South Korea proposed holding inter-Korean military talks on July 21 to ease tensions along the border, South Korean Vice Defense Minister Suh Choo Suk said. In the proposal, South Korea wants to have the meeting at Tongilgak, a North Korean building in the truce village of Panmunjeom, Suh said in a press briefing. He said South Korea wants the meeting to help halt "all acts of hostility" near the Military Demarcation Line that bisects the two Koreas. The South Korean government separately proposed reopening Red Cross talks to discuss ways to resume family reunions. The South's Red Cross proposed holding the talks on August 1 at the Peace House, a Panmunjeom building controlled by the South. "We anticipate the North's side making a positive response" to the proposal, Suh said. If North Korea accepts the South's offer for the military talks, it would be the first official governmental talks between the two Koreas since vice ministerial talks were held in December 2015. The temporary reunions of families that remain separated since the end of the Korean War were last held in October 2015. Later today, South Korean Unification Minister Cho Myong Gyon urged North Korea to accept the South Korean offer for talks. "If the South and the North sit down face to face, matters of mutual interest could be discussed in a candid manner," Cho told reporters. Cho said South Korea does not have a hostile policy against North Korea and does not seek North Korea's collapse or unification through absorption. South Korea's policy is consistently centered on making the Korean Peninsula free from the threats of nuclear weapons and war, he said. "We want to cooperate with the international community in opening up a more bright future with North Korea if North Korea chooses to take a right path," Cho said. (Kyodo, "S. Korea Proposes Military Talks with N. Korea on Friday," July 17, 2017) Suh Choo-suk, South Korea’s vice defense minister, said in a statement that the military talks would be aimed at ceasing all “acts of hostility” near the border line, but did not specify any agenda items nor mention who from South Korea would take part. Cho Myong-gyon, head of the Unification Ministry, which handles inter-Korean relations, later today said in a press briefing that South Korea had left enough wiggle room for the North, adding that the local government would flesh things out once Pyongyang reacts. Asked whether Seoul was open to talks on halting joint military drills with the United States, which Pyongyang has persistently demanded in the past, Cho said only that the two Koreas would “freely discuss matters of mutual interest.” Cho added, “In principle, we haven’t changed our basic stance that we would use whatever method we have to press North Korea towards denuclearization, including sanctions [against the regime] when the North carries out a nuclear or missile provocation, and dialogue.” Cho added that the South did not engage in any back-channel dialogue with the North before making the proposals. When asked whether Seoul consulted with Washington, Cho replied that the countries “mutually cooperated” on the matter. The unification minister refused to answer whether Seoul was considering any incentives for North Korea if it accepts, saying, “It’s not right to make any predictions on such matters at this point.” On the separate offer to hold family reunions, the Korean Red Cross asked the North to hold relevant talks on August 1 at the Peace House, a South Korea-controlled building in the truce village, known as the equivalent to North Korea’s Tongilgak. The group proposed the family reunion to be held on October 4, in time for the Chuseok holiday, Korea’s harvest festival. Three people, including the general secretary of the Korean Red Cross, would attend the Aug. 1 discussions if they are given the green light, the group said in its statement. Without directly mentioning the proposals, Rodong Sinmun said today that Moon’s Berlin speech was “fortunate” in that it pledged to respect and implement the June 15, 2000, inter-Korean joint
President Moon’s aspiration to restart inter-Korean dialogue and welcoming nor opposition. A joint statement agreed upon on June 30 by South Korean and US administrations interpreted this as a “neutral expression,” indicating neither active support nor opposition. State Department East Asia Pacific spokesperson who accompanied Kishida in New York echoed the minister’s remarks that the US administration is merely an attempt to host “the ear of Pyongyang” and is inadequate. “That being said, I think the president has made clear in the past with respect that any type of conditions that would have to be met are clearly far away from where we are now.” Seoul’s Foreign Ministry said it has provided a sufficient explanation to the US before the announcement, and will continue working on the issues based on a “clear and realistic” understanding of Pyongyang’s nuclear threats, Foreign Ministry spokesman Cho June-hyuck said Tuesday. “We provided an explanation of our proposal (to the North) to the US and other nations before the announcement. Now we are currently waiting for the North’s response,” Cho said. The sides are also expected to discuss the matter, with Foreign Minister Kang Kyung-wha scheduled to attend the ASEAN Regional Forum early August in Manila and meet her key counterparts. A Unification Ministry official also said the allies are on the same page, noting yesterday’s offer is not an indication that the conditions for full-fledged dialogue have been met and is merely an attempt to host “the early stages of talks.” “There is no big gap between the White House’s statement (on the inter-Korean talk proposals) and our stance,” the official told reporters. Experts are saying that Spicer’s reaction embodies the discomfort the US holds over South Korea’s decision. “Spicer’s reaction reflects the US’ discomfort over South Korea’s decision to offer the military talk to the North during a diplomatically sensitive time,” Choi Kang, vice president for research at the Asan Institute for Policy Studies in Seoul, told Korea Herald. “This may sour the Seoul-Washington relationship, but it’s more complicated than it seems because the allies need to display a tight bilateral bond in order to stop North Korea from getting the better side of the bargain.” Japan, for its part, struck a more downbeat tone, expressing open disagreement toward the Moon administration’s offer. “This is a time for pressure,” said Japanese Foreign Minister Kishida Fumio told reporters in New York yesterday, according to Kyodo. “We will closely work with the international community including South Korea in making North Korea take certain steps towards solving several issues.” Maruyama Norio, Japan’s foreign ministry spokesperson who accompanied Kishida in New York echoed the minister’s remark saying that the pressure must come before conducting “a serious dialogue.” (Jung Min-kyung, “U.S. Wary over Seoul’s Proposal of Talks with N.K.,” Korea Herald, July 18, 2017) The White House and State Department showed a subtle difference in their responses to Seoul’s July 17 proposal of inter-Korean military talks and Red Cross talks toward divided family reunions. When asked about Trump’s response at a regular briefing the same day, White House spokesperson Sean Spicer replied, “Obviously those comments came out of the Republic of Korea and I would refer you back to them.” He went on, “That being said, I think the President has made clear in the past with respect that any type of conditions that would have to be met [by North Korea for dialogue to take place] are clearly far away from where we are now.” When asked by Hankyore on July 17 for the US position on the South Korean proposal, State Department East Asia-Pacific spokesperson Katina Adams curtly suggested the reporter “ask the South Korean government.” A diplomatic source in Washington interpreted this as a “neutral expression,” indicating neither active support and welcoming nor opposition. A joint statement agreed upon on June 30 by South Korean President Moon Jae-in and President Donald Trump indicated that Trump “expressed support for President Moon’s aspiration to restart inter-Korean dialogue on certain issues, including
humanitarian affairs.” The statement also said Trump “supported the ROK’s leading role in fostering an environment for peaceful unification of the Korean Peninsula.” The State Department’s determination appeared to be that Seoul’s proposal was not a departure from this agreement in the broader scheme of things. Japanese Foreign Minister Kishida Fumio also responded to questions from reporters about Seoul’s proposal the same day during his visit to New York. “This is the time to apply pressure,” Kyodo reported Kishida as saying. (Yi Yong-in, “White House and State Department with Subtly Different Responses to Inter-Korean Dialogue Overture,” Hankyore, July 19, 2017)

7/18/17 DPRK FoMin spokesman’s answer to the question raised by the “as regards the fact that the U.S. made an apology and returned the diplomatic package to the DPRK which it had seized from a DPRK delegation in New York: As reported, on June 16, the delegation of the DPRK which was en route home after attending the Conference of States Parties to the Convention on the Rights of Persons with Disabilities was literally mugged at the John F. Kennedy International Airport by the U.S. authorities that forcibly took away a diplomatic package from the delegation in an illegal and heinous act of provocation. The Ministry of Foreign Affairs of the DPRK termed this mugging by the U.S. an intolerable act of infringement upon the sovereignty of the DPRK and a malicious provocation, and condemned it in the strongest terms while strongly demanding an explanation and an official apology from the U.S. government. At the meeting of the UN Committee on Relations with Host Country, convened at the request of the permanent mission of the DPRK to the UN, the Cyprian representative chairing the committee and other representatives from many countries attending the session including China, Russia, Cuba and Syria acknowledged the mugging of the diplomatic package as a grave infringement upon the sovereignty of a UN member state which can never be tolerated. The U.S. Department of State made an official apology to the DPRK on behalf of the U.S. government acknowledging that its security officials concerned made a mistake and expressed its hope that the DPRK would understand that the mistake was due to the security officials being oversensitive amid the deteriorating security situation in the U.S. The U.S. eventually returned the diplomatic package and all its contents to the DPRK. The U.S. should learn a due lesson from the incident and never again commit such an act of infringing the sovereignty of other countries, in flagrant violation of the universally recognized international norms and regulations.” (KCNA, “FM Spokesman on U.S. Return of DPRK’s Diplomatic Package,” July 18, 2017)

Efforts to hold the Kim regime accountable for decades of brutality against the North Korean people have so far amounted to little, but that isn’t stopping human rights activists from trying to document the abuses. The latest effort is an ambitious project by the Seoul-based Transitional Justice Working Group that aims to map sites of mass killings and mass burials in North Korea so that — one day — evidence can be collected and the regime can be held responsible. “Victim testimony was often given a limited place in previous hearings, like those on the former Yugoslavia and on the Holocaust,” said Sarah Son, one of the authors of the mapping report, which will be published tomorrow. “But location-based data provides a bigger picture on patterns of abuse within a country.” The research was backed by the National Endowment for Democracy, which seeks to bolster civil society and democratic institutions around the world and is financed by the U.S. Congress. The working group interviewed 375 defectors from North Korea over the past two years. They were shown maps of their home towns and asked to identify places where abuses occurred. The researchers say they have been able to pinpoint 47 sites where bodies were buried or dumped, and hundreds more that might yield documentary evidence in the future. “People who have done this kind of work in Croatia or Southeast Asia keep telling us we can’t be too prepared for what might happen in the future,” she said. The report says that the mapping project could contribute to “the collective effort to support the push for accountability, as well as . . . future efforts to institute a process of transitional justice following a change in the political conditions in North Korea.” “The commission of inquiry report was not the end, it was just the start,” said Oh Se-hyek, a North Korean defector and another of the report’s authors. “We must continue that work.” The group asked North Korean defectors to point out places in their home towns where they had directly seen or heard executions or mass burials taking place, or where they
had heard from a witness of such an event happening. By cross-referencing the places the defectors identified, the group came up with 47 sites where forensic evidence might be collected in the future, and sites such as police stations or security offices where documents might be found. Most of the sites were in North Hamgyong, a province that shares a long border with China. This province is the source of most defectors from North Korea because of the ease in crossing into China from there and because the residents — whose loyalty Pyongyang considers suspect — are most neglected by the regime. Some interviewed defectors reported seeing or hearing about mass executions by hanging or shooting. Others described burial sites on or near the grounds of prison camps, or on mountainsides near police and state security buildings. Former prisoners described seeing or hearing of places where bodies were incinerated. One former political prisoner reported having seen a list of more than 100 inmates who had been executed in secret over the course of a year, in 1999. The list was held by the state security agency and the local police office operating within the camp, the former prisoner said. North Korea, like other authoritarian regimes, keeps systematic records, so securing these documents could be important for future trials, just as Stasi documents were important after the collapse of East Germany, the report’s authors wrote. “We aim to record the locations of these sites for future safeguarding of documents.” The group did not disclose the locations of the burial sites, saying it feared that the North Korean regime would seek to destroy any evidence if it knew certain sites had been identified. Sandra Fahy, an expert on North Korean human rights who teaches at Sophia University in Tokyo, said that the report was an “important and critical step in a long process of keeping track of North Korea’s atrocities.” “Its impact could be two-fold,” she said. “First, it will further the process of accountability and recordkeeping — with a move toward justice for victims and family members — in the future.” But, Fahy said, it could also inspire North Korean officials to take more precautions in killing and disposing of victims. “North Korea does keep track and respond domestically to the pressures of the international community, but not always in ways we might like,” Fahy said. (Anna Fifield, “Where Are the Bodies Buried in North Korea? Investigators Try to Prepare for Future Trials,” Washington Post, July 18, 2017)

Kim Jung-un’s June 2015 visit to a pesticide facility—Pyongyang’s Bio-technical Institute—rekindled long-standing suspicions that North Korea might be developing bioweapons. Photos of the tour, shown on North Korean television, showed a smiling Kim. He posed with military officers and personnel in lab coats in front of apparently new buildings, with sparkling laboratories and shiny equipment. The tour took place amid tensions with the United States—and soon after a US military laboratory accidentally shipped live anthrax to a US airbase in South Korea, an accident that Pyongyang translated as an act of aggression. These circumstances contributed to a belief that the visit to the pesticide facility was designed to send a message to the United States: that North Korea has an active bioweapons program. Very little is known for sure about North Korea’s alleged bioweapons program. Much of the available data is drawn from scant intelligence estimates issued by the US, Russian, and South Korean governments, most of these estimates over a decade old. Additional information can be found in the media and from other independent sources, but such information cannot be corroborated and some of it is of questionable reliability. Most government sources seem to agree that North Korea’s interest in biological weapons started in the 1960s, in the same era when Pyongyang launched its chemical weapons effort. On December 25, 1961, President Kim Il-sung issued a “Declaration of Chemicalization,” ordering the military to develop chemical weapons. Around the same time, he reportedly instructed the Academy of Defense Sciences to investigate biological weapons. According to South Korea’s National Intelligence Service, North Korea established a testing center at the academy in the 1960s, and reportedly acquired strains of the causative agents of anthrax, plague, and cholera from an unidentified source in Japan in 1968. The program’s research and production infrastructure is difficult to discern with any precision. The South Korean government estimates that 10 facilities might be involved in bioweapons activities—seven research centers and three production facilities. Four facilities are often mentioned in academic publications and other media sources as carrying out activities dedicated to biological weapons (with the South Korean government sometimes cited as a source): the Germ Research Institute, established in the 1970s; as well as the Central Biological Research Institute, the military biodefense unit, and the No. 5 Factory (sometimes referred to as the February 25 Factory, or No. 25 factory), all created in the 1980s. South Korean
and Japanese media outlets list up to a dozen other dual-use and medical facilities that are potentially connected to the program, but do not provide clear evidence of bioweapons activities at these facilities. Government and open-source documents are also decidedly vague about the activities of the program and the agents under study. Several sources claim that North Korean bioweapons research has focused on 13 agents, including the usual suspects: anthrax, plague, botulinum toxin, and hemorrhagic fevers (link in Korean). In the 1990s, US intelligence suspected that North Korea was working on a smallpox weapon based on samples obtained from the Soviet Union in the 1980s. But these claims have not been substantiated. In addition, several defectors have made allegations of human testing at military and medical institutions. None of these claims has been confirmed. Furthermore, some of the defectors later acknowledged that they had no first-hand knowledge of bioweapons activities. Experience shows that one always needs to be cautious about defector testimony. The evolution and current status of the North Korean program are equally uncertain—government estimates generally provide no details on these issues, or on the possible achievements of a bioweapons program. For example, US assessments are consistently vague and continually changing. While some US estimates have taken the view that North Korea is engaged in research and development but that the country has not yet weaponized bio-agents or produced bioweapons, others state that North Korea may already possess ready-to-use biological weapons. A 1997 CIA assessment indicated that North Korea was “capable of supporting a limited [biological weapons] effort.” Defense Department assessments of the late 1990s and early 2000s concurred, describing North Korea’s bioweapons infrastructure as “rudimentary” and capable of producing “limited quantities” of bio-agents. Starting in 2000, CIA estimates began to change, placing more emphasis on North Korea’s production capabilities and indicating that “North Korea [was] capable of producing and delivering via munitions a wide variety of chemical and biological agents,” and “possibly [had] biological weapons ready to use.” In 2002, State Department official John Bolton dialed up the threat dramatically, declaring during a meeting of the Korean-American Association in Seoul that the North “has one of the most robust offensive bioweapons programs on Earth … and … has developed and produced, and may have weaponized, [biological weapons] agents… .” He added that “North Korea likely has the capability to produce sufficient quantities of biological agents within weeks of a decision to do so.” It is worth noting that in 2002 John Bolton also accused Cuba of having a biological weapons program. His claims were soon contradicted by US intelligence. A 2011 report by the Office of the Director of National Intelligence sharply deflated the North Korean threat, merely stating that North Korea has “a biotechnology infrastructure that could support the production of various [biological weapons] agents” and that the country could use its conventional munitions production infrastructure to weaponize bio-agents. More recent reports issued by the office provide no assessment of a potential bioweapons program in North Korea. It remains to be seen whether this indicates the absence of a bioweapons program or the absence of evidence to substantiate suspicions. In a rare assessment made public in 1993, Russia’s Foreign Intelligence Service seemed to agree with pre-2000 US assessments that North Korea’s biological activities were of a defensive nature. The report indicated that various research institutes, universities, and medical institutions were engaged in “applied military-biological research” and that “bio-agents are being tested on the island territories belonging to the DPRK.” The report, however, noted that “there is no evidence of offensive bioweapons activities” (link in Russian). A 2005 report by the Swedish Defense Research Agency came to the same conclusion, indicating that no evidence suggested a large-scale bioweapons program with dedicated production facilities in North Korea. South Korea, on the other hand, has consistently claimed that the North Korean bioweapons program has advanced to the production phase—but official reports do not explicitly state that North Korea has produced or stockpiled bioweapons. Reports published by South Korea’s Ministry of National Defense generally state that Pyongyang has been producing biological agents since the 1980s, but the reports are more cautious about the North’s weaponization capabilities, indicating that North Korea is “likely capable” or is “suspected” of being able to produce bioweapons including anthrax, plague, and smallpox. But like the United States, Seoul provides few details and little evidence to support its assessments. It is not surprising that Kim Jung-un’s visit to a pesticide facility resulted in alarming analyses—government threat assessments are inconsistent and vague, international access to North Korea is extremely limited, and fear about bioterrorism has been elevated since 9/11 and the US anthrax-letter episode. But recent history demonstrates that access to relevant material and equipment is
hardly a guarantee of a successful bioweapons program. When threat assessments are made solely on the basis of the equipment to which nations have gained access, grossly exaggerated evaluations of capabilities are possible—just witness Libya and Iraq’s nuclear and biological weapons programs. Images of dual-use equipment at the pesticide facility do not reveal anything about the activities occurring there. One can’t assess the activities occurring at the site without knowing whether personnel can actually use the dual-use equipment and adapt its technology to bioweapons development. Iraq, for example, acquired drying equipment necessary for bioweapons development but was not able to use it for lack of expertise. Also, claims that because the pesticide facility might produce *Bacillus thuringiensis* (Bt), and that therefore it can produce anthrax, are shortsighted at best. Bt has indeed been used as a simulant for anthrax, but individuals who have expertise working with Bt cannot automatically produce an anthrax weapon. As is known from the Soviet bioweapons program, scientific expertise in the civilian field does not necessarily translate into expertise in the weapons field. For example, when the Soviet research facility “Vector” was created in the 1970s, its staff of virology experts (including smallpox experts) all came from the university system and had no weapons expertise. Five years of experimentation and testing—and the help of experienced bioweapons scientists from another facility—were required for the university experts to master the specialized bioweapons knowledge needed to succeed. Further, several pieces of laboratory equipment that could be used in a bioweapons program, such as the autoclave shown in the North Korean television report about Kim Jong-un’s visit to the pesticide facility, require electricity. If the power supply at the facility is intermittent—and power in North Korea is indeed intermittent—it is unlikely that such devices can be used effectively. Finally, to ascertain the existence of bioweapons activity, one needs to visit a site and determine whether it displays hallmarks or signatures of bioweapons infrastructure or activity. Analyses of past state and terrorist bioweapons programs indicate that the continuity and stability of scientific and production work must be ensured over a long period of time to allow scientists and technicians to accumulate the knowledge necessary for development of a working bioweapon. In addition, because bioweapons are based on fragile microorganisms that are sensitive to their handling and to environmental conditions, the development stages of bioweapons are highly interdependent—a stage cannot occur until the previous stage has been successfully completed. This calls for an organizational structure that carefully coordinates and synchronizes the work of the teams involved. It also requires a management model that allows scientists to communicate freely, share information, and openly acknowledge failures in order to learn from them. When these conditions are not met, programs face steeper learning curves, long delays in project development, and numerous failures. Very few of the known state bioweapons programs have produced a working weapon, and many have failed despite having access to the required material and financial resources. In North Korea’s case, the data available from open sources and government assessments raise many questions about the country’s ability to produce a working bioweapon. The North Korean bioweapons program is suspected of having been launched in the 1960s, with new infrastructure built in the 1970s and 1980s. But was this a continuous program—or a series of separate and independent programs? Did the team that reportedly started to investigate bioweapons with strains obtained from Japan in 1968 continue its involvement in the 1970s and 1980s when new facilities were established, or did the work switch to new teams at those facilities? Did the original teams transfer their expertise and accumulated knowledge to the new teams? What was the knowledge base of both teams when they started, and did they have expertise working with the agents selected for work? Answers to these questions could provide important clues about the continuity and speed of the program and about the personnel’s ability to accumulate knowledge and make progress. If the North Korean program has faced similar issues, it is unlikely that it has made substantial progress over the past 30 years. Another issue that requires investigation is the impact of North Korea’s economic circumstances on a potential bioweapons program. Some would argue that the defense sector gets priority in allocation of resources and therefore is shielded from incessant economic crises. But this is a faulty assumption. The Soviet Union also had a planned economy, with centralized allocation of resources and a defense sector that received priority status. Yet the defense complex could not escape the shortages that plagued the Soviet system. For example, bioweapons facilities routinely lacked the required equipment or reagent necessary for their work. The output objectives set by central authorities did not always take into account scientific realities, nor did they factor in the
difficulties that the economic system itself imposed on obtaining the required technical and human resources. As a result, scientists sometimes had to stop work in order to independently procure material and equipment that they could not get through official procurement routes, creating substantial delays in bioweapons development. And when they failed to meet centrally set objectives, they either lied about the outcome of their work or produced bad science. Thus, despite its priority status, the Soviet bioweapons program suffered due to an inefficient economic system, and its achievements were much reduced as a result. It is likely that North Korean facilities suffer from much greater challenges: While the Soviet economy could obtain some resources from overseas and send some personnel to learn new techniques in the West, North Korea is a closed country due both to its own system and to international sanctions. Pyongyang’s bioweapons program is unlikely to benefit from outside expertise. North Korea could in theory obtain missing equipment or material illegally—the country is adept at establishing illicit procurement networks. But in the bioweapons field, illicit procurement can harm scientific work, especially when laboratory equipment or material is obtained from different suppliers. For example, a change in the quality or characteristics of reagents can doom an experiment because unknown variables can be introduced. Furthermore, North Korea experiences regular power outages, and the quality of its water is notoriously bad. These factors too can affect scientific work. Power outages can cause fragile microorganisms to die due to improper storage or working conditions—and if outages occur during production, they can compromise weeks, or possibly months, of work. North Korea’s unsanitary water might also harm experiments by introducing foreign organisms that could contaminate a batch of bio-agents. Such challenges ultimately create additional disruptions in scientific work and lengthen the time required to obtain positive results.

Understanding Pyongyang’s alleged bioweapons efforts also requires a good understanding of the status of natural and medical science in North Korea. Without a solid foundation in natural and medical sciences, a bioweapons program cannot succeed. When Soviet authorities issued a decree to expand the country’s bioweapons program in the early 1970s, they had to face the reality that Soviet science had fallen behind and needed modernization. Years of Stalin’s purges, along with the policy of Lysenkoism—which negated the role of genetics in science—had resulted in the elimination of a whole generation of competent scientists. Some of them had been at the forefront of bioweapons development, but now they were replaced with a new generation of scientists educated in flawed science. It took the Soviet Union close to a decade to catch up and create the modern infrastructure needed to meet the bioweapons challenge. The Soviet Union procured some needed equipment overseas and sent some of its scientists for training in Western laboratories. Even so, Soviet scientists could not reach the objectives set by central authorities to create new types of bioweapons. Decades of economic sanctions, and the desperate state of North Korea’s economy and society, have undoubtedly had an effect on the scientific sector. Reports about the nation’s health care system are revealing: Hospitals are reportedly unable to procure medication for patients and are otherwise poorly equipped. If North Korean natural science is in as bad a state as the medical sector, it is likely that North Korea does not have the knowledge base required to support bioweapons development. A poor public health system also places a country at risk if an accident should occur in a bioweapons facility. And such an accident would ensure international detection of the program. One can develop a more accurate assessment of a country’s bioweapons capabilities, and the speed of its progress, by gathering data about the scientific, economic, political, and social conditions in which scientific work occurs than by relying solely on isolated pieces of information about equipment acquisition. Reaching an evidence-based assessment is all the more important in North Korea’s case because the regime often builds Potemkin villages for internal and external consumption. From fake missiles displayed during military parades to malls filled with modern electronics and clothes that are only for show and not for sale, to the incessant barrage of reports on North Korean television showing a smiling Kim Jong-un visiting technology fairs or plants that produce food products, the regime aims to project an image of strength and abundance both to the outside world and to its starving population. The visit to the pesticide facility might well have been another Potemkin exercise. It is quite possible that North Korea has engaged in exploratory bioweapons research, but it is unlikely that the country has been able to establish the conditions required to achieve a working bioweapon. The poor state of North Korea’s medical and (most probably) science sector implies that the country does not have a sufficient knowledge base to research, design, produce, and dry bio-agents, not to mention weaponize them.
The deficiencies of North Korea’s economic system, along with the weight of decades of international sanctions, cast doubt on the country’s ability to acquire but also to ensure a continuous supply of equipment and material needed in bioweapons work. Little is known about the organization of scientific work in North Korea, but it is more than likely that science is managed in an autocratic manner, and that subordinates do not challenge orders from higher-ups or openly report failures, particularly if they risk sanctions for doing so. All this casts doubt on the ability of scientists and technicians to learn from each other, accumulate knowledge, and acquire outside expertise when needed—traits that have been a hallmark of past successful bioweapons programs. Without a solid knowledge base and a continuous and stable work environment and infrastructure, scientists are less likely to overcome the challenges of working with fragile, living microorganisms. One might ask why, if North Korea has been able to produce a nuclear weapon in the same adverse conditions, it shouldn’t also be successful in the bioweapons field. The answer lies in the decidedly different nature of bio-agents and nuclear weapons. Unlike nuclear material, living microorganisms are fragile and unpredictable. They are more sensitive than nuclear material to changes in work conditions, equipment, laboratory materials, and other disruptions. A country that cannot ensure a stable and continuous work environment is unlikely to operate a successful bioweapons program. More research is needed to characterize North Korea’s political, economic, organizational, and managerial circumstances, and probe the effects of these circumstances on bioweapons work. But if the United States and the international community are serious about preventing the emergence of a North Korean bioweapons threat, they might seek to forestall the threat by means of the Biological and Toxin Weapons Convention (BTWC). North Korea has been a party to the convention since 1987—but the BTWC lacks a verification mechanism. If a verification regime for the treaty were instituted, the United States could not only obtain more accurate data about the North’s program but, more importantly, promote routine inspections that would prevent progress in Pyongyang’s bioweapons development. Conducting international inspections, or merely threatening to do so, has proved to be an effective strategy in creating disruptions and delays in past biological weapons programs, including in the Soviet Union and Iraq, and even in the program of the terrorist group Aum Shinrikyo. (Sonia Ben Ouaghram-Gormley, “Potemkin or Real: North Korea’s Biological Weapons Program,” Bulletin of the Atomic Scientists, July 18, 2017)

Kim, Philipp, and Chung: “Limited information on North Korea’s BW program leads to a low threat perception that may undermine preparation and response efforts. Nonetheless, preparation against BW is urgent and necessary, which will also serve as defense against naturally occurring epidemics that increasingly threaten the 21st century. Military and public health sectors should cooperate to urgently prepare for “dual-response” mechanisms. Components of a well-established “dual-response” program should include the best possible threat assessment by military and intelligence communities, a strong public health detection and response system, a well-coordinated crisis communication strategy among multiple stakeholders, and compliance from an informed public. …South Korean sources report that North Korea established a biological weapons program under Kim Il-Sung. During the Korean War (1950-1953), North Korea’s population experienced outbreaks of cholera, typhus, typhoid, and smallpox, which North Korea falsely attributed to biological weapons attacks by the United States. This provided an impetus for creating its own BW program. The exact timeline is unclear. According to recent defector Taeg Young-Ho, a former North Korean diplomat, North Korea’s chemical and biological weapons program started in the early 1960s, and according to a South Korean Defense White Paper, North Korea began weaponizing biological agents in the 1980s. Furthermore, it is known that North Korea’s soldiers are vaccinated against smallpox, suggesting either an interest in an offensive BW program or a biodefense precaution. Unlike its current rhetoric regarding its nuclear program, however, North Korea has at times adamantly denied the existence of its BW program. In 2005, in response to a U.S. State Department report to Congress alluding to North Korea’s BW development, North Korea stated through their state newspaper Rodong Sinmun that it “does not possess any biological weapon and has been implementing the Biological Weapons Convention with good will.” North Korea has even attempted to reverse the narrative around its BW program by falsely claiming that the United States is willing to engage in biological warfare against North Korea as it did in the Korean War. In 2015, when U.S. forces accidentally brought live Bacillus anthracis test samples
and *Yersinia pestis* samples to the Osan Air Force base in South Korea, North Korea immediately issued a statement denying the existence of its BW program and accused the United States of targeting North Korea with a biological weapons attack. It even called on the UN Security Council to investigate the United States. The current status and the future of North Korea’s BW program remain unclear. Sources from the 1990s claim that North Korea intends to develop an offensive BW program, but recent official statements from North Korea do not support this claim. Regardless, it is certain from government statements, defector testimonies, and circumstantial evidence such as the smallpox vaccination of North Korean soldiers that at least in the past, North Korea has held an interest in developing biological weapons. Accurately assessing North Korea’s BW capability is challenging without access to classified intelligence. The ROK Ministry of National Defense has disclosed partial intelligence reports via White Papers, reports, and testimonies at the request of the South Korean legislature. These reports, in addition to several sources from the United States, South Korea, and the former Soviet Union, indicate that North Korea has the capability to cultivate pathogens for BW purposes and weaponize them. However, language describing North Korea’s BW program has been softened in some U.S. assessments. With a healthy grain of skepticism, a reasonable assessment is that North Korea has the capability to cultivate and produce biological weapons. North Korea is assumed to have several pathogens in possession. The 2000 ROK Defense White Paper mentions anthrax and smallpox most frequently. Since 2012, the plague (*Yersinia pestis*) and others have been on the list as well. Agents mentioned in the White Papers, however, are not exhaustive. More information on North Korea’s BW capability discussed through other sources, which maps out 13 agents: *Bacillus anthracis* (Anthrax), *Clostridium botulinum* (Botulism), *Vibrio cholerae* (Cholera), Bunyaviridae hantavirus (Korean Hemorrhagic Fever), *Yersinia pestis* (Plague), *Variola* (Smallpox), *Salmonella typhi* (Typhoid Fever), *Coquillettidia fuscopennata* (Yellow Fever), *Shigella* (Dysentery), *Brucella* (Brucellosis), *Staphylococcus aureus* (Staph), *Rickettsia prowazekii* (Typhus Fever), and T-2 mycotoxin (Alimentary Toxic Aleukia). In addition to possessing these agents, the Ministry of National Defense assessed that North Korea may even have capabilities to weaponize them. North Korea’s BW capability is difficult to verify in part due to the dual-use nature of equipment and facilities used for cultivating BWs. As seen in the cases of Iraq’s Al Hakam Factory and the Soviet Union’s ‘Progress Scientific and Production Association’ in Stepnogorsk, Kazakhstan, biopesticide plants can be covers for bioweapons production. Here we evaluate the possibility of dual-use in North Korea. Since his inauguration, Kim Jong-Un has clearly stated the importance of agricultural reform as “the frontline of socialism.” A large aspect of this reform is to increase pesticide production. While most pesticides worldwide are chemical, North Korea’s interest in organic, biological pesticides has increased. Some point out that this shift from chemical to biopesticides could signal an expansion of North Korea’s BW program, though it could simply be a consistent part of Kim Jong-Un’s priority to enhance agricultural productivity. In March 2017, according to the *Rodong Sinmun*, North Korea built an organic fertilizer production complex that covers “thousands of square meters” in Gangnamgun, Pyongyang that is claimed to be capable of producing thousands of tons of organic fertilizers. North Korea intends to continue exponential increase in bio-pesticide production to achieve Kim Jong-Un’s goal of producing “Juche fertilizer,” named after North Korea’s self-reliance ideology. Such emphasis on agricultural self-reliance suggests the legitimate use of pesticide facilities for civilian use only. However, a series of photos of the Pyongyang Bio-technical Institute released by the North Korean state media in 2015 raised concerns for dual-use. Analysis of these images revealed that the Pyongyang Bio-technical Institute could produce military-sized batches of BWs, specifically anthrax. The modern equipment visible in these images also showed a violation of the Australia Group’s dual-use items list, and showed that it is possible to convert the facility from pesticide to BW production. In response to this study, North Korea’s National Defense Commission (NDC) issued a statement strongly refuting the claim that the Biotechnology Institute is an anthrax production facility. It furthermore invited every member of the U.S. Congress to inspect the Pyongyang Bio-technical Institute. South Korea’s Ministry of National Defense pointed out that the facilities in the images were not equipped with biosafety equipment and that staff were not wearing protective suits, emphasizing that the possibility of the Institute being a dual-use facility should be considered with caveats. North Korea may not, however, adhere to international biosafety standards, considering its historical record of treating people as expendable entities; testimonies from defectors allege...
that North Korea uses human subjects in testing biological and chemical weapons. Also, biosafety equipment and protective suits would only be required during the actual production of BW agents. Thus, the fact that the Pyongyang Bio-technical Institute was not equipped with a Level 3 biosafety cabinet and safety suits does not necessarily rule out its dual-use. Altogether, we cannot exclude the possibility that these large-scale pesticide production facilities and Bio-technology Institute have dual-use potential. The ambiguity surrounding the dual-use potential of bio-pesticide facilities could be used to North Korea’s advantage. For example, the date of Kim Jong-Un’s visit to the Pyongyang Bio-technical Institute, which is run by the Korean People’s Army Unit 810, could be interpreted as strategic messaging. The visit took place only ten days after the U.S. Forces Korea’s accidental import of live anthrax samples into a South Korean air base was publicized. It is plausible that North Korea intended to signal its BW capability to the United States and South Korea by showing its leader praising the military-run Bio-technical Institute. Furthermore, the Pyongyang Bio-technical Institute has been recently alleged to be responsible for the implementation of the assassination of Kim Jong-Nam as well. Separately, the South Korean government believes that North Korea maintains at least three possible BW production facilities and seven BW or BW-related research centers. These facilities include the No. 25 Factory in Chongju, the Central Biological Weapons Research Institute in Pyongyang, and a plant in the City of Munchon, Kangwon Province. All of these circumstances considered, it is reasonable to conclude that North Korea has dual-use facilities. It would be difficult to analyze the state of facilities at each institution and whether they are used for their BW program, but investing in efforts to monitor the flow of dual-use equipment would be an important part of BW preparedness. … There is much debate on the extent to which North Korea can weaponized biological agents. Some claim that North Korea has already weaponized biological agents that are only waiting to be loaded onto missiles, while others believe that it only has samples of BW agents. The most recent statement made by the South Korean Defense Ministry is that “North Korea has 13 types of BW agents which it can weaponize within ten days, and anthrax and smallpox are the likely agents it would deploy.” Weaponization requires stabilizing and formulating biological agents for dissemination. Stabilization prevents degradation of biological agents from environmental factors such as high salt concentrations, dryness, and heat. How to achieve these technical challenges depends on the agent. Some pathogens such as Bacillus and Clostridium naturally form spores that allow survival in heat, dryness, and excessive radiation. Once stabilized, typically by freeze-drying (lyophilization), biological agents can be disseminated by spraying. … It is unknown whether North Korea has the capability to weaponize all 13 types of agents, and whether North Korea has the capacity to produce a mass stockpile of stabilized biological agents. Regarding the first aspect, little information is available. The ROK Defense White Paper mostly mentions anthrax and smallpox, so these could be agents that North Korea has higher capability to weaponize. However, it is important to note that despite an investment of 40,000 personnel over 63 years (1928-1991), the Soviet Union’s BW program yielded only 13 weaponizable agents. Although increase in biological knowledge in the modern era could expedite weaponization, it is highly unlikely that all of North Korea’s agents are ready for weaponization. Regarding the second aspect of mass production, Kim Jong-Un’s visit to the Pyongyang Bio-technical Institute showed bio-pesticide production facilities at a massive scale, which could allude to its capacity to mass-produce BW agents. However, some experts doubt that North Korea can mass produce BWs and little is verified by publicly available information. … Images of the Pyongyang Bio-technical Institute in 2015 revealed that North Korea has dual-use equipment that violates export control based on the Australia Group. Compared to the thorough monitoring of dual-use items used for North Korea’s nuclear program, procurement channels and the flow of BW dual-use items are less well understood. Part of the reason for this is that in the case of BW, distinguishing between items intended for military purposes, agricultural applications, and public health efforts is difficult. For example, a European non-governmental organization provided training and basic equipment for bio-pesticide production to the North that may have inadvertently contributed to North Korea’s ability to produce BW. Currently there is a need for clearer identification of procurement channels through which North Korea obtains its equipment and technology to produce BW. In this section, we examine the current policies of the United States and the Republic of Korea on North Korea’s BW program, and identify areas where further policies are needed. Vaccination of U.S. Troops on the Ground: As a preventive measure against North Korea’s BW threat, U.S. Forces in Korea
(USFK) are vaccinated against smallpox and anthrax since 2004, as decided by the U.S. Department of Defense. Anthrax and smallpox vaccination is also mandatory for Department of Defense personnel and contractors assigned or deployed to the Korean Peninsula for 15 consecutive days or longer, which will also include forward-deployed naval forces.

**Joint Exercise:** The ROK and the United States have held joint exercises to respond to bio-threats since 2011. The *Able Response (AR)* exercise aims to “coordinate inter-ministerial procedures inside Korea and international procedures in requesting the medical resources urgently between the ROK and USA, and among the ROK, the UN, and nongovernmental organizations.” The exercises hosted by the Korean Ministry of National Defense and the Ministry of Health and Welfare encompass related military and civilian agencies from both South Korea and the United States. It started as a tabletop exercise in 2011 in which virtual scenarios were presented and discussed. In the 2013 and 2015 exercises, these exercises had a greater focus on operational aspects. In 2016, the exercise was conducted during the Ulchi Freedom Guardian (UFG) maneuvers indicating that bio-threats from North Korea are real, and that response against bio-threats should take a more integrated approach.

**The JUPITR Program:** The Joint United States Forces Korea portal and Integrated Threat Recognition (JUPITR), a program led by the U.S. Army’s Joint Program Executive Office for Chemical and Biological Defense is underway in the ROK as well. The JUPITR program supports new bio-surveillance equipment that increase the speed and ease of monitoring bio-threats. For example, new equipment such as the BioFire Array can run Dry Filter Unit samples in five to six hours, compared to the current system that runs samples in a couple days. In January 2017, the USFK decided to deploy JUPITR equipment in the port of Busan. The USFK has not confirmed whether the equipment has already deployed.

**U.S. Government Funded Programs for Rapid Detection and Response to Pathogens:** The U.S. Department of Defense, through the Defense Advanced Research Projects Agency (DARPA), supports academic and industry research for rapid detection and response to pathogens. DARPA’s Biological Technologies Office (BTO), with an annual budget of $296 million, has prioritized the “Outpacing Infectious Disease” program to rapidly identify pathogens via DNA and RNA sequencing. Pathogen sequences would be then used to make DNA/RNA vaccines within a matter of days or weeks, compared to the months or years required for traditional vaccine pipelines. In particular, DARPA has funded Moderna Therapeutics, a biotech startup, to develop RNA vaccine platforms. Such public-private partnerships ensure the development of technologies important for national security that may not be incentivized by commercial profits. Multiple benefits will ensue from such government-funded innovation: the United States will be more resilient and better prepared for pandemics, and technological innovations could boost the economy; for example, DARPA-funded research programs contributed to the digital revolution in Silicon Valley.

Government-funded research is also supporting the use of DNA sequencing to conduct detailed analysis on possible BWs. The U.S. Department of Homeland Security recently funded a project that used DNA sequencing to assess whether a Soviet strain of anthrax could have been genetically engineered. In 1979, a military facility in Sverdlovsk accidentally released anthrax spores, causing about 100 deaths. During the Cold War, the Soviets were rumored to have genetically manipulated *Bacillus anthracis* to be resistant to vaccines and antibiotic treatment. By sequencing the genomes of anthrax from two victims, the study authors found no trace of genetic manipulation. Instead, they found that the Sverdlovsk strain was a wildtype anthrax strain endemic to Russia. This study led to determining a unique, geographical molecular fingerprint, which could be important for tracing the source of potential biological weapons attacks.

