North Korean context where the state controls major aspects of the international trading economy. As early as 2006, former Undersecretary for Terrorism and Financial Intelligence Stuart Levey noted that, “the line between North Korea’s licit and illicit money is nearly invisible.” As North Korea has become ever more isolated internationally, it has had to confine nearly all of its trade to China. Data from 2016 shows that around 85% of total North Korean trade was conducted with China. According to Harvard-based North Korea specialist John Park, “what we are seeing now is the operation of sophisticated North Korean-run networks based in China.” In this relationship, North Korea has repeatedly taken advantage of the system of trade to conduct illicit activity nested within the licit system. North Korea has repeatedly exploited the Chinese market to disguise its illicit activity. In the past, North Korean networks in China have reportedly shipped missile components to North Korea, used Chinese dual-use technologies in UAV’s, used Chinese vehicles for mobile missile launchers, and counterfeited Chinese currency. Using a variety of large-scale commodity exports, the regime found a receptive market in the growing Chinese economy, particularly the trade in anthracite coal, which made up over 46% of total exports in 2016 alone. While the ban on North Korean coal imports levied by China on February 18, 2017 has ostensibly halted Chinese imports of coal from North Korea, the regime’s nested trading infrastructure remains largely in place. “There are lucrative recurring business opportunities with elite North Korean state trading companies,” according to Park, “But the catalyst for the further development of sophisticated North Korea-directed networks is the private Chinese company.” These relationships are partly responsible for the development of black markets within North Korea, giving North Korean traders access to an expanding portfolio of foreign goods. Leveraging their unique position, many China-based, commercial facilitators branch heavily into other illicit networks. It should be noted that DHID-linked front companies were transacting heavily with the businesses of a formerly sanctioned Burmese regime crony, who was known to be a weapons facilitator for the junta. Although the regime has seen a boom in the sale of natural resources in recent years, the increased sale of fewer
and fewer commodities to a single country has left its system of trade progressively more vulnerable. Analysis reveals that the scope of licit trade, in which North Korea nests its illicit networks, is surprisingly small. According to trade records, from 2013 to 2016, there were only 5,233 companies within China that either imported goods from or exported goods to North Korea. To put that number in perspective, as of 2016, 67,163 Chinese companies exported to South Korea. Additionally, these 5,233 businesses are not all unique actors: many of them have subsidiary relationships with companies within the dataset. For example, the network surrounding the DHID, the Liaoning Hongxiang Group, was made up of 18 companies in China alone, many of which appear within the dataset as unique entities. Companies within this discreet dataset that are seeking to conduct illicit activities are likely to be subject to similar market forces as the Liaoning Hongxiang Group, and are likely to manifest those forces in similar network structures. By analyzing trade flows to isolate these networks, it may be possible to significantly increase the tempo of investigations and enforcement actions. While the number of firms doing business with North Korea is limited, a disproportionate share of that trade is centralized among an even smaller number of large-scale trading firms. This centralization is best seen in the trade data. According to trade records, the top ten importers of North Korean goods in China in 2016 controlled just shy of 30% of the market. Many of these companies have retained their market position for years. In 2016, five of the top ten Chinese exporters had been in the top ten for at least three of four years since 2013. For its part, Dandong Hongxiang Industrial Development Co. Ltd. appears on both the list of top importers and top exporters from 2013 to 2016, a position only shared by one other company, Dandong Qiancang Trading Co. Ltd. The limited number of companies dealing with North Korea on this scale annually suggests that these central companies have created a system in which dealing with the Kim regime carries high barriers of entry. This is an idea that has been explored in more detail by John Park: “The primary driver for the development of North Korean-run networks is the monetization of political relationships. The head of the private Chinese company, acting as the node of a network, has become adept at clearing a pathway of potential obstacles by buying the services of local law enforcement officers and politically connected officials. In a short period of time, these actors have become full-fledged partners in the network.” In 2016, a single company, Dandong Zhicheng Metallic Material Co. Ltd, reportedly accounted for 9.19% of total North Korean exports to China. Established in July 2005, just as North Korean coal exports began to increase as a percentage of total exports, Dandong Zhicheng Metallic Material Co. Ltd. is a commodity company based in Dandong, China. The company’s archived website states that, as of April 6, 2016, it was recording annual sales of US$250 million, mainly of North Korean coal. This fact is recorded in trade data: 97% of the company’s imports were of North Korean coal. The company’s rapid growth and subsequent market position today is best described by a 2013 statement by one of the company’s traders, “The golden time for high profit has ended. It is now difficult to expand the market share further, and small players are out of the game.” Since 2014, Dandong Zhicheng Metallic Material Co. Ltd. has reportedly been the top overall importer from North Korea in China. While Dandong Zhicheng Metallic Material Co. Ltd. is the clearest example of centralization of China-North Korea trade, it is hardly the only one. Even discounting the fact that many of the firms contained within the dataset are subsidiaries of larger firms, top firms hold a unique position—regardless of the presence of illicit activity, international business at this volume with North Korea is unlikely to occur without interacting with the regime. Court transcripts from the Chinpo Shipping case repeatedly state as much, “there are no private companies in DPRK. All companies are state-owned.” While statistical analysis of the dataset shows the influence of top firms on China-North Korea trade, the internal structure of their business networks reveals how truly limited these networks are. Once charted, not only do links between top firms become more apparent, but it becomes much more apparent that a very small number of key executives control a disproportionate share of the trade. Many of the top importers and exporters have relationships with other top firms via joint ventures, shared directors, shareholders, or common identifiers (office addresses, phone numbers, email addresses, etc.). For example, the company Dandong Hongri Diandang Co. Ltd. was formed via a joint venture between DHID and Dandong Kehua Economic Trade Co. Ltd. Both companies were additionally part of the “Northeast Asia Economic Trade Development Summit,” an event including five leading China-North Korea trade companies. These relationships, both formal and informal, are marks of an increasingly consolidating China-North Korea trade. The extent of inter-
connectedness among these firms is perhaps best seen in the network surrounding executives linked to Dandong Tianfu Trade Co. Ltd. Together they link seven firms that appear on top ten importer or exporter revenue lists between 2013 to 2016, including the previously mentioned Dandong Qiancang Trading Co., into a loose network via shared directors, shareholders, and business identifiers. The combined exports of these seven companies to North Korea from 2013 to 2016 was US$737,302,913, or 5.6% of total Chinese exports to North Korea over that period. Centered around the CEO of Dandong Tianfu Trade Co. Ltd., Zhang Ling, a Chinese Communist Party member, the group holds a commanding position. Much like DHID, the network encompasses a full suite of commodity, logistics, trade, and hospitality companies. As John Park observed, “While on the surface we may see shrubs, below are roots that are remarkably deep and interconnected with other root systems.” Centralized illicit networks nested within a limited number of firms means that targeting specific key nodes can have a disproportionate impact. Moreover, due to these nodes requiring the licit systems of trade, transportation, and finance to conduct core business operations, they are also visible and vulnerable to law enforcement action. The main objective of the North Korean sanctions program is to deny the proliferation of WMD and dual-use materials that could benefit the regime’s nuclear and missile programs. Although sanctions have greatly restricted avenues for North Korea-related trade, it is clear from repeated weapons testing that proliferation materials are circumventing these measures. This is, in large part, likely because of the ability of North Korean overseas networks to disguise these transactions within their much larger trade flows. By monitoring the specific trade flows that these companies conduct, in addition to analyzing the network structures of firms playing a central role in China-North Korea trade, it may be possible to identify signals of illicit activity. It should be noted that analysis of DHID flagged a potential shipment of aluminum oxide, a component used in uranium enrichment, among the company’s exports to North Korea as recently as September 2015. The following Harmonized System (HS) codes, used to classify and define internationally traded goods, were provided by Catherine Dill, Senior Research Associate at the James Martin Center for Nonproliferation Studies, as goods that had a high potential for dual-use application in ballistic missile programs. While the list is not exhaustive, it does identify key dual-use components North Korea could use within its missile program. Further investigation is required to confirm the presence of any illicit activity.

- 9306.90 – Bombs, grenades, torpedoes, mines, missiles and similar munitions of war and parts thereof
- 9014.20 – Instruments and appliances for aeronautical or space navigation (other than compasses)
- 8802.60 – Spacecraft (including satellites) and suborbital and spacecraft launch vehicles
- 8803.90 – Parts for 8802.60
- 8526.10 – Radar
- 8412.10 – Reaction engines other than turbo-jets
- 8411.11 – Turbo-jets: Of a thrust not exceeding 25 kN
- 8526.91 – Radio navigational aid apparatus
- 8463.90 – Other machine-tools for working metal or cermet’s, without removing material
- 6815.10 – Non-electrical articles of graphite or other carbon
- 2825.10 – Hydrazine and hydroxylamine and their inorganic salts
- 3801.10 – Artificial graphite
- 3801.90 – Preparations based on graphite or other carbon in the form of blocks, plates or other semi-manufactures

Searches for these HS codes within trade data of Chinese firms exporting to North Korea produced a range of interesting results:

- In April 2014, Dandong Qiancang Trading Co. Ltd. was responsible for a shipment worth US$17,600 of HS code 8463.90. According to the James Martin Center for Nonproliferation Studies, items might include machine-tools for working metal or cermet, without removing

Industrial Ltd., a company with linkages to the Jie Shun seizure, share common identifiers on their
business registry information does not necessarily prove collusion or the existence of illicit
activity. However, it demonstrates again what has been consistently apparent; that the limited
North Korean trading system is much more inter-connected than it at first appears, and that,
because of links to illicit actors, it may be vulnerable to systemic disruption in the face of targeted
enforcement action. International pressure and sanctions enforcement levied against North Korea have stumbled because of two key misconceptions. First, the system of North Korean financing and procurement is practically invisible, making it nearly impossible to expose. And second, the information needed to pressure the regime is unobtainable from the open source; therefore, unavailable to key stakeholders, such as banks, transportation companies, and much of law enforcement. Our study finds the opposite to be true. By being centralized, limited and ultimately vulnerable North Korean overseas networks are, by their nature, ripe for disruption. The cases studies in this paper, while not comprehensive, were intended to highlight key trends and patterns which can help to guide decision-makers in understanding the operational capabilities of these networks and to hopefully design more effective global enforcement strategies. Cases such as Fan Mintian’s role in weapons trafficking highlight the extent to which the system is centralized around key entities and individuals, while the activities of entities such as Dandong Hongxiang reveal the extent to which the entire system relies on key logistical ‘chokepoints’ for its global centralized system of illicit finance. Moreover, as can be seen in its trading relationships with the Tianfu Group and Dandong Zhicheng Metallic Material Co. Ltd., the system is closely interconnected, and through connections to companies such as Dandong Dongyuan Co. Ltd., potentially exposed to, and facilitating, illicit activity. However, the entire system remains extremely vulnerable. The fact that a vast majority of North Korea’s trade activity, both licit and illicit, may be concentrated within just 5,233 companies makes the investigatory work to map and expose these networks manageable. Additionally, these networks’ reliance on the licit systems of finance, trade, and transportation means they leave behind a digital trail within public records, and other data sources, and are acutely vulnerable to targeted sanctions. Although to date economic coercion has been ineffective in persuading North Korea to abandon its pursuit of nuclear weapons, this does not mean it cannot work. On the contrary, targeted enforcement actions against key nodes within the system can have the effect of impacting multiple networks across multiple countries simultaneously, removing key functions, such as individuals or entities specialized in illicit finance and procurement, who cannot be easily replaced. Each action can individually increase the cost and complexity of sanctions evasion for North Korea, but if applied against a number of these key nodes simultaneously, they could, in theory, cause the entire overseas system to collapse. The 2016 indictment and forfeiture action against Dandong Hongxiang in September 2016 is an ideal example of such action. The action not only disrupted a major source of revenue for the North Korean government, but also an important gateway through which the broader regime banking sector was accessing the international financial system. For the U.S. government, it closed down a network moving known dual-use materials that could be used in North Korea’s uranium enrichment program, but for the Chinese government, it had the additional benefit of closing down an entity that was exposing the Chinese banking sector to significant reputational and material risk. Dismantling North Korea’s overseas illicit financing and procurement system is the most compelling means to coerce the regime to the negotiating table. The time for action is now.” (David Thompson, Risky Business: A System-Level Analysis of the North Korean Proliferation Financing System, C4ADS, June 12, 2017)
also revealed that the drone was outfitted with components coming from six countries. Propelled by an engine made by Czech Republic, the drone used a South Korean servo motor, Canadian autopilot circuit board, American GPS system and Japanese A7R camera made by Sony. The drone flew at a maximum altitude of 2.4 kilometers at an average speed of 90 kilometers per hour in a “straight-line pattern,” until it reached the site for Terminal High Altitude Area Defense battery in Seongju, North Gyeongsang Province, the military added. The military confirmed that the drone carried about 551 photos of South Korean territory, including about 10 pictures of a THAAD battery. The images, however, were not transmitted to North Korea in realtime, the military analyzed. “We believe that North Korea has yet to secure technology to send the images back home in real time,” an anonymous official from Agency for Defense Development, a state agency for research and development of defense technology. Although the found drone was mainly designed to acquire information on ground targets, the North could use smaller-size devices for biological attacks involving toxic materials such as Antrax, the military asserted. “We believe North Korea has the capability to mount chemical weapons and explosives, instead of a camera. They can fly such drones into the South’s rear area,” a senior official at JCS said under the condition of anonymity. Analysts, calling such a drone attack an “imminent threat,” criticized the South Korean military for having done little about it, while acknowledging the challenges in detecting and intercepting small drones with current surveillance. After a North Korean drone was found to have flown over the presidential palace of Cheong Wa Dae and taken pictures of it in 2014, the South Korean military decided to ramp up efforts to purchase and develop low-altitude radars targeting drones. But the radars have yet to be fully deployed, particular at the border area. “The military is in the process of developing a new system to detect and neutralize small-sized drones. We are doing our utmost to field extensive radar and other air-defense assets,” said defense ministry’s spokesman Moon Sang-kyun. (Yeo Jun-suk, “Drone That Spied on THAAD Was from North Korea: Military,” Korea Herald, June 21, 2017)

The Trump administration has asked China to act against several Chinese entities suspected of doing illicit business with North Korea, Secretary of State Rex Tillerson said during testimony before the House Foreign Affairs Committee. But Tillerson was explicit that Washington also believes that Chinese businesses and individuals are helping North Korea evade a yoke of international sanctions. “Our expectations have been very clear with the Chinese. Their cooperation, I would say, has been notable, but it has been uneven,” Tillerson said. “We continue that dialogue with the Chinese, specifically around their actions that support revenue streams to North Korea, but also taking action against entities inside of China that may be supporting revenue streams as well,” Tillerson said. The Wall Street Journal reported this week that the Trump administration has given China a list of about 10 such suspect entities and has demanded action. Tillerson appeared to confirm that report and added that Chinese compliance would be a central topic during meetings he will have with Defense Secretary Jim Mattis and their Chinese counterparts next week in Washington. “We have made it clear to them, and we have provided them a list of entities that we believe they need to take action against,” Tillerson said. “We have asked that they take the action, but President Trump has also been very clear with President Xi that if they either don’t want to take the action or they do not take the action, we will act on our own.” Later, in testimony to a panel of the House Appropriations Committee, Tillerson said the United States assesses that China’s complicated relationship with North Korea is changing and that China increasingly sees Pyongyang as a liability. The combination of North Korean advances in nuclear weapons and long-range missiles means that “there’s no runway left,” for lengthy or ineffective diplomacy, Tillerson said. “We have to reverse what North Korea is doing,” and China understands the imperative, he said. “They have affirmed their policy is a denuclearized Korean Peninsula,” Tillerson said. Chinese diplomats recently worked alongside the United States to approve additional new United Nations Security Council sanctions. Although mild, those penalties served as a warning that Chinese patience is thinning. “There is a critical window of opportunity for the nuclear issue of the [Korean] Peninsula to come back to the right track of seeking a settlement through dialogue and negotiations,” China’s U.N. ambassador, Liu Jieyi, told the Security Council, according to Reuters. “It is incumbent on all parties concerned to exercise restraint and to do more to help ease the tension and build mutual trust.” (Anne Gearan, “Tillerson...
achieving national unity. The great national unity leads to reunification and reunified powerful National reunification is the great cause of rejoining the severed national unity as immutable truth, away from confrontation idea hostile toward the compatriots. The road to reunification and rosy future of the nation will be opened when they accept promoting settlement of the reunification issue. The south Korean authorities should bear in mind that the forget that herein lies the prospect for the improvement of the north submission to outsiders. By our n south Korean authorities should make a crucial decision at a crossroads of independence or the nation which follows flunkeyism would ruin. This is a bitter lesson taught by history. The south relations let alone the reunification issue. One who take despite their lip service for "new era" and "new politc the blood and soul of the nation, he should make a bold decision to part with the disgusting and servile act which would be of no help to maintaining national independence. Time has changed today and the initiative of settling the reunification issue is in the hands of the Korean nation itself, not any outsiders. The south Korean authorities should clearly understand this. If one is not able to move even a step at one's own will, being shackled by the chain of sycophancy toward the U.S. despite their lip-service for "new era" and "new politcs", one can never be able to solve the north-south relations let alone the reunification issue. One who takes to flunkeyism would be fool and the nation which follows flunkeyism would ruin. This is a bitter lesson taught by history. The south Korean authorities should make a crucial decision at a crossroads of independence or submission to outsiders and By our nation itself or "south Korea-U.S. alliance", and should never forget that herein lies the prospect for the improvement of the north-south relations and the settlement of the reunification issue.

2. The south Korean authorities should bear in mind that the road to reunification and rosy future of the nation will be opened when they accept promoting national unity as immutable truth, away from confrontation idea hostile toward the compatriots. National reunification is the great cause of rejoining the severed blood ties of the nation and achieving national unity. The great national unity leads to reunification and reunified powerful
country. It is our consistent will to unite irrespective of ideology, social system, ism and political view for the great intention for national reunification. The north-south confrontation will be aggravated and the nation cannot dodge conflicts and war if they do not allow the ideas and social systems existing in the north and the south but force upon other side their own regarding them as absolute. When we go united, we will prosper, but divided, we will lose everything. Koreans should give up hostility to compatriots and open the new chapter of reconciliation and unity in order to radically improve the north-south relations as desired by the entire nation. However, the present south Korean authorities fail to pass the "red line" of confrontation drawn during the conservative regime. They claim "the government and army of the north are enemy", expressing the will to continue sanctions and pressure on the north. Even they unhesitatingly reveal the sinister intention to use wicked means and methods for "collapse of social system in the north" sought by the conservative group. It is something new in its appearance but is the replica of the confrontation policy pursued by the past regime in its main substance. Far from welcoming the north's measures for bolstering its capability for self-defense recognized by other countries, the south Korean authorities openly seek sanctions and pressure against the north in collusion with the U.S., branding them as "threats and provocations". This is an expression of the will of the present south Korean regime to pursue confrontation policy against the compatriots in the north. Confrontation with the compatriots is the treacherous behavior following the U.S. hostile policy toward the DPRK and sanctions and pressure are a vivid expression of hostility to the latter. That's why calling for improved relations pursuing the "strategy for carrying out sanctions and dialogue, pressure and contacts side by side" is a foolish act and self-deception. We call for recognizing the opposite side as companion of reunification and joining hands to open the new horizon of national reconciliation and unity, not for visits between few non-governmental organizations shirking the settlement of the fundamental problems. Such trick is nothing helpful but brings bigger disasters. If the south Korean authorities have no will to recognize and respect the north and give up confrontation and hostility to the compatriots, we have no idea to force them. The confrontation between social systems will finally lead to physical conflict, and then we are compelled to choose reunification by non-peaceful way. Bearing this in mind, the south Korean authorities should take the responsible option. 3. We make it clear once again that it is our invariable stand that measures to remove the acute military tensions on the Korean peninsula should be urgently taken before anything else. Peace and security on the peninsula is a vital issue related to the destiny of our nation and this serves as indispensable premise for national reunification. Despite our devoted and persevering efforts to ensure the peace on this land, unheard-of acute military tensions in history prevail on the peninsula and no one can guess when and where a nuclear war will break out. Moreover, the U.S., taken aback by the fact that the pro-American conservative regime fell in south Korea and the entire Korean nation's interest in improved north-south relations and reunification is mounting, is busy staging the largest-ever war maneuvers everyday by introducing huge nuclear war forces into the peninsula and its vicinity to push the military tension to the extremes. What matters is that the present south Korean authorities, who vociferate about an "epochal turn" for peace on the peninsula during their term of office, are pro-actively joining in the robber-like aggression war moves of the U.S., persistently faulting the fellow countrymen's measures for bolstering their nuclear force. After its emergence, the new regime of south Korea has caused such dangerous situation unprecedented in history as simultaneous introduction of two nuclear-powered carrier strike groups of the U.S. to the waters off the peninsula. And it has been staging more frantic aggression war exercises against the fellow countrymen, frequently introducing formations of nuclear strategic bombers such as B-1B, nuclear-powered submarine and other nuclear strike means into south Korea. When viewing the present situation, people at home and abroad unanimously express anxiety that it is hard to escape a disaster of nuclear war, far from expecting "lasting peace and prosperity" touted by the chief executive of south Korea. Under such grave situation, peace can be ensured only by strength for self-defense enough to beat any formidable enemy at one blow, not concession and submission to the aggressor. We could no longer allow the U.S. persistent nuclear threat, blackmail and aggression war moves that have continued for centuries, and so we have provided the world's strongest military capability for self-defense with nuclear force as a pivot. We desire peace more than anybody else and do not want the war disaster to be suffered by our nation again. However, if the U.S. and its vassal forces finally make reckless
attack, we are fully ready to blow up the aggressors and their bulwark with treasured nuclear sword of justice. Our nuclear strike means are so precise that they can destroy not only nearby nuclear strike assets of the U.S. but also gouge out even the aggressors entrenched in its mainland across the ocean. **If the south Korean authorities truly want peace, they should not pull up the DPRK's nuclear forces for self-defense,** the most dependable and realistic guarantee for peace of the Korean peninsula, but take steps to put a halt to the U.S. aggressive and war-like deeds. In particular, **they should no longer cling to the reckless military provocation aimed to defend the illegal and bogus "northern limit line" in the hotspot waters of the West Sea. And they should go into action to remove the danger of armed conflicts in land, sea and sky including the areas of the Military Demarcation Line and defuse the military tensions.** Now the south Korean authorities should be mindful that they stand at the crossroads of life whether they will leave a proud mark in the nation's history by improving the north-south relations together with us or follow the miserable suit of predecessors, staggering at while reading outsiders' faces. **Now that the DPRK emerged a dignified nuclear and rocket power, steadfast is its stand to open up a broad avenue to independent reunification by bringing about a great turn and change in the north-south relations.** We take this opportunity to ardently call upon all compatriots in the north and the south and abroad to more valiantly turn out in the nationwide struggle for ushering in a new history of improved north-south relations and independent reunification through strict embodiment of the spirit of the June 15 joint declaration. (KCNA, “CPRC Statement on Anniversary of June 15 Joint Declaration,” June 14, 2017)

The National Security Agency has linked the North Korean government to the creation of the WannaCry computer worm that affected more than 300,000 people in some 150 countries last month, according to U.S. intelligence officials. The assessment, which was issued internally last week and has not been made public, is based on an analysis of tactics, techniques and targets that point with “moderate confidence” to North Korea’s spy agency, the Reconnaissance General Bureau, according to an individual familiar with the report. The assessment states that “cyber actors” suspected to be “sponsored by” the RGB were behind two versions of WannaCry, a worm that was built around an NSA hacking tool that had been obtained and posted online last year by an anonymous group calling itself the Shadow Brokers. It was the first computer worm to be paired with ransomware, which encrypts data on victims’ computers and demands a ransom to restore access. WannaCry was apparently an attempt to raise revenue for the regime, but analysts said the effort was flawed. Though the hackers raised $140,000 in bitcoin, a form of digital currency, so far they have not cashed it in, the analysts said. That is likely because an operational error has made the transactions easy to track, including by law enforcement. As a result, no online currency exchange will touch it, said Jake Williams, founder of Rendition Infosec, a cybersecurity firm. “This is like knowingly taking tainted bills from a bank robbery,” he said. Though the assessment is not conclusive, the preponderance of the evidence points to Pyongyang. It includes the range of computer Internet protocol addresses in China historically used by the RGB, and the assessment is consistent with intelligence gathered recently by other Western spy agencies. It states that the hackers behind WannaCry are also called “the Lazarus Group,” a name used by private-sector researchers. One of the agencies reported that a prototype of WannaCry ransomware was found this spring in a non-Western bank. That data point was a “building block” for the North Korea assessment, the individual said. “What it really confirms is that . . . you don’t have to be the best in the business to cause a lot of disruption,” said Michael Sulmeyer, director of the cybersecurity project at Harvard’s Kennedy School. “And that’s what they showed they were willing and able to do.” The NSA declined to comment. Federal prosecutors have been probing North Korea’s role in the Bangladesh bank theft, and indictments could be issued. The Justice Department in recent years has used indictments as a tool to try to hold accountable hackers from other nation states, including China and Iran. The fact of a nation-state using cyber tools to rob banks, then-NSA Deputy Director Richard Ledgett said in March, represented “a troubling new front in cyberwarfare.” He did not name North Korea, but the allusion was clear. “This is a big deal,” he said. The NSA cyber tool at the base of WannaCry was an exploit dubbed EternalBlue by the agency. It took advantage of a software flaw in some Microsoft Windows operating systems and enabled an attacker to gain access to those computers. Although Microsoft, after being notified by the NSA, issued a patch for the software flaw in March, many companies around
President Moon Jae-in said he was willing to “sit knee-to-knee, head-on-head” with North Korea to discuss ways to implement the joint inter-Korean declarations promoting peace and cooperation between the two countries, adding that on the key agenda could be normalizing ties between Washington and Pyongyang and the establishment of a “peace regime” on the peninsula. The statement was laid out in Yeouido, western Seoul, during his congratulatory remarks in a ceremony that marked the 17th anniversary of the June 15th North-South Joint Declaration. It was the first time in 12 years that a sitting president attended the event. Moon’s remarks were a step beyond his previous stance, whereby he mostly stopped short of saying he would talk with North Korean leader Kim Jong-un if the regime refrained from conducting any additional nuclear and missile tests. On Thursday, the agenda was specified. The North Korean leader’s most important diplomatic goal is to sign a permanent peace treaty with the United States to replace a 64-year-old armistice and formally end the Korean War. Washington has rebuffed the idea in the past unless Pyongyang fully scraps its nuclear and missile programs, which Kim has insisted will never happen. Moon called for the legalization of the joint inter-Korean agreements, saying Seoul’s North Korea policy would not have “gone back and forth” had the legislature ratified them. Moon mentioned four joint declarations in 1972, 1991, 2000 and 2007 to be made law, most of which stress that Seoul and Pyongyang agree to seek reunification independently, apart from any influence from third countries or outer forces. Other agreements include economic cooperation and building mutual confidence by boosting exchanges in all fields. In the midst of the conciliatory gesture, however, Moon spared no time in pressing the North to denuclearize. “North Korea must give up on developing nuclear weapons and find a way to cooperate with the international society,” he said. The annual ceremony, organized by the Seoul-based All Korean Committee for Implementation of the June 15 Joint Declaration in South Korea, was held six days after the group rescinded their decision to hold the event jointly with its North Korean counterpart in Pyongyang. The committee said it had considered “physical and political situations at hand” for their final call to host the celebration separately, but blamed the South Korean government for not officially endorsing the joint project. It lambasted Seoul’s stance that any humanitarian support to the North and exchanges at the private level would be reviewed within the bounds of international sanctions against the regime, saying, “Private human-to-human dialogue and exchanges must be independent” from any political issues between the two countries. North Korea ran several articles in its state-run media today that urged the South Korean government to part ways with the United States and draw back its sanctions. “National independence is a fundament guarantee and a basic principle for the solution of the reunification issue,” the Committee for Peaceful Reunification of the Country of the DPRK, the North’s equivalent to South Korea’s Ministry of Unification, said in
a statement, which was issued Wednesday and published in Rodong Sinmun today. Inter-Korean relations soured and reached a “total catastrophe due to the U.S. persistently seeking to hinder the Korean nation’s reunification,” the statement continued. Pyongyang threatened that the South-North confrontation will eventually lead to “physical conflict,” and that by then, both countries would be “compelled to choose reunification [the] non-peaceful way.” For Seoul to seek peace with Pyongyang, it should not fight for North Korea’s denuclearization because the weapons are the “most dependable and realistic guarantee for peace” of the Korean Peninsula, said the North. Trashing Moon’s “kowtowing to big countries for no good reason,” Pyongyang demanded that Seoul stop siding with Washington by applying sanctions and pressure against the regime. (Lee Sung-eun, “President Willing to Discuss Ways to Carry out Joint Declarations,” JoongAng Ilbo, June 16, 2017) A decision by North Korea to give up its nuclear weapons would be a sign that it is willing to implement its agreements with South Korea. If the North halts further provocations with its nuclear weapons and missiles, we’re willing to engage in unconditional dialogue with the North,” President Moon Jae-in said today. “The agreements reached by previous governments, including the July 4 Inter-Korean Joint Statement, the Inter-Korean Basic Agreement, the June 15 Joint Statement and the Oct. 4 Summit Statement, are important assets that must be respected even when the administration changes. The government will handle the inter-Korean agreements of previous administrations under the principle that North and South Korea ought to return to them together.” “Inter-Korean relations must be reestablished and developed, if only to resolve the crisis we are facing,” Moon said during a congratulatory address in an event marking the 17th anniversary of the June 15 Inter-Korean Joint Statement, which took place in the 63 Building in Yeouido, Seoul, on June 15. It was the first time since 2006 (since former president Roh Moo-hyun, in office 2003-08) for a sitting president to attend this event, which commemorates the inter-Korean summit meeting attended by former president Kim Dae-jung (1998-2003) on June 15, 2000. “Just as Kim Dae-jung managed to develop inter-Korean relations while holding to the principle of not tolerating North Korea’s nuclear weapons and provocations, we must also once again work toward a solution with determination and a daring plan,” Moon said. “I’m willing to sit down for a face-to-face discussion of how we will go about implementing the current inter-Korean agreements. It will be possible to discuss the complete range of issues, including the complete abolition of North Korea’s nuclear program, the establishment of a peace regime on the Korean Peninsula and even the normalization of North Korea’s relations with the US,” he continued, while calling for North Korea to stop committing nuclear and missile provocations. Since his presidential campaign, Moon has said he means to reach a new agreement while respecting previous inter-Korean agreements. “Considering that North Korea is under sanctions and pressure, we can’t make a new proposal to North Korea [that goes beyond our current stance]. He was emphasizing that we can work with the international community to help North Korea if the North abandons its nuclear weapon development and takes part in dialogue,” a Blue House official said when asked about Moon’s comments. “We’re in a situation where both the US and North Korea seem willing to engage in dialogue under the right conditions. Taking the initiative to create the conditions for dialogue will be the crux of the new administration’s foreign policy and security,” said an expert on inter-Korean relations who was part of Moon’s presidential campaign. A large number of figures attended the commemorative event, including Kim Dae-jung’s widow Lee Hee-ho, Minjoo Party leader Choo Mi-ae, Minjoo Party floor leader Woo Won-shik, People’s Party interim leader Park Joo-sun and People’s Party floor leader Kim Dong-cheol. In a post on his Facebook page, Park Joo-sun even proposed to Moon Jae-in that “The dates of the June 15 Inter-Korean Joint Statement and the Oct. 14 Inter-Korean Summit Statement be designated as national anniversaries.” A resolution has currently been submitted to the National Assembly calling for this designation. “These anniversaries could be designated immediately with the approval of the cabinet,” Park said. (Lee Jung-ae and Jung In-hwan, “Pres. Moon Says Unconditional Dialogue If North Korea Halts Nuke Development and Provocations,” Hankyore, June 16, 2017)

The United States is exhausting all possible diplomatic efforts to resolve the North Korean nuclear issue without using force because war with the North would result in massive human suffering unseen since the Korean War, Defense Secretary Jim Mattis said. "We will win. It will be a war more serious in terms of human suffering than anything we’ve seen since 1953. It will involve the massive shelling of an ally’s capital, which is one of the most densely packed cities on earth,"
Otto Warmbier, who was medically evacuated from a 17-month detention in North Korea and arrived home June 13, has extensive loss of brain tissue and is in a state of unresponsive wakefulness, University of Cincinnati doctors said this afternoon. Doctors said they don’t know what caused the brain damage. When asked whether it could be the result of beating or other violence while in prison, they said that Warmbier did not show any obvious indications of trauma, nor evidence of either acute or healing fractures. Rather, Daniel Kanter, medical director of the neuroscience intensive care unit at University of Cincinnati Medical Center said, the pattern of brain injury they see on magnetic resonance imaging (MRI) results appeared consistent with a cardiopulmonary arrest, with damage to brain tissue caused by lack of blood flow to the brain. The doctors said they are not aware of anything from his medical history prior to his time in North Korea that might cause cardiopulmonary arrest. One of the more common causes of cardiopulmonary arrest is respiratory arrest, said Jordan Bonomo, neurointensivist and emergency medicine physician at UC Health. That cessation of breathing could be triggered by several things, including intoxication or a traumatic injury. It is possible to have respiratory arrest caused by an overdose of medication, intentional or otherwise, he said. Otto Warmbier’s condition, its possible causes and his treatment while he was detained in North Korea are of intense interest in a case that threatens to worsen already fraught relations between the United States and North Korea.

President Trump called Warmbier’s parents last night to tell them his administration had worked hard to secure their son’s release, and to ask how he was doing. Secretary of State Rex Tillerson also expressed relief that Warmbier has been returned to the United States. However, asked at news conference in Miami about how the United States might respond given Warmbier’s brain damage during captivity, Tillerson said he would not comment on his health, saying it was a private matter for the Warmbiers. “We are glad that he is home, rejoined with his family,” he said. Warmbier has undergone a battery of tests since his arrival at the UC Medical Center on the night of June 13. The doctors said he has spontaneous opening and blinking but shows no signs of understanding language or awareness of his surroundings. He has not spoken or engaged in any purposeful movement, Kanter said. “We don’t feel he has any conscious awareness,” Brandon Foreman, neurointensive care specialist at UC Gardner Neuroscience Institute, said. They have had no direct contact with North Korean medical authorities, Kanter said, but Warmbier arrived with two brain scans dated April and July 2016. They don’t have any way to verify those dates, but the damage to the brain is consistent with the deterioration they see from those previous scans, he said. After the tissue is damaged initially by insufficient blood flow — which they think probably happened before that initial scan — the body tries to remove the damaged tissue. “That’s what we’re seeing is this removal.” It has been almost a year and a half since Warmbier was detained in North Korea, which he had visited on a five-day tourist trip on his way to a study-abroad trip to Hong Kong with the University of Virginia. On his last night there, he apparently tried to remove a large propaganda sign. He was charged with “hostile acts against the state” and, after a sham trial, sentenced to 15 years of hard labor. It has been about 15 months since all contact was severed. He was allowed no consular visits. About a week ago, his parents suddenly got news: Their 22-year-old son was in a coma and had been for more than a year. They were told — but did not believe — that shortly after the trial Otto Warmbier contracted botulism and was given a sleeping pill, and that he had never recovered. There was no evidence indicating botulism,
Foreman said today. Joseph Yun, the State Department’s special representative for North Korea, rushed to help secure Warmbier’s medical evacuation. Late on the night of June 13, the Gulfstream jet touched down in Cincinnati, and his family finally got to see him, before medical personnel carried him off the plane into a waiting ambulance. At a news conference earlier today, Fred Warmbier said they are left with many questions and no answers. One many people had was how an athletic young man had become so desperately ill. “There is no excuse for any civilized nation” to have kept his condition a secret and denied him medical care for so long, Fred Warmbier said. Today, North Korea’s state-run news agency said that a court had allowed Warmbier to return home “on humanitarian grounds.” (Susan Svrluga, “Otto Warmbier Has Extensive Loss of Brain Tissue, No Sign of Trauma,” Washington Post, June 15, 2017) One American who was held captive in North Korea said he was interrogated up to 15 hours a day by officials who wanted him to confess to plotting to overthrow their government. Another said she was held in a 5-by-6-foot windowless cell. Yet another former American inmate shivered on the concrete floor of a room “no bigger than a dog’s house.” But despite a history of such treatment of prisoners dating to the 1950-53 Korean War, North Korea has generally refrained from physically abusing the Americans it has held in recent decades. That makes the case of Otto Warmbier, a 22-year-old American college student who had been serving a 15-year sentence in North Korea, even more striking. North Korea is known to have detained 16 American citizens since 1996, including three who are still in custody. They have been subjected to varying degrees of mental abuse but less often physical torture. Despite its longstanding enmity toward the United States and its allies, North Korea remains deeply sensitive to outside criticism of its human rights record, billing itself as a righteous nation that respects international norms. And while its propagandists have presented American prisoners as proof that the United States has been sending subversive agents into the country, it has also used them as bargaining chips in dealing with Washington, analysts said. The prospect that the Americans might eventually be released as part of negotiations seems to have influenced their treatment. “There seems to be a general attitude of not using physical violence against Americans, although they don’t appear unwilling to use psychological tactics and that sort thing,” said Robert R. King, a former State Department special envoy for North Korea human rights issues who handled Warmbier’s case until he retired in January. “This situation with Warmbier is likely something that happened that they did not intend.” The worst known case of abuse before Warmbier was that of Robert Park, a Christian missionary who said he was severely beaten by North Korean soldiers after he was caught in 2009 while walking across the border from China waving a Bible. After he was transferred to Pyongyang, North Korea, he said, he was subjected to torture so horrific he begged for death. “Several North Korean women surrounded me and did the worst thing to me to try to make me commit suicide,” Park said in an interview with Yonhap. He said the women beat his genitals with a club. Park has said he was diagnosed with post-traumatic stress disorder and has attempted suicide since his release. One former American detainee, Evan C. Hunziker, took his own life less than a month after he was released from North Korea in 1996, although it was unclear whether this was related to his experiences in the North. In a 2015 interview, the former detainee Aijalon Gomes recalled “a cement cell, which was beyond 6-foot cell. “Once I heard those words, ‘12 years,’ come from the judge, I could barely stand up straight,” Ling said on the “Oprah Winfrey Show,” recalling the day she and Ms. Lee were sentenced to 12 years of hard labor for illegal entry into the country. She spiraled into a deep depression. But she was not sent to a labor camp but was instead moved to a regular room while she was treated for ulcers. She was also allowed to place a few calls and send letters to her sister, husband and parents in the United States. She even taught curious guards a few yoga poses. The two women were released later in 2009 after former President Bill Clinton visited Pyongyang. It was a similar pattern for Kenneth Bae, a Korean-American missionary who was sentenced to 15 years of hard labor on charges of trying to establish a secret proselytizing network in the North. In his book “Not Forgotten,” Bae said his North Korean captors interrogated him up to 15 hours a day for the first four weeks. His treatment improved only after he wrote a confession in which he described himself as a terrorist who plotted to overthrow the government. Bae toiled on a soybean farm and lost more than 30 pounds. But he was allowed to read emails from his
family and friends in the United States. He was hospitalized three times for problems including diabetes, an enlarged heart and back pain. And he was permitted to read his Bible. While his treatment was harsh, Bae said he also sensed an undercurrent of respect toward foreigners by the North Korean authorities, who were concerned about their image abroad. He was never beaten, said Mr. Bae, who was freed in 2014 after the American government sent the director of national intelligence at the time, James R. Clapper Jr., to Pyongyang. Some of the American detainees even said they were treated rather decently. Matthew Todd Miller said he was surprised that he was allowed to keep his iPhone and iPad for “at least a month” after his arrival in North Korea, enabling him to listen to music and access other stored information, although he could not use them to send or receive messages. “I was prepared for the torture. But instead of that, I was killed with kindness,” he said in an interview with NK News. Another former detainee, Jeffrey E. Fowle, also said he was never harmed physically during nearly six months in detention. Arturo Pierre Martinez said he was treated “well,” and was even allowed out to take photos like a tourist. King said North Korea appeared to be very concerned about the health of the Americans it held. “They don’t want anyone to die on their watch,” he said. “This is why the Otto Warmbier case is unusual.” In his book “The Last P.O.W.,” the journalist Mike Chinoy said that a North Korean doctor and nurse appeared to check the blood pressure, pulse and heartbeat of Merrill E. Newman, then an 85-year-old American detainee, four times a day. Newman was released after 42 days in 2013. “The North Koreans have traditionally not wanted to keep Americans if there’s a possibility of having a health issue,” King said. King said that Warmbier was treated much like other Americans until his trial in March last year, when he was sentenced to 15 years of hard labor for trying to steal a political banner from his hotel in Pyongyang. What happened afterward is unclear. His family in Cincinnati reportedly was told that after his trial he contracted botulism and took a sleeping pill, and then fell into a coma. King suspected that North Korea may have been less willing to provide information about Warmbier’s health during rising tension over recent American sanctions against the country. The news about Warmbier deepened the anxiety among families of South Koreans and Japanese citizens held in the North. North Korea is accused of kidnapping more than 450 South Koreans, mostly fishermen, and 12 Japanese citizens in the decades after the Korean War. “This sounded like a warning to us, signaling what might happen to our family members if we spoke out against human rights abuses in the North,” said Hwang In-cheol, whose father was on a South Korean airliner hijacked to the North in 1969. The families of the Japanese citizens who the government says were abducted by North Korea in the 1970s and early ’80s know the pain of waiting for loved ones to return. North Korea has told the Japanese government that eight of the 12 are now dead but many families refuse to give up. Iizuka Shigeo, 79, refuses to believe that his sister, Yaeko Taguchi, who was abducted in 1978, died in a traffic accident in North Korea. “All we want is that all the abductees, including Yaeko, return as soon as possible,” he said. He said he was shocked to hear of Warmbier’s release in a coma. “It’s like a warning to the U.S.,” he said. (Choe Sang-hun, “North Korea’s Brutality to American Captive Is Seen as Rarity,” New York Times, June 15, 2017, p. A-8)