**International Limits to North Korea’s Biological Sciences:** North Korea’s access to WMD-relevant training in biological sciences and access to dual-use items is purposefully limited by UN resolutions and other voluntary international coalitions. UN Resolutions since UNSCR 1718 (2006) have decided that member states “shall prevent the direct or indirect supply, sale or transfer” to North Korea of “items, materials, equipment, goods and technology” that are deemed by the Security Council or 1718 Committee as potential contributors to any weapons of mass destruction related programs. Furthermore, member states are banned from providing “technical training, advice, services or assistance” to North Korean nationals that would contribute to its advancement of WMD programs. However, as earlier evidence demonstrated, such international resolutions may not be sufficient as North Korea is still able to obtain restricted dual-use materials. The Australia Group and the Wassenaar Arrangement are two international
nonproliferation regimes that maintain export control lists, including biological weapons dual-use items. United Nations Security Council Resolution 1540 (2004) includes binding obligations for member states to adopt domestic legislation to prevent the proliferation of biological weapons and their means of delivery, and to establish domestic controls to prevent the illicit trafficking of their related or component materials. Unsurprisingly, North Korea does not participate in these regimes and has never submitted a compliance report to the 1540 Committee. **Gaps in the Current Policies Vaccination of the ROK military:** Unlike the USFK, the ROK military is not vaccinated against anthrax and smallpox. The main reason for this is the lack of vaccines. According to open sources, the Korean Center for Disease Control and Prevention had smallpox vaccines for less than 30 percent of the Korean population as of 2014, and the Ministry of National Defense had stockpiled vaccines since only 2014.48 The Ministry aims to secure the appropriate amount of anthrax and smallpox vaccines by 2020, but it is likely that this goal would not be met by then considering the delay in the anthrax vaccine clinical trial. The Defense Ministry budget for smallpox vaccines was earmarked in 2015, and the actual vaccines will not be distributed to the military until 2019. Open sources indicate that the United States declined to provide vaccines to the ROK military as vaccine stockpile is insufficient, and there is no precedent for overseas vaccines sales. **Dismantlement of the BW Program:** The United States and South Korea should prepare to lead the dismantlement of the North Korean biological weapons program in the event that the state collapses and reunified with South Korea, or it reaches a comprehensive disarmament agreement with the international community. Troop units should be designated and trained for this task, and vaccinated ahead of time. Units should also stockpile the necessary equipment to carry out the neutralization of biological weapons production facilities and stockpiles. The procedure for neutralizing any biological agents will depend in part on the state in which they are stored. The United States military has experience with assisting others in efforts to dismantle biological weapons program infrastructure. The U.S. Department of Defense Cooperative Threat Reduction (CTR) program effort in the former Soviet Union in 1991 is one such example. **Efforts to Close Procurement Channels:** Despite the international community’s efforts to stem North Korea’s various illicit trade and money laundering activities, it continues to evade sanctions with “techniques that are increasing in scale, scope and sophistication.” The international community should, therefore, increase its efforts to close off North Korea’s illicit procurement channels, which may provide it with infrastructure, funds, and knowledge that enable it to advance its biological weapons program. The international community should be cautious in providing scientific training to North Korea without mechanisms to conduct follow-up surveillance for potential misuse. For example, the Center for Agriculture and Biosciences International (CABI), an international non-profit agency that runs agricultural aid programs, established a facility in North Korea for producing *Bacillus thuringiensis* (Bt) as a bio-pesticide. This facility and the knowledge for Bt cultivation could be easily used to manufacture Bt’s close relative *Bacillus anthracis* (anthrax). While bio-pesticide production is an appropriate goal for North Korea to achieve food security for its population, there should be policies in place to ensure that scientific knowledge and infrastructure provided by the international community under the intentions of aid are not misused for biological weapons production. The international community should also prioritize better accounting of existing biological weapons to prevent stockpiles from falling into the wrong hands. A 2014 report from the U.S. Department of Homeland Security revealed that 27 biological agents and toxins used in research in the U.S. - including *Bacillus anthracis* (anthrax), *Yersinia pestis* (the plague), and botulinum neurotoxin - were not properly registered with the Federal Select Agent Program. Although these agents have since been secured, and the U.S. government is clearly taking these alarming gaps in inventory control with serious concern, it is worth noting that missing laboratory inventory could easily end up in the wrong hands. **Effective Communication Strategy between Stakeholders:** Effective communication between stakeholders including the ROK, the United States, and the public is lacking. The live anthrax incident at Osan Air Force base in 2015 demonstrates miscommunication between the South Korean and the U.S. governments, as well as poor communication to the public on the risk posed by these agents. The public ought to have been alerted of the import of biological agent samples and provided information on preparation efforts against biological threats. In fact, a large number of the Korean public wrongly perceived that the United States was unjustly conducting bio-hazardous activity on Korean soil, exploiting the alliance. After the incident, the South Korean
and U.S. governments increased their communication efforts by disclosing the Able Response exercise for the first time in September 2015. The South Korean public, however, is still averse even to the idea of having biological agent-related equipment on their soil. When it became public that the USFK is deploying the JUPITR biodefense equipment at the ports of Busan, there were public protests. For a more robust and effective preparation effort, the ROK and the U.S. government should effectively coordinate information-sharing, and communicate facts and risks accordingly to the public. Biological weapons policy and preparedness for BWs incidents have been undertaken by the United States, South Korea, and other members of the international community. More must be done, however, to enhance intelligence on this vital issue and to pursue non-military tracks to improve understanding, preparedness, deterrence in this area. Intelligence Gathering and Validation of Sources The international community, led by the United States, South Korea, and China, should invest in further efforts to gather intelligence on North Korea’s biological weapons capability. This should be done at the governmental level as well as through open source research at the level of think-tanks, universities, and other research institutions. The North Korea security studies community has a strong precedent of analyzing open source information such as publicly released photos and video footage from North Korea and satellite images of industrial sites for the country’s nuclear and missile programs. More must be done to cultivate intelligence on its biological weapons facilities. Gathering Intelligence Online: Internet usage in North Korea has been increasing despite tight government control of access. In September 2016, an accident allowed worldwide access to all websites hosted on North Korean servers, revealing 28 websites. Screenshots revealed that many of these sites were available in both Korean and English, and some in Russian, Mandarin, German, French, and Arabic, pointing to a possibility that their websites are accessed by non-Korean speakers. As more communication, both internal and external to North Korea, takes place on the web, there is potential to mine information from these websites. In particular, websites that are not indexed by search engines, referred to as the “deep web,” may hold valuable information. The continual growth of open source data on the internet provides a means by which North Korea could potentially acquire third-party knowledge relevant to developing internal BW capability. In turn, it also offers the potential to identify and monitor activities of organizations and individuals that may be engaging in biological research with North Korea. Emerging intelligence tools that mine the internet with data processing are making it possible to generate surveillance intelligence at a scale and speeds that have previously not been possible; one such example is AMPLYFI’s artificial intelligence platform DataVoyant. Applying machine learning algorithms to analyze the deep web for key trends, people, and patterns, to assess whether any signal can be detected for associations between North Korea and biological weapons-related search terms could open new leads of information and investigation. Such tools can be used to monitor activity on North Korea hosted websites. To date, AMPLYFI has mined 840,000 websites that contain a curated list of pertinent biological search terms. Of these, they found 23,000 websites with weak associations to North Korea, 170 of which point to particular organizations and institutions. While it remains to be seen whether any meaningful signals exist after rigorous follow-up analyses to eliminate false positives, such new algorithms should be considered as an additional tool to strengthen surveillance and detect North Korea’s biological activities. Assessing North Korea’s Research Interests: Similar to efforts for its nuclear weapons program, North Korea may seek training for its scientists abroad, particularly in Russia and China. Documentation of these international exchanges are not always publicly recorded and are thus difficult to access. North Korea’s international research and training efforts, however, can be evaluated if they result in academic publications. UN member states are banned from providing BW development training to North Korean nationals as noted above. As part of this effort, it is important to monitor other biology-related training that North Korean nationals receive. On January 25, 2016, North Korea acceded to the Svalbard Treaty, announcing through its state news agency, Korean Central News Agency (KCNA), that its accession provided North Korea “with an international legal guarantee for conducting economic activities and scientific researches in the Svalbard Islands.” The treaty affords parties equal rights to access the Norwegian islands for commercial, mining, and industrial purposes, including scientific research and the procurement of biological samples. North Korea’s research participation in the Svalbard is worth monitoring for two reasons: to gain a better understanding of North Korean life science research capabilities, and to monitor specimens it procures from permafrost. Few states maintain active
economic and research activities on the islands. In 2015 and 2016, Chinese and North Korean academic scientists jointly published research undertaken in the Svalbard Islands: on the detection of novel bacterial species from permafrost. These studies employed DNA sequencing to identify novel species of bacteria isolated from the tundra soil of Svalbard islands, resulting in new species of the *Hymenobacter*, *Terrimonas*, and *Roseomonas* genera. It is highly unlikely that the typing of these genomes will provide know-how for biological weapons development efforts. It is unclear whether North Korean scientists involved in these works were commissioned to do so from a high level within the North Korean government, or part of a basic science inquiry in conjunction with Chinese scientists, as studying organisms that live in extreme conditions is important for advancements in basic science and bio-technology. It is noteworthy, however, that North Korean scientists undertook these studies as the first authors, i.e. the lead scientist, given that its capacity and track record of conducting research internationally is limited. Improving Nonproliferation Policy The international community should improve policy to cut off dual-use supply chains to North Korea. The 1540 Committee, established pursuant to Security Council Resolution 1540 (2004) to prevent the proliferation of nuclear, chemical, and biological weapons, maintains frameworks for assessing these efforts and conducts an annual review. The Committee’s implementation matrix for UN member states is designed to facilitate assistance to states and act as a tool to enhance dialogue among member states on implementation. In 2016, the Committee reported increased adherence to the terms of UNSCR 1540 pertaining to states’ obligations in biological weapons amounting to a 62 per cent overall implementation rate. These efforts, however, are targeted more towards preventing non-state actors from producing or procuring biological weapons, and less focused on trans-shipment issues and limiting access of states like North Korea to dual-use materials. Improving national export control lists is one such effort that stands to stem proliferation of BW dual-use items to both North Korea and non-state actors of concern. The Committee noted that the overall number of states that maintain control lists pertaining specifically to biological weapons has increased to 77 since its last count. Engaging North Korea through Multilateral Global Health Efforts The United States and South Korea should use existing frameworks to engage North Korea in dialogue regarding its illegal biological weapons program. The United States, South Korea, and other international partners maintained a dedicated effort for advancing negotiations on the North Korean nuclear program throughout the 1990s and 2000s, but have made little progress on such negotiations for the last half-decade. These negotiations have not extended to North Korea’s biological weapons capability. The new presidential administrations inaugurated in the United States and South Korea in 2017 may choose to prioritize WMD talks with North Korea, but it is too early to assess their policies. A path forward outside of the traditional negotiation pathway includes engaging North Korea through “softer” issues of public health, agricultural health, or laboratory safety. The goal of these fora would be to improve public health and safety around biological sciences that will have positive impact on North Korean citizens, and to improve information sharing about the current state of standards in North Korea. The Global Health Security Agenda (GHSA), a multilateral effort launched in 2014, may provide one avenue through which to engage North Korea on issues tangential to its biological weapons program. The GHSA is a voluntary partnership of more than 50 states and non-governmental organizations that engages in “capacity-building efforts to achieve specific and measurable targets around biological threats.” North Korea’s health infrastructure stands to benefit from improvements included in the GHSA’s expert-developed “Action Packages,” including those for bio-safety and bio-security, or the national laboratory system package. Engagement in these health or agricultural fora present opportunities to build relationships between negotiators and representatives from respective parties, and offer a chance to glean information about North Korea’s biological weapons program. Increase Interdisciplinary Exchange As part of the preparedness effort against pandemics and bioweapons, it is important to continually engage scientists and healthcare workers. While there is no evidence that North Korea is genetically modifying biological agents for weaponization, the ease in genome engineering thanks to new tools such as CRISPR warrants new frameworks for monitoring in the future. Currently, senior level scientists in synthetic biology and epidemiology in the United States have been part of national committees on biosecurity. It is important to continue such engagement with the scientific community to ensure that governments are up-to-date and informed about the latest tools for effective response, should North Korea’s bioweapons
South Korean President Moon Jae-in is seeking a deal with North Korea in 2020 to bring about the “complete denuclearization” of the isolated nation in return for a peace treaty that would guarantee the survival of Kim Jong Un’s regime. Moon set out his ambitious goal today in a special presidential Blue House report outlining his objectives for his five-year term. It’s the first time the new president has provided a timeline for his engagement policy. “We will come up with a negotiation plan for comprehensive denuclearization that will lead a nuclear freeze to a complete dismantling,” of weapons, the Blue House said in the report, which stated Moon would propose a road map this year. "The treaty will be signed when denuclearization is complete and the peace regime will be maintained in a stable way." While his olive-branch approach doesn’t differ greatly from President Donald Trump’s policy of maximum pressure and engagement, the devil will be in the details, according to analyst Ralph Cossa. “Moon apparently has Trump’s support in playing a lead role in dealing with the North,” Cossa, president of the Pacific Forum CSIS in Honolulu, said

program advance to a new level of sophistication. Additionally, unless North Korea makes an explicit announcement, the first signs of a BW attack will likely be encountered by a nurse or a physician, as pathogens typically require several days of incubation before the onset of symptoms. As the expectation of a BW attack is very low by healthcare workers, misdiagnosis is highly possible. Healthcare providers, particularly those in primary care and infectious disease in select geographical locations, should be regularly engaged by government officials and trained to detect and treat these rare disease scenarios. **Improve “Dual-Response” Health Preparedness Effort Against Pandemics and BWs** Investing resources to strengthen health systems will mitigate against the risk posed by North Korea’s BW program as well as against natural infectious disease outbreaks, which we label as “dual-response.” Preparedness efforts should be undertaken even if the international community makes incremental progress on engaging North Korea on this issue. One such measure is improving continually-deployed and nationally-funded surveillance technology in South Korea along the border, at border crossings, and in major cities to detect pathogens and BWs in the atmosphere. Systems that conduct environmental sampling or “sniff” the air for aerosolized biological agents are examples. Another example is deploying technologies that detect water-viable BW agents and harmful toxins for screening water supplies in major cities and near U.S. military bases, which are likely targets for North Korean biological operations. These systems can be built into South Korea’s existing efforts in environmental surveillance, including air pollution monitoring and water quality control. Such systems may also be designed to detect chemical weapons. When the MERS epidemic spread through major South Korean cities in 2015, the country implemented screening of commuters at transportation hubs such as intercity bus terminals, visually inspecting passengers as they disembarked. Screening at airports, bus terminals, and train stations may be useful to monitor for human vectors of biological weapons once knowledge of an imminent attack is known; however, this approach would be cost-ineffective, and it may not be useful in catching the initial infected person(s). Unless law enforcement agencies have additional intelligence to indicate an impending biological weapons attack, these screening mechanisms may be useful to mitigate spread of a suspicious infectious disease. **Increase the Effectiveness and Transparency of Risk Communication** As seen in the live anthrax import incident in 2015 and the controversy around the USFK’s deployment of the JUPITR program, preparation efforts against BW would not be fully effective without the understanding and approval of the general public. It is important to communicate the risk and needs for preparation measures against North Korea’s potential BWs more effectively to the public. The ROK and the United States should design their risk communication with the “Comprehensive Risk Management Framework” in mind, establishing strategies appropriate to each phase of management: prevention, protection, response, recovery, and resilience. Notwithstanding the sensitive nature around North Korea’s BW program and preparation efforts, government agencies should include discussions on effective communication strategies when they are making decisions that affect the health and safety concerns of the general public at the prevention stage. In order for the ROK government to effectively communicate with the public, the United States should also maintain transparency regarding its preparedness efforts on the Korean Peninsula with the Korean people.” (Hyun-kyung Kim, Elizabeth Phillipp, and Hattie Chung, North Korea’s Bioweapons Program: The Known and Unknown, Belfer Center for Science and International Affairs, Harvard Kennedy School, October 2017)
before the statement was released. "Both have agreed to a mix of pressure and dialogue but neither is an end in itself. The end is changing North Korea behavior, and the prospects of that remain very slim." Cossa added that Moon’s desire to take the lead on nuclear discussions is "a total non-starter" for Kim. On July 15, Rodong Sinmun criticized Moon’s approach as a “series of sleep-talking sophistries that create even greater hurdles” to talks. Still, the paper expressed “relief” that Moon has signaled a departure from the policies of his conservative predecessors. The reclusive state has yet to respond to Moon’s demilitarization timetable. North Korea is likely to agree to military talks by suggesting an alternative date and “there are a few easy carrots for Moon to offer, such as an end to propaganda broadcasts and balloons,” said Cossa. The sticking point is that Kim will want more than Moon can promise, such as an end to the South Korea-U.S. joint military drills. Today’s report details 100 tasks that Moons plans to tackle during his single, five-year term. While they also cover areas such as the domestic economy and welfare policies, below are some of his objectives for relations on the Korean peninsula: Seek early return of wartime operational control to South Korea from the U.S. Connect the two Koreas by building an energy belt along the east coast to Russia, a logistics and transportation belt on the west coast, and a tourism belt around the demilitarized zone on the border. Establish an inter-Korean joint market, if conditions allow, to boost private sector economic exchanges. Reopen the joint industrial park on the northern side of the border and resume tourist visits to North Korea’s Mt. Geumgang — again, if conditions improve. Complete the nation’s three main defense systems earlier than scheduled in early-2020: Kill Chain, aimed at striking North Korea’s nuclear and missile system; Korea Air & Missile Defense to intercept North Korean missiles targeting South Korea; Korea Massive Punishment & Retaliation to remove the North’s leadership should it use nuclear weapons. (Kanga Kong, “Moon Seeks 2020 Deal for Peace with a Nuclear-Free North Korea,” Bloomberg, July 19, 2017)

An advisory panel to South Korean President Moon Jae In said that the country will separate history issues from its bilateral cooperation with Japan to deal with North Korea’s missile and nuclear development programs. In a five-year state policy plan, the panel said that history issues, including the one on so-called comfort women, should not disturb the development of future-oriented bilateral relations with Japan. On the comfort women issue, the plan called for producing a solution that victims and other citizens can support, suggesting that the country may review its 2015 deal with Japan to “finally and irreversibly” resolve the issue. But there was no reference to the possibility of renegotiating the accord on the women. The panel also mentioned plans to launch a related memorial day, a research center and a history museum. (Jiji, “Seoul to Keep History Issues, North Korea Separate,” Yomiuri Shimbun, July 19, 2017) South Korea’s new government has pledged to take "strong action" against Japan in long-running territorial and "comfort women" disputes, raising concerns about the further straining of bilateral ties. President Moon Jae-in’s policy toward Tokyo was spelled out in the administration's five-year management plan that was published July 19. On the disputed Takeshima islets and nearby Ulleungdo island, Seoul plans to bolster its ability to control the islands from 2018. Berthing and security facilities at key ports on the islets will be expanded and strengthened for use by the South Korean Coast Guard. (Takeda Hajimu and Makino Yoshihiro, “Seoul to Take Strong Line on Disputed Isles, ‘Comfort Women,’” Asahi Shimbun, July 20, 2017)

South Korea's Unification Ministry approved Hyundai Asan Corp.'s bid to contact North Korea as the company seeks to visit the North next month to mark the anniversary of the death of its former chairman. The operator of the now-suspended inter-Korean tour to Mount Kumgang on North Korea's east coast has held the memorial service for Chung Mong-hun at the mountain since his death in August 2003. But it did not seek approval for the visit last year due to tensions sparked by the North's nuclear and missile tests. If approved, it would mark the first visit by South Koreans to the North under the government of President Moon Jae-in. (Yonhap, “Seoul Approves Hyundai Asan’s Bid for N.K. Contacts over Memorial Service,” July 19, 2017) North Korea on July 27 rejected Hyundai Asan Corp.'s request to hold a memorial service in the reclusive country next month to mark the anniversary of the death of its former chairman, a corporate source said. (Yonhap, “Pyongyang Rejects Hyundai Asan’s Bid to Hold Memorial Service in N. Korea,” Korea Herald, July 27, 2017)
North Korean leader Kim Jong-un has sent an "urgent directive" to diplomats to "negotiate a peace treaty with the U.S.,” Asahi Shimbun reported. Sources told the daily that Kim considers South Korean President Moon Jae-in's term in office a "golden opportunity" to sign the peace treaty. The paper said Kim sent the directive to the North's overseas diplomatic mission during the G20 Summit in Germany from July 7-8, apparently emboldened by the successful test of an intercontinental ballistic missile. "The Moon Jae-in administration is providing a golden opportunity for us. Before hostile forces cause a stir, we must realize our duty of reunification," it quoted the directive as saying. (Lee Dong-hwi, “Kim Jong Un Wants PPeace Treaty with U.S.,” Chosun Ilbo, July 20, 2017)

John Park testimony: “The key takeaway is not that the North Korean regime has been evading sanctions - they've been engaged in this activity for decades. Rather it's the story of how North Korea's sanctions evasion techniques have improved significantly because of North Korea, Inc.'s migration to the Chinese marketplace. As a result, U.S. policymakers need to factor in these growing gaps and consider under-utilized measures - like Chinese domestic policy tools - to disrupt Chinese-North Korean business partnerships and restrict North Korea's access to finance. My MIT colleague, Dr. Jim Walsh, and I recently completed a three-year study assessing the application of targeted sanctions to halt the North Korean regime's nuclear and ballistic missile programs. Based on interviews with former managers of "North Korea, Inc." - the web of state trading companies (STCs) that the regime operates to procure licit and illicit items - we were able to map North Korea, Inc.'s practices, partners, and pathways. We found that STC managers were able to significantly increase the effectiveness of their procurement activities by 1) hiring more capable Chinese middlemen who can more effectively handle financing, logistics, and doing business with private Chinese firms and foreign firms operating in China, 2) taking up residence and embedding themselves on the mainland, which increases their effectiveness, 3) expanding the use of Hong Kong and Southeast Asian regional commercial and banking hubs, and 4) increasing the use of embassies as a vehicle for procurement. 1) The Unique Role of Chinese Middlemen By working directly with local Chinese middlemen, North Korean STC managers have been able to better evade sanctions. These middlemen charge their North Korean clients a fee to purchase dual-use technologies - items that can be used for either civilian or military purposes, such as industrial equipment and components. Following the application of additional rounds of sanctions, these local Chinese middlemen began to charge larger fees to reflect the increased risk of doing business with North Korean STC clients. Instead of impeding procurement activities, we found that additional sanctions have actually attracted more capable middlemen, incentivized by a bigger payday. The North Korean regime has financed these larger paydays by drawing on sizeable slush funds on the mainland that it amassed during the lucrative North Korea-China coal trade in the late 2000s. 2) Embedding in Commercial Hubs in China Using diplomatic credentials, former North Korean STC managers noted that they were able to reside longer in commercial hubs on the mainland. What's new was not that STC managers had been engaged in procurement activities - they've been doing so for decades - rather it was how and where they had conducted business. Previously, STC managers would go on the equivalent of a business trip from Pyongyang to Eastern Europe to procure an item ordered by the regime. They acquired very limited information about local market dynamics on such transactional trips. What was striking about interviewing former STC managers was the normalcy of their business practices. Like American or European expatriate businessmen, they explained the challenges and opportunities of operating in a particular local market in Asia. Gaining the tacit business knowledge that resides in these networks was critical to increasing the procurement effectiveness of North Korean managers. By acting more like regular businessmen, STC managers were able to form improved business partnerships with local middlemen. 3) Leveraging Commercial and Banking Hubs in Hong Kong and Southeast Asia North Korean STC managers have operated in Hong Kong and Southeast Asian hubs for many years. As global trends in trading and banking shifted to this part of Asia, these managers have benefited from increased access to business partners with an international reach. In the case of Hong Kong, we documented how a former STC manager based there was able to procure high tech medical equipment from Japan through a local business partner. This partner filled out all the required documentation using the details from its own registrations and licenses. It also coordinated with other companies on the logistics of delivery. In the case of
Singapore, it has been a particularly useful venue for North Korean STC managers to pay local firms to arrange wire transfers for payments to foreign counterparties. As Singapore has rapidly risen to be a global center for money management, opportunities abound for the North Korean regime to benefit from illicit financial service offerings. 4) Extensive Use of Embassies as a Vehicle for Procurement North Korean embassies serve two key functions with respect to the operation of North Korea, Inc.'s illicit activities. The first is serving as a vehicle for procuring controlled items in a foreign country. Former North Korean STC managers note that the regime co-locates shell companies with its embassies in countries that offer unique access to sought-after items ordered by the regime. Business cards of these shell companies list the local embassy's address and fax number. The second function is the ability to credential an STC manager as a North Korean diplomat. In addition to gaining valuable tacit business knowledge by embedding in a country for a longer duration, STC managers are also able to use diplomatic pouches for illicit purposes related to transporting a banned item or couriersing unreported cash. The Sanctions Conundrum In examining U.S.-led efforts to counter these sanctions evasion techniques, we observed what we call the "sanctions conundrum" - one of the key negative unintended consequences of applying more sanctions on North Korea, Inc. The net effect of sanctions was that they, in practice, ended up increasing the regime's procurement capabilities. Because of the elevated risk of doing business, an STC had to pay higher commission fees to private Chinese companies that played a middleman role. The elevation of risks and rewards attracted more capable, professional middlemen into illicit network activities on behalf of North Korean clients. Accelerating this trend in this niche marketplace was the Chinese middlemen's monetization of political relationships.Linked to local corrupt Chinese officials, the private companies used portions of the elevated commission fees to clear a path for efficiently completing a procurement transaction on behalf of a North Korean client. In sum, targeted sanctions - unintentionally and counterintuitively - helped to create more efficient markets in China for North Korea, Inc. If one were to view sanctions as the antibiotics in the U.S. national security toolkit, increasing the dosage on the North Korean regime has triggered, in some instances, the development of drug-resistance. This resistance is in the form of alternative, more effective commercial channels. We need to better target sanctions and strengthen law enforcement and other measures, based on an improved understanding of how North Korea, Inc. has devised innovative techniques to evade them. Stopping North Korea, Inc. by Disrupting its Business Partnerships in China An important starting point is setting the strategic goal of disrupting the North Korean regime's procurement networks. While we need to develop ways to bolster the impact of sanctions, we should also explore other policy tools. Diversifying the set of policy tools and coordinating with different policy actors will significantly constrain the remarkably open space within which North Korea, Inc. currently operates. If we widen the aperture and view the target as the business partnership between a private Chinese company linked to a local corrupt party official on one side and an elite North Korean STC on the other, we can apply tailored policy tools to disrupt this partnership. These specialized partnerships have created largely unconstrained opportunities for the North Korean regime to procure the critical components for its nuclear and ballistic missile development programs. Using the definition of technology as the knowledge of techniques and processes, these partnerships constitute a "dual-use" technology in that they are essentially commercial channels that can be readily used to move either illicit or licit goods. A key reason behind the procurement effectiveness of these business partnerships is that they hide in the open. Given the massive quantity of business transactions that occur daily in the Chinese marketplace, filling out documents, signing contracts, and taking out insurance on freight enables illicit consignments to "blend in." A top priority is to disrupt these partnerships upstream - before the procured item moves through this dual-use technology and literally becomes a part of globalized trade flows. In addition to the policy recommendations offered by my distinguished colleagues on the panel, I'd like to bring to the Subcommittee's attention the "Three Antis" which are a set of China's domestic policy tools - anti-corruption apparatus, anti-narcotics campaign, and anti-counterfeiting activities. U.S. policymakers can coordinate closely with their Chinese counterparts on redirecting these Chinese domestic policy tools to counter North Korean procurement in China. (Contrary to common perception there are precedents of bilateral cooperation, such as the U.S.-China Joint Working Group on the Nonproliferation of WMD, which was established during the July 2014 round of the Strategic and Economic Dialogue). With respect to current policy
cooperation, the U.S.-China Comprehensive Economic Dialogue (CED) and the U.S.-China Diplomatic and Security Dialogue (D&SD) could serve as effective mechanisms for building and sustaining high-level political support. Collaboration on the "Three Antis" would advance the U.S. and China's common goal of stopping North Korea, Inc.'s illicit activities in China. 1) Anti-Corruption Apparatus Perhaps the highest impact policy tool in disrupting North Korea, Inc. is China's anti-corruption apparatus. The September 2016 case of the Dandong Hongxiang Industrial Development Company serves as an important precedent for scaling up the application of the anti-corruption apparatus to target corrupt party officials involved in these Sino-North Korean business partnerships. Given the link between private Chinese middlemen and local corrupt party officials, using the anti-corruption apparatus for this specialized function would have an immediate impact on procurement deals. Of all the policy tools, this substantial one is readily available, but dependent on the senior Chinese leadership's decision to go down this path. The United States should use policy cooperation mechanisms like the CED and D&SD to regularly provide commercial intelligence to the Chinese authorities so that they can apply their domestic policy tools on Chinese entities engaged in criminal activities. Secondary sanctions could raise the appeal of pursuing this path. 2) Anti-Narcotics Campaign An open secret in China's northeastern provinces is that there's an expanding narcotics problem emanating from North Korea. Called "ice," this cheap and potent form of methamphetamine is produced in large quantities in North Korean pharmaceutical factories. Drawing on the precedent of Sino-U.S. cooperation in the late 2000s when China was confronting an inflow of opiates through its border with Afghanistan, there's an opportunity to adapt the previous program to China's northeastern provinces. Although aimed at the narcotics trade, the positive spillover effect of increased Chinese law enforcement activities would further constrain the areas in which North Korea, Inc. and its Chinese partners operate. 3) Anti-Counterfeiting Activities The North Korean regime is well documented as the creator of "supernotes" - counterfeited US$100 bills. What's not so well known in the West is that there's strong concern in China that its neighbor has been counterfeiting Chinese currency. From Beijing's perspective, this criminal activity is a direct threat to China's economic security. U.S. policymakers could leverage this Chinese concern to elevate channels of bilateral cooperation drawing on U.S. experience tracking down the North Korean regime's sophisticated counterfeiting operations. Given the high threat level, the United States should encourage China to further expand the deployment of Chinese law enforcement resources trained on counterfeiting activities, with special authorization to investigate and inspect consignments and facilities. Objectively assessing how criminal North Korean activities affect China's national interests yields a clear view of areas of common ground upon which we can build a common cause in stopping North Korea, Inc. In this endeavor, it's important to reassure the Chinese authorities that these measures are intended to "sanitize" China's growing bilateral trade with North Korea, not to cut it off. The majority of the bilateral trade is in non-sanctioned goods and services that are a significant element of the economies of Chinese provinces near the border with North Korea. Stopping North Korea, Inc.'s illicit procurement and blocking its access to finance constitute a top priority in slowing down the regime's rapid advances in its nuclear and ballistic missile programs. The work of the Subcommittee, the panel members, as well as sanctions-focused officials is critical in finding new, adaptive, and effective ways to counter the North Korean regime's WMD threat to the United States, its Northeast Asian allies, and the international community." (U. S. House Committee on Financial Services Subcommittee on Monetary Policy and Trade, Hearing on Restricting North Korea’s Access to Finance, John Park testimony July 19, 2017)

CNN has learned that US intelligence indicates that North Korea is making preparations for another intercontinental ballistic missile (ICBM) or intermediate range missile test. Two administration officials familiar with the latest intelligence confirm there are indicators of test preparations that could lead to a potential launch in about two weeks. US satellites have detected new imagery and satellite-based radar emissions indicating North Korea may be testing components and missile control facilities for another ICBM or intermediate launch, officials say. The US is watching in particular for further testing of North Korean radars and communications that could be used in a launch. The next test launch would be the first since North Korea successfully launched an ICBM on July 4. Officials also say that North Korea is continuing to test components to launch a missile from a submarine but the US intelligence assessment is that
program remains in early stages. When taken together, these developments are concerning because North Korea says it is trying to develop a missile capable of delivering a nuclear warhead to the United States. The latest intelligence about a potential second ICBM test comes as the second highest ranking US military officer has warned Congress that North Korea's deception techniques to mask their missile launches have grown in sophistication. "I am reasonably confident in the ability of our intelligence community to monitor the testing but not the deployment of these missile systems," General Paul Selva, vice chairman of the Joint Chiefs of Staff, told the Senate armed services committee on July 18. Selva gave the strongest public indication so far that the US believes the current North Korean ICBM still has limitations, saying that Pyongyang has yet to demonstrate the "capacity to strike the United States with any degree of accuracy or reasonable confidence of success." When asked about the possibility of a preemptive US military strike, Selva said, "I think we have to entertain that potential option. That would be a policy choice by the President of the United States to execute or not execute that option." But Defense Secretary James Mattis has long warned against letting the North Korean situation get to the point of a US military strike and has strongly and publicly advocated for a diplomatic solution led by the State Department. Selva, who is deeply involved in the US nuclear weapons and missile defense programs, noted a parallel line of effort is underway to "provide for the defense of the United States with a suitable ballistic missile defense system that can handle the low volume at this point of missiles that he (Kim Jong Un) might be able to deploy that could strike us here across all of US territory, Alaska, Hawaii and the lower 48." The preparations for a potential new launch come as the US military has observed North Korea carrying out an "unusual level" of submarine activity as well as testing a critical component of a missile that could potentially be launched from a submarine. Two US defense officials told CNN that a North Korean Romeo-class submarine is currently engaged in "unusual deployment activity" in the Sea of Japan/East Sea and has been under way for about 48 hours. The US is observing the sub via reconnaissance imagery and the officials said the submarine's patrol had taken it farther that it has ever gone, sailing some 100 kilometers out to sea in international waters. The submarine's activity was different than the typical training activity usually observed closer to shore, according to the officials. The diesel-electric-powered North Korean sub spotted far from port is about 65 meters long and the US does not assess it capable of venturing very far from its home port. The activity caused US and South Korean forces to slightly raise their alert level, according to one official. The US military pays close attention to North Korean submarine activity following the 2010 Cheonan incident where a North Korean sub torpedoed a South Korean Naval vessel. North Korea's submarine fleet is believed to encompass around 70 subs, though the majority are quite old and likely cannot fire missiles. The deployment comes days after Pyongyang tested a critical component for a missile that could potentially be launched by a submarine. The test took place on land at the Sinpo shipyard in North Korea. The current US intelligence assessment is that the missile program aboard submarines remains in the very early stages. An ejection test in may tested the missile's "cold-launch system," which uses high pressure steam to propel the missile out of the launch canister into the air before the missile's engines ignite, preventing damage to the submarine or submersible barge that would launch the missile. It is the type of technology that allows missiles to be launched underwater from submarines. (Barbara Starr and Ryan Browne, “U.S. Intelligence Shows North Korean Preparations for a Possible Missile Test,” CNN, July 20, 2017)

Bermudez: “Recent media reports indicate that North Korea’s sole SINPO-class experimental ballistic missile submarine (SSBA) has been engaged in “unusual deployment activity” over the past 48 hours,” sailing approximately 100-km out into the East Sea (Sea of Japan). If correct, this would be the submarine’s longest known voyage to date. Most previous voyages have been far shorter and within the waters near its home port at the Sinpo South Shipyard. A 100-km voyage would also likely place the submarine in international waters—a first for the vessel. While there are several possible explanations, the most likely is preparations for a test in the near future of an updated Pukguksong-1 (KN-11) submarine-launched ballistic missile (SLBM) or a potentially newer system. Commercial satellite imagery from June 30 of the Sinpo South Shipyard shows activity at the facility’s secure boat basin, where both the SINPO-class submarine and the submersible test stand barge have been repositioned. While the precise reason for this movement
The Trump administration said that it would bar Americans from traveling to North Korea, a month after the death of Otto F. Warmbier, a 22-year-old college student from Ohio who was arrested while trying to leave the country and returned to his parents, more than a year later, in a coma. The announcement came only hours after Mike Pompeo, the director of the C.I.A., strongly hinted that the United States was considering a regime change in North Korea. Pompeo told an audience at the Aspen Security Forum last night that President Trump had ordered him to come up with options that would “separate the capacity” to build and deliver nuclear weapons from “someone who might well have intent,” a clear reference to Kim Jong-un. Pompeo was pressed several times in an interview here last evening conducted by Bret Stephens, a New York Times columnist, about what he meant by that phrase, and whether it was code for regime change. Pompeo would not utter that phrase, saying instead, “As for the regime, I am hopeful we will find a way to separate that regime from these” missiles and nuclear weapons. C.I.A. officials noted that Pompeo’s language was deliberately ambiguous, and that there were ways to “separate” Kim from his arsenal without overthrowing the government. Pompeo, when pressed on the point, noted that there were risks if Kim left office, because it was unclear who might succeed him. But his statement did not exactly echo how Secretary of State Rex W. Tillerson has talked about the administration’s approach to North Korea. In April, Tillerson said: “Our goal is not regime change. Nor do we desire to threaten the North Korean people or destabilize the Asia Pacific region.” While the State Department has long warned Americans about the risks of detention in the North — leading to high-drama cases in which the United States has sent former presidents, intelligence chiefs and special envoys to win the release of detainees — it has not previously banned all travel. The new rules will allow for a special certification, granted at the State Department’s discretion, for Americans to enter the country on aid missions or in other special circumstances. The ban was expected to be announced formally July 27, a major holiday in North Korea, and go into effect 30 days later, to allow any Americans in the country to leave. Heather Nauert, a State Department spokeswoman, said in a statement that once the ban is in effect, “U.S. passports will be invalid for travel to, through and in North Korea, and individuals will be required to obtain a passport with a special validation in order to travel to or within North Korea.” How much a travel ban will hurt the North is unclear, since not many Americans travel there. But some North Korea experts have been urging the ban for some time, as a way both to squeeze the government and to prevent other Americans from being taken prisoner. “It’s important to stop the flow of cash and prospective hostages into North Korea, especially after the recent death of Otto Warmbier,” said Evans J.R. Revere, a former State Department official who specializes in North Korea. None of the three Americans who are known to remain in prison in North Korea were tourists. All three are Korean-Americans, and two of them worked at Pyongyang University of Science and Technology, teaching the children of the country’s elite. Pompeo’s discussion of how the president had given him and the Defense Department the task of coming up with ways to undermine the missile program omitted any discussion of opening negotiations with the North, as South Korea, China and Russia have urged. During the Obama administration, the C.I.A. and the Pentagon were deeply involved in a sabotage program to use cyber- and electronic-warfare techniques to destroy the North’s missiles just before, or in the early moments of, tests. But after a long string of failures, the North has been more successful in the last eight months or so, using missiles that employ different fuels and other technologies. (David E. Sanger, “U.S. to Bar Americans from North Korea Travel,” New York Times, July 22, 2017, p. A-7) Several media outlets have reported that Gen. Joseph Dunford, chairman of the Joint Chiefs of Staff, said over the weekend that war with North Korea was not “unimaginable.” What has gone unreported is that he also suggested the administration is giving diplomacy only “a few more months.” Dunford’s comments, sure to be heard in Beijing and Pyongyang, come as the Trump administration is hinting, with various degrees of subtlety, that it is willing to kill Kim Jong Un, the North Korean despot. First, Dunford. “As I’ve told my counterparts, both friend and foe, it is not unimaginable to have military options to respond to North Korean nuclear capability,” he said at the Aspen Security Forum in a conversation with NBC’s Andrea Mitchell. “What’s unimaginable to me is
allowing a capability that would allow a nuclear weapon to land in Denver, Colorado. That’s unimaginable to me. And so my job will be to develop military options to make sure that doesn’t happen.” Far more important is what Dunford said next. Mitchell mentioned that at another Aspen session James Clapper, the former director of national intelligence, said that Kim would never give up his nuclear weapons. Dunford responded this way: “I think that has certainly been conventional wisdom. When Secretary [of State Rex] Tillerson came in, in the intelligence communities the general assessment was, and it has been public, that Kim Jong Un views his existence as inextricably linked to nuclear weapons and China will never cooperate. So those are the two things that everybody has basically said. That’s conventional wisdom of North Korea. So where does that leave us?” And then came the lines probably intended more for Chinese and North Korean ears than American ones: “So I think for all of us, we should give Secretary Tillerson full support in attempting to resolve this diplomatically and economically even as we recognize that it may not happen, and there may have to be a follow-up option, which is the military option. We can wring our hands and say it will never happen or we can roll up our sleeves and make an effort to have a concerted economic and diplomatic plan that does cause KJU, Kim Jong Un, to come to the table and begin to have a conversation, at least stop the path that he’s on right now, which is further development of intercontinental ballistic missiles and nuclear capability, and to me it makes all the sense in the world to prove the theory of the case and to work this for a few more months.” Dunford’s comments about timing do not appear to be a slip of the tongue. He also made it clear at the beginning of his conversation with Mitchell that time was in short supply. “North Korea today, from a ‘sense of urgency’ perspective, would be our number one challenge,” he said in remarks the Defense Department highlighted in its account of the Aspen event. So what happens in “a few more months”? On Thursday at Aspen, CIA Director Mike Pompeo made the audience gasp—I was there for both his and Dunford’s remarks—with these comments: “It would be a great thing to denuclearize the Peninsula, to get those weapons off of that, but the thing that’s the most dangerous about it is the character who holds the control over them today. So from the administration’s perspective the most important thing we can do is separate those two, separate capacity and someone who might well have intent and break those two apart, and I’m confident that the intelligence community will present a set, a wide range of options for the president about how we might go about that.” Pompeo later tried to walk back the threat of killing the North Korean leader, but he fumbled that effort. Dunford and Pompeo spoke after U.S. officials leaked to the media that they had a clean shot on the Kimster on July 4, the day of the North’s initial flight test of the Hwasong-14, the country’s first proven intercontinental ballistic missile. American targeters, we learned, watched him smoke cigarettes and mill around the launch site for about 70 minutes, giving them a marvelous opportunity to end dynastic rule in the Democratic People’s Republic of Korea. This particular U.S. health warning—about puffing too long in one pot—did not come from the surgeon general. Rodger Baker of Stratfor believes the Trump administration sent, in the words of Business Insider, two “powerful messages” with the leak. In comments to that site, he said that by not killing Kim, Washington was indicating it was not seeking regime change. The second message is that there’s “no need to continue” the missile program. If the North insists on doing so, however, the U.S. is warning it can “strike it and Kim.” As Business Insider noted, on the following day the U.S. and South Korea engaged in a live-fire exercise “demonstrating they could have both killed Kim and stopped the launch.” Maybe all these developments are coincidental, but it does appear the Trump administration is fast losing patience with Kim and, by implication, his friends in Beijing. After all, there seems to be concerted messaging. So after the last several weeks of dire-sounding warnings, war on the Korean Peninsula appears not only imaginable but also close at hand. (Gordon Chang, “Top U.S. General Hints at Military Action in a Few More Months,” Daily Beast, July 25, 2017)

Myanmar’s military has maintained ties with North Korea, even though the civilian-led government denies any cooperation, and the Trump administration is pressing for a complete break-off of remaining links, current and former U.S. officials said. Washington made its case to Myanmar’s de facto leader Aung San Suu Kyi and the army chief Senior General Min Aung Hlaing during a visit to the country this week by the U.S. special envoy for North Korea. Ambassador Joseph Yun’s trip to Myanmar underlined continuing U.S. worries over North Korean links that date back to Myanmar’s decades of military rule, according to a senior State Department
official. "It was an opportunity to message that any engagement with North Korea, particularly military engagement, is counterproductive to trying to end this threat that North Korea poses to the region and to the globe," the official told Reuters, speaking on condition of anonymity. He declined to specify what kind of military cooperation had continued between North Korea and Myanmar. There was no immediate response to a request for comment from Myanmar's embassy in Washington. The official said U.S. sanctions leveled this year against the Myanmar army's procurement body were meant to “reflect long-standing concerns” about the military's dealings with Pyongyang. Myanmar insists that arms deals and other military relations with North Korea stopped before Myanmar's transition to a nominally civilian government in 2011. Myanmar’s military was believed in the past to have imported North Korean-made weapons and North Korean personnel also worked in Myanmar, two former U.S. officials said. Any residual ties may be unfinished business between the two armies dating back to Myanmar's previous military-led government, one of the former officials said, adding there was no indication of a “nuclear component to the relationship.” The State Department official did not rule out the possibility of imposing further North Korea-related measures on Myanmar, saying: “If a situation becomes so egregious and serious for our national security interests, there are a variety of tools, including sanctions.” For now, though, Washington was relying mostly on diplomacy with Myanmar, a resource-rich and strategically placed country that Washington wants to keep out of China's orbit. He stressed, however, that it would be difficult to proceed toward full normalization of U.S. relations with Myanmar until Washington was convinced of a halt to ties with North Korea. As Yun arrived in Yangon for talks on July 17, Kyaw Zeya, permanent secretary at Myanmar's Ministry of Foreign Affairs, insisted Myanmar no longer had military ties with Pyongyang and was complying with U.N. resolutions banning such links. "It's normal relations between the two countries," he told reporters. “As I understand, there's no such relations between military to military. Definitely not.” The State Department official told Reuters that Myanmar authorities did not explicitly deny that some vestiges of the previous North Korea relationship remained but said “those ties are not what they were in the past.” Myanmar's former ruling junta, which, like North Korea, was widely shunned by the outside world over its suppression of human rights, was known to have ties to Pyongyang. This included sending missile experts and material for arms production to Myanmar. Myanmar's Directorate of Defense Industries (DDI) was sanctioned in March under the Iran, North Korea, and Syria Nonproliferation Act. The DDI was previously sanctioned in 2012 and accused of materially assisting North Korea but had fallen off the sanctions list in October after the Obama administration dropped most measures against Myanmar in recognition of a successful political transition. (Antoni Slodkowski, David Brunnstrom and Matt Spetalnick, “U.S. Presses Myanmar to Cease Military Ties with North Korea,” Reuters, July 21, 2017)

The UN Special Rapporteur on the situation of human rights in the DPRK said he believes there are “inconsistencies” in South Korea’s narrative of the case of 12 high-profile North Korean defectors. Speaking at a news conference in Seoul, Tomas Ojea Quintana said the issue of the group defection had been “brought to his attention” among other “contentious issues” on the Korean Peninsula during his trip to Seoul from 17 to 21 July. “I have interacted with a wide range of the interlocutors here to gather as much information as possible on the situation of these women,” Ojea Quintana told assembled local and foreign media. “Whereas I am pleased to learn that these women are safe and not held in detention, I see inconsistencies in the narrative concerning their cases, and will be following up with concerned governments.” Ojea Quintana declined to give specifics on his doubts on the case, but said he would “further address this issue to the stakeholders and definitely try to avoid that the situation of these women becomes obstacles” to inter-Korean efforts. “Here let me urge the two Koreas to avoid politicizing the situation of these women, and strictly focus on their interests, protection needs and the needs of their families.” The restaurant workers, consisting of 12 female employees and one male manager, arrived in Seoul on April 7 last year via Malaysia and Thailand, having allegedly fled a North Korean government-run restaurant in the Chinese city of Ningbo. Pyongyang has repeatedly insisted that the group was “abducted” and that their male manager colluded with South Korea in the plot. North Korea has said that reunions between families separated by the Korean War will not be held until South Korea repatriates the 12 women – along with Kim Ryon Hui – who has said she wishes to return to the DPRK after, she claims, mistakenly defecting in 2011. During his
North Korea is suffering its worst drought in 16 years, a United Nations agency reported, raising fears of worsening food shortages in the country, where children and other vulnerable groups have been malnourished for years. North Korea’s production of staple crops for this year, including rice, corn, potatoes and soybeans, has been severely damaged by prolonged dry spells “threatening food security for a large part of its population,” the agency, the Food and Agriculture Organization, said in a report prepared in collaboration with the European Commission’s Joint Research Center. Seasonal rainfall in the main cereal-producing regions is below that of 2001, when grain production fell to a record low of two million tons, Vincent Martin, the agency’s representative in North Korea, said in a news release. Although some rain has fallen this month, it was likely to be too late to allow the normal planting and development of main crops that would be harvested in October and November, the report said. Because of the drought, the production of early season crops that are harvested in June, including wheat, barley and potatoes, dropped to 310,000 tons, more than 30 percent below last year’s 450,000 tons, it said. The early season harvest usually accounts for 10 percent of the country’s total annual cereal production.