The U.S. government has issued a global alert against a group of North Korean hackers known as “Hidden Cobra,” citing major global hacking incidents that have occurred since 2009. The Computer Emergency Readiness Team of the U.S. Department of Homeland Security and the FBI in a joint statement warned of additional cyberattacks by the group of hackers targeting international media, and the financial, air transport and aerospace industries. Hidden Cobra has also been known as Lazarus or Guardians of Peace. Lazarus is thought to be responsible for the WannaCry ransomware attack that hijacked computers in vital businesses and services around the world last month, as well as 18 major hacking attempts including on the central bank of Bangladesh and the Federal Reserve Board in New York. As Guardians of Peace they hacked Sony Pictures in the U.S. in 2014, resulting in the leak of the private information of 47,000 individuals. Hidden Cobra was identified as the U.S. government was investigating the source of the "Delta Charlie" malware. The hackers have targeted computers using outdated Windows programs and apparently funneled the money from ransomware attacks into the North’s weapons programs. (Chosun Ilbo, “U.S. Announces Global Alert against N. Korean Hackers,” June 15, 2017)
Moon Chung-in, professor emeritus at Yonsei University and President Moon Jae-in’s special advisor on unification, foreign affairs and national security, said that the South Korea-US joint military exercises (which include the deployment of US strategic assets to the Korean Peninsula), could be scaled down if North Korea suspends its nuclear and missile activities. Moon Chung-in made the remarks during a seminar on the topic of “New Administrations and the U.S.-R.O.K. Alliance: Challenges and Way Forward,” which was hosted in Washington by the East Asia Foundation and the Woodrow Wilson International Center for Scholars, and during a press conference with South Korean correspondents that followed. With Moon Jae-in’s summit with President Donald Trump scheduled for June 29 and 30, Moon Chung-in’s remarks appear to be a preliminary attempt to direct US government and public opinion toward dialogue. “The president has made two proposals. The first is that we and the US can discuss reducing the South Korea-US joint military exercises if North Korea suspends its nuclear weapons and missile activities,” Moon said on the topic of North Korea’s nuclear program. “The president was thinking that we could even decrease the American strategic assets that are deployed to the Korean Peninsula [during the exercises].” “The president’s other proposal is to link the issue of denuclearizing North Korea with the issue of establishing a peace regime on the Korean Peninsula. This issue is much more complicated than the Iranian nuclear negotiations,” Moon Chung-in said. “At any rate, the president has offered two guidelines for pursuing the denuclearization of the Korean Peninsula.” During an event on June 15 commemorating the 17th anniversary of the June 15 Inter-Korean Summit Meeting, President Moon indicated the starting point for negotiations, saying South Korea could engage in unconditional dialogue if North Korea refrains for additional nuclear and missile provocations What Moon Chung-in described as “President Moon’s proposals” on June 16 appear to go a step further by offering a specific “payback” for North Korea moving gradually toward denuclearization. During the subsequent meeting with correspondents, the special advisor went into more detail about the proposal for reducing US strategic assets if North Korea freezes its nuclear program. “There’s no need to deploy strategic assets such as aircraft carriers and nuclear submarines during the Key Resolve and Foal Eagle exercises. Scaling down the strategic assets that have been forward deployed since the shelling of Yeonpyeong Island in 2010 and running the exercises the way we used to would likely mitigate the crisis,” he said. “In a way, this kind of thing [the deployment of strategic assets] heightens tensions and aggravates North Korea’s response,” Moon Chung-in said. Drawing upon his observations as a scholar, he noted that “Kim Jong-il tested 18 missiles during the 18 years of his rule, but Kim Jong-un has carried out 35 test launches in just five years.” “Since the US has forward deployed its strategic assets, North Korea seems to be responding in this way because it thinks that the US will strike if the North shows any weakness,” Moon Chung-in said. (Yi Yong-in, “Moon Chung-in Says Military Exercises Could Be Scaled down If N. Korea Suspends Nukes,” Hankyore, June 19, 2017) South Korea may consult with the United States about scaling back joint military exercises, such as downsizing the deployment of American strategic assets, if North Korea suspends nuclear and missile activities, Moon Chung-in, a foreign affairs scholar and special presidential adviser, said at a Wilson Center seminar in Washington, adding President Moon has proposed the idea as part of an incremental solution to the nuclear standoff beginning with a freeze of the weapons programs. “He proposed two things. One, if North Korea suspends its nuclear and missile activities, then we may consult with the United States to (on) scaling down ROK-US joint exercises and training. I think what he has in mind is we may scale down deployment of American strategic weapons over the Korean Peninsula,” the adviser said. “Another one is linking North Korea's denuclearization to creation of a peace regime on the Korean Peninsula. It is a much more complicated one. It could be much more complicated than the Iranian deal, but anyhow, he laid out those two guidelines to which he would pursue the denuclearization of North Korea,” he said. The adviser later told reporters that U.S. strategic assets, such as aircraft carriers and nuclear-powered submarines, began participating in joint exercises only since several years ago, and scaling back their participation could help reduce tensions with the North. Chances are low for the North to accept the proposal, but it's still worth a try, he said. "What's important is to reduce tensions," he said. President Moon's idea is to seek an "incremental, comprehensive, and fundamental solution" to North Korean problem as he believes "ultimate denuclearization of North Korea will take much longer period, longer time, most likely not during his tenure if he understands the realistic constraints," the adviser said. The offer to downsize joint exercises could be attractive to North Korea as Pyongy...
denounced such maneuvers as a rehearsal to invade the country and demanded an immediate halt to them. It is unclear, however, how the U.S. would react to the idea because Washington has flatly rejected the North's demand, saying such drills are purely defensive. But the adviser said he believes the U.S. would see little problem with downsizing strategic assets deployment. The adviser also said that the environmental assessment that South Korea plans to conduct over the U.S. THAAD missile defense system could take one year because the study should take into consideration the deployment's impact over four seasons. Earlier this month, South Korea suspended the deployment of an additional four THAAD launchers pending an environmental assessment, spurring doubts the halt might be a precursor to the South ultimately rejecting the THAAD deployment altogether. But Seoul has promised that the environmental review won't lead to a reversal on the deployment itself. Adviser Moon said that it's wrong to say the alliance could break up over THAAD. "THAAD is a weapons system, defensive weapons system. Does the alliance break up because of that?" he said. "It's hard to accept to say as if THAAD is everything about the alliance," he said. The adviser said that President Moon plans to seek greater exchanges and cooperation with North Korea within the framework of international sanctions on Pyongyang, a remark seen as aimed at dispelling U.S. concerns that a softer approach by the South's new liberal leader could end up blunting sanctions on Pyongyang. The South seeks a peaceful coexistence or "de-facto unification" with the North through trust-building and exchanges and cooperation and won't seek to absorb the North, the adviser said. The new government will also not tolerate the North's provocations, he said. The South should seek dialogue with the North if the North refrains from provocations, the adviser said. "Is there any reason for us not to have a dialogue when North Korea refrains from provocations?" he said. "The point is to improve inter-Korean relations. It's pretty clear that if the inter-Korean relations improved, it would have a positive effect on the missile and nuclear issues." The Moon administration also hopes to further strengthen the alliance with the U.S. and take back the wartime operational control (OPCON) of the country's forces from the U.S. in order to reduce its dependence on the U.S. for its security and to enhance its defense capabilities, the adviser said. But he said the OPCON issue is not expected to be a topic for the upcoming summit. (Chang Jae-soon, “S. Korea May Consult with U.S. about Scaling back Joint Exercises If N.K. Suspends Nuclear Activities: Adviser,” Yonhap, June 17, 2017) President Moon Jae-in’s special aide on unification, diplomacy and security Moon Chung-in took aim at the attempts by US media to pressure the new administration in Seoul, claiming that the THAAD issue is a "red line" for the South Korea-US alliance. Moon’s remarks came while addressing the issue of an environmental impact assessment on the THAAD deployment site during a seminar on “New Administrations and the U.S.-R.O.K. Alliance: Challenges and Way,” which was hosted in Washington by the East Asia Foundation and the Woodrow Wilson International Center for Scholars. “US Forces Korea cannot be exist above South Korean law,” Moon stressed. “Administrations may have been able to skirt over the law during the dictatorships of the past, but not today,” he added, emphasizing the importance of procedural legitimacy in the THAAD deployment. While Moon conceded that “legal procedures could be carried out more swiftly,” he also stressed that an environmental impact assessment “needs to measure impacts across all four seasons of spring, summer, fall, and winter.” He added, “Perhaps even God himself cannot elide over that regulation.” The remarks are being seen as implying the THAAD deployment could be postponed for around one year. At the same time, Moon stressed that the decision would follow South Korean legal procedure and the agreement on the THAAD deployment would not be overturned. In a talk with South Korean correspondents afterwards, Moon strongly disputed US experts’ claims that failure to resolve the THAAD issue could “break the alliance.” “If that’s true, what kind of an alliance is it?” he asked, adding, “It’s hard to accept people talking as though THAAD were all there is to the alliance.” “If the alliance breaks down over a defensive weapons system like THAAD, you have to question whether the US military would come running in the event of an emergency [on the Korean Peninsula],” he continued. Moon immediately went to stress he was speaking as a professor rather than as a special presidential aide. “THAAD is a security issue. At the same time, it’s an issue of the rule of law and democracy, including things like environmental impact and the rights to life and property,” he said. “Tremendous [economic] damages have resulted from China’s THAAD sanctions, much larger than we think,” he added. “Look at President Trump. [He’s said] he could change out the alliance because the public’s welfare is important,” Moon continued. “What’s wrong with our
President taking that seriously and giving it careful consideration?” Stressing that he was relating his own opinion, Moon described the South Korea-US alliances as “a means of survival and a tool,” adding that it was “difficult to accept that democracy can be compromised and the public’s welfare can be compromised [over the alliance].” Justice Party lawmaker Kim Jong-dae, who participated in the foreign correspondents’ talk, noted that South Korea and the US had “agreed at the time that the THAAD deployment would take place by the end of the year,” adding that the question was “why they had to accelerate things and cause a speeding mishap.” “I cannot contain my astonishment at the way some of the news outlets in Washington have made it out as though [the Moon administration] is deliberately delaying [the THAAD deployment] to weaken the South Korea-US alliance or taking its cues from Beijing,” Kim said. “It’s not true, and the way THAAD was trotted out in the middle of an election needs to be investigated,” he continued. In terms of a resolution to the THAAD issue, domestic experts said the Moon administration had adopted a solid defensive strategy by using [the deployment’s] procedural legitimacy to buy time. But some also expressed worries about how the situation was playing out. “Supposing we do buy time, the big concern is whether they have any bright ideas for taking advantage to solve the problem,” said Cho Se-young, director of the Dongseo University Japan Center. An expert in US-China relations speaking on condition of anonymity said there were “no signs of an imminent resolution of the THAAD issue.” (Yi Yong-in and Kim Ji-eun, “Moon Chung-in Says If THAAD Breaks S. Korea-U.S. Alliance ‘What Kind of an Alliance Is It?’” Hankyore, June 19, 2017)

DPRK FoMin press statement “over the vicious sanctions and pressure by the U.S. and its followers: The despicable sanctions and pressure imposed on the DPRK by the U.S. and its vassal forces have reached the extreme. The DPRK’s development of nuclear force that the U.S. and its vassal forces use as a pretext for sanctions is an outcome of the extremely hostile policy of the U.S. and its nuclear threat against the DPRK and, hence, it is a legitimate and righteous measure for self-defense to protect the sovereignty and the right to existence of the country and nation. Not a single article or provision in the UN Charter and other international laws stipulates that nuclear test or ballistic rocket launch poses a threat to international peace and security. If, nonetheless, anyone were ever to be held accountable for carrying them out, those countries that have conducted most of the nuclear tests and ballistic missile launches so far should be subject to sanctions before any others. Nevertheless, the U.S. and other hostile forces have constantly waged sanctions and pressure campaign against the DPRK, taking issue with its exercise of the right to self-defense and now they are openly pursuing the criminal intent to completely suffocate the DPRK’s national economy and impoverish the people’s livelihood. Their sanctions have grown utterly vicious and barbaric today as to try to obliterate the rights to existence and development of the state and people of the DPRK, destroy modern civilization and bring the world back into medieval darkness. The very nature of these sanctions running counter to the human ethics and civilization finds its expression in the fact that the hostile forces cooked up the so-called “sanctions resolutions” of the United Nations Security Council(UNSC) in the most despicable and heinous way and are enforcing them upon the international community. The UN “sanctions resolutions” are so preposterous that the wide-ranging import and export prohibition or restriction enforced by them has included even luxury goods while listing numerous entities and individuals to be subject to sanctions, allegedly aiming to contain the DPRK’s nuclear and ballistic missile-related activities. These “resolutions” are producing endless series of bizarre and ridiculous episodes. The prohibition on the export of underground resources including coal was indiscriminately expanded and the control over “dual-use” items was exercised in such a careless way that these measures are having adverse consequences for the people’s livelihood and normal economic activities. Last year, the customs office of a certain country seized even frozen chicken, cosmetics packaging and zipper tab production equipment and materials as well as frequency stabilizers and voltage regulators to be used at fishery stations, and returned them after several months. These are only few of many cases which testify to the fact that the “sanctions resolutions” rigged up at the UNSC allegedly to protect the international peace and security are actually pursuing the nefarious objective of impeding the development of the overall national economy of the DPRK. The “Resolution 2270” coercively adopted at the UNSC was weird enough to include recreational sports equipment in the list of luxury goods. As the result, a country in Europe is prohibiting the export of sports equipment and apparatus to the DPRK such as ski, yacht,
mountaineering boots, snowmobile, snow groomer and even billiard table for the reasons of implementation of the “resolution”. Another country prohibits the export of sports apparatus including sports firearms, ammunitions and archery equipment that the DPRK used to import regularly, for fear of violating the “sanctions resolutions”. In November 2016, seven sets of diving flippers addressed to the Rungna Dolphinarium in Pyongyang were confiscated by the customs office in a European country as they were classified as luxury goods. It had been decided to hold the 2017 World Junior Judo Championship and 2018 IWF (International Weightlifting Federation) Junior World Championship in the DPRK, but the venues have now changed to other countries. One country has denied entry visas to the teams and delegations of the DPRK to attend the international sports tournaments while the support grants legally provided by the International Olympic Committee and other international sports federations are not being remitted to the DPRK. Archery equipment would never become ballistic rockets and sports rifles could never be used to launch nuclear warheads, but some countries either being overpowered by or blindly following the high-handed practices of the hostile forces are bringing disgrace to the ideal and purpose of sports. These brutal and barbarous sanctions and pressure have stretched out their claws to the public health and humanitarian areas as well. The UNICEF country office in the DPRK ordered 24.4 tons of malaria mosquito repellent (Insecticide Residual Spray) from other countries in September 2016, but they were unable to sign a contract for the transportation of the goods as that would breach the UN “sanctions resolutions”. The goods could never leave the place of origin and they have remained piled up in the warehouse for 9 months until today. In November 2016, the country office procured 15 mobile X-ray units and the reagent for diagnosis of tuberculosis, but the delivery was delayed for 6 months for the reason that those were classified as “dual-use” items by the UN “sanctions resolutions” on the DPRK. In January 2017, a hundred thousand ampoules of ephedrine being imported by a health company of the DPRK were unreasonably seized although the company had gone through the procedure of informing the International Narcotics Control Board in advance as per the regulations. The fact that the items urgently needed for the treatment of chronic diseases are being subject to sanctions for such absurd reasons as “dual-use” proves that the clause in the “sanctions resolutions” which underlined that the measures imposed by the resolutions are “not intended to have adverse humanitarian consequences for the civilian population of the DPRK” is only a deception and that the “sanctions” are actually targeting the daily life and the very existence of the people of the DPRK. Some countries in Europe refuse to grant basic diplomatic privileges and immunities to the DPRK diplomatic passport holders and treat them with impudence by randomly searching their luggage and confiscating used household items, cosmetics, and even carbonated drinks and children’s bicycle in flagrant disregard of the universally recognized legal norms and practices. They are so crazy and obsessed about “sanctions” that diplomats do not make any difference to them and children’s bicycle, refrigerator, kitchen utensils and hairdryer appear to be weapons of mass destruction-related items. As seen above, the sanctions and blockade racket aimed to isolate and suffocate the DPRK is going beyond the limits. The U.S. is the primary mastermind of this frantic campaign of sanctions and pressure on the DPRK. Not only the U.S. fabricated the unprecedented vicious “sanctions resolutions” against the DPRK by abusing the mandate of the UNSC and made attempts to drag all countries of the world into their implementation, but it maliciously resorted to “unilateral sanctions” against the DPRK claiming to close the loophole in the UN sanctions. The “sanctions” of all sorts that the U.S. has imposed on the DPRK for more than half a century are now becoming all the more reckless backed by such evil laws as the “North Korea Sanctions and Policy Enhancement Act of 2016.” The newly emerged Trump administration announced “maximum pressure and engagement” as its policy towards the DPRK, and continues to invent different kinds of “sanctions” including the “sanctions on specially designated nationals” which targeted even the supreme dignity of the DPRK, in attempt to comprehensively furnish its domestic law to accommodate the “unilateral sanctions” on any entity or individual of the DPRK. A quick calculation shows that 15 Party and government organs, 73 other firms and entities and about 90 individuals of the DPRK are currently placed on the sanctions list together with 16 airplanes and 20 trade cargo ships, but hardly any of them are associated with munitions area at all. The U.S. is also making desperate and frenzied moves to involve other countries in the “sanctions” campaign against the DPRK. The U.S. state secretary said on a recent occasion that the U.S. made it clear to all countries including China and Russia that they should join in imposing “sanctions” on the
DPRK. He also said if a country claims that the total amount of its trade with the DPRK does not exceed 5 million USD, the U.S. would ask the country to reduce it to 2 million. This fully reveals the true colors of the U.S. as the gang of muggers. The U.S. has employed the “secondary boycott” to achieve its wicked aim, and business persons and firms of several countries including China and Russia have already fallen victim to it and suffered huge losses in their economic activities and business management as they were unreasonably put on the sanctions list of the U.S. Besides, the U.S. is coercing all the countries that established diplomatic relations with the DPRK to sever the relations or scale down the level, in a blatant violation of the international laws including the UN Charter and Vienna Convention on Diplomatic Relations. Except one Latin American country and two or three Asian countries that show signs of attempts to reduce the number of the DPRK diplomats in their countries under the pressure of the U.S., the overwhelming majority of the countries resolutely reject the U.S. demand, regarding it an interference in their internal affairs, or simply ignore it. The sanctions campaign waged by the U.S. and its vassal forces is a heinous act of hostility and aggression against the DPRK to deprive it of her sovereignty and rights to existence and development, and to overthrow its ideology and system by all means. If the high-handed and arbitrary practices of the U.S. are tolerated, allowed and sympathized with, their spearhead will eventually be leveled at the other countries adhering to independence and the world will plunge into gloom where the U.S. holds sway on everything. The U.S. and its vassal forces that always suffer crushing defeats in the overall politico-military confrontation with the DPRK may resort to much more despicable and barbarous sanctions, but they can never check the advance of the DPRK marching towards the final victory of the building of a powerful socialist country by dint of self-reliance and self-development. As the U.S. and other hostile forces get more frantic in the moves to impose the toughest sanctions and pressure on the DPRK, the hatred and rage of the army and people of the country will only grow stronger and the DPRK will further speed up the strengthening of its nuclear force to root out the base of aggression and all evils.” (KCNA, “Press Statement of DPRK Foreign Ministry,” June 16, 2017)

There is no foreign leader on whom President Trump has placed a bigger bet than Xi Jinping of China. Trump’s gamble was based on his calculation that Xi, the Chinese president, could put heavy pressure on North Korea to curb its nuclear weapons and missile programs. To secure Xi’s cooperation, the president soft-pedaled his harsh stance on China’s trade practices, and has said little about its adventurism in the South China Sea. But a growing number of Trump’s aides fear that the bet is not paying off. China has not significantly tightened the pressure on North Korea since Trump met with Xi in Palm Beach, Fla., in April. Its failure to do more has frustrated White House officials, who plan to raise the issue with their Chinese counterparts at a high-level meeting here on June 21. China’s reluctance to exert its influence in this regard has left the Trump administration with few good options in dealing with the North Korea crisis. And it may lead the administration to try to negotiate with North Korea’s leaders, an approach that did not work for Trump’s predecessors but which he has periodically seemed to embrace. The White House stepped gingerly in the direction of engagement this week when it sent a senior diplomat to North Korea to obtain the release of Otto F. Warmbier, a gravely ill American prisoner. The encounter, some former American officials said, could lay the predicate for further such conversations. But North Korea’s inhumane treatment of Warmbier complicates the prospects for diplomacy. Still, current and former officials said the administration was unlikely to shift its strategy because of the mistreatment of a single American, no matter how horrific. The most likely outcome, they said, is that any future contacts with North Korea will be conducted in the utmost secrecy. “The Trump administration has made it quite clear that this is an all-of-the-above approach,” said Daniel R. Russel, who served as assistant secretary of state for East Asian affairs under President Barack Obama. “They will explore what kind of official or unofficial contacts with North Korea can advance the cause.” Trump’s aides are also motivated by South Korea’s recent election, which brought to power a progressive leader more interested in engagement than confrontation with the North. The president, Moon Jae-in, halted the deployment of an American antimissile system. The Chinese are among those most interested in a meeting between Trump and the North Korean leader, Kim Jong-un, officials said, in part because that would put the onus for a solution on Washington, not Beijing. For the moment, though, the White House is more focused on getting China to put pressure on its neighbor. Trump came into office promising to challenge China on a
range of issues. But the imminent danger posed by North Korea’s nuclear and missile programs changed that calculus. In April, he said Xi would be his partner in curbing Kim. Two weeks later, the Treasury Department declined to designate China as a currency manipulator, something Trump had promised to do during his presidential campaign. Since then, there is scant evidence of a crackdown by Beijing on Chinese trade with North Korea. The Chinese government has not announced the shutdown of any major trading companies, nor have traders in Dandong, the Chinese port city on the North Korean border, reported any signs of movement against their companies. “It is worrisome that the president seems to think he has convinced Xi Jinping to change course,” said Michael J. Green, a senior adviser on Asia in the National Security Council of President George W. Bush. “That’s the position he has staked out publicly, and it has huge implications for the region. He should not have oversold it.” Trump’s quid pro quo has sowed concern in Japan and Southeast Asia, where officials are worried that the United States is muting its response to China’s aggressions in the South China Sea or could put off arms sales to Taiwan — actions that administration officials deny. To raise the pressure on China, administration officials said the United States was considering sanctions on a range of Chinese individuals and banks that do business with North Korea — a step that could aggravate tensions with China and sour Trump’s fledgling relationship with Xi. It is not clear that even these steps would prod China to radically alter its approach to North Korea, which is driven less by concern over its nuclear ambitions than a dread of what a collapsed North would mean for China, with which it shares an 880-mile-long border. Impatience with China has simmered for weeks inside the White House. But only in recent days has it begun to show. “We cannot allow China to use its economic power to buy its way out of other problems, whether it’s militarizing islands in the South China Sea or failure to put appropriate pressure on North Korea,” Secretary of State Rex W. Tillerson said last week in Sydney, Australia. Trump himself has withheld public judgment of Xi. At a rally in April to mark his first 100 days in office, the president said it would have been counterproductive to designate China as a currency manipulator at a time when he was seeking the government’s help on North Korea. And he said he had developed a sense for Xi over hours of talks. “He’s a good man,” Trump told his supporters. “Now, he’s representing China. He’s not representing us. But he’s a good man. And I believe he wants to get that situation taken care of. They have tremendous power, and we’ll see what happens.” In his Twitter feed, the president has veered between optimism and mild finger wagging toward China. On April 21, he wrote, “China is very much the economic lifeline to North Korea so, while nothing is easy, if they want to solve the North Korean problem, they will.” On May 29, after another missile test, Trump wrote: “North Korea has shown great disrespect for their neighbor, China, by shooting off yet another missile … but China is trying hard!” In the last month, traders said Chinese exports to North Korea were being inspected more thoroughly. The provincial authorities have warned traders not to hide banned goods that can be used in the North’s nuclear program — chemicals, for example — in general cargo. Some longtime diplomats predicted that the Chinese would announce some modest measures — cracking down on a handful of banks or companies without potent political ties — as a way of giving Trump just enough evidence to show that his confidence in Xi was not wholly misplaced. “There is a perception that the Chinese played to his vanity and fleeced him,” said Christopher R. Hill, a special envoy on North Korea during the George W. Bush administration. “It puts him in an awkward position. My sense is they know that calculation and want to deliver on it.” (Mark Landler, “As Trump Bets on China’s Help on North Korea, Aides Ask: Is It Worth It?” New York Times, June 16, 2017, p. A-21)

The world has become used to terrible stories of brutality from North Korea. The hundreds of thousands who starved during the 1990s famine, the all-encompassing repression, the torture of those who dare to try to escape. But this week, North Korea showed itself capable of an entirely new type of brutality, and one that strikes much closer to home for Americans. Otto Warmbier — a quintessential American, tall and good-looking, from a close-knit family in a leafy Ohio suburb — had joined a group tour to North Korea at the end of 2015 on his way to study in Hong Kong. Instead of graduating with his classmates at the University of Virginia last month and heading to the job on Wall Street he had lined up, the 22-year-old was brought home on a military medical plane and now lies unconscious in a Cincinnati hospital. He suffered extensive loss of brain tissue, a condition usually caused by a lack of blood flow to the brain. How did Warmbier fall into this
For more than a year, American diplomats have held secret talks in Pyongyang and European cities with North Korea's top nuclear negotiator, hoping to free U.S. prisoners and even establish a diplomatic channel to constrain North Korea's nuclear and missile programs. The official dispatched by North Korean leader Kim Jong Un — Madame Choe Son Hui — is well known to U.S. officials, fluent in English and is believed to have direct access to Kim. That raised expectations that the regime eventually might engage with the Trump administration about the
future of Pyongyang's weapons efforts. So did the agreed release this month of 22-year-old American prisoner Otto Warmbier, until it emerged he was in a coma. "Given the reported status of Mr. Warmbier's condition, any diplomatic path forward is going to be extremely difficult," said Suzanne DiMaggio of the New America Foundation, a Washington think tank, who helped establish an unofficial channel with the North Koreans early last year. But she had a suggestion for Pyongyang to begin to repair the damage: "If the North Koreans immediately released the remaining three prisoners, it could set up an atmosphere for potentially serious talks." President Donald Trump has repeatedly said he isn't seeking regime change in North Korea and hasn't ruled out negotiations to curb North Korea's rapidly advancing nuclear and ballistic-missile programs.

Early last year, DiMaggio established through interlocutors in Stockholm a "track two" dialogue with North Korea, a term reflecting the fact no active U.S. officials were present at the initial meetings. She made the first of two trips to the North Korean capital in February 2016, in an early bid to help defuse the nuclear crisis. DiMaggio held numerous track two discussions with Iranian officials before the Obama administration formally started nuclear negotiations with Tehran in 2012. Choe was a major player in nuclear and missile negotiations that took place both during the Bill Clinton and George W. Bush administrations, current and former U.S. officials said. Her official title now is the director-general of the North America affairs bureau of North Korea's Foreign Ministry. "When Track Two participants meet with her, what they're getting is someone who can convey very accurately to us what the North Koreans want us to hear," said Robert Einhorn, a former senior State Department official who worked on North Korea in the Obama and Clinton administrations and met Madame Choe last month. "She's a valuable interlocutor because of her experience and connections." Bill Richardson, the former New Mexico governor and U.S. energy secretary, separately began a string of about 20 meetings with North Korean diplomats in New York at about the same time as DiMaggio's trips that were focused on gaining Warmbier's release. The North Koreans' favorite spot for meetings was The Palm steakhouse in New York, close to their United Nations offices. Richardson sent his own representative to Pyongyang last September to seek Warmbier's release. "[Mr. Warmbier's] situation will temper the desire for dialogue for the time being," said Richardson, a self-proclaimed champion of engagement. "I'm so unhappy and disgusted by what's happened to him." The issue of American prisoners, Richardson said, appeared now to be totally under the mandate of the North's security forces. "It's conceivable my interlocutors didn't even know about Otto Warmbier's status," Richardson said in an interview. The State Department's special representative for North Korea, Joseph Yun, was first scheduled to attend a meeting with Madame Choe and other North Korean diplomats in New York this February, these officials said. But the Trump administration canceled the North Koreans' visas at the last minute after Kim's half-brother was assassinated in Malaysia. The U.S. believed the killing was state-sanctioned, a charge Pyongyang has denied. In May, Yun attended a meeting with Madame Choe in Oslo that was organized by DiMaggio and the Norwegian government. It largely focused on the status of the American prisoners. Yun and Madame Choe had dinner and a two-hour meeting in the Norwegian capital. But the senior North Korean diplomat didn't provide any details about Warmbier's declining health, according to senior U.S. officials. She did promise to provide access to American prisoners in North Korea, using Swedish diplomats in Pyongyang. Choe told reporters in Beijing after leaving Norway that Pyongyang would be willing to meet U.S. officials for talks on the nuclear issue "if the conditions are set." Americans who have met Choe said the North Korea diplomat is steadfast that Pyongyang will maintain its nuclear weapons arsenal but is open to the possibility of limiting it. "They have not ruled out partial steps, like a cap or freeze as a temporary measure," said Einhorn, who is now at the Brookings Institution. "They don't attack that; nor do they say it's acceptable." It wasn't until June 6 that North Korea invited Yun for a direct meeting in New York with Pyongyang's ambassador to the U.N., according to the State Department. It was here that the U.S. finally was notified that Warmbier was in a coma. The revelation resulted in Secretary of State Rex Tillerson's decision to send a diplomatic and medical team to Pyongyang to bring the University of Virginia student home. Three Americans remain in North Korean prisons. (Jay Solomon, "Top North Korean Nuclear Negotiator Met with U.S. Diplomats," Wall Street Journal, June 18, 2017)
United States. The presidential office said the adviser’s statements were his personal opinion and were not cleared through prior consultation with the President. “We talked to the special adviser who is currently visiting the United States, today” said a ranking official on condition of anonymity. “We told him that his remarks will do little to contribute to Seoul-Washington relations in the future.” The official noted that the adviser’s opinion was just one of a variety of options being developed here to resolve the nuclear and missile threats from the North. “Any decision needs to be made through close consultation between Seoul and Washington. It cannot be said a certain option is feasible simply because one person suggested it,” the official said. He added that President Moon had made no response to the adviser’s controversial comments. U.S. State Department spokeswoman Alicia Edwards also said Saturday that Washington viewed the adviser’s proposal as a personal opinion, not the official stance of the South Korean government, according to Voice of America. Despite Cheong Wa Dae’s efforts to remove controversy, the opposition parties went all out to criticize the adviser, with the conservative opposition Liberty Korea Party (LKP) even calling for him to step down from his position. Rep. Lee Hyun-jae, the LKP’s policy chief, pointed out that Moon Chung-in has been a mentor to President Moon on security and foreign affairs. “If the special adviser’s opinion was different from President Moon’s official stance, the President should receive the adviser’s resignation,” Lee said. Rep. Kim Dong-cheol, floor leader of the center-left opposition People’s Party, said, “The U.S. is seriously concerned about the presidential adviser’s unexpected remarks as well as the Moon Jae-in government’s order to inspect a decision-making process involving the deployment of a U.S. Terminal High Altitude Area Defense system here.” Ruling Democratic Party of Korea Chairwoman Rep. Choo Mi-ae said the opposition parties were overacting to his “brave” remarks.

United States, June 20, 2017) The Blue House said a warning was issued to Moon Chung-in, presidential special adviser for unification, foreign and national security affairs, who stirred up a controversy with remarks at a forum on the U.S.-Korea alliance at the Woodrow Wilson Center in Washington, D.C. on June 16. “An official in charge told him today that his remarks are not helping Korea-U.S. relations looking to the future,” a senior Blue House official said in a background briefing today. The official refused to give a clear answer when asked if the special adviser’s remarks were contrary to the policy of the Moon administration. “I cannot say for sure how far his remarks agree with it or not,” he said. “It was one of many ideas to resolve North Korea’s continuing nuclear tests and missile launches and to create a new breakthrough.” “And that is something to be decided through close consultations between South Korea and the United States,” he said. “It’s not feasible just because one person says it.” Speculation still lingers that the special adviser’s remarks were made on the direct order of the Blue House. If they were, it was a trial balloon that was quickly burst.

The Blue House said yesterday the remarks were the professor’s personal opinion, and added today that the special adviser did not consult with the president before his trip to Washington. It, however, admitted that the special adviser visited the presidential office before his visit to Washington and met with Chung Eui-yong, head of the National Security Office. After the meeting, Chung reportedly said the special adviser spoke about his views, but he thought it was just an unofficial exchange of ideas. “It was not a meeting for them to coordinate what should be said in the United States,” a Blue House source said. “But I don’t know the exact contents of their discussion.” Officials also said President Moon made no reaction to the controversy. A strategist of the Blue House told JoongAng Ilbo that the administration wanted to send a stronger message to the North. “The president already made a proposal to the North that unconditional dialogue will be offered in return for suspending provocations in his speech to mark the anniversary of the June 15, 2000 North-South Joint Declaration,” he said. “There was a need to send a clearer message to the North. Special adviser Moon’s remarks are controversial in terms of strategy for their timing and method, but the substance is not widely different from the framework the Blue House is planning.” Another official who participated in creating foreign and national security policy for Moon’s presidential campaign said special adviser Moon actually “preemptively scratched an itching spot for President Moon.” He said the special adviser’s remarks created room for President Moon to speak more freely at the upcoming summit, scheduled for next week. The ruling Democratic Party also tried to defend the administration and the special adviser. “Prudently informing Washington about comprehensive issues concerning the Korean Peninsula is the right thing to do to protect our national security,” Chairwoman Choo Mi-ae said today at the Supreme
Council meeting. “Special adviser Moon’s remarks are a high-level political act to signal that we are reviewing what to offer in order to bring the North to a dialogue,” said Rep. Woo Sang-ho, former floor leader of the party, in a radio interview. A senior opposition politician supported that idea. “The timing and place were inappropriate, but the substance was right,” Rep. Park Jie-won, former head of the People’s Party, wrote on his Facebook page. Park, one of the closest associates of the late President Kim Dae-jung, also quoted former U.S. Defense Secretary William Perry as saying it’s too late to dismantle the North’s nuclear programs and that Korea-U.S. joint military drills can be scaled down or stopped in return for Pyongyang freezing its nuclear and missile programs. The conservative opposition Liberty Korea and Bareun Parties, however, demanded special adviser Moon resign. “He is a ticking time bomb,” said Rep. Chung Woo-taik, floor leader and acting chairman of the Liberty Korea Party. “He must resign instead of working as a mentor to the president.” Bareun Party’s acting head, Rep. Joo Ho-young, also said the special adviser must be held accountable for creating turmoil with a “dangerous idea.” The party’s secretary-general, Rep. Kim Se-yeon, said, “We must imagine Kim Jong-un’s satisfied face at this moment.” Meanwhile, the Blue House said today that Hong Seok-hyun has repeatedly declined to serve as Moon’s special adviser for unification, foreign affairs and national security. Moon announced on May 21 that he named Professor Moon and Hong, chairman of the Korea Peninsula Forum, as special advisers. “After the nomination, Hong repeatedly informed the Blue House of his intention to decline,” a senior presidential aide said. He also admitted that the communication was not smooth for the nomination process. The announcement was made while Hong was returning from Washington after meeting with Trump and other U.S. officials as a special presidential envoy,. (Kang Tae-wha and Ser Myo-ja, “Blue House Tells Adviser His Trial Balloon Failed,” JoongAng Ilbo, June 20, 2017) A special adviser to President Moon Jae-in tried to persuade Washington that his controversial suggestions about new approaches to North Korea weren’t actually from Korea’s president. Moon Chung-in, presidential special adviser for unification, foreign and national security affairs, attended a discussion hosted at President Moon’s North Korea policy is in line with the Donald Trump administration’s strategy of “maximum pressure and engagement.” “Look, the South Korean government has been complying with the international sanctions regime,” Moon was quoted as saying by the Voice of America. “We have been fully complying with United Nation’s resolution 2270, 2321 and we closed the Kaesong Industrial complex, we closed Mount Kumgang tourism project. Therefore, at the present moment, we are part of that maximum pressure on North Korea.” He stressed that President Moon is fully aware that current conditions are not proper for restarting inter-Korean dialogues. Moon, a professor at Yonsei University, stirred controversy June 16 with remarks at a forum on the U.S.-Korea alliance at the Woodrow Wilson Center in Washington, D.C. If North Korea suspends nuclear and missile activities, he said, South Korea could consult with the United States to scale down joint military exercises and reduce deployment of U.S. strategic weapons to the South. He also dismissed concerns that an environmental probe ordered by Seoul will effectively delay the U.S. deployment of the Terminal High Altitude Area Defense antimissile system in Korea. “If the Korea-U.S. alliance is ruptured by the issue,” he said, “that’s not an alliance.” His remarks prompted angry responses in Washington. To distance itself, the Blue House issued a warning to him today in Seoul. Today in New York, Moon stood by his remarks, but claimed they were his personal views as a scholar. He stressed that although he is a special adviser, he has no policy-making authority. Moon elaborated on his idea of scaling down Korea-U.S. joint military exercises. He said it means reducing strategic assets deployed by the United States since the North’s sinking of the South Korean warship Cheonan and shelling of Yeonpyeong Island in 2010. He said Seoul and Washington could make an offer of those gestures to Pyongyang in return for denuclearization, adding that a give-and-take is the essence of a negotiation. Moon also said Moon- Trump summit next week will be an opportunity for the two leaders to ease tensions between Seoul and Washington. Moon will visit Washington for the summit. In an obvious riposte to the special adviser’s remarks, the U.S. military publicized the dispatching of strategic bombers to South Korea on June 20. Two supersonic B-1B Lancer bombers were dispatched to participate in a joint drill with the South Korean Air Force, a Korean official said. “Today’s dispatch was based on the joint exercise plan created earlier this month,” a military official was quoted as saying by Yonhap. “The United States will send the strategic bombers more than once a month and it will not scale down an exercise plan for this year.” General Vincent Brooks, commander of United States Forces Korea,
ordered the military to actively promote the strategic bombers’ participation in the drill, a military source also said. Until recently, the United States has not made public its dispatch of strategic assets. The bombers were sent twice last month, but no media coverage was allowed. (Ser Myo-ja, “Moon’s Adviser in New York Backpedals Hard,” *JoongAng Ilbo*, June 21, 2017)

Otto Warmbier, the University of Virginia student who was detained in North Korea for nearly a year and a half, died this afternoon, six days after he returned home in a coma, his parents announced. Warmbier, 22, had been medically evacuated last week and was being treated at the University of Cincinnati Medical Center. His parents, Fred and Cindy Warmbier, did not specify the cause of death. But they made clear in a written statement that they blamed North Korea for what happened. Their son was arrested in January 2016 at the end of a brief tourist visit to the isolated country. “Unfortunately, the awful torturous mistreatment our son received at the hands of the North Koreans ensured that no other outcome was possible beyond the sad one we experienced today,” the Warmbiers said. Warmbier’s death was mourned by his wide circle of friends and by complete strangers, and it intensified political reaction to his detention, with outraged critics calling it murder. “There is nothing more tragic for a parent than to lose a child in the prime of life,” President Trump said in a statement. “Our thoughts and prayers are with Otto’s family and friends, and all who loved him. “Otto’s fate deepens my Administration’s determination to prevent such tragedies from befalling innocent people at the hands of regimes that do not respect the rule of law or basic human decency. The United States once again condemns the brutality of the North Korean regime as we mourn its latest victim.” Sen. John McCain (R-Ariz), chairman of the Senate Armed Services Committee, said in a statement: “Otto Warmbier, an American citizen, was murdered by the Kim Jong-un regime. In the final year of his life, he lived the nightmare in which the North Korean people have been trapped for 70 years: forced labor, mass starvation, systematic cruelty, torture, and murder. North Korea is threatening its neighbors, destabilizing the Asia-Pacific region, and rapidly developing the technology to strike the American homeland with nuclear weapons. Now it has escalated to brutalizing Americans, including three other citizens currently imprisoned in North Korea. The United States of America cannot and should not tolerate the murder of its citizens by hostile powers.” Sen. Benjamin L. Cardin (Md.), ranking Democrat on the Senate Foreign Relations Committee, said in a statement that “Otto is dead because of Kim Jong-un’s repressive, murderous regime,” and that North Korea “must be held accountable for their continued barbaric behavior.” Sen. Marco Rubio (R-Fla.) also said North Korea must be held accountable for the “murder.” Warmbier’s death could push Congress or the Trump administration to restrict or ban Americans from traveling to North Korea. Reps. Adam B. Schiff (D-Calif.) and Joe Wilson (R-S.C.) have introduced the North Korea Travel Control Act in the House, which would require Americans who want to travel to North Korea to obtain a license. There would be no licenses for tourists. The Senate has been more reluctant to introduce restrictions on Americans — but Warmbier’s death might be the trigger that they need, analysts say. Separately, Secretary of State Rex Tillerson has raised the prospect of the administration using an executive order to ban travel to North Korea. “We have been evaluating whether we should put some type of travel visa restriction to North Korea,” Tillerson told a House committee last week. “We haven’t come to a final conclusion, but we are considering it.” Today, Tillerson issued a statement: “Today we received with deep sadness the news that Otto Warmbier has passed away. “On behalf of the entire State Department and the United States government, I extend my condolences to the Warmbier family, and offer my prayers as they enter a time of grief no parent should ever know. We hold North Korea accountable for Otto Warmbier’s unjust imprisonment, and demand the release of three other Americans who have been illegally detained.” (Susan Svrluga and Anna Fifield, “Otto Warmbier Dies Days after Release from North Korea Detention,” *Washington Post*, June 19, 2017) Analysts said anger over Warmbier’s death would dim, if not scuttle, any prospect of a less antagonistic relationship in the near future between Washington and Pyongyang, which is still holding three other Americans. The White House has quietly pushed for the release of all the Americans as a first step toward better relations, and President Trump has sometimes publicly indicated a willingness to talk with the North’s leader, Kim Jong-un, about its pursuit of nuclear arms and missiles capable of striking the United States. “I believe it’s going to set back any serious discussion about a diplomatic dialogue until this is cleared up,” former Gov. Bill Richardson of New Mexico, an expert on North Korea who has helped extricate Americans held
there, said of Warmbier’s death. “I think the first objective has to be to get the three other Americans out, and get a full explanation of what happened to Otto Warmbier.” Jae H. Ku, director of the U.S.-Korea Institute at the Johns Hopkins School of Advanced International Studies, agreed that moves toward diplomacy would be delayed. “I think it’s going to be slowed down. There is going to be a lot of anger and venting of frustrations,” he said. But other analysts said that however horrific the case might be, the Trump administration was unlikely to let it upset the momentum toward dialogue it has built in recent months. They said that Yun’s trip was the first fruit of those efforts and that North Korea may have freed Warmbier to open up space for diplomacy with Washington, even if they anticipated the anger that his condition would provoke in the United States. A statement on June 19 from Mr. Trump about Warmbier condemned the North for its “brutality,” but he and Secretary of State Rex W. Tillerson both stopped short of announcing fresh sanctions in response. When Yun held a secret meeting with Choe Son-hui, a senior negotiator from the North Korean Foreign Ministry, in Oslo last month, the North Koreans agreed to look into the matter, these people said. But this month, the North Koreans came back with shocking news: They said Warmbier had been in a coma for more than a year and told the Americans to take him home. North Korea has said it released Warmbier on “humanitarian grounds” but did not explain his medical condition. It has told American officials that Warmbier fell into a coma after contracting botulism, according to his family. American doctors found “extensive” brain damage but could not say what had caused the injury. They found no evidence of botulism, or that Warmbier had been beaten, as one American official had asserted. “Perhaps his condition deteriorated and the authorities decided it was better to release him in a coma than as a corpse,” said John Delury, a North Korea expert at Yonsei University in Seoul. “North Koreans might have feelers out to see if there is a deal to be made with the Trump administration, and releasing Mr. Warmbier is a way to move that process along, while also removing what could be an obstacle down the road.” China, North Korea’s main ally, is a strong advocate for negotiations over the North’s nuclear program, and Warmbier’s death seemed unlikely to change that. At a daily news briefing in Beijing, a Foreign Ministry spokesman, Geng Shuang, called the death “really a tragedy” but stopped short of reprimanding North Korea for its treatment of Warmbier. Shi Yinhong, a professor of international relations at Renmin University in Beijing, said that China would not punish North Korea over a human rights issue. “What makes China take steps is a missile or nuclear test, not the death of an American student,” he said. Another Chinese analyst, Cheng Xiaohui, an associate professor of international relations at Renmin University, said Warmbier’s death illustrated the “failure of North Korea’s hostage diplomacy” because it would strengthen “hard-liners” in the Trump administration. He said there could be retaliation from the United States unless Pyongyang took a step like freeing the three remaining American captives. “I believe the U.S. will not let the issue slip away quietly and will take retaliatory actions soon if North Korea fails to make a conciliatory move regarding the detainees,” he said. Warmbier’s case has drawn new attention to the other three American prisoners in North Korea, who Yun was allowed to meet when he visited Pyongyang. (Choe Sang-hun, “Otto Warmbier’s Death a New Wedge between U.S., and North Korea,” New York Times, June 20, 2017, p. ) What happened to Otto Warmbier, an American college student who died just days after North Korea released him from detention in a coma, is difficult to make sense of. It jars so strikingly with the fates of most past detained Americans that outside observers are left struggling not only with the mystery of what killed Warmbier but also with what his death means for attempts by Washington and its allies to stop North Korea’s pursuit of a nuclear-tipped ICBM that can target the U.S. mainland. "The treatment of Otto Warmbier is beyond the pale of North Korea's usual standards," said John Delury, an Asia expert at Seoul's Yonsei University. "It's worth a forceful response. The U.S. government should not just throw up its hands and say, 'This is just how North Korea is.' But how do you do that in a smart way where there is some modicum of accountability?" It may never be known, but there are some clues — as well as widespread speculation. The University of Virginia student was medically evacuated from North Korea last week, more than a year after a court sentenced him to 15 years in prison with hard labor for allegedly trying to steal a propaganda banner. North Korean diplomats at the United Nations had urgently requested a face-to-face meeting with U.S. officials in New York. During the June 6 meeting, Washington learned of Warmbier's condition. His family said it was told he fell into a coma soon after his March 2016 sentencing after contracting botulism and taking a sleeping pill. Doctors in Cincinnati said they
found no active sign of botulism or evidence of beatings. They say he had severe brain damage but they don't know what caused it. Some observers believe that North Korea became worried because Warmbier's condition suddenly worsened. "North Korea sent him back to the United States before he died because more questions would have been raised about his death and the situation would have gotten worse if it had returned his dead body," said Cheong Seong-jang, an analyst at the private Sejong Institute in South Korea. Others believe it is unlikely that North Korea intentionally harmed Warmbier because he was valuable as a political pawn. Poor hygienic conditions, diet or bad medical care may have been responsible for a coma that North Korean doctors couldn't handle. Or maybe North Korea concealed his medical condition for so long in the hopes that he'd recover. Some outside experts see an internal divide in North Korea between officials who believe solving the long standoff with Seoul and Washington is the best way to improve the country's economy and international standing, and hard-liners who believe that outside pressure, isolation and animosity help keep the ruling Kim family in power by solidifying domestic support. The last thing conservatives want, the argument goes, is curious American tourists talking with citizens and undercutting decades of propaganda that assures North Koreans that they are the envy of the world. But North Korea has also consistently lobbied Washington for specific concessions that would need deep negotiations, something recent U.S. administrations have been reluctant to pursue because of the North's weapons programs. North Korea's demands include a peace treaty to officially end the Korean War and the removal of U.S. troops from the Korean Peninsula. "I'm sure there are high-ranking North Koreans who regret what happened to Warmbier and who think this was a mistake," Delury said. "You've got to capitalize on this, and influence their internal debates to get them to recognize and acknowledge what happened." Another reading is that Warmbier's death may simply show a pattern of North Korean callousness and a lack of concern over diplomatic repercussions. Outside groups say North Korea tortures thousands of its own citizens at prison camps. And earlier this year the North was suspected of arranging the killing of the half-brother of leader Kim Jong Un with VX nerve agent at a Malaysian airport. Outrage in the United States means that more pressure, not dialogue, is the more likely course. But some analysts believe negotiations could happen because of U.S. worries about the safety of the three other Americans still detained in North Korea. South Korean President Moon Jae-in has been unable to pursue the engagement with the North he favors because of a string of North Korean missile tests. Warmbier's death could make it even harder, although some analysts think Moon could offer talks with the North as a way to get other detainees out of North Korea. "It's unlikely that Washington and Seoul will let Warmbier's death entirely derail their efforts at talks because North Korea's nuclear weapons program is such a serious and immediate threat," said Koh Yu-hwan, a North Korea expert at Seoul's Dongguk University. Still, opponents will question whether such negotiations may give the North more time to expand its nuclear weapons program. Moon said in an interview with CBS television broadcast Tuesday that Warmbier's death showed "we must now have the perception that North Korea is an irrational regime," but talks are still necessary because "we were unable to resolve the North Korean nuclear issue through only the sanctions and pressure." Delury said the Trump administration may try to pressure China to cut its large numbers of tourists to North Korea while the North apologizes and releases the other Americans. Whether North Korea will actually respond to pressure or talks is unclear. The country may not worry about much of anything externally, even the death of a young tourist, until it reaches its goal of building a nuclear ICBM that can ease what it sees as decades of U.S. and South Korean hostility. (Foster Klug, “Death of American Detained in North Korea Baffles Experts,” Associated Press, June 20, 2017)
During the campaign, you talked about going to Pyongyang to meet Kim Jong Un. Do you think Trump interview with Lally Weymouth: “Trump Says Push by China Failed on North Korea,” administration, and things are only going to get worse.” (Mark Landler and Gardiner Harris, Albright Stonebridge Group. “We’re reaching the end of the beginning for the Trump to impose duties that will lead Mr. Trump to declare that foreign steel imports threaten the domestic steel industry. That will lead Mr. Trump to impose duties that will anger the Chinese, a major steel producer. “This initial period of calm in the U.S.-China relationship was not sustainable,” said Eric Altbach, senior vice president at the Albright Stonebridge Group. “We’re reaching the end of the beginning for the Trump administration, and things are only going to get worse.” (Mark Landler and Gardiner Harris, “Trump Says Push by China Failed on North Korea,” New York Times, June 21, 2017, p. A-1)