“Increased food imports, commercial or through food aid, would be required during the next three months at the peak of the lean season, ensuring adequate food supply for the most vulnerable, including children and elders,” the agency said in a statement. North Korea experienced chronic food shortages in the 1990s, when a famine caused by years of bad weather and economic mismanagement forced the country to issue a rare appeal for international help. By some estimates, more than a million people died in the famine. The country has since allowed more market-oriented activities and encouraged trade with China to increase access to food. Its own food production has also improved in recent years. But humanitarian relief groups still call for donations, warning that shortages remain widespread. But international donors have become increasingly reluctant to provide humanitarian aid in recent years, as North Korea has continued to test nuclear weapons and missiles in defiance of United Nations resolutions. In September, after the North’s fifth nuclear test, South Korea did not offer humanitarian aid to tens of thousands of flood victims in North Korea, saying that the country should divert the money spent on weapons to buy food for its people. President Park Geun-hye took a hard-line stance on the North, but under President Moon Jae-in, a liberal who took office in May, the South Korean government has indicated it will be reader to consider humanitarian aid. But North Korea did not appear to be helping itself. It has not responded to the South Korean proposal on July 17 that the two sides hold military and humanitarian talks on the border to discuss easing tensions. North Korea has not yet reported any damage from the drought. Instead, Rodong Sinmun urged the country today to produce more goods locally, especially raw materials and fuel, to overcome what it called “barbaric” international sanctions pushed by the United States. In a separate commentary, the newspaper criticized Washington’s efforts to pressure China to use its economic leverage to force the North to abandon its nuclear and missile programs. The American tactic will never break the Communist neighbors’ “friendly ties sealed in blood,” it said, referring to when China and North
Korea joined to fight the Americans during the 1950-53 Korean War. The newspaper also warned that the Chinese would gain little if they succumbed to pressure from the United States and hurt their neighbor. Despite United Nations sanctions, North Korea’s external trade grew by an estimated 4.7 percent to $6.55 billion last year, the Korea Trade-Investment Promotion Agency, a government-invested organization in South Korea, said today. North Korea’s trade with China grew 6.1 percent to $6 billion last year, the agency said. China accounts for more than 90 percent of the North’s external trade. Also today, South Korea’s central bank, the Bank of Korea, said that the North Korean economy grew by about 3.9 percent last year. That was the highest annual growth rate the Bank of Korea has reported for the North in 17 years and was another indication that the economy there has been growing under its leader, Kim Jong-un. Economists caution that it is difficult to offer reliable economic growth estimates for North Korea because it does not release its economic data. Analysts have often said the central bank’s estimates on North Korean economic growth are too conservative. (Choe Sang-hun, “U.N. Agency Reports the Worst Drought in 16 Years in North Korea,” New York Times, July 22, 2017, p. A-7)

Rodong Shimun: “The U.S. talk about "China responsible" for bolstering up nuclear force of the DPRK is no more than despicable and cynical ploy to pass the blame upon others. The DPRK's access to H-bomb, strategic sub-based ballistic missile and ICBM, the final gate to rounding off the national nuclear force, is the "feats" of the U.S., which has compelled it to bolster up the nuclear force through persistent nuclear blackmail. The U.S. pressure upon the DPRK by wooing China can never break the tradition of friendship sealed in blood through the anti-imperialist and anti-U.S. resistance of the peoples of the two countries. The history of traditional friendship of the two peoples, the masters and makers of history, cannot be written off no matter how impudently such gangster-like state as the U.S. behaves. In protest against the U.S. pressure, the public is becoming vocal in China that "China is not a country which carries out a decision according to the domestic law of any other country", "China resolutely rejects other's interference in internal affairs as a "law-governed state" and "China is maintaining the blood-sealed relations with the DPRK." The U.S. should behave with discretion, mindful that it will meet shame and rebuff only if it calculates it could disregard self-respect of a sovereign state and the tradition of history and consider someone as its sentry and chariot run by its whip. (Jo Nam Su commentary, “U.S. Shameless Trick to Pass Buck to Others,” Rodong Shimun, July 22, 2017)

North Korea's ambassador to the United Nations had problems renewing his visa, which was delayed for nearly two months beyond its expiry, according to a diplomatic source familiar with U.S.-North Korea ties. Ja Song Nam, who has served as ambassador to the United Nations since Feb. 28, 2014, applied to extend his visa in March, before it expired on May 22, the source said. However, the renewal was only granted after North Korea raised the issue on July 13 at a closed meeting of a U.N. committee dealing with the host country. As the host, the United States is charged with issuing visas and renewals to the government officials representing the 193 member states at the international body. That paperwork is processed through the U.S. mission in New York, rather than through Washington, where the New York-based diplomats can process their renewal requests without leaving the country. A North Korean official said that no explanation was offered about why the process took so long. "We believe it's a sort of hostile act," the official said. When contacted by Kyodo, a U.S. mission representative declined to comment, saying visa records are considered to be confidential. Others U.N. diplomats suggested that it was "rare" for such a request to have been delayed for so long. Although the ambassador was legally able to remain in the United States, it could have become problematic if he had tried traveling abroad. Another diplomat believed that the time lag could be seen as a "message" to the country, especially in light of the heightened tensions on the Korean Peninsula, with Pyongyang test-launching its first intercontinental ballistic missile on July 4. (Kyodo, “N. Korean UN Envoy’s Visa Renewal Delayed for Nearly 2 Months,” July 22, 2017)

7/23/17

The Moon Jae-in administration has begun internal discussions on whether it is possible to replace the 1950-53 Korean War armistice with a peace treaty, sources said Sunday. The talks follow a proposal from a presidential advisory panel — the administration's de-facto transition committee
Congressional leaders have reached an agreement on sweeping sanctions legislation to punish Russia for its election meddling and aggression toward its neighbors, they said Saturday, defying the White House’s argument that President Trump needs flexibility to adjust the sanctions to fit his diplomatic initiatives with Moscow. Congress has complicated his choice because the legislation also encompasses new sanctions against Iran and North Korea, two countries the administration has been eager to punish for their activities. In a statement from two California Republicans — Kevin McCarthy, the House majority leader, and Ed Royce, the chairman of the House Foreign Affairs Committee — the lawmakers said, “North Korea, Iran and Russia have in different ways all threatened their neighbors and actively sought to undermine American interests.” They added, “The bill the House will vote on next week will now exclusively focus on these nations and hold them accountable for their dangerous actions.” The House version of the bill includes a small number of changes, technical and substantive, from the Senate legislation, including some made in response to concerns raised by American energy companies. Those tweaks — and the addition of North Korea sanctions to a Senate package that included only Russia and Iran, months after the House approved sanctions against North Korea by a vote of 419 to 1 — helped end the impasse.

The House version of the bill was set for a vote on Tuesday, according to McCarthy’s office. (Matt Flegenheimer and David E. Sanger, “As Congress Aims To Punish Russia, Trump Faces Bind,” New York Times, July 23, 2017, p. A-1) Congress is poised to give itself new powers over the administration’s ability to roll back sanctions aimed at Russia, the latest evidence of lawmakers’ continuing distrust of President Trump’s handling of the United States’ relationship with Moscow. The House and Senate are expected to pass a bill as soon as this week that includes language giving Congress 30 days to review and vote to prevent any move by the president to ease sanctions against Russia. The move comes despite considerable pressure from the administration to strip this provision from the bill, with the White House arguing that it would give the president less flexibility than his predecessors to determine when and where sanctions should be applied. Lawrence in both parties rejected this argument and said they want to include similar restraints in future legislation, including a proposal aimed at North Korea, with Democrats citing Trump as a motivating factor and Republicans arguing that it should become the new practice regardless of who occupies the Oval Office. “We want to continue on, no matter who’s president,” Sen. Bob Corker (R-Tenn.) said in an interview. “I think congressional review should be a part of every sanction that we put in place.” Tomorrow, the House will vote on a bill that would impose new financial sanctions on Russia and Iran, which are meant to punish Moscow for its alleged interference in the 2016 presidential election and its military activities in Syria and Ukraine, and Tehran for its nuclear and ballistic missile programs. The bill doesn’t give Congress the same review powers over penalties directed at Iran as it does Russia, and the House plans to add to the bill a package of sanctions against North Korea that also lacks this oversight language. But lawmakers said the congressional review process is expected to be part of sanctions bills going

— that Moon laid the groundwork for peace on the Korean Peninsula. Sources said the Office of the Korean Peninsula and Security Affairs at the Ministry of Foreign Affairs will lead the discussions. As part of a five-year policy roadmap, the committee said it was necessary to forge an agreement with North Korea on its complete denuclearization by 2020, President Moon's fourth year in office. The committee also advised offering help to the North in freezing its nuclear program in advance; while signing a peace treaty when the program enters "the final phase for complete denuclearization." "The government should work closely with the United States and maintain international cooperation to reach its joint goals of denuclearization and peace," a source said. The formal ending of the war will be impossible should North Korea keep its nuclear program. However, critics say the Moon government is taking an unrealistic approach to resolve the nuclear issue when the North is refusing all proposals for dialogue from the South, and the U.S. is strengthening sanctions against it. They said Pyongyang appears to be unwilling to engage in dialogue and Washington seems to be against accelerating inter-Korean dialogue without its consent. "The peace treaty with North Korea must follow as part of steps to build a peace network," said Paik Hak-soon, a senior researcher at the Sejong Institute. "And we'll need to convince the U.S. and North Korea as well as China." (Yi Whan-woo, “Gov’t Begins Internal Talks on Peace Treaty,” Korea Times, July 23, 2017)
North Korea is said to be willing to hold ministerial talks with South Korea if the South allows and supports a peace treaty between Pyongyang and Washington. Besides, the North seems to have a plan to freeze its nuclear program and ultimately discuss the issue of Korean reunification. In other words, North Korea has clearly set its policy not to respond to South Korea’s proposal to hold inter-Korean military and Red Cross talks as long as the South keeps its stance as in the past. According to influential Korean and Chinese sources familiar with North Korea’s information, North Korea is ready to respond to inter-Korean talks at any time. But the biggest obstacle seems to be the fact that there aren’t much benefits in return to attract North Korea. If the South serves as a senior official in Liaoning provincial government situated on the China-North Korea border, said, “North Korea is not opposed to inter-Korean dialogue itself. It wouldn’t want to talk for nothing.” He said it’s obvious that North Korea rejected the South’s recent proposal for military talks. He claimed that the North Korea might accept the South’s offer if the South shows a positive attitude toward signing of Pyongyang-Washington peace agreement, saying, “I recently met a senior official of the North Korean Embassy. He talked about a precondition to the talks. It was South Korea’s acceptance and support for conclusion of Pyongyang-Washington peace treaty.” K, a Korean source who recently contacted a number of North Korean senior officials staying in Beijing and Dandong, had a similar opinion. “On the surface, North Korea claims that it is not open to dialogue because the South refused to repatriate 13 North Koreans restaurant workers who it claimed were abducted by South Korea. However, if South Korea does not oppose the North Korea-U.S. peace treaty, it is expected to pass the problem. I was also asked to deliver this position to the authorities,” he said. “North Korea high-ranking officials in China insist that there is no reason to seek a nuclear program if a North Korea-U.S. peace treaty is signed. The ultimate goal of North Korea is normalization of the US-North Korea diplomacy through a peace treaty and guarantee of its system.” According to the source, since some of North Korean officials revealed that the North would be able to hold ministerial talks if the atmosphere heightens, it’s clear that North Korea has adopted a bold strategy to link the North Korea-U.S. peace agreement with the inter-Korean talks. This means that South Korea should be free from its existing framework in order to resume inter-Korean conversation. (Hong Soon-do, “North Korea Would Hold Talks If South Korea Supports Peace Treaty with US,” Asia Today, July 24, 2017)

North Koreans are becoming more independent of the ruling Kim regime, with the vast majority of households earning their living through markets rather than relying on the state, according to a new survey that attempts to shed light on ordinary life inside North Korea. The latest “microsurvey” by the Beyond Parallel project run by the Center for Strategic and International Studies found that 72 percent of respondents — or 26 of the 36 North Koreans questioned — said they earned all or almost all income through the markets. Nine others said they earned more than three-quarters of their living this way, according to the survey, published today. “Of all the respondents that we talked to, the people who were most upset about the government impeding market
activities were women rather than men,” said Victor Cha, who holds the Korea chair at CSIS and runs the Beyond Parallel project, which focuses on Korean unification. When asked what caused them to feel the greatest animosity toward the Kim Jong Un regime, 11 of the 16 women surveyed said low salaries or market interference. This is probably a reflection of the fact that it is overwhelmingly married women who work in the markets, while their husbands have low-paying but compulsory jobs in state factories or agencies. The finding was consistent with a 2015 survey of North Korean defectors conducted by researchers at Seoul National University. Three-quarters of respondents in that survey estimated that 70 percent or more of North Koreans were engaged in market activity or some other kind of personal business. “Second, the influence of the markets in North Korea, in terms of the percentage of household income that comes from the markets, is clearly not limited to the border areas,” Cha said. While the provinces running along the border with China are the first stop for many of the goods and ideas that come into North Korea, the mini survey found no difference in responses between border areas and other parts of the country. The only person who reported that less than three-quarters of their income came through the markets lived in Pyongyang, the capital and home to those most loyal to the regime. There are now more than 400 markets, called “jangmadang,” where ordinary North Koreans can buy and sell and keep their profits, in addition to the state-run markets, which also have grown in number under Kim’s rule. This has brought about a huge change in the way that people interact with one another and has loosened the regime’s ability to use food as a method of control, analysts say. Getting reliable information from North Korea is notoriously difficult given the restrictions on movement and information inside the totalitarian state. Beyond Parallel is trying to extract ever more information from North Koreans who live and work in the country, as opposed to the more prevalent surveys of those who have escaped from the nation. Beyond Parallel has asked a nongovernmental agency that works inside North Korea to conduct the mini-surveys, in which 36 people — 20 men and 16 women — ages 28 to 80 are polled. They come from a variety of backgrounds — working such jobs as doctor, laborer, homemaker, factory worker and company president — and live across the country. Most of the questioning in the mini-surveys has been done in and around markets, where there is freer communication, Cha said. But, given the constraints of working in tightly controlled North Korea, the surveys are not carried out by a person with a name badge and a clipboard. Some respondents might not even know they’re being surveyed. Other subjects explored in earlier surveys have included how North Koreans think and talk about the regime in private and the broken-down government rations system. (Anna Fifield, “Markets Helping North Koreans Become More Independent of the Regime,” Washington Post, July 24, 2017)

Western researchers recently began sifting through troves of North Korean Internet data, looking for activity related to missile launches or malicious cyber activity within the famously isolated country. What they found instead surprised them. North Korea’s tiny circle of elite families — among the few people in the country with unfettered access to the Internet — turned out to be strikingly like the rest of the world in their digital habits. They use their smartphones to check Gmail, call up their Facebook accounts and browse for goods at Amazon and Alibaba, a Chinese e-commerce company, according to a report released Tuesday. “These leaders are doing many of the same things that we do when we wake up in the morning,” said Priscilla Moriuchi of Recorded Future, a threat intelligence firm that wrote the report. “They’re not isolated.” These observations apply to only a tiny sliver of North Koreans because the vast majority of the nation’s 25 million people are poor and have no access to the Internet. Even the few who have mobile devices — a number estimated as high as 4 million people — are confined to a heavily censored, government-run national network called Kwangmyong. But some North Koreans do have direct access to the Internet through universities, select businesses and perhaps the homes of top government or military officials. Whoever they are, 65 percent of their overall Internet traffic was devoted to gaming and streaming online content. Among the most popular streaming services are China’s Youku video-hosting service and iTunes. North Koreans with Internet access have a particular fondness for Baidu, a Chinese search engine and Internet services firm, as well for a multiplayer online game called World of Tanks, the researchers found. The researchers also found that few of the elites on the Internet in North Korea used virtual private networks or other tools for cloaking the origin of digital activity, although one iPad used a virtual private network “to check a Gmail account, access Google Cloud, check Facebook and MSN accounts, and view adult content,” the
North Korea will be able to field a reliable, nuclear-capable intercontinental ballistic missile as early as next year, U.S. officials have concluded in a confidential assessment that dramatically shrinks the timeline for when Pyongyang could strike North American cities with atomic weapons. The new assessment by the Pentagon’s Defense Intelligence Agency (DIA), which shaves a full two years off the consensus forecast for North Korea’s ICBM program, was prompted by recent missile tests showing surprising technical advances by the country’s weapons scientists, at a pace beyond what many analysts believed was possible for the isolated communist regime. The U.S. projection closely mirrors revised predictions by South Korean intelligence officials, who also have watched with growing alarm as North Korea has appeared to master key technologies needed to loft a warhead toward targets thousands of miles away. The finding further increases the pressure on U.S. and Asian leaders to halt North Korea’s progress before Pyongyang can threaten the world with nuclear-tipped missiles. President Trump, during his visit to Poland this month, vowed to confront North Korea “very strongly” to stop its missile advances. The DIA has concluded that North Korean leader Kim Jong Un will be able to produce a “reliable, nuclear-capable ICBM” program sometime in 2018, meaning that by next year the program will have
advanced from prototype to assembly line, according to officials familiar with the document. Already, the aggressive testing regime put in place in recent months has allowed North Korea to validate its basic designs, putting it within a few months of starting industrial production, the officials said. The DIA and the Office of the Director of National Intelligence declined to address any classified assessments. But Scott Bray, ODNI’s national intelligence manager for East Asia, said in a statement: “North Korea’s recent test of an intercontinental range ballistic missile — which was not a surprise to the intelligence community — is one of the milestones that we have expected would help refine our timeline and judgments on the threats that Kim Jong Un poses to the continental United States. This test, and its impact on our assessments, highlight the threat that North Korea’s nuclear and ballistic missile programs pose to the United States, to our allies in the region, and to the whole world. The intelligence community is closely monitoring the expanding threat from North Korea.” One of the few remaining technical hurdles is the challenge of atmospheric “reentry” — the ability to design a missile that can pass through the upper atmosphere without damage to the warhead. Long regarded as a formidable technological barrier for impoverished North Korea, that milestone could be reached, beginning with new tests expected to take place within days, U.S. analysts said. U.S. officials have detected signs that North Korea is making final preparations for testing a new reentry vehicle, perhaps as early as July 27, a North Korean national holiday marking the end of the Korean War. “They’re on track to do that, essentially this week,” said a U.S. official familiar with the intelligence report who, like others, insisted on anonymity to discuss sensitive military assessments. North Korea has not yet demonstrated an ability to build a miniaturized nuclear warhead that could be carried by one of its missiles. Officials there last year displayed a sphere-shaped device that the regime described as a miniaturized warhead, but there has been no public confirmation that this milestone has been achieved. Preparations reportedly have been underway for several months for what would be the country’s sixth underground atomic test. The last one, in September, had an estimated yield of 20 to 30 kilotons, more than double the explosive force of any previous test. “There has been alarming progress,” said Joseph DeTrani, the former mission manager for North Korea for the Office of the Director of National Intelligence and a former special envoy for negotiations with Pyongyang. “In the last year they have gained capabilities that they didn’t have, including ones that we thought they would not have been able to obtain for years.” The July 4 missile test also caught South Korea’s intelligence service off guard, prompting a hasty revision of forecasts, according to South Korean lawmakers who have received closed-door briefings. “The speed of North Korea’s ICBM missile development is faster than the South Korean Defense Ministry expected,” said lawmaker Lee Cheol-hee of the left-wing Minjoo party, who attended an intelligence committee briefing after the July 4 test. The South Korean government, which is actively trying to engage the regime in Pyongyang, has declined to call the most recent test a success. North Korea still has not proved it has mastered some of the steps needed to build a reliable ICBM, most notably the reentry vehicle, Lee said. Still, officials across the political spectrum acknowledged that North Korea is rapidly gaining ground. “Now they are approaching the final stage of being a nuclear power and the owner of an ICBM,” said Cha Du-hyeogn, who served as an adviser to conservative former president Lee Myung-bak. U.S. spy agencies have detected multiple signals that North Korea is preparing to test a reentry vehicle. Analysts believe that the July 4 test was intended to demonstrate range — the ability of its new two-stage ICBM prototype to reach altitude and distance milestones — while the new launch will seek to validate engineering features designed to protect the warhead as it passes through the upper atmosphere and then is delivered to a distant target. The latest designs appear to cobble together older systems — including portions of a missile frame used to launch satellites into orbit — with a more advanced engine that North Korea began testing earlier this year. Much of the technology is based on old Soviet-era designs that have been reworked by what U.S. experts describe as an increasingly capable cadre of homegrown engineers, goaded along by a leadership that has pursued nuclear weapons and delivery systems with single-minded zeal. Kim vowed in January to successfully test a nuclear-capable ICBM in 2017, achieving a long-sought goal that North Koreans believe will serve as the ultimate deterrent against threats to the communist regime’s survival. At the time, the U.S. intelligence community’s formal assessment still held that a credible ICBM threat would not emerge until 2020 at the earliest. “North Korea’s timeline moved faster than we expected,” said the U.S. official familiar with the new DIA assessment. “We
weren’t expecting an ICBM test in July.” Former U.S. officials and weapons experts said a successful test of a nuclear-capable ICBM would dramatically raise the stakes in the North Korean crisis, putting new pressure on North Korea’s neighbors and increasing the risk of miscalculation. “The danger is that decision time and warning is greatly reduced when North Korea has the weapons, and that escalation can happen quickly,” said Jon Wolfsthal, senior director for arms control and nonproliferation with the Obama administration’s National Security Council. The specter of a nuclear-armed, ICBM-capable Kim “takes the risk to a new level but does not change the nature of the threat we have faced for some time,” Wolfsthal said. “We have to deter North Korea from ever using any nuclear weapons and make clear that any move to use these weapons is suicide.” (Ellen Nakashima, Anna Fifield and Joby Warrick, “N. Korea on Fast Track to Nuclear Missile,” Washington Post, July 26, 2017 p. A-1) U.S. officials said they have seen increased North Korean activity that could be preparations for another missile test within days. The officials, speaking on condition of anonymity, said that over the past week intelligence has spotted equipment, possibly for launching an intercontinental ballistic missile (ICBM) or an intermediate-range missile, moving into a site in the western city of Kusong. Earlier this month, reclusive North Korea, which regularly threatens to destroy the United States and South Korea, said it had conducted its first test of an ICBM and mastered the technology needed to deploy a nuclear warhead via the missile. Pyongyang's state media said the test verified the atmospheric re-entry of the warhead, which experts say may be able to reach the U.S. state of Alaska. However, the vice chairman of the U.S. Joint Chiefs of Staff recently said the July 4 test stopped short of showing North Korea has the ability to strike the United States “with any degree of accuracy.” The Washington Post reported today that the Defense Intelligence Agency (DIAL), the Pentagon spy agency, has assessed that North Korea will be able to field a nuclear-capable ICBM by next year, earlier than previously thought. According to two U.S. officials, however, some other analysts who study North Korea's missile program do not agree with the DIAL assessment. "DIA and the South Koreans tend to be at the leading edge of estimates on North Korea's military programs, and that's understandable,” said one of the U.S. officials, who both agreed to speak only on the condition of anonymity. "There is no question that the DPRK has moved further and faster with its effort to develop a reliable, nuclear-capable ICBM that can be built in quantity, but there are still doubts about whether it can cross that threshold in a year." A second U.S. official familiar with the science of ICBMs said that North Korea still has not demonstrated the ability to design and build nuclear warheads small enough to be delivered on its long-range missiles and tough enough to survive re-entry into the atmosphere. A third official said that even if Pyongyang develops a workable ICBM from its "tinker-toy mix of old Russian missiles," it would pose a threat to the United States and its allies only if North Korean leader Kim Jong Un's regime is suicidal. Speaking in Beijing, Chinese Foreign Ministry spokesman Lu Kang said on Wednesday he was aware of the reports of a possible new North Korean missile test. U.N. resolutions were clear when it came to North Korean missile launches and China opposed any move that ran counter to them, Lu told reporters. "We hope all sides can bear in mind the broad situation of peace and stability on the Korean peninsula and exercise restraint," he added. (Idrees Ali and John Walcott, “

DPRK FoMin spokesman’s answer to question put by KCNA “over the fact that the director of the U.S. Central Intelligence Agency (CIA) dared to talk about "removal of the supreme leadership" of the DPRK: On July 20, the U.S. CIA Director Pompeo mentioned impertinently, at a security forum hosted by a civilian organization, about the "removal of the supreme leadership" of the DPRK, saying that what is most dangerous about the north Korean nuclear issue is the character who holds the control over the nuclear weapons and that the intelligence community and the Department of Defense are figuring out the way to separate the weapons from someone who might well have intent to use them. Although his reckless remarks are just balderdash of a guy who has become so angrily desperate due to the ever-increasing nuclear strike capability of the DPRK, they have gone over the line, and it has now become clear that the ultimate aim of the Trump administration's hostile policy towards the DPRK is the "regime change" in the DPRK. That the person who is supposed to be in charge of all foreign intelligence in the U.S., harbors an illusion that it could separate our army and people from our supreme leadership is an expression of his illiteracy about the DPRK and an explicit illustration of incompetence of the U.S. intelligence community. The successive U.S. administrations could not but fail in the DPRK-U.S.
confrontation. That is also attributable to the "merits" of such stupid intelligence community of the U.S. Our army and people have never thought about their destiny and future separated from their supreme leadership. The first and foremost mission of our revolutionary armed forces with the nuclear force as their backbone is to defend the leader at the cost of their lives. The DPRK legally stipulates that if the supreme dignity of the DPRK is threatened, it must preemptively annihilate those countries and entities that are directly or indirectly involved in it, by mobilizing all kinds of strike means including the nuclear ones. We will find out and smash all those who intend to do something against our supreme leadership, wherever they are. This is an immutable and indomitable will of the army and people of the DPRK. We once again felt deep in our hearts from the reckless remarks of the CIA director how just it was that we have achieved the great historic cause of completing the nuclear force by overcoming all difficulties and trials. Should the U.S. dare to show even the slightest sign of attempt to remove our supreme leadership, we will strike a merciless blow at the heart of the U.S. with our powerful nuclear hammer, honed and hardened over time. The likes of Pompeo will bitterly experience the catastrophic and miserable consequences caused by having dared to shake their little fists at the supreme leadership, our eternal sun and everything of life for our nation." (KCNA, “DPRK FM Spokesman Slams CIA Director’s Remarks,” July 25, 2017)

The US may target Chinese companies as part of new North Korea sanctions, an administration official said, even as diplomats are working with Beijing at the UN to reach a new international agreement. Speaking to a US Senate Foreign Affairs subcommittee, Susan Thornton, acting assistant secretary of the State Department's East Asia bureau, said "the Chinese are now very clear that we're going to go after Chinese entities if need be." Thornton's testimony came as the House of Representatives was voting on a sweeping bill with new sanctions targeting Russia, Iran and North Korea. Her comments show the delicate balancing act President Donald Trump's administration is walking on North Korea, where China is both a key ally for bringing pressure to bear on Pyongyang, but also a major potential target for sanctions designed to limit North Korean trade and imports. Speaking to reporters Tuesday, the US ambassador to the UN Nikki Haley said progress was being made with China on new international sanctions targeting North Korea. "We're constantly in touch with China ... things are moving but it's still too early to tell how far they'll move," she told reporters. "The true test will be what (the Chinese) have worked out with Russia (and whether) Russia comes and tries to pull out of that." Tong Zhao, an analyst at the Carnegie Tsinghua Center for Global Policy, said that while China has long been supportive of sanctions, confusion about the ultimate policies both countries are pursuing remains. "The US strategy only makes sense to China if the ultimate US objective is to directly threaten the stability of the North Korean regime through a comprehensive economic embargo," he said. "China has big concerns about that approach, but on the other hand US officials have also repeatedly said they are not trying to threaten the regime." Apparent contradiction between statements and action causes confusion, Zhao said. He added the two countries "need to stop focusing on debating the specific tactics" and instead focus on overall strategy and goals with regard to North Korea. Even as Washington attempts to thread the needle on North Korea sanctions, some analysts argue they won't have much effect. "If Kim and his generals have to tighten their belts, the nuclear and missile programs are about the last things they will cut," John Delury, an expert at the Yonsei University Graduate School of International Studies in Seoul, wrote for CNN Opinion in December. "On the contrary, in the absence of diplomatic talks and under intensified pressure, Pyongyang is likely to double-down on its nuclear deterrent, which it sees as its best guarantee of national security and regime survival." Thornton echoed Delury's comments today, even as she called for greater implementation of sanctions against North Korea. "North Korea has no intention of abandoning its nuclear program in the current environment," she said. "North Korea will not give up its weapons in exchange for talks, even with economic concessions that provide sorely needed assistance to the North Korean people." Washington, she added, would also not consider talks at this time, despite calls for just this from Beijing and Seoul. "We will not negotiate our way to talks," Thornton said. That has led some to advocate for a military option, with Trump's CIA director Mike Pompeo last week appearing to indicate support for regime change in Pyongyang — something Thornton said the State Department was not pursuing. (James Griffiths, “Does Sanctions Bill Risk US-China Relationship?” CNN, July 26, 2017) The United States is making
progress in talks with North Korean ally China on imposing new United Nations sanctions on Pyongyang over its latest missile test, but Russia's engagement will be the "true test," U.S. Ambassador to the U.N. Nikki Haley said. The United States gave China a draft resolution nearly three weeks ago to impose stronger sanctions on North Korea over the July 4 missile launch. Haley had been aiming for a vote by the 15-member Security Council within weeks, senior diplomats said. "We're constantly in touch with China ... Things are moving but it's still too early to tell how far they'll move," Haley said today, adding that she was pleased with China's initial response to the U.S. proposal because it showed "seriousness." "We know that China's been sharing and negotiating with Russia, so as long as they are doing that, we're going to continue to watch this closely to make sure it is a strong resolution," she told reporters. China's U.N. Ambassador Liu Jieyi told reporters: "We are making progress, it requires time, but we're working very hard." Speaking in Beijing on July 26, Chinese Foreign Ministry spokesman Lu Kang said any United Nations' moves should help ensure peace, stability and denuclearization. "All sides need to maintain pressure, and also work hard to ease the tense situation on the peninsula as soon as possible, creating a beneficial environment and atmosphere for resuming contacts and talks," Lu told a daily news briefing. Traditionally, the United States and China have negotiated sanctions on North Korea before formally involving other council members, though diplomats said Washington informally keeps Britain and France in the loop. Along with Russia, those five countries are veto-wielding Security Council members. "The true test will be what (the Chinese) have worked out with Russia (and whether) Russia comes and tries to pull out of that," said Haley. China's Ambassador to Washington Cui Tiankai said today that Beijing objected to secondary sanctions. In June, the United States blacklisted two Chinese citizens and a shipping company for helping North Korea's nuclear and missile programs. "Such actions are unacceptable. They have severely impaired China-U.S. cooperation on the Korean nuclear issue, and give rise to more questions about the true intention of the U.S.,” he told the Institute for China-America Studies in Washington. (Michelle Nichols, “U.S. Says Progress on Sanctions with China, True Test Is Russia,” Reuters, July 25, 2017) In retrospect, said Vladimir Bogdanov, it wasn't the best time to start the first passenger-ship service between Russia and North Korea shortly before Kim Jong Un shocked the world by announcing he's successfully tested a missile capable of striking the U.S. mainland. "We were in a hurry, thinking we'd be too late. We should have slowed down," said Bogdanov, who's organized nine trips since May between Russia's far east port of Vladivostok and Rajin in North Korea's Rason special economic zone. "Still, there's no turning back" for the service, which is loss-making so far after filling at best a quarter of its 193 places each time, he said. Economic ties between Russia and North Korea, which share a narrow land border, are similarly beleaguered, with trade down for a third year to just $77 million in 2016, according to the Russian customs service. While the volume is small, it's becoming a point of tension between President Vladimir Putin and his U.S. counterpart Donald Trump, who's pressing Russia and other powers to ramp up opposition to the Communist regime's nuclear-missile program. Russia regards the trade relationship as a means to safeguard its position with Kim in diplomacy to try to defuse the crisis on the Korean peninsula. "We can't afford to argue with North Korea because it will completely cast Russia to the sidelines," said Georgy Toloraya, head of the Russian Academy of Science's Center for Asian Strategy. "Our interests will not be considered" if North Korea sees Russia siding with the U.S., he said. Putin is unwilling to isolate North Korea completely. He opposes tougher sanctions because he believes they won't affect the North Korean leadership, said two senior Kremlin officials, who asked not to be identified discussing internal policy. The U.S. is pressing Russia to end a program for taking 30,000 to 50,000 North Korean migrant workers, in order to "deprive Kim Jong Un of all his money," Toloraya said. "This is what they demand from Russia right now, very actively." Any country that hosts North Korean workers "is aiding and abetting a dangerous regime" that's "a global threat," U.S. Secretary of State Rex Tillerson said after Kim announced the successful missile test on July 4. "Russia has never been a supporter of dialogue by sanctions," which is a "futile approach," Kremlin spokesman Dmitry Peskov told reporters in April. That position hasn't changed after Putin and Trump met at this month's Group of 20 summit, he said. While Trump and Putin had "a pretty good exchange on North Korea," they differ in tactics and pace for dealing with the threat, Tillerson said after the Hamburk talks. Russian diplomat Oleg Burmistrov presented proposals for resolving the confrontation during a visit to North Korea this week, the Interfax news service reported today, citing a Foreign Ministry
source it didn't identify. North Korean officials told him they won't negotiate its nuclear or ballistic-missile programs unless the U.S. "terminates its hostile policy," according to the state-run Korean Central News Agency. Russia and China blocked U.S.-led efforts to expand penalties against North Korea in a draft United Nations Security Council resolution condemning the missile test. While Trump has accused China of doing too little to pressure its neighbor, officials in Beijing said they've been "strictly abiding" by U.N. sanctions and that imports from North Korea fell 13.2 percent to $880 million in the first six months of 2017 compared to a year earlier. "No one has any real leverage on North Korea to convince them to give up nuclear weapons, including the Chinese," Alexander Gabuev of the Moscow Carnegie Center said. Kim's regime may earn $30-$50 million a year from the migrant workers, who labor in remote Russian forest camps or on construction sites, he said. Russian imports from North Korea slumped to just $421,000 in the first quarter of 2017 from the same period last year, while exports, mainly of foodstuffs and fuel, more than doubled to $31.4 million, according to customs service data. Nobody knows the real level of trade since many goods go via third countries, though it may be worth $500 million, according to Toloraya. Migrant workers take the boat between Vladivostok and Rajin alongside Russian and Chinese visitors, according to Bogdanov, who said his business was contracted to run the route by a Hong Kong-registered company through an entity in North Korea that he didn't identify. The service may break even in a few months and will continue even amid the U.S. demands for isolating North Korea, he said. "We're not afraid of Trump," said Bogdanov. "We see the unanimity of Russia and China in pursuing the route to peace. And our poorly-painted little ship is also a path of peace." (Ilya Arkhipov, “Putin Defies Trump on North Korea,” Bloomberg, July 26, 2017)

The U.S. House of Representatives overwhelming passed legislation that authorizes measures against exports of crude oil to Pyongyang as well as North Korean forced labor overseas and online gambling as part of a larger package of sanctions bills also targeting Iran and Russia. The House voted 419-3 in support of bipartisan legislation referred to as the “Countering America’s Adversaries through Sanctions Act,” against Russia, Iran and North Korea. This legislation encompasses the “Korean Interdiction and Modernization of Sanctions Act” on Pyongyang, passed in May by the House in vote of 419-1, which seeks to bolster the implementation of UN Security Council resolutions and cut off cash used for the regime’s weapons of mass destruction programs. The bill penalizes anyone who “knowingly, directly or indirectly, sold, transferred, or otherwise provided significant amounts of crude oil, condensates, refined petroleum, other types of petroleum or petroleum byproducts, liquefied natural gas, or other natural gas resources to the government of North Korea,” with some exceptions for humanitarian uses. China, Pyongyang’s main trading partner, is the main supplier of crude oil to North Korea, and Washington has been seeking to restrict oil exports to North Korea in the UN Security Council. Amid other efforts to limit the flow of foreign currency that may be funneled into North Korea’s nuclear and missile programs, the bill prohibits the supporting of North Korean government’s commercial activities over the internet, including online gambling. It also authorizes sanctions against people involved in the forced labor and slavery overseas of North Koreans and further prohibits “significant goods, wares, articles, and merchandise mined, produced, or manufactured wholly or in part” by North Korea from entering any ports of the United States. The bill calls for a report assessing the extent of cooperation between North Korea and Iran related to nuclear and ballistic missile development, or their chemical or biological weapons development and conventional weapons programs. This bill also prevents President Donald Trump from lifting sanctions on Russia without congressional approval. It has been referred to the Senate. Republican Rep. Ed Royce of California, chairman of the House Foreign Affairs Committee, told the floor, “These three regimes, in different parts of the world, are threatening vital U.S. interests and destabilizing their neighbors. It is well past time that we forcefully respond.” “Believe me, these sanctions are going to have very real impact,” Royce told Fox News the same day. He pushed for cutting off “all the hard currency going into North Korea,” referring to Washington’s sanctions on the Macao-based Banco Delta Asia for its role in laundering money for North Korea in 2005. “They didn’t have the hard currency to go forward. We need that kind of strength and action at this point in time.” White House spokeswoman Sarah Huckabee Sanders said in a briefing, “While the president supports tough sanctions on North Korea, Iran and Russia, the White House is reviewing the House legislation
and awaits a final legislative package for the president’s desk.” Washington also plans to blacklist additional entities in China “fairly soon” for their ties with North Korea’s weapons programs, said Susan Thornton, acting assistant secretary of state for East Asian and Pacific affairs, at a hearing of the Senate Subcommittee on East Asia, the Pacific, and International Cybersecurity Policy. “I think the Chinese are now very clear that we’re going to go after Chinese entities if need be, if we find them to be in violation, and if the Chinese feel they can’t cooperate in going after those targets”. The Trump administration has been urging China to exert its unique leverage over North Korea as its main economic and diplomatic benefactor. Thornton said, “But we are perfectly prepared to act on our own.” While Washington has not relisted North Korea as a state sponsor of terrorism, the latest bill urges a reassessment, and Thornton said Washington is still reviewing this. (Sarah Kim, “U.S. reps Try Block Oil to North,” JoongAng Ilbo, July 25, 2017)

North Korea’s state-sponsored hackers are increasingly going after money rather than secrets, according to a report published today by a South Korean government-backed institute. Cybersecurity experts have noticed a shift in the hacking attacks they suspected were mounted by North Korea. In the last few years, North Korean hackers seem to have become more interested in stealing cash, the Financial Security Institute said in its report. The report said North Korean-linked hackers were behind the recent digital theft of $81 million from Bangladesh’s central bank. The North Koreans also tried to breach Polish banks, leaving traces that led anti-hacking experts to believe the hacking group also planned to steal money from more than 100 other organizations around the world. North Korea is isolated, impoverished and desperately short of foreign currency to pay for imports. Even so, it has trained a large army of hackers, originally as an inexpensive means of espionage, sabotage and propaganda, but now also as a moneymaker. The Russian cybersecurity firm Kaspersky Lab has identified a hacking group called Bluenoroff that it says is to blame for attacks on foreign financial institutions, like those in Poland and Bangladesh. Bluenoroff is said to be an offshoot of Lazarus, the North Korea-linked hacking group implicated in earlier attacks. The new report identified another Lazarus spinoff, which it named Andariel, and said that group was responsible for at least seven hacking attacks on banks, defense contractors and other businesses in South Korea over the last two years. (The names Lazarus and Andariel apparently refer to characters in a video game called Diablo.) “Bluenoroff and Andariel share their common root,” the report said. “If Bluenoroff has attacked financial firms around the world, Andariel focuses on businesses and government agencies in South Korea using methods tailored for the country.” The report said the Andariel group had increasingly shifted from destructive attacks on computer networks to crimes like stealing bank-card data and using it to draw cash from bank customers’ accounts or selling the data on the black market. The group also used malware to cheat at online poker and on other gambling websites. “Andariel is believed to focus on earning hard currency,” the report said. The Financial Security Institute, which is financed by the South Korean government, cautioned that the report was partly conjectural and did not represent an official view. South Korean cybersecurity officials began detecting attacks attributed to North Korean hackers around 2009. North Korea is now believed to have 1,700 state-sponsored hackers, aided by more than 5,000 supervisors, trainers and other support staff, South Korean officials estimate. The hackers typically do their work abroad, taking legitimate software programming or other jobs in China, Southeast Asia or Europe and waiting for instructions from Pyongyang to mount an assault, they said. Going abroad is a rare privilege for North Koreans, and those who are allowed to work outside the country are required to send the government a quota of foreign currency every year, according to North Korean defectors. North Korea has been accused of illicit moneymaking schemes to pay for its huge military, its nuclear weapons program and its leaders’ luxurious lifestyle, including gunrunning, drug trafficking and counterfeiting. As the United Nations has tightened sanctions and made those avenues more difficult, cyberattacks have loomed larger as a source of cash. Some hacking experts suspect North Korean involvement in the recent wave of global ransomware attacks. North Korea has denied any involvement in hacking attacks, accusing South Korea and the United States of slander. (Choe Sang-hun, “North Korea Tries to Make Hacking a Profit Center,” New York Times, July 27, 2017)
After an intense battle with the White House over his first choice to become the top US diplomat to Asia, Secretary of State Rex Tillerson is considering a new candidate with a deep résumé in business and economics but little diplomatic experience, BuzzFeed News has learned. Tillerson’s consideration of a new candidate underscores the limited options he faces between an adversarial White House and a Congress adamant that he fill a State Department replete with vacancies six months into the presidency. Olin Wethington, a former Treasury Department official and a nonresident fellow at the Atlantic Council, is now a contender for the nomination of assistant secretary of state for East Asian and Pacific Affairs, four individuals familiar with the matter said. If nominated and confirmed, Wethington’s portfolio would include some of Washington’s most sensitive national security issues, including the accelerating nuclear weapons program of North Korea, China’s growing naval posture in the South China Sea, and heightened tensions between Beijing and Taiwan over a new US arms sale to the island. A senior State Department official cautioned that no nominees have completed the vetting process and the State Department has no new appointments to announce. The official also said three other individuals are under consideration for the position. Tillerson originally wanted the job to go to Susan Thornton, a veteran diplomat who speaks Mandarin Chinese, two US officials told BuzzFeed News. But White House officials opposed her due to concerns that her views were out of step with the president’s agenda — a claim State Department officials deny. Tillerson’s anger over the White House’s objection to Thornton and his other picks boiled over in a June meeting at the White House when he “ripped into” Johnny DeStefano, the head of the presidential personnel office, a US official said. Details of that meeting were first reported by Politico. The former Exxon Mobil CEO, used to having absolute authority over staffing decisions, told DeStefano that the president had given him autonomy over staffing decisions and that he knew best who to hire in Foggy Bottom. The explosive nature of the exchange prompted Jared Kushner to inform Tillerson’s chief of staff, Margaret Peterlin, that Tillerson’s outburst was unprofessional and unacceptable. On July 23, CNN reported that Tillerson has told some of his close friends that he may quit his position by the end of the year due to his frustrations with White House interference, citing anonymous sources. Tillerson’s senior aide RC Hammond denied the story, telling BuzzFeed News the secretary is determined to carry out the president’s agenda. “As long as there are rogue regimes pursuing nuclear weapons or terrorists seeking safe haven the secretary will remain on the job,” Hammond said. Ultimately, in shifting to Wethington, Tillerson appears to be acquiescing to the White House, which has shown a preference for appointments with a strong business background over career diplomatic experience. The challenge for Wethington would be taking on a job that is much more diplomatic in nature than his previous positions at Commerce and Treasury. “Wethington’s overall policy orientation is good — he’s just going to have a high learning curve on security and political issues,” said Scott Kennedy, an Asia expert at the Center for Strategic and International Studies. There is a risk, Kennedy noted, when an assistant secretary comes in without detailed knowledge and experience on issues of language and diplomacy related to highly sensitive issues such as Taiwan, South China Sea, and North Korea. Wethington is the founder and chairman of Wethington International, a firm that focuses on investment and business advisory in emerging markets. He met Tillerson recently and the meeting “went well,” said one person familiar with the vetting process. Another acquaintance of Wethington said “he’s been around talking to people about taking the job so it’s pretty far along.” The source noted that one factor that may delay an appointment announcement is the process of disentangling Wethington’s investments to avoid conflicts of interest. “He worked for some real businesses where he probably accumulated stock,” said the person. When asked about a pending nomination, Wethington told BuzzFeed News, “I have no comment.” Wethington’s supporters said his deep familiarity with the region from his work at Treasury and the private sector will be a major asset. “It’s good to have someone who really knows Northeast Asia and Southeast Asia,” said Doug Paal, an Asia scholar at the Carnegie Endowment for International Peace. “He’s got a real depth of experience on the financial and economic side that’s really important to the partners out there.” A State Department official said Thornton’s nomination was jeopardized by her status as a career foreign service officer, a cohort some White House officials see as reluctant supporters of the president’s “America First” agenda at best. A White House official denied that being career service had anything to do with it and said the Oval Office’s resistance was purely due to policy differences. Thornton, who is currently serving as acting assistant secretary of state for East Asia and Pacific Affairs, did support the
Their test was aimed to finally confirm the overall technological specifications of the weapon system of Hwasong-14 capable of carrying large-sized heavy nuclear warhead, including its maximum range. By order of the Supreme Leader, the intercontinental ballistic rocket Hwasong-14 loaded with the tremendous might of heroic Korea soared into space, leaving a column of flames behind. The rocket that blasted off from the northwestern part of the DPRK reached an altitude of 3,724.9km and flew 998km for 47 minutes and 12 seconds before landing in the target waters in the open sea. The test-fire was carried out at the maximum angle launch system for the maximum range, and had no adverse effect on the security of the neighboring countries. The test also reconfirmed the specific features of the rocket system such as the rocket's separation from its launching pad, stage-separation, structural system, etc. which were confirmed at the first test-fire, and confirmed the performing features of motors whose number has increased to guarantee the maximum range in the active-flight stage as well as the accuracy and reliability of the improved guidance and stability system. The attitude control features of heavy warhead in the middle flight stage after the separation of warhead were reconfirmed, and the accurate guidance and attitude control of warhead was ensured at the atmospheric reentry at the angle launch system harsher than the actual maximum range flying conditions. The structural stability of warhead was maintained and the warhead explosion control device showed normal operation even at the thousands of degrees of Centigrade. Expressing great satisfaction over the results of the test-fire of ICBM which proved to be a perfect and big success without an inch of error, Kim Jong Un highly praised the scientists, technicians and officials in the field of rocket research and gave them special thanks in the name of the Party Central Committee. The test-fire reconfirmed the reliability of ICBM system, demonstrated the capability of making surprise launch of ICBM in any region and place any time, and clearly proved that the whole U.S. mainland is in the firing range of the DPRK missiles, he said with pride. The maximum range simulation test-fire of ICBM conducted by the DPRK today is meant to send a grave warning to the U.S. making senseless remarks, being lost to reason, he said, adding this would make the policy-makers of the U.S. properly understand
that the U.S., an aggression-minded state, would not go scot-free if it dares provoke the DPRK.

The U.S. trumpeting about war and extreme sanctions and threat against the DPRK only emboldens the latter and offers a better excuse for its access to nukes, he said, stressing: To the Korean people who experienced disastrous disturbances of war on this land by the beast-like U.S. imperialists, the powerful war deterrence for defending the state is an inevitable strategic option and it is a precious strategic asset that cannot be bartered for anything. If the Yankees brandish the nuclear stick on this land again despite our repeated warnings, we will clearly teach them manners with the nuclear strategic force which we had shown them one by one, he emphasized. Kim Jong Un warmly congratulated the scientists and technicians in the field of rocket research who demonstrated once again the independent prestige and dignity of Juche nuclear power, the world-level rocket power by succeeding in the second test-launch of ICBM Hwasong-14. He, taking them in his arms, had a photo session with them which will go down in history. The DPRK, advancing along the new line of the great Workers' Party of Korea on simultaneously developing the two fronts, will develop much more the most powerful strategic weapons, Juche weapons which will display the invincible might of Juche Korea and its inexhaustible potentiality of development to the world until the U.S. and its vassal forces trying to undermine the DPRK's dignity and its right to existence are eliminated, and will achieve the final victory in the showdown with the imperialists and the U.S. without fail. Accompanying him were Ri Pyong Chol, Kim Rak Gyom, Kim Jong Sik, Jang Chang Ha, Jon Il Ho, Yu Jin and Jo Yong Won.” (KCNA, “Kim Jong Un Guides Second Test-Fire of the ICBM Hwasong-14,” July 29, 2017)

North Korea has taken another step toward achieving its stated goal of being able to send a nuclear weapon to the U.S. mainland, apparently firing another ballistic missile late today. It was not immediately clear whether the missile was capable of reaching the continental United States, but the fact that it flew for some 45 minutes suggested it had an even longer range than the intercontinental ballistic missile that North Korea launched on July 4, analysts said. The Pentagon and South Korea's joint chiefs of staff both said they had detected the launch, which occurred today at about 11:11 p.m. North Korea time(10:41 a.m. Eastern time). The late-night launch was unusual as North Korea usually fires missiles soon after dawn. "I can confirm that we detected a launch of a ballistic missile from North Korea. We are assessing and will have more information soon," Navy Capt. Jeff Davis, a Pentagon spokesman, said. The missile was launched from Jagang province in northwestern North Korea, near the border with China, South Korea's joint chiefs said. President Moon Jae-in convened an emergency national security meeting. In Tokyo, chief cabinet secretary Suga Yoshihide said the missile landed within Japan's exclusive economic zone, and he condemned the latest launch. "We cannot tolerate North Korea's repeated provocations like this," Suga told a news conference convened early July 29 at 1 a.m. Tokyo time. "We have made a strong protest to North Korea and condemned this act in the strongest terms." A launch had been anticipated. Not only has Kim Jong Un repeatedly said he wants a nuclear-tipped missile that can reach the United States, but U.S. intelligence agencies in recent days had spotted preparations for another test. On July 26, the day before the anniversary of the end of the 1950-1953 Korean War, North Korea threatened to launch a preemptive nuclear strike against the United States. "If enemies misunderstand our strategic status and stick to options of staging a preemptive nuclear attack against us, we will launch a nuclear attack on America's heart as the most relentless punishment without warning or prior notice," Pak Yong Sik, North Korea's defense minister, said at a ceremony to mark the conclusion of the Korean War, which ended in an armistice but which Pyongyang claims it won. The test comes barely three weeks after North Korea fired its first missile technically capable of reaching the United States, launched as July 4 dawned in Asia. That missile, which North Korea called the Hwasong-14 (or Mars-14), was fired from Panghyon, a northwestern part of the country not far from the border with China, and flew to an altitude of 1,741 miles - seven times as high as the International Space Station. It landed 577 miles from its launch site, splashing down in the sea between the Korean Peninsula and Japan. If fired on a trajectory designed to maximize its range, rather than a "lofted" flight path, the missile could have flown 4,970 miles, according to the missile defense project at the Center for Strategic and International Studies (CSIS), a Washington-based think-tank. That would put Hawaii and Alaska within reach. But analysts at the Center for Nonproliferation Studies in California have suggested
that the missile was capable of reaching New York City. Jeffrey Lewis, head of the East Asia program at CNS, said that if this was an ICBM test, it would have been designed to demonstrate that North Korea could hit more of the mainland United States. "My guess is that they want to show more range," Lewis said, adding that North Korea was essentially calling the Pentagon's bluff. "We basically dared them to do this. We said, 'It's not really an ICBM until it can hit Alaska,' and they're like, 'okay.'" The Pentagon's Defense Intelligence Agency has shaved two full years off the consensus forecast for North Korea's ICBM program, now estimating that North Korea will be able to field a reliable, nuclear-capable intercontinental ballistic missile as early as next year. The aggressive testing schedule has already allowed North Korea to validate its basic designs, putting it within a few months of starting industrial production, the officials said. The July 4 test, which violates United Nations resolutions against North Korea, was met with the usual rounds of international condemnation, but the world has not found a way to persuade North Korea to stop. The United States has been leading the charge for more and more sanctions against North Korea, but Russia and China - both veto-wielding permanent members of the U.N. Security Council - have been reluctant to impose painful measures and are instead calling for a "de-escalation plan" to deal with Pyongyang. The United States won't know anything about North Korea's intentions unless it engages the regime seriously and at length, said Sharon Squassoni, head of the proliferation prevention program at CSIS. "Kim Jong Un does seem hell-bent on acquiring the capability to reach the United States with nuclear weapons," she said. "Although some experts judge this means he will never negotiate, it could also mean that he's looking for the capability that forces the United States to the table." The Trump administration needs to commit resources and real expertise to reshaping peace and security on the Korean Peninsula, she said. Kelsey Davenport, director for nonproliferation policy at the Arms Control Association, agreed that sanctions alone will not change North Korea's behavior. "A deployed North Korean ICBM is not inevitable, but it will be if policymakers in Washington keep putting the cart before the horse and demanding Pyongyang meet onerous preconditions to begin talks," she said. The Trump administration, like the Obama administration before it, has said that North Korea must agree to freeze its weapons program before talks can begin. "Washington's diplomacy deficit is further compounded by the dangerous illusion that sanctions alone will push North Korea to negotiate," Davenport said, "when the Trump administration and Congress should be focused on signaling support for talks without conditions." (Anna Fifield, "North Korea Fires Another Missile, Its Latest Step toward Putting the U.S. within Reach, Washington Post, July 28, 2017)

Elleman: "With its second—apparently successful—flight test of the Hwasong-14 on July 28, North Korea may soon be able to field an intercontinental ballistic missile (ICBM). However, a number of critical questions remain about how soon Pyongyang could field a reliable weapon, not the least of which is whether or not North Korea can shield a nuclear warhead from the rigors of re-entry into the earth’s atmosphere at ICBM velocities. Video of the Hwasong-14 test has emerged that casts doubt on the North’s ability to do so. The Japanese television station, NHK, has a weather camera mounted on the roof of its Hokkaido Prefecture affiliate, located in Muroran City. The camera looks east, across a bay, and in the direction where the Hwasong-14’s re-entry vehicle (RV) crashed into the sea, about 200 km from Japan. Based on the camera’s position, and the RV’s impact point, the camera’s view is obscured by the small mountain range located across the bay and the earth’s curvature when the RV is about 2 km above the ocean’s surface. Given the range, peak altitude and time of flight of the Hwasong-14 test, the RV is traveling at just over 6 km per second when it enters the atmosphere. At about 25 to 30 km altitude, the air is dense enough to slow and heat the RV. At about 20 km above sea level, the RV has become so hot that it begins to glow as its descent is recorded by the camera. It continues to slow and its temperature further rises as it approaches impact with the sea. In the video, peak radiance—when the clouds reflect the RVs radiance resulting in a bright flash—occurs when it is at 6 to 8 km altitude, and a fraction of a second before it passes through or behind a layer of clouds. Soon after the flash, the RV descends to roughly 4 or 5 km altitude, where the frictional forces that slow and heat the RV reach a maximum. At this point, the RV appears to be shedding small radiant objects and is trailed by an incandescent vapor. At an altitude of 3 to 4 km, the RV then dims and quickly disappears. This occurs before the RV passes behind the mountain range and is obscured from the camera’s view, indicating that it disintegrated about the time it experienced maximum stressing loads. Had

Young Seok, an elected member of South Korea’s National A
balance of power between South and North Korea, and I also support that position,” said Yoon
Moon to at
the defense burdens borne by the U.S. military. “Trump’s ‘America-first’ policy has triggered this
kind of public sentiment,” said Moon Chung In, a top national security adviser to South Korean
President Moon Jae In. Trump also has waivered on his commitment to defending South Korea, he
said, including suggesting during the campaign that South Korea and Japan should develop their
own nuclear arsenals. While President Moon, a liberal who took office in May, does not support
calls for South Korea to join the nuclear club, polls show that a majority of South Koreans
surveyed favor the idea. Support bumps higher whenever North Korea conducts a nuclear or
missile test and members of South Korea’s two major conservative parties are pressing Moon to at
least explore the nuclear option of developing nuclear weapons. “They want to strike a better
balance of power between South and North Korea, and I also support that position,” said Yoon
Young Seok, an elected member of South Korea’s National Assembly who belongs to the
conservative Liberty Korea Party. Yoon said that half of his party’s 107 lawmakers support South
Korea arming itself with nuclear weapons. Up until the early 1970s, South Korea was actively
pursuing development of nuclear warheads. But because of pressure from the United States, it
abandoned those efforts in 1975, when it signed the international nuclear non-proliferation treaty.
Since then, it has relied on the deterrence capacity of the United States, which has a stockpile of
roughly 4,000 nuclear weapons. Now, North Korea’s advances in nuclear weaponry and missiles
are changing South Korea’s strategic calculus. Since 1953, South Korea and the United States
have been bound by a mutual defense treaty to aid each other in the event of war. On the campaign
trail, however, Trump said he’d like to see South Korea and Japan develop their own nuclear
weapons to deter a North Korean attack. He also said he’d be open to withdrawing U.S. forces
from Japan and South Korea if the two nations did not shoulder more of the costs of keeping
troops in the region. Trump’s latter comment caused a stir in South Korea, partly because North
Korea quickly applauded it and also South Korea is hardly a slacker when it comes to national
defense. The country spends more than $34 billion yearly on its military, requires compulsory
military service and fields more than 620,000 active troops. By comparison, the United States —
with more than six times the population — is defended by 1.28 million active duty military. The
White House did not respond to a request for comment. Since Trump took office, his national
security team has worked to rebuild trust with South Korea, arguably the most crucial U.S. ally in
Asia. When Defense Secretary Jim Mattis visited Seoul in February, he told his counterparts he
was there “to make clear the administration’s full commitment to the United Nations mission in
defense of your democracy.” Even so, several of Trump’s actions have left South Korean leaders
uneasy. Upon taking office, Trump pulled the United States out of the Trans-Pacific Partnership, a
trade deal aimed at undermining China’s rising influence in the region. Trump also has accused
South Korea of “horrible” trade policies, and at one point suggested that South Korea pay $1
billion for a missile defense system known as THAAD that is being deployed, in part, to protect
U.S. troops and military assets in the region. Daniel Pinkston, a U.S. Air Force veteran and
security expert at Troy University in Seoul, said that Trump’s collective actions have sent a
negative signal to friends and adversaries. Past presidents, said Pinkston, have bolstered the U.S.-
South Korea alliance through trade and support of democracy, human rights and the rule of law.
Trump has taken a different stance. “Lack of support for these shared values has a lot of people
alarmed in the region, from Australia to Japan to South Korea,” said Pinkston. Uncertainty about

the RV survived the rigors of re-entry, it would have continued to glow until disappearing behind
the mountains. In short, a reasonable conclusion based on the video evidence is that the Hwasong-
14’s re-entry vehicle did not survive during its second test. If this assessment accurately reflects
reality, North Korea’s engineers have yet to master re-entry technologies and more work remains
before Kim Jong Un has an ICBM capable of striking the American mainland. (Michael Elleman,
“Video Casts Doubt on North Korea’s Ability to Field an ICBM Re-Entry Vehicle,” 38North, July
31, 2017)
the U.S. commitment is emboldening South Koreans who want to pursue the nuclear option, a move that Pinkston calls “reckless and dangerous.” South Korea is home to more than 20 nuclear power plants, and if it decided to pursue a nuclear weapons program, it would have both the expertise and material to do so. Still, it would be no simple task for South Korea to “go nuclear.” Building nuclear weapons would jeopardize South Korea’s alliance with the United States, and also force Seoul to withdraw from a U.S. nuclear agreement that bans it from independently enriching uranium or reprocessing plutonium. In turn, it would expose South Korea to international sanctions, similar to those imposed on North Korea after its first nuclear test, in 2006. It is also unlikely that Beijing would sit idly by while South Korea deployed nuclear weapons nearby. China would likely ramp up its own arsenal, especially if Japan followed Seoul’s lead and launched its own nuclear weapons program. There are strategic reasons for South Korea not to go down this road, said Pinkston. Even with its technological know-how, South Korea would need several years to develop a reliable nuclear arsenal, leaving it exposed during that time. “North Korea would have an incentive to strike first,” said Pinkston. “South Korea would be in a very vulnerable position.” Currently, South Korea’s pro-nuclear contingent of lawmakers does not have the votes to pursue a nuclear weapons program. But that could change in subsequent elections, depending on what happens in Washington, Pyongyang and Seoul. “There are an increasing number of lawmakers who are studying armament, or what we call nuclear sovereignty,” said lawmaker Kim Jong Dae, a member of the Justice Party, which is generally aligned with President Moon’s Democratic Party. “This will definitely emerge as a mainstream political issue,” he added, if North Korea demonstrates it possesses the capability to launch a missile strike against major U.S. cities. In the meantime, President Moon’s foreign policy staff is keeping a close eye on the White House, including which advisers are ascending or descending. Trump’s decision to remove hardline nationalist Steve Bannon from the National Security Council in April was “a good sign,” said Moon Chung In, the South Korean president’s national security consultant. Seoul’s new leadership is holding out hope that Defense Secretary Mattis and National Security Advisor H.R. McMaster will hold sway over policy toward the Korean peninsula. Said Moon, the adviser, “If Trump listens to Mattis and McMaster, there won’t be any kind of disaster.” (Stuart Leavenworth, “South Korea Considers a Nuclear Arsenal to Counter the North,” McClatchy, July 28, 2017)

The South Korean government wants greater firepower to counteract the growing threat from North Korea’s missiles, which have apparently led the new liberal government in Seoul to prioritize tougher action against Pyongyang over diplomatic engagement. This represents a significant shift for Moon Jae-in, who was elected president just two months ago and will be welcomed in Washington, where the Trump administration has been growing frustrated with South Korea’s heel-dragging. The catalyst for the sudden change was North Korea’s second launch in a month of an intercontinental ballistic missile technically capable of reaching the U.S. mainland. The Pentagon said that the missile, launched close to midnight North Korea time yesterday, flew about 2,300 miles almost straight up before crashing into the sea off Japan about 620 miles from its launch site. Fixed cameras for NHK appeared to capture the missile crashing into the sea not far from the coast of Hokkaido, the northern Japanese island. If the ICBM had been launched on a normal trajectory, the missile could theoretically have reached Chicago and perhaps even New York, experts said after analyzing the launch. North Korean state television today broadcast footage of the launch, showing leader Kim Jong Un in a grassy area surrounded by trees in the middle of the night, as the missile was wheeled out on the back of a modified truck. 

_Rodong Sinmun_ ran a large front-page photo of Kim signing the order to launch the missile that North Korea calls the Hwasong-14. It was just one of many photos showing the 33-year-old North Korean leader in the control room and at the launch site. The launch confirmed several key technical advances, showing the power of the motors and the ability of the missile to survive reentry into the Earth’s atmosphere, KCNA reported. Within hours of the North Korean launch, South Korea showed off a more powerful ballistic missile of its own — although it still pales in comparison with the North’s ICBM — in drills with the U.S. military. “Our combined efforts showcase the capabilities of this alliance,” Lt. Gen. Thomas Vandal, the commander of the Eighth Army, said in a statement. The allies were ready to deter North Korean provocations and defend South Korea, he said. The South’s Defense Ministry released footage of two missiles being
fired from a launcher in quick succession, the first hitting a target and the second destroying a bunker. The system can launch four missiles back to back, giving the South the ability to carry out fast and lethal strikes, the ministry said. “In particular, it can destroy not only North Korea’s nuclear and missile bases but also the tunnel-shaped strongholds of its artillery posing a threat to Seoul and nearby Gyeonggi province,” the ministry said in a statement, according to Yonhap. As part of a flurry of phone calls after the launch, South Korea’s national security adviser, Chung Eui-yong, called his American counterpart, H.R. McMaster, to seek revisions to their countries’ bilateral ballistic missile guidelines. Under an agreement written in 1979 but revised in 2001 and 2012, South Korea is limited in the capabilities it can pursue with its own missile program. The guidelines limit South Korean ballistic missiles with a range of 500 miles to carrying a half-ton payload, but the Moon administration is now seeking to double that to one ton. “It is fair to say that more weight will be given to the payload part rather than the missile range issue,” the South Korean president’s chief press secretary told reporters Saturday in Seoul. South Korean officials have been concerned about the growing “missile gap” between South and North Korea, but any increases are likely to alarm China in particular. South Korea recently test-fired a new ballistic missile called the Hyunmoo-2 that has a range of 500 miles, enough to reach all of North Korea. The president watched the launch. Earlier, Moon signaled a willingness to accept the planned deployment of a Terminal High Altitude Air Defense, or THAAD, system in South Korea. The previous South Korean government had agreed to host the U.S. antimissile system, and the deployment was expedited as it became increasingly clear that Moon, who had vowed during the election campaign to review the process, was going to win. The radar and launch system, along with two launchers, had been deployed and was operational before his election in May. But Moon professed outrage when he discovered that four additional launchers had been brought into South Korea after his election without his knowledge. American analysts said that a full battery comprised six launchers and that this had always been the agreement. But after last night’s launch, Moon said that he was willing to discuss the “temporary” deployment of the four additional launchers. The Trump administration has been frustrated by Moon’s unwillingness to join its efforts to crack down on North Korea. Moon’s administration had declined to categorize North Korea’s July 4 launch as an intercontinental ballistic missile and has not signed on to U.S. sanctions against a bank in China accused of helping the North Korean regime skirt sanctions. Japan had done both. (Anna Fifield, “In Shift, South Korea, Angles for More Firepower against North,’’ Washington Post, July 30 2017, p. A10) South Korea and the United States have agreed to open negotiations to revise a bilateral ballistic missile guideline to allow the former to develop a more powerful missile amid North Korea’s continued provocations, Seoul’s presidential office Cheong Wa Dae said. President Moon Jae-in instructed his government to begin bilateral consultations to rewrite the guideline that bans Seoul from developing ballistic missiles with a range of over 800 kilometers and a payload exceeding 500 kilograms, said Yoon Young-chan, his chief press secretary. In a phone call, Chung Eui-young, top presidential security adviser, made an official proposal to his U.S. counterpart H.R. McMaster to open negotiations over the revision, and McMaster agreed, Yoon said. The agreement came hours after the North fired off what it claims to have been an intercontinental ballistic missile in a stinging blow to Moon’s pursuit of dialogue and rapprochement with the wayward regime. The focus of the negotiations is expected to be on doubling the payload weight limit to 1 ton, a source said, declining to be named. "During the summit between the allies' leaders, there was a discussion regarding the payload part (in the guideline), and (the negotiations) will be in line with that," Yoon said. "It is fair to say that more weight will be given to the payload part rather than the missile range issue," he added, noting the negotiations would open "at the earliest date." A senior presidential official said that there has yet to be any concrete consultations with Washington over how much the payload weight limit needs to be increased. "Given the U.S. shares the need" for increasing the warhead weight, the heavier the better," the official told reporters. Asked whether there were prior consultations with Beijing and Tokyo over the issue, he said, "There is no need for us to definitely inform them of it in advance ... We will do if need be." (Yonhap, “South Korea, U.S. Agree to Open Negotiation on Missile Guideline after N.K. Missile Launch,” Korea Herald, July 29, 2017) Hours after yesterday’s test, some former American officials said President Trump’s options were limited. “In the White House you have a threshold decision: Can you get them back to the table or not,” Mark W. Lippert, President Barack Obama’s ambassador to Seoul, said Saturday about negotiating with
the North Koreans — a step Trump said during the 2016 campaign, and again several months ago, he was willing to try. Lippert said he supports Washington’s current diplomatic efforts as well as United Nations sanctions against the North. But so far, the North has not responded, perhaps calculating that it first wanted to demonstrate it was a permanent member of the club of nuclear-armed nations, and able to strike American cities, to strengthen its position before any negotiation. Lippert, speaking at a conference in Kent, Conn., said that barring negotiations, “the question gets binary pretty quick: containment or some kind of military operations.” Others question whether this administration, immersed in its own internal upheavals, can focus on the problem. “It takes a president of the United States who has the intellectual, global and historical depth” to deal with the Korean crisis, said R. Nicholas Burns, who served as undersecretary of state for political affairs in the Bush administration. Some believe the United States will simply learn to live with the North’s new capability, despite the words of Trump and his predecessors. “We are left in a situation where they believe we will ultimately acquiesce,” said Christopher R. Hill, an American diplomat who led nuclear negotiations with North Korea during the last Bush administration, which resulted in the dismantlement of part of a plutonium reactor. Hill is now dean of the Korbel School at the University of Denver. Today, the Chinese Ministry of Foreign Affairs condemned the resumed deployment of THAAD, in a statement that was in some ways more strongly worded than its statement earlier in the day criticizing North Korea’s missile test. “China is gravely concerned with the course of action taken by South Korea,” a spokesman for the Foreign Ministry, Geng Shuang, said in the statement. “Deploying Thaad won’t solve South Korea’s security concerns, won’t solve the related issues on the Korean Peninsula and will only further complicate issues.” In Washington, Trump accused China of failing to curb North Korea’s aggression and signaled he would restrict trade with Beijing as a consequence. “I am very disappointed in China,” Trump said tonight in a post on Twitter. “Our foolish past leaders have allowed them to make hundreds of billions of dollars a year in trade, yet they do NOTHING for us with North Korea, just talk. We will no longer allow this to continue.” He said, “China could easily solve this problem!” Yesterday, just as news of the North Korean test was breaking, the man who engineered the opening of America’s diplomatic relations with China, former Secretary of State Henry A. Kissinger, argued the administration needed a new and different approach to convincing the Chinese to take a more forceful stance. “I believe we have a better chance of getting to the nuclear problem with North Korea if we first come to an agreement with China about what follows after the collapse of the North Korean regime,” Kissinger said. That would include a commitment from the United States to withdraw most of its troops from the Korean Peninsula after a North Korean collapse, to allay the Chinese fear that, with the buffer of North Korea gone, the United States military would be right on its border. Kissinger has made the proposal to Secretary of State Rex W. Tillerson and other officials, according to people familiar with those conversations. But many doubt the Chinese would trust the American commitment, perhaps noting that the promises to integrate Russia into the West after the fall of the Berlin Wall never came to pass. Missile analysts remain uncertain and even doubtful that North Korea has cleared all the technical hurdles to build a reliable nuclear-tipped ICBM. But the test yesterday night left little doubt that the country, although cut off from most of the global economy and hit with several rounds of United Nations sanctions, was getting closer to its goal of arming itself with long-range missiles that can deliver nuclear warheads to the United States. South Korea fears that by building nuclear missiles that can reach major American cities, North Korea is trying to weaken the United States’ resolve over whether to intervene on the South’s behalf should war break out on the Korean Peninsula. “We must actively look for measures to secure our military’s own forces to deter and effectively deal with North Korea’s nuclear threats,” Moon said after an emergency meeting of his National Security Council today. South Korea wants to build ballistic missiles that can deliver more powerful payloads to targets in the North, including the location of its leadership and its missile and nuclear sites, most of which are hidden deep underground, defense officials here said. A hurdle to that ambition has been a treaty signed with Washington in the 1970s in return for American help in building its missiles. (South Korea can already load warheads weighing up to two tons on ballistic missiles with shorter ranges, but those missiles cannot reach key missile bases in northern North Korea.) The South Korean demands reflected growing regional jitters over how the North’s growing missile capabilities may affect Washington’s defense commitment to its allies in the region. Today, Moon warned that the latest North Korean test could lead to “a
fundamental change in the security structure in Northeast Asia.” “U.S. policy for 21 years has been to prevent this day from coming, and now it has,” said Adam Mount, a senior fellow at the Center for American Progress. “North Korea didn’t test an ICBM to launch a bolt from the blue against Washington; they’re hoping to split the United States from its allies.” Barry Pavel, director of the Brent Scowcroft Center on International Security at the Atlantic Council, said North Korea could use a nuclear-tipped ICBM capability to “target the United States and deter U.S. security cooperation with its close Asian allies.” “Once it is assured that it has a ‘nuclear shield,’ North Korea is likely to act much more aggressively in every other area of its foreign and military policies,” said Pavel. In “Rolling Back the Growing North Korean Threat,” the Atlantic Council’s memo to Trump published last month, Pavel and the co-author Robert A. Manning said that such North Korean aggressions could include “increasingly dangerous provocations and the sale of weapons of mass destruction to other nations and terrorist groups for much-needed cash.” Today, in what the U.S. military called a demonstration of America’s “ironclad commitment” to its allies, two American B-1B bombers flew from an air base on Guam to Japan and then South Korea, conducting joint exercises with each of the two countries’ air forces. Tillerson yesterday reaffirmed that the United States “will never accept a nuclear-armed North Korea nor abandon our commitment to our allies and partners in the region.” At the United Nations Security Council, Washington is urging China and Russia to agree to a new set of economic sanctions against North Korea, including severely curtailing the country’s access to oil supplies from the outside. China and Russia supply nearly all of North Korea’s oil imports and also host tens of thousands of the North workers. A bulk of the workers’ earnings end up in the coffers of the North Korean leadership, according to human rights groups and defectors. “As the principal economic enablers of North Korea’s nuclear weapon and ballistic missile development program, China and Russia bear unique and special responsibility for this growing threat to regional and global stability,” Tillerson said. But there is a growing frustration over China’s reluctance to use its economic leverage to rein in the North’s nuclear ambitions and over Washington’s inability to persuade Beijing. China accounts for more than 90 percent of North Korea’s external trade, but it fears the collapse of the Communist government on its border more than a nuclear-armed North. (Choe Sang-Hun and David E. Sanger, “To Counter North Korea, South Seeks U.S. Nod to Bolster Arms,” New York Times, July 30, 2017, p. A-1)

Suga: “Yesterday, at 11:42 PM, it was observed that a missile was fired from central North Korea and flew for 45 minutes before falling into the exclusive economic zone of our country in the Sea of Japan. Now, as of this time, we have not confirmed any reports of damage to ships and aircraft operating in the area. With regards to this incident, Prime Minister Shinzo Abe has immediately issued a report, ordered a collection of information and analysis with full strength. With regards to our countrymen, we will offer timely and accurate information; ensure the complete safety of ships and aircraft; and take a thorough stance for preparing for unexpected circumstances. There are instructions for these three points. Now, with regards to the government, in addition to collecting information, we called for an emergency meeting in the Prime Minister's Countermeasure Room, which is responsible for North Korean affairs and is part of the Prime Minister's Emergency Response Center, to debate our response to this action. At the end, we decided to consider debate regarding the collection of information and possible responses after quickly opening a meeting of the National Security Council. With regards to this ballistic missile launch, in addition to being an extremely problematic action from the view of the safety of our ships and aircraft, this is a clear violation of various United Nations Security Council Resolutions. Our country cannot accept and must reject these frequent provocations from North Korea. We strictly protest and use the strongest language to criticize North Korea. We will continue with all efforts to collect information and conduct analyses. If we obtain information in the future that should be made public, we will quickly make an announcement.” (Statement of Chief Cabinet Secretary Suga Yoshihide, Sankei, July 28, 2017)

South Korea and the United States conducted another round of combined ballistic missile drills in a show of firepower against North Korea, their armed forces said. The live-fire exercise held along the east coast involved the South's Hyunmoo-2 and the U.S. Eight Army's Army Tactical Missile
System (ATACMS). Two missiles were fired from the Hyunmoo-2 launcher, along with two others from the ATACMS. "The munitions impacted in the sea east of the Korean Peninsula," where the North lobbed what it claims to be an intercontinental ballistic missile (ICBM) hours earlier, according to the Eighth Army. The Hyunmoo-2 is a road-mobile tactical ballistic missile with a range of 300 kilometers. The ATACMS is a similar-range guided missile. The allies reaffirmed their capabilities for "precise strikes on the enemy's leadership," the South's Joint Chiefs of Staff said in a statement. The Eighth Army also said the two sides demonstrated their ability to work together to defend South Korea. "The ROK-U.S. Alliance remains ironclad, and our combined efforts showcase the capabilities of this alliance," said Lt. Gen. Thomas Vandal, who commands the unit, a core element of the 28,500-strong U.S. Forces Korea. "I assure you we are ready to fight tonight, will deter North Korean provocations and if necessary defend the Republic of Korea." The Eighth Army stressed that the ATACMS can be rapidly deployed and provide "deep-strike precision capability." It enables the allied forces to engage a full array of time-critical targets under all weather conditions, it added. The allies held such joint ballistic missile drills early this month following the communist nation's firing of the Hwasong-14 ICBM. (Yonhap, “S. Korea, U.S. Stage Ballistic Missile Exercise,” Korea Herald, July 29, 2017)

The United States flew two supersonic B-1B bombers over the Korean peninsula in a show of force today after Pyongyang's recent tests of intercontinental ballistic missiles (ICBM), the U.S. and South Korean Air Forces said. The B-1B flight was in direct response to the missile test and the previous July 3 launch of the "Hwansong-14" rocket, the U.S. statement said. The South Korean air force said the flight was conducted early on Sunday. The bombers took off from a U.S. air base in Guam, and were joined by Japanese and South Korean fighter jets during the exercise, according to the statement. "North Korea remains the most urgent threat to regional stability," Pacific Air Forces commander General Terrence J. O'Shaughnessy said in the statement. "If called upon, we are ready to respond with rapid, lethal, and overwhelming force at a time and place of our choosing." (James Pearson and Jack Kim, “U.S. Flies Bombers over Korean Peninsula after North Korea Test,” Reuters, July 29, 2017)

7/30/17

DPRK FoMin spokesman: “The resounding success in the second test-fire of ICBM Hwasong-14 conducted on July 28 is a great victory of the DPRK that demonstrated once again the independent prestige and dignity of Juche nuclear power, the world-level rocket power. The test-fire confirmed the DPRK’s capability of making surprise launch of ICBM in any place and location any time, and clearly proved that the entire U.S. mainland is in the firing range of the DPRK's missiles. The maximum range simulation test-fire of ICBM conducted by the DPRK this time is meant to send a stern warning to the U.S. making senseless remarks, being lost to reason in the frantic sanctions and pressure campaign against the DPRK. The policy-makers of the U.S. who must have closely observed the successful second ICBM test-fire would now properly understand that the U.S., an aggression-minded state, would not go scot-free if it ever dared provoke the DPRK. The U.S. trumpeting about war and threat to impose extreme sanctions on the DPRK only emboldens the latter and provides further justification for its access to nukes. To the Korean people who experienced disastrous disturbances of war on this land by the U.S. imperialist brutes, the powerful war deterrence for defending the state is an inevitable strategic option and it is a precious strategic asset that cannot be discarded or bartered for anything. If the Yankees, who have imposed pain and misfortune upon the Korean people for over half a century through their bloody war of aggression and heinous hostile policy against the DPRK, dares brandish the nuclear stick on this land again despite the DPRK’s repeated warnings, the DPRK will clearly teach them manners with the nuclear strategic force which it had so far shown the U.S. one after another. The U.S. should clearly understand the strategic position of the DPRK which has become a world nuclear power and a rocket power and the resolve of its army and people for retaliation, and wake up from the foolish dream of doing any harm to the DPRK. In case the U.S. fails to come to its own senses and continues to resort to military adventure and "tough sanctions", the DPRK will respond with its resolute act of justice as already declared.” (KCNA, “DPRK Warns U.S. to Wake up from Foolish Dream of Doing Any Harm to DPRK: FM Spokesman,” July 30, 2017)
China hit back after President Donald Trump tweeted he was "very disappointed" in China following Pyongyang's latest missile test, saying the problem did not arise in China and that all sides need to work for a solution. China has become increasingly frustrated with American and Japanese criticism that it should do more to rein in Pyongyang. China is North Korea's closest ally, but Beijing is angry with its continued nuclear and missile tests. China's Foreign Ministry, in a statement sent to Reuters responding to Trump's tweets, said the North Korean nuclear issue did not arise because of China and that everyone needed to work together to seek a resolution. "All parties should have a correct understanding of this," it said, adding the international community widely recognized China's efforts to seek a resolution. The essence of Sino-U.S. trade is mutual benefit and win-win, with a vast amount of facts proving the healthy development of business and trade ties is good for both countries, the ministry added. Chinese Vice Commerce Minister Qian Keming, weighed in too, telling a news conference there was no link between the North Korea issue and China-U.S. trade. "We think the North Korea nuclear issue and China-US trade are issues that are in two completely different domains. They aren't related. They should not be discussed together," Qian said. China, with which North Korea does the large majority of its trade, has repeatedly said it strictly follows U.N. resolutions on North Korea and has denounced unilateral U.S. sanctions as unhelpful. "Pyongyang is determined to develop its nuclear and missile program and does not care about military threats from the U.S. and South Korea," state-run Global Times said on July 31. "How could Chinese sanctions change the situation?" said the paper, which is published by the ruling Communist Party's official People's Daily. China wants both balanced trade with the United States and lasting peace on the Korean peninsula, its official Xinhua news agency added in a commentary. "However, to realize these goals, Beijing needs a more cooperative partner in the White House, not one who piles blame on China for the United States' failures," it added. Nikki Haley, U.S. Ambassador to the United Nations, said in a statement China must decide if it is willing to back imposing stronger U.N. sanctions on North Korea over Friday night's long-range missile test, the North's second this month. Any new U.N. Security Council resolution "that does not significantly increase the international pressure on North Korea is of no value," Haley said, adding that Japan and South Korea also needed to do more. Japanese Prime Minister Abe Shinzo Abe spoke with Trump and agreed on the need for more action on North Korea just hours after the U.S. Ambassador to the United Nations said Washington is "done talking about North Korea". A White House statement after the phone call said the two leaders "agreed that North Korea poses a grave and growing direct threat to the United States, Japan, the Republic of Korea, and other countries near and far". It said Trump "reaffirmed our ironclad commitment" to defend Japan and South Korea from any attack, "using the full range of United States capabilities." Abe told reporters after his conversation with Trump that repeated efforts by the international community to find a peaceful solution to the North Korean issue had yet to bear fruit in the face of Pyongyang's unilateral "escalation". "International society, including Russia and China, need to take this seriously and increase pressure," Abe said. He said Japan and the United States would take steps towards concrete action but did not give details. Abe and Trump did not discuss military action against North Korea, nor what would constitute the crossing of a "red line" by Pyongyang, Deputy Chief Cabinet spokesman Koichi Hagiuda told reporters. (Ben Blanchard and Elias Glenn, “China Hits Back at Trump Criticism over North Korea,” Reuters, July 30, 2017)

7/31/17

Analysts examining video of North Korea’s July 29 launch of an intercontinental ballistic missile that appeared capable of reaching the West Coast of the United States say they saw evidence of a setback the North never mentioned: The mock warhead on the missile shattered into pieces during its fiery re-entry to earth. If the analysis is correct, it would mean that North Korea suffered a significant, but not decisive, setback. It suggests that the country, for all its success as it works toward its goal of putting American cities under threat, has not yet mastered the difficult aerodynamics of designing a warhead that can survive re-entry. News of the video analysis came as President Trump, asked about the launch for the first time, offered vague assurances that he was on top of the problem. “We’ll handle North Korea,” he said, heading into a cabinet meeting. “We’re going to be able to handle them. It will be handled. We handle everything.” The findings about the North’s difficulties with a re-entry vehicle came from Michael Elleman, a missile expert at the International Institute for Strategic Studies in London. He said the malfunction of the
warhead as it re-entered the earth’s atmosphere “casts doubt” on the North’s ability to shield a nuclear warhead from the blistering heat and vibrations as it heads to its target at the high speeds that intercontinental ballistic missiles typically achieve. In a news conference today, Elleman said North Korea would have to conduct a minimum of two or three more ICBM test flights to make sure its rocket designers have fixed the warhead problem. Still, he said, the nation will probably be able to develop a workable missile with a reliable warhead by early next year. That would put the country within the rough time period described in recent American intelligence analyses, which predicted that sometime in 2018 all the technologies needed by the North were likely to come together in a single weapon. Fixing the design flaw “might take them another six months,” Mr. Elleman told reporters on a conference call organized by 38 North at the Johns Hopkins University School of Advanced International Studies. “But the key is that they’ll have to do additional flight tests.” The need for more tests creates an opening for the Trump administration. Under President Barack Obama, North Korean missile tests were regularly subject to cyber and electronic attacks. Among its military options, the Trump administration could accelerate those attacks, but they appeared less effective over the past six months. The United States could also position more naval craft in international waters off the North Korean coast. That would give it the option of conducting pre-emptive attacks on missiles on their launch pads — a risky approach because it could incite a war — or trying to shoot down test missiles as they are rising through the atmosphere. The videotape of the warhead’s breakup came from the Japanese television station NHK. An affiliate in Muroran City, a port in Hokkaido, Japan’s northernmost large island, keeps a weather camera mounted on a roof. On Friday, in a stroke of luck, the camera was trained on the area of the sky where the mock warhead appeared to plunge back to earth, about 125 miles from the Japanese coast. The incoming mock warhead, Elleman said, should have shone brightly and continuously as it fell — like a shooting star streaking to Earth. But in this case, he said, the video shows the bright incoming projectile starting to shed into small radiant objects. Then, quite suddenly, it dims and disappears altogether. It should have continued to glow until it hit the ocean, he told reporters. “Most likely it broke up,” he said. How long it will take the North to fix the design, Elleman said, depends largely on “how much they learn from this particular test.” His six-month estimate, he said, assumes that the North’s engineers have the ability to correctly diagnose the technical problem and fix it. “It could be done in three months,” he said. “It may take six months. If they continue to fail, however, it could take a longer period of time. We just don’t know.” (David E. Sanger and William J. Broad, “Video Analysis Creates Doubts about the Success of North Korea’s Missile Test,” New York Times, August 1, 2017, p. A-10)

John Schilling: “Less than a month after their first successful ICBM test, North Korea has done it again. The missile tested on July 28 appears to be identical to the liquid-fueled KN-20 (Hwasong-14) missile launched on July 4. This missile, however, demonstrated substantially greater range—possibly sufficient to reach the east coast of the United States—but only with a substantially reduced payload. Second, possibly because of the reduced reentry vehicle (RV) weight, the RV appears to have disintegrated before reaching the ground, and thus the test may not have been completely successful. Third, this was the first time the North Koreans have conducted at launch night, suggesting an emphasis on demonstrating operational rather than experimental launch procedures. While Pyongyang may have an ICBM, the threat is currently limited to unsophisticated warheads against targets on the US west coast. North Korea will likely have to turn to an upgraded design to achieve their goal of a robust capability to retaliate against targets on the east coast, including Washington, for any attack on North Korea. While the KN-20 may have some deterrent value even in its current, unreliable form, it will likely take another year or two of work to achieve full operational capability. If the North pursues the objective of fielding a new solid-propellant ICBM, that will likely only be another few years beyond that. The combination of increased performance and a night launch, contrary to North Korea’s hopes, reveal the probable failure of this test. Rather than landing far out to sea, this missile entered the atmosphere within sight of Japan, and it did so in a clear night sky. Several cameras on the Japanese island of Hokkaido caught the incandescent trail of the reentry vehicle. As my colleague Michael Elleman notes, the trail flashes briefly and brightly as the missile descends for 6-8 km, and a second or so thereafter breaks up into at least two visible objects and a vapor trail. The initial flash could be due to the reentry vehicle passing close to a reflective cloud, or it could be a part of the heat shield
breaking off and vaporizing. Whatever the cause of the flash, the subsequent breakup is telling. We cannot be certain, but it seems unlikely that a warhead would have survived that experience. The missile was reported to have reached an altitude of over 3,700 km, remaining airborne for 47 minutes. That’s a substantially higher level of performance than what the missile displayed on its first launch. This means, if the missile had been launched on a maximum-range trajectory, it could have reached Chicago or possibly even New York City. North Korea has given us a clue as to how that happened, with a press release indicating that the number of engines has increased. The trajectory of the first KN-20 indicates that its upper stage was propelled by a set of two vernier engines from an old Soviet submarine-launched ballistic missile whose technology is known to have fallen into North Korean hands. This same propulsion system was used on North Korea’s successful Unha space launch vehicle, but doesn’t produce enough thrust for optimal performance with heavy nuclear warheads. There is room in the upper stage to add a second pair of vernier engines, and we suspect this was done. But this alone wouldn’t explain the performance observed from the second test. In order to reach a 3,700 km altitude, compared to 2,800 km in the first test, North Korea would probably have needed to reduce the missile’s payload from roughly 500 kg in the first test to 300-350 kg in the second. This may explain the failure. The first test was conducted with a conservative design, with all of the key elements of the missile’s design having been successfully demonstrated in other systems and with a heavy, robust reentry vehicle. The second test included a new upper-stage propulsion system and a much lighter reentry vehicle. The propulsion system worked, but that led to the lighter reentry vehicle hitting the atmosphere at a higher velocity than in the first tests, and that didn’t work so well. Based on those tests, and on performance data from other missiles whose technology has been incorporated into the KN-20, everything depends on the weight of the payload. 300 kg is almost certainly too small for a reentry vehicle that must carry one of North Korea’s nuclear warheads and survive reentry at ICBM speeds. If they can manage to squeeze a warhead and survivable reentry vehicle into a 400 kg package (a very low possibility), New York might barely be within range. For more realistic 500-600 kg warheads, the KN-20 would be limited to west coast targets. Interestingly, adding extra engines does little to improve long-range performance with the lightest warheads, where the extra thrust isn’t needed and the weight of the engines competes with the warhead. North Korea’s press report alluded to “heavy warheads,” and their chosen missile design supports that interpretation. If North Korea continues with the current design, their near-term objective will likely be to overcome this latest partial failure in order to field a missile capable of delivering nuclear warheads of reasonable weight to targets on the US west coast. They will presumably want to conduct another test combining the four-vernier engine upper stage and the heavy reentry vehicle to validate that configuration, after which, they may feel ready to go into production and training. And to do that, they may require more tests. The fact that last week’s test was conducted at night and from a site not normally used for missile testing may signal that they are getting a head start on the crew training part already, treating the launch as an operational exercise as well as an engineering test. If they fast-track this version of the missile, they may have a robust, reliable nuclear strike capability against US west coast targets sometime next year, and may have already fielded a few unreliable prototypes to provide minimal deterrence in the interim. The emphasis on heavy warheads suggests North Korea has plans to use any extra payload capability they can squeeze out of the design. One obvious possibility is a thermonuclear warhead. North Korea has never successfully tested such a device, and the sophisticated designs that allow the major nuclear powers to deliver hundreds of kilotons of yield from a package of only a few hundred kilograms weight are probably beyond Pyongyang’s reach for now. But there are ways for North Korea to incorporate a thermonuclear element to increase the yield of their current 10-20 kiloton fission warheads, and we expect they will seek to incorporate them in any ICBM design they field.
They will probably also seek to incorporate more advanced reentry vehicles, along with decoys and other penetration aids to defeat missile defenses. The successful July 4 test most likely used a simple blunt-body RV, but the payload shroud used on the KN-20 and the post-boost propulsion system demonstrated on the KN-17 (Hwasong-12) would both support a more advanced payload with a low-drag RV and set of decoys. These advances will not come quickly or easily to North Korea, but we should be looking for them perhaps five years down the road. While North Korea’s ambitions reach beyond the west coast to places like Washington, DC, if they want to accomplish that with this missile, they will have to change the design substantially. The extra engines on the upper stage currently aren’t enough; they will also need to stretch the propellant tanks.

Additionally, they will need to demonstrate a lightweight warhead capable of surviving the faster and hotter reentry of such a long-range missile. This missile’s design may not stretch that far without breaking, but North Korea may try anyway. If so, they probably won’t succeed this year or next. They may not try at all. Earlier this year, canisters representing solid-propellant ICBMs were paraded through the streets of Pyongyang. Those canisters were probably empty; North Korea has an ambitious solid-rocket development program but has so far only been able to build smaller medium-range missiles using solid propellant. But the greater mobility and responsiveness afforded by solid propellant makes it the clear choice for ICBMs as well. North Korea may consider the liquid-propellant KN-20 to be strictly an interim system to provide limited deterrence by threatening US west coast targets and to support technology development for advanced warheads and other systems to be incorporated in a new solid-propellant ICBM in perhaps 2025. The bottom line today is that North Korea has tested two versions of the KN-20 ICBM which seem to work, and two reentry vehicles, one of which probably didn’t work. Using the more conservative RV design, they can field a system that can threaten US west coast targets. At first, this threat will consist of a handful of unreliable prototype missiles, but as early as next year they could begin production and deployment of a proven, reliable design with trained crews. After that, they might be able to stretch the KN-20 design to reach Washington, DC, with a light warhead. Or they might use the system’s increased payload capability at short ranges to experiment with more advanced warheads and decoys, which in the longer term could be incorporated in a new solid-fuel ICBM.” (John Schilling, “What Next for the North Korea’s ICBM?” 38North, August 1, 2017) North Korea may not yet have mastered the re-entry technology necessary to deliver a payload aboard an intercontinental missile (ICBM), South Korea’s defense chief said today. “It’s too early to see [Friday’s launch] as a test of re-entry technology,” South Korean Minister of National
Defense Song Yong-moo told lawmakers during an emergency meeting of the National Assembly’s National Defense Committee. Re-entry technology, which allows a missile warhead to survive the heat and pressure sustained when reentering the Earth’s atmosphere, is a key technological threshold required in order to field a reliable ICBM force. Today’s emergency meeting of the National Defense Committee was held after Pyongyang launched a Hwasong-14 ICBM three nights ago. While South Korea’s Joint Chiefs of Staff (JCS) told media two days ago that the North test-launched “an advanced-type of ICBM” according to the range it flew, the minister cast doubt as to whether Pyongyang has a capacity to put a nuclear warhead on an ICBM.

“Even though the development of the intercontinental missile was completed, it’s difficult to judge whether the [technology] of mounting the nuclear [warhead] at the very last stage is complete or not.” The defense minister said the North appeared to focus on both speed and range during Friday’s test-firing. And despite it being the same type of missile as was tested on July 4, Song said it appeared from the second launch that the North increased the maximum range of the missiles’ engine. “[The South Korean military] confirmed and judged that [the North] increased the efficiency of the engine and reduced the payload of the warhead to 300kg,” Song said.