Moon interview with Lally Weymouth: “Q: You seem to want to engage with North Korea. During the campaign, you talked about going to Pyongyang to meet Kim Jong Un. Do you think appreciate the efforts of President Xi & China to help with North Korea, it has not worked out,” Mr. Trump wrote on Twitter on the eve of a high-level meeting of Chinese and American officials in Washington. “At least I know China tried!” It is not clear how Mr. Trump’s statement will affect tomorrow’s Chinese-American meetings. Secretary of State Rex W. Tillerson and other American officials had been planning to press their Chinese counterparts on North Korea. On Tuesday afternoon, senior officials said they were still trying to gauge the meaning of the president’s tweet. Reports late today of renewed activity at a North Korean nuclear site added to the sense of urgency, and underlined how China had failed to curb Kim’s provocative actions. Administration officials said they were considering imposing so-called secondary sanctions on a variety of Chinese banks and companies with ties to North Korea. Such a step would greatly increase the pressure on Mr. Kim’s government, but it could also antagonize the Chinese government. In the short run, Warmbier’s death from a brain injury suffered while he was a prisoner makes engagement with the North seem a more remote possibility. “Clearly, we’re moving further away, not closer, to those conditions being enacted,” said Sean Spicer, the White House press secretary. “I would not suggest that we’re moving any closer.” But China’s failure to do more to pressure North Korea — which was little surprise to anyone who follows the issue — also leaves the United States with few better alternatives to diplomacy. Some American officials had hoped to use the secret negotiations to obtain Warmbier’s release as the predicate for a dialogue with the North on other issues. At first, the White House and State Department said very little about the case, beyond expressing relief that he had been reunited with his family. But as outrage over the death of Mr. Warmbier, a 22-year-old college student, grew on social media and cable television, both released statements late yesterday condemning North Korea for his treatment. Even today, however, Trump appeared to place more of the blame on his predecessor, Barack Obama, for failing to negotiate Warmbier’s release than on Kim. “It’s a disgrace what happened to Otto,” the president said. “Frankly, if he were brought home sooner, I think the results would have been a lot different.” But even as he implicitly criticized his predecessor, Mr. Trump appeared to walk away from one of the biggest gambles of his presidency. At a summit meeting in April at his Palm Beach, Fla., estate, Mar-a-Lago, Trump tried to enlist Xi to ratchet up China’s pressure on North Korea — something China has historically avoided because of fears that it would precipitate a collapse in a country with which it shares a 880-mile border. The president made Mr. Xi the centerpiece of his strategy for North Korea, agreeing to soft-pedal his complaints during the 2016 campaign about China’s trade and currency practices in return for Beijing squeezing its neighbor to curb its nuclear and ballistic missile programs. “I explained to the President of China that a trade deal with the U.S. will be far better for them if they solve the North Korean problem,” Trump declared in a morning tweet a few days after the summit meeting. As the evidence accumulated that China was taking only modest steps against North Korea, impatience with Beijing mounted inside the White House. But in his tweet on Tuesday, Trump seemed to take pains not to allow his disappointment to affect the relationship he has cultivated with the Chinese leader. “The question we’ve all been waiting to have answered is, ‘When does President Trump realize that Xi Jinping is not going to deliver North Korea for him, and what does he do when that happens?”’ said Ely Ratner, a senior fellow at the Council on Foreign Relations. “Otto Warmbier’s death accelerates that day of reckoning.” Some China experts said the administration could use Warmbier’s death as leverage to demand that China put pressure on North Korea to release three other Americans being held there. “The Chinese will only spring into action if they recognize the status quo is unsustainable,” said Evan S. Medeiros, a former senior director for Asia in Mr. Obama’s National Security Council. Even apart from North Korea, relations with China could soon turn more contentious. Within days, the administration is expected to declare that foreign steel imports threaten the domestic steel industry. That will lead Mr. Trump to impose duties that will anger the Chinese, a major steel producer. “This initial period of calm in the U.S.-China relationship was not sustainable,” said Eric Altbach, senior vice president at the Albright Stonebridge Group. “We’re reaching the end of the beginning for the Trump administration, and things are only going to get worse.” (Mark Landler and Gardiner Harris, “Trump Says Push by China Failed on North Korea,” New York Times, June 21, 2017, p. A-1)
Q: What are the conditions for deploying THAAD? A: President Trump also mentioned that under the right conditions, he is willing to engage in dialogue with North Korea. Regarding exactly how, we do not have a detailed way forward. It must be in close consultation with the United States. But there is one thing I would like to stress: South Korea should now play a larger and more leading role in this process. During the periods when South Korea played a more active role, the inter-Korean relationship was more peaceful, and there was less tension between the United States and North Korea. The last U.S. administration pursued a policy of strategic patience and did not make any effort to improve its relationship with North Korea. Also, the previous Korean government did not make any such efforts. The result is the reality you see today — North Korea continuing to advance its nuclear and missile program.

Q: You’ve also discussed reopening the Kaesong Industrial Complex, a joint North-South project from which Seoul withdrew early last year after another rocket test. But this would be a violation of United Nations sanctions. What is your plan? A: The engagement that I am talking about is actually very similar to the engagement that President Trump is talking about. He has put the resolution of the North Korean nuclear issue at the top of his priority list, and he has employed a tactic of maximum pressure and engagement, but engagement [can only occur] if the conditions are right. Q: Are you willing to collaborate with the United States on putting maximum pressure on North Korea? A: Yes. As long as North Korea continues its provocations, I believe that we will have no choice but to apply additional and strong pressure on it. At the same time, it is also important to send out a message to North Korea that if it decides to denuclearize and to come to the negotiating table, then we are willing to assist them. Q: What do you mean? Are you talking about a freeze of its weapons program? A: For example, the reopening of Kaesong. This is something we can do at a later stage, when North Korea has made some progress on denuclearization. [For now] we must continue to strengthen our sanctions and pressure on North Korea. Q: Wouldn’t reopening Kaesong violate U.S. and U.N. sanctions? A: Yes, that is true. But what Korea and the U.S. both ultimately seek to achieve is the dismantlement of North Korea’s nuclear program. Q: Do you think that is possible? North Korea has conducted five nuclear tests and is firing off more and more ballistic missiles. Why is Kim Jong Un going to denuclearize? A: It seems Kim Jong Un firmly believes that developing nuclear missile capabilities will provide security and guarantee his regime. We must make it clear that it is not nuclear and missile programs that will protect Kim Jong Un and his regime. The goal of the international sanctions and pressure is to make it unbearable for Kim Jong Un if he does not accept this fact. On the other hand, we are continuously trying to send a message that giving up its nuclear program and coming to the negotiating table is the right path for North Korea to protect itself and achieve its development. North Korea continues to advance its nuclear technology and will soon reach weaponization. Regarding its intercontinental ballistic missiles, it is continuously making progress. So currently, it is urgent for us to freeze North Korea’s program so they will stop additional provocations and stop advancement of its technologies.

Q: I believe during my upcoming summit meeting in the U.S. I will be able to discuss a two-phased approach to the North Korean nuclear issue — the first being a freeze and the second being complete dismantlement. Q: You are getting ready to meet Trump. What do you hope will come out of the meeting? A: President Trump and I have a common goal — that is the complete dismantlement of North Korea’s nuclear program and the denuclearization of the Korean Peninsula. In the process of working toward that common goal, the friendship and trust between the two of us will be very important. I hope we will be able to show the world that the collaboration between our two countries is strong and will continue to grow stronger. Q: The United States sent an anti-ballistic-missile system — the Terminal High Altitude Air Defense, or THAAD — to South Korea, but some in Washington are frustrated that your administration has not fully deployed it. A: The decision to deploy was made by the previous administration. I have made it clear that I will not take the decision [to finish installing the final four batteries] lightly. Q: Does that mean you will deploy THAAD? A: It is not that simple. We have deployed the radar component of the THAAD system and two launchers. But we must go through due process, which involves an environmental-impact assessment. Q: When you go to Washington next week, President Trump is obviously going to ask you whether you intend to deploy THAAD. A: Getting the environmental-impact assessment does not mean that we will cancel or reverse the decision to deploy. Q: Before you became president, you were a famous human rights lawyer. People in the
United States are very upset about the death of American student Otto Warmbier at the hands of the North Koreans. How do you feel about the overall human rights situation in the North? A: It is very deplorable that North Korea still does not uphold human rights, which are universal values. That includes foreigners. **There is still some speculation as to how Mr. Warmbier fell into a coma.** [But] the North Korean authorities had the responsibility to immediately inform the family of this fact and to ensure he would receive the best possible treatment. **Yet North Korea tried to withhold and hide this fact.** This was a cruel act. I would like to extend my deep condolences to Mr. Warmbier’s family and to the American people. Q: In your current agreement with the United States, your wartime forces come under U.S. command. But your new defense minister has long wanted to reverse this policy. Do you agree with him? A: As a sovereign state, we should have operational command of our forces returned to us at an appropriate time. Korea and the United States have already reached an agreement where we will receive operational control of our forces when the conditions are met. I would like to add that Korea and the U.S. have maintained a combined forces command system for a long time. Even if [we] were to get operational control back, as long as this combined system is maintained, our countries will continue to have combined security, and U.S. forces will continue to play their part in our security. Q: What is your assessment of Kim Jong Un? Is he crazy? Or is he being smart by building a nuclear program so that he can have some importance? How do you see him? A: He is an unreasonable leader and a very dangerous person. Yet he is the person who has effective control over North Korea, and he is the person who has the authority to denuclearize North Korea. Q: Or to use the weapons. A: That is correct. So we face the task of the complete dismantlement of North Korea’s nuclear program while dealing with such a leader. Q: It won’t be easy to get Kim suddenly to decide to stop his missile tests. I assume he thinks his regime would go if his weapons went. A: When it comes to getting rid of North Korea’s nuclear missile capabilities, it is the Republic of Korea that faces the greatest threat. For the United States, this is a threat, but to us, this is a matter of life and death. Although Kim Jong Un is a very unreasonable leader and has a firm, unreasonable belief that nuclear and missile weapons will protect him and his regime, we will continue to employ all possible means — sanctions, pressure as well as dialogue — to draw North Korea to the negotiating table for denuclearization. To resolve the issue we have to add dialogue to the current menu of sanctions and pressure. **Every time North Korea commits an additional provocation, the U.N. Security Council passes another resolution.** But when it comes to dialogue, currently there is nothing set. I hope to have frank and open discussions with President Trump on this issue. Q: Do you feel that your administration might have a way to conduct a dialogue with the North that the rest of the world — including the United States — might not have? A: **When it comes to dialogue between South and North Korea and between the United States and North Korea, these can go on parallel tracks.** South Korea and the United States can each play a role. Q: President Park Geun-hye, who was removed from office this year amid corruption charges, took a tougher line toward Pyongyang. She shut down money flows to North Korea from African countries like Uganda — where she stopped Uganda’s military and security cooperation with North Korea. A: Yes. . . . This had no effect, and North Korea continued to advance its nuclear and missile programs. Q: So your message is that you have to have another approach to North Korea? And South Korea should play a bigger role? A: Yes. The message that we must send to North Korea is twofold — if the North Korean regime believes that it can defend and protect itself through nuclear and missile programs, that is a misjudgment. But if North Korea gives up its nuclear program, we will help it secure and develop itself. We must consistently send these two messages. Q: Does that start with family visits right now? A new kind of Sunshine Policy? A: Humanitarian assistance and exchanges are still allowed, even under the sanctions regime on North Korea. Therefore, in parallel with sanctions and pressure, we must also employ humanitarian assistance. The meeting of separated families is also a measure to ensure human rights. Q: Does humanitarian assistance include sending money and aid? A: Sending money or hard currency to North Korea is prohibited under U.N. Security Council resolutions. Q: You’ve questioned the 2015 “comfort-women” agreement with Japan, in which Prime Minister Shinzo Abe apologized for his country’s use of Korean sex slaves before and during World War II — and established a $9 million victims’ fund. Are you going to revisit that? A: The comfort-women agreement that we made with Japan during the last administration is not accepted by the people of Korea, particularly by the victims. They are against this agreement. The core to
Two U.S. long-range strategic bombers will train with South Korea's fighter jets over the peninsula later today as part of a regular combined exercise, defense officials said. "Our Air Force plans to hold a joint drill with two B-1Bs in the sky of the Korean Peninsula today," Lt. Col. Kim Sung-duk, a public relations officer of the South Korean Air Force, told reporters. The B-1B Lancers are scheduled to fly over Korea for a few hours along with two F-15K fighter jets, he added. He pointed out the allies have regularly conducted such a joint air training. (Lee Chi-dong, “Two B-1 Bombers to Train over Korea,” Yonhap, June 20, 2017)

Namkung: “Hankyoreh (Hani): There are serious concerns that Otto Warmbier being released in a coma could worsen North Korea-US relations. Tony Namkung (Namkung): While this is an unfortunate situation, I think it could actually have a positive effect. Warmbier’s release was the first example in a very long time of cooperation between the US and North Korean governments. Doctors have said that Warmbier was not malnourished and that there was no evidence of torture or other cruel treatment. Hani: Why do you think he was only released now? Namkung: Last year, the so-called “decapitation operation” was included in the South Korea-US joint military exercises, which infuriated North Korea. I think the reason they’ve released him now is because they consider President Trump to be someone they can negotiate with. Hani: Are you saying that there could be behind the scenes contact between the US and North Korea? Namkung: I think there could be. When Joseph Yun (US State Department special representative for North Korea policy) visited Pyongyang to arrange Warmbier’s release, he visited all three of the Americans detained there. That’s worth paying attention to. North Korea seems to have sent a clear signal. Hani: The Trump administration has chosen “maximum pressure and engagement” as its North Korean policy. Namkung: It’s a two-stage process. The first stage is applying “maximum pressure” to bring North Korea to the table for talks. The second stage of “maximum engagement” implies the possibility of making completely unprecedented proposals to North Korea, such as a peace treaty, normalization of relations and revoking sanctions. But North Korea won’t be interested in this kind of stage-based strategy. Pressure or engagement-you can only choose one of the two. This policy framework needs to be changed. Hani: Is North Korea’s denuclearization a prerequisite for dialogue? Namkung: Reports of that sort appear in the South Korean media, but I’m not sure what the grounds are for that. Denuclearization is supposed to be what the negotiations culminate in; it can’t be their prerequisite. Hani: Do you think dialogue would be possible if North Korea postpones its nuclear weapons and missile tests? Namkung: On a personal level, I think so. But right now we’re just at the initial phase. Hani: South Korea’s new administration has expressed its willingness to restore inter-Korean relations. Namkung: North Korea puts a priority on political and military issues, which are issues that it has to work through with the US. Improving inter-Korean relations comes after that. If progress is made on talks between the US and North Korea, that could actually lead to a breakthrough in inter-Korean relations. South Korea can’t take the lead in resolving the North Korean nuclear issue, but it can take the lead in North Korea-US dialogue aimed at resolving that issue. Hani: Do you have any advice for the upcoming South Korea-US summit? Namkung: President Trump is completely different from previous politicians. President Moon Jae-in should also deviate from familiar formulas and bring new ideas. It’s important to ask what role South Korea will play [in North Korea-US relations]. (Jung In-hwan and Kim Ji-eun, “Tony Namkung Says Moon Jae-in Should Lead Way to Three-Way Dialogue,” Hankyore, June 20, 2017)

U.S. spy satellites have detected new activity at North Korea's underground nuclear test site for the first time in several weeks, two US officials told CNN. The activity appears to involve some modifications around one of the tunnel entrances to an underground test area. The officials said it is not yet clear if the activity indicates a sixth nuclear test is imminent, but noted there is concern that North Korea could set off a test during tomorrow's visit to Washington by top Chinese
The Trump administration has come under growing pressure to open negotiations on a temporary freeze on North Korea’s nuclear and missile tests in return for reducing the American military footprint in the Korean Peninsula, according to American officials and foreign diplomats. Versions of the proposal, floated by Beijing for several months, have been revived several times this week, first by South Korea’s newly installed president and then by China’s foreign minister and one of its top military officials in talks on Wednesday with Secretary of State Rex W. Tillerson and Defense Secretary Jim Mattis. But White House officials say they are not interested in any proposal that would require the United States to lift military or economic pressure on the North, even in return for a moratorium on tests. Instead, Mr. Tillerson and Mr. Mattis publicly pressed the Chinese to exert more diplomatic and economic pressure on Pyongyang, though President Trump indicated on Twitter on June 20 that he had just abandoned ideas for obtaining help from the Chinese. “China understands that the United States regards North Korea as our top security threat,” Tillerson told reporters at a news conference after meetings with his Chinese counterpart, Yang Jiechi, and Gen. Fang Fenghui, in the first security dialogue with Beijing conducted by the Trump administration. “We reiterated to China that they have a diplomatic responsibility to exert much greater economic and diplomatic pressure on the regime if they want to prevent further escalation in the region.” But like his predecessors, Trump is gradually learning that for all its talk about cooperation, China is deeply reluctant to take any measures that could seriously destabilize the North Korean government, for fear the country might collapse or be absorbed by the South. So China’s strategy has been to buy time — and preserve the status quo — with talks that may be linked to some kind of testing freeze. They may now have a new advocate of that approach, President Moon Jae-in of South Korea, who was elected on a platform pledging resumed engagement with the North. On Tuesday, he embraced a similar idea, telling Norah O’Donnell of CBS News in an interview that a freeze could be a way station to a second phase of
talks that would “achieve the complete dismantling of North Korea’s nuclear program.” In an interview broadcast on Wednesday, the North Korean ambassador to India, Kye Chun-yong, said his country was willing to consider a moratorium on nuclear and ballistic missile tests if the United States and South Korea stopped their annual joint military exercises. “Under certain circumstances, we are willing to talk in terms of freezing nuclear testing or missile testing,” Mr. Kye said, speaking in English. “For instance, if the American side completely stops big, large-scale military exercises temporarily or permanently, then we will also temporarily stop. Let’s talk about how to solve the Korean issue peacefully.” But to American officials, a freeze is a trap that previous administrations have stepped into. The Clinton administration tried a freeze in 1994 that the North Koreans first cheated on and then openly discarded early in the administration of President George W. Bush. At the end of Bush’s term, a second such freeze and partial dismantlement of a nuclear reactor was negotiated, only to be abandoned by the North Koreans as soon as President Barack Obama entered office. Tillerson himself rejected the idea of such a negotiated freeze when he visited South Korea early this year, saying that it would simply enshrine “a comprehensive set of capabilities” that North Korea has already developed, a reference to its arsenal of a dozen or more nuclear weapons and a growing fleet of short- and medium-range missiles that can hit American troops in the region, along with South Korea and Japan. But the idea has been embraced by some longtime Korea experts, including former Defense Secretary William J. Perry, who say that it is the only way to buy some time before North Korea successfully tests an intercontinental ballistic missile that could reach the United States. All the other options available to the United States have major drawbacks. They include secondary sanctions on Chinese banks and companies doing business with North Korea; a military strike; or simple acceptance of North Korea as a nuclear power. Secondary sanctions could ignite a trade war. Even a limited military strike could lead North Korea to attack Seoul with conventional weapons, with potentially catastrophic results. And few in the United States government are ready to accept North Korea as an established nuclear power. Without a clear alternative, the Trump administration remains committed to urging China to crack down on Pyongyang. Some 90 percent of North Korea’s trade is with China. And although China recently banned imports of North Korea coal, overall trade between the two countries has actually been increasing. Tillerson said countries around the world were cracking down on activities North Korea uses to fund its weapons programs, “and we hope China will do their part as well.” Mattis vowed to “continue to take necessary measures to defend ourselves and our allies.” (David E. Sanger and Gardiner Harris, “U.S. Pressed to Pursue Deal to Freeze North Korea Missile Tests,” New York Times, June 22, 2017, p. A-12)

The United States said that China has a responsibility to exert much greater pressure on North Korea to prevent escalating tensions with a government that ignores the law and “provokes and provokes and provokes.” At the security talks, Secretary of Defense Jim Mattis and Secretary of State Rex Tillerson hosted Chinese foreign policy chief Yang Jiechi and Gen. Fang Fenghui, chief of the People’s Liberation Army’s joint staff department. “China understands that the United States regards North Korea as our top security threat,” Tillerson said. “We reiterated to China that it has a diplomatic responsibility to exert much greater economic and diplomatic pressure on the regime if they want to prevent further escalation in the region.” Tillerson called for increased efforts to curtail the North’s illicit revenue streams of revenue that allegedly help fund its nuclear weapon and missile programs. He said the two sides agreed on the need for companies not to deal with North Korea in violation of U.N. sanctions, but did not specify any particular action China was promising to take. Mattis said China “continues to work these issues.” Trump tweeted ahead of today’s talks that Beijing’s efforts to sway Pyongyang weren’t working. That comment came amid outrage in Washington over the death of Otto Warmbier days after the comatose American student was released from imprisonment in North Korea. Defense Secretary Jim Mattis said Trump’s commentary “represents the American people’s view of North Korea right now. We see a young man go over there healthy and with a minor act of mischief” and come home on the verge of death. “What you are seeing I think is the American people’s frustration with the regime that provokes and provokes and provokes and basically plays outside rules, plays fast and loose with the truth,” Mattis told a news conference. North Korea conducts about 90 percent of its trade through China, which maintains that it implements the U.N. sanctions properly. Chinese officials
were not immediately available for comment after the talks. Beforehand, China said it was hoping for “positive outcomes” from today’s dialogue. It had long pushed for a resumption of U.S. negotiations with North Korea, which currently appears a remote prospect. The talks also covered the South China Sea, where Beijing’s island-building and construction of possible military facilities have rattled neighbors and caused tension with Washington. The officials also discussed U.S.-Chinese military cooperation to reduce risk of conflict, as well as efforts to defeat the Islamic State group. Divisive trade issues will be dealt with at a later date. Washington has one threat it can use with Beijing: the possibility of “secondary” sanctions that go after Chinese companies doing business in North Korea. Such a move risks fraying relations between the world’s two biggest economies. The Chinese state-run Global Times warned in an editorial that if Washington imposes sanctions against Chinese enterprises “it will lead to grave friction between China and the U.S.” (Matthew Pennington, “U.S.: China Needs to Exert ‘Much Greater Pressure’ on N. Korea,” Associated Press, June 22, 2017) China and the United States agreed that efforts to denuclearize the Korean Peninsula should be "complete, verifiable and irreversible", Chinese state media said on Saturday, reporting the results of high level talks in Washington this week. "Both sides reaffirm that they will strive for the complete, verifiable and irreversible denuclearization of the Korean Peninsula," a consensus document released by Xinhua said. The consensus document also highlighted the need to fully and strictly hold to U.N. Security Council resolutions and push for dialogue and negotiation, which has long been China's position on the issue. Military-to-military exchanges should also be upgraded and mechanisms of notification established in order to cut the risks of "judgment errors" between the Chinese and U.S. militaries, the statement also said. (Christian Shepherd, “China, U.S. Agree on Aim of ‘Complete, Irreversible’ Korean Denuclearization,” Reuters, June 24, 2016)

Tillerson, Mattis briefing: “…TILLERSON: Hello. Good afternoon, all. I do want to thank Secretary Mattis, State Councilor Yang Jiechi, and PLA Chief of Joint Staff Fang Fenghui for a day of very productive meetings. Secretary Mattis and I were quite pleased to host the first session of the Diplomatic Security Dialogue since we agreed on this format at the presidential summit in Mar-a-Lago. This is one of four distinct dialogue areas that will implement our President’s vision for constructive, results-oriented bilateral relations. We’re sustaining these regular talks at a much higher level than in previous years and among principals in both the civilian and the military agencies. President Trump, I know, looks forward to his state visit to China later this year. …The most acute threat in the region today is posed by the DPRK. We both call for complete, verifiable, and irreversible denuclearization of the Korean Peninsula. And we call on the DPRK to halt its illegal nuclear weapons program and its ballistic missile test as stipulated in the UN Security Council resolutions. We reaffirmed our commitment to implement in full all relevant UN Security Council resolutions. For example, we both agreed that our companies should not do business with any UN-designated North Korean entities in accordance with these resolutions. China understands that the United States regards North Korea as our top security threat. We reiterated to China that they have a diplomatic responsibility to exert much greater economic and diplomatic pressure on the regime if they want to prevent further escalation in the region. Whether it is money laundering, extorting Korean expatriates, or malicious cyber activity, North Korea has engaged in a number of criminal enterprises that help fund its weapons programs. We must step up our efforts to help to curtail these sources of revenue. Countries around the world and in the UN Security Council are joining in this effort and we hope China will do their part as well. The United States remains committed to …holding North Korea accountable for multiple violations of UN Security Council resolutions which expressly prohibit its nuclear weapons and ballistic missile programs. We regret that it is the North Korean people who suffer when the regime diverts resources to these prohibited programs, and we urge the DPRK regime to choose a better path for its people. … MATTIS: Well, thank you, Secretary Tillerson. Good afternoon, ladies and gentlemen. A few words to add to Secretary Tillerson’s report, to give you something from the defense perspective. This has been a unique opportunity for our nations to engage in philosophical-level discussions about how we discuss these issues and to discuss the way ahead, together hosting our counterparts, State Councilor Yang and General Fang. In this first round of dialogues agreed to by our presidents at the summit at Mar-a-Lago, we gained a glimpse of a mutually beneficial future that we can create. As Secretary Tillerson mentioned,
the United State seeks a constructive and a results-oriented relationship with China. Events like
the Diplomatic and Security Dialogue we just completed represent our effort to elevate and focus
our bilateral discussions. I’m committed to improving the U.S.-China defense relationship so that
it remains a stabilizing element in our overall relationship. Our two nations can and do cooperate
in mutually beneficial ways. We prioritize mechanisms that contribute to greater risk
reduction between our armed forces, that open and maintain effective channels of
communication between us, and that expand areas of cooperation where we can. At the same
time, we do manage our differences where we have them, and while competition between our
nations is bound to occur, conflict is not inevitable. This afternoon, we affirmed North Korea’s
nuclear missile program is a threat to peace and security in the Asia Pacific region. We also
affirmed our strong commitment to cooperate, including through the UN, to realize our shared
goal of denuclearization of the Korean Peninsula. Meanwhile, we will continue to take necessary
measures to defend ourselves and our allies. …MS NAUERT: Barbara Plett from BBC. Q: Thank
you. Secretary Mattis, the President seemed to signal yesterday that he was extremely angry
and frustrated with North Korea, and that China had failed in its attempt to help on that.
Despite these continued efforts at cooperation, is the administration beginning to think that China
will not be able to rein North Korea in, and is there any consideration of new, direct action? In
particular, has the military posture changed in any way? And if I may, a question on the South
China Sea. Control of the South China Sea is a fundamental part of China’s strategic policy.
Freedom of navigation efforts notwithstanding, how far is the U.S. willing to go to prevent
militarization? Thank you. MATTIS: In regards to the President’s view of North Korea, I
believe he represents the American people’s view of North Korea right now. We see a young
man go over there healthy, and with a minor act of mischief, come home dead, basically – die
shortly – immediately after he gets here. There is no way that we can look at a situation like
this with any kind of understanding. This is – goes beyond any kind of understanding of law
and order, of humanity, of responsibility towards any human being. So what you’re seeing, I
think, is the American people’s frustration with a regime that provokes, and provokes, and
provokes, and basically plays outside the rules, plays fast and loose with the truth, that sort of
thing. As far as China’s role, China continues to work these issues. We – the reason for this
dialogue that we had today was to have an open and frank dialogue about what more can be done
in areas of common interest. I would point out to you that China’s end state on the Korean
Peninsula in terms of nuclear weapons is the same as ours, and we continue to work towards that
end state. On South China Sea, this is a dialogue where we identify areas where we can work
together and to understand those areas where we have, I would call them disconnects, where are
our understanding of the problem is very different from theirs. And we had that discussion here
today, and we’ll continue to work – to close gaps in our understanding and to work some kind of
manner in the future that removes these irritants. But I would say for right now that’s the whole
purpose for the dialogue that we held here today, and we will be holding more in the future."
(DoS, Secretary of State Rex Tillerson and Secretary of Defense Jim Mattis at a Joint Press

North Korea’s ambassador to India says his country may halt its nuclear and missile tests
"temporarily" if the U.S. and South Korea cease their joint military exercises near the Korean
Peninsula. Under certain circumstances, "we are willing to talk in terms of freezing nuclear testing
and missile testing," Kye Chun Yong said. The rare official comment was aired Wednesday by
Indian news channel WION, which recorded the interview with the ambassador Tuesday. Kye
discussed the possibility of a "moratorium" on such weapons testing, saying that should the
American side "completely stop the big, large-scale military exercises, stopping temporarily or
permanently, then we are also temporarily stopping." The North Korean diplomat noted in the
interview that President Donald Trump "said there [were] so many options including [military
action], so we should be ready [for] both of them, dialogue and militarily." North Korea is open to
dialogue with the U.S. "anytime," Kye said, but he deemed "unacceptable" any preconditions such
as an advance statement to "withdraw the missile program [and] nuclear program." But the
ambassador offered a moderate gesture to the South, saying Pyongyang is "encouraging the inter-
Korean dialogue." He indicated North Korean leader Kim Jong Un's willingness to have a direct
dialogue with Moon Jae-in. "Possessing nuclear weapons is inevitable," Kye said, emphasizing the
"very arduous choice to defend the right of existence." He cited Pyongyang's analysis that a
denuclearization applying only to the Korean Peninsula carries little meaning because the U.S. and
its allies "deployed a lot of nuclear weapons around Korean Peninsula, in Japan, in Guam and
some small islands belonging to America." (Kuronuma Yuji, “North Korean Diplomat Offers

The short, unexpected honeymoon that China enjoyed with President Trump seems to be in
trouble, dashing hopes in Beijing that the two countries had embarked on a new, businesslike
relationship. “While I greatly appreciate the efforts of President Xi & China to help with North
Korea, it has not worked out,” Trump wrote on Twitter June 20, ahead of a high-level meeting of
Chinese and American officials on June 21 in Washington, signaling a harder line. Trump did not
detail what might follow that conclusion, but the options on the table with North Korea —
including more coercive sanctions that could target Chinese companies trading with the country, a
military buildup and even the use of force — are all deeply objectionable to Beijing. At the same
time, Trump had previously suggested he was holding off on getting tough on China’s trade
policies in return for Xi’s help with reining in North Korea, often engaging in public flattery of the
leader. Now, Xi and his colleagues in Beijing must ask — again — whether Trump is serious
about the threats he made on the campaign trail. The prospect of a rockier relationship is
particularly sensitive now as Xi prepares to preside over the Communist Party’s 19th National
Party Congress in the fall. He is said to want to use the gathering to consolidate his authority and
reshuffle the leadership, and he does not want any foreign crises to be distractions. “What Trump
is saying is, I don’t need you on North Korea now, and therefore maybe we should have it out on
these other issues, like trade,” said John Delury, an expert on China and the Koreas at Yonsei
University in Seoul. The official response from China was fairly muted, though strained. “I have
to say that the crux of the Korean Peninsula problem and the focal point of the conflict is not
China,” a spokesman for the Foreign Ministry, Geng Shuang, said at a briefing today. He added:
“Resolving the Korean Peninsula issue requires joint efforts, and it won’t work if it depends on
China alone.” At the same time, he said that “China’s role is indispensable.” The statement by
Trump, although couched in appreciative words for Xi, surprised and annoyed analysts in Beijing.
China had taken significant steps to tighten trade with the North, they said, and the United States
had, as always, not given sanctions enough time to take effect. “China has done its best, and these
sanctions are working,” said Lu Chao, director of the Border Study Institute at the Liaoning
Academy of Social Sciences, a government research organization in Shenyang. “Given time, they
will have a greater impact on the economy.” Cheng Xiaohe, an associate professor of international
relations at Renmin University of China in Beijing, said that Xi’s government had learned not to
take Trump’s Twitter messages at face value. “The Chinese government assumes Trump’s tweets
do not necessarily represent the administration,” he said. “The government cannot treat them very
seriously. Trump changes all the time.” He added that the new round of meetings in Washington
came at a “very critical period” and that the government would try to sustain the positive
momentum of the first few months of the Trump presidency. Officials in Beijing had expressed
confidence that their gestures to Trump — including the lifting on Tuesday of a 14-year embargo
on American beef imports — would placate Trump, whose platform as a candidate had signaled a
more confrontational policy. “Why would I call China a currency manipulator when they are
working with us on the North Korean problem?” he wrote in a tweet in April, defending the
reversal of a campaign promise. China’s willingness to help with North Korea — or at least be
seen to be helping — became the foundation of that relationship. In recent weeks, however, White
House officials signaled a growing frustration with Beijing, arguing that Mr. Trump’s bet had not
paid off. The president appears to have reached the same conclusion. “We understand the
Americans are angry over the student’s death,” said Jin Qiangyi, director of the Center for North
and South Korea Studies at Yanbian University in Yanbian, near China’s border with North
Korea. But imposing new sanctions targeting Chinese companies would only lead to more
problems, he said. “The United States may want to smoke North Korea out with sanctions so it
would drop its nuclear programs, but we doubt this will work,” he said. “This is a country that has
managed to go through decades of sanctions.” (Steven Lee Myers, “China’s Trump Honeymoon:
North Korea has carried out another test of a rocket engine that the United States believes could be part of its program to develop an intercontinental ballistic missile, a U.S. official told Reuters. The United States assessed that the test, the latest in a series of engine and missile trials this year, could be for the smallest stage of an intercontinental ballistic missile (ICBM) rocket engine, said the official, who spoke on the condition of anonymity. A second U.S. official also confirmed the test but did not provide additional details on the type of rocket component that was being tested or whether it fit into the ICBM program. One official said he believed the test had taken place within the past 24 hours. North Korea's state media, which is normally quick to publicize successful missile-related developments, did not carry any reports on the engine test. South Korean officials did not have details about the reported test and declined to comment on the possible nature of the engine. Chinese Foreign Ministry spokesman Geng Shuang said China opposed any action that violated UN Security Council resolutions and called for restraint from all parties. (Phil Stewart, “North Korea Tests Rocket Engine, Possibly for ICBM: U.S Officials,” Reuters, June 23, 2017) Joseph Bermudez: “North Korea conducted another test of a rocket engine that could potentially be used on a future intercontinental ballistic missile, Fox News reported June 22, quoting two U.S. officials. Reuters news agency ran a similar report, quoting a U.S. official as saying the test, the latest in a series of engine and missile tests conducted by the country this year, could be for the smallest stage of an ICBM rocket engine. Another U.S. official confirmed the test, but did not provide details such as the type of rocket component that was being tested or whether it fit into the country's ICBM program, according to Reuters. Although military experts believe North Korea could still be years away from acquiring a reliable ICBM capability, Robert Soofer, deputy assistant secretary of defense for nuclear and missile defense policy, said earlier this month that Pyongyang "is poised to conduct its first ICBM test in 2017." (Kyodo, “N. Korea Tests Rocket Engine in Suspected ICBM Development,” June 21, 2017) Recent commercial satellite imagery confirms media reports that North Korea conducted a rocket engine test at the Sohae Satellite Launching Station on, or about, June 22. While it was reported that this test “could be for the smallest stage of an ICBM rocket engine,” and the June 22 imagery shows evidence of a recent small rocket engine test, it is not possible to confirm whether this test was for an ICBM engine using imagery alone. Both natural-color and color-infrared imagery of the vertical engine test
stand from June 22 show numerous tire tracks on the test stand’s apron and at the nearby garage that were not previously present in a June 10 image, indicating recent heavy vehicular traffic. Such traffic is similar to that seen for previous engine tests. More significantly, the image shows widespread, but minor, damage to vegetation surrounding the base of the test stand where rocket engine exhaust is directed during tests. The minor damage suggests that the recently conducted test was of a relatively small engine. Whether the engine test was “for the smallest stage of an ICBM rocket engine” or some other system cannot be determined from the imagery alone. No vehicles or personnel are observed in or around the test stand. The fact that this test was conducted only twelve days after the June 10 image showed no evidence of test preparations reinforces that North Korea possesses the technical and logistical capabilities to conduct such tests with little or no advance warning.” (Joseph Bermudez, “Imagery Confirms Recent Media Reports of Failed Rocket Engine Test,” 38North, June 27, 2017)

Ties between the U.S. and South Korea have cooled after a special adviser to South Korean President Moon Jae-in suggested scaling back joint military exercises, even as Washington ramps up its rhetoric on Pyongyang over the death of a college student. "If North Korea suspends its nuclear and missile activities, then we may consult with the U.S. about scaling down ... joint exercises and training," Moon Chung-in said at an event in Washington on June 16. "We may scale down deployment of American strategic weapons [in] the Korean Peninsula," the adviser also said. The U.S. reacted quickly to his comments. "We understand these views are the personal views of Mr. Moon [Chung-in] and may not reflect official [South Korean] government policy," a State Department spokeswoman reportedly told JoongAng Ilbo. The official U.S. stance is that it will consider a dialogue if and only if North Korea clearly expresses its intent to denuclearize. Simply halting its nuclear and missile development, as Moon proposed, would not be enough. If anything, Washington is looking to bolster its joint exercises with the South. "I am never satisfied. I want to do more training," Maj. Gen. Theodore Martin, a top commander of U.S. forces in South Korea, told Yonhap on June 20. Meanwhile, Washington is ramping up pressure on Pyongyang following the death of an American student who was detained by the North and returned to America in a coma. "The United States once again condemns the brutality of the North Korean regime," President Donald Trump said in a statement. The U.S. also flew B-1B bombers over the Korean Peninsula on June 20. The deployment of the U.S. Terminal High Altitude Area Defense missile shield in the South has strained bilateral relations. President Moon ordered an investigation after the South Korean Defense Ministry apparently failed to inform him about four additional launch pads brought in for the system. An environmental assessment of these pads is expected to delay full deployment by a year. Trump is furious, according to South Korean reports. Seoul is trying to walk back Moon Chung-in's statement in light of recent developments. On June 19, the president's office announced that Moon was expressing his personal opinion, and had been reprimanded for not helping South Korean-U.S. relations. But the office did not refute the comment itself. Moon was also a key foreign policy adviser to former President Roh Moo-hyun, for whom the current president served as chief of staff. He is believed to wield significant influence in the current administration as well. (Suzuki Sotaro, “Washington, Seoul Face Growing Rift over North Korea,” Nikkei Asian Review, June 21, 2017)