The US military has detected "highly unusual and unprecedented levels" of North Korean submarine activity and evidence of an "ejection test" in the days following Pyongyang's second intercontinental ballistic missile launch this month, a defense official told CNN. An ejection test examines a missile’s "cold-launch system," which uses high pressure steam to propel a missile out of the launch canister into the air before its engines ignite. That helps prevent flames and heat from the engine from damaging either the submarine, submersible barge or any nearby equipment used to launch the missile. Carried out on land at Sinpo Naval Shipyard, Sunday's ejection test is the third time this month — and fourth this year — that North Korea has conducted a trial of the missile component that is critical to developing submarine launch capabilities, according to the US defense official. (Zachary Cohen and Ryan Browne, “U.S. Detects ‘Highly Unusual’ North Korean Submarine Activity,” CNN, August 1, 2017)

KCNA: “The south Korean authorities recently revealed their true colors as confrontation maniacs through the "strategy on the north" of the "five-year program of state administration." They recklessly set "denuclearization of the north" until 2020 as the general orientation of the "north policy", although the DPRK declared that it can never talk about the inter-Korean relations with the "nuclear issue" as a precondition. This is absolutely unpardonable as it blocks the road for improved north-south relations, disregarding the principled stand of the DPRK on the "nuclear issue." The south Korean authorities "strategy on the north" has no essential difference from "denuclearization, opening and 3 000 dollars" and "confidence-building process on the Korean peninsula" touted by the Lee Myung Bak and Park Geun Hye groups of traitors, and it is more cunning and disgusting in sinister intention. In the "strategy" they called for the establishment of "human rights foundation", settlement of the issues of "POWs of south Korean army and south Korean abductees", support to the "defectors from the north" and promotion of the plan for the establishment of the "Center for Unification" openly showing the scheme for "unification through absorption" and confrontation of social systems. Turning blind eyes to the basic problems such as defusing of politico-military confrontation between the north and the south, they talked about "new economy guidance idea" and "unification of economy." This proves that the present south Korean authorities are interested in making "administrative achievements" and claptrap tactics. The "strategy on the north" after the "new Berlin declaration", which has already been denounced by Koreans, is an intolerable insult to the north and a declaration of the overall confrontation between compatriots. The north-south relations will never improve with the "nuclear issue" as a precondition. The powerful nuclear deterrence of the DPRK is the righteous option for self-defense to protect the dignity and destiny of the nation from the U.S. nuclear threat and blackmail and it is now guaranteeing peace and stability on the Korean peninsula. The south Korean authorities should not imprudently talk about "denuclearization of the north" but make efforts to scrap nuclear weapons of the U.S. which reduced south Korea to the
world's biggest arsenal of nukes. If they challenge the just demand of the north and mindset of south Koreans who took part in the candlelight actions, they would meet the miserable end of the predecessors.” (KCNA, “KCNA Commentary on S. Korea’s ‘Strategy on North,’” July 31, 2017)

President Donald Trump said that there will be war with North Korea if the regime continues to aim an intercontinental ballistic missile (ICBM) carrying a nuclear warhead at the United States. Sen. Lindsey Graham of South Carolina said on NBC’s Today show that President Trump told him in person, “There will be a war with North Korea over their missile program if they continue to try to hit America with an ICBM.” Graham continued, “If there’s going to be a war to stop them, it will be over there. If thousands die, they’re going to die over there, they’re not going to die here, and he’s told me that to my face.” A war scenario on the Korean Peninsula would put millions of lives in the region in danger and many defense experts, as well as U.S. government officials and congressmen, have warned against a military option. But while Graham acknowledged that “Japan, South Korea, China would all be in the cross hairs of a war if we started one with North Korea,” he pointed out that Trump would ultimately choose U.S. security over regional stability. “It’s inevitable unless North Korea changes,” Graham said of a war scenario, “because you’re making our president pick between regional stability and homeland security.” He indicated options are running out, adding, “They kicked the can down the road for 20 years - there’s no place else to kick it.” “When you’re the president of the United States, where does your allegiance lie? To the people of the United States,” said Graham. The senator pointed out that both the Chinese and North Koreans are “miscalculating” Trump, and urged Beijing to choose to pressure North Korea diplomatically or else face military action. “The only way that they [North Korea] are going to change is if there is a credible threat of military force on the table,” said Graham. “President Trump has said, ‘I will not allow them to get an ICBM with a nuclear weapon on top to hit America.’ They’re heading that way.” “He has told me that. I believe him,” the lawmaker said. “If I were China, I would believe him, too, and do something about it. You can stop North Korea, militarily or diplomatically.” Graham, a former Republican presidential candidate who dropped out of the 2016 race in December 2015, was vocally critical of Trump during his campaign. When reminded that defense experts have underscored that there is no good military option, Graham declared, “They’re wrong. There is a military option: To destroy North Korea’s program and North Korea itself.” Gen. Joseph Dunford, chairman of the Joint Chiefs of Staff, testified to a U.S. House Armed Services Committee in June that of some 25 million people in Seoul, 30,000 are Americans “who are within range of thousands of rockets, missiles and artillery pieces along the border.” Dunford said while he is confident the United States would be victorious in a war with North Korea, “We will see casualties unlike anything we’ve seen in 60 or 70 years,” referring to the Korean War of 1950-53. Defense Secretary Jim Mattis echoed a similar message during the same meeting. He had warned in an interview with CBS in May that military conflict with the North would probably be “the worst kind of fighting in most people’s lifetime.” He elaborated that “it would be a catastrophic war,” and urged diplomacy. When asked to verify if destroying North Korea is an option, as Graham indicated, Sarah Huckabee Sanders, the White House press secretary, said “The president has been very outspoken about the need to stop North Korea. We’ve been very focused on stopping the nuclear program, stopping the missiles, stopping the aggression.” She added, “That still continues to be the focus, and we’re keeping… all options on the table in order to do that.” But Sanders didn’t straight out deny Graham’s assertions about Trump’s statements. Washington is considering dispatching two U.S. aircraft carriers to the Korean Peninsula, according to Seoul government officials, in an apparent show of force following North Korea’s ICBM launches. A Blue House official, however, recommended focusing on Secretary Tillerson’s statements on North Korea, while adding on Graham’s remarks, “We are watching over this part. Our two countries’ leaders will have a chance to hold a phone conversation, so there will be various discussions back and forth.” (Sarah Kim, “Senator Warns of U.S. War with North Korea,” JoongAng Ilbo, August 3, 2017)

Secretary of State Rex Tillerson called for a dialogue with North Korea and acknowledged that U.S. relations with Russia have worsened during the Trump administration. [?] During wide-ranging comments at the State Department marking six months since his confirmation, Tillerson
told reporters that the United States does not aim to depose the government in Pyongyang or use military force. “We do not seek a regime change, we do not seek a collapse of the regime, we do not seek an accelerated reunification of the peninsula, we do not seek an excuse to send our military north of the 38th Parallel,” he said. “We are trying to convey to the North Koreans: ‘We are not your enemy, we are not your threat. But you are presenting an unacceptable threat to us, and we have to respond.’ ” Tillerson added that the United States hopes that “at some point,” North Korea will understand and sit down for a dialogue. The secretary of state said the administration has been attempting to exert “peaceful pressure” on North Korea, “because the options available to us are limited, particularly if we think we are operating under a short period of time.” Tillerson talked to reporters during a surprise appearance in the briefing room, his first since becoming secretary six months ago. He expressed concern about Iran’s regional ambitions, unrest in Venezuela and war in Ukraine. He also said he has a “good” relationship with President Trump, who calls him daily, including late at night and on weekends, “when something comes to his head.” (Carol Morello and Anne Gearan, “Tillerson Seeks Talks with North Korea,” Washington Post, August 2, 2017, p. A-5) In the Trump administration’s first serious attempt at a diplomatic opening to North Korea, Secretary of State Rex W. Tillerson has offered to open negotiations with Pyongyang by assuring “the security they seek” and a new chance at economic prosperity if the North surrenders its nuclear weapons. Tillerson’s comments came just hours before the United States tested an unarmed Minuteman III intercontinental ballistic missile, sending it 4,200 miles to a target in the Marshall Islands. The Pentagon said the test was not intended as a response to the North’s launch on July 28 of a missile that appeared capable of reaching Los Angeles and beyond. But military officials said the test demonstrated that the American nuclear arsenal was ready “to deter, detect and defend against attacks on the United States and its allies.” The combination of Tillerson’s outreach and the missile test laid bare an internal administration debate over what course to take — and whether a combination of diplomatic outreach and maximal military pressure would change North Korea’s current course. Most intelligence assessments have concluded that the North has no incentive to begin negotiations until it demonstrates, even more conclusively than it has in recent weeks, that its nuclear weapon could reach the United States mainland. The missile test was the latest demonstration of American power to North Korea. Over the weekend, the United States flew two strategic bombers over the Korean Peninsula, alongside fighter jets from South Korean and Japan. And for years, with mixed results, the United States has targeted the North’s missile program with cyberattacks. Trump administration officials said Tillerson was increasingly concerned that the recent North Korean advances, especially its missiles’ range, were driving the United States to a binary choice: Accept a North with nuclear weapons that can target American cities, or head toward a military confrontation. At a rare appearance in front of the State Department press corps today, Tillerson went out of his way to offer assurances to the government of Kim Jong-un in Pyongyang. Others in the Trump administration have declined to publicly say as much, and on the night of August 2, The Wall Street Journal reported that Vice President Mike Pence told journalists traveling with him on Air Force Two that the United States would not hold direct talks with North Korea. It was not clear how his comments squared with those of Tillerson a day earlier. Tillerson’s new position is that negotiations should begin without conditions, as long as they are ultimately headed toward denuclearization. “We don’t think having a dialogue where the North Koreans come to the table assuming they’re going to maintain their nuclear weapons is productive,” he said. “So that’s really what the objective that we are about is.” Outside experts had their doubts about whether the North would take up Tillerson’s offer. Christopher R. Hill, a former American ambassador to Seoul who led Bush-era negotiations on ending North Korea’s nuclear program, said on July 29 that Pyongyang believed the United States was cornered into accepting it as a nuclear weapons state. “We are left in a situation where they believe we will ultimately acquiesce,” he said at the KentPresents ideas festival in Kent, Conn. At the same conference, Kathleen Stephens, another former American ambassador to Seoul, said in the case of China, India and Pakistan, “we have never succeeded in stopping a nuclear aspirant country.” She also said the North’s drive for a weapon was based on a bet that the United States could not stop it. But in making the offer to talk, Tillerson may be accomplishing several goals at once. If the North rejects the proposal, Washington can reiterate its good-faith effort to the Chinese and a new South Korean government that has proposed its own negotiations with North Korea — and then step up military
and financial pressure. If the North insists, as it has in the past, that it must first be recognized as a nuclear weapons power, the United States can make the case that the ultimate objective — a denuclearized Korean Peninsula — cannot be achieved diplomatically. Tillerson’s offer also nods toward other diplomatic proposals. China has suggested a “freeze-for-freeze” deal, in which the United States agrees to halt all military exercises with South Korea — something Hill noted would “hollow out the alliance” — in return for North Korea’s stopping its tests. Both sides have rejected that idea, but it creates an opening. “If we can get past the impasse of the North Koreans saying, ‘We will only come to the table if you recognize us as a nuclear state,’ and the U.S. saying, ‘We can only enter into talks if you commit to denuclearization,’ there’s a diplomatic space,” said Robert S. Litwak, director of security studies at the Woodrow Wilson International Center for Scholars in Washington, and author of “Preventing North Korea’s Nuclear Breakout.” Litwak advocates a freeze deal that he said would “at least stop us from having to deal with a North Korea with 100 nuclear weapons, instead of 20 or so” — the current estimate of the size of its arsenal. But if a freeze is all that is achieved, North Korea essentially becomes like Pakistan: a nuclear power that the United States does not formally recognize, but has to deal with as a real weapons state. (David E. Sanger, “U.S. Opens Door to Talks on North Korean Threat,” New York Times, August 3, 2017, p. A-9)

Tillerson: “One of the first threats we were confronted with upon entering office is North Korea, and it was the first policy area that we felt an urgency to deal with. And I think, as many of you have watched over the last several months, that threat has materialized in the ways that we expected it would. And that’s why early on we identified it as a very urgent matter, and the North Koreans have certainly proven the urgency of that to us. We initiated a sustained and continued intensified campaign on what I like to call peaceful pressure, because the options available to us, I think as all of you well understand, are limited, and particularly if we think we are operating under a short period of time. So we felt the appropriate thing to do first was to seek peaceful pressure on the regime in North Korea to have them develop a willingness to sit and talk with us and others but with an understanding that a condition of those talks is there is no future where North Korea holds nuclear weapons or the ability to deliver those nuclear weapons to anyone in the region much less to the homeland. In doing so, we’ve sought to partner with China. China does account for 90 percent of economic activity with North Korea. The Chinese have been very clear with us that we share the same objective, a denuclearized Korean Peninsula. They do not see it in their interest for North Korea to have nuclear weapons, just as we do not see it in anyone’s interest. China has ways that they can put pressure on and influence the North Korean regime because of this significant economic relationship that no one else has. We’ve been very clear with the Chinese we certainly don’t blame the Chinese for the situation in North Korea. Only the North Koreans are to blame for this situation. But we do believe China has a special and unique relationship because of this significant economic activity to influence the North Korean regime in ways that no one else can. And that’s why we continue to call upon them to use that influence with North Korea to create the conditions where we can have a productive dialogue. We don’t think having a dialogue where the North Koreans come to the table assuming they’re going to maintain their nuclear weapons is productive. So that’s really what the objective that we are about is. We have reaffirmed our position towards North Korea, that what we are doing, we do not seek a regime change; we do not seek the collapse of the regime; we do not seek an accelerated reunification of the peninsula; we do not seek an excuse to send our military north of the 38th parallel. And we’re trying to convey to the North Koreans we are not your enemy, we are not your threat, but you are presenting an unacceptable threat to us, and we have to respond. And we hope that at some point, they will begin to understand that and that we would like to sit and have a dialogue with them about the future that will give them the security they seek and the future economic prosperity for North Korea, but that will then promote economic prosperity throughout Northeast Asia. This is going to be a continued effort to put ever greater pressure on the North Korean regime because our other options, obviously, are not particularly attractive. Now, in saying that, I want to — I want to acknowledge a couple of people, and I’m going to give some credit to people as I go through this. These first six months, we’ve been carrying out this activity, as you know, with largely people in acting assistant secretary positions, using our ambassadors, the strength of the
organization, and I’m quite proud of what we’ve accomplished. In dealing with North Korea, Acting Assistant Secretary Susan Thornton and Ambassador Joseph Yun have been stellar in helping us develop these policies and carry them out. Susan Thornton also has been key to our relationship with China, and I think it’s important that everyone understand that North Korea does not define the relationship with China. …So these are very in-depth conversations and discussions we have with the Chinese, and we test this relationship through things like the situation in North Korea. Can we work together to address this global threat where we have a common objective? And where we have differences – in the South China Sea, and we have some trading differences that need to be addressed – can we work through those differences in a way without it leading to open conflict and find the solutions that are necessary to serve us both? Out of Mar-a-Lago came, I think, some very important commitments to one another. We established four very high-level dialogues. We had many, many dialogues with the Chinese in the past – over 20 dialogues – but these were at a level that we felt were insufficient to deal with this question of our relationship, so the Chinese agreed to designate very high-level individuals so we have four dialogues. The Diplomatic and Security Dialogue is led by myself and Secretary Mattis with our counterparts in China. We have had two meetings of the Diplomatic and Security Dialogue. The Economic and Trade Dialogue has met twice. That’s led by Secretary Mnuchin and Secretary Ross. We have two other dialogues that are yet to meet: law enforcement and cyber security; and then social or people-to-people. And so these are really to help us explore the tough issues that exist for the two largest economies in the world and two significant military powers, as to how do we want to deal with these issues, and they’ve served – I think they’ve served us well to this point, and they’ve been quite helpful in us advancing this understanding of one another’s interests, so we will continue those. And again, I want to thank Assistant Secretary Susan Thornton for her help in advancing these. …” (DoS, Secretary of State Rex W. Tillerson, Remarks at a Press Availability, Washington, August 1, 2017)

The operational test launch of a Cold War-era Minuteman III ICBM from Vandenberg Air Force Base, California took place today. "The launch is not in response to any real world events," said Navy Capt. Brooke DeWalt. "The purpose of the ICBM test launch program is to validate and verify the effectiveness, readiness, and accuracy of the weapon system," according to a release from Air Force Global Strike Command. The launch is a way to test the reliability of the missiles, as well as the proficiency of the crews who are trained to launch nuclear weapons within minutes of receiving a validated president order. The unarmed Minuteman III will be equipped with a single test reentry vehicle, which contains a telemetry package that will provide data for evaluating the launch. The last test of a Minuteman was May 3. (Jamie McIntyre, “U.S. Says Planned ICBM Launch Not Related to North Korea,” Washington Examiner, August 1, 2017)

The U.S. Defense Department said yesterday that it is ready to install four more Terminal High-Altitude Area Defense battery launchers in South Korea. Pentagon spokesman Jeff Davis told reporters in Washington, "We made an alliance decision with the [South Korean] government last year to deploy THAAD to the Korean Peninsula as a defensive measure. We have gotten that to an initial missile defense ability just within the past few months. We are certainly ready to bring additional pieces in as quickly as we can." The U.S. brought six THAAD interceptor launchers to South Korea in March but set up only two in Seongju, North Gyeongsang Province while the other four remain in storage. "A lot of people question the need for THAAD; they question the requirement for us," Davis said. "But the North Koreans are being far better spokespersons on that than we're capable of. They're making the case for us rather effectively." A Defense Ministry official here said today, "The deployment of additional launchers will be handled through a transparent process. That entails convincing local residents and notifying them beforehand of the deployment." He added, "That means we will not deploy them by surprise in the middle of the night as the first two THAAD launchers were in Seongju in April." A Cheong Wa Dae official said, "We will convince local residents and then deploy the THAAD launchers according to the agreement between the defense ministries of both countries." (Kim Jin-myung, “U.S. Ready to Set up 4 More THAAD Launchers,” Chosun Ilbo, August 2, 2017)
American humanitarian agencies that work in North Korea and Americans with relatives there are expressing grave concerns about the new restrictions on U.S. citizens traveling to the country. The restrictions, due to be announced in the Federal Register Tuesday, will require all American citizens who hope to travel to North Korea to apply to the State Department for a passport with a special validation. This, some say, will mean that previously private and non-political work — sometimes already viewed with suspicion by the regime in Pyongyang — will now have a literal U.S. government seal of approval. “When the North Koreans look at our delegation, they cannot assume that we got permission from anybody,” said Stephen Linton, an American who heads the Eugene Bell Foundation, a non-governmental organization that treats thousands of people with multi-drug-resistant tuberculosis inside North Korea. His is one of about 25 American humanitarian groups that are active in North Korea. The Eugene Bell Foundation administers medicines to TB patients who have proven resistant to previous rounds of treatment, and the treatment must follow a strict schedule in order to be effective. “As soon as you have a licensing system, the immediate question is why did you get permission?” said Linton, who has been working inside North Korea since 1979. “What was in it for the U.S. government to issue you the permission to come here? And there’s nobody in North Korea that I’ve ever met who would believe that the U.S. government would issue that permission purely for humanitarian reasons.” The new “geographic travel restriction” will come into effect in 30 days’ time. Every year, about 1,000 Americans had been going to North Korea on organized tours, but tourism will be outright banned for U.S. citizens from next month. This new rule is much stricter than the policy the Trump administration has implemented towards Cuba, which Americans are still allowed to visit if they travel with a licensed tour company under U.S. jurisdiction. Independent travel is still allowed for Americans to visit their family members in Cuba and for religious activities and humanitarian projects. Just four categories of Americans will be allowed the special endorsed passports: journalists, Red Cross representatives on official missions, humanitarian workers and anyone else whose trip is “in the national interest.” Those who are approved will be issued “a limited validity U.S. passport permitting one-time travel to North Korea,” according to the State Department. Humanitarian groups have been appealing to the State Department not to make the new rule bureaucratically burdensome. Some are asking for a system where blanket approval can be given to their organization, rather than every person having to get approval for every trip. “U.S. humanitarian workers have been providing relief to the poorest and most deprived of North Korea’s population for over 20 years,” said Keith Luse, executive director of the National Committee on North Korea, a Washington-based NGO that promotes cooperation between the United States and North Korea. “A majority of them have built meaningful relationships with North Koreans at the local level and not been confronted by the authorities. As travel ban details are finalized, we hope the State Department will consider their experience,” Luse said. Amid years of failed nuclear talks and an enduring reluctance to engage with North Korea, private sector activities like humanitarian work have been “the only positive aspect” in the relationship between the United States and North Korea, said Linton of the Eugene Bell Foundation. “Make no mistake: if the American private sector is now banned from travel, it will be another major step toward diminishing of U.S. influence in East Asia,” Linton said. “Asians are well aware of this downward trend and are already thinking about how to resolve challenges related to North Korea should the U.S. government and its private sector be unwilling or unable to play a major role in the region.” The new rules will particularly affect Korean Americans. Between 200 and 500 Korean Americans travel to North Korea each year, a significant proportion of them for reunions with family members from whom they were separated during the Korean War. Many of them travel to North Korea as tourists and they would not appear to qualify for travel permission under the new restrictions. There are also as many as 100 Korean Americans living or working in North Korea at any given time. Most are associated with Kim Il Sung University or the private American-run Pyongyang University of Science and Technology. Two of the Americans detained in North Korea earlier this year, Tony Kim and Kim Sang-dok, were affiliated with the Pyongyang University of Science and Technology, which was started by Korean American Christians. The third detainee, Kim Dong-chul, was working in the Rajin-Sonbong Special Economic Zone in the northeast of the country near the Chinese border and has now been held for almost two years. Efforts to free the men are continuing. But there are also some Americans who live in North Korea permanently in the Rajin-Sonbong zone. “To the extent that the permanent residents need to travel back and forth
to the U.S. from time to time, the travel ban would adversely impact them,” said Sam Yoon, executive director of the Council of Korean Americans. There are about 1.8 million Korean Americans in the United States, according to population estimates from the Census Bureau. “One could argue that the travel ban – especially for families – would in fact hurt them the most,” Yoon said. (Anna Fifield, “U.S. Rules on North Korea Trips Fuel Worry,” Washington Post, August 2, 2017, p. A-8)

A total of 800 tons of flour donated by Russia arrived at a North Korean port this week to help meet the North's food shortages, Radio Free Asia reported. Citing the Facebook page of the Russian Embassy in Pyongyang, RFA said a Russian ship carrying the wheat flour, provided as humanitarian aid through the World Food Program, docked yesterday in the North's northeastern port city of Chongjin. The donation will be used to make dietary supplements for the North's vulnerable people, including children in the Kangwon and Ryanggang provinces, lactating mothers and pregnant women, and baby biscuits. The arrival of Russian-donated flour came on the heels of 2,400 tons of flour being delivered to the North as part of Russia's implementation of the WFP project to help the North ease its food shortages. (Yonhap, “Russia-Donated Grain Arrives in Food-Short N. Korea,” Korea Times, August 1, 2017)

Washington is seeking talks on how North Korea can be suspended from Asia's biggest security forum as part of a broader effort to isolate Pyongyang diplomatically and force it to end its missile tests and abandon its nuclear weapons program, U.S. and Philippine officials said. Acting Assistant Secretary for East Asian and Pacific Affairs Susan Thornton told reporters in Washington that North Korea's actions have violated the conflict-prevention aims of the ASEAN Regional Forum, which groups the United States and North Korea with 25 other countries. The Philippines is hosting an annual ministerial meeting of the 27-nation ARF which will be attended by U.S. Secretary of State Rex Tillerson and North Korean Foreign Minister Ri Yong Ho. Tillerson has no plans to meet Ri on the sidelines of the meeting, Thornton said. With the U.S., Japan and South Korea expected to push for stronger actions against the North, a verbal showdown looms at the forum. "What we have been sort of looking at is having a serious discussion of what it would take for a member to be suspended from this organization that is dedicated to conflict prevention and preventive diplomacy," Thornton said. "I think we're going to continue to have that conversation as it regards North Korea." She said, "What we've been doing is going around talking to partners about what more could they do to contribute to that increasing pressure on the regime and the increasing sort of diplomatic isolation of the regime.” Two Filipino officials told The Associated Press that U.S. officials have discussed such a prospect with Philippine officials, who told them it may be better to keep North Korea in the forum, where it can be persuaded to stop provocations through dialogue. A North Korean delegation led by its vice foreign minister flew to Manila last week and told Philippine officials of their hope for a "favorable environment" when Pyongyang's top diplomat attends the ARF meetings in Manila, said the officials, who spoke to AP on condition of anonymity because they were not authorized to discuss the matter publicly. In response, the Philippine officials told the North Koreans they could not guarantee that because other member states, like South Korea, Japan and the United States, would definitely raise alarm over Pyongyang's continued missile tests. They asked the delegation why North Korea staged an intercontinental ballistic missile test last week, days before the ARF meeting, and then expected not to be confronted by other nations over it, the officials said. While it may be too late for Pyongyang to be barred from the ARF meeting this year, Thornton said Washington would continue to “push the organization to think about what kinds of suspension measures or requirements or stipulations might be included in the future.” (Associated Press, “U.S. Moves to Have North Korea Barred from Asian Forum,” August 2, 2017)

DPRK FoMin spokesman’s “answer to a question raised by the KCNA on August 3 as regards the fact that the U.S. has rigged up another heinous sanctions law to suffocate the DPRK: On August 2, U.S. President Trump signed the "Countering America's Adversaries through Sanctions Act" which recently passed the U.S. Congress. Thus, additional sanctions against the DPRK, Russia and Iran were formally adopted as the law. The U.S. adoption of sanctions law against the DPRK
is no more than last-ditch efforts by those who are terrified at the series of measures taken by the DPRK in rapid succession to develop a sophisticated nuclear force. The act of the U.S. which is so fond of rigging up sanctions law and brandishing the sanctions club against other sovereign states is no better than that of a hooligan which cannot be allowed by international law as well. The adoption of another unilateral sanctions law against sovereign states by the U.S. is a criminal conduct whereby it tried to apply its federal law to international relations which constitutes a direct challenge to the UN Charter and international law. That is why the DPRK strongly condemns and rejects the so-called unilateral sanctions by the U.S. and all other countries in the world also need to seriously ponder over the outrageous and unlawful act of the U.S. It is an undeniable reality that the DPRK has manufactured atomic bomb and hydrogen bomb, and even ICBM despite harsh sanctions continuing for more than half a century. It is really pathetic to see the lawmakers of the U.S. still running foolish and impudent failing to grasp the key to the DPRK's success. The sanctions campaign by the U.S. might work on the other countries, but never with the DPRK. As the respected Supreme Leader with far-sighted wisdom, outstanding leadership art and incomparable strength of self and people around the leader and the great might of self-development, the DPRK scores only victory one after another. The sanctions by the U.S. has only worked to redouble the indomitable spirit of our army and people closely rallied around the leader and their unfathomable strength of self-reliance and self-development and increase the DPRK's defense capability. The recent second test-launch of ICBM Hwasong-14 by the DPRK was meant to send a stern warning to the U.S. which is going reckless and frantic, having suffered only crushing defeats in the all-out showdown with the DPRK. The U.S. trumpeting about war and threat to impose extreme sanctions on the DPRK only increase the latter's vigilance and stamina, and provides further justification for its access to nukes. The anachronistic daydream of the U.S. politicians of damaging by means of sanctions the overall national power and strategic prestige of the DPRK, which have been markedly boosted, is being subject to humiliation within the U.S. as well. **The U.S. sanctions provide further justification for the DPRK's measures to intensify the development of its nuclear force.** The countries abiding by this sanctions regime, instead of criticizing it, can't be seen otherwise than the ones fueling the tensions on the Korean peninsula. The U.S. had better deliberate on the ways to ensure its home security rather than wasting its energy on the hopeless sanctions racket against the DPRK.” (KCNA, “DPRK Foreign Ministry Spokesman Slashes at U.S. Adoption of Independent Sanctions Law,” August 3, 2017)
manners with the strategic nuclear force that it had so far shown to the world.” (KCNA, “DPRK FM Spokesman Denounces U.S. Reckless Move,” August 3, 2017)

The top national security officials in South Korea, the US and Japan expressed their agreement that dialogue with North Korea is possible under the right conditions and that the international community, under the lead of the three countries, should keep working to apply sanctions and pressure on the North to bring it to the negotiating table. “National Security Advisor Chung Eui-yong held a video conference with White House National Security Advisor Herbert McMaster and Japanese National Security Council Secretary-General Yachi Shotaro and discussed ways for the three countries to respond to North Korea’s nuclear and missile provocations,” said Blue House Senior Secretary for Public Communication Yun Young-chan this evening. This was the first time that the top national security advisors to the leaders of the three countries discussed urgent security issues together over video conference. During the video conference, which began at 9 pm and lasted for one hour and 10 minutes, the three security officials “reconfirmed that North Korea’s missile launches represent a serious challenge and threat not only to the Korean Peninsula and Northeast Asia but also to the peace and stability of the entire world and agreed to strengthen pressure as much as possible through UN Security Council resolutions to deter additional North Korean provocations,” Yun Young-chan said. During the meeting, Chung reportedly emphasized “the need to make clear that the ultimate goal of maximum pressure and sanctions is to bring North Korea to the negotiating table and make sure that tensions on the Korean Peninsula are not raised needlessly.” “The security officials also agreed that the three countries would continue working together closely in the future on North Korean weapons and missile issues,” Yun added. The focus on close trilateral cooperation is an apparent attempt to downplay the controversy over “Korea passing,” or the claim that South Korea is being excluded from the discussion of Korean Peninsula issues amid speculation about a military strike or a grand bargain between the US and China to resolve the North Korean nuclear and missile issue following North Korean missile provocations. (Lee Jung-se, “S. Korean, U.S., and Japanese Top Security Officials Hold First Videoconference on North Korea,” Hankyore, August 5, 2017)

The United States hit North Korea at the United Nations with a proposed set of unprecedented economic penalties, punctuated by a one-third cut in its export revenue, to punish the isolated country for its missile and nuclear tests. The penalties were contained in a draft Security Council resolution that American diplomats have been working on since North Korea launched its first successful intercontinental ballistic missile a month ago, demonstrating an ability to attack the United States homeland. The U.S.-drafted resolution, which was circulated today to all 15 Security Council members, is scheduled to be put to a vote tomorrow afternoon. It was circulated after American diplomats held extensive discussions about the language with China and Russia, suggesting that the two will back the measure or at least not block it with their veto power. The draft resolution, which needs at least nine yes votes for approval, would be the most punitive of any resolution over the past 11 years aimed at pressuring North Korea into abandoning its nuclear arms ambitions. A Security Council diplomat told reporters that the draft resolution’s provisions banning North Korea’s exports of coal, iron, iron ore, lead, lead ore and seafood would together lop roughly $1 billion from the country’s $3 billion in annual export revenue. The diplomat said it was the first time that entire sectors of North Korea’s export economy would be banned. He called it “the most impactful and expansive set of sanctions to date.” The draft resolution, which “condemns in the strongest terms” the July 4 and July 28 missile tests, would also place new limits on North Korea’s joint ventures and Foreign Trade Bank, and prohibit the country from sending more workers to overseas jobs — another important source of revenue for the impoverished nation of 25 million people. Nonetheless, the draft resolution did not go nearly as far as what the American ambassador, Nikki R. Haley, had demanded after the July 4 ballistic missile test. Haley called for cutoffs of North Korea’s access to foreign money and oil for its military. Those steps were not taken. Whether the resolution’s penalties would have much effect on North Korea’s actions is a matter of debate. Despite the country’s longstanding economic isolation, it has repeatedly defied Western-led efforts to change its behavior through sanctions. “I don’t think this is something that will bring North Korea to its knees,” said Jae H. Ku, the director of the U.S.-
Korea Institute at the Johns Hopkins School of Advanced International Studies in Washington. “This might be the gradual wringing of the neck of North Korea, but we’ve been down this road many times,” he said. “North Korea has always been able to find loopholes.” American intelligence assessments have generally concluded that the North Korean leader has no incentive to negotiate with the United States until his country emphatically shows that it could arm a missile with a nuclear weapon that could reach the American mainland. (Rick Gladstone, “U.N. Action Could Cost North Korea $1 Billion in Exports,” New York Times, August 5, 2017, p. A-7)

The United Nations Security Council unanimously imposed new sanctions on North Korea that could slash by a third the Asian state's $3 billion annual export revenue over its two ICBM tests in July. The U.S.-drafted resolution bans North Korean exports of coal, iron, iron ore, lead, lead ore and seafood. It also prohibits countries from increasing the current numbers of North Korean laborers working abroad, bans new joint ventures with North Korea and any new investment in current joint ventures. "We should not fool ourselves into thinking we have solved the problem. Not even close. The North Korean threat has not left us, it is rapidly growing more dangerous," U.S. Ambassador to the United Nations Nikki Haley told the council. "Further action is required. The United States is taking and will continue to take prudent defensive measures to protect ourselves and our allies," she said. Washington would continue annual joint military exercises with South Korea, Haley said. North Korea has accused the United States and South Korea of escalating tensions by conducting military drills. China and Russia slammed U.S. deployment of the THAAD anti-missile defense system in South Korea. China's U.N. Ambassador Liu Jieyi called for a halt to the deployment and for any equipment in place to be dismantled. Liu also urged North Korea to "cease taking actions that might further escalate tensions." President Donald Trump hailed the vote in a Twitter message on this evening. "The United Nations Security Council just voted 15-0 to sanction North Korea. China and Russia voted with us. Very big financial impact!" Trump wrote. Trump "appreciates China's and Russia's cooperation in securing passage" of the resolution, the White House said in a later statement. The president "will continue to work with allies and partners to increase diplomatic and economic pressure on North Korea to end its threatening and destabilizing behavior," it said. Russia's U.N. Ambassador Vassily Nebenzia said he hoped recent remarks by U.S. Secretary of State Rex Tillerson "were sincere - that the U.S. is not seeking to dismantle the existing situation or to forcibly unite the peninsula or to militarily intervene in the country." The United States negotiated with China for a month on the resolution, then expanded negotiations to the full council yesterday. "We had tough negotiations this week," Haley told reporters. "I think that the Chinese realized that the United States was going to push, but they responded and we appreciate how they cooperated with us during these negotiations." Liu, asked about U.S. negotiating pressure, said China has been consistent on trying to achieve denuclearization, peace and stability on the Korean Peninsula and "to re-launch negotiations to achieve this end." He told reporters China was "opposed to any unilateral sanctions outside the agreed framework set by the U.N. Security Council resolutions." It had been unclear whether strained U.S.-Russia relations would hamper negotiations on North Korean sanctions. "We are not hostages to our relations when we have to work together on issues which are far more important," Russia's Nebenzia told Reuters. The new U.N. resolution adds nine individuals and four entities to the U.N. blacklist, including North Korea's primary foreign exchange bank, subjecting them to a global asset freeze and travel ban. "I would think China and Russia signed on the sanctions hoping that they would force North Korea back to the negotiating table," said Thomas Byrne, president of the New York-based Korea Society. "However, North Korea will try to evade the new sanctions." The new resolution completely bans North Korean exports of coal. In November, the Security Council capped the North's coal exports at $400 million annually. China, its largest buyer, halted imports in February. A U.N. diplomat said North Korea had been expected to earn an estimated $251 million from iron and iron ore in 2017, $113 million from lead and lead ore, and $295 million from seafood. The diplomat said it was difficult to estimate how much North Korea was earning from sending workers abroad. A United Nations human rights investigator said in 2015 that North Korea had forced more than 50,000 people to work abroad, mainly in Russia and China, earning between $1.2 billion and $2.3 billion a year for the government. Joseph DeThomas, a former State Department official who worked as an adviser on Iran sanctions and on previous rounds of North Korea sanctions, said freezing foreign labor would be difficult to enforce.
"Overall I doubt that $1 billion number. I doubt it will hit that hard in terms of economic damage," he said. "You cannot expect North Korea to buckle for anything less than the sanctions imposed on Iraq in 1990." These sanctions, he said, remain "a very long way" from there. (Michelle Nichols, “United Nations Bans Key North Korea Exports over Missile Tests,” Reuters, August 5, 2017) Both Beijing and Moscow, in casting their votes for the new sanctions, said they appreciated statements by Secretary of State Rex Tillerson last week that the United States does not seek North Korea’s collapse, replacement of its government or “accelerated reunification” of the Korean Peninsula, and has no intention of sending troops there. “Our hope is that the United States will translate these ‘four no’s’ into a firm policy,” Liu Jieyi, China’s U.N. ambassador, told the council. In addition to reducing U.S. military exercises in the region, he repeated China’s objection to deployment of sophisticated U.S. antimissile systems, known as THAAD, in South Korea. “THAAD will not bring a solution,” he said. “What it will do is to seriously undermine the strategic balance of the region.” China also called for the resumption of talks among North Korea, regional powers and the United States. In his August 1 statement, Tillerson said Washington was interested in a “productive dialogue” but only on the basis of Pyongyang’s acceptance of nuclear disarmament. “We don’t think having a dialogue where the North Koreans come to the table assuming they’re going to maintain their nuclear weapons is productive,” he said. In addition to banning exports, the resolution also prohibits all countries from increasing the number of North Korean laborers they employ, prohibits any new joint ventures and commercial agreements with North Korea, and forbids increased investment in existing ventures. It also adopts new measures to strengthen previous measures and improve sanctions enforcement. The goal is to prevent North Korea’s access to hard currency, which Haley and other delegates at the council session said are not used for the welfare of the North Korean people. The United States had initially hoped to ban oil exports and additional banking and commercial penalties, which were opposed by China and Russia. (Karen DeYoung, “U.N. Imposes Export Sanctions on North Korea,” Washington Post, August 6, 2007, p. A-7) The Security Council voted for the third time in two years to block countries from buying North Korean coal, the country’s primary export, in a move intended to choke off funding from Kim Jong Un’s weapons programs. The new ban plugs a loophole that allowed North Korea to sell coal to China under the guise of “humanitarian” trade, even though much of North Korea’s coal trade has been devoted to weapons development, not humanitarian purposes, according to recent U.S. court filings. The humanitarian loophole was large enough that after the first such U.N. ban in March 2016, Chinese companies actually imported more North Korean coal. Documents from a recently unsealed U.S. court filing, combined with another federal case, suggest that much of the money China has paid to North Korea for coal over the years went toward the country’s weapons and military efforts. The coal trade cited in the court documents, which has accounted for as much as a third of North Korean exports, helps explain how North Korea continued to develop its weapons programs despite being impoverished and under trade sanctions. The connections to the military also undermine Chinese claims that their imports were benefiting North Korean civilians. “We considered that to be a very narrow [humanitarian] exception, but it soon became clear that not all others shared our view,” a State Department spokesperson said before the vote. In the most recent court filing, unsealed last month, U.S. government attorneys were granted a seizure warrant against the largest Chinese importer of North Korean coal and four related front companies after presenting evidence that the Chinese company’s transactions with North Korea were “ultimately benefiting sanctioned North Korean end users, including North Korea military and North Korea weapons programs.” The documents cite a defector, deemed “reliable,” who said that the vast majority of the revenue from the country’s coal exports go toward the military, nuclear missiles and weapons programs. Those disclosures followed a court case filed in September in which federal attorneys cited a spreadsheet showing a major Chinese coal importer making purchases from various North Korean government agencies. The Chinese importer was also purchasing from a North Korean company controlled by a secretive government branch believed to be conducting illicit activities and slush funds for political leaders. “What these cases expose is that calling [China’s] coal business with North Korea ‘humanitarian’ is a cynical lie,” said Joshua Stanton, who runs the site One Free Korea and advises House and Senate staff on North Korea sanctions law. “There is no such thing as truly private industry in North Korea.” Asked last week about the coal imports, a spokesperson for the Chinese embassy said in a statement that “China has been comprehensively and accurately
implementing the UN Security Council resolutions.” What’s undisputed is the importance of coal exports to the North Korean economy. From 2010 to 2015, coal shipments accounted for about a third of North Korea’s total export revenue, according to figures cited by the Congressional Research Service. The coal exports, which generated more than $1 billion in annual revenue, were mainly purchased by Chinese companies. While China says its recent coal purchases comply with U.N. rules and benefit North Korean civilians, U.S. officials have reported that at least some of the coal trade is directly profiting the North Korean military. The Treasury Department last year, for example, said that a “significant share” of the money for North Korea’s nuclear and ballistic missile program was coming from mining operations that often use “workers in slave-like conditions.” Those natural resources, including coal, were sold abroad. Some North Korean exporters, the Treasury Department said at the time, “may” be working on behalf of North Korean government or military agencies. The more recent court filings by U.S. officials assert conclusive evidence of the connections between the North Korean exports and the military, citing business records, and give a better sense of the extent of the magnitude of the trade’s contribution to the military. “Kim Jong Un puts over 95 percent of North Korea’s foreign currency earnings generated from coal exports toward the advancement of … North Korea’s military and North Korea’s nuclear missiles and weapons programs,” according to the defector, who is quoted in an affidavit filed by assistant U.S. attorneys for the District of Columbia. The account of the defector, who is not named, was used to support the forfeiture of bank funds from the single largest importer of North Korean coal, a Chinese company known as Dandong Zhicheng Metallic Material. The Chinese company imported more than $234 million of North Korean coal in 2016, according to Panjiva, a global trade data analytics company. That’s about a fifth of North Korea’s annual coal exports. An 80-page affidavit filed by the government — but not released to the public — describes “numerous” transactions between Dandong Zhicheng Metallic Material, its front companies, and “entities known to conduct business with or on behalf of North Korea.” Portions of the government’s affidavit became public with the release of a decision by U.S. District Chief Judge Beryl A. Howell. Another federal forfeiture case against a Chinese company, filed in September, similarly supports the claim that China’s coal imports have helped finance the North Korean government. In that case, against Dandong Hongxiang Industrial Development, the U.S. government claims to have had access to business records reflecting coal trade between North Korea and China. One spreadsheet at the Chinese company was labeled “anthracite data.” It summarized four months of anthracite coal shipping transactions in 2013 and names several North Korean government agencies and their front companies, according to the government’s filing. Among the entries on the “anthracite data” spreadsheet are North Korea’s National Defense Commission, the military portion of the government, and the Reconnaissance General Bureau, North Korea’s primary intelligence organization. In addition, according to the filing, an unnamed Chinese company purchased 439,000 tons of anthracite coal from various North Korean government agencies, including some that had been under trade sanctions. Among the coal purchases made by the unnamed Chinese company was one from a front company for “Office 39 of the Korean Worker’s Party,” a secretive group that the U.S. government has said supports the North Korean leadership. These court filings “show that the Chinese — their banks or their government or their companies — are either complicit in sanctions evasion or refusing to ask the right questions,” said Anthony Ruggiero, a former official with the Treasury and State Department, now a senior fellow at the Foundation for Defense of Democracies. “Given their relationship with North Korea and the history, the Chinese should have known that the North Korean government only allows profits to go to one of three purposes — the weapons program, the military or luxury goods for the elite.” The U.N. Security Council specifically targeted North Korea’s coal industry for sanctions after North Korea conducted its fourth nuclear test in early 2016. In March of that year, it required countries to cease importing North Korean coal. At the urging of the Chinese, however, it allowed coal purchases if they were for “livelihood purposes.” “Trade related to the people’s livelihood in North Korea, especially if it embodies humanitarian principles, should not be affected by sanctions,” Foreign Ministry spokesperson Geng Shuang said last month. The U.N. sanctions were hailed for having demonstrated “the consensus, commitment and resolution of the international community to curtail North Korean nuclear program,” said Yun Sun, a Senior Associate with the East Asia Program at the Stimson Center, the nonpartisan research group. But the measure didn’t harm exports at all, at least at first, because the
“humanitarian” exception turned out to be very broad. In the nine months after the U.N. measure — from April to December of 2016 — China imported 17 million metric tons of coal from North Korea. That’s more than the imports in the corresponding months for each of the previous two years, according to the Congressional Research Service. For that reason, the United States pushed for stricter limits, and in November, the U.N. added a cap on North Korean coal imports, with the quota set at less than half the volume of coal trade from previous year. In mid-February, China announced that it was suspending its annual quota of North Korean coal and suspending the imports. The volume of China’s imports of North Korean coal was still well below the quota level, however, according to U.N. statistics, and it could resume coal imports. And even if it were to reach the coal quota this year, China could import more North Korean coal next year. “The suspension is for 2017 only, so I do foresee that the Chinese will import North Korean coal again in 2018,” Sun said. (Peter Whoriskey, “North Korea’s ‘Humanitarian’ Exports Paid for Weapons Programs, U.S. Says,” Washington Post, August 6, 2017)

PP2: Reaffirming that proliferation of nuclear, chemical and biological weapons, as well as their means of delivery, constitutes a threat to international peace and security, (PP2 of UNSCR 2321)

PP3: Expressing its gravest concern that the DPRK's ongoing nuclear- and ballistic missile-related activities have generated increased tension in the region and beyond, and determining that there continues to exist a clear threat to international peace and security, (PP9 of UNSCR 2321)

1. Condemns in the strongest terms the ballistic missile launches conducted by the DPRK on 3 July and 28 July of 2017, which the DPRK has stated were launches of intercontinental ballistic missiles, and which used ballistic missile technology in violation and flagrant disregard of the Security Council's resolutions; (Based on OP1 of UNSCR 2270)

2. Reaffirms its decisions that the DPRK shall not conduct any further launches that use ballistic missile technology, nuclear tests, or any other provocation; shall suspend all activities related to its ballistic missile program and in this context re-establish its pre-existing commitments to a moratorium on missile launches; shall abandon all nuclear weapons and existing nuclear
programs in a complete, verifiable and irreversible manner, and immediately cease all related activities; and shall abandon any other existing weapons of mass destruction and ballistic missile programs in a complete, verifiable and irreversible manner; (OP 2-4 of UNSCR 2270, adapted and combined)

**Designations**

3. **Designate individuals and entities for asset freeze/travel ban:** Decides that the measures specified in paragraph 8(d) of resolution 1718 (2006) shall apply also to the individuals and entities listed in Annex I and II of this resolution and to any individuals or entities acting on their behalf or at their direction, and to entities owned or controlled by them, including through illicit means, and decides further that the measures specified in paragraph 8(e) of resolution 1718 (2006) shall also apply to the individuals listed in Annex I of this resolution and to individuals acting on their behalf or at their direction; (OP3 of UNSCR 2321)

4. **Designation of additional WMD-related Items:** Decides to adjust the measures imposed by paragraph 8 of resolution 1718 (2006) and this resolution through the designation of additional goods, directs the Committee to undertake its tasks to this effect and to report to the Security Council within fifteen days of adoption of this resolution, and further decides that, if the Committee has not acted, then the Security Council will complete action to adjust the measures within seven days of receiving that report; (OP25 of UNSCR 2270)