Reid Kirby: “…North Korea is believed to have placed a high priority on chemical weapons ever since Kim Il-sung’s “Declaration of Chemicalization” in 1961. But the quantity, quality, and durability of the North Korean chemical arsenal are unknown. In the 1970s, intelligence estimates by the United States and South Korea rated North Korea’s chemical warfare potential as mostly defensive. By the late 1980s, views had changed; Pyongyang was believed to have 250 tons of mustard gas and some nerve agents. By 2010, North Korea was estimated to possess 2,500 to 5,000 tons of chemical weapons, mostly sarin and the nerve agent VX. Furthermore, it is assumed that North Korean military doctrine treats chemical weapons as a natural aspect of the nation’s scheme of maneuver, and that chemical weapons would be used from the outset of hostilities. Chemical weapons are reportedly pre-deployed—with one out of three North Korean projectiles believed to be chemical. The February assassination of Kim Jong-nam in Malaysia with VX was undoubtedly a reminder to North Korea’s enemies of the chemical threat that Pyongyang poses.
Bruce Bennett of the RAND Corporation reports that eight manufacturing facilities have been identified in North Korea, capable of producing 5,000 tons of chemical weapons a year during peacetime and 12,000 tons during wartime. The Nuclear Threat Initiative, meanwhile, reports that North Korea has 11 production and storage facilities—in addition to 13 research and development facilities, two test ranges, and four military bases equipped with chemical weapons, as well as facilities near the cities of Kanggye and Sakchu prepared to fill chemical artillery. Earlier, I cited a claim that North Korea’s 170mm and 240mm artillery could fire 10,000 rounds per minute on Seoul. This claim requires validation. While numbers vary, let’s assume that North Korea has 500 170mm guns and 200 240mm guns (the M-1985)—the conservative numbers specified on the Global Security website—and delve into a bit more detail. North Korea has the M-1978 Koksan self-propelled gun; the M-1989 variant of this gun carries 12 rounds. Its estimated range is about 25 miles—and with rocket-assisted projectiles, the range can be extended up to about 37 miles. From North Korea’s firing positions along the Kaesong salient of the demilitarized zone, these 170mm guns can cover a one-third to one-half of Seoul without rocket-assisted projectiles and all of Seoul with them (see Figure 1). North Korea’s 240mm artillery rockets are fired from either the 12-rocket M-1985 or the 22-rocket M-1991 mobile multiple rocket launcher. With their range of about 20 miles, these launchers can cover less than one-third of Seoul from the same firing positions along the Kaesong salient. The Juche 100 variant of the 240mm rocket is reported to have a range of about 37 miles. So the rate of fire of 10,000 rounds per minute appears incorrect—it is apparently based on the rate of fire produced by 155mm artillery pieces (that is, 12 rounds every 3 minutes). The larger-caliber 8-inch gun in the United States has a sustained rate of fire of 10 rounds every 15 minutes, implying that a more appropriate rate for 170mm guns may be 12 rounds per 15 minutes. The firing rate of 240mm rockets is one rocket every 4 seconds, with 5 to 8 minutes to reload after expending either 12 or 22 rockets. Assuming 500 170mm guns and 200 240mm guns, the more likely overall rate of fire is 10,800 rounds every 15 minutes. With that established, we can calculate how much sarin Seoul might receive during a chemical artillery barrage. The sarin payload of each 240mm rocket is known to be 8 kilograms per rocket, based on the Soviet Katyusha. There is little information available on the 170mm projectile, but a chemical payload of 5 kilograms per projectile can be assumed, based on a US chemical shell of comparable size (the experimental 175mm T223, created for the T145 and T256 guns). Misfires and duds for these artillery weapons would reduce the amount of sarin released on Seoul. Overall, the chemical loading would be about 100 kilograms per square kilometer every 15 minutes. How much total sarin North Korea placed on Seoul would depend in part on Pyongyang’s chemical objectives—that is, the casualty rate it hoped to achieve—and on prevailing weather conditions. Anglo-American chemical retaliatory plans during World War II called for a 25 percent casualty rate in urban targets; this objective was retained in the earlier half of the Cold War. Figures from that era for estimating casualties from sarin assumed a median lethal dosage (LC50) of 70 mg·min/m³ and a median incapacitating dosage (IC50) of 35 mg·min/m³ (for example, if a soldier were breathing 7 milligrams of sarin per cubic meter of air for 10 minutes, there would be a 50 percent probability he would die). The prevailing weather conditions assumed in this analysis are for urban terrain under neutral atmospheric stability, with five-knot winds. A heuristic approach to estimating the total quantity of sarin required to inflict 25 percent casualties on a city such as Seoul under the specified conditions simplifies the problem into a box model of 600 square kilometers, with casualty rates integrated by area to find the necessary quantity. Using this approach, a “sea of sarin” attack on Seoul would require about 400 kilograms of sarin per square kilometer. Such an attack would require a total of 240 tons of sarin, easily within the estimated size of North Korea’s chemical arsenal. It would take one hour for North Korean artillery to mass sufficient sarin on Seoul to attain a 25 percent casualty objective—or three hours if mixed with high-explosive fire at a 1:2 ratio of chemical to high-explosive projectiles or rockets. …Based on Cold War–era dosage figures for sarin, North Korea could, in a matter of hours, inflict around 25 percent casualties by distributing 240 tons of sarin throughout Seoul. But these dosage figures were indexed for soldiers considered among the healthiest third of a population that is relatively young overall (military service age). For a diverse population encompassing all ages and genders, and with a wide range of health statuses, the lethal and incapacitating dosages of sarin are significantly lower. The Institute for Defense Analysis held a workshop in 1998 to assess the state of the art and to arrive at dosage figures appropriate for the general population. The institute estimated that, for the general
population, the median lethal dosage would be only half the dosage assumed in the US Army field manual mentioned above. If the institute’s figures for a sarin attack on a civilian population are used, the consequences of a North Korean chemical artillery attack become much more severe:

<table>
<thead>
<tr>
<th>Effects</th>
<th>Percentage of population affected</th>
<th>Number of people affected</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fatalities</td>
<td>25</td>
<td>2,500,000</td>
</tr>
<tr>
<td>Severe Casualties</td>
<td>10</td>
<td>1,000,000</td>
</tr>
<tr>
<td>Moderate Casualties</td>
<td>19</td>
<td>1,900,000</td>
</tr>
<tr>
<td>Mild Casualties</td>
<td>40</td>
<td>4,000,000</td>
</tr>
</tbody>
</table>

The overall expected casualty rate is nearly total. Compared to the military-dosage scenario, there would be more than 3.8 times the number of fatalities and almost 1.5 times as many moderate-to-severe casualties. Estimates of chemical-weapon effects based on Cold War-era dosage figures are a gross understatement of the number of fatalities and casualties that could be expected in a general civilian population. And if Pyongyang expended quantities of chemical weapons appropriate for a military rather than a civilian population—which is logistically feasible even for a large-area target such as Seoul—the probable effect on a general civilian population would be significant overkill. How does one visualize such an attack? In more than half of Seoul, the consequences would be comparable to the worst images from the Ghouta sarin attack; in the remainder of the city, consequences would be similar to the Tokyo subway attack. Long-term consequences might not be immediately appreciated, but would be severe as well. For survivors experiencing cardiopulmonary arrest, a fair number might enter a persistent vegetative state due to anoxia. Neuropathy and ataxia (loss of control over bodily movements) might be present for up to three months after the attack in 10 percent of survivors, and about 8 percent would likely have post-traumatic stress disorder for up to five years afterward. Policy makers also should not discount public perceptions of latent effects, whether real or imagined. Gulf War Syndrome, the 1984 Bhopal Disaster, and the use of Agent Orange in Vietnam all provide cautionary examples of the way lingering doubts, with political importance, can persist for more than a decade after a mass chemical incident. To be sure, South Korea is not defenseless against a sea-of-fire counter-value attack. While it is not logistically or technically feasible for South Korea to directly shoot down 10,800 chemical projectiles and rockets every 15 minutes, Seoul has a formidable counter-battery capability to destroy North Korean artillery pieces. The problem would be responding quickly enough—and prioritizing the destruction of 500 170mm guns, and 200 240mm multiple rocket launchers, in a demilitarized zone crowded with numerous other artillery pieces. The qualitative difference between a nuclear and a chemical deterrent lies in the latter’s mass effect. For example, if three attack aircraft flew on a mission to deliver a nuclear weapon and only one aircraft carried the weapon, a one-in-three probability of losing an aircraft would result in a binary situation: a two-thirds probability that the weapon would have 100 percent of its intended effect or a one-third probability that it would have none of its intended effect. Chemical weapons are different; a one-in-three chance of losing an attack aircraft would mean that two-thirds of the chemical payload would be delivered to the target and mass casualties would still result. Successful counter-battery attrition against a “sea of sarin” attack would require destroying all North Korean chemical artillery in less than 15 minutes. In general terms, the attrition would shrink the portion of Seoul experiencing a Syrian-type casualty scenario, replacing it with a Tokyo-type casualty picture. A chemical load of 100 kilograms per square kilometer would still result in mild casualties for about 93 percent of the affected population, moderate casualties for about 7 percent, and numerous fatalities in the vicinity of each burst. It is this mass effect from artillery which makes the potential of a North Korean chemical counter-value attack a potent possible deterrent. The mass-action nature of a chemical attack would inflict massive numbers of casualties even in the unlikely scenario that South Korea silenced all North Korean artillery within 15 minutes. Civil defense could help reduce casualties. Seoul has 3,321 civil defense evacuation centers. Spread across the country are 17,501 protective shelters. There is even a smartphone app
to help direct people to the nearest shelter during an attack. After the 2010 North Korean bombardment of Yeonpyeong Island, South Korean civil defense authorities issued 1,300 protective masks to island residents and made plans to boost the chemical protection capabilities of its civil defense corps, including the renovation of public shelters against chemical weapons. Depending on availability, on how much warning is provided, and on public response time, civil defense measures could substantially reduce chemical casualties. If the typical response time were on the order of two minutes into the attack—unlikely—expected casualties would be only one-quarter of those expected in a population without chemical protections. Details about North Korea’s chemical arsenal are not known with confidence. We do not know for sure what chemical weapons North Korea would use or how it would use them. The North’s repeated threats to turn Seoul into a sea of fire may be only rhetoric. The North’s strategic views concerning deterrence and escalation are also unknown. History shows a willingness in Pyongyang to engage in military provocations short of the level that would justify a renewal of the Korean War. Nonetheless, it is possible to make a rough estimate of the impact of a massive chemical artillery attack on a large urban center such as Seoul. Ultimately, such an estimate is illustrative, representing one of many possible scenarios, yet it can still provide a reasonable understanding of the potential magnitude of a sarin artillery attack against civilian population centers. If publicly stated intelligence estimates are to be believed, North Korea’s chemical arsenal represents a credible and present threat. How North Korea could apply this threat as a deterrent is speculative. But the destructive potential of the threat should give reasonable cause to hesitate regarding preemptive military options against North Korea’s nuclear weapons ambitions.” (Reid Kirby, “Sea of Sarin: North Korea’s Chemical Deterrent,” Bulletin of the Atomic Scientists, June 21, 2017)

South Korea cast caution over reading too much into a North Korean envoy’s remarks proposing a conditional moratorium on the North’s nuclear and missile tests. North Korea’s top envoy to India Kye Chun-yong said yesterday that North Korea can place a moratorium on its nuclear and missile tests if the U.S. suspends its annual joint military drill with South Korea. South Korea’s unification ministry expressed prudence about giving its assessment over Kye’s remark, recalling its January 10, 2015 proposal. "North Korea made a similar offer in 2015. We will closely watch the situation," said a ministry official. "I think that North Korea is seen as giving its views in various manners as the outside world is talking about its nuclear weapons program." Kye’s remark came as Moon said in a recent interview with CBS that South Korea has no plans to scale back joint military exercises between Seoul and Washington. Meanwhile, the ministry official said that reported new activity at North Korea’s underground nuclear test site does not seem to be related to signs of an additional nuclear test by the North. Citing two U.S. officials, CNN reported June 20 that U.S. spy satellites have detected new activity at North Korea’s nuclear test site on its northeastern region for the first time in several weeks. "It does not appear to be directly related to (signs of) another North Korea nuke test," the official added. "But North Korea seems to be ready to conduct an additional nuke test at any time." (Yonhap, “S. Korea Cautious about Assessing N.K.’s Offer for Moratorium on Nuke Tests,” June 22, 2017)

South Korea successfully test-fired a new ballistic missile with a range far enough to hit any part of North Korea, as it seeks to counter the North’s growing missile threat. While President Moon Jae-in watched, the weapon, a type of Hyunmoo-2 ballistic missile, blasted off from a test site in Taean, a coastal county south of Seoul, the capital, the president’s office said in a statement. The missile traveled a designated distance before hitting a target, the office said, without disclosing how far it flew. Defense officials and the domestic news media said the missile could fly up to 800 kilometers, or 497 miles — the maximum ballistic missile range allowed under a deal with the United States. South Korea has tested the missile four times so far and will have it ready to use after two additional tests, Moon’s office said. “I am a believer in dialogue, but I also know that dialogue is possible when we have a strong national defense,” Moon was quoted as saying from the missile test site. “A policy of embracing North Korea is possible when we have a defense capability that surpasses that of North Korea.” As that threat by the North has increased, South Korea has also sought to strengthen its capabilities, particularly after the United States agreed in 2012 to let it possess ballistic missiles with a range of up to 497 miles as long as the payload did
not exceed 500 kilograms, about half a ton. South Korea can load warheads weighing up to two tons on ballistic missiles with shorter ranges. Until then, the South had been barred from deploying ballistic missiles with a range of more than 300 kilometers, or 186 miles, and a payload of more than half a ton because of concerns about a regional arms race. It first agreed to missile guidelines with the United States in 1979 in return for American technological aid in developing its first ballistic missiles. But South Korea’s desire to improve its weapons gained urgency as the North made gains in its missile programs. South Korea’s ballistic-missile inventory includes the Hyunmoo-2A with a range of 186 miles and the Hyunmoo-2B with a range of 310 miles. Its Agency for Defense Development test-fired the Hyunmoo-2B from a mobile launch vehicle at the Taean site in 2015 as Park Geun-hye, the president at the time, observed. The new missile on Friday was believed to be named Hyunmoo-2C. (Choe Sang-hun, “South Korea Tests Missile Capable of Striking Any Part of North Korea,” New York Times, June 23, 2017)

The Blue House moved quickly to quash a controversy about changes to the THAAD deployment agreement provoked by President Moon Jae-in’s interview with Reuters on June 22. After Moon’s remarks during the interview that “the original agreement [between South Korea and the US] was to deploy one launcher by the end of 2017 and the remaining five launchers next year” unexpectedly caused a disagreement between the two countries, the Blue House explained that “the crux of the president’s remarks was not that the number of launchers changed but rather that the deployment process was pushed forward.” “The remarks came after the Reuters reporter asked questions on the assumption that the THAAD deployment was being delayed and President Moon was explaining that [an environmental impact assessment] has procedural transparency and legitimacy and that [the deployment] could have happened more quickly if this step had been taken,” a senior official at the Blue House told reporters who were asking about the significance of Moon’s remarks during the interview. “The question of whether the original plan was for ‘one plus five’ [one launcher now and five later] or ‘two plus four’ isn’t fundamentally important.” But despite the Blue House’s explanation, questions remain. The first question is why Moon went public with the original terms of the agreement before the South Korea-US summit, considering that those terms had not been previously disclosed. The Blue House only obliquely revealed that Moon became aware of this fact during the Defense Ministry’s investigation at the end of last month into the omission of information about the delivery of four additional launchers from a report. Blue House Senior Secretary to the President for Public Relations Yoon Young-chan was apparently aware that the original agreement had been for ‘one plus five’ during the briefing about the investigation into the omission of information from the Defense Ministry’s report. “We can make some educated guesses [about the change in the deployment schedule], but I’m unable to reveal everything,” Yoon said at the time. According to the Blue House’s explanation, Moon had been aware since the beginning of this month that the original agreement had been changed to move forward the deployment schedule and that he revealed this during the interview to aid the reporter’s understanding while he was explaining that the environmental impact assessment was not intended to delay the THAAD deployment. The Blue House has remained silent about when the ‘one plus five’ agreement mentioned by Moon was reached. “I’m not in a position to know the timing of the original agreement or other details. [This question] will be revealed through a Defense Ministry investigation,” said a Blue House source. But given the context of Moon’s remarks and the information released by the US and South Korea thus far, the original agreement was presumably made before July 8, 2016. That was the date when the South Korean Defense Ministry and the Pentagon announced their agreement to deploy the THAAD system by the end of 2017. When Seongju County in North Gyeongsang Province was announced as the THAAD deployment site on July 13, the size of the THAAD system was specified as “one battery,” which is composed of six launchers. The hypothesis that the original agreement was reached before July 2016 conflicts with Moon’s subsequent remarks in the interview. Immediately after mentioning the original “one plus five” agreement, Moon said, “But for some reason that I do not know, this entire THAAD process was accelerated” over the course of former President Park Geun-hye’s impeachment. This implies that the content of the agreement changed after Nov. 2016, when the impeachment process got underway. Another possibility is that Moon was conflating two different things during the interview. Perhaps the “one plus five” agreement tentatively reached during the initial THAAD negotiations became “one battery by the end of 2017” in the agreement’s final
stage, and perhaps the “end of 2017” deadline for completing the deployment was pushed forward during the impeachment process at the end of last year for reasons that are unclear. In that case, Moon may have gotten his facts mixed up. This assumes that what Moon originally wanted to point out was the “lack of transparency” in the entire deployment process. In July 2016, the government announced that the deployment would take place by the end of 2017, but that schedule was pushed forward to September shortly after the National Assembly passed the motion to impeach Park, and then two launchers were unexpectedly delivered at the beginning of March, in the early stage of the presidential election, and then deployed at Seongju at the end of April, shortly before the presidential election. (Lee Se-young, “Blue House Scrambling to Address Controversy Sparked by Moon’s THAAD Remarks,” Hankyore, June 24, 2017)

South Korean President Moon Jae-in invited North Korea to the Winter Olympic Games to be held in the country early next year, while welcoming a North Korean delegation to the World Taekwondo Championships. "I believe in the strength of sports that has been establishing peace. I am glad to see the first sports exchange of the South and the North under the new (South Korean) government take place at this event," Moon said in his congratulatory speech marking the opening of the event hosted by the World Taekwondo Federation (WTF). The new South Korean president was speaking before 971 athletes and 796 officials from 183 countries, making the seven-day biennial event in Muju, located 240 kilometers south of Seoul, the largest of its kind ever to be held. The participants included a 36-member delegation, including 32 North Koreans, from the North Korea-led International Taekwondo Federation (ITF), with a 12-member demonstration team also set to stage its first-ever performance in South Korea. "It will mark the first time the ITF will perform at a WTF event held in South Korea," the president said. "Friendship and goodwill exchanges between the two federations will of course greatly contribute to reconciliation between South and North Korea, as well as the establishment of peace on the Korean Peninsula," he added, noting the WTF was set to send a demonstration team to an ITF event to be held in Pyongyang in September. "I wish the achievement made by taekwondo will be repeated at the PyeongChang Winter Olympic Games next year. If a North Korean delegation takes part in the PyeongChang Winter Olympics, I believe it will greatly contribute to realizing the Olympic values of friendship and peace," President Moon said, according to a script of his remarks released by the presidential office Cheong Wa Dae in Seoul. Also present at the opening of the taekwondo championships in Muju were Chang Ung, North Korea's sole member of the International Olympic Committee, and Ri Yong-soon, the North Korean head of the ITF. Earlier this week, Seoul's new sports minister, Do Jong-hwan, suggested forming a joint Korean team in women's hockey and holding skiing events at North Korea's Masikryong resort during PyeongChang 2018. In his speech, Moon said he'd once again like to feel the emotions from watching the joint march of the two Koreas in the opening ceremony of the 2000 Sydney Olympics. Moon also made references to the 1991 World Table Tennis Championships and the 1991 FIFA World Youth Championship, two competitions where the Koreas fielded joint teams. (Yonhap, “Moon Says Sports Can Create Peace, Invites N. Korea to PyeongChang Olympics,” June 24, 2017)

Shipments of North Korean products to China tumbled more than 30 percent on-year in May, Chinese data showed, an apparent outcome of China's import ban on North Korean coal as part of international sanctions against the communist North. According to the data from China's customs office, North Korean exports to China came to US$123.75 million in May, down 31.6 percent from the same month a year earlier. The tally marks the third-lowest level since June 2014. It also marked the third consecutive month of decline. China halted inbound shipments of North Korean coal in February under a sanctions resolution of the U.N. Security Council issued late last year. The new sanctions resolution came in retaliation for the North's latest and fifth nuclear test in September 2016. North Korea's exports to China tumbled 51.7 percent on-year to $114.55 million in March, followed by a 40.8 percent plunge to $99.27 million the following month. In the first five months of the year, North Korea's exports to China slipped 9.3 percent on-year to $722.1 million. China's shipments to the impoverished North, on the other hand, spiked 32 percent on-year over the cited period, according to the customs data. (Yonhap, “China’s Imports of N. Korea Goods Plunge Nearly 32 Pct. in May: Report,” June 24, 2017)
As South Korean president, Park Geun-hye approved a covert plan to oust North Korean leader Kim Jong Un — including assassination — and to cover Seoul’s tracks, a source said. The plan was floated when the conservative Park was growing increasingly frustrated and taking a more confrontational stance against the northern neighbor, according to the source knowledgeable about policy toward North Korea during Park’s administration. After a meeting of officials from the two Koreas ended on a negative note in December 2015, Park signed a document that gave the green light for a “leadership change” in North Korea. The National Intelligence Service (NIS) was put in charge of the policy. Although details of the actual plan are sketchy, the options included Kim’s retirement, political exile or even assassination, the source said. Careful planning was conducted to cover any trace of Seoul’s hand in such operations because a change in North Korean leadership that had even an inkling of South Korean involvement would likely lead to military retaliation, the source said. The plots apparently considered staging an “accident” on the road or over water to eliminate Kim, but tight security prevented any mission from being carried out, the source said. Park was further infuriated by North Korea’s nuclear tests in January and September 2016, and she began to publicly criticize Kim in her speeches. But she also emphasized that she did not view the North Korean populace as the enemy. In a speech given in August 2016, she called out directly to North Korean government officials and the general population for a unification of the two Koreas. Two months later, she urged North Korean citizens to defect from their nation. Another source said Park’s moves were an attempt to spur a “palace revolution” among those in high-ranking positions close to Kim. Sources said plans to bring down Kim were also pushed forward by NIS reports that described an unstable North Korean society suffering from power and water shortages as well as the rule of a paranoid leader fearful of an attack on himself. Those reports apparently led to the belief that a leadership change was possible in North Korea. That may have led the NIS to funnel such intelligence reports to the president, while ignoring analyses of other officials that painted a picture of a stable North Korean economy helped through the partial introduction of capitalist economic measures as well as a unified leadership structure under Kim that would make a regime change very difficult. (Makino Yoshihiro, “Source: Park Signed off on Plot to Oust, even Kill, Kim Jong Un,” Asahi Shimbun, June 26, 2017)

James Clapper, U.S. director of national intelligence for the Barack Obama administration, who was sent to North Korea in November 2014 to secure the release of two American detainees, said the Trump administration should establish a liaison office in Pyongyang and allow the regime to set up a similar presence in Washington, to break the current diplomatic impasses. That measure was the “only path” to what he thought could lead to a “soft implosion” in the North. In coordination with the South Korean leadership and other regional stakeholders, Clapper, who retired as national intelligence director in January, said during his keynote speech that the U.S. should offer to establish an “interest section” in Pyongyang like the one it had in Havana, Cuba for decades. Clapper said the diplomatic representation will serve as a means of regular dialogue between the two countries and, for North Korea, a “critical conduit” for information from the outside world, which would lead to the regime’s “soft implosion.” In return, the U.S. could ask the North’s agreement for a “verifiable stop” of its nuclear and missile tests, which would delay their weapons development capability. The proposal was based on his personal experience in 2014 talking with Kim Won-hong, who at the time was serving as North Korea’s state security minister, and Kim Yong-chol, then-head of the Reconnaissance General Bureau, said Clapper. On November 7, 2014, Clapper flew into Pyongyang and arranged to fly out two American citizens, Kenneth Bae and Matthew Todd Miller. “I was amazed at the magnitude and depth of paranoia, and the overwhelming sense of siege that seems to prevail among the elite leadership in the North,” said Clapper. “Everywhere they look, from their perspective as I heard repeatedly, they see enemies who threaten their very existence.” Clapper stressed that he learned North Korea won’t give up their nuclear weapons because a nuclear capability for them is “their ticket to survival.” “It’s all about face, recognition and leverage,” said the former intelligence director, “They have none of that without their nuclear weapons.” On why a liaison office would work with North Korea, Clapper highlighted that Pyongyang’s leaders “do crave communication” with Washington, and that “they want that dialogue with the United States.” The chances that the Trump administration would actually follow his advice, however, were low, he acknowledged without explaining further. In regards to Otto Warmbier, the 22-year-old American college student
who died on June 19 just six days after he was released from the North in a vegetative state, Clapper said the former Obama administration couldn’t get him out because, to his knowledge, North Korea never stipulated any conditions for his release. They “never said anything, never made an offer, never allowed the Swedish delegation in Pyongyang, which acts for us in diplomatic consular affairs… access to Otto Warmbier, which they did with the other prisoners,” Clapper said. “Unless there’s some dialogue, front channel or back channel, it’s very hard to arrange for the release.” Clapper continued that for “whatever reason,” North Korea “singled him out.” “If North Korea expressed what their conditions were, I’m sure we would have addressed those,” he said. “In case of Kenneth Bae and Matthew Miller, they said they wanted a captain-level official who was active in the National Security Council to come to Pyongyang. So we sent somebody - me - to do that. They specifically [had] no conditions whatsoever for the release of Otto Warmbier.” (Lee Sung-eun, “Top Envoy Dismisses Jitters about Summit,” JoongAng Ilbo, June 27, 2017) South Korea’s foreign minister indicated strongly that her government would honor an agreement to deploy an American missile-defense system despite protests and economic retaliation from China. Foreign Minister Kang Kyung-wha said the domestic review was to strengthen public support for the missile system by shoring up its political legitimacy. Calling the deployment “an alliance decision,” she said South Korea would “continue to collaborate on the basis of mutual trust.” “My government has no intention to basically reverse the commitments made in the spirit of” the alliance, Ms. Kang said at a forum in Seoul jointly organized by JoongAng Ilbo and the Center for Strategic and International Studies. Kang also addressed another concern in Washington by saying that her government would not hurry to try to reopen a jointly run industrial complex in the North Korean city of Kaesong. South Korea closed the complex last year after the North’s nuclear and long-range rocket tests. “We will pursue this only under the right circumstances,” Kang said. “It is something that can be pursued at a later stage when we are assured of progress in dealing with the North Korean nuclear and missile threats, and we will do so in closest consultations with the United States.” (Choe Sang-hun, “South Korean Foreign Minister Pledges Support for U.S. Antimissile System,” New York Times, June 27, 2017, p. A-7)

The government decided on an ordinance revision aimed at introducing a so-called “catch-all” regulation that enables Japan to seize all cargo items possibly linked to North Korea’s nuclear and missile development. The revision of the ordinance of the special measures law concerning cargo inspections was approved at a Cabinet meeting this morning. It will be promulgated on June 30 and come into effect in mid-July. Under the current regulations, more than 100 items subject to a trade embargo, such as nuclear fuel and weapons, are specified in a list annexed to the ordinance. When third-country vessels or planes that have access to North Korea are suspected of carrying the listed items, the ordinance allows the Japan Coast Guard or Japan Customs to inspect and confiscate the items. However, Pyongyang is believed to have been disassembling weapons and related listed items, and transporting them as raw materials and mechanical parts. As a result, many have pointed out the current system leaves a loophole in the sanctions. “From Japan’s stance, in which we are determined to firmly carry out U.N. sanctions on human-rights issues that include nuclear weapons, missiles and abductions, we’d like to continue to deal with this matter,” said Kato Katsunobu, minister in charge of the abduction issue, at a press conference this morning. (Yomiuri Shimbun, “Japan to More Strictly Confiscate Cargo Linked to North Korea’s Nuke Supplies,” June 27, 2017)
North Korea clearly has the ability to produce tritium internally, a basic element for making hydrogen bombs, although the country has yet to weaponize it, an American nuclear expert said today. "The evidence is quite clear that North Korea is able to produce tritium, which is necessary for a hydrogen bomb to create fusion. So you need tritium when you are going to have hydrogen bombs," Siegfried Hecker, a professor at Stanford University, told a group of journalists here.

North Korea claimed it used a hydrogen bomb when it conducted its fourth nuclear test in January last year, although it has not been proven. "I believe they have made tritium. In fact, last year there have been some indications that they were trying to market one of the key ingredients for making tritium, something called lithium-6 ... So it's clear they know how to make tritium. We know that's official," he noted. Also citing commercial satellite imagery, the nuclear expert also said that North Korea is adding at least one more tritium production facility to an old facility. But he was negative about North Korea being able to weaponize the material. "They can make tritium so they have the basic element for a hydrogen bomb. But it takes much more than that to weaponize hydrogen bombs. I don't believe they can do that (yet)." Hecker said the first step to denuclearize North Korea should start with a "no-use" agreement with the country to guarantee that Pyongyang would not use its nuclear weapons. Without the agreement, accidental launch, miscalculation or loss of control could wreak unimaginable damage on the Korean Peninsula, he said. "Those possibilities are sufficiently worrisome that I maintain that the crisis is here now, not when they (North Korean missiles) are able to reach the U.S.," according to Hecker. "Once you do no-use,... then it's halt, roll back and eliminate," he said, indicating that the denuclearization process should be carried out in three phases. "It's (also) important for the U.S. and South Korea to come to an agreement (on how to phase the process) before they would negotiate with North Korea." In an earlier presentation given to a forum on North Korean nuclear issue, hosted by the Institute of Korean Studies, Hecker also said that North Korea appears to be in possession of enough nuclear fuel to make as many as 25 nuclear weapons in addition to the ability to produce about six or seven additional nuclear weapons every year. (Yonhap, “N. Korea Is Clearly Advancing H-Bomb Development: Hecker,” June 27, 2017)

South Korea's new leader vowed to stand firmly with President Donald Trump against North Korea, playing down his past advocacy of a softer approach toward the nuclear-armed nation as he made his first visit as president to Washington. President Moon Jae-in offered an emotional tribute to Marines who fought in a fierce battle in the Korean War that helped in the mass evacuation of Korean civilians, including his own parents. Moon said that without those American sacrifices, he would not be here today. "Together we will achieve the dismantlement of North Korea's nuclear program, peace on the Korean Peninsula and eventually peace in Northeast Asia," Moon said, after laying a wreath at a Marine Corps base in Quantico, Virginia, as he began his first overseas trip since taking office. Trump's National Security Adviser H.R. McMaster said today that the U.S. is preparing "all options" for North Korea, "because the president has made clear to us that he will not accept a nuclear power in North Korea and a threat that can target the United States." The talks between Moon and Trump, which begin with dinner tomorrow night and then formal talks the next day, come amid intense wrangling over North Korea. (Matthew Pennington, “South Korean Leader Vows to Stand with Trump on North Korea,” Associated Press, June 28, 2017) South Korean President Moon Jae-in said reducing his country's joint military exercises with the United States was not an option for now, though it may be considered following what he called irreversible and verifiable steps by North Korea to denuclearize. "First of all, the official position we have now is that North Korea's nuclear freeze and reduction of joint military exercises between South Korea and the United States cannot be linked," Moon said. "That has been the official position of South Korea and the United States, and that position has not changed," he added, while aboard Air Force One on his way to Washington for a summit with his U.S. counterpart, Donald Trump. Moon's remarks came after his special security adviser, Moon Chung-in, claimed Seoul and Washington may consider scaling back their joint military drills staged in South Korea should the North freeze its nuclear activities. "I do believe the notion that we must not reward bad behavior is a principle we must uphold," the new South Korean president told reporters. Still, Moon noted such a reward may be possible if the North agrees to give up its nuclear ambition and takes verifiable steps towards complete denuclearization. "The most ideal solution would be to completely denuclearize North Korea in an one-shot deal. But more realistically, I believe such a
deal will not be easy," Moon said. "I believe (the North) must at least promise to a nuclear freeze for us to start taking serious measures (discussions) for its denuclearization. In that sense, its nuclear freeze will be the entrance and nuclear dismantlement the exit," he added. (Yonhap, “Moon Says Reducing Military Drills Not an Option, At Least for Now,” June 29, 2017)

President Donald Trump is growing increasingly frustrated with China over its inaction on North Korea and bilateral trade issues and is now considering possible trade actions against Beijing, three senior administration officials told Reuters. The officials said Trump was looking at options including tariffs on steel imports, which Commerce Secretary Wilbur Ross already has said he is considering as part of a national security study of the U.S. steel industry. Whether Trump would take any steps against China remains unclear. The officials said there was no consensus on the way forward with China and they did not say what other options were being studied. No decision was expected this week, a senior official said. Chinese steel already is subject to dozens of anti-dumping and anti-subsidy orders. As a result it has only a small share of the U.S. market. "What's guiding this is he ran to protect American industry and American workers," one of the U.S. officials said, referring to Trump's 2016 election promise to take a hard line on trade with China.

On North Korea, Trump "feels like he gave China a chance to make a difference" but has not seen enough results, the official said. The United States has pressed China to exert more economic and diplomatic pressure on North Korea to help rein in its nuclear and missile programs. Beijing has repeatedly said its influence on North Korea is limited and that it is doing all it can. "They did a little, not a lot," the official said. "And if he's not going to get what he needs on that, he needs to move ahead on his broader agenda on trade and on North Korea." U.S. Ambassador to China Terry Branstad, who arrived in Beijing on Tuesday, spoke reporters outside his residence and said the United States hoped to collaborate with China. "We need to work together to deal with some of the pressing, difficult issues, such as the threat from North Korea. We want to work together to denuclearize the Korean Peninsula," he said. (Steve Holland, “Trump Growing Frustrated with China, Weighs Trade Steps: Officials,” Reuters, June 28, 2017)

South Korea's new leader vowed to stand firmly with President Donald Trump against North Korea, playing down his past advocacy of a softer approach toward the nuclear-armed nation as he made his first visit as president to Washington. President Moon Jae-in offered an emotional tribute to Marines who fought in a fierce battle in the Korean War that helped in the mass evacuation of Korean civilians, including his own parents. Moon said that without those American sacrifices, he would not be here today. "Together we will achieve the dismantlement of North Korea's nuclear program, peace on the Korean Peninsula and eventually peace in Northeast Asia," Moon said, after laying a wreath at a Marine Corps base in Quantico, Virginia, as he began his first overseas trip since taking office. Trump's National Security Adviser H.R. McMaster said today that the U.S. is preparing "all options" for North Korea, "because the president has made clear to us that he will not accept a nuclear power in North Korea and a threat that can target the United States." The talks between Moon and Trump, which begin with dinner tomorrow night and then formal talks the next day, come amid intense wrangling over North Korea. (Matthew Pennington, “South Korean Leader Vows to Stand with Trump on North Korea,” Associated Press, June 28, 2017) South Korean President Moon Jae-in said reducing his country's joint military exercises with the United States was not an option for now, though it may be considered following what he called irreversible and verifiable steps by North Korea to denuclearize. "First of all, the official position we have now is that North Korea's nuclear freeze and reduction of joint military exercises between South Korea and the United States cannot be linked," Moon said. "That has been the official position of South Korea and the United States, and that position has not changed," he added, while aboard Air Force One on his way to Washington for a summit with his U.S. counterpart, Donald Trump. Moon's remarks came after his special security adviser, Moon Chung-in, claimed Seoul and Washington may consider scaling back their joint military drills staged in South Korea should the North freeze its nuclear activities. "I do believe the notion that we must not reward bad behavior is a principle we must uphold," the new South Korean president told reporters. Still, Moon noted such a reward may be possible if the North agrees to give up its nuclear ambition and takes verifiable steps towards complete denuclearization. "The most ideal solution would be to
North Korea secures up to 300,000 tons of oil products from Russia each year through Singapore-based dealers, a defector who formerly managed funds for the leadership has told Kyodo News, posing a challenge for the United States as it seeks to isolate Pyongyang. "North Korea has procured Russia-produced fuel from Singapore brokers and others since the 1990s...It is mostly diesel oil and partly gasoline," Ri Jong Ho, 59, a former senior official of Office 39 of the Workers' Party of Korea, said recently in the U.S. capital in his first interview with media under his own name. Ri also said North Korea relies more on Russia than China for fuel to keep its economy moving, indicating that the U.S. drive for Beijing to restrict oil supplies over Pyongyang's nuclear and missile programs will only have a limited effect. "It is a wrong perception that North Korea is completely dependent on China," he said. Petroleum products have been shipped to North Korea by tankers leaving Vladivostok and Nakhodka, both in the Russian Far East, with the fuel widely used for cars, ships and trains, helping to support the North's economy, Ri said. Other sources familiar with the fuel deals said the petroleum products ending up in North Korea are often purchased by brokers who claim they are destined for China, with the items procured using forged paperwork. Ri, who defected to South Korea with his family in October 2014, provided details of the activities of Office 39. The secretive entity, said to have been established by former North Korean leader Kim Jong Il in May 1974, is subject to international sanctions as the United States and other Western countries believe it is engaged in illicit economic activities and the management of slush funds for the leadership. He said North Korea has been trying to reduce its economic reliance on China, Pyongyang's most important benefactor, since leader Kim Jong Un issued an order to expand trade with Russia and Southeast Asian countries in August 2014. The order followed Chinese President Xi Jinping's visit to South Korea a month earlier, during which he and then South Korean President Park Geun Hye expressed opposition to North Korea's nuclear weapons development. It was the first time for a Chinese president to visit South Korea before traveling to the North. Ri said the North Korean
leader was "infuriated" by the visit, going so far as to call China an "enemy state," and began taking measures to boost trade with Russia. According to Ri, Office 39 has five central groups and systematically acquires foreign currency by sending laborers overseas as well as through gold mining and exports. "It is an organization that manages the supreme leader's coffers and the party's funds to rule the country. It also leads trade activities to earn foreign currency," Ri said. The office has enormous power as it is directly linked to the leadership and is independent of other government organs, he added. Ri admitted that Office 39 has evaded U.N. sanctions by asking Chinese and Russian contacts to allow the use of their names for the opening of bank accounts for trade settlement. The activities of Office 39 require the involvement of hundreds of thousands of people, including those in rural areas who produce items for export. Ri said the bureau is now headed by Chon Il Chun, first vice department director of the party's Central Committee and a former classmate of Kim Jong Il, the current leader's father. A native of Wonsan on North Korea's east coast, Ri was told to work in Pyongyang by the Central Committee in the mid-1980s. He operated a shipping company at Office 39's Daehung group and later headed a trade control section in the group between 1998 and 2004. The Daehung group earns revenue through farm exports and shipping operations, among other means. With exclusive rights to trade "matsutake" mushrooms and snow crabs, it was actively shipping those products to Japan before Tokyo imposed a total ban on trade with the North about 10 years ago. The four other central groups are Kungang, which dominates gold export activities, Daesong, involved in the shipment of processed products and intermediate trade overseas, Daesong Bank, in charge of the office's banking operations, and a group dispatching workers to other countries. Asked about the possibility that the foreign currency earned by North Korea is being used for its nuclear and missile development programs, Ri only said, "It is up to the supreme leader how to use the funds." North Korea receives 500,000 tons of crude oil each year through a pipeline from China, resulting in around 70,000 to 100,000 tons of gasoline and about 100,000 tons of diesel oil after refining, but the oil products are exclusively used by the North Korean army and are not good enough for cars that carry the elite, Ri said. He also said crude oil purchased from other countries is refined by foreign companies based in China, leading to the importation into North Korea of an additional 50,000 to 100,000 tons of gasoline. Despite holding a high rank, Ri decided to leave North Korea after Kim Jong Un's once-powerful uncle Jang Son Thaek was executed in December 2013 and other senior officials were purged. Jang, who had close ties with China, was accused of inappropriately selling North Korean coal and other resources to other countries. Many of Ri's acquaintances were also subject to the purge and sent to political prison camps or executed. "I could no longer tolerate such a cruel and tragic situation," Ri said, explaining why he fled to South Korea from the port city of Dalian, northeastern China, where he was head of North Korea's trading company. He moved to the United States in March 2016 and currently lives near Washington. (Inoue Tomotaro, “N. Korea Procuring Russian Fuel Via Singapore Dealers: Defector,” Kyodo, June 28, 2017)
suggestion of national reconciliation was unacceptably high and that all states must take constructive steps to reduce these risks," the former military and diplomatic leaders — from nations as diverse as Russia, China, India, Pakistan, and the United States — write in an 11-page report about what they consider the biggest nuclear flashpoints. The crisis group was established earlier this year under the auspices of Global Zero, an leading arms control organization that supports the ultimate abolition of nuclear
A primary concern is the deteriorating situation with North Korea, which continues to test long-range missiles and prepare additional nuclear tests, and has been the focus of rising threats from President Donald Trump. Among the group's recommendations: "To reduce immediate nuclear risks, the United States and North Korea should resume bilateral discussions immediately without preconditions." It also calls on Washington and Pyongyang to "refrain from nuclear threats and adopt nuclear no-first-use statements" and to further reduce tensions the U.S. should "suspend flights of strategic bombers and visits by strategic submarines in return for key commensurate restraints by North Korea." The calls for action on North Korea coincided with a letter today to Trump from a bipartisan group of former top U.S. leaders — including former secretaries of State, Defense and Energy — also urging him to open direct talks with North Korean leader Kim Jong Un. "Tightening sanctions can be useful in increasing pressure on North Korea, but sanctions alone will not solve the problem," the letter states. "Pyongyang has shown it can make progress on missile and nuclear technology despite its isolation. Without a diplomatic effort to stop its progress, there is little doubt that it will develop a long-range missile capable of carrying a nuclear warhead to the United States." The letter to Trump was signed by William Perry, former secretary of Defense under Bill Clinton; George Shultz, secretary of State under Ronald Reagan; Robert Gallucci, who was chief U.S. negotiator during the North Korean nuclear crisis of 1994; Siegfried Hecker, former director of the Los Alamos National Laboratory, who has visited North Korea seven times; former Republican Sen. Richard Lugar, who chaired the Foreign Relations Committee; and Bill Richardson, a former secretary of Energy and another frequent visitor to the isolated communist regime. (Bryan Bender, "Ex-Nuke Commanders: Talk to North Korea, Open NATO-Russia Dialogue," Politico, June 28, 2017)

The Trump administration has blacklisted a small Chinese bank accused of illicit dealings with North Korea, escalating pressure to get Beijing to rein in its wayward ally. The Treasury Department says that the Bank of Dandong is a "primary money-laundering concern." It is proposing severing the bank from the U.S. financial system, pending a 60-day review period. The announcement reflects growing U.S. frustration over China's efforts to enforce international sanctions intended to starve North Korea of revenue for its nuclear and missile programs. Dandong, a northeastern Chinese city on the North Korean order, is a gateway for trade with the isolated nation. The U.S. also slapped sanctions on a Chinese shipping company and two Chinese people it says have facilitated illegal activities by North Korea. (Matthew Pennington, "U.S. Blacklists China Bank, Revving up Pressure over North Korea," Associated Press, June 29, 2017)

The International Olympic Committee is not ruling out a proposed joint Korean team at next year's Pyeongchang Olympics nor North Korea's hosting a piece of the 2018 Winter Olympics. "Every time the games can play a role, a positive role of this nature, we cannot shut the door," the Olympic Games' executive director Christophe Dubi said in an interview with Kyodo News on Thursday. "We are not speaking about must or not must, we are speaking about opportunities. If the games can create these opportunities, let's seize them." In an attempt to thaw relations between the two nations, South Korean officials, President Moon Jae In among them, have extended an olive branch to North Korea with ideas of a joint team at Pyeongchang and North Korea co-hosting some events of the games in February. Dubi, the IOC's chief technical expert on games organization, said a full evaluation has yet to be made on North Korea's level of participation at Pyeongchang. An IOC team, including Dubi and President Thomas Bach, will head to South Korea from Thursday to hold meetings through Tuesday, during which the dissection will begin. "The matter currently has not been looked into in detail," Dubi said. "These are expressions of ideas that we have been made aware of. No detailed discussions have taken place or no evaluation at this point in time." "These are expressions of interests for the Koreans of the whole peninsula to collaborate at that point in time. Of course some of the conversation will revolve around the ideas that have been floated because we've heard many comments made by different people." "What we want is a full understanding of what is being proposed and whether at this point in time some studies were made or not. As far as the IOC is concerned, we are looking for additional information which will be provided in the next few days." Bach arrived in Seoul today, when he supported South Korea's attempt to engage in dialogue with its neighbor. "We noted with great
appreciation the initiative and the speech made by President Moon on the opening of the taekwondo world championships,” Bach said. “I am looking forward to discussing all these issues with President Moon immediately after his return from his talks in Washington.” (Kano Shintaro, “IOC Not Ruling out S. Korea, N. Korea over Pyeongchang Collaboration,” Kyodo, June 29, 2017)

Resolving the issues surrounding North Korea’s nuclear program is more likely than ever before under a Donald Trump presidency, South Korean President Moon Jae-in said. “The ultimate goal of South Korea and the US is to end North Korea’s missile and nuclear programs. This is only possible through a strong Korea-US alliance,” Moon said in his meeting with House of Representatives’ leaders including Speaker Paul Ryan. “As it is a matter of top priority for President Trump, the possibility of resolving the issue is higher than ever. In the past, South Korea and the US placed importance in the matter but did not take concrete action. (I) plan to seek fundamental solutions with President Trump.” Responding to Ryan’s question regarding China’s role in denuclearizing North Korea, Moon said that Beijing is playing a part but that there is room for a bigger role. “I think that China has made an effort after the US-China summit. I think that the fact that North Korea has not conducted a sixth nuclear test nor launched an ICBM is the result of President Trump’s efforts, and the part Beijing is playing,” Moon said. “However, the problem has not been completely solved. North Korea appears to be making preparations, and appears ready (to conduct tests) at any time. So, there is still room for a bigger role from China, and (I) will discuss the matter when I meet President Xi Jinping.” (Choi He-suk, “N.K. Solution More Likely Than Ever under Trump: Moon,” Korea Herald, June 29, 2017)

The option of scaling down the annual joint military exercise between South Korea and the United States is huge leverage in rein in North Korea's nuclear weapons ambition, a former career diplomat said in a forum co-hosted by Yonhap News Agency and the Ministry of Unification. “I think the scale of the South Korea-U.S. joint exercise could be revised down or readjusted” on the condition that North Korea stops its nuclear and missile tests, freezes its production of weapon-grade plutonium and uranium as well as shutting down its nuclear facilities in Yongbyon and letting the International Atomic Energy Agency to inspect the country, Shin Bong-kil, formerly a diplomat of 30 years, said in a forum. The annual forum was held to discuss the Moon Jae-in administration's vision for peace and unification of the Korean Peninsula. Referring to his attendance at a semi-governmental meeting held between North Korea and the South Korea-U.S. side a month earlier in Stockholm, Sweden, the former ambassador to Jordan, said that "From what I have heard there, the thing more painful for North Korea than international sanctions it is now facing was the joint South Korea-U.S. military exercise." "Given that the recent talk of the possibility of (U.S.) pre-emptive attacks and a (South Korean contingency) operation to decapitate Kim Jong-un put North Korea in a state of sever alertness, it is huge leverage," Shin said, referring to the option of downsizing the joint Key Resolve and Foal Eagle exercises the allies carry out every spring in South Korea. Shin, now a professor at Yonsei University's Graduate School of International Studies, also said South Korea may also be able to reopen the Kaesong Industrial Complex, a now-suspended joint inter-Korean factory park in the North Korea border town of Kaesong, if a freeze is agreed on North Korea's nuclear and missile programs. The reopening and resumption of inter-Korean economic cooperation would require permission under the United Nations Security Council resolutions, but "easing the U.N. sanctions could be negotiated if there's a breakthrough in the North Korean nuclear front, he noted. Shin also stressed that South Korea should go beyond its current reliance on the South Korea-U.S. alliance and the U.N. to pursue a regional cooperation mechanism as a means to bring North Korea to the table for negotiations and eventually secure peace in the region. "Northeast Asia should build up a regional cooperation mechanism to take a lead in efforts to solve North Korea's nuclear issues,” he said, urging the government to capitalize on the trilateral dialogue frame involving South Korea, China and Japan, symbolized by the Trilateral Cooperation Secretariat. The secretariat was set up in Seoul in 2011 to back up the arrangement of the three countries' summit and ministerial meetings. The trilateral body should invite Russia or Mongolia as its dialogue partners who could bring North Korea to
the table with them, according to Shin. (Yonhap, “Downsizing S. Korea-U.S. Military Exercise Is Huge Leverage for N. Korea: Ex-Diplomat,” June 29, 2017)

The Defense Department has put together revised military options for North Korea and is ready to present them to President Donald Trump, CNN reported. The options will be presented if the North conducts an underground nuclear or ballistic missile test that indicates the regime has made significant progress towards developing a weapon that could attack the US, CNN reported, citing two unidentified military officials. National Security Adviser H.R. McMaster also confirmed that military options had been prepared, it said. "What we have to do is prepare all options because the president has made clear to us that he will not accept a nuclear power in North Korea and a threat that can target the United States and target the American population," McMaster was quoted as saying during remarks at a Washington think tank. McMaster also said that the North's threat is "much more immediate now." "We can't repeat the same failed approach of the past," he said. "The president has directed us to not do that and to prepare a range of options, including a military option, which nobody wants to take." (Yonhap, “Pentagon Ready to Present Trump with Revised Military Options for N. Korea: Report,” Korea Herald, June 29, 2017)

6/30/17

President Donald Trump called for a determined response to North Korea after talks with South Korea's President Moon Jae-in where he stressed the importance of their alliance but took aim at Seoul over trade and sharing the cost of defense. Trump said the United States was renegotiating what he characterized as a "rough" trade deal with South Korea agreed to five years ago by his predecessor, Barack Obama, and reiterated that an era of "strategic patience" over North Korea's nuclear and ballistic missile programs had ended. "Together we are facing the threat of the reckless and brutal regime in North Korea," Trump said as he stood alongside Moon in the White House Rose Garden. "The nuclear and ballistic missile programs of that regime require a determined response." Despite the tough rhetoric, it remains unclear how Trump will find a way forward on North Korea, which is working to develop a nuclear-tipped missile capable of hitting the United States. Moon, who warned of a "stern response" to any provocations, urged Pyongyang to return promptly to talks. "Our two leaders will employ both sanctions and dialogue in a phased and comprehensive approach," Moon said of South Korea and the United States. Trump and Moon have said they are open to renewed dialogue with North Korea but only under circumstances that would lead to Pyongyang giving up its weapons programs. Moon told an event at the Center for Strategic and International Studies think tank that moves by North Korea that could create conditions for dialogue could include a freeze on its nuclear and missile tests, or the release of three Americans it is holding in the country. To be successful, talks would have to involve North Korean leader Kim Jong Un and have as their ultimate aim the complete dismantling of North Korea's nuclear program, he added. South Korea is a long-standing American ally but Trump has spoken harshly about U.S. trade imbalances and threatened to tear up the bilateral trade pact. "We will do more to remove barriers to reciprocal trade and market access," Trump said, adding that the two leaders had talked about theorny trade areas of steel and autos. Trump said he was encouraged by Moon's assurances that he would seek a level playing field for American workers and businesses, particularly automakers. A joint statement said the two sides had agreed to work together to reduce over supply of basic materials such as steel and non-tariff barriers. It also said Trump had accepted an invitation from Moon to visit South Korea this year. Bonnie Glaser, senior adviser for Asia at the Center for Strategic and International Studies think tank, said it was unwise for Trump to air the trade issue so publicly. "Public complaints by Trump about unfair trade and inadequate defense spending provide opportunities for China and North Korea to drive a wedge between the allies," she said. Trump also emphasized the need to ensure equitable sharing of costs for defense, returning to a theme he raised during his campaign and brought up with other allies, including NATO countries and Japan. A senior U.S. official said in a briefing before the president's meeting with Moon that South Korea was in many respects a "model ally," given its spending of 2.7 percent of GDP on defense and Moon's plan to grow capabilities. "We shouldn't view South Korea as somehow laggard on that front," the official said. The U.S. goods trade deficit with South Korea has more than doubled since the U.S.-Korea free trade pact known as KORUS took effect in 2012. The agreement was forecast to boost U.S. exports by $10 billion a
year, but in 2016 they were $3 billion lower than in 2011. At the start of today's talks, U.S. Commerce Secretary Wilbur Ross said the largest component of the deficit was automotive trade and many non-tariff barriers to U.S. auto exports to South Korea remained. I think the way to address it is to deal product by product with what we can do to change the export side and what we can do to reduce the bad imports side," he said. Ross said later today that some progress had been made in the talks. The current pact was agreed to despite protests by supporters of Moon, who was then in opposition. But analysts have suggested that given the need to preserve a unified front in the face of a hostile North Korea, there could be compromise on both sides to resolve issues. (David Brunnstrom and Lisa Lambert, “Trump Calls for Firm Response on North Korea, Targets Seoul on Trade,” Reuters, June 30, 2017) President Moon Jae-in faced a demand by President Donald Trump to resolve trade imbalance between the two countries and pay more of the cost for the presence of U.S. troops in Korea, while winning assurances for stronger defense measures to deter North Korea’s rapidly advancing threats. In the joint press conference that followed the Oval Office summit, Trump said the era of strategic patience with the North Korean regime has failed. “And frankly, that patience is over,” he added. After calling upon regional powers and all responsible nations to implement sanctions and pressure North Korea to end its nuclear and missile programs, Trump said now the goal is “peace, stability and prosperity for the region.” The United States will defend itself and its allies, Trump said, and as part of that commitment, he said he wants to ensure that the cost of U.S. military presence in South Korea is equitably shared. “Burden sharing is a very important factor,” he said. “A factor that is becoming more and more prevalent, certainly in this administration.” Trump also spoke of a “fair and reciprocal economic relationship” with South Korea, while complaining that the Korea-U.S. free trade agreement has increased the U.S. trade deficit with South Korea by more than $11 billion. Trump expressed satisfaction with the fact that South Korean companies are making new investments in the United States in time with Moon’s trip, such as Cheniere’s export of American liquefied natural gas to South Korea in a deal worth more than $25 billion. The U.S. president said he and Moon discussed “tough” trade issues, particularly auto and steel, and that Moon promised to create a level playing field. He said Korean companies are selling cars in the U.S. market and that U.S. automakers should have the same opportunity to compete in the Korean market. “I’ve called on South Korea to stop enabling the export of dumped steel,” Trump said, adding that the two countries will work on the issues and sign a deal that is “great” for both of them. Following Trump’s remarks, Moon gave his own summary of the summit. While he made almost no specific mention of the trade issue or demand that Korea share more of the cost of U.S. troops in Korea, Moon said he recognizes Trump’s “strong commitment towards the development of the ROK-US alliance, the resolution of the North Korean nuclear issue and the establishment of a permanent peace on the Korean Peninsula.” He added, “President Trump and I agreed that only strong security can make true peace possible,” and that “Through the [South Korea-U.S.] joint defense posture, including extended deterrence, we agreed to strengthen our overwhelming deterrence.” Moon also commented specifically on the issue of denuclearization. “President Trump and I agreed today that the resolution of the North Korea nuclear issue is our top foreign policy priority and that we will closely coordinate our policies,” he said. “In this vein, we agreed to work together toward a fundamental resolution of the North Korea nuclear issue based on a phased and comprehensive approach, utilizing both sanctions and dialogue.” He also warned North Korea to not “underestimate the firm resolution of our two countries” and urged it to return to the negotiation table to discuss denuclearization. Moon also said Korea will strengthen its joint defense capability with the United States as well as the country’s own defensive capabilities. “In this process," he said, "I hope to see more active technology cooperation in the field of defense industry." In the morning, Moon and Trump sat down for their first summit at the White House. They started the talks with a one-on-one meeting and then an expanded session with top government officials from both countries. "We accomplished a lot having to do with our thoughts on North Korea and very much our thoughts on trade," Trump was quoted as saying in a White House pool report. “We are renegotiating a trade deal right now with South Korea, and hopefully it will be an equitable deal. It will be a fair deal for both parties. It's been a rough deal for the U.S., but I think that it will be much different and will be good for both parties." "Last night, at the dinner with President Trump," Moon said, “we discussed various issues through a diverse scope and very honest discussions and on issues to include the North Korean nuclear issue and other
issues of mutual interest.” Moon continued, “It was a great opportunity for us to further the trust and friendship between me and President Trump. It was also an opportunity to reconfirm that the United States and Korea are walking together on the same path towards a great alliance. Through this summit today, I hope that our relationship can further develop into a more meaningful and fruitful relationship.” “What many people don't know,” Trump then said, “is that South Korea is a major trading partner with the United States, and we want something that is going to be good for the American worker, and I think that we will be able to do that today, and I think we'll be able to do many other things. The relationship is very, very strong, and our personal relationship with President Moon — our personal relationship is very, very good.” Since he took office earlier this year, Trump has repeatedly promised to renegotiate the Korea-U.S. free trade agreement, which was concluded in 2007 and took effect in March 2012, following a renegotiation. Trump has called the free trade pact a “horrible deal” and vowed to either renegotiate or scrap it entirely.

Moon, however, has insisted that the deal, a legacy of his political mentor, the late President Roh Moo-hyun, is mutually beneficial for the two countries. Ahead of the summit, Moon began his day by laying a wreath at the Korean War Veterans Memorial, where he paid respect to the American veterans who sacrificed their lives to defend Korea. One inscription at the memorial reads, “Our nation honors her sons and daughters who answered the call to defend a country they never knew and people they never met.” Moon’s parents came to South Korea as refugees aboard a U.S. warship during the Korean War. Two years after they arrived in 1951, Moon was born on the island of Geoje in January 1953. (Ser Myo-ja, “Moon and Trump Discuss Security, Trade and Future Alliance at First Summit,” JoongAng Ilbo, July 1, 2017)

President Moon Jae-in stressed the need for improvements in inter-Korean relations, proclaiming a “four no” approach that includes avoiding hostile acts or military attacks against North Korea, attempts to undermine or replace its government, and efforts to artificially hasten reunification. Moon’s agreement on these principles during his summit with US President Donald Trump is being seen as laying a foundation for dialogue toward North Korea’s denuclearization. Moon reportedly plans to announce a “Moon Jae-in doctrine” - a vision and proposal for North Korea policy structured around these “four nos” - during his July 5-8 visit to Germany to attend the G-20 Summit. Moon shared the principles during a June 30 dinner for invited Korea experts at the Center for Strategic and International Studies (CSIS) during his Washington visit for the South Korea-US summit. “Neither President Trump nor I will be pursuing antagonistic policies toward North Korea,” he said. “We do not intend to attack North Korea, nor do we want the replacement or collapse of the North Korean regime. We will not artificially hasten unification of the Korean Peninsula either,” he continued. Moon also said Washington’s relationship with Pyongyang “may improve in the process of South Korea working with the US’s coordination to improve inter-Korean relations.” “I shared a deep conversation on this visit with President Trump. We agreed to work more actively to protect and forge peace,” he added, stressing that the “four nos” had been agreed upon with Washington. “Our new direction will be a move away from ‘strategic patience’ toward using all available means to bring North Korea to the negotiating table,” Moon continued. “There also needs to be dialogue with [North Korean leader] Kim Jong-un. He is the only person who can make the decision to end North Korea’s nuclear program,” he said. Moon’s “four nos” approach is significant as an agreement between Seoul and Washington on principles for approaching Pyongyang. The two leaders’ joint statement said they had emphasized that “the United States and the ROK do not maintain a hostile policy toward North Korea.” The approach also echoes the “three nos” stated by US Secretary of State Rex Tillerson in a May 3 address to State Department employees: no military attacks, regime replacement or collapse, or artificially hastening of reunification. “The ‘four nos’ stated by President Moon Jae-in were an attempt to bring North Korea into denuclearization dialogue by announcing that it will not do the things North Korea fears most,” explained an inter-Korean relations expert who worked on Moon’s presidential election campaign. Moon is expected to present his visit for North Korean policy - including the “four nos” message - in a Korber Foundation invitational speech scheduled for his July 5-8 Germany visit. Late former President Kim Dae-jung (1998-2003) was also in Germany when he delivered his Berlin Declaration of Mar. 9, 2000, which proposed large-scale economic support to North Korea, dialogue between South and North Korea, and the sending of special envoys. Kim’s Berlin Declaration ended up bearing fruit three months later with the first-ever
inter-Korean summit and June 15 Joint Declaration. (Choi Hye-jung and Jung In-hwan, and Yi Yong-in, “In U.S., Pres. Moon Stresses North Korea Policy Based on ‘Four No’s,’” Hankyore, July 3, 2017) The Moon Jae-in administration made a request during its late June summit with the US to amend the two sides’ New Missile Guidelines (NMG) to increase the maximum permissible warhead weight on a 800-km ballistic missile from its current 500kg to one ton, it was learned on July 24. Seoul proposed the idea to the US at the time, with plans to discuss the details with the US during the two sides’ Security Consultative Meeting (SCM) and Korea-US Integrated Defense Dialogue (KIDD) scheduled for the second half of the year, sources said. The proposal indicates that Seoul is attempting to amend the NMG for the first time in roughly five years. A Ministry of National Defense source said it would be “inappropriate to confirm the specifics of matters discussed at a summit between the South Korean and US leaders,” but did not deny that the proposal to increase the warhead weight had been made. A high-level government source familiar with the situation said, “I think that if you look at the administrations’ response when North Korea launched its [Hwasong-14] missile last month, you can pretty much see its position in terms of responding resolutely to the issue.” A ministry official also responded to questions on whether the administration’s aim in increasing the warhead weight is to develop a “bunker buster” capable of destroying an underground bunker where North Korean leader Kim Jong-un might attempt to hide in an emergency. “I can’t confirm whether such plans exist at present, but it is true that we will require such a development plan in the future,” the official said. But if the accounts are true, the measure could end up being a stumbling block to the Moon administration’s North Korea policy approach of imposing sanctions and pressure to resolve the nuclear issue while attempting to achieve peace on the Korean Peninsula through improvements in inter-Korean relations. It could be interpreted as signaling that the administration, which has repeatedly stressed that it has no intention of attacking North Korea and does not desire a regime change or collapse in Pyongyang, is now attempting to develop technologically that basically targets that same regime. In 2012, the South Korean government concluded negotiations with the US increasing the maximum development range for ballistic missiles from 300km to 800km while keeping the maximum warhead weight at 500kg. (Kim Ji-eun, “In Summit with US, Moon Administration Requested Increase of Warhead Maximum Weight,” Hankyore, July 25, 2017)

President Trump hardened his treatment of allies and adversaries in Asia this week, pressing South Korea’s visiting leader to overhaul a landmark trade agreement with the United States a day after announcing a series of steps that angered China. Meeting with President Moon Jae-in of South Korea, Trump demanded more access to Korean markets for American cars and less of what he called “dumped” Korean steel in the United States — all part of an overhaul of the five-year-old free trade agreement with South Korea that he derided as “not exactly a great deal.” “Very important steps,” a stern Trump said in the White House Rose Garden, standing next to Moon. “They have to be made. Not fair to the American worker if they are not. And they will be.” The president reaffirmed the American security alliance with South Korea against the threat of a nuclear-armed North Korea. But he showed little patience for Moon’s hope for engagement with the North — something analysts said could be a future source of friction between the leaders. Trump’s decision yesterday to impose sanctions on Chinese entities that do business with North Korea was interpreted by some as a shot across the bow not only to Beijing, but also to Moon, since it emphasizes pressure over diplomacy. And the president’s approval of a $1.4 billion weapons sale to Taiwan provoked a sulfurous reaction from the Chinese government. Taken together, the measures signal that Trump has moved into an aggressive, unpredictable phase of his strategy for dealing with one of the world’s tensest regions. On trade, at least, the United States will now be at odds with its two key partners in confronting the rogue government in North Korea. Trump’s new approach will be a test of whether he can pursue the protectionist themes of his presidential campaign while still cooperating with China and South Korea on security issues.

“Trump has opted for coercion over engagement with allies and adversaries, even when the adversary is pressuring the ally,” said Evan S. Medeiros, who served as senior director on Asia in the National Security Council during the Obama administration. Given that South Korea is already under intense pressure from the Chinese over THAAD, some analysts said the harshness of Trump’s critique of South Korea on trade had caught them by surprise. During the Oval Office meeting with Moon, Trump invited his commerce secretary, Wilbur Ross, to recite a list of
grievances. Ross cited barriers that he said cut down the number of American cars sold in South Korea. He also complained about Chinese steel, which he said was dumped in South Korea and used to manufacture pipes for oil fields, which are then shipped to the United States. The United States ran a $27 billion trade deficit with South Korea in 2016, a modest decline from the previous year but more than double the amount in 2011, the year before the renegotiated trade agreement took effect. “There are a lot of very specific problems,” Ross said. Trump blamed President Barack Obama for the pact, even though the deal was first negotiated by President George W. Bush in 2007 and renegotiated by Obama, which is essentially what Trump is proposing to do.

Trump’s aides said he also planned to push ahead with his trade campaign against China — freed up by his conclusion that China’s president, Xi Jinping, had fallen short in pressuring North Korea to curb its behavior. Trump had delayed introducing measures against China to encourage Xi to use his influence with North Korea’s leader, Kim Jong-un. In the coming days, the White House plans to publish the results of an investigation of the steel industry, which could lead to tariffs and other measures against imports. South Korea is the second-largest supplier of steel to the United States, by dollar value, after Canada. China is much further back, but administration officials say the country has a pernicious effect on the global steel market because of its excess capacity. Surplus steel from China is shipped to other countries and ends up in products that are exported to the United States. During the meeting with Moon, Gary D. Cohn, the president’s chief economic adviser, confined his remarks to China’s “many predatory practices in how they deal with us.” He told Moon he would be interested to hear how South Korea deals with its neighbor. It is not yet clear whether Trump has given up on his relationship with Mr. Xi after cultivating him assiduously over a two-day summit meeting at the president’s Florida estate, Mar-a-Lago, in April. Trump has avoided derogatory comments or tweets about Xi, even as his administration has made moves, like the Taiwan arms sale, that angered Beijing. Tellingly, today Trump did not refer to China as an ally in the push to curb North Korea’s nuclear efforts. He said only that “other regional powers and all responsible nations” should join the United States, South Korea and Japan in enforcing sanctions on the North Korean government. “The era of strategic patience with the North Korean regime has failed,” he said. “Frankly, that patience is over.” In the days leading up to his visit, Moon and his aides had tried to erase any signs of daylight between him and Mr. Trump. The South Korean foreign minister said the government would not reverse the deployment of the American antimissile system, which Moon has halted until an environmental assessment can be completed. Though Moon spoke of using “both sanctions and dialogue,” he said he supported Trump’s pressure campaign. “The threats and the provocations by the North will be met with the stern response,” he said. But Moon said nothing about the trade issues that Trump raised.

Like other foreign leaders, he came armed with business deals, including a $25 billion agreement to buy American natural gas, which earned perfunctory praise from Trump before he launched his critique. “I saw Moon moving toward alignment and taking issues off the table,” said Scott Snyder, the director of the program on United States-Korea policy at the Council on Foreign Relations. “In a way, the only issue he couldn’t take off the table is the one the president holds powerfully and viscerally — the idea that Korea is a free rider.” (Mark Landler, “Trump Adopts More Aggressive Stance with U.S. Allies and Adversaries in Asia,” New York Times, July 1, 2017, p. A-8) President Moon Jae-in appears to have won his US counterpart Donald Trump’s fundamental support for his approach toward North Korea and a US missile shield during their first summit, but challenges persist over future dealings with the nuclear issue and trade, analysts said July 2. During Moon’s visit last week, the two leaders were seen building personal rapport and reaffirming their commitment to the 60-year alliance. Seoul managed to keep at bay the controversy over its decision to freeze the deployment of the US’ Terminal High Altitude Area Defense system here, which observers had fretted may overshadow the meeting. Another contentious issue had been a gap in their stances toward Pyongyang, with Moon seeking to restart dialogue and Trump pushing for a “maximum pressure” policy and ditching talks without the Kim Jong-un regime’s denuclearization commitment. At a joint news conference, however, Moon said both sides agreed to work to resolve the nuclear issue based on his “phased and comprehensive approach” designed to start with a moratorium on the North’s nuclear and missile tests, progress to a complete disarmament and ultimately the creation of a peace regime. A separate joint statement stipulated their resolve to impose new sanctions to “apply maximum pressure,” but stressed the door to dialogue remains open “under the right circumstances.” It also said Trump supported
South Korea’s “leading role” in fostering an environment for a peaceful unification. Moon said he was able to secure his counterpart’s backing over North Korea by exerting flexibility about the “right circumstances.” On THAAD, he gave assurances that its halt is not intended to upend its deployment. Trump also “understood” Seoul’s need to ensure “procedural legitimacy” by conducting an environmental review of the THAAD battery site. “We’d decided it would be wise not to specify the conditions at this point. … As President Trump said, we would have to use our senses to determine it given the shifting political situation,” Moon said at a meeting with reporters in Washington on July 1. In another development, the presidents vowed to “expeditiously enable” the conditions-based transfer of wartime operational control by boosting South Korea’s defense capabilities including through the Kill Chain and Korean Air and Missile Defense pre-emptive strike systems. The OPCON handover was initially set for 2015 but was delayed until the 2020s under the Park Geun-hye government. Moon had called for its early execution as part of his campaign pledges. Cheong Seong-chang, head of unification strategy at the Sejong Institute, projected on the summit results that the transfer could now be completed no later than 2020.

“The two leaders displayed ‘great chemistry’ and were apparently capable of laying the foundation to explore common ground even on sensitive matters,” he said in a commentary, referring to Trump’s portrayal of the summit. Lee Si-hyung, Seoul’s former deputy trade minister and ambassador to the Organization for Economic Cooperation and Development who currently heads the Korea Foundation, said the summit bears significance in that the two presidents exhibited a united front on North Korea and the alliance with Seoul playing a “leading role.” Though Trump bashed a free trade pact and what he called “imbalance” at the conference, they managed to only carry a basic position on trade expressed in a “refined, well-chosen language in a concise manner,” Lee pointed out. “Unlike security issues, if the two leaders had reached a ‘consensus’ on trade at their very first summit it would be rather difficult to call it success,” he wrote on Facebook. “Now Seoul’s urgent task is to refurbish the trade-related organizations and personnel so that it can devise countermeasures on the US interests in preparation for future dealings.” (Shin Hyeon-hee, “Emboldened Moon to Spur N.K. Dialogue But Challenges Remain,” Korea Herald, July 2, 2017)

Joint Statement: “…Maintaining lock-step coordination on our North Korea policy President Trump and President Moon pledged to continue to coordinate closely to achieve our shared goal of complete, verifiable, and irreversible denuclearization of the Korean Peninsula in a peaceful manner. The two leaders called on North Korea to refrain from provocative, destabilizing actions and rhetoric, and to make the strategic choice to fulfill its international obligations and commitments. The two leaders affirmed that North Korea's nuclear tests and unprecedented number of ballistic missile tests constitute direct violations of multiple United Nations Security Council Resolutions (UNSCRs) and highlight the accelerating threat its programs pose to international peace and security. **They affirmed their commitment to fully implement existing sanctions and impose new measures designed to apply maximum pressure on North Korea to compel Pyongyang to cease its provocative actions and return to sincere and constructive talks.** The two leaders also urged all UN member states to swiftly and fully implement UNSCR obligations and took note with appreciation of constructive actions by some countries around the world to exert diplomatic and economic pressure on North Korea to return to credible negotiations on denuclearization. They noted the important role China could play to this end. In addition, the two sides committed to enhance cooperation to combat North Korea's dangerous and destabilizing malicious cyber activity. **Noting that sanctions are a tool of diplomacy, the two leaders emphasized that the door to dialogue with North Korea remains open under the right circumstances.** In reaffirming our two sides' shared top priority to resolve the nuclear issue, the two leaders emphasized that the United States and the ROK do not maintain a hostile policy toward North Korea and, together with the rest of the international community, stand ready to offer a brighter future for North Korea if it chooses the right path. The two sides decided to closely coordinate on our joint North Korea policy, including how to create conditions necessary for denuclearization talks, through a high-level strategic consultation mechanism. President Trump supported the ROK’s leading role in fostering an environment for peaceful unification of the Korean Peninsula. The two leaders expressed deep concern about the well-being of the North Korean people, including the egregious human rights violations and abuses committed by the government, and noted their intention to ensure sanctions have minimal impact on North Korea's...
vulnerable populations. President Trump supported President Moon’s aspiration to restart inter-Korean dialogue on issues including humanitarian affairs. The two leaders reaffirmed the importance of cooperating with the international community to ensure accountability and achieve substantial progress in North Korea’s deplorable human right situation. The two leaders reaffirmed their commitment to promote regional relations and enhance U.S.-ROK-Japan trilateral cooperation. The two leaders affirmed that trilateral security and defense cooperation contributes to enhanced deterrence and defense against the North Korean threat. They decided to further develop this cooperation, using established bilateral and trilateral mechanisms. They also underscored the importance of leveraging the U.S.-ROK-Japan trilateral relationship to address global challenges such as cancer research, energy security, women's empowerment, and cybersecurity. President Trump and President Moon decided to discuss further ways to enhance trilateral cooperation together with Prime Minister Abe at the upcoming U.S.-ROK-Japan Trilateral Summit on the margins of the G20 in July.” (Joint statement of Presidents of South Korea and the United States, Korea Herald, July 1, 2017)

7/2/17

President Trump, frustrated by China’s unwillingness to lean on North Korea, has told the Chinese leader that the United States is prepared to act on its own in pressuring the nuclear-armed government in Pyongyang, according to senior administration officials. Trump’s warning, delivered in a cordial but blunt phone call tonight to President Xi Jinping, came after a flurry of actions by the United States — selling weapons to Taiwan, threatening trade sanctions and branding China for human trafficking — that rankled the Chinese and left little doubt that the honeymoon between the two leaders was over. After returning from his weekend getaway in Bedminster, N.J., late the next day, Trump noted on Twitter, “Perhaps China will put a heavy move on North Korea and end this nonsense once and for all!” American officials, talking about the continuing dialogue with the Chinese, said they hoped the tough steps by the United States would spur Xi to reconsider his reluctance to press the North. But Trump, one official said, now has fewer illusions that China will radically alter its approach to its reclusive neighbor, which is driven more by fear of a chaotic upheaval there than by concern about its nuclear and missile programs. That leaves the president in a familiar bind on North Korea as he prepares to leave for a Group of 20 meeting this week in Germany, where he will meet Xi as well as the leaders of Japan and South Korea, nations Trump has also turned to in navigating his approach to the North. Without the full weight of China, pressure tactics are unlikely to force North Korea’s leader, Kim Jong-un, to change course. Yet diplomatic engagement — which Xi continues to push, according to officials — is not a step that Mr. Trump is ready to consider, after the death last month of an American college student, Otto F. Warmbier, who was held captive in Pyongyang for 17 months, then freed in a coma. A go-it-alone approach by Trump would also further antagonize China, since it would require blacklisting multiple Chinese banks and companies that do business with the North. The United States began doing so on a modest scale last week by designating four Chinese entities and individuals. The precarious state of United States-China relations was captured by the way the two sides characterized the call. The White House said only that Trump had raised the “growing threat” of North Korea’s weapons programs with Xi. The Chinese, in a more detailed statement, said the relationship was being “affected by some negative factors.” The latest of these — and perhaps the most grating to the Chinese — was a naval maneuver in which an American guided-missile destroyer sailed near disputed territory claimed by Beijing in the South China Sea. The movement by the warship, the Stethem, off Triton Island in the Paracel archipelago prompted a furious response from China’s government, which called it a “serious political and military provocation.” Still, neither leader appeared ready to abandon the rapport established in April at a summit meeting in Palm Beach, Fla. Trump avoided any personal jabs at Xi; the Chinese government said tensions were to be expected in a relationship this complex. But each leader has learned a hard lesson about the other, according to officials and outside analysts. Xi, they said, miscalculated what China needed to do to satisfy Trump, thinking he could buy him off with a few highly visible measures, like banning coal purchases from the North. Trump overvalued the personal touch by betting that a few hearty handshakes with Xi would overcome China’s deep-rooted resistance to pressuring North Korea. “The Chinese tried to figure out what was the absolute minimum they needed to do,” said Bonnie S. Glaser, director of the China Power Project at the Center for Strategic and International Studies. “The administration has signaled repeatedly
that they had to shut down these banks and front companies in northeast China that enable North Korea.” Chinese officials professed surprise last week when the White House rolled out three tough steps, back to back. It imposed sanctions on a Chinese bank, accusing it of acting as a conduit for illicit North Korean financial activity, as well as on a Chinese company and two Chinese citizens. It approved the sale of $1.4 billion in weapons to Taiwan, which China regards as a breakaway province. And it labeled China one of the worst offenders in an annual State Department report on human trafficking. The White House also signaled it would act against imported Chinese steel as part of a broader campaign against steel dumping around the world. But the Commerce Department’s report on the steel market, which would be the basis for tariffs and other sanctions, is still undergoing revisions and will not be released before the Group of 20 meeting. The American destroyer’s cruise past Triton appeared to be especially offensive to China. It was only the second time since Trump took office in January that an American warship had ignored China’s claims in the South China Sea. On May 24, another guided-missile destroyer, the Dewey, traversed Mischief Reef in the disputed Spratly Islands. “The Chinese side strongly urges the U.S. side to immediately stop such kind of provocative operations that violate China’s sovereignty and threaten China’s security,” a Foreign Ministry spokesman, Lu Kang, said on Sunday. “The Chinese side will continue to take all necessary means to defend national sovereignty and security.” Washington and Beijing confirmed that Trump requested the call on Sunday. But American officials said their Chinese counterparts signaled that they were eager to clear the air after a bumpy week. Cheng Xiaohui, an associate professor of international relations at Renmin University in Beijing, said it was “a little bit odd” that Xi had agreed to the call. Still, he said, the gesture indicated that China was seeking to maintain “stability and some momentum” with Trump and perhaps deter him from taking more extreme measures, such as military action. “The actions the administration has taken have upset the Chinese, no doubt about it,” Professor Cheng said. “The conversations demonstrate that China is still willing to talk with Trump and work with the U.S. government to deal with North Korea’s nuclear issues.” China’s resistance has led Trump to turn to other nations, notably Japan and South Korea, for help in resolving the crisis. He had a warmer call with Prime Minister Abe Shinzo of Japan, who praised his decision to penalize Chinese entities accused of doing illicit business with the North, according to Kyodo. Trump will host a dinner with Abe and Moon Jae-in, South Korea’s new president, at the Group of 20 in Hamburg on July 6. Some former officials said the tensions between Trump and Xi were neither new nor particularly troubling. “We’ve had similar dynamics under Bush, Clinton and Obama,” said Jeffrey A. Bader, a China adviser to President Barack Obama. “It’s not an either-or. We operate in a nether zone with the Chinese.” (Mark Landler and Javier Hernandez, “Trump Calls Xi with a Warning on North Korea,” New York Times, July 4, 2017, p. A-1) "Both leaders reaffirmed their commitment to a denuclearized Korean Peninsula," the White House said of Trump's call with Xi from his resort property in Bridgewater, New Jersey, where he is spending a long weekend. "President Trump reiterated his determination to seek more balanced trade relations with America’s trading partners," it added. Trump and Xi discussed the "peace and stability of the Korean peninsula", China's Foreign Ministry said, without elaborating. Ministry spokesman Geng Shuang later told a daily briefing that the United States was "very clear" about China's position on North Korea. Geng did not elaborate on what Xi told Trump about North Korea. "Negative factors" have affected Sino-U.S. relations, and China has already expressed its position to the United States, Xi told Trump, according to a read-out of a telephone call between the leaders carried by the ministry. Trump and Abe, in their call, reiterated their commitment to increase pressure on North Korea. "They reaffirmed that the United States-Japan Alliance stands ready to defend and respond to any threat or action taken by North Korea," the White House said in a statement. Japan's Chief Cabinet Secretary Suga Yoshihide told a news conference the two countries and South Korea will have a trilateral summit at the G20 meeting, but he didn’t want to speculate on what might be said there. “It’s important for these three nations to show their strong unity and cooperation both within and without,” Suga said. "Things such as strengthening pressure on North Korea or urging China to fulfill even more of a role. Things like this have been agreed on before as well.” (Jeff Mason, “Trump Talks North Korea Threat in Calls with China, Japan Leaders,” Reuters, July 3, 2017)
It wasn’t so long ago that Abe Shinzo appeared on course to becoming Japan’s longest-serving prime minister ever. But after his conservative Liberal Democratic Party’s crushing defeat in today’s Tokyo assembly election, Abe’s iron grip on power has finally shown signs of slipping — a setback critics say is the biggest crisis he has faced since his sweeping return to power in December 2012. “This is a very stern rebuke from the public that we must do some serious soul-searching about,” NHK showed a grim-faced Abe telling reporters at his Tokyo office this morning. “It’s been five years since this administration kicked off, and I believe the public has sent us a tough message that we have lost our discipline,” he said. Although Tokyo assembly elections have often served as a harbinger of national trends, there is no immediate danger of the Abe administration disintegrating, as the next Lower House election isn’t scheduled until next year. Experts say the LDP’s shattering defeat hardly leaves Abe in the mood to call a snap election anytime soon, either. But the results bode ill for the prime minister nonetheless and point to the “beginning of the end of Abe’s invincibility,” according to Narita Norihiko, a political science professor at Surugadai University. Today’s election saw Abe’s LDP lose big to a fledgling party headed by the capital’s popular governor, Koike Yuriko. Tomin First no Kai (Tokyoites First), as it is called, trounced the LDP by capturing 49 seats in the 127-member assembly. The tally, if combined with seats won by its allies, including Komeito, gives the pro-Koike forces a comfortable majority in the assembly at 79 seats. The outcome left the LDP tied with Komeito at 23 seats, followed by the Japanese Communist Party with 19, and the Democratic Party with five. In March, the LDP rubber-stamped a historic rule change to extend the maximum tenure of its president to nine years, up from six, in what was seen as a move to enable a third term for Abe that would continue through 2021. Such a scenario would mean that Abe, who served previously as prime minister from 2006 to 2007, would be remembered as the longest-serving leader in modern Japan, topping Taro Katsura, who held the office for a combined 2,886 days before dying in 1913. But Sunday’s trouncing has “clouded the prospect of a third term,” Narita said. It also places a big question mark over Abe’s recently announced timeline for revising the pacifist Constitution by 2020. His goal is to alter war-renouncing Article 9 to make explicit the status of the Self-Defense Forces. Abe’s sudden mention of a deadline and the unconventional ways in which he said he would go about legalizing the SDF caused murmurs of discord among his rivals in the LDP, such as Shigeru Ishiba, who argued the prime minister’s methods were riding roughshod over his party’s previous internal policies. When he was riding high, Abe couldn’t have cared less about these voices of discontent, but now “it’s not clear whether he can push ahead with his agenda, given an expected rise in momentum within the LDP for questioning his power,” Narita said. Speculation is also rife that Abe will attempt to engineer a make-or-break image makeover, perhaps starting this month, by overhauling his scandal-tainted Cabinet and ousting Defense Minister Tomomi Inada, who violated her obligation to stay politically neutral by hinting that the SDF backed an LDP-backed candidate. But a failure to check the background of her replacement or other new faces would risk the possibility of further scandals, which would be a recipe for disaster, Narita said. Yakushiji Katsuyuki, a professor of political science at Toyo University, said the metropolitan assembly election not only debunked the notion of Abe’s invincibility, but also exposed an uncomfortable truth. With the main opposition Democratic Party so hopelessly unpopular, Abe had faced no real enemy until this election. But when confronted with a powerful alternative in the person of Koike, the fragility of his popularity was made painfully clear. “When there is no real alternative to the LDP, you either refuse to vote or begrudgingly vote for the LDP,” Yakushiji said. “Abe mistook these votes as positive support for his party, which emboldened him into going ahead with all these controversial policies, such as revising the Constitution.” All eyes are now on whether Tomin First’s overwhelming victory will facilitate a foray by Koike into national politics — and ultimately her widely rumored bid to become Japan’s first female prime minister. Asked today about the possibility of returning to national politics, Koike ruled out the idea. Observers, too, are playing it down, saying the fact she is Tokyo governor means she is unlikely to flirt with national politics anytime soon. Doing so, they say, would be taken as a betrayal of Tokyo’s residents that would send her popularity plummeting. “She is not stupid enough to do that,” Yakushiji said. Reports say some prominent lawmakers, including Koike protege Masaru Wakasa and ex-DP member Akihisa Nagashima, are thinking about founding a new “pro-Koike” party at the national level. But Koike’s absence from such a party, coupled with the fact that no national election is scheduled in the immediate future, means
President Moon Jae-in appointed his new point man on North Korea. Cho Myoung-gyon, a former official from the unification ministry, as the new unification minister. (Yonhap, “President Appoints Unification, Agriculture Minister,” July 3, 2017) South Korea's new unification minister vowed today to use all available means to induce North Korea to accept Seoul's offer to resume exchanges and improve relations. Cho Myoung-gyon also said he will make efforts to resolve North Korea's nuclear issue and mend inter-Korean relations "with persistence and step by step." "I will try to mobilize all available means (to improve frayed inter-Korean ties). I think that a long-term perspective and persistence would be needed," Cho told reporters after taking office earlier in the day. A joint statement adopted after the summit showed that U.S. President Donald Trump "supported President Moon's aspirations to restart inter-Korean dialogue on issues, including humanitarian affairs," and hailed South Korea's "leading role" in creating the conditions for the peaceful reunification of the two Koreas. "Rather than being swayed by the North's each and every reaction, I believe we need to take a long-term perspective in handling North Korea's affairs." Moon is seeking to take a two-phased approach to resolving North Korea's nuclear standoff — a freeze on Pyongyang's nuclear and missile programs and their complete dismantlement. "Based on the outcome of the summit, (I) will make efforts to resolve North Korea's nuclear issue and mend inter-Korean relations in a way that is mutually beneficial to each other. To this end, I will strive to make such efforts with persistence and step by step," he said. Cho described reunions of families separated by the 1950-53 Korean War as the "urgent" issue. "I feel strongly that the issue warrants urgency," the minister said. "(I) will step up efforts to resolve the issue as soon as possible with the hope that specific measures would be drawn up." He said at his confirmation hearing last week that he would consider proposing the family reunions to the North for Liberation Day on August 15 or the Chuseok fall harvest holiday. (Yonhap, “New Unification Minister Vows Persistent Efforts to Improve Inter-Korean Ties,” July 3, 2017)

KCNA: “Respected Supreme Leader Kim Jong Un signed the order to carry out the test-fire of inter-continental ballistic rocket Hwasong-14 on July 3, Juche 106 (2017). There will be a report of the DPRK Academy of Defense Science on the successful launch of Hwasong-14 that was conducted under the personal guidance of Kim Jong Un.” (KCNA, “Kim Jong Un Issues Order for Test-Fire of Intercontinental Ballistic Rocket Hwasong-14,” July 4, 2014) KCNA: “The Academy of Defense Science of the Democratic People's Republic of Korea released the following report Tuesday [July 14]; Scientists and technicians of the DPRK Academy of Defense Science successfully carried out the test-fire of inter-continental ballistic rocket Hwasong-14, newly researched and developed by them under the strategic decision of Kim Jong Un, chairman of the Workers' Party of Korea, chairman of the State Affairs Commission of the DPRK and supreme commander of the Korean People's Army. The rocket blasted off from the northeastern part of the DPRK at 9:00, July 4, Juche 106 (2017) to make 39 minute flight along its pre-set trajectory before accurately hitting the target waters in the open sea in the East Sea of Korea. The test-launch was carried out at the maximum angle launch system and had no adverse effect on the security of neighboring countries. The rocket flew 933km, reaching an altitude of 2, 802km. Kim Jong Un, Supreme Leader of our party, state and the army, personally observed the process of the test-launch in field and solemnly declared before the world its shining success. The success in the test-fire of inter-continental ballistic rocket Hwasong-14, final gate to rounding off the state nuclear force, at just one go is a powerful manifestation of the invincible state might and the tremendous capability of the self-reliant national defense industry of Juche Korea that has advanced at a remarkably rapid pace under the great Workers' Party of Korea's new line on the simultaneous development of the two fronts, and a great auspicious event to be specially recorded in the history of the DPRK which has long craved for powerful defense capabilities. As a full-fledged nuclear
power that has been possessed of the most powerful inter-continental ballistic rocket capable of hitting any part of the world, along with nuclear weapons, the DPRK will fundamentally put an end to the U.S. nuclear war threat and blackmail and reliably defend the peace and stability of the Korean peninsula and the region.” (KCNA, “Report of DPRK Academy of Defense Science,” July 4, 2017)