5. **Designation of additional Conventional Arms-related Items:** Decides to adjust the measures imposed by paragraph 7 of resolution 2321 (2016) through the designation of additional conventional arms-related items, materials, equipment, goods, and technology, directs the Committee to undertake its tasks to this effect and to report to the Security Council within thirty days of adoption of this resolution, further decides that, if the Committee has not acted, then the Security Council will complete action to adjust the measures within seven days of receiving that report, and directs the Committee to update this list every 12 months; (Based on OP7 of UNSCR 2321 and OP25 of 2270)

**Transportation**

6. **Prohibit port calls by designated vessels tied to illicit activities:** Decides that the Committee may designate vessels for which it has information indicating they are, or have been, related to activities prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), or this resolution and all Member States shall prohibit the entry into their ports of such designated vessels, unless entry is required in the case of emergency or in the case of return to its port of origination, or unless the Committee determines in advance that such entry is required for humanitarian purposes or any other purposes consistent with the objectives of resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), or this resolution; (New)

7. **Prohibit chartering of vessels flagged by the DPRK:** Clarifies that the measures set forth in paragraph 20 of resolution 2270 (2016) and paragraph 9 of resolution 2321 (2016), requiring States to prohibit their nationals, persons subject to their jurisdiction and entities incorporated in their territory or subject to their jurisdiction from owning, leasing, operating any vessel flagged by the DPRK, without exception, unless the Committee approves on a case-by-case basis in advance, apply to chartering vessels flagged by the DPRK;

**Sectoral**

8. **Full ban on coal, iron and iron ore:** Decides that paragraph 26 of resolution 2321 (2016) shall be replaced by the following: "Decides that the DPRK shall not supply, sell or transfer,
directly or indirectly, from its territory or by its nationals or using its flag vessels or aircraft, coal, iron, and iron ore, and that all States shall prohibit the procurement of such material from the DPRK by their nationals, or using their flag vessels or aircraft, and whether or not originating in the territory of the DPRK, decides that for sales and transactions of iron and iron ore for which written contracts have been finalized prior to the adoption of this resolution, all States may allow those shipments to be imported into their territories up to 30 days from the date of adoption of this resolution with notification provided to the Committee containing details on those imports by no later than 45 days after the date of adoption of this resolution, and decides further that this provision shall not apply with respect to coal that the exporting State confirms on the basis of credible information has originated outside the DPRK and was transported through the DPRK solely for export from the Port of Rajin (Rason), provided that the exporting State notifies the Committee in advance and such transactions involving coal originating outside of the DPRK are unrelated to generating revenue for the DPRK’s nuclear or ballistic missile programs or other activities prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), or this resolution; (New)

9. **Prohibit seafood exports from the DPRK:** Decides that the DPRK shall not supply, sell or transfer, directly or indirectly, from its territory or by its nationals or using its flag vessels or aircraft, seafood (including fish, crustaceans, mollusks, and other aquatic invertebrates in all forms), and that all States shall prohibit the procurement of such items from the DPRK by their nationals, or using their flag vessels or aircraft, whether or not originating in the territory of the DPRK, and further decides that for sales and transactions of seafood (including fish, crustaceans, mollusks, and other aquatic invertebrates in all forms) for which written contracts have been finalized prior to the adoption of this resolution, all States may allow those shipments to be imported into their territories up to 30 days from the date of adoption of this resolution with notification provided to the Committee containing details on those imports by no later than 45 days after the date of adoption of this resolution;

10. **Prohibit lead exports from the DPRK:** Decides that the DPRK shall not supply, sell or transfer, directly or indirectly, from its territory or by its nationals or using its flag vessels or aircraft, lead and lead ore, and that all States shall prohibit the procurement of such items from the DPRK by their nationals, or using their flag vessels or aircraft, whether or not originating in the territory of the DPRK, and further decides that for sales and transactions of lead and lead ore for which written contracts have been finalized prior to the adoption of this resolution, all States may allow those shipments to be imported into their territories up to 30 days from the date of adoption of this resolution with notification provided to the Committee containing details on those imports by no later than 45 days after the date of adoption of this resolution;

11. **Ban the hiring and paying of additional DPRK laborers used to generate foreign export earnings:** Expresses concern that DPRK nationals frequently work in other States for the purpose of generating foreign export earnings that the DPRK uses to support its prohibited nuclear and ballistic missile programs, decides that all Member States shall not exceed on any date after the date of adoption of this resolution the total number of work authorizations for DPRK nationals provided in their jurisdictions at the time of the adoption of this resolution unless the Committee approves on a case-by-case basis in advance that employment of additional DPRK nationals beyond the number of work authorizations provided in a member state's jurisdiction at the time of the adoption of this resolution is required for the delivery of humanitarian assistance, denuclearization or any other purpose consistent with the objectives of resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), or this resolution; (New)

**Financial**
12. **Prohibiting new or expanded joint ventures and cooperative commercial entities with the DPRK:** *Decides* that States shall prohibit, by their nationals or in their territories, the opening of new joint ventures or cooperative entities with DPRK entities or individuals, or the expansion of existing joint ventures through additional investments, whether or not acting for or on behalf of the government of the DPRK, unless such joint ventures or cooperative entities have been approved by the Committee in advance on a case-by-case basis; *(New)*

13. **Clarifies** that the prohibitions contained in paragraph 11 of resolution 2094 (2013) apply to clearing of funds through all Member States' territories; *(New)*

14. **Clarifies** that companies performing financial services commensurate with those provided by banks are considered financial institutions for the purposes of implementing paragraph 11 of resolution 2094 (2013), paragraphs 33 and 34 of resolution 2270 (2016), and paragraph 33 of resolution 2321 (2016); *(New)*

**Chemical Weapons**

15. **Prohibiting use of chemical weapons and calling for accession to the CWC:** *Recalls* paragraph 24 of resolution 2270 (2016), *decides* that the DPRK shall not deploy or use chemical weapons, and *urgently calls upon* the DPRK to accede to the Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and Their Destruction, and then to immediately comply with its provisions; *(Based on OP24 of UNSCR 2270)*

**Vienna Convention**

16. **Abiding by the VCDR/VCCR:** *Demands* that the DPRK fully comply with its obligations under the Vienna Convention on Diplomatic Relations and the Vienna Convention on Consular Relations; *(New)*

**Impact on the People of the DPRK**

17. **Regrets** the DPRK's massive diversion of its scarce resources toward its development of nuclear weapons and a number of expensive ballistic missile programs, *notes* the findings of the United Nations Office for the Coordination of Humanitarian Assistance that well over half of the people in the DPRK suffer from major insecurities in food and medical care, including a very large number of pregnant and lactating women and under-five children who are at risk of malnutrition and nearly a quarter of its total population suffering from chronic malnutrition, and, in this context, *expresses* deep concern at the grave hardship to which the people in the DPRK are subjected; *(New)*

**Sanctions Implementation**

18. **State implementation report:** *Decides* that Member States shall report to the Security Council within ninety days of the adoption of this resolution, and thereafter upon request by the Committee, on concrete measures they have taken in order to implement effectively the provisions of this resolution, *requests* the Panel of Experts, in cooperation with other UN sanctions monitoring groups, to continue its efforts to assist Member States in preparing and submitting such reports in a timely manner; *(based on OP36 of UNSCR 2321)*

19. **Redouble implementation efforts:** *Calls upon* all Member States to redouble efforts to implement in full the measures in resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013) 2270 (2016), 2321 (2016), and 2356 (2017), and to cooperate with each other in doing
so, particularly with respect to inspecting, detecting and seizing items the transfer of which is prohibited by these resolutions; (OP38 of UNSCR 2321)

20. Update Committee and POE mandate: Decides that the mandate of the Committee, as set out in paragraph 12 of resolution 1718 (2006), shall apply with respect to the measures imposed in this resolution and further decides that the mandate of the Panel of Experts, as specified in paragraph 26 of resolution 1874 (2009) and modified in paragraph 1 of resolution 2345 (2017), shall also apply with respect to the measures imposed in this resolution; (OP39 of UNSCR 2321)

21. Standard "seize and dispose" provision: Decides to authorize all Member States to, and that all Member States shall, seize and dispose (such as through destruction, rendering inoperable or unusable, storage, or transferring to a State other than the originating or destination States for disposal) of items the supply, sale, transfer, or export of which is prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), or this resolution that are identified in inspections, in a manner that is not inconsistent with their obligations under applicable Security Council resolutions, including resolution 1540 (2004), as well as any obligations of parties to the NPT, the Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on Their Development of 29 April 1997, and the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction of 10 April 1972; (OP40 of UNSCR 2321)

22. Force majeure clause: Emphasizes the importance of all States, including the DPRK, taking the necessary measures to ensure that no claim shall lie at the instance of the DPRK, or of any person or entity in the DPRK, or of persons or entities designated for measures set forth in resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), or this resolution, or any person claiming through or for the benefit of any such person or entity, in connection with any contract or other transaction where its performance was prevented by reason of the measures imposed by this resolution or previous resolutions; (OP41 of UNSCR 2321)

23. Request Interpol notices: Requests that Interpol issue Special Notices with respect to designated individuals, and directs the Committee to work with Interpol to develop the appropriate arrangements to do so; (New)

24. Expand POE capacity and resources: Requests the Secretary General to provide additional analytical resources needed to the Panel of Experts established pursuant to resolution 1874 (2009) to strengthen its ability to analyze the DPRK's sanctions violation and evasion activities; (Based on OP42 of UNSCR 2321)

Political

25. Reiterates its deep concern at the grave hardship that the people in the DPRK are subjected to, condemns the DPRK for pursuing nuclear weapons and ballistic missiles instead of the welfare of its people while people in the DPRK have great unmet needs, and emphasizes the necessity of the DPRK respecting and ensuring the welfare and inherent dignity of people in the DPRK; (OP45 of UNSCR 2321)

26. Reaffirms that the measures imposed by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), and this resolution are not intended to have adverse humanitarian consequences for the civilian population of the DPRK or to affect negatively or restrict those activities, including economic activities and cooperation, food aid and humanitarian assistance, that are not prohibited by resolutions 1718 (2006), 1874 (2009),
2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017) and this resolution, and the work of international and non-governmental organizations carrying out assistance and relief activities in the DPRK for the benefit of the civilian population of the DPRK and decides that the Committee may, on a case-by-case basis, exempt any activity from the measures imposed by these resolutions if the committee determines that such an exemption is necessary to facilitate the work of such organizations in the DPRK or for any other purpose consistent with the objectives of these resolutions, and further decides that the measures specified in paragraph 8(d) of resolution 1718 (2006) shall not apply with respect to financial transactions with the DPRK Foreign Trade Bank or the Korea National Insurance Corporation if such transactions are solely for the operation of diplomatic missions in the DPRK or humanitarian assistance activities that are undertaken by, or in coordination with, the United Nations; (Based on OP46 of UNSCR 2321)

27. Reaffirms its support for the Six Party Talks, calls for their resumption, and reiterates its support for the commitments set forth in the Joint Statement of 19 September 2005 issued by China, the DPRK, Japan, the Republic of Korea, the Russian Federation, and the United States, including that the goal of the Six-Party Talks is the verifiable denuclearization of the Korean Peninsula in a peaceful manner, that the United States and the DPRK undertook to respect each other's sovereignty and exist peacefully together, that the Six Parties undertook to promote economic cooperation, and all other relevant commitments; (OP47 of UNSCR 2321)

28. Reiterates the importance of maintaining peace and stability on the Korean Peninsula and in north-east Asia at large, and expresses its commitment to a peaceful, diplomatic, and political solution to the situation and welcomes efforts by the council members as well as other States to facilitate a peaceful and comprehensive solution through dialogue and stresses the importance of working to reduce tensions in the Korean Peninsula and beyond; (OP48 of UNSCR 2321)

29. Affirms that it shall keep the DPRK's actions under continuous review and is prepared to strengthen, modify, suspend or lift the measures as may be needed in light of the DPRK's compliance, and, in this regard, expresses its determination to take further significant measures in the event of a further DPRK nuclear test or launch; (OP49 of UNSCR 2321)

30. Decides to remain seized of the matter. (OP50 of UNSCR 2321)

Annex I

Travel Ban/Asset Freeze (Individuals)
CHOE CHUN YONG Description: Representative for Ilsim International Bank, which is affiliated with the DPRK military and has a close relationship with the Korea Kwangson Banking Corporation. Ilsim International Bank has attempted to evade United Nations sanctions. A.K.A.: Ch'oe Ch'un-yo'ng Identifiers: Nationality: DPRK; Passport no.: 654410078; Gender: male

HAN JANG SU Description: Chief Representative of the Foreign Trade Bank. A.K.A.: Chang-Su Han Identifiers: DOB: November 08, 1969; POB: Pyongyang, DPRK; Nationality: DPRK; Passport no.: 745420176, expires on October 19, 2020; Gender: male

JANG SONG CHOL Description: Jang Song Chol is a Korea Mining Development Corporation (KOMID) representative overseas. AKA: n/a Identifiers: DOB: 12 March 1967; Nationality: DPRK

JANG SUNG NAM Description: Chief of an overseas Tangun Trading Corporation branch, which is primarily responsible for the procurement of commodities and technologies to support the DPRK's defense research and development programs. A.K.A.: n/a Identifiers: DOB: July 14, 1970;
Nationality: DPRK; Passport no.: 563120368, issued on March 22, 2013; Passport expiration date: March 22, 2018; Gender: male

JO CHOL SONG Description: Deputy Representative for the Korea Kwangson Banking Corporation, which provides financial services in support to Tanchon Commercial Bank and Korea Hyoksin Trading, a subordinate entity of Korea Ryongbong General Corporation. A.K.A.: Cho Ch’o’l-so’ng Identifiers: DOB: September 25, 1984; Nationality: DPRK; Passport no.: 654320502, expires on September 16, 2019; Gender: male

KANG CHOL SU Description: Official for Korea Ryongbong General Corporation, which specializes in acquisition for the DPRK’s defense industries and support for the DPRK’s military-related overseas sales. Its procurements also likely support the DPRK’s chemical weapons program. A.K.A.: n/a Identifiers: DOB: February 13, 1969; Nationality: DPRK; Passport no.: 472234895

KIM NAM UNG Description: Representative for Ilsim International Bank, which is affiliated with the DPRK military and has a close relationship with the Korea Kwangson Banking Corporation. Ilsim International Bank has attempted to evade United Nations sanctions. A.K.A.: n/a Identifiers: Nationality: DPRK; Passport no.: 654110043

PAK IL KYU Description: Official for Korea Ryongbong General Corporation, which specializes in acquisition for DPRK’s defense industries and support to Pyongyang’s military-related sales. Its procurements also likely support the DPRK’s chemical weapons program. A.K.A.: Pak Il-Gyu Identifiers: Nationality: DPRK; Passport no.: 563120235; Gender: male

List Update for Aliases:
JANG BOM SU (KP1.016) - New AKA: Jang Hyon U with date of birth 22 February 1958 and diplomatic passport number 836110034, which expires on 1 January 2020.
JON MYONG GUK (KP1.018) - New AKA: Jon Yong Sang with date of birth 25 August 1976 and diplomatic passport number 836110035, which expires on 1 January 2020.

Annex II Asset Freeze (Entities)
1. FOREIGN TRADE BANK (FTB) Description: Foreign Trade Bank is a state-owned bank and acts as the DPRK’s primary foreign exchange bank and has provided key financial support to the Korea Kwangson Banking Corporation. AKA: n/a Location: FTB Building, Jungsong-dong, Central District, Pyongyang.
2. DPRKKOREAN NATIONAL INSURANCE COMPANY (KNIC) Description: The Korean National Insurance Company is a DPRK financial and insurance company and is affiliated with Office 39. AKA: Korea Foreign Insurance Company Location: Central District, Pyongyang.
3. DPRKKORYO CREDIT DEVELOPMENT BANK Description: Koryo Credit Development Bank operates in the financial services industry in the DPRK’s economy. AKA: Daesong Credit Development Bank; Koryo Global Credit Bank; Koryo Global Trust Bank Location: Pyongyang.
4. DPRKMANSUDAE OVERSEAS PROJECT GROUP OF COMPANIES Description: Mansudae Overseas Project Group of Companies engaged in, facilitated, or was responsible for the exportation of workers from the DPRK to other nations for construction-related activities including for statues and monuments to generate revenue for the Government of the DPRK or the Workers’ Party of Korea. The Mansudae Overseas Project Group of Companies has been reported to conduct business in countries in Africa and Southeast Asia including Algeria, Angola, Botswana, Benin, Cambodia, Chad, the
Democratic Republic of the Congo, Equatorial Guinea, Malaysia, Mozambique, Madagascar, Namibia, Syria, Togo, and Zimbabwe. AK: Mansudae Art Studio Location: Pyongyang, DPRK (UN Security Council Resolution 2371, August 5, 2017)

Southeast Asia's top diplomats slammed North Korea with a sharp rebuke over its intercontinental ballistic missile tests and admonished Pyongyang to comply with its duty to help avert conflicts as a member of Asia's biggest security forum. The Association of Southeast Asian Nations foreign ministers, however, were split on an American proposal to suspend Pyongyang from the ASEAN Regional Forum, a 27-nation bloc that includes North Korea and its bitter adversaries the U.S., South Korea and Japan. The ASEAN ministers reiterated in a joint statement their grave concerns over the escalation of tensions on the Korean Peninsula due to the North's two ICBM tests last month, saying the launches threaten world stability. The ministers traditionally issue a communique containing their diverse concerns, and their issuance of a separate statement on North Korea's missile tests and nuclear weapons program reflects their deep worries about the issue. "These developments seriously threaten peace, security and stability in the region and the world," the ministers said in their statement. They urged the North to immediately and fully comply with its obligations under U.N. Security Council resolutions. They also backed efforts to improve relations between the two Koreas and said their 10-nation bloc was ready "to play a constructive role in contributing to peace and stability" on the Korean Peninsula. All the countries involved in the so-called six-party talks aimed at taming the North's nuclear ambitions belong to the ASEAN Regional Forum, but Philippine Department of Foreign Affairs spokesman Robespierre Bolivar said at a news conference Saturday that there was no plan for those nations to meet on the sidelines of the Manila meetings. North Korea pulled out of the talks — which also include South Korea, the U.S., China, Japan and Russia — in 2009 to protest international condemnation of a long-range rocket launch. Philippine Foreign Secretary Alan Peter Cayetano said the ministers were divided over a U.S. proposal to suspend the North from the ASEAN Regional Forum, which will hold its annual meeting in two days. North Korean Foreign Minister Ri Yong Ho will attend that meeting. With the U.S., Japan and South Korea expected to push for stronger actions against the North, a verbal showdown looms. "There were views that, 'How can we hear them out or confront them if they're not there?' But there's also a view that we should give them an ultimatum," Cayetano said late yesterday after discussing the issue with other foreign ministers. The ministers "strongly call upon" North Korea, as a member of the ASEAN Regional Forum, to help "maintain the Asia Pacific as a region of lasting peace, stability, friendship and prosperity," the ministers said in their statement. (Teresa Cerojano and Jim Gomez, “Associated Press, August 5, 2017)

McMaster interview: “HH: All right, let me switch if I can to North Korea, which is really pressing. And– and remind our audience, at the Aspen Institute ten days ago, Chairman of the Joint Chiefs, Joe Dunford, said, “There’s always a military– option. It would be horrific.” Lindsey Graham on Today Show earlier this week said– “We need to destroy the regime and their deterrent.” Secretary of State Rex Tillerson said on Tuesday, I believe, to North Korea, “You are leaving us no choice but to protect ourselves.” And then the Chairman of the Chief of Staff of the Army said, “Just because every choice is a bad choice doesn’t mean you don’t have to choose.” Are we looking at a preemptive strike? Are you trying to prepare us, you being collectively, the administration and people like Lindsey Graham and Tom Cotton for a first strike North Korea? HRM: Well, we really, what you’re asking is– are we preparing plans for a preventive war, right? A war that would prevent North Korea from threatening the United States with a nuclear weapon. And the president’s been very clear about it. He said, “He’s not gonna tolerate North Korea being able to threaten the United States.” Look at the (UNINTEL) for that regime if it– if– if they have nuclear weapons that can threaten the United States. It’s intolerable from the president’s perspective. So– so of course, we have to provide all options to do that. And– and that includes a military option. Now, would we like to resolve it short of what would be a very costly war, in terms of– in terms of the suffering of mainly the South Korean people? The– the ability of– of that North– North Korean regime to hold the South hostage to conventional fire’s capabilities, artillery and so forth, Seoul being so close. We’re cognizant of all of that.
And so what we have to do is— everything we can to— to pressure this regime, to pressure Kim Jong-un and those around him such that they conclude, it is in their interest to denuclearize. And there are really I think three critical things, came out of the president’s very successful summit with— President Xi of China that were different— that were different from past efforts to work with China, which has always been, you know, the— the desire, right, to work with China— on the— on the North Korean problem. The three things that came out of that are, first of all, that North Korea, Kim Jong-un— armed with nuclear weapons is a threat not only to the United States, not only to our great allies, Japan and South Korea, but also to China. So that’s a big acknowledgement. The second thing was that— was that, we’re, the goal— the goal of working together with them cannot be the so-called “freeze for freeze.”

Where we freeze our— our— our training and then they freeze their program. Because they’re at a threshold capability now. Freeze for freeze doesn’t work anymore. Right? It’s— it’s intolerable. So the goal is denuclearization of the— of the peninsula. That’s the second big thing. The third big thing that came out of it is, China acknowledged they have tremendous coercive economic influence here. They may not have a great political relationship with Kim Jong-un. I mean, who does these days, right? But— but they recognize that they do have a great deal of agency and control over that situation. And so we are prioritizing Secretary of State in the lead obviously, prioritizing an effort to work with the Chinese. As the president has said, as the president has tweeted, right? We— we also though have to be prepared to walk down a path that assumes not as much help from China as we would like.

HH: So that would mean, back to the preemptive strike or some kind of action against Kim Jong-un, should he be sleeping easily at night? HRM: No, I think— I think he should not be, because he— he has the whole world against him. Right? He’s— he’s isolated— he’s isolated on this. Si— since 1953, the Korean Peninsula has been in a state of armistice. Right? The war never formally ended. And there has been no aggression— no aggression from— from the United States, South Korea, any— any of our allies. HH: If he were removed, General, would the regime’s behavior change? If that one individual were removed? HRM: Well, I— I’m not sure about that. I mean, I don’t think anybody has a very clear picture of the inner workings of that regime. What is clear is that it is— it is an authoritarian dictatorship that— that has existed since the end— end of World War II. It is now in its third generation. And there is a difference in this third autocratic ruler, in that he’s as brutal as the previous two have been, but he’s doing some things differently. He’s killing members of his own family even. And so what— what this means for the future of that regime. I mean, I think it’s really almost imp— it’s impossible to predict.

HH: Is it legitimate? You’ve done a lot of strategic thinking about this. Is it legitimate to attempt to achieve regime change by the removing of one— leader of a regime? Is that a legitimate tool of international affairs? HRM: Well, di— well, I think it depends on— on really the— the— the legal justifications for that, right? And— and this goes back to, you know— j— just war theory. And— and— what is the nature of— of the risk? And— and does that risk justify acting in defense of— of your people and— and your vital interests? HH: We know the risk a little bit. In 1994, when the first nor— North Korean deal with signed— the people who executed it, Gallucci, Dan Poneman, Joe Wit wrote a book. And they quoted a general saying, “If there is a conflict,” called Going Critical, “there will be a million casualties.” A million casualties. Is that still a good estimate of what happens if— preemptive strike unfolds in North Korea, General?

HRM: You know, wa— one— one thing about war. It’s impossible oftentimes to predict. It’s always impossible to predict the future course of events. Because war is a continuous interaction of opposites, a continuous interaction between your forces and those of the enemy. It— it involves not just the capability to use force, but also intentions and things that are just unknowable at the outset. And so I think it’s important to— to look at— range of estimates of what could happen, because it’s clear that at war, it’s— it’s unpredictable. And so you al— always have to ask the question, “What happens next? What are the risks? How do you mitigate those risks?” And— and obviously, you know, war is— is— is the most serious decision any leader has to make. And so what we can do to make sure we exhaust our possibilities and exhaust our— our other opportunities to accomplish this very clear objective of denuclearization of the peninsula short of war? HH: If we were to go into a preemptive strike, General McMaster, of some sort, large, small, whatever, would we tell the Chinese before we did that in order to manage their expectations and to limit the possibility of a replay of the Korean War? HRM: Well, I can— I can’t really talk about any details associated with operational plans or— or strategies. But— but— it would depend on the
circumstances I guess— HH: Have you– have you sat with the president and walked through how China might or might not react to a preemptive strike and how they unpredictably entered the war in the– in the first Korean War? HRM: Well, as– as a rule, we don’t talk about deliberations with the– with the president, but he’s been very much involved and– and has– has been– deeply briefed, you know, on– on all aspects of the– the strategy– on North Korea. HH: How concerned should the American people be that we are actually on the brink of a war with North Korea? HRM: Well, I think– I think it’s– it’s impossible to overstated the danger associated with this. Right, the, so I think it’s impossible to overstated the danger associated with a rogue, brutal regime, I mean, who murdered his own brother with nerve agent in a p– in– in an airport. I mean– I mean, think– think about what he’s done– in terms of his– his own brutal repression of not only members of his regime but his own family. HH: That’s a prison camp run by the Mafia with nuclear weapons. HRM: As one author has called it, it’s an “impossible state.” Right? HH: Or as the chief of staff said, “Just because all the choices are terrible doesn’t mean we don’t have to choose.” Will this administration choose or will it, as some people said about the last administration, “lead from behind,” when it comes to North Korea? HRM: Well, there’s a big difference, right? There’s a big difference in the situation that President Trump inherited from previous administrations. It’s worse. Situation’s worse. Whereas before there’s– there’s been this cycle over the years as you– as you know, from demanding that— that— that North Korea stop its missile program, stop its nuclear program. After those demands, pressure is brought on the regime. The regime then says, “Oh, I would like to talk.” And then there– then there’s long, drawn-out negotiations during which the North Korean regime continues to work on its program. And then a weak agreement is decided upon, which then North Korea immediately violates, right? Okay, so that’s, so we’re just not gonna repeat that failed cycle. We can’t do it. And so the– the, it has progressed too far as you’ve seen with these recent missile tests. And as you’ve seen– they’ve done five nuclear tests. And so– so I– I think what you’ll see increasingly is that a rec– this is a recognition that North Korea is a global threat. It requires global action. And so what– what are you seeing now? You’re seeing countries expel North Korean, so-called “guest workers,” who– who they export overseas to send money back to the regime. You’re seeing squeezing of a lot of their other illicit activities globally. You’re seeing economic sanctions now being enforced more rigorously. And so that’s the path everybody needs to be on. This isn’t, this is a problem for the United States. It is. But this is a big problem for, not only Japan, South Korea, but also Russia, China, everyb– everyb– of course, all of our allies are with this on us. HH: The– the– Reuters had a story earlier this week. Two U.S. officials, senior officials confirm that, “The I.C.B.M.s that North Korea tested can reach anywhere in the United States.” Can you confirm that, General? HRM: No. (LAUGH) I’m not gonna confirm it. But– it’s– it is– but, as I mentioned really, I mean, it’s– the, whether it could reach– you know– San Francisco or– or Pittsburgh or Washington, I mean, how much does that matter, right? It’s– it’s a grave threat. HH: Does South Korea need its own nuclear deterrent? HRM: Well, here’s, this is what’s an important, this is a very important question, right. And—and of course, it’s– it’s– it’s U.S., United States extended deterrence, nuclear deterrence extended to our allies that has been really a key to the nonproliferation of nuclear weapons. If that regime is broken, that nonproliferation regime is broken, it’s bad news for everybody. And so imagine now a Northeast Asia with a nuclear armed North Korea, South Korea, Japan, China, Russia, right? All of– all countries– (UNINTEL) HH: Pakistan and India, yeah. HRM: And so, is that what China wants? Is that what Russia wants? No. I mean, so it is in all of our interest to insure that North Korea denuclearizes. HH: Last North Korea question. Is there a red line about which K.J.U. should know? HRM: Well, you know, President Trump’s been very clear about this, right? That– that he does not advance, he does not announce red lines in– in advance. But I– I think his overall intention is very clear, to insure that North Korea does not have the capability to threaten the United States with a nuclear weapon.” (Duane Patterson, National Security Adviser General H.R. McMaster Interview on Hugh Hewitt, MSNBC, August 5, 2017)
government statement carried by the official media. Yet in his remarks to reporters at a regional conference in which North Korea’s missile and nuclear tests have dominated discussions, Tillerson held an olive branch to Pyongyang by saying the United States will sit down for talks “when conditions are right” to discuss denuclearization and steps to ensure North Korea can feel secure and prosperous. “The best signal that North Korea could give us that they’re prepared to talk would be to stop these missile launches,” he said. “We’ve not had any extended period of time where they have not taken some type of provocative action by launching ballistic missiles. I think that would be the first and strongest signal they could send to us, would be to stop these missile launches.” Pressed for a time frame, Tillerson said, “We’ll know it when we see it.” “We’re not going to give someone a specific number of days or weeks,” he added. “This is not ‘Give me 30 days and we’re ready to talk.’ It’s not quite that simple. It is all about how we see their attitude in approaching a dialogue with us.” Tillerson has used the Association of Southeast Asian Nations (ASEAN) gathering here in the Philippine capital to hold meetings on the sidelines with allies and adversaries. Following a meeting with his counterparts from Australia and Japan, the three countries issued a statement urging the international community to pressure North Korea to abandon its “threatening and provocative” actions, urging the new sanctions be strictly implemented. Yesterday, China delivered frank advice to North Korea, its outcast neighbor, telling Pyongyang to make a “smart decision” and stop conducting missile launches and nuclear tests. The statement by Chinese Foreign Minister Wang Yi came on the heels of a U.N. Security Council decision to impose additional sanctions on North Korea and its exports, and it suggested that the American push to further isolate the regime of Kim Jong Un is reaping some dividends. But Wang also called on the United States to dial back the tension. After meeting with North Korea’s top diplomat at the ASEAN gathering here, Wang said that the situation on the Korean Peninsula is critical — but that it could be a turning point for negotiations over North Korea’s nuclear proliferation. “Do not violate the U.N.’s decision or provoke international society’s goodwill by conducting missile launching or nuclear tests,” Wang said after talks with Ri Yong Ho, North Korea’s foreign minister. Wang, however, quickly added, “Of course, we would like to urge other parties like the U.S. and South Korea to stop increasing tensions.” Tillerson arrived in Manila on the night of August 5 in what State Department officials said would be a concerted effort to enlist other countries in the campaign to get North Korea to abandon its missile and nuclear tests. Concern has mounted that North Korea is developing its missile technology more quickly than expected, after tests last month of missiles that experts said are capable of striking the U.S. mainland, perhaps as far inland as Chicago. “Certainly we want to resolve this issue through negotiations, and this pressure campaign, the sanctions, it’s all about trying to convince the North Koreans that the fast way forward is to come back to the table and talk,” said Susan Thornton, assistant secretary for East Asian and Pacific affairs. President Trump, who is at his golf club in New Jersey, tweeted on Sunday night: “Just completed call with President Moon of South Korea. Very happy and impressed with 15-0 United Nations vote on North Korea sanctions.” In the hour-long phone call, Trump and South Korean President Moon Jae-in agreed to cooperate and apply maximum pressure and sanctions on North Korea in a telephone call today, the South’s presidential office said, according to Reuters. Moon was quoted as saying there is a need to show North Korea that the door to dialogue is still open, should Pyongyang give up its nuclear program. In Washington, White House counselor Kellyanne Conway reveled in the vote, which took place August 5. On ABC’s “This Week,” she said Sunday: “And then you also just yesterday saw a unanimous rebuke of North Korea. The greatest economic sanctions package ever levied against them, it’ll cost about $1 billion. Even allies in the region like China, Japan, South Korea, all agreeing with the United States that North Korea and its nuclear capabilities must be stopped.” But Tillerson also has pointedly stated several times that the United States does not seek regime change or a rapid reunification of the Koreas, which have been in a state of suspended hostility since an armistice was declared in 1953. Yesterday, he declared the latest U.N. sanctions a “good outcome.” That prompted South Korean Foreign Minister Kang Kyung-wha to correct him slightly. “It was a very, very good outcome,” she said. South Korean officials told reporters that Kang and Tillerson had agreed to pursue the denuclearization of the Korean Peninsula through peaceful measures. But the diplomatic road ahead is rocky. U.S. officials rejected Beijing’s call for the North to halt its nuclear program in exchange for the United States and South Korea suspending joint military exercises, which Pyongyang considers a prelude to an invasion and
regime change. “This kind of moral equivalency that’s implied by the freeze for freeze, which is between the North Koreans shooting off missiles that are prohibited and our reasonably defensive exercises that we undertake in our alliance with the South Koreans to protect them from these launches, is not a reasonable kind of a trade,” Thornton said. Thornton also said the United States would be “watchful” to ensure that China did not slip from its adherence to the new sanctions, which she characterized as the strongest in a generation. “We want to make sure China is continuing to implement fully the sanctions regime,” she said. “Not this kind of episodic back and forth that we’ve seen.” The United States has unsuccessfully lobbied for the 27 members of the ASEAN Regional Forum to suspend North Korea’s membership. The response has been polite but noncommittal. U.S. officials have been adamant that there will be no direct meetings with North Koreans in Manila, even among lower-level officials. (Carol Morello, “Tillerson to North Korea: No Talks Until Missiles Stop,” Washington Post, August 7, 2017, p. A-1)

Tillerson: “TILLERSON: Good morning. …Obviously, high on the agenda in the time that we’ve been here has been the situation with the DPRK and North Korea. And I think the strong UN Security Council resolution unanimously approved, working in coordination with China and Russia both to put out a statement from the Security Council that I think is quite clear in terms of there being no daylight among the international community as to the expectation that North Korea will take steps to achieve all of our objectives, which is a denuclearized Korean Peninsula. I think there should be no question in anyone’s mind as to the common view held by everyone on that Security Council as that being the ultimate objective. I think we also – as you well know, ASEAN released a – what I consider to be a very strong statement as well demonstrating their commitment as well to support a denuclearized Korean Peninsula – I think a statement that’s probably stronger than any we’ve ever seen from ASEAN in terms of a view on this particular issue. So I think two very important actions taken to hopefully send a strong message that North Korea understands the expectation of the rest of the international community going forward. So the next steps obviously are to see that the Security Council resolution sanctions are enforced by everyone. We will be monitoring that carefully and certainly having conversations with any and all that we see who may not be fully embracing not just the spirit of those sanctions but the operational execution of those sanctions. And we hope, again, that this ultimately will result in North Korea coming to the conclusion to choose a different pathway, and when the conditions are right that we can sit and have a dialogue around the future of North Korea so that they feel secure and prosper economically. …I did have the opportunity yesterday for an exchange of views with our Chinese counterparts, and we really went through a bit of reflection on the relationship since the first summit between the two presidents at Mar-a-Lago, the creation of the four high-level dialogues between our two countries, two of which are already actively meeting – the Diplomatic and Security Dialogue and the Economic and Trading Dialogue. Both of those are very active. The two remaining dialogues that we hope to convene in the next several weeks are the Law Enforcement and Cyber Security Dialogue and the Cultural or People-to-People Dialogue. I think all four of these dialogues, which are conducted at a very high level, are really advancing our two countries’ understandings of the nature of this relationship between the U.S. and China and how we should strive to strengthen this relationship so that it benefits both of our countries from an economic prosperity standpoint but also benefits the world in terms of maintaining a secure world absent of conflict. I also had the opportunity to sit and exchange views with our Russian counterparts, Sergey Lavrov. We discussed several issues during the course of that meeting. We also had some exchange of views about the nature of the relationship between our countries, and a lot of work, obviously, that has to be done in that regard. I told the foreign minister that we had not made a decision regarding how we will respond to Russia’s request to remove U.S. diplomatic personnel. We had – I asked several clarifying questions just to ensure I understood kind of their thinking behind that diplomatic note we received, but told him we would respond by September the 1st. …

Q: Thank you, Secretary Tillerson, for doing this. On North Korea, I’m wondering if you can discuss more specifically what the exact preconditions are for the U.S. to engage in the type of talks that you said we ultimately would like to have with them. And given that these new sanctions are going to take a while for them to have a desired economic effect and we’re under a time crunch with North Korea’s rapid development of this technology, how can you be confident that these sanctions will change North Korea’s calculus before it’s too late? TILLERSON: Well, the
best signal that North Korea could give us that they’re prepared to talk would be to stop these missile launches. We’ve not had an extended period of time where they have not taken some type of provocative action by launching ballistic missiles. So I think that would be the first and strongest signal they could send us is just stop, stop these missile launches.

Obviously, we have other means of communication open to them, to certainly hear from them if they have a desire to want to talk. In terms of the most recent round of sanctions, I think your point is well taken that when do these actually have a practical bite on their revenues. I think perhaps the most – the more important element of that is just the message that this sends to North Korea of how unacceptable the entire international community finds what they’re doing to be. And I think also it sends a strong message to two parties that we think can have some influence on how the North Koreans come to grips with the reality of what they’re facing, that being China and Russia. So I think their – again, their support for the Security Council resolution itself I think also sends a message. But I think the world is also expressing a view to China and Russia that we do have an expectation that you will do everything you possibly can to help North Korea understand the reality of the future as well and bring them to the negotiating table. …

Q: Secretary, you said earlier to Josh that preconditions for North Korea would be stopping missile launches. So how long do they need to stop those missile launches for in order to have conversations? And do they need to dismantle – say that they’re going to dismantle their nuclear program? …

TILLERSON: With respect to the North Korean missile launches, we’ll know it when we see it. We’re not going to give someone a specific number of days or weeks. This is really about the spirit of these talks, and they can demonstrate they’re ready to sit with a spirit of finding a way forward in these talks by no longer conducting these missile tests. So this is not a give me 30 days and we’re ready to talk. It’s not quite that simple. So it is all about how we see their attitude towards approaching a dialogue with us.” (DoS, Secretary of State Rex W. Tillerson, Press Availability in Manila, August 7, 2017)

North Korea spurned harsh new U.N. sanctions and threatened to defend itself with nuclear weapons if necessary, as Secretary of State Rex Tillerson repeated an offer to bargain with the outcast nation under the right circumstances. There was no sign at a major Asian security conference here that the sanctions hailed by President Trump as a foreign policy achievement would succeed where past efforts have failed in trying to persuade the country to give up its nuclear weapons. North Korean Foreign Minister Ri Yong Ho told diplomats that his country will never negotiate away what he called a rational “strategic option” against the threat of attack from the United States. “We will, under no circumstances, put the nukes and ballistic rockets” up for negotiation”, Ri said in prepared remarks, adding that the entire United States is within range of its missiles. Approved Saturday as illegal, appearing to rule out talks that the Trump administration, in a diplomatic partnership with China and Russia, is offering North Korea as a way out of its economic and diplomatic pariah status. He dismissed the U.N. Security Council sanctions approved Saturday as illegal, appearing to rule out talks that the Trump administration, in a diplomatic partnership with China and Russia, is offering North Korea as a way out of its economic and diplomatic pariah status. “The best signal that North Korea could send that they’re prepared to talk would be to stop these missile launches,” Tillerson told reporters today at the Association of Southeast Asian Nations (ASEAN) gathering. The security conference in the Philippine capital was dominated by the rising threat posed by North Korea’s rapid advances in nuclear and ballistic missile technology. Those capabilities are already a threat to neighbors and U.S. allies South Korea and Japan. In two tests last month, North Korea demonstrated that it could hit major population centers in the United States, and the country is now working to perfect the technology to allow those missiles to carry nuclear warheads. The new economic sanctions were approved amid the discussions here. The penalties are the toughest to date against a country that has been under international sanctions for more than a decade, and they carry the symbolic weight of approval by Pyongyang’s closest ally, China. They also approximate a trade embargo by targeting some of North Korea’s biggest exports, including coal. The sanctions can work only if North Korean leader Kim Jong Un concludes that he has too much to lose by hanging on to his weapons. Kim’s calculation has been the opposite — that his weapons and the means to deliver them buy him irreplaceable leverage over the United States, his principal adversary. China is urging Kim to consider negotiations, and also worked alongside the United States to develop the
new U.N. sanctions. Days before the unanimous Security Council vote, Tillerson had made a point of saying that the United States does not consider North Korea its enemy and does not seek to invade the country or unseat Kim. Those reassurances were meant to encourage North Korea to meet at the bargaining table. At the same time, Washington has issued blunt warnings that the United States will use military force if necessary, and North Korea has answered in kind. In the printed version of his speech, Ri said Pyongyang will use nuclear weapons only against the United States or any other country that might join it in military action against North Korea. Ri’s address here was closed to the media, so it could not be determined whether he stuck to a script delivered to reporters. Another direct warning was aimed at the United States in a government statement published by the state-run Korean Central News Agency. “There is no bigger mistake than the United States believing that its land is safe across the ocean,” it said. North Korea “will make the U.S. pay dearly for all the heinous crimes it commits against the state and people of this country,” the statement said. Tillerson would not spell out a deadline for North Korea to respond to the diplomatic overture. “We’ll know it when we see it,” he said. “We hope again that this ultimately will result in North Korea coming to a conclusion to choose a different pathway, and when the conditions are right that we can sit and have a dialogue around the future of North Korea so that they feel secure and prosper economically,” he told reporters. Tillerson avoided running into Ri, who attended the related ASEAN Regional Forum. The State Department said he skipped one event where the two men might have met and left another early to attend a scheduled meeting with Philippine President Rodrigo Duterte. Tillerson and Trump spoke by phone for about an hour today, and Tillerson detailed the results of his discussions in Manila, the White House said. “United Nations Resolution is the single largest economic sanctions package ever on North Korea,” Trump wrote in a Twitter message Saturday. “Over one billion dollars in cost to N.K.” Today, Trump complained that the U.S.-led sanctions vote at the United Nations is not getting enough attention, writing, “The Fake News Media will not talk about the importance of the United Nations Security Council’s 15-0 vote in favor of sanctions on N. Korea!” North Korea rarely attends, or is even invited to, international forums such as the ASEAN meeting. Ri tried to make the most of it, holding meetings with the top diplomats from China and Russia, two countries that trade with North Korea and employ North Koreans as contract workers. China alone is responsible for 90 percent of North Korea’s trade. Moscow and Beijing have proposed a “freeze for a freeze” approach, in which North Korea would suspend its missile and nuclear testing if the United States and its allies stop conducting joint military exercises in the region. Washington has rejected that. After meeting with Ri, Russian Foreign Minister Sergei Lavrov called on all parties “to show maximum restraint to avoid the projection of military power on the Korean Peninsula and immediately start seeking a political and diplomatic resolution to the problems of the peninsula, including its denuclearization.” Chinese Foreign Minister Wang Yi said he told Ri that North Korea should abide by U.N. prohibitions against missile and nuclear testing. But he also said that sanctions, while needed, “are not the final goal,” and he called for dialogue. Wang urged the United States and South Korea, as well as the North, not to increase tensions, saying the situation already is at a “critical point.” Chinese state media today acknowledged that North Korea had to be punished for its missile tests, but criticized the United States for its “arrogance.” The effectiveness of the new sanctions depends on how well China, in particular, decides to enforce them, said Michael J. Green of the Center for Strategic and International Studies, an Asia expert in the George W. Bush administration. More broadly, Green said, the time for effective diplomacy has almost certainly run out. There is little to no chance that North Korea can be talked out of weapons it considers essential, he said. “The North Korea strategy for decades has involved both carrots and sticks. The problem is that the carrots are no longer credible,” he said. (Carol Morello and Anne Gearan, “North Korea Rejects Talks,” Washington Post, August 8, 2017 p. A-1)

President Moon Jae-in and U.S. President Donald Trump shared concerns about North Korea’s missiles and agreed to impose a “maximum level of pressure and sanctions” to induce it to abandon its missile and nuclear ambitions during a 56-minute phone conversation, the Blue House said. Blue House Spokesman Park Soo-hyun reported that the two leaders agreed that they should pursue “the maximum level of pressure and sanctions” to induce the North to “make the right choice of giving up its nuclear and missile programs.” According to a presidential secretary, Moon did most of the talking while the businessman-turned-president mostly listened. On Resolution
2371, unanimously approved by 15 UN Security Council member states, Trump said it was a sign of a “very important change” in the global community over how to tackle the North Korean nuclear problem, an apparent reference to votes by Moscow and Beijing, according to the Blue House. Trump also emphasized that inducing change in the North’s behavior requires a “firm stance” composed of “strong pressure and sanctions.” During the nearly one-hour talk, Trump inquired about Seoul’s recent dialogue overtures to Pyongyang to discuss holding family reunions and easing military tensions along the border, which were ignored by Pyongyang. Moon told Trump that the international community needs to show North Korea that the “door for dialogue” is open as long as Pyongyang makes the prudent decision to give up its nuclear weapons. Spokesman Park said Moon explained to Trump that his proposal to hold reunions of families separated by the Korean War was made on a humanitarian basis and that a proposed military talk was intended to prevent unexpected military clashes along the border by restoring a military communications hotline. Moon stressed that North Korea “should be brought to the point” that it can no longer withstand crushing sanctions. Moon also stressed there should be no outbreak of war on the Korean Peninsula, which was devastated by the 1950-53 Korean War, expressing the need to solve the North Korean problem “in a peaceful and diplomatic” manner through close Seoul-Washington coordination. Moon also asked Trump for his assistance in revising bilateral missile guidelines signed by the two, which prohibits Seoul from developing a ballistic missile with a range of over 800 kilometers (497 miles) and a payload of over 500 kilograms (1,102 pounds). Seoul wants to raise the cap to 1,000 kilograms so that its missiles can be more effective against North Korean threats. While calling Seoul-Washington relations a “great partnership,” Trump pointed out that the U.S. spent a lot on the bilateral alliance, a reiteration of his campaign theme that U.S. allies should pay more for their military defense, according to the Blue House. He also said revising the Korea-U.S. free trade agreement was needed, citing trade deficits with Korea. Moon expressed his hopes for smooth talks between the countries on the FTA issue as Korea’s new chief trade representative, Kim Hyun-chong, was recently appointed. On the U.S.’s defense budget for Korea, Moon said a large portion of an increase in Seoul’s defense budget would be spent on purchase of cutting-edge American weapons, helping to narrow the U.S. trade deficit with Korea. Following his talk with Trump, Moon also conversed with Japanese Prime Minister Abe Shinzo for 23 minutes from 4 p.m. During the talk, the two shared concerns over the North’s growing missile capability. As in his talk with Trump, Moon said the North Korean issue should be addressed and resolved in a “peaceful and diplomatic manner” and close coordination among Seoul, Tokyo and Washington was required to that end, the presidential spokesman said.