North Korea's overseas mouthpiece said diplomatic negotiations have risen as the sole clue to address its confrontation with the United States with the success of its recent intercontinental ballistic missile launch. “The ongoing nuclear showdown between Pyongyang and Washington has entered into its final phase with the North's successful Hwasong-14 ICBM test-fire, and now avoiding armed conflict and seeking ways to find a clue to settle it via diplomatic negotiations have become a pressing issue that the international community can no longer turn away from,” Chosun Sinbo, a pro-Pyongyang newspaper based in Tokyo, said. The nuclear war crisis between the two nations can be resolved not via the abandonment of Pyongyang's nuclear policy but via that of Washington's hostile policy, the paper said. "It's not North Korea but the United States that should change," it said. The paper's claim is in line with North Korean leader Kim Jong-un's remarks the previous day that the North will never offer to abandon its nuclear weapons and ballistic missiles in any case unless the U.S.' hostile policy and nuclear threat are fundamentally cleared away. (Yonhap, “N. Korean Mouthpiece Says Diplomatic Negotiations Emerge as Key to Solving Nuclear Standoff,” July 5, 2017)

North Korea said that it had successfully conducted its first test of an intercontinental ballistic missile, claiming a milestone in its efforts to build nuclear weapons capable of hitting the mainland United States. The announcement came hours after a launch that the United States military said sent the missile aloft for 37 minutes. That duration, analysts said, suggested a significant improvement in the range of the North’s missiles, and it might allow one to travel as far as 4,000 miles and hit Alaska. In initial statements, the United States Pacific Command and the State Department described the weapon as an intermediate-range missile rather than an intercontinental ballistic missile. The missile took off from the Banghyon airfield in the northwestern town of Kusong and flew 578 miles before landing in the sea between North Korea and Japan, the South Korean military said in a statement. The Japanese government said the missile landed in its so-called exclusive economic zone off its western coast. It was the first missile test by the North since it launched land-to-sea cruise missiles off its east coast on June 8. Under a series of United Nations Security Council resolutions, North Korea is prohibited from developing or testing ballistic missiles. While the North is believed to have made significant progress in its weapons programs, experts believe it still has a long way to go in miniaturizing nuclear warheads for intercontinental ballistic missiles. The missile test adds a volatile new element to the Trump administration’s efforts to curb North Korea’s nuclear ambitions, which have included naval drills off the Korean Peninsula and pressure on China, Pyongyang’s longtime ally. In a blunt phone call July 2, President Trump warned President Xi Jinping of China that the United States was prepared to act alone against North Korea. On Twitter late last night, Trump was apparently referring to North Korea’s leader, Kim Jong-un, when he wrote: “North Korea has just launched another missile. Does this guy have anything better to do with his life? Hard to believe that South Korea and Japan will put up with this much longer. Perhaps China will put a heavy move on North Korea and end this nonsense once and for all!” If the missile took 37 minutes to fly 578 miles, as the South Korean and United States military analysts said, that would mean that it had a highly lofted trajectory, probably reaching an altitude of more than 1,700 miles, said David Wright, co-director of the Global Security Program at the Union of Concerned Scientists. Such a missile would have a maximum range of roughly 4,160 miles, or 6,700 kilometers, on a standard trajectory, he said. North Korea said the missile, which it identified as the Hwasong-14, flew for 39 minutes. “That range would not be enough to reach the lower 48 states or the large islands of Hawaii, but would allow it to reach all of Alaska,” Wright wrote in a blog post. The missile looked like the longest-range missile that North Korea had ever tested, and its long flight time was “more consistent with an ICBM that can target Alaska and perhaps Hawaii,” said Jeffrey Lewis, director of the East Asia Nonproliferation Program at the Middlebury
Institute of International Studies. “It’s a very big deal — it looks like North Korea tested an ICBM,” he said by email. “Even if this is a 7,000-km-range missile, a 10,000-km-range missile that can hit New York isn’t far off.” But analysts also cautioned that although they have been impressed by the rapid and steady progress in the North’s missile programs, the long flight time itself did not suggest that North Korea had mastered the complex technologies needed to build a reliable nuclear-tipped ICBM, such as the know-how to separate the nuclear warhead and guide it to its target. By lofting some of its recent missiles to higher altitudes and letting them crash down toward the Earth at greater speeds, North Korea has claimed that it tested its “re-entry” technology, which can protect a nuclear warhead from intense heat and vibrations as it crashes through the Earth’s atmosphere. But it is still unclear whether the North has successfully cleared that technological hurdle, missile experts said. Kim Dong-yub, a defense analyst at the Institute for Far Eastern Studies at Kyungnam University in Seoul, said that the Hwasong-12, which the North tested in May, flew 489 miles in 30 minutes, soaring to an altitude of 1,312 miles. Such a missile could deliver a standard 1,430-pound nuclear warhead over a range of 2,800 miles, not enough to reach Hawaii and Alaska, as North Korea claimed at the time. North Korea’s test on Tuesday may have been intended to prove that its missiles could reach Hawaii and Alaska, Kim said. North Korea announced the missile launch in a broadcast on state television after a series of patriotic music videos. “As a proud nuclear power that possesses not only nuclear weapons but also the most powerful ICBM that can target any part of the world, North Korea will root out the United States’ threat and blackmail of nuclear war and solidly defend the peace and stability of the Korean Peninsula and the region,” the North Korean statement said. North Korea called the test “a momentous event in the history of the country” and said it had brought a “great joy” to North Koreans. Chinese officials criticized the North’s missile test, saying it violated United Nations rules. At the same time, the Chinese government offered no signs that it was preparing to take more drastic action against the North, urging a return to diplomatic talks instead. “I have to reiterate that the current situation in the Korean Peninsula is complicated and sensitive,” Geng Shuang, a spokesman for the Chinese Ministry of Foreign Affairs, said at a regular news conference in Beijing. “We hope all sides concerned can remain calm and restrained so that tensions can be eased as soon as possible.” Analysts said the launch would put President Trump’s administration in a precarious position, given that it had indicated that such a missile, capable of reaching parts of the United States, was a critical threshold. In January, Trump tweeted “it won’t happen!” The message set off a cascade of speculation on what exactly he meant. “The important thing is that Donald Trump doesn’t let himself be backed into a corner and that he understands that there are long-term options to contain, constrain and deter the regime,” said Adam Mount, a senior fellow at the Center for American Progress in Washington. The United States had hoped North Korea would stop short of developing a long-range missile that could reach its shores, Mount said. Now, he said, the United States and its allies will have to compromise on any expectation that North Korea will ever give up its nuclear program, he added. “Talks can’t proceed from the presumption of denuclearization,” he said. “And we can’t coerce North Korea back to the negotiating table to prevent them from crossing a threshold they have already crossed.” (Choe Sang-hun, “North Korea Says It Has Successfully Tested ICBM,” New York Times, July 4, 2017; “North Korea Fires Missile amid Rising Tensions with U.S.,” New York Times, July 4, 2017, p. A-8)

South Korean President Moon Jae-in warned North Korea not to cross a "red line" after it claimed a successful test of its first intercontinental ballistic missile. Moon urged the North to immediately halt its provocations, saying he is not sure what kind of consequence the communist state will have to face if it crosses the "red line." "I hope North Korea will not cross the point of no return," the South Korean leader said in a meeting with former British Prime Minister David Cameron, according to his chief press secretary Yoon Young-chan. His remarks came shortly after he ordered his top security officials to seek "UN Security Council measures" in close cooperation with the country's allies, including the United States in an emergency meeting of the National Security Council. Moon earlier noted the North may develop an ICBM in the "not too distant future." The North Korean reports said the new ICBM, Hwasong-14, reached an altitude of 2,802 kilometers, and flew 933 kilometers. When launched at the right angle, the missile could reach up to 8,000 km, experts have noted. Moon, even prior to the North Korean reports, told his security
officials to handle the latest provocation as if it were an ICBM. "We plan to devise necessary measures assuming it may have been an ICBM," he told the NSC meeting, according to Cheong Wa Dae pool reports. "I strongly urge North Korea to come out of its delusion that nuclear and missile development ensures its safety and make a decision to denuclearize," he said. Other South Korean officials also warned the North may face "much stronger sanctions" should its latest missile launch be confirmed to have involved an ICBM. "If it is confirmed to have been an ICBM, I believe the level of pressure and sanctions currently imposed on North Korea will likely escalate," a ranking Cheong Wa Dae official told reporters. The latest North Korean missile launch came shortly after the South Korean president returned home from a visit to Washington, where he and his U.S. counterpart, Donald Trump, agreed to seek a phased denuclearization of the North, enabling a resumption of dialogue with the reclusive state following its initial steps to denuclearize. "I express a deep disappointment and regret over the fact that North Korea staged such a provocation only a few days after President Trump and I urged North Korea to reduce its provocations, refrain from military action that causes instability, and make a strategic decision to abide by international duties and regulations," Moon said. "North Korea's nuclear weapons and missiles are a matter of our life or death that threatens the very safety and lives of our people and our allies. We will not tolerate any such threat under any circumstances." Still, officials here said the country's move to resume dialogue with the communist North remained unchanged despite its latest provocation. "The policy to seek the resumption of dialogue while maintaining maximum pressure remains unchanged," a Cheong Wa Dae official told reporters, while asking not to be identified. (Yonhap, “Moon Urges North Korea Not to Cross ‘Point of No Return,’” July 4, 2017)

Secretary of State Rex Tillerson called for global action after North Korea tested a newly developed intercontinental ballistic missile, calling it a new escalation of Pyongyang's nuclear threat. In a statement, Tillerson warned that any country that hosts North Korea workers, or provides economic or military aid to Pyongyang, or failed to implement United Nations sanctions "is aiding and abetting a dangerous regime." Tillerson said, "All nations should publicly demonstrate to North Korea that there are consequences to their pursuit of nuclear weapons.” (Lesley Wroughton, “U.S.’s Tillerson Calls for Global Action to End North Korea’s ICBM Threat,” July 4, 2017)

The Russian Federation and the People’s Republic of China are the Korean Peninsula’s neighbors; therefore the development of the situation in the region concerns the national interests of both countries. Russia and China will closely coordinate their efforts in order to promote a complex solution to the Korean Peninsula’s problems, including that of the nuclear issue, for the sake of achieving a lasting peace and stability in Northeast Asia. In the spirit of strategic cooperation the foreign ministries of Russia and China (hereinafter referred to as Parties) state the following: 1. The Parties are seriously worried by the Democratic People’s Republic of Korea (DPRK)’s statement of July 4, 2017 about a ballistic missile launch and consider this statement unacceptable and in disharmony with the relevant UN Security Council resolutions. 2. The Parties express serious concern about the development of the situation on the Korean Peninsula and around it. Mounting political and military tension in that region, fraught with the eruption of an armed conflict, are calling on the international community to adopt collective measures to settle the situation peacefully through dialogue and consultations. The Parties oppose any statements or moves that might escalate tension or aggravate the contradictions and urge all countries concerned to maintain calm, renounce provocative moves or bellicose rhetoric, demonstrate readiness for dialogue without preconditions and work actively together to defuse tension. 3. The Parties are putting forward a joint initiative, which is based on the Chinese-proposed ideas of “double freezing” (missile and nuclear activities by the DPRK and large-scale joint exercises by the United States and the Republic of Korea) and “parallel advancement” towards the denuclearisation of the Korean Peninsula and the creation of peace mechanisms on the peninsula, and the Russian-proposed stage-by-stage Korean settlement plan. The Parties propose the following: The DPRK, by way of a voluntary political decision, announces a moratorium on the testing of nuclear explosive devices and ballistic missile tests, and the United States and the Republic of Korea should, accordingly, refrain from large-scale joint exercises. Simultaneously,
**the conflicting parties begin talks and assert common principles of their relations**, including the non-use of force, the renunciation of aggression, peaceful coexistence and determination to do all they can to denuclearise the Korean Peninsula with a view to promoting a complex resolution of all problems, including the nuclear issue. During the negotiating process, all parties concerned push forward, in a format suitable to them, the creation on the peninsula and in Northeast Asia of a peace and security mechanism and consequently normalise relations between the countries in question. The Parties urge the international community to support the aforementioned initiative that paves the real way for resolving the Korean Peninsula’s problems. 4. The Parties are resolutely committed to the international non-proliferation regime and are firmly aimed at the denuclearisation of the Korean Peninsula and a comprehensive and full implementation of the relevant UN Security Council resolutions. The Parties intend, jointly with other parties concerned, to continue making efforts to facilitate the balanced removal of the existing concerns via dialogue and consultations. **The Parties confirm that the DPRK’s justified concerns should be respected.** Other states must make relevant efforts to have talks resumed and jointly to create an atmosphere of peacefulness and mutual trust. The Parties are calling on all parties involved to comply with the commitments formulated in the Joint Statement of September 19, 2005, and **to re-launch, as soon as possible, the dialogue on the comprehensive resolution of problems on the Korean Peninsula.** Any possibility of using military means to solve the problems of the Korean Peninsula should be ruled out. 5. The Parties express support for the North and the South of the Korean Peninsula to conduct dialogue and consultations, display benevolence towards each other, cooperate, and in the matter of a peaceful settlement, and play a due role in defusing the situation on the Korean Peninsula and in resolving its problems in a proper manner. 6. The Parties confirm that they are paying sufficient attention to **the maintenance of the international and regional balance and stability,** and emphasise that allied relations between separate states should not inflict damage on the interests of third parties. They are against any military presence of extra-regional forces in Northeast Asia and its build-up under the pretext of counteracting the DPRK’s missile and nuclear programs. The Parties confirm that the deployment of THAAD antimissile systems in Northeast Asia is inflicting serious damage on strategic security interests of regional states, including Russia and China, and does nothing to help achieve the aims of the Korean Peninsula’s denuclearisation, nor to ensure peace and stability in the region. Russia and China are against the deployment of the said systems, call on the relevant countries to immediately stop and cancel the deployment process, and have agreed to adopt the necessary measures to protect the two countries’ security interests and to ensure a strategic balance in the region. This statement was signed on July 4, 2017, in Moscow.” (Joint Russian Chinese Statement on the Korean Conflict, *The Duran*, July 5, 2017)

KCNA: “The scientists and technicians of the DPRK Academy of Defense Science on July 4 successfully carried out the test-launch of the inter-continental ballistic rocket Hwasong-14 newly developed by them under the personal guidance of Kim Jong Un, chairman of the Workers’ Party of Korea, chairman of the State Affairs Commission of the DPRK and supreme commander of the Korean People’s Army. Respected Supreme Leader Kim Jong Un supervised the test-launch on the spot. Over a few days ahead of the test-launch, he frequented the place where the general drive for assembling the rocket was underway and meticulously guided the scientists and technicians in their busy preparations for the test-launch. Feasting his eyes on the newly made inter-continental ballistic rocket Hwasong-14, he stressed that the protracted showdown with the U.S. imperialists has reached its final phase and it is the time for the DPRK to demonstrate its mettle to the U.S. which is testing its will in defiance of its warning. At dawn of the day of the test-launch he again came out to the rocket test-launching ground to acquaint himself with the plan for the test-launch. The test-launch was aimed to confirm the tactical and technological specifications and technological features of the newly developed inter-continental ballistic rocket capable of carrying large-sized heavy nuclear warhead and to finally verify all technical features of the payload of the rocket during its atmospheric reentry including the heat-resisting features and structural safety of the warhead tip of ICBM made of newly developed domestic carbon compound material, in particular. By order of the respected Supreme Leader, the inter-continental ballistic rocket Hwasong-14 of Juche Korea was launched on 9:00 a.m. The test-launch confirmed the features of the rocket's blast-off from its launching pad and technological features of its guidance and stability system in its active-flight stages and structural system. It also reconfirmed the features of starting
Wednesday. South Korea's military later released previously shot video showing the test South Korean troops fired "deep strike" precision missiles off South Korea's east coast. The test, the nation's formal name, the Democratic People's Republic of Korea. In a show of force, U.S. and North Korea's response would include an emergency U.N. Security Council session. U.S. Secretary of State Rex Tillerson said the U.S. was "very concerned" and North Korea needed to "consideration of "more intensive possibil"

North Korean leader Kim Jong Un vowed Wednesday his nation will "demonstrate its mettle to the U.S." and never put its weapons program up for negotiations, a day after successfully testing its first intercontinental ballistic missile. The hard line suggests that North Korea will conduct more weapons tests until it perfects nuclear armed missiles capable of striking anywhere in the United States. Analysts say Kim's government believes nuclear weapons are key to its survival and could be used to wrest concessions from the United States. South Korea President Moon Jae-in said today that the world should look at tougher sanctions against the North and insisted the problem must be solved peacefully. Speaking through an interpreter in Berlin before the Group of 20 summit, Moon called the test "a big threat and provocation" and that there should be consideration of "more intensive possibilities of sanctions." Worry also spread in Washington and at the United Nations, where the United States, Japan and South Korea requested an emergency U.N. Security Council session. U.S. Secretary of State Rex Tillerson said the U.S. response would include "stronger measures to hold the DPRK accountable," using the acronym for the nation's formal name, the Democratic People's Republic of Korea. In a show of force, U.S. and South Korean troops fired "deep strike" precision missiles off South Korea's east coast Wednesday. South Korea's military later released previously shot video showing the test-firing of
A series of recent missile tests has added new urgency to Japan’s debate about how it can defend itself from Pyongyang’s increasingly sophisticated arsenal. Even before the claimed test of a missile with intercontinental range, North Korea had fired a rocket in May that reached an altitude of more than 2,000km before plunging into the Sea of Japan at a speed of more than 5km a second. Meanwhile in late June, Japan and the US tested their new, jointly developed Aegis SM-3 Block 2A interceptor, designed to protect against exactly such a threat. The interceptor failed; the missile got through. The outcome of these respective experiments is amplifying discussions in Japan about the future of missile defense — and whether a more viable option is not defense but attack. This would involve pre-emptive strikes against Pyongyang’s missiles on the ground in the moments before they are launched, stretching the country’s pacifist constitution to the limit. “It requires formidable technology and cost to intercept a missile in flight,” says Onodera Itsunori, former defense minister and a member of parliament for the ruling Liberal Democratic party. “To destroy a missile before it is launched is much easier and cheaper.” Japan’s existing missile defense system has two layers. The first consists of Maritime Self-Defense Force destroyers equipped with the Aegis system, designed to intercept rockets mid-flight. The second is the short-range Patriot missile, designed to intercept a ballistic missile in its final moments of descent. Defense analysts in Tokyo say this set-up offers a good chance of success against small numbers of unsophisticated missiles. “If North Korea fired many missiles at once — 10 or more — it would be hard to defend against,” says Ueda Naruhiko, a retired lieutenant-general and now president of the Japan Defense Research Center. The Block 2A interceptors are part of Japan’s efforts to upgrade its defenses. Tokyo is also considering whether to buy the Aegis Ashore system — similar to the sea-based system but installed on land. With just a few sites it would be possible to protect most of Japan, improving coverage and freeing up destroyers for other missions. “The problem with Aegis Ashore is simply cost and time to deploy the system,” says Ben Goodlad, principal analyst at IHS Jane’s in London. An alternative is adding a third layer of interceptors via the Terminal High-Altitude Area Defense (THAAD) system — whose deployment in South Korea sparked a dispute between Seoul and Beijing because its powerful radar can reach into China.
The United States toughened its military pressure and invective against nuclear-armed North Korea, conducting a missile maneuver with South Korea, hinting of a possible return to war with the North and proposing wider United Nations sanctions against “any country that does business with this outlaw regime.” The proposal for broader sanctions appeared aimed especially at China, North Korea’s most important trading partner. It was part of a vocal public effort by the Trump administration to push President Xi Jinping of China by linking improved American-Chinese trade relations to solving the North Korea problem — and threatening worse trade relations if China does not help more. “There are countries that are allowing, even encouraging, trade with North Korea,” the American ambassador to the United Nations, Nikki R. Haley, told the Security Council at an emergency session on the North Korean missile test. If such countries want good trade relations with the United States, Haley said, “that’s not going to happen.” “We will not look exclusively at North Korea,” Haley said in outlining the toughened American position. “We will look at any country that does business with this outlaw regime.” Haley did not specifically threaten China, but she emphasized that 90 percent of North Korea’s trade is with the Chinese and that “much of the burden of enforcing U.N. sanctions rests with China.” She said the United States was drafting a Security Council resolution that could cut North Korea’s access to foreign currency and restrict oil exports to North Korea, which are mostly supplied by China. “We will not repeat the inadequate approaches of the past that have brought us to this dark day,” Haley said. She also raised the possibility of using America’s “considerable military forces” if necessary, but said, “We prefer not to have to go in that direction.” The chances of Security Council approval for such a resolution appeared dim at best. China and Russia, both veto-wielding members of the Council, generally oppose the use of sanctions. China’s United Nations ambassador, Liu Jieyi, did not address the sanctions question but called North Korea’s missile launch an unacceptable and “flagrant violation” of other Security Council resolutions. He called on all antagonists in the crisis to “exercise restraint, avoid provocative actions and belligerent rhetoric.” American experts on China and North Korea said they saw little hope that the Trump administration’s pressure tactics would succeed with Xi, who does not want to be seen as bullied by the United States. “I guess this is a way of putting pressure on China,” said Bonnie Glaser, senior adviser for Asia at the Center for Strategic and International Studies in Washington. But, she said, “I’m very reluctant to say this strategy is going to work.” Earlier in the day, the top American general in South Korea said “self-restraint” was all that was keeping the United States and South Korea from going to war with the North. The unusually blunt warning, from Gen. Vincent K. Brooks, the commander of American troops based in Seoul, came as South Korea’s defense minister indicated that the North’s missile,
Hwasong-14, had the potential to reach Hawaii. “Self-restraint, which is a choice, is all that separates armistice and war,” General Brooks said, referring to the 1953 cease-fire that halted but never officially ended the Korean War. “As this alliance missile live-fire shows, we are able to change our choice when so ordered by our alliance national leaders. “It would be a grave mistake for anyone to believe anything to the contrary.” Although doubts remained that North Korea had cleared all the technical hurdles to make a fully functional ICBM, the launch prompted Washington and Seoul to conduct a joint missile exercise off the east coast of South Korea on Wednesday. The drill involved firing an undisclosed number of ballistic missiles into the sea.

President Moon Jae-in of South Korea asked President Trump last night to endorse the exercise, arguing that the allies had to respond to the North’s provocation with “more than statements,” Mr. Moon’s office said. In Washington, Capt. Jeff Davis, a Pentagon spokesman, said that commercial airplanes, ships and satellites had been put at risk because North Korea did not announce its missile test ahead of time, which would have allowed airspace and sea traffic to be cleared. “We strongly condemn this act by North Korea,” Captain Davis told reporters at the Pentagon. “It is escalatory. It is destabilizing. It is also dangerous.” (Rick Gladstone and Choe Sang-Hun, “After North Korea Tests a Missile, the U.S. Seeks Sanctions and Hints at War,” New York Times, July 6, 2017, p. A-6)

The standoff over North Korea’s nuclear program has long been shaped by the view that the United States has no viable military option to destroy it. Any attempt to do so, many say, would provoke a brutal counterattack against South Korea too bloody and damaging to risk. That remains a major constraint on the Trump administration’s response even as North Korea’s leader, Kim Jong-un, approaches his goal of a nuclear arsenal capable of striking the United States. Over the years, as it does for potential crises around the world, the Pentagon has drafted and refined multiple war plans, including an enormous retaliatory invasion and limited pre-emptive attacks, and it holds annual military exercises with South Korean forces based on them. Today, the Trump administration made a point of threatening a military response. Gen. Vincent K. Brooks, commander of the American forces that conducted a missile exercise with South Korea, said the United States had chosen “self-restraint” with the North. Nikki R. Haley, the American ambassador to the United Nations, said her country’s “considerable military forces” were an option. “We will use them if we must, but we prefer not to have to go in that direction,” she told the Security Council. But the military options are more grim than ever. Even the most limited strike risks staggering casualties, because North Korea could retaliate with the thousands of artillery pieces it has positioned along its border with the South. Though the arsenal is of limited range and could be destroyed in days, the United States defense secretary, Jim Mattis, recently warned that if North Korea used it, it “would be probably the worst kind of fighting in most people’s lifetimes.” Beyond that, there is no historical precedent for a military attack aimed at destroying a country’s nuclear arsenal. The last time the United States is known to have seriously considered attacking the North was in 1994, more than a decade before its first nuclear test. The defense secretary at the time, William J. Perry, asked the Pentagon to prepare plans for a “surgical strike” on a nuclear reactor, but he backed off after concluding it would set off warfare that could leave hundreds of thousands dead. The stakes are even higher now. American officials believe North Korea has built as many as a dozen nuclear bombs — perhaps many more — and can mount them on missiles capable of hitting much of Japan and South Korea. Earlier in his term, President Trump tried to change the dynamics of the crisis by forcing the North and its main economic benefactor, China, to reconsider Washington’s willingness to start a war. He spoke bluntly about the possibility of a “major, major conflict” on the Korean Peninsula, ordered warships into nearby waters and vowed to “solve” the nuclear problem. But Trump has backed off considerably in recent weeks, emphasizing efforts to pressure China to rein in Kim with sanctions instead. After all, a pre-emptive American attack would very likely fail to wipe out North Korea’s arsenal, because some of the North’s facilities are deep in mountain caves or underground and many of its missiles are hidden on mobile launchers. The North has warned that it would immediately retaliate by launching nuclear missiles. But predicting how Kim would actually respond to a limited attack is an exercise in strategic game theory, with many analysts arguing that he would refrain from immediately going nuclear or using his stockpile of chemical and biological weapons to avoid
provoking a nuclear response from the United States. Assuming Kim is rational and his primary goal is the preservation of his regime, he would only turn to such weapons if he needed to repel a full-scale invasion or felt a nuclear attack or other attempt on his life was imminent, these analysts say. But anticipating what the North might do with its conventional weapons in the opening hours and days after an American attack is like trying to describe a “very complex game of three-dimensional chess in terms of tic-tac-toe,” said Anthony H. Cordesman, a national security analyst at the Center for Strategic and International Studies in Washington. The problem, Mr. Cordesman said, is that there are many ways and reasons for each side to escalate the fighting once it begins. Stopping it would be much more difficult. North and South Korea, separated by the world’s most heavily armed border, have had more than half a century to prepare for a resumption of the war that was suspended in 1953. While the North’s weaponry is less advanced, the South suffers a distinct geographical disadvantage: Nearly half its population lives within 50 miles of the Demilitarized Zone, including the 10 million people in Seoul, its capital. “You have this massive agglomeration of everything that is important in South Korea — government, business and the huge population — and all of it is in this gigantic megalopolis that starts 30 miles from the border and ends 70 miles from the border,” said Robert E. Kelly, a professor of political science at Pusan National University in South Korea. “In terms of national security, it’s just nuts.” North Korea has positioned as many as 8,000 artillery cannons and rocket launchers on its side of the Demilitarized Zone, analysts say, an arsenal capable of raining up to 300,000 rounds on the South in the first hour of a counterattack. That means it can inflict tremendous damage without resorting to weapons of mass destruction. Kim could order a limited response, by hitting a base near the Demilitarized Zone, for example, and then pausing before doing more. But most analysts expect the North would escalate quickly if attacked, to inflict as much damage as possible in case the United States and South Korea were preparing an invasion. “North Korea knows it is the end game and will not go down without a fight,” said Jeffrey W. Hornung of the RAND Corporation, adding, “I think it is going to be a barrage.” The North has often threatened to turn Seoul into a “sea of fire,” but the vast majority of its artillery has a range of three to six miles and cannot reach the city, analysts say. The North has deployed at least three systems, though, that can reach the Seoul metropolitan area: Koksan 170-millimeter guns and 240-millimeter multiple-rocket launchers capable of hitting the northern suburbs and parts of the city, and 300-millimeter multiple-rocket launchers, which may be able to hit targets beyond Seoul. There are perhaps 1,000 such weapons near the Demilitarized Zone, many hidden in caves, tunnels and bunkers. But under a traditional artillery strategy, the North would not fire them all at once. Instead, it would hold some in reserve to avoid giving their positions away and to conserve munitions. How much damage an initial attack would inflict depends on how many are used and on how much of the ordnance explodes. In 2010, North Korean forces fired about 170 shells at an island in the South, killing two civilians and two soldiers. Analysts later concluded that about 25 percent of the North’s shells failed to detonate. A study published by the Nautilus Institute for Security and Sustainability in 2012 accounting for these and other factors such as population density concluded that the initial hours of an artillery barrage by the North focused on military targets would result in nearly 3,000 fatalities, while one targeting civilians would kill nearly 30,000 people. The North could compound the damage by also firing ballistic missiles at Seoul. But Joseph S. Bermudez Jr., a North Korea expert at AllSource Analysis, a defense intelligence consultancy, said it was more likely to use missiles to target military installations, including American bases in Japan. United States and South Korean forces could be put on alert and bracing for retaliation before any attempt to knock out North Korea’s nuclear program. But there is little they can do to defend Seoul against a barrage of artillery. The South can intercept some ballistic missiles, with the recently installed Terminal High Altitude Area Defense system, as well as Patriot and Hawk systems. But it does not have anything like Israel’s Iron Dome that can destroy incoming artillery shells and rockets, which fly at lower altitudes. Instead, South Korean and American troops would employ traditional “counterbattery” tactics — using radar and other techniques to determine the location of the North’s guns when they are moved out of their bunkers and fired, and then using rockets and airstrikes to knock them out. David Maxwell, associate director for the Center for Security Studies at Georgetown University and a veteran of five tours in South Korea with the United States Army, said the Pentagon was constantly upgrading its counterbattery capabilities. But he added, “There is no silver bullet solution that can defeat North Korean fire before they inflict significant damage on
President Donald Trump vowed to confront North Korea "very strongly" following its latest missile test and urged nations to show Pyongyang there would be consequences for its weapons program. Speaking at a news conference with Polish President Andrzej Duda, Trump said North Korea was "a threat, and we will confront it very strongly." He said the United States was considering "severe things" for North Korea, but that he would not draw a "red line" of the kind that his predecessor, Barack Obama, had drawn but not enforced on the use of chemical weapons in Syria. Trump added: "They are behaving in a very, very dangerous manner and something will have to be done." Defense Secretary Jim Mattis said the missile test in itself did not bring the prospect of war between the United States and South Korea alliance and promising "the full range of U.S. capabilities.

"We stand ready to provide (military) options if they are necessary. But this is a purely diplomatically led (effort)," Mattis told a small group of reporters at the Pentagon. "Diplomacy has not failed. ... Diplomatic efforts remain under way as we speak." Mattis spoke by phone with South Korean Defense Minister Han Min-koo today, reaffirming Washington's commitment to the U.S.-South Korea alliance and promising "the full range of U.S. capabilities." He spoke with his Japanese counterpart yesterday. Late today, court filings made public disclosed that U.S. authorities were trying to seize millions of dollars from companies that deal with North Korea, including the country's military, from eight large international banks. Russia objected on Thursday to U.N. Security Council condemnation of the North Korean rocket launch because the U.S.-drafted statement referred to it as an intercontinental ballistic missile, diplomats said.

Moscow has said it believes Pyongyang fired an intermediate-range ballistic missile on Tuesday, while China has not identified the rocket launched. North Korea said it tested an ICBM and the United States said that was likely true. Trump flew to Hamburg today to attend a summit of leaders of the Group of 20 developed nations, and was due to meet with Xi there. His frustration

Seoul and South Korea." Based on counterbattery efforts in the Iraq war, the Nautilus Institute study estimates that North Korea might lose about 1 percent of its artillery every hour to American and South Korean counterbattery fire, or more than a fifth of its arsenal after a day of fighting. What makes the situation so dangerous is how easy it would be for either side to take action that leads the other to conclude an all-out war is imminent and escalate the battle. The United States and South Korea could hit targets besides artillery, including supply lines and communication facilities, for example. The North could send tanks and troops across the border and drop special forces into the South’s ports. Especially perilous would be any hint that the United States and South Korea were preparing a “decapitation” strike against the North Korean leadership, which could lead a desperate Kim to turn to nuclear or biochemical weapons. All things considered, analysts say, it could take American and South Korean forces three to four days to overwhelm North Korea’s artillery. How much damage North Korea inflicts in that time depends in part on South Korea’s ability to get people to safety quickly. As more of the North’s guns are destroyed and people take cover, the casualty rate would fall with each hour. The Nautilus Institute study projects 60,000 fatalities in the first full day of a surprise artillery attack on military targets around Seoul, the majority in the first three hours. Casualty estimates for an attack on the civilian population are much higher, with some studies projecting more than 300,000 dead in the opening days. The Seoul metropolitan government says there are nearly 3,300 bomb shelters in the city, enough to accommodate all 10 million of its residents. In Gyeonggi Province, which surrounds the capital like a doughnut, the provincial government counts about 3,700 shelters. Many train stations in the region double as shelters, and most large buildings have underground parking garages where people fleeing artillery attacks can seek cover. But critics say that the local authorities are unprepared for the chaos an artillery attack would cause and that the public is nonchalant about the prospect of war. The South Korean government conducts emergency drills only five times a year, and they are fairly desultory affairs that last about 20 minutes, with people hunkering in buildings or stopping in their cars on the roads after sirens go off. Many residents have no idea where their nearest shelter is. Few people keep stockpiles of food and water, for example, and while the government has indicated it may buy about 1.8 million gas masks for use in the event of a chemical attack, that would not be nearly enough to protect the population. "For the first 72 hours,” said Nam Kyung-pil, governor of Gyeonggi Province, “each individual will have to save their own lives or be prepared by themselves.” (Motoko Rich, “First Strike Is Option Few Can Stomach,” New York Times, July 6, 2017, p. A-1)
that Beijing has not done more to clamp down on North Korea prompted him to tweet on Wednesday: "Trade between China and North Korea grew almost 40% in the first quarter. So much for China working with us - but we had to give it a try!" Trump did not mention China in his remarks in Poland but his message that other countries needed to do more was clearly meant for Beijing. "President Duda and I call on all nations to confront this global threat and publicly demonstrate to North Korea that there are consequences for their very, very bad behavior," he said. U.S. Ambassador to the United Nations Nikki Haley told the U.N. Security Council on Wednesday the United States would propose new U.N. sanctions in coming days, and that if Russia and China did not support the move, then "we will go our own path." U.S. officials have said the United States might seek unilaterally to sanction more Chinese companies that do business with North Korea, especially banks, echoing a tactic it used to pressure Iran to curb its nuclear program. (Jeff Mason and Roberta Rampton, "Trump Pledges to Act 'Very Strongly' on North Korea Missile Threat," Reuters, July 7, 2017) President Trump warned that North Korea could face "some pretty severe" consequences after its defiant test of an intercontinental ballistic missile, but Washington also confronted firm opposition from Russia and China over any possible response. Trump did not specify potential U.S.-directed punishment for North Korea. Yet efforts to find consensus among world powers appeared to hit a wall — sharply limiting Trump’s options. With key players at odds, Trump must now find a way forward as he heads into Group of 20 meetings in Germany later today. In Germany, Trump is expected to have his second meeting with Chinese President Xi Jinping and his first with Russia’s president, Vladimir Putin. In Warsaw, Trump said the United States was considering “some pretty severe things” in response to what he called “very, very bad behavior” from the North, though he did not mention any specific plans. “Something will have to be done about it,” he said. At an emergency meeting of the U.N. Security Council yesterday, U.S. Ambassador Nikki Haley accused China and Russia of “holding the hands” of the North Korean leader Kim. Haley chided Beijing and Moscow for not supporting a resolution that would tighten sanctions and hinted that the United States would consider the use of force. “One of our capabilities lies with our considerable military forces,” she said. “We will use them if we must, but we prefer not to have to go in that direction.” Her words were met with criticism from Vladimir Safronkov, Russia’s deputy ambassador to the United Nations, who called stricter sanctions “not acceptable” and military action “inadmissible.” At a daily briefing in Beijing on Thursday, a spokesman for China’s Foreign Ministry backed him up, calling for calm in response to U.S. remarks. (Emily Rauhala, “Trump Warns of ‘Severe’ Consequences for North Korea as Russia, China Balk at Tough U.S. Talk, Washington Post, July 6, 2017)

The United States will continue to pursue diplomatic options to tamp down tensions with North Korea following that country's test of an intercontinental ballistic missile, Defense Secretary Jim Mattis said. "I do not believe this capability brings us closer to war," Mattis told reporters at the Pentagon. "Diplomacy has not failed. It is our self-restraint that has prevented war ... Our self-restraint holds." The two-stage missile launched by North Korea was not one that the United States had known about, the Pentagon said. Navy Capt. Jeff Davis, a Pentagon spokesman, said yesterday that several elements of the first-ever launch of an intercontinental ballistic missile by North Korea were worrisome, including the missile was fired into busy commercial airspace with no warning. The missile was fired from a mobile launcher from Panghyon Airport in northwest North Korea, which has not been used in previous missile launches. The missile was assessed to have the capability to travel more than 5,500 miles, making it capable of hitting Alaska, Davis said. The missile was tracked by the destroyer USS Momsen and the tracking ship USNS Howard O. Lorenzen. It flew for 37 minutes before splashing down within Japan's 250-mile economic zone, he said. However, Mattis said the United States was not caught off guard by the launch. "We knew it as soon as it was fired that it had been launched," he said. Mattis said the United States is still analyzing the launch to determine what advances North Korea was able to achieve. "It clearly had a booster, which was a new development on a previous missile," he said. Mattis said the missile advances do not force the United States to pursue a military response at this time. "We stand ready to provide options if necessary but this [response] is purely diplomatically led," he said. (Stars and Stripes, “Mattis: North Korean Missile Advances Do Not Force U.S. Military Response,” July 6, 2017)
South Korea said it is considering proposing military and Red Cross talks to North Korea to follow up on President Moon Jae-in's offer to stop all acts of hostility on the border and hold reunions of separated families. Moon unveiled his broad vision for bringing peace to the Korean Peninsula during his speech in Berlin today, two days after the North test-fired an intercontinental ballistic missile (ICBM). He proposed that the two Koreas mutually suspend hostile acts along their tense border on the July 27 anniversary of the armistice treaty that ended the three-year Korean War in 1953. He also offered to hold reunions of families torn apart by the war on Oct. 4, Korea's lunar fall harvest holiday and the 10th anniversary of the second inter-Korean summit.

"The government is working on follow-ups to implement Moon's proposal. ... We expect North
Korea's positive response to South Korea's offer aimed at bringing peace to the Korean Peninsula,” Lee Eugene, vice spokesperson at Seoul's unification ministry, told a press briefing. She said that the government is considering proposing the military working-level talks and the Red Cross meeting to the North. Detailed plans will be unveiled soon, Lee added. Seoul's proposal of military steps may include the suspension of the two Korean armies' loudspeaker broadcasts on the border. South Korea resumed loudspeaker broadcasts carrying anti-Pyongyang messages in January 2016 in response to North Korea's fourth nuclear test. It suspended loudspeaker campaigns in August 2015 after a landmark inter-Korean agreement on easing tensions. A reunion of separated families is one of the most urgent and humanitarian affairs as more than 50 percent of some 138,000 people on a waiting list for reunion events have passed away. "Moon has effectively proposed the Red Cross talks, but the government is mulling over the talks to discuss details of the reunions,” a ministry official said. The two Koreas held their last reunions for separated families in October 2015 at a resort at Mount Kumgang on North Korea's east coast. For separated family events, North Korea is currently demanding South Korea repatriate 12 female North Koreans who worked at a Pyongyang-run restaurant in China and defected to Seoul en masse last year. The North claimed that they were lured and kidnapped by Seoul's spy agency. "Without hesitation, North Korea should immediately respond to Moon's offer,” Unification Minister Cho Myoung-gyon said in a speech earlier in the day. Lee, the vice ministry spokesperson, said that the government will make efforts to flesh out Moon's North Korea policy, based on national consensus and communication with parties. "If necessary, we can seek (to send a special envoy) to help resolve North Korea's nuclear issue and improve inter-Korean ties,” she said. (Yonhap, “S. Korea Likely to Propose Talks to N.K. Following Moon’s Peace Gesture,” July 7, 2017) President Moon Jae-in proclaimed a vision for peace in Berlin on July 6, calling for the achievement of the Korean Peninsula's denuclearization through peaceful means. Moon said his aim was to “begin the bold journey of establishing a peace regime on the Korean Peninsula, with the Republic of Korea playing more of a guiding role.” As a first step, Moon identified five “policy directions for dismantling the Cold War framework on the Korean Peninsula and establishing permanent peace” - including guaranteeing the security of the regime in Pyongyang with the peninsula’s denuclearization - and proposed four “tasks for practice” to the North as a means of breaking through, including the resumption of inter-Korean dialogue and reunions of divided families. “The complete, verifiable, and irreversible denuclearization of the Korean Peninsula is a demand shared by the international community and an absolute prerequisite for peace on the Korean Peninsula,” Moon said in the speech, given in Berlin at the invitation of the Körber Foundation that afternoon. “The need for dialogue is more urgent than ever before at a time like now when the vicious cycle of military tensions has reached a critical point,” he said. Moon also said it was “important that the basic conditions have been put in place for restarting the halted Korean Peninsula peace process.” “Recently, South Korea and the US agreed on a general approach in which sanctions are a diplomatic approach and denuclearization of Korean Peninsula is achieved through peaceful means,” he explained. The “vision for peace on the Korean Peninsula” shared by Moon was both a summary of his ideas for North Korea policy and a blueprint for a peaceful future for the Korean Peninsula. It was a reflection of his longstanding ambitions of ending the Cold War-era framework on the peninsula through peaceful denuclearization and a peace regime, while using inter-Korean reconciliation to bring about a united economic community and pave the way for a future of branching out into Northeast Asia. In his speech, Moon gave a three-principle approach to North Korea policy ruling out efforts to hasten a regime collapse in Pyongyang, unification by South Korean absorption of the North, or artificial efforts to accelerate reunification. Moon also sternly criticized North Korea’s recent intercontinental ballistic missile (ICBM) launch as an “extremely disappointing and very misguided decision.” “North Korea’s choice this time is a reckless one. It has invited retaliation from the international community,” he said. At the same time, he also stressed that “the need for dialogue is more urgent than ever before at a time like now when the vicious cycle of increasing military tensions has reached a critical point.” “We do not wish for North Korea’s collapse, we will not pursue unification by absorption in any form, nor will be pursue artificial unification,” he said. Moon also emphasized that Seoul and Washington had “recently declared that we do not hold hostile policies against North Korea.” “Reunification will happen naturally at some point based on agreement between South and North once peace has been established,” he said. The message was that Moon plans to continue on with the so-called “four
President Moon’s Berlin speech: “…Distinguished guests from home and abroad, The Berlin in which we are here today is the very place where 17 years ago President Kim Dae-jung of the Republic of Korea introduced the "Berlin Doctrine" which laid out the foundation for reconciliation and cooperation between South and North Korea. Moreover, this Altes Stadhaus is a historic site where the German Unification Treaty was negotiated. Today, at the very place where Berlin’s lesson is still alive, I would like to outline the Korean Peninsula peace initiative of the new Korean Government. Distinguished guests, To Korea, which is the last divided nation on this planet, the experience of Germany's unification gives hope for unification, and at the same time shows us the path that we need to follow. First and foremost, it is the importance of the process leading to unification. Germany's unification made us realize how important the process of peace and cooperation based on mutual respect really is. The German people made the decision of
unification by themselves based on the trust that was built during this process. The citizens of East and West Germany interacted and cooperated with each other in various areas, and the two Governments guaranteed this institutionally. Nonpolitical exchanges in the private sector unlatched the gate of political ideology and the people from East and West Germany started to open their hearts towards each other. The fact that the Ostpolitik continued for twenty-some years is also an important point. The reason that a consistent policy was possible in spite of the change of governments is because it was supported by the people and was built upon the cooperation of the international community. Germany understood that when a peaceful order is created in Europe, the unification of Germany would also be possible under that structure. By keeping pace with and at times persuading the international community, Germany was able to obtain strong security, and was assured support for inter-German relations. The German unification process, which was initiated by Chancellor Willy Brandt, was completed under Chancellor Helmut Kohl, who was from a different political party. Likewise, I believe that for peace and common prosperity on the Korean Peninsula, there should be continued cooperation that transcends partisan lines.