“President Moon and Prime Minister Abe shared their judgement that they should strengthen pressure and sanctions as North Korea shows no interest in talk amid its repeated provocations,” said spokesman Park. Abe told Moon that while it required dialogue to resolve North Korea’s nuclear and missile problems at the final stage, he highly valued the fact that the two leaders were on the same page that they should impose pressure on the North to bring it to the negotiating table. The two did not discuss the issue of Korean women forced to work as sexual slaves for the Japanese Imperial Army during World War II. (Kang Jin-kyu, “Moon Talks to Trump, Abe about North,” JoongAng Ilbo, August 8, 2017)

The 2017 Chicago Council on Global Affairs Survey finds that the US public senses an increased threat from North Korea’s nuclear program, rating it one of the top threats facing the United States. Nine in ten Americans reject the idea that North Korea should be allowed to produce nuclear weapons. While Americans broadly support sanctions against North Korea and against Chinese banks and companies that do business with North Korea, they continue to have little appetite for overt military action. Three-quarters of Americans (75%) now say that North Korea’s nuclear program is a critical threat facing the United States, placing it among the top threats facing
the country. Concern over North Korea's nuclear program has spiked 15 percentage points since 2016 (60%) and 20 percent from 2015 (55%). This is also the largest increase in any of the potential threats included in the 2017 survey. The public's sense of a heightened threat from North Korea has also strengthened their expressed commitment to US ally South Korea if it were attacked by North Korea. In Chicago Council Surveys since 1990, steadily increasing percentages—but fewer than half—have favored using US troops to defend South Korea in the event of an attack by North Korea. In the 2017 survey, for the first time a majority of Americans express support for using US forces to defend South Korea (62%, up from 47% in 2015).

Policy options on North Korea are constrained, and no administration has been able to successfully convince North Korea to cease its nuclear and missile programs. While there has been ongoing debate among experts about accepting a North Korea with nuclear weapons in exchange for an agreement guaranteeing it will not produce more of them, only 21 percent of the American public—17 percent of Republicans and 26 percent of Democrats—say they support this option. Even fewer are willing to simply accept that North Korea will produce more nuclear weapons (11%; 11% of Republicans, 13% Democrats). While sanctions have yet to slow North Korea's progress, increasing sanctions is the option that receives the most support from the American public (76%). On this, there is strong partisan agreement. While 84 percent of Republicans support this approach, 76 percent of Democrats agree. There is also strong support (68%) for placing sanctions on Chinese banks and companies that do business with North Korea. Military action carries with it the very real risk of retaliation and escalation, and as in past surveys, lacks public support. Overall, 28 percent of Americans favor sending US troops to destroy North Korea's nuclear facilities and 40 percent favor conducting airstrikes against North Korea's nuclear production facilities. But there are partisan differences on these potential responses, most notably on airstrikes. A majority of Republicans (54%) support such airstrikes versus 33 percent of Democrats. Republicans (37%) are also more likely than Democrats (24%) to favor sending US troops to destroy DPRK's nuclear facilities, though still a minority. In the United States, there is no love for North Korea’s leader, Kim Jong Un. His frequent portrayals in the media cast him as a madman, making him notorious for missiles, nuclear weapons, threats to the United States, and human rights abuses. Accordingly, just 6 percent of the American public holds a favorable view of Kim. Nine in ten (91%) hold unfavorable views of him, with 79 percent holding very unfavorable views. This makes him the least favorable leader included in the survey. By contrast, a majority (54%) hold a favorable view of South Korean President Moon Jae-In.

Carlin: “The reports came fast and furious from Manila the other day. Hello, sweetheart, give me rewrite! North Korean Foreign Minister Ri Yong Ho says the North will never negotiate on nuclear or missiles! North Nixes Tillerson Talk Offer! The stories were breathless, and they were wrong. Anyone familiar with the North’s statements knows that over the past month there has been a major shift in Pyongyang’s formulation about negotiating. The real story starts with Kim Jong Un’s remarks on July 4, after the North’s first ICBM test-launch, Kim Jong Un introduced a new element to the North’s public position on the nuclear issue. He said: ‘[T]he DPRK would neither put its nukes and ballistic rockets on the table of negotiations in any case nor flinch even an inch from the road of bolstering the nuclear force chosen by itself unless the US hostile policy and nuclear threat to the DPRK are definitely terminated.’ In the past month, that formulation has been repeated several times (at least five) in DPRK media. Significantly, it appeared in the August 7 Government statement responding to the recent UNSC sanctions. Government statements are not chopped liver. They are vetted, and possibly written, at the highest levels of the regime. Kim’s formulation was somewhat vague in the original Korean—does the qualifier “unless” modify the entire sentence, or only the second half? Yet the question arises, why would Kim have even raised the image of the “table of negotiations”? It’s not normally part of the North’s public discussion. Previously, a couple of years ago, the routine formula in lower level media commentaries was that the nuclear deterrent was ‘…not a mere bargaining chip to put on the table for negotiations with the United States.’ Then what about Ri Yong Ho’s remarks in Manila on August 7? Didn’t he say the North would “never” negotiate? The media rushed to report that. And here we have an interesting lesson. Ri would not on his own have altered a top-level formulation, certainly not one that had appeared in a Government statement the same day. Well then, what? Did he receive new instructions? Possible, but at the time I thought it unlikely. In fact, when the North Korean English language text of Ri’s remarks finally became available, it was clear that he had used exactly the same formulation, almost word for word, as the one that has been in play for over a month. The same formulation. . . except it was now split into two sentences: ‘We will, under no circumstances, put the nukes and ballistic rockets on the negotiating table. Neither shall we flinch even an inch
from the road to bolstering up the nuclear forces chosen by ourselves, unless the hostile policy and nuclear threat of the U.S. against the D.P.R.K. are fundamentally eliminated.' So, what do we did we have? Slight of hand, splitting the formulation, essentially putting nuclear and missiles off the table, while suggesting a moratorium (that’s essentially what “flinching an inch from the road of bolstering” means) can be achieved? The August 7 KCNA English report on Ri’s remarks is of no help. It is a brief summary that wriggles around the question of what the foreign minister said, or meant to say, on the key formulation. Luckily, we have the Korean version of Ri’s speech. And there the key formulation is exactly as it was originally minted—all one sentence. That odd English version? We can only assume it was an editing/printing mistake, probably not career enhancing. Final point—isn’t the very broad language of the qualifying phrase (“unless the hostile policy and nuclear threat of the U.S. against the D.P.R.K. are fundamentally eliminated”) a mountain impossible to climb? Experience in past negotiations tells us that the North Koreans can use this sort of vague conditionality however it suits them. Sometimes it prevents progress, but sometimes it actually gives Pyongyang the maneuver room it needs to move ahead. How will we find out? One way seems obvious: go and talk to them.” (Robert Carlin, “Door to Negotiations or No?” 38North, August 8, 2017)

DPRK Government statement “over the fact that the U.S. and other hostile forces, terrified at the growth of the DPRK’s state nuclear force in quality and quantity, are steeped in the most intensive sanctions, pressure and provocations against it: On August 6, the U.S. framed up "sanctions resolution" 2371 at the United Nations Security Council which is geared to completely block the DPRK’s economic development and improvement of the people's livelihood, branding its test-launch of ICBM as "a threat to international peace and security." This UN "sanctions resolution", to all intents and purposes, is an outcome of diabolical attempts of the U.S. to isolate and stifle the DPRK, which constitutes a flagrant infringement upon its sovereignty and an open challenge to it. The DPRK’s access to the strongest nuclear force is a fair and legitimate measure for self-defense to protect the country's sovereignty and the nation's right to existence from the high-handed and arbitrary acts of the U.S. which has made it its business to pursue the policy of extreme hostility and pose nuclear threat to the DPRK well over half a century. The successive test-launch of ICBM by the DPRK was a stern warning to the U.S. which, being entrenched far across the Pacific, wages reckless and perilous military provocation and desppicable campaign of sanctions on the DPRK. However, the U.S. goes more frenzied and desperate instead of accepting the DPRK's existence and learning to coexist with the latter. It is trying to drive the situation of the Korean peninsula to the brink of nuclear war, running amuck to conduct missile drill against the DPRK and deploying massive strategic equipment to the peninsula. It was against this backdrop that the U.S. manipulated UNSC to rig up the "sanctions resolution" more heinous than ever, placing a total ban even on normal trade activities and economic exchange, thereby disclosing before the whole world its evil intention to obliterate the ideology and system of the DPRK and exterminate its people. On the other hand, the U.S. causes such a racket with no time to wipe their mouth, making impudent remarks that it is considering the so-called military option targeting the DPRK. There are countries to which the ridiculous threats of the U.S. are working and there are countries which lie prostrate at the bluff of the U.S. The U.S. claiming to be the "only superpower of the world" and the DPRK's neighbors hardly any smaller in size than the U.S. are all so frighten at merely two ICBM test-launches by the DPRK that they are making much a scene baying at each other. Watching them go frantic only redoubles the DPRK's pride in the country's great might and reaffirms its faith that the path it had chosen is the only way to survive and prosper. The DPRK has already gained everything it needed while having everything wanted in its hands through an arduous struggle under the harshest sanctions regime created by numerous UN "sanctions resolutions" adopted at the instigation of the U.S during the last several decades. It is only a forlorn hope to consider any chance that the DPRK would be shaken an inch or change its stance by the sanctions of this new kind imposed upon by the hostile forces. As the U.S. launched full-scale provocation against the DPRK across all fields of politics, economy and military, nothing can alter the will and resolve of the army and people of the DPRK to respond by taking resolute retaliatory measures. The DPRK Government solemnly states as follows to cope with the grave situation created by the frantic acts of the U.S. and other hostile forces: First, the DPRK condemns in the strongest terms and totally rejects the anti-DPRK "sanctions resolution" of the UNSC rigged
up by the U.S. and other hostile forces as a wanton infringement upon the sovereignty of the country. The DPRK is taking measures to strengthen the self-defensive nuclear deterrence in order to counter the policy of extreme hostility and nuclear threat against it from the U.S., the biggest nuclear weapons state of the world. Terming these measures "a threat to international peace and security" is a gangster like logic indicating that the rest of the world should either become U.S. colonies serving its interests or fall victim to its aggression. The countries, that openly pursue their ambition to maintain permanent nuclear hegemony by conducting most of the nuclear tests in the world and launching ICBM whenever they please, are adopting illegal and unlawful "sanctions resolutions" to incriminate the DPRK's bolstering of self-defensive nuclear force and enforcing those sanctions over its alleged "violation" of them. This constitutes the height of outrageous double standard. As long as the U.S. hostile policy and nuclear threat continue, the DPRK, no matter who may say what, will never place its self-defensive nuclear deterrence on the negotiation table or flinch an inch from the road chosen by itself, the road of bolstering up the state nuclear force. Second, now that the U.S. did forge the "sanctions resolution" by manipulating the UNSC to oblitate the DPRK's sovereignty and rights to existence and development, the DPRK will move into its resolute action of justice as it had already clarified. The U.S. is acting absurd by resorting to the anachronistic sanctions and pressure campaign against the DPRK, instead of appreciating the strategic status of the DPRK and paying proper attention to its repeated warnings. The unwise conduct of the U.S. will only speed up its own extinction. As the gangsters of the U.S. remain unabated in their mean and heinous provocation, the DPRK will further increase the strength of justice to thoroughly eradicate the cause of war and aggression and never back away from this fight to a finish. Third, the DPRK will make the U.S. pay dearly for all the heinous crime it commits against the state and people of this country. The U.S. once waged a tragic war that plunged this land into a sea of blood and fire, and has been leaving no stone unturned to oblitate the DPRK's ideology and system century after century. The U.S. is sadly mistaken if it considers its mainland a safe haven for being on the other side of the ocean. Those countries which were offered "thanks" from the U.S. as a reward for taking part in the conspiracy to invent the heinous "sanctions resolution" against the DPRK through their backdoor arrangement this time, too, would never be able to evade the responsibility for increasing the tensions on the Korean peninsula and jeopardizing peace and security of the region. If the U.S. fails to act with discretion, persisting in its reckless attempts to stifle the DPRK, we will not waver or hesitate to use any form of ultimate means. The DPRK will hold fast to the line of simultaneously developing the two fronts, the lasting banner of defending peace, and continue to march straight forward to the end of the road chosen by itself without the slightest deviation.” (KCNA, “Statement of DPRK Government,” August 7, 2017)

KPA General Staff statement: “Timed to coincide with the fabrication of the heinous "sanctions resolution" against the DPRK at the UN, the U.S. war-thirsty forces are engrossed in war hysteria without discretion. In the U.S. Trump is talking rhetoric without hesitation that "he will not rule out a war against the north rather than taking a folded-arm approach towards its development of long-range nuclear missile advancing with a rapid speed" and "even if a war breaks out, it will be fought on the Korean peninsula and even though thousands are killed, they will be there, not in the U.S. mainland." U.S. Ambassador to the UN Haley is openly saying that the "U.S. has the inexhaustible power" and "it will exercise the right to all the military options." An assistant to the President for National Security is saying that "if the north has access to the nuclear weapons capable of threatening the U.S., it is an intolerable thing for the president. Therefore, the U.S. is preparing all the military options including a fresh preventive war for neutralizing the north's nuclear strike capabilities." The military warmongers of the Pentagon such as Secretary of Defense Mattis, Chairman of the U.S. Joint Chiefs of Staff Dunford and commander of the U.S. combined special warfare are chiming in, unhesitatingly talking about the necessity of the "beheading operation", "preemptive strike at the north", "secret operation", "internal harassing operation" and "special operation." Timed to coincide with this, the 82nd airborne division, the U.S. imperialist forces' only air-dropping one, went into a large-scale airdrop and mobile drill, anticipating its involvement in the Korean front and the 25th light infantry division and the 10th mountain division are running high fever in their drills for getting familiar with the terrain of the Korean peninsula. Navy SEAL which earned an ill-fame across the world and other special
warfare units specializing in terrorist operations were urgently dispatched to south Korea. The plan for bringing strategic assets including B-52, B-1B, B-2A and F-22 formations to south Korea is in the pipeline. At the Edward Air Force Base in California State B-52H formations are busy making preparations for a "secret operation" aimed to create chaos within the depth of the KPA, while staging a drill of dropping PDU-5/B bombs containing propaganda leaflets for psychological warfare. The U.S. plans to bring huge naval forces including its two nuclear aircraft carrier task forces and a nuclear sub to the waters off the Korean peninsula. All these military actions being conducted in the ground, sea and air clearly go to prove that the nuclear war hysteria of the U.S. authorities including Trump has reached an extremely reckless and rash phase for an actual war after crossing the red line. Under the prevailing grave situation, the General Staff of the KPA clarifies at home and abroad its resolute stand as follows to mercilessly smash all sorts of military provocation, being planned by the U.S. imperialist warmongers, with the inexhaustible military might of the powerful revolutionary Paektusan army which has so far been built. 1. The KPA will start the Korean-style preemptive retaliatory operation of justice to wipe out the group of despicable plot-breeders once a slight sign of the U.S. provocation scheming to dare carry out a "beheading operation" against the supreme headquarters of the Korean revolution out of wild calculation is detected. The "beheading operation" being pursued by the U.S. is just an extremely imprudent and heinous operation for "eliminating" the supreme headquarters of the DPRK, which has long been premeditated by the U.S. to "put under its control" Pyongyang where the supreme headquarters of the Korean revolution are located and neutralize the use of nukes and strategic rockets. Once the U.S. shows a sign of starting to carry out the foolhardy plot, we will launch the Korean-style pre-emptive retaliatory operation of justice to annihilate the masterminds of the thrice-cursed operation and all the criminals involved in it. No matter how much specially they have been trained and prepared, the commandos group will be completely eliminated outside the blockade lines of the seas, underwater and air of the DPRK in which its sovereignty is exercised and on the line before the Military Demarcation Line before they reach the supreme headquarters. We have a world's best special operation force, not merely a "team" or platoon or company or battalion in its scale. Once the pent-up indignation of the service personnel of the special operation force of the KPA, which regards it as the greatest mission of the army of the leader and the party and the first maxim of soldiers to devotedly defend the headquarters of the revolution, against the U.S. and other enemies erupts, the U.S. will be forced to suffer an imaginably terrible disaster for the "beheading operation." The world will clearly witness how the fate of Trump and war merchants crying out for "not ruling out a war" and daring attempt to hurt the supreme dignity of the DPRK and eliminate its supreme headquarters will end in miseries once the fully prepared heroic special operation force group of the KPA on standby launches its operation. 2. The provocative "preventive war" the U.S. has devised and plans to execute will be countered with a just all-out war of wiping out all the strongholds of the enemies including the U.S. mainland. The "preventive war" allegedly under the preparations by the security think tank of Trump is an extremely provocative aggression war concept envisaging a sudden strike at the nuclear and rocket bases of the DPRK, which have the U.S. mainland within their striking range, and preventing possible danger of the U.S. Inventors of the "preventive war" admitted themselves that their act is a brigandish military option that can cause an international uproar. Yet, they set the northern half of the Republic, in which the sovereignty of the DPRK is exercised, as the theatre of the "preventive war" and claim it can be an "ideal option" unearthly to them as only Koreans will die there. This is a silly idea bereft of elementary sense, cognition and discretion of those ignorant of how things change, who their rival is and where the trend goes. War is by no means a game. The U.S. should remembered, however, that once there observed a sign of action for "preventive war" from the U.S., the army of the DPRK will turn the U.S. mainland into the theatre of a nuclear war before the inviolable land of the DPRK turns into the one. We do not hide that we already have in full readiness the diversified strategic nuclear strike means which have the U.S. mainland in our striking range. 3. The attempt at "preemptive attack" oft-repeated by the U.S. military warmongers will be mercilessly foiled by the Korean style preemptive attack which will be mounted earlier. Preemptive strike is no longer the monopoly of the U.S. The DPRK has its own style peculiar preemptive strike mode capable of holding back any military preemptive attack of the U.S. in advance as it has made preparations for a do-or-die confrontation with the U.S. imperialist aggressors for decades. It is ridiculous to talk about
preemptive strike at the nuclear and rocket bases of the DPRK. The Korean-style earlier
preemptive attack will burn up all the objects in the areas under the control of the first and third
field armies of the puppet forces including Seoul the moment the U.S. reckless attempt at
preemptive attack is spotted, and will lead to the all-out attack for neutralizing the launch bases of
the U.S. imperialist aggression forces in the Pacific operational theatre together with the
simultaneous strike at the depth of the whole of the southern half. All the strike means to be
involved in the Korean-style earlier preemptive strike are ready to open fire of justice by order
which can be made any moment. 4. The U.S. "secret operation" targeting the creation of
disorder inside the DPRK and a regime change in it will be foiled by its all-people resistance.
The "secret operation" touted by the U.S. policy-makers is a foolish scheme aimed at bringing
down the social system of the DPRK, in combination with psychological warfare after creating
disarrangement with such disorderly conducts as murder, arson, destruction with the use of rogue-
like special commandoes to be infiltrated into the DPRK. In order to realize this scheme, a large-
size bomb-dropping drill for psychological warfare is being conducted in the U.S. mainland. The
"secret operation" is a type of special operation which the U.S. applied to countries in Mid-east
like Iraq and Libya and several other countries in Africa and Europe. The anti-U.S. resistance of
all the people including three million Children's Union members and five million youths will
smash to pieces the "secret operation" which the U.S. dreams to conduct in the DPRK. A saying
goes that a war with full knowledge of oneself and one's rival will emerge ever-victorious but a
war without knowledge of oneself and one's rival would always end in loss. The U.S. has gone
hysteric, being quite unaware of the army and people of the DPRK. The DPRK is an invincible
ideological power in which all the service personnel and people are united around their leader in
single mind and a country of an impregnable fortress in which all the people are armed and the
whole country has been fortified. The U.S. policy-makers have no idea that the country on a
declining slope is none other than the American empire where they reside. Herein lies their
tragedy. This means that the U.S. is bound to meet a miserable end as it goes helter-skelter without
knowledge of itself and its rival. Those who make their way to this land for their dirty dream can
never be scot-free as the entire army and people tightly hold arms with strong hatred and hostility
toward the U.S. The officers and men of the Korean People's Army and the members of the
Worker-Peasant Red Guards and the Young Red Guards replete with the transparent spirit of
devotedly safeguarding the leader and defending the country are waiting for the time of do-or-die
battle while closely following the every move of the U.S. imperialist aggressors. The U.S. should
not forget even a moment that its mean and crafty attempt at an aggression war against the DPRK
will further strengthen the intensity of the military counteraction of the Korean People's Army.
Should the U.S. finally opt for a reckless military adventure, defying the stern warning of our
revolutionary armed forces, the tragic end of the American empire will be hastened." (KCNA,
"U.S. War Hysteria Will Only Bring Miserable End of American Empire: Spokesman for KPA
General Staff," August 8, 2017)

North Korea has successfully produced a miniaturized nuclear warhead that can fit inside its
missiles, crossing a key threshold on the path to becoming a full-fledged nuclear power. U.S.
intelligence officials have concluded in a confidential assessment. The new analysis completed
last month by the Defense Intelligence Agency comes on the heels of another intelligence
assessment that sharply raises the official estimate for the total number of bombs in the communist
country’s atomic arsenal. The U.S. calculated last month that up to 60 nuclear weapons are now
controlled by North Korean leader Kim Jong Un. Some independent experts believe the number of
bombs is much smaller. The findings are likely to deepen concerns about an evolving North
Korean military threat that appears to be advancing far more rapidly than many experts had
predicted. U.S. officials last month concluded that Pyongyang is also outpacing expectations in its
effort to build an intercontinental ballistic missile capable of striking cities on the American
mainland. While more than a decade has passed since North Korea’s first nuclear detonation,
many analysts believe it would be years before the country’s weapons scientists could design a
compact warhead that could be delivered by missile to distant targets. But the new assessment, a
summary document dated July 28, concludes that this critical milestone has already been reached.
“The IC [intelligence community] assesses North Korea has produced nuclear weapons for
ballistic missile delivery, to include delivery by ICBM-class missiles,” the assessment states, in an
physical actions,” in the wake of new preemptive strike if there were any signs of U.S. provocation, Reuters reported, quoting state that Pyongyang was consid immediately clear what Trump was responding to. A North Korean military spokesman said today gone “beyond a normal state,” he twice repeated the “fire and fury” warning. It was not reporters at his Bedminster, N.J., gold course, said North Korea will face a devastating response if its threats continue. “They will be met with the fire and fury and frankly power, the likes of which this world has never seen before,” Trump said. Earlier today, North Korea described a new round of United Nations sanctions as an attempt “to strangle a nation” and warned that in response “physical action will be taken mercilessly with the mobilization of all its national strength.” Determining the precise makeup of North Korea’s nuclear arsenal has long been a difficult challenge for intelligence professionals because of the regime’s culture of extreme secrecy and insularity. The country’s weapons scientists have conducted five nuclear tests since 2006, the latest being a 20- to 30-kiloton detonation on Sept. 9, 2016, that produced a blast estimated to be up to twice that of the bomb dropped on Hiroshima, Japan, in 1945. “What initially looked like a slow-motion Cuban missile crisis is now looking more like the Manhattan Project, just barreling along,” said Robert Litwak, a nonproliferation expert at the Woodrow Wilson International Center for Scholars and author of “Preventing North Korea’s Nuclear Breakout,” published by the center this year. “There’s a sense of urgency behind the program that is new to the Kim Jong Un era.” While few discount North Korea’s progress, some prominent U.S. experts warned against the danger of overestimating the threat. Siegfried Hecker, director emeritus of the Los Alamos National Laboratory and the last known U.S. official to personally inspect North Korea’s nuclear facilities, has calculated the size of North Korea’s arsenal at no more than 20 to 25 bombs. Hecker warned of potential risks that can come from making Kim into a bigger menace than he actually is. “Overselling is particularly dangerous,” said Hecker, who visited North Korea seven times between 2004 and 2010 and met with key leaders of the country’s weapons programs. “Some like to depict Kim as being crazy — a madman — and that makes the public believe that the guy is undeterable. He’s not crazy and he’s not suicidal. And he’s not even unpredictable. The real threat,” Hecker said, “is we’re going to stumble into a nuclear war on the Korean Peninsula.” In the past, U.S. intelligence agencies have occasionally overestimated the North Korean threat. In the early 2000s, the George W. Bush administration assessed that Pyongyang was close to developing an ICBM that could strike the U.S. mainland — a prediction that missed the mark by more than a decade. Recently, however, analysts and policymakers have been taken repeatedly by surprise as North Korea achieved key milestones months or years ahead of schedule, noted Jeffrey Lewis, director of the Center for Nonproliferation Studies’ East Asia Nonproliferation Program. There was similar skepticism about China’s capabilities in the early 1960s, said Lewis, who has studied that country’s pathway to a successful nuclear test in 1964. “There is no reason to think that the North Koreans aren’t making the same progress after so many successful nuclear explosions,” Lewis said. “The big question is why do we hold the North Koreans to a different standard than we held [Joseph] Stalin’s Soviet Union or Mao Zedong’s China? North Korea is testing underground, so we’re always going to lack a lot of details. But it seems to me a lot of people are insisting on impossible levels of proof because they simply don’t want to accept what should be pretty obvious.” (Joby Warrick, Ellen Nakashima and Anna Fifield, “U.S.: North Korea Has Missile-Ready Nuclear Weapon,” Washington Post, August 9, 2017, p. A-1)

President Trump used his harshest language yet to warn North Korea that it will be “met with fire and fury and frankly power, the likes of which this world has never seen before,” if it does not stop threatening the United States. “North Korea best not make any more threats,” Trump told reporters at his Bedminster, N.J., golf club, where he is vacationing. Saying that the threats had gone “beyond a normal state,” he twice repeated the “fire and fury” warning. It was not immediately clear what Trump was responding to. A North Korean military spokesman said today that Pyongyang was considering a plan to fire missiles at Guam and that it would carry out a preemptive strike if there were any signs of U.S. provocation, Reuters reported, quoting state media. Earlier in the day, North Korea said it would “ruthlessly take strategic measures involving physical actions,” in the wake of new economic sanctions approved Saturday by the U.N. Security
Council. Yesterday, Pyongyang threatened retaliation against the United States “thousands of times.” Trump’s statement also followed a report in The Washington Post that North Korea has successfully produced a miniaturized nuclear warhead that can fit inside its ballistic missiles, crossing a key threshold on the path to becoming a full-fledged nuclear power. The report quoted a confidential assessment by U.S. intelligence officials. Trump’s late-afternoon statement today came after he took to Twitter in the morning to amplify a Fox News report, based on anonymous sources, that U.S. spy satellites had detected North Korea loading two cruise missiles on a patrol boat on the country’s coast in recent days. Without adding any comment of his own, Trump, who regularly decries leaks to the media, retweeted to his more than 35 million followers a link to the day-old story, which was featured Tuesday morning on “Fox & Friends,” a program on Fox News. A White House spokesman did not respond to a question about whether Trump’s retweet amounted to a confirmation of the story, which was attributed to unnamed “U.S. officials with knowledge of the latest intelligence in the region.” Trump’s comments drew criticism from senior lawmakers. “The great leaders I’ve seen don’t threaten unless they’re ready to act, and I’m not sure President Trump is ready to act,” Sen. John McCain (R-Ariz.) told a Phoenix radio station. Sen. Benjamin L. Cardin (D-Md.) said the remarks were “not helpful and once again show that he lacks the temperament and judgment” to deal with a serious crisis. “We should not be engaging in the same kind of blustering provocative statements as North Korea about nuclear war.” The escalated rhetoric and talk of war came as the administration is trying to push North Korea toward direct talks. “The strategy has been pretty clear,” said a senior administration official, who spoke on the condition of anonymity to discuss internal policymaking, “to increase economic pressure and diplomatic isolation, with the goal of getting the North Koreans to come to their senses and begin reducing the threat, so that we can have a meaningful dialogue.” “Right now, there is nothing that North Korea is doing that suggests to us that they are willing to have a serious dialogue with us,” the official said. Even if Pyongyang expressed interest, the administration has been intentionally ambiguous about what it would consider a sufficient change by North Korea. The administration has made clear that it is no longer adhering to the policy of previous administrations requiring North Korea to commit to giving up its nuclear weapons before talks can begin. While denuclearization of the Korean Peninsula is the ultimate goal, it is no longer a U.S. prerequisite for talks. Repeating comments he made in the spring, Tillerson last week said the United States is not seeking regime change in North Korea. If Tillerson’s remarks were the carrot, Trump’s are clearly the stick. The White House has said it is “keeping all options on the table” regarding North Korea, including the use of military force. Short of war, the administration is already drawing up plans for additional sanctions, including on North Korean oil imports. “We’re still far short of the kind of pressure that we brought to bear against Iran, or even Iraq” under Saddam Hussein, the senior official said. Trump, who receives daily intelligence briefings, including while on his current 17-day stay in New Jersey, would presumably be in a position to know whether U.S. intelligence believes that the North Koreans did, in fact, load cruise missiles onto a patrol boat recently, and its significance. Asked about the report Tuesday morning on Fox, Nikki Haley, the U.S. ambassador to the United Nations, said she could not comment. “I can’t talk about anything that’s classified, and if it’s in the newspaper, that’s a shame,” Haley said. “It’s incredibly dangerous when things go out to the press like that.” (Karen DeYoung and John Wagner, “Trump Warns N. Korea of ‘Fire and Fury’ If Threats Persist,” Washington Post, August 9, 2017, p. A-8) President Trump threatened to unleash “fire and fury” against North Korea if it endangered the United States, as tensions with the isolated and impoverished nuclear-armed state escalated into perhaps the most serious foreign policy challenge yet of his administration. In chilling language that evoked the horror of a nuclear exchange, Trump sought to deter North Korea from any actions that would put Americans at risk. But it was not clear what specifically would cross his line. Administration officials have said that a pre-emptive military strike, while a last resort, is among the options they have made available to the president. Undaunted, North Korea warned several hours later that it was considering a strike that would create “an enveloping fire” around Guam, the western Pacific island where the United States operates a critical Air Force base. In recent months, American strategic bombers from Guam’s Andersen Air Force Base have flown over the Korean Peninsula in a show of force. Trump’s stark comments went well beyond the firm but measured language typically preferred by American presidents in confronting North Korea, and indeed seemed almost to echo the bellicose words used by Kim. Whether that message
was mainly a bluff or an authentic expression of intent, it instantly scrambled the diplomatic equation in one of the world’s most perilous regions. Supporters suggested that Trump was trying to get Kim’s attention in a way that the North Korean leader would understand, while critics expressed concern that the American president could stumble into a war with devastating consequences. “This is a more dangerous moment than faced by Trump’s predecessors,” said Mark Dubowitz, chief executive of the Foundation for Defense of Democracies, a nonprofit group in Washington. “The normal nuanced diplomatic rhetoric coming out of Washington hasn’t worked in persuading the Kim regime of American resolve. This language underscores that the most powerful country in the world has its own escalatory and retaliatory options.” But Senator Dianne Feinstein, Democrat of California, said it would be counterproductive. “President Trump is not helping the situation with his bombastic comments,” she said in a statement. Senator John McCain, Republican of Arizona and chairman of the Armed Services Committee, also took exception. “All it’s going to do is bring us closer to some kind of serious confrontation,” he told KTAR News radio. In Guam, Governor Eddie Baza Calvo played down the North’s threat to the island in a video address. He said his administration had been in touch with the White House and U.S. military commanders and that there was “no change in the threat level resulting from North Korea events.” The Washington Post reported that American intelligence agencies had concluded that North Korea had miniaturized a warhead that could fit on top of one of its missiles. The Japanese government also said in an annual threat assessment on Tuesday that “it is possible that North Korea has already achieved the miniaturization of nuclear weapons and has acquired nuclear warheads.” But experts said the main problem for North Korea is not miniaturization; the bombs are already judged small enough to fit on a ballistic missile, as a famous picture of Kim with an odd warhead resembling a disco ball seemed to make clear. The real test is whether a warhead can survive the intense heat of re-entry as it plunges through the atmosphere from space, a hurdle North Korea is not believed to have overcome. Even before Trump’s comments, North Korea’s militant response to the sanctions on Tuesday was the strongest indication yet that it could conduct another nuclear or missile test, as it has often done in response to past United Nations sanctions. “Packs of wolves are coming in attack to strangle a nation,” the North Korean statement said. “They should be mindful that the D.P.R.K.’s strategic steps accompanied by physical action will be taken mercilessly with the mobilization of all its national strength,” it added. Trump’s “fire and fury” response echoed the kind of language the North Koreans themselves have used in the past. While Trump’s statement is among the most militant a president has made about North Korea, it may have been aimed as much at Beijing as at Pyongyang. By discussing military options, the administration may be trying to convince China and its president, Xi Jinping, that the status quo is dangerous because it risks war. “It may be a message to Xi Jinping that you have to be doing more than just sanctions at the U.N.,” said Joseph S. Nye Jr., a Harvard scholar who once ran the American government’s National Intelligence Council. “It may be a very rational, thought-out message,” rather than an emotional outburst, he added. But after so many warnings of a trade war with China and other belligerent statements, Trump’s threat will probably be interpreted by Xi as “another thumping-the-table” exercise, said Shi Yinhong, a professor of international relations at Renmin University in Beijing. “I guess Xi would not believe it as more than 30 to 40 percent true,” Shi said of the possibility that Trump would unleash a nuclear strike on North Korea. (Peter Baker and Choe Sang-Hun, “In Chilling Nuclear Terms, Trump Warns North Korea,” New York Times, August 9, 2017, p. A-1)

Trump: “Q. Any comment on the reports about North Korea’s nuclear capabilities? THE PRESIDENT: North Korea best not make any more threats to the United States. They will be met with fire and fury like the world has never seen. He has been very threatening beyond a normal state. And as I said, they will be met with fire, fury, and, frankly, power, the likes of which this world has never seen before.” (White House Office of the Press Secretary, Remarks by the President before a Briefing on the Opioid Crisis, Trump National Golf Club, Bedminster, New Jersey, August 8, 2017)

Japan has upgraded its official warning on North Korea, saying that the threat had entered a “new stage” and that the regime may have already acquired the ability to miniaturize nuclear weapons.
Japan’s annual defense white paper — a hefty document that also highlights China’s “attempts at changing the status quo by coercion” — said that the threat posed by Pyongyang had been reassessed after two nuclear tests and more than 20 testfirings of ballistic missiles since last year’s report. “It is possible that North Korea has already achieved the miniaturization of nuclear weapons and has acquired nuclear warheads,” said the white paper. In its overview of Japan’s defense priorities, the white paper described the security environment as increasingly severe, with “destabilizing factors becoming more tangible and acute”. The report highlighted the test launch carried out by North Korea on July 4, concluding that this was a ballistic missile with intercontinental range. The North Korea warning comes less than a week after Prime Minister Abe Shinzo re-installed Onodera Itsunori as defense minister — a political veteran who has stated publicly that Japan should consider acquiring the technology to strike overseas missile bases. Although it would take many years to develop the technology, such a move would mark a radical shift in Japan’s pacifist defense posture. Facing depressed approval ratings, Abe appears to have put constitutional revision on the back burner. More immediately, he said at the weekend that Tokyo had “no plan” to give Japan’s self defense forces permission to begin the development process that would allow them to strike a North Korean missile base. But some analysts judge that Abe, or a future successor, might not encounter heavy resistance to changes aimed at reducing the threat of North Korea. The procession of missile tests, any one of which would be capable of hitting Japan, has prompted many Japanese municipalities to run evacuation drills — alarming exercises that may harden the public view that Japan should equip itself with more offensive capabilities. Onodera, in his first press conference on returning to the role of defense minister, said that he had been instructed by Abe to review the national defense program guidelines. “I would like to study, with ceaseless effort, a review of the guideline from the perspective of what must be done to protect the lives and peace of the Japanese public,” said Onodera. “Compared to the last time I was defense minister [three years ago], the improvement of North Korea’s ballistic missile ability is amazing,” he added. The 2017 white paper added to last year’s already substantial warnings on China, noting that Beijing “remains poised to fulfil its unilateral demands without compromise”, and the risks this posed to the regional security environment. For the first time, the white paper made specific mention of China’s activities in the Sea of Japan — flights by military aircraft and the fact that the number of scrambles by Japan’s air self-defense forces had increased to a record high in the 12 months to March 2017. (Leo Lewis, “Japan Upgrades North Korea Missile Threat,” Financial Times, August 9, 2017, p. 4)

KPA Strategic Force spokesman’s statement: “Recently, the U.S. test-fired ICBM Minuteman-3 at its Vandenberg Air Force Base in California State targeting the DPRK, the fourth one this year, openly staged an actual nuclear strike drill targeting the strategic objects of the DPRK by mobilizing its nuclear strategic bombers formation stationed at its Anderson Air Force Base on Guam in the Pacific. It is driving the regional situation to an extreme pitch by bringing various kinds of nuclear strategic hardware before the very eyes of the DPRK. The Strategic Force of the KPA has taken special note of such maneuvers. Such military maneuvers of the U.S. may provoke a dangerous conflict under the present extremely acute situation prevailing on the Korean peninsula. Typically, the nuclear strategic bombers from Guam frequent the sky above south Korea to openly stage actual war drills and muscle-flexing in a bid to strike the strategic bases of the DPRK. This grave situation requires the KPA to closely watch Guam, the outposts and beachhead for invading the DPRK, and necessarily take practical actions of significance to neutralize it. In the morning of August 8 the air pirates of Guam again appeared in the sky above south Korea to stage a mad-cap drill simulating an actual war. Supreme Commander of the revolutionary forces of the DPRK Kim Jong Un, estimating the nature of the military action taken by the U.S. forces in the Asia-Pacific region, once recommended examination of a powerful and effective action plan for containing the U.S. imperialists' aggression hardware as the U.S. forces are resorting to inappropriate and reckless military actions in the sensitive area, while going on the rampage in the waters off the Korean peninsula and the Pacific waters. The KPA Strategic Force is now carefully examining the operational plan for making an enveloping fire at the areas around Guam with medium-to-long-range strategic ballistic rocket Hwasong-12 in order to contain the U.S. major military bases on Guam including the Anderson Air Force Base in which the U.S. strategic bombers, which get on the nerves of the DPRK and threaten and
blackmail it through their frequent visits to the sky above south Korea, are stationed and to send a serious warning signal to the U.S. The plan is to be soon reported to the Supreme Command soon after going through full examination and completion and will be put into practice in a multi-concurrent and consecutive way any moment once Kim Jong Un, supreme commander of the nuclear force of the DPRK, makes a decision. The execution of this plan will offer an occasion for the Yankees to be the first to experience the might of the strategic weapons of the DPRK closest. Explicitly speaking again, the strategic weapons which the DPRK manufactured at the cost of blood and sweat, risking everything, are not a bargaining thing for getting acknowledgement from others and for bartering for anything, but they serve as substantial military means for resolutely countering the U.S. political and economic pressure and military threat as what has been observed now. Will only the U.S. have option called "preventive war" as is claimed by it? It is a daydream for the U.S. to think that its mainland is an invulnerable Heavenly kingdom. The U.S. should clearly face up to the fact that the ballistic rockets of the Strategic Force of the KPA are now on constant standby, facing the Pacific Ocean and pay deep attention to their azimuth angle for launch. It should make a proper option so as not to regret today in the future.” (KCNA, “U.S. Should Be Prudent under Present Acute Situation: Spokesman for KPA Strategic Force,” August 9, 2017)

President Trump retweeted messages blaming former President Obama for not doing enough to protect the U.S. from North Korea. Trump first retweeted former U.S. Ambassador to the United Nations and Fox News contributor John Bolton, who blamed former President Obama for increased tensions with North Korea. "Our country [and] civilians are vulnerable today because Barack Obama did not believe in national missile defense. Let’s never forget that," Bolton said in the tweet Trump retweeted. The president also retweeted "The Five," which quoted host Jesse Waters as saying "[Trump]being unpredictable is a big asset, North Korea knew exactly what President Obama was going to do." The president wrapped his retweet storm with a tweet from Bloomberg showing the stock market openings surging. Tensions reached a new high yesterday after it was reported that North Korea had developed a miniaturized nuclear warhead capable of being attached to a missile. Trump responded furiously to that development, telling reporters at his Bedminster, N.J., golf club that if Pyongyang's threats against the U.S. continued, North Korea would "be met with fire and fury like the world has never seen." Today he continued by tweeting about the nuclear arsenal. (Julia Manchester, “Trump Retweets Fox News Takes on North Korea,” August 9, 2017)

Secretary of State Rex Tillerson defended President Trump’s forceful warning to North Korea to stop threatening the United States, and dismissed concerns Guam is in any imminent danger from Pyongyang’s missiles. “What the president is doing is sending a strong message to North Korea in language that Kim Jong Un would understand, because he doesn’t seem to understand diplomatic language,” Tillerson said during an interview with two pool reporters while flying from Malaysia to a scheduled refueling stop in Guam. “I think the president just wanted to be clear to the North Korean regime that the U.S. has the unquestionable ability to defend itself, will defend itself and its allies, and I think it was important that he deliver that message to avoid any miscalculation on their part.” Tillerson said Guam is in no more danger than anywhere else, and naming the island as a target did not deter him from making a scheduled refueling stop. “Well, the North Korean missile capability can point at many directions,” he said. “So Guam is not the only place that can be under threat. No, I never considered rerouting the trip back. And I do not believe that there is any imminent threat, in my own view.” Tillerson said North Korea’s rhetoric shows that the campaign to turn North Korea’s allies against it is working. Tillerson said he knew of no significant changes in the last 24 hours that could speed the move to military action. Nor does he see any reason for a change in strategy. Diplomatic and economic isolation is working, he said, even if it could take a long time to materialize. “I think in fact the pressure is starting to show,” he said. “I think that’s why the rhetoric coming out of Pyongyang has gotten louder and more threatening.” Tillerson said Americans should not worry about the increasingly angry tone displayed in recent days. “I think what the president was just reaffirming is that the United States has the capability to fully defend itself from any attack, and our allies, and we will do so,” he said.
“So the American people should sleep well at night.” (Carol Morello, “Tillerson Backs Trump’s Strong Warnings to North Korea after No Headway with ‘Diplomatic Language,’” Washington Post, August 9, 2017)

Tillerson: “Q: Mr. Secretary, President Trump said that North Korea’s threats against the United States, if they continue, will be met with fire and fury like the world has never seen before. Is this part of a diplomatic strategy or did you find those remarks to be unhelpful? TILLERSON: Well, I think the U.S. and international community with respect to North Korea has actually had a pretty good week. We had a unanimous UN Security Council resolution strengthening sanctions against North Korea with China and Russia joining us in that vote, and then at ASEAN, a lot of strong statements coming out of ASEAN, and I think also reinforced with a global community that has expressed its view that North Korea really needs to stand down this program. And so I think in response to that, North Korea’s rhetoric has just ratcheted up louder and louder and more threatening. So I think the President – what the President is doing is sending a strong message to North Korea in language that Kim Jong-un can understand, because he doesn’t seem to understand diplomatic language. I think the President just wanted to be clear to the North Korean regime on the U.S. unquestionable ability to defend itself, will defend itself and its allies, and I think it was important that he deliver that message to avoid any miscalculation on their part. Q: Well, one of their – one of North Korea’s responses was to say it’s going to direct missiles on Guam. That’s exactly where you are headed right now. Would you consider re-routing? TILLERSON: Well, the North Korean missile capability can point in many directions, so Guam is not the only place that would be under threat. No, I never considered re-routing the trip back, and I do not believe that there is any imminent threat, in my own view. Q: Do you think there’s a longer-term threat, specifically about Guam, against the region in general? TILLERSON: Well, I hope not. Again, what we’re hopeful is that this pressure campaign, which the entire world now has joined us in, and with the engagement of China and Russia, two of North Korea’s closest neighbors – that they can begin to persuade the regime that they needed to reconsider the current pathway they’re on and think about engaging in a dialogue about a different future. Q: Have China and Russia been helpful at all to you in the last 24 hours? Have you spoken with your counterparts and have they helped in any way? TILLERSON: Well, I haven’t spoken to them since we left Manila, which was, I guess, about a day and a half ago. But we had direct discussions in Manila about the situation. I know that they were having talks as well with the representative from North Korea. I think that is evidence that they have very good, open channels of communication to be able to talk to the regime of North Korea, and we hope that they will be encouraging them to stand down their program and abide by the UN Security Council resolutions, which both China and Russia have voted for in the past. So I’m hopeful that they can use their influence – and I think they do have influence with the regime – to bring them to a point of dialogue, but with the right expectation of what that dialogue (inaudible). Q: Has anything happened in the last 24 hours to lead you to believe that we are moving towards a military option perhaps more quickly than anticipated? TILLERSON: Nothing that I have seen and nothing that I know of would indicate that the situation has dramatically changed in the last 24 hours. Q: Do you have any immediate diplomatic plans to de-escalate the situation that could have an impact within days instead of months or years? TILLERSON: Well, we have a very active, ongoing diplomatic effort, most of which is behind the scenes because that’s where diplomacy is most effective. We had very open conversations and our telephone lines remain open, certainly, to China and Russia as well as our allies, and I think publicly, we’ve been pretty clear in our statements directed at the North Koreans as to what we would like to see happen and make clear to them that we do not seek to be a threat to them, but we have to respond to the serious threats that they make towards us. Q: There have been calls for you to launch a new diplomatic effort. Do you feel that a new strategy may be warranted? TILLERSON: I do not. I think the strategy we’re currently on is working. In fact, again, we have now garnered widespread international support, obviously, not just with the UN Security Council resolution, but globally, countries are speaking out and expressing the same view as to what North Korea should do, which is not be a threat to the stability of the region. I think, in fact, the pressure is starting to show. I think that’s why the rhetoric coming out of Pyongyang is beginning to become louder and more threatening. Whether we’ve got them backed into a corner or not is difficult to say, but diplomatically, you never like to have someone in a
corner without a way for them to get out. Q: And what is Pyongyang’s way out?
TILLERSON: Talks. Talks with the right expectation of what those talks will be – will be about. Q: Do you have any advice for Americans? Should they be worried? TILLERSON: I think Americans should sleep well at night, have no concerns about this particular rhetoric of the last few days. I think that the President, again, as commander-in-chief, I think he felt it necessary to issue a very strong statement directly to North Korea. But I think what the President was just reaffirming is the United States has the capability to fully defend itself with any attack, will defend our allies, and we will do so. So the American people should sleep well at night. (DoS, Secretary of State Rex W. Tillerson, Remarks En Route to Guam, August 9, 2017)

Tensions around the Korean Peninsula remain high after North Korea’s recent missile tests followed by its provocative threat to engulf a U.S. territory in a barrage of missiles, a ranking South Korean official said. However, the situation does not represent a crisis, the official from Seoul's presidential office Cheong Wa Dae said, noting the North Korean threat may have been multipurposed but not to incite an actual conflict. "I do not agree with the claim that the Korean Peninsula faces an imminent crisis," the official told reporters. "It is true the situation on the Korean Peninsula is becoming very serious due to North Korea's repeated provocations though many believe they are rather strategic provocations. We are working to fundamentally resolve the North Korean nuclear and missile issues at the earliest date possible, and are working with a belief that the possibility is very high," the official said. "However, I do not believe the situation has reached a state of crisis, and rather think we may turn this into an opportunity to overcome the serious security condition." (Yonhap, “Seoul Says Fundamental Resolution of N. Korea Issue ‘Highly Possible,’” August 9, 2017)

KCNA: “Rim Hyon Su, a Canadian civilian, was released on sick bail according to the decision of the Central Court of the DPRK on August 9, 2017 from the humanitarian viewpoint. He had been under the penalty of indefinite hard labor as he conducted hostile deeds against the DPRK.” (KCNA, “Canadian Rim Hyon Su Released,” August 9, 2017)

8/10/17 General Kim Rak Gyom, commander of the KPA Strategic Force of the Korean People's Army, statement on August 9: "As already clarified, the Strategic Force of the KPA is seriously examining the plan for an enveloping strike at Guam through simultaneous fire of four Hwasong-12 intermediate-range strategic ballistic rockets in order to interdict the enemy forces on major military bases on Guam and to signal a crucial warning to the U.S. On Tuesday [August 8], the KPA Strategic Force through a statement of its spokesman fully warned the U.S. against its all-round sanctions on the DPRK and moves of maximizing military threats to it. But the U.S. president at a golf links again let out a load of nonsense about "fire and fury," failing to grasp the on-going grave situation. This is extremely getting on the nerves of the infuriated Hwasong artillerymen of the KPA. It seems that he has not yet understood the statement. Sound dialogue is not possible with such a guy bereft of reason and only absolute force can work on him. This is the judgment made by the service personnel of the KPA Strategic Force. The military action the KPA is about to take will be an effective remedy for restraining the frantic moves of the U.S. in the southern part of the Korean peninsula and its vicinity. The Hwasong artillerymen of the KPA Strategic Force are replete with a strong determination to fully demonstrate once again the invincible might of the force, which has developed into a reliable nuclear force of the Workers' Party of Korea and the world's strongest strike service, through the planned enveloping strike targeting the U.S. imperialist bases of aggression. The Strategic Force is also considering the plan for opening to public the historic enveloping fire at Guam, a practical action targeting the U.S. bases of aggression. This unprecedented step is to give stronger confidence in certain victory and courage to the Korean people and help them witness the wretched plight of the U.S. imperialists. The Hwasong-12 rockets to be launched by the KPA will cross the sky above Shimane, Hiroshima and Kochi Prefectures of Japan. They will fly 3 356.7 km for 1 065 seconds and hit the waters 30 to 40 km away from Guam. The KPA Strategic Force will finally complete the plan until mid-August and report it to the commander-in-chief of the DPRK nuclear
President Trump escalated his war of words with North Korea by declaring that his provocative threat to rain down “fire and fury” might not have been harsh enough, as nuclear tensions between the two nations continued to crackle. Rejecting critics at home and abroad who condemned his earlier warning as reckless saber-rattling, Trump said North Korea and its volatile leader, Kim Jong-un, have pushed the United States and the rest of the world for too long. “Frankly, the people who were questioning that statement, was it too tough? Maybe it wasn’t tough enough,” he told reporters at his golf club in Bedminster, N.J. “They’ve been doing this to our country for a long time, for many years, and it’s about time that somebody stuck up for the people of this country and for the people of other countries. So if anything, maybe that statement wasn’t tough enough.”