Distinguished guests, For the Korean people who long for peace and unification of the Korean Peninsula, Berlin is remembered together with the "Berlin Declaration" made by President Kim Dae-jung. President Kim's Berlin Declaration led to the first inter-Korean Summit in 2000, and brought about the great transformation which enabled the South and the North, that had been in confrontation and conflict for more than six decades after the division and war, to enter into a path of reconciliation and cooperation. Following this path, President Roh Moo-hyun set a new milestone for the development of inter-Korean relations and peace and prosperity through the second inter-Korean Summit in 2007. President Kim Dae-jung and President Roh Moo-hyun also promoted international cooperation in order for peace to take root on the Korean Peninsula. At the time, the Six-Party Talks adopted the Sept. 19 Joint Statement and the Feb. 13 Joint Statement that outlined the principles and direction for resolving the North Korean nuclear issue. There was also progress in North Korea-US relations and North Korea-Japan relations. I am inheriting these two former government's efforts and, at the same time, with a more leading role by the Korean government, will embark on a dauntless journey towards establishing a peace regime on the Korean Peninsula. Respected guests from home and abroad, The biggest challenge that the Korean Peninsula is facing is the North Korean nuclear issue. North Korea is continuing its nuclear and missile provocations and is threatening the peace on the Korean Peninsula, Northeast Asia, and furthermore, world peace. In particular, the missile provocation just two days ago was a very disappointing and a largely wrong decision. It is not only a clear violation of UN Security Council resolutions, but is also an outright rejection of the repeated warnings by the international community. Above all, for my Government, which at long last had arranged a path towards dialogue through the recent ROK-US Summit, the level of regret is even deeper. This choice by the North was reckless. It incurred punishment by the international community. It is testing my Government's commitment that if North Korea stops its provocative actions and shows its will towards denuclearization, my Government will lead the way in helping the North receive the international community's support and cooperation. I hope that North Korea will not cross the bridge of no return. North Korea must give up its nuclear and missile development and find a way in which it can cooperate with the international community. The complete, verifiable, and irreversible denuclearization of the Korean Peninsula is the agreed demand of the international community and is the absolute condition for peace on the Korean Peninsula. This means that the decision for denuclearization of the Korean Peninsula is the only way North Korea will be guaranteed its security. Therefore, I would like to emphasize that now is the last chance for North Korea to make the right decision and also the best time to do so. This is because we have reached the tipping point of the vicious circle of military escalation, and thus, the need for dialogue is more pressing than ever before. It is also important to note that the basic conditions have been met to restart the Korean Peninsula Peace Process which had been halted. Recently, Korea and the United States agreed on the overall direction that sanctions are a diplomatic tool and the denuclearization of the Korean Peninsula should be achieved in a peaceful manner. Our two countries also made clear that we do not have a hostile policy towards North Korea. We affirmed that, together with the international community, we can provide a brighter future to North Korea, depending on its decision. Korea and the United States also shared the view that in order to create a breakthrough of the current crisis on the Korean Peninsula, improvement in inter-Korean relations is vital.
President Trump supported Korea's leading role in creating an environment conducive to the peaceful unification of the Korean Peninsula, and also supported my initiative to reopen inter-Korean dialogue. Chinese President Xi Jinping and I also reached a consensus on this matter. For quite some time, I have argued that my country must sit in the driver's seat and lead Korean Peninsula-related issues based on cooperation with our neighbors. Now the conditions are finally being fostered. It has also been repeatedly confirmed that if the right conditions are met, the United States, China, and the rest of the international community are keeping the door open for dialogue at any time. Now we are left with North Korea to make its decision. Whether it will come out to the forum for dialogue, or whether it will kick away this opportunity of dialogue that has been difficultly made, is only a decision that North Korea can make. But if North Korea does not stop its nuclear provocations, there is no other choice but to further strengthen sanctions and pressure. Peace on the Korean Peninsula and North Korea's security will not be guaranteed. I look forward to and urge North Korea to accept this commitment of my Government and the international community towards peace on the Korean Peninsula as a very significant and urgent signal. Distinguished guests, Now I would like to outline my Government's policy direction that will lead to dissolving the Cold War structure and establishing lasting peace on the Korean Peninsula. First, what we are pursuing is only peace. A peaceful Korean Peninsula is a peninsula free from the threat of nuclear weapons and war. It is a peninsula where the South and the North recognize and respect each other and live well together. We already know the road that leads to a peaceful Korean Peninsula. It is returning to the June 15 Joint Declaration and the Oct. 4 Declaration. Through these two declarations, the South and the North clearly stated that the owner of inter-Korean issues is our own nation, and committed to closely cooperate in easing tensions and guaranteeing peace on the Korean Peninsula. The two Koreas also promised to walk the path of common prosperity through cooperative projects in every sector of the society, including in the economic field. This spirit of agreement that was made on the foundation of mutual respect between the South and the North is still valid. And it is also desperate. We must return to that spirit where the South and the North together worked towards realizing a peaceful peninsula. I clearly state the following: we do not wish for North Korea's collapse, and will not work towards any kind of unification through absorption. Neither will we pursue an artificial unification.

Unification is a process where both sides seek coexistence and co-prosperity and restore its national community. When peace is established, unification will be realized naturally someday through the agreement between the South and the North. What my Government and I would like to realize is only peace. Second, my Government will pursue the denuclearization of the Korean Peninsula that guarantees the security of the North Korean regime. Last April, rumors that we are on the brink of war swept over the Korean Peninsula and the entire world. The military tension around the Korean Peninsula is like a "powder keg" of the world. We need to urgently ease the military tension on the Korean Peninsula. We need to rebuild the trust that has collapsed between the South and the North. In this regard, we will seek exchanges and dialogue. North Korea also needs to stop from any more nuclear provocations. We need to establish a military management system to prevent accidental clashes. A more fundamental solution is to uproot the North Korean nuclear issue. The North Korean nuclear issue has become much more difficult to deal with than the past with the advancement of North Korea's nuclear arsenal. A step-by-step and comprehensive approach is required. My Government, in cooperation with the international community, will work towards a comprehensive solution of the current issues on the Korean Peninsula and Northeast Asia, including the complete dismantlement of North Korea's nuclear program and establishing a peace regime, easing North Korea's security and economic concerns, and improving North Korea-US and North Korea-Japan relations. However, it takes two to tango. This is only possible when North Korea fully stops its nuclear provocations and comes out to the forum of bilateral and multilateral dialogue on denuclearization. Third, my Government will work towards establishing a permanent peace regime. The Korean Peninsula has been under an armistice for more than 60 years since 1953. Firm peace cannot be realized under an unstable armistice system. The invaluable agreements between the South and the North should not be shaken or broken every time there is a change of government. We need to institutionalize peace. Domestically, my Government will work towards enacting into law the inter-Korean agreements. We will make it clear that all agreements between the South and the North are basic assets of the Korean Peninsula that should be inherited even when there is a change of government. In order to
establish a permanent peace structure on the Korean Peninsula, we need to conclude a peace treaty with the participation of relevant countries, and formally end the war. Through a comprehensive approach on the North Korean nuclear issue and establishing a peace regime on the Korean Peninsula, my Government will pursue the conclusion of a peace treaty along with complete denuclearization. Fourth, my Government will work towards drawing a new economic map on the Korean Peninsula. Economic cooperation where the South and the North prosper together is an important foundation of establishing peace on the Korean Peninsula. I have planned a 'new economic map for the Korean Peninsula.' If there is progress in the North Korean nuclear issue and if appropriate conditions are met, my Government will draw a new economic map on the Korean Peninsula. We will freshly connect the South and the North, where it has been disconnected by the military demarcation line, with an economic belt and establish an economic community where the two Koreas proper together. The severed inter-Korean railway will be connected again. A train departing from Busan and Mokpo will run through Pyongyang and Beijing, and head towards Russia and Europe. Cooperation projects in Northeast Asia, such as the gas pipeline project connecting the two Koreas and Russia, may also be implemented. South and North Korea will prosper together as a bridging country connecting the Asian mainland and the Pacific. The South and the North need only to implement the Oct. 4 Declaration together. Then the world will see a new economic model of an economy of peace and co-prosperity. Fifth, my Government will consistently pursue nonpolitical exchange and cooperation projects by separating it from the political and military situation. The exchange and cooperation projects between South and North Korea are the process of healing the wounds and realizing reconciliation among all members on the Korean Peninsula and also efforts towards building peace from within. In both Koreas there are separated families who can no longer visit their hometown due to the division and war. It is truly an embarrassment for both governments of the South and the North for not being able to heal the scars for more than six decades. Among the separated family members who have applied to the Korean Government to meet their families in the North, there are more than 60,000 people who are still alive and their average age is 81 years old. The situation in North Korea should be the same. We need to let them meet their families while they are still alive. This is a pressing humanitarian issue that needs be addressed in front of any political considerations. Issues that the peoples of the South and the North suffer from due to the division need to be addressed by the authorities of the two Koreas. When the rivers in North Korea overflow, the people in South Korea suffer from floods. Infectious diseases, forest pests, and forest fires do not observe the boundaries between the South and the North. My Government will work towards cooperation in which the South and the North jointly addresses these problems. Exchanges among the private sector have contributed to easing tensions and restoring homogeneity between the two Koreas ahead of exchanges between the two governments. Expanding exchanges in the private sector is a valuable asset that can help untie the tight knot between the South and the North. My Government will widely support exchanges of the private sector in various areas. We will also actively support exchanges among different regions. The universal value and international norms of respecting human beings must be observed all around the Korean Peninsula. My Government will join the international community in raising its clear voice against the poor human rights conditions that the North Korean people are living in. In addition, my Government will expand its humanitarian cooperation in a way that actually helps the North Korean people. Distinguished guests, My Government and I are ready to implement while holding firmly to these policy directions. The South and the North need to work hand-in-hand and make a breakthrough in realizing peace on the Korean Peninsula. I suggest to North Korea that we first start with what is easy. First, let us solve the pressing humanitarian issue. This year marks the tenth anniversary of the Oct. 4 Declaration. Also, Chusuk, which is one of our nation's greatest traditional holidays, falls on Oct. 4 this year. In the Oct. 4 Declaration, the two Koreas agreed to expand the family reunions between the separated families and relatives. If the family reunion event can be held on this day when these two meaningful anniversaries overlap, it will be a meaningful start respecting and observing the agreement already made between the South and the North. If North Korea is ready to take one step further, I suggest that we also include visiting the ancestral graves for this year's family reunion event. The separated family members of the divided Germany were allowed not only exchanges of letters and phone calls but even exchange of visits and migration. There is no reason why we cannot do the same. Before more members of separated families leave us behind, we must wipe
their tears. If North Korea is not ready immediately, our side will allow and open North Korean separated family members to visit their hometown and ancestral graves in the South. I look forward to North Korea's positive response, and hope that South-North Korean Red Cross talks will be held to discuss the reunion of separated family members. Second, let us make the Pyeongchang Winter Olympics an 'Olympic of Peace' with the participation of the North. In Feb. 2018, the Winter Olympics will be held in Pyeongchang, Korea, which is only 100 km away from the military demarcation line. Two years later in 2020, the Summer Olympics will be held in Tokyo, and in 2022, the Winter Olympics will be held in Beijing. My Government would like to suggest to North Korea to utilize these series of precious events held in Asia as an opportunity for building peace on the Korean Peninsula, in Northeast Asia, and the world. Sports have the power of connecting one heart to another. When athletes from South and North Korea, and from the rest of the world, sweat and compete against each other, offer a hand to fellow athletes who have fallen down, and embrace each other, the world will witness peace through the Olympic games. I look forward to opening together a new era of peace on the Korean Peninsula while applauding together with the leaders of the world. As the IOC has promised its cooperation on the participation of North Korea in the Pyeongchang Winter Olympics, I look forward to North Korea's active and positive response. Third, let us mutually halt acts of hostility around the Military Demarcation Line (MDL). Even at this moment, a war without gunfire continues along the MDL on the Korean Peninsula. The escalation of military tension between the two militaries remains unchanged. This situation increases the danger of armed conflict between the South and the North and threatens the safety of the people who are living in the areas nearby on both sides. July 27 this year marks the 64th anniversary of the Armistice Agreement. If the two Koreas, starting this day, stop all acts of hostility that escalate military tension on the MDL, it will provide a meaningful opportunity to ease tensions between the two Koreas. Fourth, inter-Korean dialogue is necessary for peace on the Korean Peninsula and South-North cooperation. Easing tension on the Korean Peninsula is the most urgent issue between the South and the North. The current situation where there is no contact between the relevant authorities of the South and the North is highly dangerous. We need to start with contacts to manage the situation and move on to meaningful dialogue. I am ready to meet with Chairman Kim Jong-un of North Korea at any time at any place, if the conditions are met and if it will provide an opportunity to transform the tension and confrontation on the Korean Peninsula. We can place on the dialogue table all issues of interest between the South and the North, including the nuclear issue and the peace treaty, and discuss peace on the Korean Peninsula and inter-Korean cooperation. It will not be solved with only one attempt. However, making a start is important. One can take a step forward only after rising up from one's seat. I look forward to North Korea's decision. (Korea Herald, Cheong Wa Dae's unofficial translation of President Moon Jae-in's speech delivered at Berlin's Old City Hall upon the invitation of the Körber Foundation, July 7, 2017

DPRK FoMin spokesman’s statement “as regards the fact that the U.S. is pulling up the DPRK over the successful test-fire of intercontinental ballistic rocket Hwasong-14: On July 4, the DPRK successfully carried out the test-fire of inter-continental ballistic rocket Hwasong-14 which stands for the final gate to completing the state nuclear force. The success in the test-fire of Hwasong-14 at just one go is a brilliant victory achieved by the army and people of the DPRK in their more than half-a-century-long anti-imperialist, anti-U.S. showdown and a heroic deed that provided a reliable guarantee of peace and stability of the Korean peninsula and the region. However, the U.S. is condemning the DPRK's test-fire as a "global threat" and is scheming to increase the international sanctions and pressure on the country to the top notch. The DPRK makes it clear once again that its development of inter-continental ballistic rocket is an option taken to defend itself by completely terminating the hostile policy and nuclear war threat of the U.S. which have lasted for decades over the century. There are several nuclear weapons states in the world today, but the U.S. is the only and only country that makes it its daily business to impose constant nuclear threat upon the DPRK. The issue of the DPRK's nukes and ballistic rocket is an issue confined to the DPRK and the U.S., and the test-fire of the inter-continental ballistic rocket conducted by the DPRK this time is a "gift package" addressed to none other than the U.S. No other ICBM states had been more transparent than the DPRK in the development and test-fire of inter-continental ballistic rocket. The DPRK officially announced that it would commence the development of
The possible use of force against the North did not come up at the meeting with the U.S. and Japanese leaders, the South Korean president explained his policy of a phased denuclearization of the North, which calls for a resumption of dialogue with the United States in order to bring it back to the dialogue table so the world can resolve the North Korean nuclear issue.

Leaders of South Korea, Japan and the United States agreed to work together for tougher sanctions against North Korea for its latest missile provocation that hinted at the country's capability to target most countries in the world. The United States will receive more "gift packages" of different sizes from the DPRK in endless succession, as it tries harder to destroy, by means of sanctions and pressure, the overall national power and strategic position of the DPRK which have been drastically boosted.” (KCNA, “Statement of DPRK Foreign Ministry Spokesman,” July 7, 2017)
The leaders of South Korea and Japan agreed to improve the countries' relations, currently at a low ebb over history issues, while intensifying their joint efforts to resolve the North Korean nuclear issue peacefully, South Korea's presidential office Cheong Wa Dae said. South Korean President Moon Jae-in and Japanese Prime Minister Shinzo Abe also agreed to restart summit diplomacy. "The leaders of the two countries agreed to resume shuttle diplomacy between the countries' leaders, noting their close communication was important for the development of the countries' bilateral relations," Cheong Wa Dae spokesman Park Soo-hyun said in a press release. Moon and Abe noted the missile launch was a "very urgent and serious provocation," Park said at a press briefing in Hamburg, according to Cheong Wa Dae. The two were earlier joined by President Donald Trump for a three-way meeting that focused on ways to bring North Korea to the dialogue table. Moon and other global leaders have called for tougher sanctions to bring the reclusive state back to negotiations aimed at ending its nuclear ambition. In their bilateral talks, Moon and the Japanese leader agreed to keep pressuring North Korea to denuclearize. They said the North's denuclearization must be achieved in a complete and irreversible manner, but also through peaceful means. The South Korean president stressed the need to resume inter-Korean dialogue to that end, and the Japanese leader expressed his understanding, the Cheong Wa Dae spokesman said. They also agreed to seek a three-way summit with China's Xi Jinping in the near future. Turning to bilateral issues, Moon and Abe pledged to work together to enhance cooperation between their countries to help expand their economic and trade relations, as well as personnel exchanges. Seoul-Tokyo relations often suffer setbacks over history issues that include Japan's territorial claim to a set of South Korean islets in the East Sea, called Dokdo. They have again turned sour over what many South Koreans consider a Japanese attempt to whitewash its war atrocities. In a 2015 agreement, Seoul's former conservative agreement under ousted former leader Park Geun-hye agreed to put an end to disputes over Japan's sexual enslavement of Korean women during World War II in exchange for a mere 10 billion yen (US$8.79 million). Abe underscored the need to implement the deal to improve the countries' relations in his meeting with Moon in the German port city, according to the Cheong Wa Dae spokesman. President Moon reiterated that most South Koreans simply could not accept the deal, but said the issue must not keep the two countries from maintaining and further developing their bilateral ties in other areas, Park said. (Yonhap, “S. Korea, Japan Agree to Improve Ties amid N. Korean Missile Provocation,” July 7, 2017)

If North Korea wanted to enter into negotiations, it might decide that it first had to gain the upper hand in a hurry, and it might conclude that the best way to do that was through shooting off one missile after another in rapid succession. As an explanation for all the launches that North Korea has recently conducted — three ballistic missiles launched last month, the salvo of cruise missiles launched Thursday — it seems at first blush like a stretch. But a growing number of analysts with backgrounds in talking to North Korean officials wonder whether the relentless pace of the North’s missile testing is designed to get Kim Jong Un’s regime into its strongest bargaining position before economic sanctions force it to return to the negotiating table. “This is like taekwondo,” said Peter Hayes, executive director of the Nautilus Institute for Security and Sustainability, referring to the Korean martial art. “This is the part where your opponent engages the spiral kick to the head with a bloodcurdling scream to put you off balance at the outset,” said Hayes, who has been dealing with North Koreans for more than 20 years. After the latest launch, Kim said that “the Yankees should be very worried” about North Korea’s capabilities. But beyond the bombastic pronouncements and technical progress, some analysts see familiar signs that North Korea is ratcheting up the tensions before being forced to talk on American terms. “The further they advance towards having an operational arsenal, the more they can get from outside powers just for a freeze when they return to the negotiating table,” said Chun Yung-woo, a former South Korean nuclear negotiator with the North and former national security adviser in Seoul. With more and more sanctions being piled on North Korea, it is just a matter of time until the pressure becomes unbearable, he said. “So before they’re drawn back to the negotiating table, they have every reason to speed up their technical development,” Chun said. At “Track 2” talks in Sweden over the weekend, North Korean representatives told U.S. experts and former officials
that they were not interested in discussing an end to their missile or nuclear programs. This was the latest of several periodic meetings with American experts and former officials to send messages to the administration in Washington and to test ideas. The State Department knows about the meetings, but officials say the talks have no impact. “The underlying North Korean message throughout our discussions was that ‘denuclearization is totally off the table and there is nothing that either the U.S. or South Korea could offer that could achieve denuclearization,’” said Bruce Klingner of the Heritage Foundation, who participated in the weekend’s talks. Negotiations with North Korea, even when they do happen, do not have a good record of success. The “six-party” talks in 2005 led Pyongyang to agree to dismantle its nuclear program in return for economic assistance and security guarantees, but the deal collapsed in 2009 when North Korea launched what it said was a satellite. The international community said it was part of an intercontinental ballistic missile program. In 2012, Washington and Pyongyang tried to forge a new deal, known as the “Leap Day” agreement because it was announced February 29. Under it, North Korea promised no more nuclear tests or long-range missile launches, while Washington offered new humanitarian assistance. That deal lasted only 16 days before North Korea said it was getting ready to launch another “satellite” — which it duly did. Despite this poor record, there is general agreement that this sort of diplomacy is the least-bad option for dealing with North Korea. And there have been signs of qualified willingness from both sides. President Trump, who prides himself on negotiating skills honed during decades in business, said last month that he would be “honored” to meet Kim, even labeling him a “smart cookie.” A top North Korean diplomat, after talks with former U.S. officials in Norway last month, said the Kim regime would be willing to talk “if the conditions are there.” Recent efforts to resume official talks have broken down because of various preconditions, including Washington’s insistence that there can be no talks unless denuclearization is on the agenda, and Pyongyang’s insistence on instead discussing a peace treaty — a document that would lead to calls for the United States to remove all its troops from South Korea while leaving the North as a nuclear state. At some point Kim could decide that he is in a strong enough bargaining position, said Gary Samore, who served as President Barack Obama’s top nonproliferation official and is at Harvard’s Belfer Center. “Then he can agree to a test moratorium, just like he did with the Leap Day deal,” he said. Adding to North Korea’s incentive to talk: the election last month of a pro-engagement president in South Korea. Moon Jae-in has promised to resume talks with Pyongyang if it will help solve the nuclear problem. “Kim Jong Un could agree to take a pause [from testing] and find out what kind of a deal he could get from Moon, who is clearly more willing to address North Korea’s economic interests and security concerns, and to see what Trump, with all his big talk, has on offer,” Samore said. That could pave the way for further talks. “Frankly, I don’t think it will get very far, but at least it will calm the current situation and slow down the program,” Samore said. Oh Joon, South Korea’s ambassador to the United Nations until last year, agreed that talks would at least stop North Korea from making progress on its missile program. “The Moon Jae-in government will jump at the opportunity for talks,” Oh said. “And for Trump, if he can bring North Korea back to denuclearization negotiations, he can say, ‘See, I have achieved what Obama couldn’t in eight years.’ It’s good for everyone.” The question now is what Kim Jong Un thinks is enough in terms of his bargaining position. “If he thinks he needs a long-range capability in order to negotiate with the U.S. on strong terms,” Samore said, “then we may have years of testing ahead of us.” (Anna Fifield, “What Does Kim Jong Un Want with All These Missile Tests? Talks Perhaps,” Washington Post, July 7, 2017)

President Moon Jae-in and Japanese Prime Minister Abe Shinzo remained poles apart over a 2015 comfort women deal during their first summit Friday. Despite the different opinions, the two leaders agreed to work to move onto future-oriented relations. But it remains to be seen whether the strained diplomatic ties, which have arisen from historical disputes, can be restored sooner rather than later. The 40-minute summit took place in Hamburg, Germany, on the sidelines of the G20 summit. Moon told his Japanese counterpart, “There is something that blocks the improvement of South Korea-Japan relations,” according to presidential spokesman Park Soo-hyun. Moon said South Koreans cannot accept the deal “emotionally,” signaling his willingness to renegotiate the verbal agreement the former Park Geun-hye administration made with the Japanese government. Moon’s comment was a repetition of what he told Abe when the two held a telephone
conversation following the former’s inauguration in May. Abe also stuck to his earlier position, calling on Seoul to implement the agreement. Under the deal, the two nations agreed to “finally and irreversibly” resolve a decades-old dispute over Japan’s sexual enslavement of Korean women before and during World War II. The Japanese government provided 1 billion yen ($9.97 million) to a Korean foundation dedicated to supporting the victims. (Jun Ji-hye, “Moon, Abe Confirm Different Views on Comfort Women Deal,” Korea Times, July 8, 2017)

U.S. authorities have tried to seize millions of dollars associated with several companies that deal with North Korea, including the country’s military, from eight large international banks, according to court filings made public today. The effort was revealed two days after North Korea tested a long-range missile capable of reaching Alaska, ratcheting up tensions with the United States and adding to worries about North Korea leader Kim Jong Un’s nuclear weapons plans. Today’s filings show that Chief Judge Beryl Howell of the federal court in Washington, D.C. on May 22 granted U.S. prosecutors’ applications for "damming" seizure warrants against Bank of America Corp, Bank of New York Mellon Corp, Citigroup Inc, Deutsche Bank AG, HSBC Holdings Plc, JPMorgan Chase & Co, Standard Chartered Plc and Wells Fargo & Co. Prosecutors believe the banks have processed more than $700 million of "prohibited" transactions on behalf of entities tied to North Korea since 2009, including the period after Donald Trump was elected U.S. president, the filings show. Some of the transactions were processed for Dandong Zhicheng Metallic Material Co and four affiliated "front" companies that prosecutors said tried to evade sanctions through transactions that would benefit North Korean entities, "including the North Korea military and North Korea weapons programs," according to the filings. A person answering the telephone at Dandong Zhicheng Metallic Material Co in northeastern China said the company was not aware of the case, and declined to comment. The company is based in Dandong, a city on the border with North Korea, where the majority of trade between the two countries takes place. On its Alibaba page, the company says annual revenue exceeds $100 million, and it has 12 years of experience in dealing with anthracite, briquettes and graphite. In a 2013 online profile for an industry conference in China, Dandong Zhicheng said it imported 1.8 million tonnes of North Korean anthracite coal, worth about $250 million. Although it did not give a timeframe, that figure makes the company one of the largest suppliers of North Korean coal to major steel producers such as China Minmetals and Hesteel Group. On February 18, China banned the import of North Korean coal for the rest of the year, and in April ordered trading firms, including Dandong Zhicheng, to return their North Korean coal cargoes, sources said at the time. Dandong Zhicheng and the alleged front companies were not the named defendants in the court papers made public. The filings did not say any of the banks knowingly violated sanctions against North Korea. Asked about the issue, Chinese Foreign Ministry spokesman Geng Shuang reiterated that any infringements of U.N. resolutions on North Korea would be dealt with according to Chinese law, and that China opposed "long-armed jurisdiction." In her decision, Howell authorized warrants requiring the eight banks to accept incoming transactions but not allow outgoing transactions involving the five companies for 14 days, and thereafter to seize what they collected. Howell, an appointee of President Barack Obama, overruled a federal magistrate judge's May 2 refusal to authorize the warrants, saying prosecutors had probable cause to obtain them. She cited a government affidavit describing in "80 pages of detail" how the five companies conduct transactions "designed to conceal the true origin and destination" of funds being wired, "consistent with generalized patterns of North Korean money laundering" identified by multiple sources, including two North Korean defectors. Bank of America, Deutsche Bank, JPMorgan and Wells Fargo declined to comment. The other banks had no immediate comment or did not immediately respond to requests for comment. (Jonathan Stempel, “U.S. Seeks Fund Tied to North Korea from Eight Big Banks,” Reuters, July 7, 2017)

For years before North Korea fired its first intercontinental ballistic missile this week, the Pentagon and intelligence experts had sounded a warning: Not only was the North making progress quickly, spy satellite coverage was so spotty that the United States might not see a missile being prepared for launch. That set off an urgent but quiet search for ways to improve America’s early-warning ability — and the capability to strike missiles while they are on the launchpad. The most intriguing solutions have come from Silicon Valley, where the Obama
administration began investing in tiny, inexpensive civilian satellites developed to count cars in Target parking lots and monitor the growth of crops. Some in the Pentagon accustomed to relying on highly classified, multibillion-dollar satellites, which take years to develop, resisted the move. But as North Korea’s missile program progressed, American officials laid out an ambitious schedule for the first of the small satellites to go up at the end of this year, or the beginning of next. Launched in clusters, some staying in orbit just a year or two, the satellites would provide coverage necessary to execute a new military contingency plan called “Kill Chain.” It is the first step in a new strategy to use satellite imagery to identify North Korean launch sites, nuclear facilities and manufacturing capability and destroy them pre-emptively if a conflict seems imminent. Even a few extra minutes of warning might save the lives of tens of thousands of Americans — and millions of South Koreans and Japanese who already live within range of the North’s missiles. “Kim Jong-un is racing — literally racing — to deploy a missile capability,” Robert Cardillo, the director of the National Geospatial-Intelligence Agency, which coordinates satellite-based mapping for the government, said in an interview days before North Korea’s latest launch. “His acceleration has caused us to accelerate.” The timeline for getting the satellites in orbit, which defense officials have never discussed publicly, reflects the urgency of the problem. The missile launch by North Korea on Tuesday was initiated from a new site, a mobile launcher at the Pang Hyon Aircraft Factory. Capt. Jeff Davis, a Pentagon spokesman, said the missile “is not one we have seen before.” That mobility is the problem that the new satellites, with wide coverage using radar sensors that work at night and during storms, are designed to address. Less than one-third of North Korea is under spy satellite coverage at a given moment. American intelligence analysts detected indications of an impending launch in the days before the missile firing, according to a spokesman for the Defense Intelligence Agency, Cmdr. William Marks. But even after the launch, the Pentagon misjudged what it was looking at. Minutes after its 37-minute flight ended, the United States Pacific Command described the missile as an intermediate-range model, often seen. Hours later, Secretary of State Rex W. Tillerson issued a very different conclusion: that the North had tested its first intercontinental ballistic missile, able to reach Alaska. The commercial radar push is one of several new ways the administration is seeking to counter the North Korean threat. President Trump inherited a secret effort to sabotage the North’s missile launches. But its success has been spotty at best, especially of late. And joint American-South Korean missile tests, conducted hours after the ICBM test, appeared to be part of the new strategy that includes Kill Chain — the missiles were designed to reach Pyongyang, where the country’s leadership lives. Kill Chain was also mentioned in a joint statement issued last week by the United States and South Korea, a notable shift for the South’s new president, Moon Jae-in. He has rejected public discussion of pre-emptive military action, arguing it plays into the North Korean paranoia that the United States and its allies are plotting to end the Kim government. The new satellite initiative builds on technology created more for Wall Street than the Pentagon. From an office in an old Defense Department building within view of the Google campus in California, Raj Shah, the director of the Defense Innovation Unit Experimental, or DIUx, is already investing in companies that exploit tiny civilian radar satellites, able to pierce darkness or storms, in hopes that the Pentagon can use them by the end of the year, or early in 2018. “It’s a very challenging target,” said Shah, a former F-16 pilot in Iraq whose extensive experience in Silicon Valley appealed to Defense Secretary Ashton B. Carter, who set up the unit during Obama’s second term and recruited Mr. Shah. “The key is using technologies that are already available, and making the modifications we need for a specific military purpose,” Shah said. His unit made an investment to jump-start the development efforts of Capella Space, a Silicon Valley start-up named after a bright star. It plans to loft its first radar satellite late this year. The company says its radar fleet, if successfully deployed, will be able to monitor important targets hourly. “The entire spacecraft is the size of a backpack,” said Payam Banazadeh, a founder of the company. Born in Iran, he learned satellite design at the University of Texas and NASA’s Jet Propulsion Laboratory, specializing in miniaturization. Once in orbit, the payload, he added, would unfurl its antenna and solar panels. “Everything is getting smaller,” Banazadeh said of the craft’s parts. “Even the next version of the satellite is getting smaller.” Seeing the early fruits of the Pentagon experiment, the National Geospatial-Intelligence Agency is opening its doors to companies that can supply it with satellite radar data in addition to traditional images. Its outpost, set up this year, is in San Jose, the heart of Silicon Valley. Federal officials rarely, if ever, acknowledge the poor reconnaissance
North Korea may be one of the world's most isolated countries, but the tightening sanctions regime it has lived under for the past two decades is anything but impermeable. An examination of North Korea's global connections reveals that even as it becomes increasingly dependent on China, Pyongyang maintains economic and diplomatic ties with many nations. Those links—from commercial and banking relationships to scientific training, arms sales, monument-building and restaurants—have helped it amass the money and technical know-how to develop nuclear weapons and missiles. The nature and extent of North Korea's global ties come from current and former officials, researchers, North Korean defectors, U.N. decisions, NGOs and an analysis of economic statistics. In some cases, North Korea leans on old allies, particularly those like Cuba from the former Communist bloc, or those like Syria that are similarly hostile to the U.S. In others, notably in Africa, it has more transactional relationships to supply items such as cheap weaponry or military training. In the Middle East, it supplies laborers for construction work and pockets almost all their earnings. Sanctions against North Korea haven't been as broad as those applied to Iran over its nuclear program, nor as rigidly enforced. David S. Cohen, undersecretary of the Treasury for terrorism and financial intelligence during the Obama administration, wrote in an op-ed in April that "North Korea has gotten off relatively easy, especially as compared with Iran." Trying to crack down on North Korean business activities is like a game of Whac-A-Mole. North Korean defectors have detailed how the regime uses front companies to conceal its commercial activities in foreign countries, or adopts business names that obscure their identity by avoiding using North Korea's full name, thereby benefiting from confusion over whether the entity is North or South Korean. Pyongyang maintains diplomatic ties with 164 countries and has embassies in 47,
primitive system of taxation, says Justin Hastings, a lecturer at the University of Sydney who has
Korean enterprises to take the lead, with the regime collecti
and counterfeit U.S. dollars, Pyongyang has mostly shifted its strategy to allow private North

For these workers, wages are paid directly to North Korean officials, raising hundreds of millions
of dollars a year for the state, human-rights groups say. U.N. sanctions are primarily intended to
block North Korea's illegitimate trade and revenue streams that have a suspected link to its
weapons programs. The U.N. doesn't target all of Pyongyang's business activities abroad, such as
the chain of restaurants it operates in Asia and the Middle East, or its dispatch of laborers. U.S.
sanctions go further in trying to disrupt North Korea's trade and revenue, including a recent move
to block access to the U.S. financial system for a bank in China on which Pyongyang relied. The
U.S. has sanctioned North Korean leader Kim Jong Un, a move that would freeze any of his assets
in America. Secretary of State Rex Tillerson on Tuesday called on the global community to stop
doing business with Pyongyang. This week, Sen. Cory Gardner (R., Colo.), chairman of the Senate
Foreign Relations Committee's subpanel on East Asia, said he was drafting legislation that he says
would create a "global embargo" on North Korea. "We need to shut off North Korea's access to
oil, to trade, to currency, to financial institutions," he said in an interview Thursday, calling for
"Iran-style" sanctions. "They are far from being 'sanctioned out.' They are certainly isolated, but
they have to recognize they ain't seen nothing yet." China has had close ties to North Korea since
the 1950s when it sent troops to fight U.S.-led forces backing the South in the Korean War. In
2001, China accounted for around 18% of North Korea's exports and 20% of its imports, ranking
behind Japan on both measures, according to customs figures compiled by Harvard University's
Atlas of Economic Complexity. Since U.N. sanctions on North Korea were tightened in 2009,
Japan and other countries have curtailed commercial ties with Pyongyang, leaving China as by far
its biggest trade partner. For the past five years, China has accounted for more than 80% of North
Korea's imports and exports, providing an economic lifeline even as political relations between
Beijing and Pyongyang have deteriorated. During that period, China has imported mostly
industrial raw materials from North Korea, especially coal, but also seafood and clothing such as
men's suits and overcoats. China's customs figures show that its exports to North Korea have
increased this year. Crucially, China continues to be North Korea's biggest source of crude oil,
according to diplomats and experts on the region. Much of North Korea's trade takes place over
the 880-mile land border with China, which is porous and sparsely guarded. Small Chinese and
North Korean companies quietly ferry coal, iron ore and other resources over the border, far from
checkpoints. U.N. sanctions introduced in March 2016 banned exports of North Korean iron ore
unless they were exclusively for "livelihood purposes"—a loophole China continues to exploit.
While North Korea gained notoriety in the early 2000s for state-backed exports of illegal drugs
and counterfeit U.S. dollars, Pyongyang has mostly shifted its strategy to allow private North
Korean enterprises to take the lead, with the regime collecting bribes from these enterprises in a
primitive system of taxation, says Justin Hastings, a lecturer at the University of Sydney who has
The two dozen commandos trained to kill North Korean dictator Kim Il Sung on a remote island off the coast of South Korea never made it to Pyongyang. The men of the 2325th Group’s 209th Detachment had been recruited from the country’s poor, desperate, and criminal and brought to Silmido Island to be trained to become assassins. To South Korea’s own authoritarian leaders in 1968, this meant they had to be hardened. They were abused, neglected, and put through grueling exercises with guards shooting at their feet and beating them with bats when they didn’t perform to expectations. Six of them were executed for disobedience; another drowned by accident. Their mission was to infiltrate North Korea, sneak into one of Kim’s palaces, and murder the Great Leader, paying North Korea back in kind for a failed 1968 special operations raid aimed at assassinating South Korean President Park Chung-hee. By 1971, Park had given up on the prospect of revenge. The men of Silmido Island, however, had not. That year, they rose up, killing 18 of their guards with their honed commando skills and stealing a boat across the Yellow Sea to the port of Incheon. There they hijacked two buses and set out to Seoul to kill the men who had ordered them to be turned into weapons. Like many attempts to kill members of the Kim dynasty both before and after, this one ended in ruin, blazing out in a hail of gunfire and grenade explosions as the remaining recruits fought a doomed battle with police in the South Korean capital. But even if they had been launched against the North, their fate would have been the same. Even their handlers believed their chances of survival were slim — a fact they kept hidden from the commandos. The North had long proved inhospitable ground for infiltrators. South Korean intelligence had “made no serious effort” to carry out intelligence operations in the North in the late 1960s “because the expected losses of intelligence agents would be high and the benefits nil or virtually nil,” according to a declassified CIA report. Nearly a half-century later, the Kim dynasty is still in power in North Korea, and talk of decapitation is in the air once again. Seoul has begun to counter Pyongyang’s aggressive messages with threats of its own to kill current leader Kim Jong Un at the outset of any war. But long before Pyongyang began lighting off ballistic missiles and churning out nuclear warheads, the Kim dynasty has been facing down assassination threats, both real and imagined. From the days of Japanese colonialism in the 1930s through the turbulent end of communist regimes in the 1990s, many have tried (and failed) to kill a Kim. But despite facing lethal challenges from within and without, the dynasty has always managed to dodge would-be assassins thanks to canny survival skills, some less than fully baked plots, and an elaborate network of bodyguards, secret police, and informants. The Kim family’s first brush with death came in the 1930s, when Kim Il Sung joined the Chinese 1st Route Army as an insurgent in the resistance against Japanese colonial rule in Manchuria and Korea. Once Kim had made a name for himself in the resistance against Japanese occupation, Japanese police set up a designated “special activities unit” to hunt him down, employing dozens of former guerrillas whom the Japanese lured from Kim’s unit by promising amnesty. Together with a network of police informants, the men stalked their former comrade and leader — a lesson in betrayal that Kim would remember for the rest of his life. Kim was protected during his guerrilla days by a band of bodyguards, which reportedly included his first wife, Kim Jong Suk, the mother of Kim Jong Il. North Korean histories of the period recount a battle in which Kim Jong Suk saved the future North Korean leader’s life in northeastern China, shielding Kim Il Sung from enemy soldiers taking aim at him from a nearby field of reeds and dropping the would-be assassins with her Mauser rifle. The tale has long been a propaganda parable about the need for absolute devotion to the Kims’ security, though there’s little independent evidence to back it up. The first confirmed attempt on Kim Il Sung’s life in the postwar era — though not the last — came during a ceremony at the Pyongyang railway station commemorating the Korean independence movement on March 7/8/27.
1, 1946. Assassins reportedly sent by the South Korean government threw a homemade grenade at the podium as Kim spoke, and Yakov Novichenko, a Soviet Army lieutenant guarding the assembled dignitaries, sprang into action and grabbed the grenade, which exploded in his hand, blowing off his arm. The incident spawned a lifelong friendship between Kim and Novichenko, as well as a cheesy Soviet-North Korean biopic in the mid-1980s. (Leonid Vasin, an assistant section chief in the Soviet Army’s special propaganda section who worked closely with Pyongyang later, would in time write a more skeptical account of the incident. Vasin claimed that the homemade grenade landed about 100 feet from Kim and to the right of the podium, posing little threat.) The coterie of guards surrounding Kim in the mid-1940s would eventually evolve into one of the world’s most repressive and pervasive police states, run for the personal benefit of the Kim family. Within that architecture of repression grew an elaborate praetorian guard for the North’s supreme leaders, protecting them with multiple, overlapping rings of security. At the innermost ring are five to six elite, handpicked bodyguards from the brigade-sized Office of Adjutants, also known as Office No. 6, who directly protect the Kims. (It’s the loose equivalent of the U.S. Secret Service—except with 20 times as many people, in a country a fraction of the size of America.) The Kims’ personal guards are senior officers who have proved their reliability and loyalty through years of service in North Korea’s Guard Command, a 100,000-member unit devoted to the security of the Kim family and the upper levels of North Korean officialdom. Other Guard Command soldiers, picked from families with no known ties to Pyongyang’s communist elite, provide the next layers of protection around Kim Jong Un, surrounding him at events, official visits, and on personal travel, as well as protecting his various residences. The capital itself is protected by the Pyongyang Defense Command and Pyongyang Air Defense Command, which would fight within the city and defend its airspace in the event of a major war or coup attempt. Outside of Pyongyang, the 3rd Corps of the Korean People’s Army (KPA) comprises the final, most heavily armed ring, guarding the western approaches to Pyongyang from the port of Nampo north to the Chongchon River. A handful of agencies also conduct surveillance within the North to act as an early tripwire for signs of disloyalty and coup plots in the making. The State Security Department runs an expansive network of eavesdropping and informants to spy on North Korean civilians while the more sensitive work of surveilling senior Workers’ Party officials is carried out by the Organization and Guidance Department. Within the KPA, the Military Security Command acts as a kind of parallel secret police to keep tabs on those in uniform. Together, the domestic intelligence and security agencies are aided by the cultivation of a Kim personality cult, which emphasizes the worship of the Kim family as essentially supernatural beings. Attempting to kill a Kim, for many North Koreans, would be more than treason—it would be blasphemy. Like Chinese emperors, the North Korean state, too, promises suffering not only to “traitors” but to their families, further deterring any attempt. The greatest test of the security apparatus protecting the Kims came in the 1990s as North Korea transitioned from the leadership of Kim Il Sung to his son Kim Jong Il. With the fall of the Berlin Wall and the Soviet Union, communist states were crumbling, and many wondered if North Korea would be the next to go. In addition to the geopolitical shift, there were also whiffs of discontent about Kim Jong Il’s position as his father’s heir. Rumors of coup plots and assassination attempts began to trickle out of the North and into Japanese and South Korean media. In the early ’90s, news outlets began to report on a supposed assassination plot led by Col. Gen. An Chang Ho and 30-40 military officers who had all studied at the Frunze Military Academy in the Soviet Union. The plots purportedly planned to turn their tanks’ guns on the two Kims during an April 1992 military parade commemorating the 60th anniversary of the founding of the KPA. “There is a lot of sourcing—from media reports to defector interview data—that establishes that An was dismissed and arrested and that alumni of Russian and East European military universities were subject to investigations,” says Michael Madden, a visiting scholar at Johns Hopkins University and an expert on North Korean leadership. “Whether An actually participated in an assassination attempt or violent power challenge is a different matter altogether.” Shortly after the death of Kim Il Sung, the KPA’s 6th Corps, based in North Hamgyong province, supposedly went on the move in 1995 with the aim of mounting a coup. “The plot was uncovered by elements within the 6th Corps itself, so it wasn’t as if it was found out by the security services,” says Ken Gause, the director of the international affairs group at CNA, a nonprofit research and analysis organization, and an expert on North Korean security institutions. “It was mainly the head of the 6th Corps [Kim Yong Chun] going to the head of the
troops deployed. Nor is it necessarily clear that the KPA would throw down its weapons in the months. But even in a scenario where the United States or South Korea succeeds in a preemptive strike, making a big deal out of it, but there are many leadership targets in North Korea,” says retired Army Col. David Maxwell, a former Special Forces officer who served with U.S. Special Operations Command Korea. “All of the command and control facilities, all of the relocation facilities from Pyongyang, the villas that Kim Jong Un might use during time of war — all of these are potential targets, at minimum, for surveillance and, in extremis, to target people that are at those leadership locations.” While knocking out enemy leadership in a war is hardly a new idea, the South Korean military has gotten more vocal about its decapitation capabilities in recent years. South Korea’s Army Special Warfare Command announced in 2016 that it was standing up a special operations unit tasked with killing Kim Jong In and other senior leaders in the event a preemptive strike became necessary. For its part, North Korea has accused its adversaries in Washington and Seoul of a bizarre plot to “commit state-sponsored terrorism against the supreme leadership of the DPRK by use of bio-chemical substance.” But any special operations team would face steep hurdles in getting close enough to Kim Jong Un to kill him. First, South Korean special operators would have to hitch a ride with their American counterparts in the U.S. Air Force Special Operations or the 160th Special Operations Aviation Regiment to infiltrate the North. Once across the Northern Limit Line, a team would then have to make it past the KPA’s 3rd Corps, which defends the approaches to the capital against invaders looking to land at Nampo and take the highway up or drop from the sky in an airborne assault. “If the defense by the 3rd Corps and the 4th Corps has failed, the [soldiers of the Pyongyang Defense Command] plan to defend the city section by section, giving time for Kim Jong Un and the Guard Command to move the leadership out into the north-central part of the country,” says Joseph Bermudez, an expert on the North Korean military. American special operators have carried out multiple such raids in places like Pakistan, Somalia, and Libya since 9/11, swooping in with stealth and speed to capture or kill terrorist leaders on the run. Trying to replicate those feats against a heavily armed nation-state lengthens the odds considerably. “It looks good in the movies, but it’s not something that is easily done,” Maxwell says. The most practical method might be a missile barrage by either the United States or South Korea. The South’s “Korea Massive Punishment and Retaliation” plan, announced after the North’s September 2016 nuclear test, calls for ballistic and cruise missiles to flatten sections of Pyongyang associated with Kim Jong Un and his commanders should a nuclear strike appear imminent. Four years before the plan’s rollout, Seoul tipped its hand with the public test of a Hyunmoo-3 cruise missile, shown smashing into a target crafted in the shape of Pyongyang’s Kumsusan Palace of the Sun. But all the missiles and special operators are useless unless they have good intelligence to guide them to a leader’s location. Getting that kind of sensitive information in a hard target like North Korea can be a quixotic quest, but that hasn’t dimmed the appetite for the enterprise, says Jeffrey Lewis, the director of the East Asia nonproliferation program at the Middlebury Institute of International Studies. “Although it never really works, military and political leaders are always drawn to decapitation. It’s catnip for idiots.” Lewis points to the 2003 invasion of Iraq as an example of the problems such missions are likely to hit. In that case, the United States sent stealth aircraft loaded with bunker-buster bombs and cruise missiles to strike a site where American spies believed Saddam Hussein was hiding. Saddam wasn’t there, nor were any leadership bunkers, and the Iraqi dictator wouldn’t be caught for another eight months. But even in a scenario where the United States or South Korea succeeds in a preemptive strike against Kim Jong Un, North Korea’s conventional military capabilities ensure that it’s still capable of inflicting catastrophic damage on the South, where the United States has thousands of troops deployed. Nor is it necessarily clear that the KPA would throw down its weapons in the
wake of Kim’s death. Secretary of Defense James Mattis has assured U.S. lawmakers that even though the United States would prevail in a war against the North, any conflict would be “more serious in terms of human suffering than anything we have seen since 1953.” Removing the last Kim — as catastrophically bloody as it would be — might be relatively easy compared with governing the chaotic kingdom left behind. (Adam Rawnsley, “The Many Failed Attempts to Kill the Leaders of North Korea,” Foreign Policy, July 8, 2017)

Schilling: “After the frenzy of technical speculation over the successful launch of North Korea’s Hwasong-14 intercontinental ballistic missile (ICBM), the dust seems to be clearing and the emerging reality is that the North has an unreliable missile that can reach Alaska or Hawaii with a single nuclear warhead, and would be lucky to hit even a city-sized target. However, with a year or two of additional testing and development, it will likely become a missile that can reliably deliver a single nuclear warhead to targets along the US west coast, possibly with enough accuracy to destroy soft military targets like naval bases. In perhaps five years, North Korea may be able to incorporate a modest suite of decoys and penetration aids to challenge US missile defenses. Let’s hope US missile defenses are up to that challenge. Contrary to the assertions of some analysts that the missile is currently capable of carrying several warheads, not just one, it may eventually be able to carry a modest suite of decoys or penetration aids, though probably not for several years. A multiple warhead capability, while theoretically possible, would require a very lightweight warhead, which will require a lot more nuclear testing and is probably a decade in the future at best. That said, the Hwasong-14 that flew last week was surprising in several respects. On the surface, it appeared to be a completely different missile than the one North Korea rolled out under the name of “Hwasong-14” back in 2015. On close examination, however, this new Hwasong-14 appears to be closely based on elements of several previous North Korean missiles. In fact, very little of the Hwasong-14 is truly new: it uses the same engine as the Hwasong-12, a structural technology first developed for the original Hwasong-14 and demonstrated on the Hwasong-12; it also featured an upper stage very similar in size and performance to the Hwasong-13 (itself derived from the upper stage of the Unha space launch vehicle), and probably a reentry vehicle (RV) derived from the original Hwasong-14. …The Hwasong-14 was launched on a very high angle “lofted” trajectory to avoid overflying Japan, and might have reached a distance of 7,000-8,000 kilometers if launched on a maximum-range trajectory. If the Hwasong-14 is put together the way we think it is, it can probably do a bit better than that when all the bugs are worked out. …A range of as much as 9,700 kilometers, approximately the distance from North Korean launch sites to the US naval base at San Diego, would be possible with a 500 kg payload. And that raises an obvious question: what is that payload? Most every other North Korean long-range missile is topped with a triconic reentry vehicle sized for a single nuclear warhead about the size of the mock-up Kim Jong Un showed off last year. We’re pretty sure North Korea can actually build nuclear warheads about that size. But where other missiles have visible reentry vehicles, the Hwasong-14 has a detachable payload shroud. We don’t know what goes inside, except that the usual triconic reentry vehicle won’t fit. Those reentry vehicles probably aren’t qualified for reentry at ICBM velocities, and changing that would require an extensive test program. A faster and lower-risk approach to putting a warhead on an ICBM is to use a blunt-body reentry vehicle, like the United States did on its first Thor and Atlas ICBMs. And indeed, the original Hwasong-14 missile from 2015 sported a blunt-body RV at the tip—one that would fit almost perfectly inside the new Hwasong-14’s shroud. Blunt-body RVs have their disadvantages, such as limited accuracy. But, as long as you’re willing to settle for landing within a few miles of the target, they will do the work. In the short term, that’s probably all there is to it—a streamlined fairing over a blunt-body RV, capable of delivering a 500 to 600 kg nuclear payload with limited accuracy to targets on the US west coast. In the longer term, however, there may be something more. Payload shrouds are somewhat failure-prone until they have been thoroughly tested, and usually not worth the bother if all one wants to do is deliver a single warhead. Payload shrouds are designed to provide a clean aerodynamic exterior to a complex assortment of un-aerodynamic payloads. Thus, we expect there will eventually be more than just a single warhead under the shroud. But it probably won’t be multiple warheads, at least not for a decade or more. Multiple warheads of the size North Korea has displayed and can plausibly build today, along with reentry vehicles to carry them, simply wouldn’t fit. To put multiple warheads inside that fairing, at a
weight that would still allow intercontinental reach, North Korea would have to develop a lightweight nuclear warhead comparable to the W-68 warhead of the US Poseidon missile. It took the United States almost 15 years to go from building the sort of nuclear weapons North Korea has today to the W-68. And while the North Korean missile program has been conducting tests at an accelerated pace, they have conducted only two nuclear tests in the past four years. So perhaps in 2030 we will see a multiple-warhead Hwasong-14, but probably not before then. A more urgent, and more realistic, priority for North Korea would be a system of decoys and penetration aids to defeat US missile defenses. The US national missile defense system in its current state is limited and unreliable, working only about half the time in tests. But North Korea has to consider that deploying an operational ICBM would motivate the United States to improve its defenses. They can’t possibly hope to build more ICBMs than the US can build missile defense interceptors. But if they can put a dozen or so effective decoys on each missile—that might be enough to maintain a credible deterrent. This is not a trivial matter. One often hears decoys described as “mylar balloons,” as if a simple child’s toy would be sufficient. In reality, a toy balloon probably wouldn’t survive the harsh environment of a missile launch, let alone fool a sophisticated adversary’s defense. As a more realistic example, consider the British “Chevaline” decoy system, developed using the technology of the early 1970s when the United Kingdom faced a similar deterrence credibility problem against Russia’s nascent anti-ballistic missile (ABM) system. This is a capability North Korea could reasonably hope to match. It took the UK seven years and seven billion (in current year dollars) to make Chevaline work. The system reportedly shoehorned 27 decoys and their deployment mechanisms into slightly more than 250 kilograms. That’s half the payload of the Hwasong-14, if North Korea is serious about targeting San Diego. Consequently, the North Koreans would probably have to accept a reduced decoy count, and make some progress on warhead weight reduction, to make it all fit. I would be very surprised if they weren’t working on that already, but without a missile to work with, there is a limit to how much progress they can make.” (John Schilling, “What Is True and Not True about North Korea’s Hwasong-14 ICBM: A Technical Evaluation,” 38 North, July 10, 2017)

The outgoing 2nd Infantry Division commander defended the use of rotational forces as the best way to maintain readiness against an increasingly threatening North Korea despite a recent report concluding that forward-based units would be more efficient. Maj. Gen. Ted Martin — who has overseen the transition from the permanently stationed Iron Brigade to the rotational system — said the training dividends from having cohesive units that deploy together outweigh the disadvantages. “I am a big fan of the rotational brigade,” the 56-year-old Jacksonville Beach, Fla., native told Stars and Stripes. The United States maintains about 28,500 servicemembers in the South to help maintain an armistice that ended the 1950-53 Korean War in lieu of a peace treaty. In July 2015, the Army inactivated the 1st Armored Brigade Combat Team, known as the Iron Brigade, which had served near the border with North Korea for 50 years. It was replaced with brigades sent to the peninsula on nine-month deployments. So far there have been four of them, with the Fort Hood, Texas-based 2nd Armored Brigade Combat Team, 1st Cavalry Division taking over late last month. It’s the second turn for the Black Jack brigade, which was the first rotational unit to arrive two years ago. A new Army War College report called “Rotational Deployments vs. Forward Stationing” found that the use of rotational forces in Europe and South Korea has cost more than expected and taken a toll on troop morale that has possibly led to lower re-enlistment rates. The author, War College professor John Deni, said basing brigades in the two theaters would also demonstrate stronger commitment to U.S. allies. The report will be released later this summer, but Deni outlined his findings during a recent panel discussion at the Atlantic Council in Washington. Martin, who assumed command in April 2015 and said he was surprised he hadn’t been questioned for the report, insisted the new system provides important continuity by ending a high turnover rate that had plagued the Iron Brigade as soldiers cycled in and out according to individual terms. “So the ability of the unit to get to a high level of collective training efficiency was very difficult and it was even more difficult to sustain it,” Martin said, adding as much as 12 percent of a formation would be transferred in a given month. “While the Iron Brigade was a fantastic outfit, what I got in turn was … a unit that had trained together for almost a year,” he said, adding that’s particularly important for units that need to hit the ground running and adapt to the mountainous terrain in South Korea. Once on the peninsula, the soldiers stay together for
nine months and train intensively with their South Korean counterparts. The 21D is the first division to combine the allied forces. Martin said the result is an overall better prepared fighting force. “What I’m telling you in a nutshell is they came in good. We delivered back to the Army the most combat-ready brigade combat team in the Army,” he said. A major drawback is the potential impact the revolving door of troops can have on relationships with South Korean forces, said Martin, who stressed that can be mitigated. “If we’re not careful we can lose the partnership,” he said. “The battalion brigade level command teams have to invest a lot of time and energy into maintaining and doing the handoff because the personal relationships are just so important. This is not an all-American show. “We found out we have to put much time into getting to know partners. It can’t be all business. It’s got to be soccer games together, spending time eating in mess halls with us, doing combined briefings,” he said, contrasting the environment in South Korea with that in Iraq and Afghanistan. “Even though we were doing things with them you never really want to get too close. Here it’s the other way around,” he said. Martin will hand over his command next week to Maj. Gen. Dennis Scott McKean. (Kim Gamel, “Outgoing 2ID Commander: Rotational Units Increase Readiness in S. Korea Despite Report,” Stars and Stripes, July 10, 2017)

7/11/17

A pro-North Korean newspaper in Japan said that President Moon Jae-in should not expect a positive response from Pyongyang to his latest reconciliatory proposal, as Seoul is still not giving up its submission to the United States. Chosun Sinbo also called on South Korea to end its joint annual military exercises with the U.S. if it hopes to prove its willingness to improve ties. "If the proposal is based on South Korea's subversion to the U.S. and hostility toward the North, Seoul cannot expect Pyongyang's positive response," the newspaper said. The newspaper hinted that Moon's handling of Seoul-Washington military drills would be a yardstick in the North's decision on its policy with South Korea. "South Korea should show a willingness to improve its relations with Pyongyang not by words, but with action," it said. "It remains to be seen whether South Korea can make a decision to suspend the drills with the U.S., a main source of tension on the Korean Peninsula." (Yonhap, “No Expectation from N.K.’s Acceptance of Moon’s Peace Proposal: Pro-N.K. Paper,” July 11, 2017)

North Korea has yet to fully secure the development of an intercontinental ballistic missile (ICBM) as it remains unknown whether the country's recently fired ballistic missile successfully re-entered the atmosphere, lawmakers said quoting the spy agency. South Korea's National Intelligence Service (NIS) concluded that the latest missile still lacked re-entry technology although it flew as far as an ICBM does, Rep. Yi Wan-young of the Liberty Korea Party and Rep. Kim Byung-kee of the ruling Democratic Party said following the spy agency's parliamentary report on the July 4 launch. "Although North Korea claimed that (the missile's) heat resistance was verified, whether it re-entered (the atmosphere safely) was not confirmed and the country has no relevant test facility, making it look like it has not secured the technology," the NIS was quoted as reporting to the parliamentary intelligence committee. North Korea may have not attained the technology to guide a warhead precisely to a target either — another key ICBM technology — given that the re-entry technique normally needs to be secured before that, according to the lawmakers. (Yonhap, “North Korea Yet to Obtain Missile Re-Entry Technology: Spy Agency,” July 11, 2017)

The Eighth U.S. Army held a ceremony to mark the opening of its new headquarters in Pyeongtaek, Gyeonggi, after relocating from the Yongsan base in central Seoul. Yongsan was its base for 64 years. The opening ceremony was held at Camp Humphreys in Pyeongtaek. (Sarah Kim and Choi Mo-ran, “U.S. 8th Army Finds New Home in Pyeongtaek,” JoongAng Ilbo, July 12, 2017)

North Korea's dependence on Russia for oil has increased threefold this year compared to the same period the previous year, according to media reports. Citing Russian customs material records, the Voice of America (VOA) said that Russian oil exports to North Korea totaled $2.3 million by April this year, a considerable increase from $740,000 last year. According to the report, 96 percent of the exports were not crude oil. Reportedly, the North used to import 99 percent of its oil
from China, its traditional ally, but recently has reached out to Russia to diversify its oil supplies. "Half of North Korea's oil needs are processed oil. North Korea has imported gasoline and jet fuel from Russia, since trade with China is more likely to be detected," Cho Han-bum, a senior research fellow from the Korea Institute for National Unification, said. Last month, a senior-level North Korean defector who used to deal with the nation's oil trade told the VOA that North Korea annually imports 200,000 to 300,000 tons of Russian oil through a Singaporean company. "From China, the North receives around 500,000 tons of crude oil per year through pipelines in the form of a loan," the defector Ri Jong-ho said. (Choi Ha-young, “Russian Oil Exports Surge in North Korea,” Korea Times, July 11, 2017)

The United States said it shot down a simulated, incoming intermediate-range ballistic missile (IRBM) similar to the ones being developed by countries like North Korea, in a new test of the nation's THAAD missile defenses. Planned months ago, the test was the first-ever of the Terminal High Altitude Area Defense (THAAD) system against an incoming IRBM, which experts say is a faster and more difficult target to hit than shorter-range missiles. The U.S. Missile Defense Agency said the IRBM was designed to behave similarly to the kinds of missiles that could threaten the United States. "The successful demonstration of THAAD against an IRBM-range missile threat bolsters the country's defensive capability against developing missile threats in North Korea and other countries," the Missile Defense Agency said in a statement. The successful THAAD test adds to the credibility of the U.S. military's missile defense program, which has come under intense scrutiny in recent years, including because of test delays and failures. The U.S. Government Accountability Office, a federal watchdog, noted in a May report that the Missile Defense Agency had not previously tested THAAD against an IRBM, despite having deployed the system to the island of Guam, a U.S. territory in the Pacific, in 2013 amid concerns about North Korea's missile program. That means that, until the latest test, the THAAD system had an unproven capability against IRBMs, missiles that have a range of between 1,800 and 3,100 miles (3,000 to 5,500 km). Guam is approximately 2,100 miles (3,400 km) from North Korea. In order to hit the mainland United States, North Korea would need to fire an ICBM, which is defined as a missile with a range greater than 3,400 miles (5,500 km). In the latest test, a THAAD in Kodiak, Alaska, intercepted a ballistic missile target that was air-launched from a C-17 aircraft flying north of Hawaii, the Missile Defense Agency said in a statement. A defense official, speaking on condition of anonymity, said the test took place early on Tuesday. This success leaves THAAD with a 100 percent track record for all 14 intercept attempts since flight testing began just over a decade ago. Lockheed Martin Corp, the prime contractor for the THAAD system, said it could intercept incoming missiles both inside and outside the Earth's atmosphere. THAAD's success rate in testing is far higher than the one for America's Ground-based Midcourse Defense (GMD) system, which is designed to shoot down an ICBM headed for the U.S. mainland. That GMD system has only a 55 percent success rate over the life of the program, stoking fierce criticism from groups including the Union of Concerned Scientists, a non-profit science advocacy group. But advocates say the technology has improved dramatically in recent years. The GMD system successfully shot down an incoming, simulated North Korean ICBM in a test in May. That led the Pentagon to upgrade its assessment of the United States' ability to defend against a small number of ICBMs, according to an internal memo seen by Reuters. A ground-based missile defense system, THAAD is designed to shoot down short-, medium- and intermediate-range ballistic missiles. John Schilling, a contributor to 38 North, a Washington-based North Korea monitoring project, downplayed the idea that THAAD might be seen as a backup to hit a longer range ICBM, saying that THAAD was not designed to hit missiles traveling so fast. "To engage an ICBM with THAAD would be like asking a high school baseball player to hit a fastball from a major-league pitcher - literally out of his league," Schilling said. The Missile Defense Agency told Congress in June that it planned to deliver 52 more THAAD interceptors to the U.S. Army between October 2017 and September 2018, bringing total deliveries to 210 since May 2011. (Phil Stewart and Idrees Ali, “U.S. THAAD Missiel Defenses Hit Test Target as North Korea Tension Rises,” Reuters, July 11, 2017)
Near the southern tip of Africa, 8,000 miles from Pyongyang, this capital city is an unlikely testament to North Korean industry. There’s the futuristic national history museum, the sleek presidential palace, the sprawling defense headquarters and the shadowy munitions factory. They were built — or are still being constructed — by North Korea, for a profit. For years, North Korea has used African nations like this one as financial lifelines, building infrastructure and selling weapons and other military equipment as sanctions mounted against its authoritarian regime. Although China is by far North Korea’s largest trading partner, the smaller African revenue streams have helped support the impoverished Hermit Kingdom, even as its leaders develop an ambitious nuclear weapons program in defiance of the international community. Namibian officials describe North Korea as a longtime ally, a partner in development and an affordable contractor. Since the 1960s, when North Korea began providing support for African nations during their independence struggles with European colonial powers, the regime has fostered political ties on the continent that have turned into commercial relationships. “We’ve relied on them for help to develop our infrastructure, and their work has been unparalleled,” said Frans Kapofi, Namibia’s minister of presidential affairs. Across Africa, such relationships have been common. A United Nations investigation this year described North Korean military equipment headed to Eritrea, automatic weapons arriving in Congo and military trainers landing in Angola and Uganda. “The Democratic People’s Republic of Korea is flouting sanctions through trade in prohibited goods, with evasion techniques that are increasing in scale, scope and sophistication,” the report said. It went on to describe how “the country also uses its construction companies that are active in Africa to build arms-related, military and security facilities.” North Korea’s commercial relationships are only one sign of the surprisingly close ties many African leaders have with the secretive, highly repressive Asian country. Yoweri Museveni, Uganda’s longtime president, said he learned basic Korean from Kim Il Sung, the former leader of North Korea and grandfather of current leader Kim Jong Un, during various visits to that country. Zimbabwean leader Robert Mugabe sent two rhinos to Pyongyang, the North Korean capital, as a show of solidarity in the 1980s (both died shortly after arriving). In Maputo, Mozambique’s capital, a street named Avenida Kim Il Sung runs through the heart of downtown. In Namibia’s national museum, a black-and-white picture of a North Korean soldier leading a group of local soldiers hangs in the foyer. “Our world outlook was determined by who was on our side during the most crucial time of our struggle, and North Korea was there for us,” said Tuliameni Kalomoh, a senior adviser in the Namibian Ministry of Foreign Affairs and the country’s former ambassador to Washington. In recent years, African countries have struggled to maintain their ties to North Korea without alienating the United States, the largest aid donor on the continent, or publicly violating U.N. sanctions aimed at curbing the country’s nuclear-weapons program. In measures going back a decade, the United Nations has barred countries from contracting with North Korea for military training or services or arms manufacturing. “Pyongyang’s ties to Africa allow it to show it still has friends abroad and benefit from their political support. They also represent a source of revenue, new entry points into the international financial system, and a haven in which to base North Korean representatives and front companies,” said Andrea Berger, a North Korea expert at the Middlebury Institute of International Studies at Monterey. The Namibian government has spent about $100 million on North Korean projects since 2002, according to officials here — a sum that goes a long way in an Asian nation where per capita income is about $1,000 per year. But in comparison, China imports about $3 billion in North Korean goods per year. Last year, the United Nations said that Namibia had violated U.N. sanctions by maintaining its commercial ties to North Korea. Among other activities, Namibia had contracted with a North Korean company called Mansudae Overseas Projects to construct a munitions factory as well as a new military academy. A company with links to Mansudae, called the Korea Mining Development Trading Corporation (known as KOMID) also worked on the munitions factory, according to the U.N. report. The Treasury Department last year called KOMID North Korea’s “primary arms dealer” and sanctioned two North Korean officials based in Windhoek. The department also sanctioned Mansudae, calling it one of a number of companies that sent workers abroad in part to earn money for the government or ruling party. After being accused of violating sanctions, Namibian officials pledged to cut commercial ties with North Korea, which is formally known as the Democratic People’s Republic of Korea, or DPRK. The Namibian government said in a statement in 2016 that it “remains committed to the implementation of all U.N. sanctions resolutions,” but added that “the warm diplomatic relations
with the DPRK will be maintained.” Over a year later, it appears that North Korean guest workers are still laboring on Namibia’s new Ministry of Defense, a large concrete building just outside of Windhoek’s city center, according to several residents who live nearby. “We see them every day or two,” said one resident who spoke on the condition of anonymity because he didn’t want to be seen as criticizing the government. “They never left.” In interviews, government officials said they were hoping to complete the current projects before expelling the workers — even though allowing the North Korean contractors to linger would probably be a violation of U.N. sanctions if they are still affiliated with KOMID. “We are definitely towards the end of phasing them out,” said Kapofi, who added that he could not confirm the presence of the guest workers at the defense ministry. Nikki Haley, the U.S. ambassador to the United Nations, recently warned that the United States might cut off trade with countries that were violating U.N. sanctions by doing business with North Korea. Namibia did $469 million of trade with the United States in 2013, according to the most recent figures released by the Office of the U.S. Trade Representative. The U.S. government also contributes to Namibian health-care initiatives, particularly related to HIV/AIDS. “As a part of our maximum pressure campaign, we are committed to ensuring that DPRK’s arms-related exports, assistance, training, and support activities are terminated, including in Africa,” said State Department spokeswoman Heather Nauert, in response to a question about Namibia’s ties with North Korea. Other African countries were also supposed to end their economic and military relationships with North Korea after the U.N. sanctions were imposed. But it remains unclear whether some have done so. U.N. member states are obliged to issue reports describing their efforts to enforce sanctions. But the U.N. panel of experts report in 2016 noted “an extremely high number of non-reporting and late-reporting States” and the “poor quality and lack of detail of the reports received.” Some African nations have appeared to distance themselves from North Korea. After photos appeared showing North Korean military trainers wearing Ugandan military uniforms last year, Uganda’s foreign minister, Sam Kutesa, said on state television, “We are disengaging the cooperation we are having with North Korea, as a result of U.N. sanctions.” Even if North Korea’s commercial ties to Africa do eventually fade, relics of the engagement will endure. In Dakar, Senegal’s capital, a soaring, North Korea-built statue — larger than the Statue of Liberty — rises from a hilltop, depicting a man holding a baby in one arm and embracing a woman with the other. When the statue was unveiled, it angered many people in the Muslim-majority nation, as the woman was scarcely clad. Other North Korean statues, mostly of African revolutionary leaders, were sold to Mozambique, Zimbabwe, Botswana, Benin and Congo. U.N. sanctions introduced in 2016 barred countries from buying any more such statues. One of the biggest projects is the war memorial outside of Windhoek, where a towering bronze statue of an unknown soldier carrying a rifle stands in front of a slim obelisk. On a recent sunny afternoon, there were no visitors at the park, and one guard slept on the steps. But from the top of the monument, the view was clear: the city and the rolling hills in the distance, and in the foreground a North Korean-built military base. (Kevin Steff, “N. Korea’s Unlikely Safety Net: Africa,” Washington Post, July 11, 2017, p. 1)
Pyongyang’s latest successful intercontinental ballistic missile test has given it confidence in its negotiating power and it is seriously considering a return to talks, a top US nuclear expert who helped organize informal talks between Washington and Pyongyang said. Suzanne DiMaggio, senior fellow at the Washington-based New America Foundation, also told the South China Morning Post in an exclusive interview that the U.S. should seize the moment with a dual strategy of “maximum pressure and engagement” to hold talks with Pyongyang, while backing up its move with pressure such as sanctions. “The best bet would be to focus on preventing the further development of Pyongyang’s ICBM capabilities through an agreement that would suspend their nuclear and missile testing,” DiMaggio said. “My sense is that the North Koreans recognize they have to make some consequential decisions in the near term and they are exploring possible options,” she said. “They seem to understand they are going to have to re-engage at some point to reduce tensions because we are fast approaching a point of crisis.”

DiMaggio said that while the goal of denuclearising the Korean peninsula shouldn’t be abandoned, “there is a need to be realistic and set it aside, at least in the near term.” Instead, DiMaggio continued that “placing an immediate focus on reducing tensions and deterring North Korea from using and proliferating its nuclear weapons makes greater sense.” “The US must decide on its highest priority with North Korea at this time and set it as an interim goal,” she said. DiMaggio helped establish the unofficial channel with the North Koreans early last year. After informal talks in Oslo, Norway, in early May, Choe Son-hui, the head of the North Korean foreign ministry’s North America bureau, said Pyongyang was open to dialogue with the US under the “right conditions.” “If conditions are met, we will hold dialogue [with Washington],” Choe said. US President Donald Trump made similar statements in May, telling Bloomberg he would be “honored” to meet North Korean leader Kim Jong-un “under the right circumstances.” “The task at hand is to find out what the ‘right conditions’ might be. We need to test whether the North Koreans are serious about dialogue, and the only way to do so is to talk to them,” DiMaggio said, adding that contact made in an unofficial dialogue such as the Oslo meeting could play a role in starting “talks about talks.” At the official level, DiMaggio stated that “aggressive diplomacy,” including direct engagement, should be backed up in dealing with Pyongyang by the leverage of “maximum pressure,” such as through United Nations Security Council sanctions. North Korea’s self-claimed test-launch on July 4 of an ICBM capable of striking Alaska is widely viewed as crossing the red line. DiMaggio said: “What cannot be denied is that North Korea is clearly focused on developing nuclear weapon delivery systems that can reach the continental United States.” “The rationale behind their single-minded focus is clear – the North Korean leadership sees their nuclear program as the only source of security against regime change. This position has hardened over the past few years. They have concluded that the United States will not attack a country that has nuclear weapons, plus the means to deliver them,” DiMaggio said. “So now, North Korea has the capability of nuclear weapons and an ICBM, they have a strengthened position to go back to negotiation.”

DiMaggio said that “in some circles, the possibility of kinetic actions is being discussed, including potential pre-emptive strikes to destroy nuclear capabilities in North Korea.” But she played down the military option. “The reality is that military action is not a viable option,” DiMaggio said. “We cannot dismiss the possibility that they would respond in a way that could inflict mass civilian casualties and severe damage to South Korea, as well as to Japan and potentially American forces based in the region. And how would Beijing react? It could lead to a regional war or even a wider war that could include the use of nuclear weapons,” she said. “The risks are just too great, especially when we haven’t even begun to exhaust diplomatic options.” DiMaggio added that relying on China to solve the North Korea problem is “a misguided approach” mainly because American interests in North Korea do not necessarily align with China’s interests. “The Chinese leadership won’t bring crippling sanctions against North Korea because they won’t risk increasing the possibility of the North Korean regime’s collapse, which could lead to a mass refugee influx into China and bring US troops to the Chinese border,” DiMaggio said. DiMaggio said the US needed to change the way it looked at China in this equation. “One way to do so would be to work
China’s imports from North Korea dropped sharply in the first half of this year, according to figures published Thursday that suggest Beijing is more serious about cracking down on Pyongyang than President Trump has recently claimed. Today’s figures suggest a different picture, although they also showed significant growth in overall bilateral trade in the first six months of the year thanks to a 29 percent spike in Chinese exports to North Korea. The value of imports from North Korea fell to $880 million in the six months to June, down 13 percent from a year earlier, according to the figures released by the Customs office. Notably, China’s coal imports from North Korea dropped precipitously, with only 2.7 million tons being shipped in the first half of 2017, down 75 percent from 2016. This suggests that China has been making good on its February decision to suspend coal imports from North Korea, potentially cutting off a major financial lifeline for Pyongyang, although analysts caution that Chinese figures should be viewed with some skepticism as they are sometimes manipulated for political purposes. About 90 percent of North Korea’s exports go to China, and coal has been the single-biggest export item. But there has been skepticism about the ban, with coal ships and train cars being seen going back and forth between the two countries. Furthermore, as coal exports have reportedly fallen, shipments of iron ore have spiked. Previous releases of Chinese customs data showed that China bought the same amount of iron ore in the first five months of this year as it did in all of last year. Today’s figures showed that total trade between the two countries is still growing, rising 10 percent in the first six months of this year compared with 2016 because Chinese exports to North Korea rose by 29 percent, or $1.67 billion, over the same period. Beijing was quick to pour cold water on the suggestion that the overall rise in trade suggested it was not complying with U.N. Security Council resolutions designed to punish Pyongyang for its nuclear tests and missile launches. The growth bilateral trade “should not be used as basis for questioning China’s solemn attitude towards the implementation of the Security Council’s resolutions,” Huang Songping, a spokesman for Chinese Customs, told reporters in Beijing. Monthly figures were more representative of the trend and China’s imports from North Korea had been “falling sharply for four consecutive months since March,” he said, including by 36 percent in March and 42 percent in April. “The trade growth between China and North Korea in the first half of the year was mainly driven by exports,” Huang said, adding that the exports were mainly labor-intensive products like textiles, which are not banned under U.N. resolutions. Asked about the surge in China’s imports of North Korean iron ore and in China’s ethanol exports to North Korea in recent months, Huang said that trade with North Korea for civilian use was allowed despite the sanctions. “We have carried out the U.N. resolution strictly,” Huang said. “If this is for civilian use and not banned, after we have verified that they are for civilian use, we can still trade.” Huang said the price fluctuation of commodities could also potentially boost the trade figure as measured by value. As the United States has searched for ways to punish North Korea for its repeated defiance of international bans on testing nuclear weapons and launching ballistic missiles, it has repeatedly turned to China. Trump has urged Chinese President Xi Jinping to use China’s economic leverage over North Korea but, after suggesting that Beijing was not acting to punish Pyongyang, Trump last week suggested he’d given up on Xi. “Trade between China and North Korea grew almost 40% in the first quarter,” Trump tweeted the day after North Korea launched its first intercontinental ballistic missile. “So much for China working with us — but we had to give it a try!” (Anna Fifield, “Chinese Imports from North Korea Fall Sharply; A Sign Beijing Is Cracking down?” Washington Post, July 13, 2017)
round after round of sanctions was imposed to try to punish North Korea for its nuclear defiance. “We were never in pain or hurting in our trade business because of the sanctions. Instead, we conducted our first nuclear test in 2006,” Ri said in an interview near Tysons Corner. The 59-year-old, whose job had been to raise money for the North Korean regime, and his family live in Northern Virginia, having defected to South Korea at the end of 2014 and moved to the United States last year. “I used to be sanctioned, as a North Korean who led trade at the front line, but I never felt any pain from the sanctions. The sanctions were perfunctory,” Ri said. He described being able to send millions of U.S. dollars to North Korea simply by handing a bag of cash to the captain of a ship leaving from the Chinese port city of Dalian, where he was based, to the North Korean port of Nampo, or by giving it to someone to take on the train across the border. In first the nine months of 2014 — he defected in October that year — Ri said he sent about $10 million to Pyongyang this way. “Unless China, Russia and the United States cooperate fully to sanction North Korea, it will be impossible to hurt them,” Ri said. China’s interest in North Korea is well known, but Russia has dramatically increased the amount of oil it has sent — some reports suggest exports have quadrupled — to North Korea this year. Ri worked for three decades in Office 39, the Workers’ Party operation responsible for raising money for the North Korean leader. The office has long been associated with both legal trade and illicit activity, including counterfeiting dollars and drug smuggling. Ri said he worked as president of a shipping company and was chairman of Korea Kumgang Group, a company that formed a venture with Sam Pa, a Chinese businessman, to start a taxi company in Pyongyang. Ri supplied a photo of him and Pa aboard a jet to Pyongyang. He was awarded the title “hero of labor” in 2002 for his efforts, and said he lived the good life in Pyongyang, with a color TV and a car. “I was very loyal to Kim Jong II, so I was rewarded by him,” he said. “I was rich.” His last position was running the Dalian branch of Daheung, a trading company involved in shipping, coal and seafood exports, and oil imports. The company was given targets to meet in terms of profits, he said, declining to go into details. But in 2014, Ri grew increasingly disillusioned after Kim Jong Un suddenly denounced his uncle, Jang Song Thaek, as a “traitor for all ages” and had him executed at the end of 2013. “It’s always useful when a defector, especially one that knows the internal operations of Office 39 — and my assumption is that he knows the external operations too — can help us,” said Anthony Ruggiero, who worked on sanctions at Treasury and is now with the Foundation for the Defense of Democracies. The United States has been trying to understand how North Korea uses banks in China in particular to finance its activities. “I hope that the Treasury and some other organizations with ‘agency’ at the end of their name are talking to him,” Ruggiero said. Ri said North Korea has repeatedly found ways to circumvent whatever sanctions are imposed on it. “North Korea is a 100 percent state enterprise, so these companies just change their names the day after they’re sanctioned,” he said. “That way the company continues, but with a different name than the one on the sanctions list.” Ri’s Chinese counterparts weren’t bothered, either, he said. “My partners in China also want to make a profit, so they don’t care much about sanctions,” he said. “When the Chinese government orders them to stop, they stop for a few days and then start up again.” (Anna Fifield, “He Ran North Korea’s Secret Money-Making Operation; Now He Lives in Virginia,” Washington Post, July 13, 2017)
latter and obliterate its sovereignty and right to existence. The DPRK’s test-fire of the
intercontinental ballistic rocket is an exercise of its legitimate right to self-defense to thoroughly
eradicate the over half a century long nuclear threat from the U.S. against the DPRK and reliably
defend peace and stability of the Korean peninsula and the region at large. The resounding success
of the test-fire of the intercontinental ballistic rocket Hwasong-14 has fully demonstrated the will
and capability of the DPRK to annihilate the U.S. by a single blow to the very heart of its
mainland in case it fails to act with discretion. It is time for the U.S. to renew its perspective on the
DPRK’s strategic position which has reached the dazzling heights, and to act with prudence.
However, it is inviting its ultimate doom by resorting to the sanctions and pressure campaign
against the DPRK. It will be a fatal mistake to consider any chance that the DPRK which rose to a
dignified nuclear power and an ICBM state would tolerate the reckless "sanctions" racket of the
U.S. and other hostile forces. Should the UNSC adopt another "resolution on sanctions", this
will trigger corresponding measures by the DPRK and respond to the "resolution" with its

Bermudez., Eley, Liu and Pabian: “Thermal imagery analysis of the Yongbyon Nuclear Scientific
Research Center indicates that from September 2016 through June 2017: The Radiochemical
Laboratory operated intermittently and there have apparently been at least two unreported
reprocessing campaigns to produce an undetermined amount of plutonium that can further
increase North Korea’s nuclear weapons stockpile. This suggests batch rather than continuous
processing of spent fuel rods from the 5 MWe Reactor during the period of analysis. Increased
thermal activity was noted at the Uranium Enrichment Facility. It is unclear if this was the result
of centrifuge operations or maintenance operations. Centrifuge operations would increase the
North’s enriched uranium inventory; however, based on imagery alone, it is not possible to
conclude whether the plant is producing low or highly enriched uranium. The thermal patterns at
the probable Isotope/Tritium Production Facility have remained consistent, suggesting that the
facility is not operational, or is operating at a very low level. This means, the facility is likely not
producing tritium, which is an essential isotope used in the production of boosted yield nuclear
weapons and hydrogen bombs. From December 2016 through January 2017, the thermal pattern
over the Experimental Light Water Reactor (ELWR) was elevated. While that might indicate that
the reactor was operational, the likelihood is low since the pattern does not appear in subsequent
imagery over the last six months. It is possible that there are alternative explanations for the
elevated pattern, for example, short-term activity at the ELWR such as the heating of pipes to
prevent freezing. Regardless, any activity at the ELWR is cause for concern and bears continued
monitoring. The 5 MWe Reactor has either been intermittently operating at a low-level or not
operating. The notable exception to this was during December 2016 and January 2017 when
thermal patterns suggests a higher level of operations. Analysis: While commercial satellite
imagery is now widely used to analyze important developments overseas, including in North
Korea, thermal imagery can provide additional important insights. Landsat 7 imagery from
September 2016 through June 2017 was used for this analysis, although heavy cloud cover
precluded the use of imagery from last November and no night-time imagery was available for the
total period of this study. A total of 19 images are available and of these, 10 were chosen
with approximately one-month time intervals between them to provide a consistent periodicity for
the analysis. Seven images were deemed too cloudy for analysis and thus weren’t considered.
Developments noted at key Yongbyon installations were as follows: Examination of the thermal
patterns associated with the Radiochemical Laboratory (reprocessing facility) show significant
deviations from month to month. Concentrated heat patterns were observed with stronger
temperature differences from the surrounding area between September to October of last
year. The thermal patterns then returned to lower levels until March 2017, when a distinct
increase in thermal activity is observed that has continued through last month. These
intermittent surges in thermal activity suggest North Korea has conducted batch rather than
continuous processing of spent fuel rods from the 5 MWe Reactor. It is typical to allow the
spent fuel rods to rest for a while in cooling ponds to both cool and allow less stable plutonium
isotopes (PU-238, etc.) to bleed off. These reprocessing campaigns do not necessarily occur
immediately after spent fuel rods are removed from the 5 MWe reactor. The June 2017 thermal
activity coincides with an increase in activity noted in a March 2017 analysis based upon natural
color imagery. The thermal patterns at the Uranium Enrichment Facility were elevated during September and October 2016, then decreased in November 2016 and remained low until March 2017 when it increased slightly. It is unclear if the period of elevated activity from September through November was related to centrifuge operations or the maintenance activity that was observed during this period. The same elevated thermal patterns over the 5 MWe Reactor observed in imagery during December 2016 and January 2017 also extended over the area of the ELWR. This was likely the result of steam being released into the air when the turbines adjacent to the 5 MWe Reactor were being run, operation of the 5 MWe Reactor itself, mid-winter heating of both structures, prevailing weather patterns, or some combination of the above. We cannot completely, however, eliminate the possibility that this elevated thermal pattern was the result of short-term activity at the ELWR itself—for example, heating the structure to prevent pipes from freezing, allowing ongoing internal construction work, or pre-startup testing. It is important to note that no other significant patterns of thermal activity were observed over the ELWR throughout the study period. Importantly, the ELWR did not operate at all from February through June 2017. Any activity at the ELWR is cause for concern and its operational status bears continued monitoring as it would be an indicator of North Korean ongoing intentions and capabilities. The thermal patterns observed at the 5 MWe Reactor remain relatively consistent with those observed in the previous report indicating either intermittent low-level or no operation of the reactor. There was a notable deviation in the December 2016 and January 2017 images, suggesting a period of higher level reactor operation that lends support to a previous analysis based upon natural color imagery. The thermal patterns at the probable Isotope/Tritium Production Facility have remained consistently low throughout the period under study, suggesting that the facility is not operational, or is operating at a very low level. (Joseph S. Bermudez Jr., Mike Eley, Jack Liu and Frank V. Pabian, “North Korea’s Yongbyon Facility: Probable Production of Additional Plutonium for Nuclear Weapons,” 38North, July 14, 2017)

North Korea has little the world wants. But it does have iron. Despite the international opprobrium over its nuclear ambitions, North Korea has managed to take advantage of a loophole in United Nations sanctions by increasing its exports of iron ore. The key buyer, as usual, is China. In global terms, the dollar figure is small: North Korea exported an estimated $74 million of iron ore and concentrates to China during the first five months of 2017. Still, that’s real money for the economically isolated country — which shares a land border with China — and represents a 212 percent increase from the year before, according to data from the Korea International Trade Association. North Korean iron tends to be of higher quality than the ore found in China, according to Sabrin Chowdhury, a commodities analyst with BMI Research in Singapore. That makes it attractive to some state-owned Chinese steelmakers looking to reduce costs, she said. “There is genuine demand for North Korean iron ore,” said Chowdhury. North Korea is a minor player compared with suppliers like Australia and Brazil. China imported about 445 million metric tons of iron ore in the first five months of 2017, according to Bloomberg Intelligence, of which just 1.1 million metric tons came from North Korea. Two-way trade between China and North Korea rose 10.5 percent to $2.55 billion in the first half of 2017, according to data released by the Chinese government on Thursday. China’s exports to North Korea rose 29 percent from the same period in 2016, General Administration of Customs spokesman Huang Songping said at a briefing in Beijing. Imports from North Korea fell 13 percent. China has seriously carried out United Nations sanctions on North Korea, said Huang. Chinese exports to the North were mainly consumer goods such as textiles, which aren’t on the list of sanctioned items, the spokesman said. For the Chinese government, purchases of iron ore provide a way to support the regime of Kim Jong Un now that sanctions more strictly cover North Korean coal. The Security Council approved a resolution in November that exempted transactions in iron and iron ore intended “exclusively for livelihood purposes.” The volume of Chinese imports of North Korean iron ore nearly doubled in the first five months of 2017 compared to the same period last year, according to Bloomberg Intelligence. “According to UN Security Council resolution 2321, iron and iron core imported from DPRK for the purpose of people’s livelihood, and not for the purpose of generating profits for its nuclear program, is not on the sanctions list. The Chinese side will continue to comprehensively, accurately, earnestly and strictly comply with UNSC resolutions,” ministry spokesman Geng Shuang said in a briefing in Beijing. In the 1980s and 1990s, North Korea was a