Trump noted that North Korea, which has made significant progress toward developing long-range nuclear weapons, responded to his original warning by threatening to launch a missile strike toward the Pacific island of Guam, an American territory and strategic base. “If he does something in Guam, it will be an event the likes of which nobody has seen before, what will happen in North Korea,” he said. Asked if that was a dare, Trump said: “It’s not a dare. It’s a statement. Has nothing to do with dare. That’s a statement. He’s not going to go around threatening Guam and he’s not going to threaten the United States and he’s not going to threaten Japan, and he’s not going to threaten South Korea. No, that’s not a dare, as you say. That is a statement of fact.”

Trump made his latest comments on North Korea during a pair of televised media events that covered a dizzying array of topics. After nearly a week of his working vacation here, the president was in an expansive mood and seemingly eager to talk and take on all issues. While his press secretary Sarah Huckabee Sanders, held a sign in the back of the room saying “one more question,” Trump kept plowing ahead, taking one after another until he was satisfied.Joining him at the club were Vice President Mike Pence and several aides, including Lt. Gen. H. R. McMaster, his national security adviser, who has been under fire from the alt-right media after purging his staff of several hard-liners thought to be close to Stephen K. Bannon, the president’s chief strategist. Trump said he “absolutely” had confidence in General McMaster. Trump’s rhetoric on North Korea has reached a level that has alarmed allies in Asia and many Americans at home. Investors were unnerved yesterday by the increasing tension. The Standard & Poor’s 500 stock index fell by 1.45 percent as investors sold out of highflying stocks such as Amazon, Facebook and Netflix. It was the sharpest daily decline in the benchmark S.&P. 500 since May 17.

Democrats complained that the president was inflaming the confrontation and called for diplomacy instead. “President Trump’s escalatory rhetoric is exactly the wrong response to dealing with North Korea’s provocative behavior,” said Senator Ed Markey of Massachusetts, the top Democrat on the Foreign Relations Committee’s East Asia Subcommittee. “It unnecessarily heightens the risk of miscalculation and creates the very fog that can lead to war.” More than 60 House Democrats sent a letter to Secretary of State Rex W. Tillerson asking him to restrain the president. “These statements are irresponsible and dangerous, and also senselessly provide a boon to domestic North Korean propaganda, which has long sought to portray the United States as a threat to their people,” the letter said. Former President Jimmy Carter, who has visited North Korea three times as a private citizen, added his voice to the criticism. “In addition to restraining the warlike rhetoric, our leaders need to encourage talks between North Korea and other countries, especially China and Russia,” he said in a statement. He added that all parties must assure the North Koreans that they would forgo “any military action against them if North Korea remains peaceful.” For all the bellicose words, Trump said that he was open to negotiations, as Tillerson has urged. But the president expressed skepticism that talks would lead to a reasonable outcome, given the experiences of his predecessors Bill Clinton, George W. Bush and Barack Obama, none of whom was able to resolve the issue through negotiations. “Sure, we’ll always consider negotiations,” Trump said. “But they’ve been negotiating now for 25 years. Look at Clinton. He folded on the negotiations. He was weak and ineffective. You look what happened with Bush, you look what happened with Obama. Obama, he didn’t even want to talk about it. But I talk. It’s about time. Somebody has to do it.” Trump likewise said he doubted that sanctions passed unanimously by the United Nations Security Council last weekend would ultimately succeed. But he again suggested that he would bargain with China by backing down
President Trump’s aides knew he planned to deliver a tough message to North Korea today, but they did not expect a threat that rivaled the apocalyptic taunts often used by his target, Kim Jong-un. The president’s language, which aides say he had used in private, escalated the long-running dispute with North Korea to a new level and left members of the Trump administration scrambling to explain what he meant. But the process, or lack of one, that led to the ad-libbed comments embodied Trump’s overall approach to foreign policy, an improvisational style that often leaves his national security team in the dark about what he is going to say or do, according to several people with direct knowledge of how the episode unfolded. The president was in a confrontational mood yesterday afternoon after The Washington Post reported that Pyongyang had developed nuclear warheads small enough to be placed on ballistic missiles. His team assumed that he would be asked about North Korea during a scheduled media appearance tied to a meeting the president was planning to hold at his golf club in Bedminster, N.J., about the opioid epidemic. But during a conference call beforehand that focused on North Korea, Trump did not offer a preview of what he planned to say — and aides did not press the president, who resists being told what to say, even on a tinderbox issue that has induced his predecessors to seek the safety of a script. He told his aides only that he wanted to signal to Kim, the North Korean leader, that he was not backing down — while turning up the pressure he has tried to place on China to tame its troublesome neighbor and on-and-off ally. Trump’s aides braced as he began to speak at the opioid event — his arms folded, jaw set and eyes flitting on what appeared to be a single page of talking points set before him on the conference table where he was sitting. The piece of paper, as it turned out, was a fact sheet on the opioid crisis. Sarah Huckabee Sanders, the White House press secretary, said Trump’s national security team was “well aware of the tone of the statement of the president prior to delivery.” “The tone and strength of the message were discussed beforehand,” she said. The words he used, she added, “were his own.” And they revealed what some longtime associates of Trump say is a simmering frustration with the velvet handcuffs slapped on him by John F. Kelly, his new White House chief of staff, who has cracked down on walk-in visitors to the Oval Office and keeps tabs on some of the president’s after-hours phone calls to ensure that he is not being fed bad information or reckless advice. Trump has embraced the new, more disciplined approach of the former Marine general, but he has made it clear that he will not cede control of what he says or tweets to anybody. If nothing else, yesterday’s statement proved that he cannot be muzzled by his staff or decorous diplomatic protocol. The president, people close to him say, believes he has a
better feel for Kim than his advisers do. He thinks of Kim as someone used to pushing people around, and Trump thinks he needs to show that he cannot be pushed. The episode also reflects an evolving and unsettled approach to one of the world’s most dangerous hot spots as Trump and his team debate diplomatic, economic and military options, none of them particularly attractive. The president’s aides are divided on North Korea, as on other issues, with national security veterans like Defense Secretary Jim Mattis and Lt. Gen. H. R. McMaster, the national security adviser, on one side and Stephen K. Bannon, the president’s chief strategist, and his allies on the other. While General McMaster and Mattis consider North Korea a pre-eminent threat that requires a tough response, Bannon and others in the nationalist wing argue that it is really just a subset of the administration’s conflict with China and that Trump should not give more prominence to an unstable rogue operator like Kim. In the North Korea debate, like a similar one over Afghanistan, Bannon has been arguing against what his side considers the overly aggressive approach of the “war party” of General McMaster. While Bannon has his own channel to the president, he has been shut out of most formal discussions of North Korea by the national security team. But neither camp, hawks or doves, advocated language like “fire and fury,” according to the people involved. Among those taken by surprise, they said, was Kelly, who has accompanied the president on his working vacation. The “fire and fury,” line, which echoed biblical passages and President Harry S. Truman’s statement after the United States dropped an atomic bomb on Hiroshima, Japan, in 1945, was Trump’s idea — despite similarities to the end-of-days style of his chief speechwriter, Stephen Miller, people with knowledge of the situation said. Trump has used the phrase repeatedly in private to express his anger at North Korea’s pursuit of nuclear weapons — one of the few public policy problems he has been focused on since his pre-political days in the 1990s. After his comments, Trump headed into an hourlong meeting on opioids, but his national security team huddled to figure out how to proceed. Secretary of State Rex W. Tillerson, who has been trying to induce Pyongyang to negotiate, became the obvious choice to calm the waters, which he did during a refueling stop in Guam, the same island threatened by North Korea. Tillerson told reporters that “Americans should sleep well at night,” and that nothing indicated that relations with North Korea had “dramatically changed in the last 24 hours.” For his part, Trump seemed pleased with the uproar caused by his remarks, and was in good spirits on Wednesday. And some of his aides did not back off from the sharp language. “He’s saying don’t test America and don’t test Donald J. Trump,” Sebastian Gorka, a hard-line adviser and one of the president’s favorite surrogates, told Fox News today. “We are not just the superpower. We were a superpower, we are now a hyperpower. Nobody in the world, especially not North Korea, comes close to challenging our military capabilities.” (Glenn Thrush and Peter Baker, “Trump’s Words Hinting at War Were Offhand,” New York Times, August 10, 2017, p. A-1)

Mattis: “Q: What would North Korea do that would sort of the — prompt any kind of action from the U.S.? SEC. MATTIS: Oh, I won't speculate on that. No, no. No. Q: It says any arms race or conflict that initiates. So what would that mean? What would that mean? MATTIS: I can't really expand on it. Thanks for asking. The DPRK-regime deck will continue to be grossly overmatched by ours, OK, and would lose any arms race or conflict it initiates. Q: ...This morning, the President specifically tweeted out this idea that, when he came into office, one of his first orders was to modernize ... the nuclear arsenal ... as part of improving readiness, et cetera. You talk about the improved readiness when it comes to nuclear infrastructure — the emphasized readiness of the ballistic missile defense, nuclear deterrent forces — you mentioned specifically in your statement. Can you give us any greater detail as to — SEC. MATTIS: For the growing threat, in the first part, I emphasized the readiness of our ballistic missile defense and nuclear deterrent forces, yeah. Q: Right. So can you give us any greater details — since President Trump said, that was one of his first orders, was to improve the existing nuclear readiness — the existing arsenal, can you give us any greater sense as to what's been done during your tenure to try to improve that? MATTIS: No, I don't think I want to tell the adversary what we've done. Yeah, I had to think my way through it. I think it's a very good — it's a very legitimate question.
I think also you're aware that we are reviewing our nuclear posture right now. Obviously, we're reviewing our ballistic missile defense. You know that's going on. We've been very open about it. So there are any number of things underway, but I don't want to get into the specifics. I hope for
South Korea's National Security Council (NSC) strongly urged North Korea to immediately stop provocations and return to the dialogue table, saying dialogue was still possible should the communist state decide to cooperate. "The standing committee of the NSC noted the security condition surrounding the Korean Peninsula was becoming serious due to North Korea's repeated provocations and threats," Park Soo-hyun, a spokesman for the presidential office Cheong Wa Dae, told reporters. "The NSC called on the North to immediately stop all activities that will further escalate tension on the Korean Peninsula." Today's NSC meeting marked a regular session of its standing committee, but the Cheong Wa Dae spokesman noted the latest meeting required long, in-depth discussions due to the seriousness of the current condition surrounding the Korean Peninsula. Also, the meeting involved all top security-related government officials, including both defense and foreign ministers, as well as the head of the National Intelligence Service. A Cheong Wa Dae official earlier noted the ministers and the spy agency chief had often sent their deputies in their place to standing committee meetings in the past. "Noting that military tension or an armed
conflict on the Korean Peninsula will not benefit any country, the NSC standing committee decided to take all necessary steps to ease tension and maintain peace under close cooperation with the United States and other key nations based on the strong joint defense readiness of South Korean and U.S. joint forces,” Park told a press briefing. The Cheong Wa Dae spokesman refused to elaborate on the steps to be taken, citing the sensitivity of such information, but said they "literally meant every possible measure we can take." Also, they apparently included resuming dialogue with the reclusive North. "In addition, the NSC standing committee decided to take active diplomatic measures to help ease tension while keeping the country's door for dialogue with North Korea," Park said. (Yonhap, “Seoul Urges Pyongyang to Stop All Provocations, Says Door for Dialogue Still Open,” August 10, 2017)

Donald Trump’s threat to unleash “fire and fury" on North Korea might have been written by Pyongyang’s propaganda mavens, so perfectly does it fit the North’s cherished claim that it is a victim of American aggression. Not since George W. Bush labeled North Korea part of an “axis of evil” has the nation had such a strong piece of presidential evidence to back up its argument that only nuclear and missile development can counter “hostile” U.S. policies aimed at ending the rule of the latest member of the Kim family of dictators. Trump now runs several risks by matching his rhetoric to that of the North, which has regularly vowed to reduce archrival Seoul to a “sea of fire,” Word choice matters on the Korean Peninsula. A torrent of belligerent warnings by the North in 2013, for instance, including nuclear strike threats against specific U.S. targets, led to an anxious, weeks-long standoff that saw the United States fly its most powerful warplanes — nuclear capable B-2 and B-52 bombers, and F-22 stealth fighters — near the North Korean border. The risk, now as then, is that heated words could cause a miscalculation that might trigger real fighting across the most heavily armed border on earth, a border that’s only a short drive from greater Seoul’s 25 million people. Though it seems unlikely it was directly responding to those comments, the North on Wednesday repeated past warnings that it’s examining operational plans for attacking the U.S. territory of Guam. This is mostly a bluff: North Korea is extremely unlikely to follow through on a suicidal pre-emptive attack on the United States. But there is also almost zero chance that the North will miss the opportunity to put its propaganda specialists to work topping Trump’s threat of total war. Pyongyang, after all, may be the world’s leading producer of such threats — against Seoul, against Tokyo, against Washington, against essentially anything or anyone seen as hostile. As John Delury, an Asia specialist at Seoul’s Yonsei University, tweeted following Trump’s comments, “Trying to out-threaten North Korea is like trying to out-pray the Pope.” Trump now confronts a problem that North Korea has long faced: Over-the-top threats are one thing, but what do you do when you can’t back them up? So far, of course, North Korea has favored smaller scale sneak attacks over following through with its threats to launch missiles into Seoul, let alone a U.S. territory. North Korea will surely continue its nuclear bluster, but Trump cannot bring “fire and fury” without risking the destruction of Seoul, and the deaths of tens of thousands of U.S. troops and citizens in South Korea. Trump’s “fire and fury” line might also hurt his efforts to get China, the North’s economic and diplomatic enabler, to do more to curb Pyongyang’s nuclear ambitions. China, though it does not want a nuclear North Korea, sympathizes with Pyongyang’s claim that it is under real threat from Washington. “The U.S. is trying to tell China, ‘We’re not in this for regime change; we’re not trying to take down (leader) Kim Jong Un; we’re not trying to reunify the Korean Peninsula; what we want is to negotiate their nukes away,’ ” Delury said in an interview. “To use unprecedented, inflammatory language, to threaten war on North Korea because they make threats, undermines the work the U.S. is trying to do to keep the Chinese on board.” (Foster Klug, “Word Choice Matters in Pyongyang: Trump’s Threat Fits with North Korea’s Image of a Hostile U.S.,” Associated Press, August 10, 2017)

Top security advisers of South Korea and the United States agreed to discuss in advance any steps they could take to contain provocative North Korea, Cheong Wa Dae said, apparently suggesting the U.S. will not pre-emptively strike the communist North without informing Seoul beforehand. The agreement came in a telephone conversation between Chung Eui-yong, the head of South Korea's Presidential National Security Office, and his U.S. counterpart H.R. McMaster. The two "discussed current security conditions surrounding the Korean Peninsula caused by North Korean
provocations and heightened tension, and ways to deal with such threats," Cheong Wa Dae spokesman Park Soo-hyun told a press briefing. "The two sides reaffirmed their promise to closely and transparently cooperate on the steps to be taken in each stage to help ensure the security and safety of both South Korea, the United States and their people." The telephone conversation started at 8 a.m. (Seoul time) and lasted 40 minutes. (Yonhap, “S. Korea, U.S. Agree to Discuss All Steps against N. Korea in Advance,” August 11, 2017)

President Trump continued to beat war drums against North Korea and, unexpectedly, said he would consider a military option to deal with an unrelated crisis in Venezuela. But though he declared that the armed forces were “locked and loaded,” there were no indications of imminent action in either part of the world. For all the bellicose language emerging from the president’s golf club in Bedminster, N.J., the United States military was taking no visible steps to prepare for a strike against North Korea or Venezuela. The Pentagon reported no new ships being sent toward the Korean Peninsula or forces being mobilized, nor were there moves to begin evacuating any of the tens of thousands of Americans living in South Korea. The contrast between the heated words and the lack of apparent preparations suggested that Trump may still be counting on a resolution to the standoff with North Korea as it works to develop a nuclear arsenal capable of reaching the United States. After escalating his rhetoric against North Korea twice today, Trump emerged from a late-afternoon meeting with his national security team offering a somewhat more restrained message, vowing to give diplomacy a chance. “Hopefully it’ll all work out,” Trump told reporters. “Nobody loves a peaceful solution better than President Trump, that I can tell you. Hopefully it’ll all work out, but this has been going on for many years.”

Secretary of State Rex W. Tillerson, who traveled to New Jersey today to brief Trump after returning from Asia, said the president’s tough language was part of an overall strategy intended to bring North Korea to the negotiating table. “It takes a combined message there if we’re going to get effective movement out of the regime in North Korea. I think the president’s made it clear he prefers a diplomatic solution,” Tillerson said, standing next to Trump. “What the president’s doing is trying to support our efforts by ensuring North Korea understands what the stakes are.”

The president’s repeated threats against North Korea, starting with his “fire and fury” warning earlier in the week, have fueled deep anxiety in Asia and elsewhere in the world. Australia’s prime minister, Malcolm Turnbull, said, “We stand shoulder-to-shoulder with the United States,” but his New Zealand counterpart, Bill English, hedged, saying his country would consider its options “on its merits.” In Germany, Chancellor Angela Merkel expressed disapproval of Trump’s approach. “I consider an escalation of rhetoric the wrong answer,” she said, adding, “I do not see a military solution to this conflict.” China, the key player in the region, offered a typical statement pleading for restraint and dialogue, asking that all parties “speak and act with caution and do more things that are conducive to de-escalating the tense situation and enhancing mutual trust among parties, rather than relapse into the old path of showing assertiveness and escalating tensions,” as the Foreign Ministry put it in a statement. In a call today, Trump and President Xi Jinping of China maintained their shared commitment to a denuclearized Korean Peninsula and “agreed North Korea must stop its provocative and escalatory behavior,” the White House said in a statement released early August 12. It described the relationship between the two leaders as “an extremely close one, and will hopefully lead to a peaceful resolution of the North Korea problem.”

Trump started the morning with a Twitter message saying the American military was “locked and loaded” for conflict “should North Korea act unwisely.” To reinforce the point, the president later shared a post from the United States Pacific Command stating that it was standing by for orders, should the need arise. “#USAF B-1B Lancer #bombers on Guam stand ready to fulfill USFK’s #FightTonight mission if called upon to do so,” the original tweet said. The president followed up in the afternoon by telling reporters in the first of two media appearances that he hoped the North Koreans “fully understand the gravity of what I said.” He singled out Kim Jong-un, the North Korean leader, saying that Kim has gotten away with destabilizing the region for too long. “This man will not get away with what he’s doing,” the president told reporters before the late afternoon meeting with Tillerson; Nikki R. Haley, the ambassador to the United Nations; and Lt. Gen. H. R. McMaster, the national security adviser. “If he utter one threat in the form of an overt threat” or takes action against the United States territory of Guam or against America’s allies, “he will truly regret it and he will regret it fast.” As a practical matter, Trump’s comments do not necessarily indicate a change in military
readiness. The motto of American forces based alongside allied troops in South Korea has long been “Ready to Fight Tonight,” mainly a slogan emphasizing preparedness rather than a statement of hostility. United States Navy officials said today that despite Mr. Trump’s heightened rhetoric, the Navy had not repositioned any ships near the Korean Peninsula, nor were there any plans to do so, which would be a prelude to an American strike. The business-as-usual posture from the Pentagon does not necessarily mean that the American military is not ready to strike North Korea, or defend American allies in the event of a Pyongyang strike. The nearly 25,000 American troops serving in South Korea pride themselves on being in a constant state of alert. But military officials say that given how quickly North Korea could retaliate against an American strike — and that retaliation could encompass an attack on Seoul, home to more than 130,000 Americans — it is doubtful that the Defense Department would advise a strike without first moving assets and organizing an evacuation. “It’s a couple of dogs barking at each other with a chain-link fence in the middle,” said Adm. Dennis C. Blair, the retired head of the Pacific Command and a former director of national intelligence. Any operation would involve extensive preparations and consultations, he noted. “You’d know that something big is afoot, and that is simply not the case now. In answer to the question, are we about to go to war? I’d say no.” The Trump administration has repeatedly said its diplomatic initiative to pressure North Korea into abandoning its nuclear weapons and ballistic missile program is still in its early phases, with much work remaining to be done. If Trump was hoping his sharp warnings would provoke a response from China, he chose an odd moment. Chinese leaders, including Xi, are largely focused on domestic politics. Top officials have gathered at Beidaihe, a seaside retreat more than 170 miles east of Beijing, to map out a once-every-five-years leadership reshuffle of the ruling Communist Party to take place this fall.

Bonnie S. Glaser, a senior adviser for Asia at the Center for Strategic and International Studies in Washington, said Chinese leaders would probably conclude that both Washington and Pyongyang are dangerous and unpredictable. “It’s unlikely that Xi will seek support from his colleagues for greater cooperation with an unpredictable U.S. president,” she said. Analysts said that Beijing’s role in resolving the current crisis might be limited. “It’s unclear Beijing would have much of a role right now beyond their usual platitudes calling on all parties to exercise restraint,” said Ely Ratner, a senior fellow at the Council on Foreign Relations. “Neither Washington or Pyongyang is interested in the diplomatic solution Beijing has put on the table.” (Peter Baker, “As World Waits, President Warns Forces Are Ready,” New York Times, August 12, 2017, p. A-1)

Trump: “Q  Mr. President, what did you mean by military solutions are locked and loaded as it relates to North Korea? THE PRESIDENT: Well, I think it's pretty obvious. We are looking at that very carefully, and I hope that they are going to fully understand the gravity of what I said. And what I said is what I mean. So hopefully they'll understand, Peter, exactly what I said and the meaning of those words. Those words are very, very easy to understand. Q  Any progress on the diplomatic backchannel? THE PRESIDENT: Well, we don't want to talk about progress, we don't want to talk about backchannels. We want to talk about a country that has misbehaved for many, many years — decades, actually — through numerous administrations. And they didn't want to take on the issue, and I have no choice but to take it on, and I'm taking it on. And we'll either be very, very successful quickly or we're going to be very, very successful in a different way, quickly. Q  Angela Merkel says she sees no military solution to a fight with North Korea. Why is she wrong? THE PRESIDENT: Well, I think maybe she's speaking for Germany. Let her speak for Germany. She's a friend of mine, she's a very good person, a very good woman. She's a friend of Ivanka. Perhaps she's referring to Germany. She's certainly not referring to the United States, that I can tell you. Q  Mr. President, you've said you want to send a strong message to North Korea. What do you say to your critics who say that your rhetoric is actually raising the tension? THE PRESIDENT: Well, you know, my critics are only saying that because it's me. If somebody else uttered the exact same words that I uttered, they'd say, "What a great statement, what a wonderful statement." They're only doing it — but I will tell you, we have tens of millions of people in this country that are so happy with what I'm saying — because they're saying, finally we have a President that's sticking up for our nation and, frankly, sticking up for our friends and our allies. And this man will not get away with what he's doing, believe me. And if he utters one threat, in the form of an overt threat — which, by the way, he has been uttering for years, and his family has been uttering for years — or
North Korea’s prospective test also includes some maneuvering room for a possible compromise, South Korean analysts said. North Korea said the missile launches were still in the planning phase and would not be finalized until later this month, raising the possibility of delay or cancellation. The four Hwasong-12 intermediate-range ballistic missiles to be aimed toward the vicinity of Guam, home to a strategic American base, would fly 2,085.7 miles in 17 minutes, 45 seconds, North Korea said in announcing the plan. The missiles would splash down 18.6 to 24.8 miles from Guam’s coast, the North said. “By revealing this detailed plan, North Korea is trying to show that

North Korea’s threat to test-fire ballistic missiles soon near the American territory of Guam deepened the challenge confronting the Trump administration: how to defang Pyongyang’s missile programs without risking all-out war. President Trump has made clear that his goal is to deny North Korea the capability to field a long-range nuclear-tipped missile that could strike the United States. And though the Pentagon still hopes for a diplomatic solution, highly classified military options are at the ready, last seriously debated when the Clinton administration pondered pre-emptive action to try to thwart North Korea’s nuclear program. Even a limited strike against a North Korean missile on its launching pad or the shooting down of a missile in midair would pose risks that the North’s leader, Kim Jong-un, might retaliate, setting off a spiral of escalation that could plunge the Korean Peninsula into war. “In the event of a first strike against Kim, even a non-nuclear option, it is highly likely that Kim would retaliate at least conventionally against...
South Korea,” said James Stavridis, a retired four-star admiral who is now dean of Tufts University’s Fletcher School of Law and Diplomacy. “This almost certainly would create an upward spiral of violence which would be extremely difficult to manage or to mitigate.” The administration’s first recourse has been diplomacy. Secretary of State Rex W. Tillerson sought to head off North Korea’s missile program this week by suggesting that the United States could open talks with Pyongyang if North Korea would halt its missile tests. Yesterday, however, North Korea raised the stakes by saying that it was considering a plan to test-fire four intermediate-range Hwasong-12 missiles in international waters near Guam, home to American air and naval bases as well as a Thaad antimissile system. Trump hinted broadly later in the day that he has his own military options in mind. “Obviously we’re spending a lot of time looking at, in particular, North Korea,” he told reporters, “and we are preparing for many different alternative events.” But few of the military options are straightforward, and some former Pentagon officials involved in war planning for North Korea pointed to the complexities. A major consideration would be whether and when to evacuate American and other allied civilians, which is no small feat as Seoul, a city of about 10 million, is within range of North Korea’s rockets and artillery and the North Korean military is also armed with chemical and biological weapons. “With all this talk, what I worry about is a serious miscalculation,” said James D. Thurman, a retired Army general who served as the top United States commander in South Korea from 2011 to 2013. “Before we start talking about all these military options, we have to decide what are we going to do with the U.S. citizens over there.” He estimated that at least a quarter-million Americans would have to be moved. If the United States was prepared to go beyond a limited strike, it could conduct a surprise attack on North Korea’s missile garrison and weapon storage areas, using American aircraft stationed in Guam, in Japan and on aircraft carriers as well as strategic bombers that would be refueled in flight. American officials, however, do not have high confidence that the military could find and destroy North Korea’s entire arsenal of long-range missiles and nuclear warheads. It would be up to American missile defenses to knock out any that survived and that North Korea might use to attack the United States or its allies. North Korea could also use its artillery, rockets and special operations forces to attack South Korea. To better defend against the threat, the United States could deploy more of its own artillery, counterbattery and reconnaissance aircraft to South Korea and send more air and naval forces to the region. But that would forfeit any element of surprise. “I can’t underscore enough how unappealing all the military options are,” said Christine Wormuth, the Pentagon’s top policy official at the end of the Obama administration. “This wouldn’t end well. The U.S. would win, but it would be ugly.” Diplomatic efforts are also deeply complicated. Unless China believes the United States is serious about using military options to head off North Korea’s emerging missile threat, it may be difficult to gain the cooperation from Beijing needed to fashion a political solution. “I am 100 percent sure from a number of conversations that, as a last resort, he would use military force to deny them the capability to strike the homeland with a nuclear weapon,” said Senator Lindsey Graham, a South Carolina Republican, who met privately with Trump on the issue a month ago. “He has convinced me,” Mr. Graham added. “Now it is up to him to convince the Chinese and North Koreans.” To prevent nuclear attacks from elsewhere, namely Russia and China, the United States has relied on its potent nuclear arsenal. Some experts say the approach could also work with North Korea — a “least-bad option,” said Jeffrey A. Bader of the Brookings Institution. But Trump has indicated that he does not want to rely on deterrence for a country he sees as bellicose and unpredictable. Discouraging the enemy from massive escalation has worked even in the midst of war. During the 1991 Persian Gulf War, the administration of George Bush led an effort to push Iraqi forces out of Kuwait while dissuading Saddam Hussein from employing chemical weapons. The Iraqis were warned shortly before the conflict by Secretary of State James A. Baker III that they would pay a heavy price if they used weapons of mass destruction. The Iraqi government interpreted that as meaning that the United States would rush to Baghdad to topple their government. The United States could try a similar approach: attacking North Korea’s missiles while warning Kim that his government would be the next target if he dared to strike back. But few analysts are confident he would be restrained. Those urging firmer action assert that a military buildup in and around South Korea could give economic sanctions and diplomacy more time to work while providing American negotiators with more leverage. Graham asserted that diplomatic efforts would fail unless the United States made clear that North Korea’s deployment of an intercontinental missile would cross a “red line” and that
military options were available if the talks faltered. But General Thurman worried that the war of words was fueling tensions and adding to the risk of miscalculation. “We are playing right into Kim Jong-un’s hands,” General Thurman said. “That is what he wants. He wants to be on the world scene.” “I really would want to tamp down this rhetoric, maintain armistice conditions, keep the force ready and,” he said, “not get the herd spooked.” (Michael R. Gordon and Eric Schmitt, “Wrestling with North Korea, Trump Finds Perilous Options,” New York Times, August 11, 2017, p. A-1)

Global Times: “The US and North Korea have both ramped up their threatening rhetoric. The Pentagon has prepared plans for B-1B strategic bombers to make preemptive strikes on North Korea’s missile sites. US Secretary of Defense James Mattis issued an ultimatum to North Korea on Wednesday to "cease any consideration of actions that would lead to the end of its regime and destruction of its people." Meanwhile, North Korea issued plans to fire four intermediate-range missiles to land 30-40 kilometers from Guam and claimed it would finalize the plan by mid-August. Some people in Guam have already expressed panic for the first time after the end of the Cold War. The US has already got the worst of the confrontation with North Korea. Many people believe the possibility of war is very low. If war really breaks out, the US can hardly reap any strategic harvest and North Korea will face unprecedented risks. North Korea aims to propel the US to negotiate with it, while the US wants to put North Korea in check. Neither can achieve its goal, so they compete to escalate tensions, but neither wants to take the initiative to launch a war. The real danger is that such a reckless game may lead to miscalculations and a strategic "war." That is to say, neither Washington nor Pyongyang really wants war, but a war could break out anyway as they do not have the experience of putting such an extreme game under control. In the near future, it would be highly sensitive if US B-1B fighter jets fly over the Korean Peninsula or North Korea launches missiles in the direction of Guam. Both sides would upgrade their alert to the highest level. The uncertainty in the Korean Peninsula is growing. Beijing is not able to persuade Washington or Pyongyang to back down at this time. It needs to make clear its stance to all sides and make them understand that when their actions jeopardize China's interests, China will respond with a firm hand. China should also make clear that if North Korea launches missiles that threaten US soil first and the US retaliates, China will stay neutral. If the US and South Korea carry out strikes and try to overthrow the North Korean regime and change the political pattern of the Korean Peninsula, China will prevent them from doing so. China opposes both nuclear proliferation and war in the Korean Peninsula. It will not encourage any side to stir up military conflict, and will firmly resist any side which wants to change the status quo of the areas where China's interests are concerned. It is hoped that both Washington and Pyongyang can exercise restraint. The Korean Peninsula is where the strategic interests of all sides converge, and no side should try to be the absolute dominator of the region. (Global Times, “Reckless Game over the Korean Peninsula Runs Risk of Real War,” August 10, 2017)

Defense Minister Onodera Itsunori suggested that the Self-Defense Forces could take part in a war between the United States and North Korea if Pyongyang attacks the U.S. island territory of Guam. At a Lower House Security Committee meeting, Onodera said an attack against Guam, a U.S. military hub, would weaken the power of the United States, thereby putting Japan’s existence in danger. In such a case, Japan could exercise its right to collective self-defense, which enables the country to help the United States militarily, he said. “Japan has a role as a shield. The United States has a role of heightening deterrence with its striking power. We cannot rule out the possibility that a U.S. loss of striking power would correspond to a situation that endangers Japan’s existence,” Onodera said in response to questions from Yuichi Goto, a lawmaker of the main opposition Democratic Party. “If the situation meets the three conditions to use force in exercising the right to collective self-defense, we will be able to do so,” Onodera said. It is extremely rare for a Japanese defense minister to refer to the possibility of entering a war, even in general terms. Sakata Masahiro, former director-general of the Cabinet Legislation Bureau, said Onodera’s remarks correspond to the expanded interpretation of a “situation that will endanger Japan’s existence as a country.” However, in order for Japan to recognize such a situation, the
United States must first exercise the right to individual self-defense after it was attacked. “If the United States has not exercised the right to individual self-defense yet, Japan cannot recognize the situation as one that endangers its existence,” Sakata said. Concerns have been raised that the government’s broader interpretation of such a situation will make it easier for SDF to take part in wars abroad. “The situation that endangers Japan’s existence must be interpreted strictly,” Sakata said. “Unless the government does so, the SDF will easily participate in overseas wars.” There are doubts about whether Japan has sufficient capabilities to intercept North Korean missiles that are flying toward waters off Guam. A senior official of the Defense Ministry said it is technically difficult to shoot down such missiles, which would fly over the Chugoku and Shikoku regions in western Japan, with SM3 interceptor missiles loaded on Aegis ships. Japan and the United States are currently jointly developing “SM3 Block 2A” missiles that have longer flying distances and higher accuracy than the SM3 missiles. (Aibara Ryo and Sonoda Koji, “Defense Chief: Japan Could Enter War between U.S., N. Korea,” Asahi Shimbun, August 11, 2017)

Former Ambassador to Washington Lee Tae-sik is being tapped for a repeat run in the job by the Moon Jae-in administration, sources said. President Moon is expected to officially announce his nomination, and will also name Noh Young-min as ambassador to China, government sources said. An experienced diplomat, Lee was vice foreign minister and ambassador to Washington in the Roh Moo-hyun administration but left the job in January 2009, a year after Lee Myung-bak was sworn in as president. During the last presidential election, Lee Tae-sik assisted Moon as a member of a policy think tank. Cheong Wa Dae originally tapped politicians who share Moon’s philosophy instead of career diplomats as ambassadors to the four major powers — the U.S., China, Japan, and Russia. But the presidential office finally decided on Lee. “The prevailing view at Cheong Wa Dae was that we need a person who is well versed in both U.S. affairs and diplomacy,” a senior presidential official said. (Jeong Woo-sang, “Lee Tae-shik Tapped for Fresh Run as Ambassador to U.S.,” August 11, 2017)

Senior American officials sent mixed signals on North Korea as President Trump’s “fire and fury” warning rattled allies and adversaries alike, a sign of his administration’s deep divisions as the outcast state once again threatened to wage nuclear war on the United States. The president’s advisers calibrated his dire warning with statements that, if not directly contradictory, emphasized different points. Secretary of State Rex W. Tillerson stressed diplomacy and reassured Americans that they could “sleep well at night,” while Defense Secretary Jim Mattis said North Korea risked “the end of its regime and the destruction of its people” if it did not “stand down.” North Korea gave no indication that it would do so. In a statement late today, the North Korean military dismissed Trump’s fire-and-fury warning as a “load of nonsense” and said only “absolute force” would work on someone so “bereft of reason.” The military threatened to “turn the U.S. mainland into the theater of a nuclear war” and added that any American strike on North Korean missile and nuclear targets would be “mercilessly repelled.” The statement also said that the North Korean military would finalize a plan by mid-August to fire four midrange missiles into the waters off the Pacific island of Guam, a United States territory used as a strategic base, to create a “historic enveloping fire.” The spiral of fighting words left the Trump administration debating how to handle a standoff that has defied three presidents and only grown more ominous in recent weeks as North Korea successfully tested intercontinental ballistic missiles for the first time. Neither Tillerson nor Mattis had reviewed in advance Trump’s threat when he said North Korea “will be met with fire and fury like the world has never seen.” And the dissonance in their own follow-up statements reflected the struggle inside the Trump administration. “I don’t think there is a single policy at work,” said Ellen L. Frost, a longtime Asia specialist at the East-West Center, a Honolulu-based research organization. “I’m not even sure that Trump cares about having a consistent policy on any subject.” Instead, she said, the president’s fire-and-fury threat was a play to demonstrate toughness to his political base “followed by more nuanced cleanup operations on the part of Tillerson and Mattis, who are walking a political tightrope.” American allies Japan and South Korea were caught off guard by Trump’s threat, as were other regional players like China and Russia. Analysts reported deep anxiety in the region over the prospect that a war of words could easily turn into a real one. But some discounted Mr. Trump’s comments as the sort of
bombast they have become accustomed to from a president who has publicly assailed not just enemies, but even allies like Germany, Canada and Mexico. The difference is that Germany is unlikely to respond to a presidential tirade with an attack on Guam, as North Korea threatened after Trump’s warning. Tillerson took on the role of soother, telling reporters as he returned from a trip to Asia that he saw no reason to believe that war was imminent. He urged North Korea to engage in talks about its nuclear program. “I think Americans should sleep well at night, have no concerns about this particular rhetoric of the last few days,” Tillerson said as his plane stopped to refuel in Guam, the very island that North Korea threatened to target. He added, “Nothing I have seen and nothing I know of would indicate that the situation has dramatically changed in the last 24 hours.” “North Korea best not make any more threats to the United States,” President Trump said after the isolated nuclear-armed country criticized the United States earlier in the day. Tillerson said Trump simply chose the sort of attention-grabbing words that Kim would use. “What the president is doing is sending a strong message to North Korea in language that Kim Jong-un would understand, because he doesn’t seem to understand diplomatic language,” Tillerson said. Hours later, Mattis issued a written statement that, while not as florid as Trump’s comments yesterday, still held out the possibility of a massive retaliation that could destroy much of North Korea. “While our State Department is making every effort to resolve this global threat through diplomatic means, it must be noted that the combined allied militaries now possess the most precise, rehearsed and robust defensive and offensive capabilities on Earth,” Mattis said. North Korea’s military, he added, “will continue to be grossly overmatched by ours and would lose any arms race or conflict it initiates.” Mattis, in his statement, stressed the international solidarity against North Korea: “Kim Jong-un should take heed of the United Nations Security Council’s unified voice and statements from governments the world over, who agree the D.P.R.K. poses a threat to global security and stability. The D.P.R.K. must choose to stop isolating itself and stand down its pursuit of nuclear weapons.” While the State Department insisted that the administration was speaking with “one voice,” analysts said that voice was not necessarily a consistent one. “Clearly there is not a coordinated messaging strategy,” Evan Medeiros, the managing director at the Eurasia Group and a former Asia adviser to President Barack Obama, said by telephone from Tokyo. “This is being put together incrementally and of all the countries and all the issues you deal with, North Korea is not the one to be kludging together statements by the president and cabinet secretaries because the risk of miscalculation is so high.” Alexander Vershbow, a former ambassador to South Korea, said the Trump administration “policy seems incoherent” and the threat of military action “will likely harden the North Koreans’ stance” and make it more difficult to get China to follow through on its support for the United Nations sanctions. “If denuclearization is still the goal, the only way to get there is through increased Chinese pressure,” Vershbow said. “Since there is no viable military option, the only other course of action is to develop a long-term deterrence and containment strategy — but that means accepting the unacceptable,” North Korea as a nuclear power. Tillerson emphasized today that he is engaged in an ongoing diplomatic effort and that “our telephone lines remain open, certainly to China, Russia as well as our allies.” Tillerson said that his strategy of gradually increasing the diplomatic and economic costs for the North Korean government is working. “I think in fact the pressure is starting to show,” he said. “I think that’s why the rhetoric coming out of Pyongyang has gotten louder and more threatening.” Medeiros questioned whether Trump’s warning, combined with sanctions, would prompt North Korea to return to the negotiating table. “That’s the big strategy question here,” he said. “Trump has clearly calculated that it will. But that’s a huge gamble, and it’s one that it’s not clear to me that the Chinese would necessarily agree with.” (Peter Baker and Gardiner Harris, “U.S. Aides Offer Mixed Messages on Korea Risks,” New York Times, August 10, 2017, p. A-1) Few foreign leaders have courted President Donald Trump as assiduously as the prime minister of Japan, Abe Shinzo. Since Trump’s election victory in November, Abe has been an eager guest at Trump Tower in New York and at Mar-a-Lago. Now, as Trump and Kim Jong Un exchange increasingly fiery words over the North’s nuclear weapons program, Abe’s relationship with the president is being tested. The North’s accelerating military advances — and Trump’s volatile response — could complicate Japan’s close alliance with the United States and Abe’s political future. Abe, analysts say, has sought favor with Trump for two reasons: to blunt the president’s criticism of Japan on trade issues — a recurring theme for Trump during his run for office — and
to ensure the president’s commitment to Japan’s defense. During the campaign, Trump sometimes suggested he would scale back the United States’ global military commitments, a policy that would have left Japan, a U.S. treaty ally, exposed. But now, if anything, Abe faces the opposite problem: a U.S. president who seems overtly eager to confront their mutual adversary, North Korea. “If it looks like the U.S. set off the chain of events that led to escalation, and Abe didn’t use his relationship with Trump to moderate that, it’s easy to imagine that there would be a domestic price to pay,” said Tobias Harris, a Japan analyst at Teneo Intelligence, a political risk consultancy based in New York. The Japanese public has much less appetite for brinkmanship than Trump appears to have, Harris said. Abe, a staunch conservative, has made a career of arguing for a tougher line against North Korea. The growing threat from the North has bolstered his drive to strengthen Japan’s military, which has long been constrained by the country’s war-renouncing constitution. Because of that, the latest escalation of tensions might seem to play into Abe’s hands. Yesterday, North Korea said it was drawing up plans to launch intermediate-range ballistic missiles into waters near Guam. The missiles, it said, would fly over western Japan — reviving memories of a North Korean missile that flew over northern Japan in 1998, causing a national uproar. “The DPRK has already acquired the capabilities of reducing the Japanese archipelago to ashes in a second once it makes up its mind,” the North’s state news agency said in a statement accompanying the Guam plan. Japan is already moving to strengthen its anti-missile defenses, and officials are debating whether to acquire weapons like long-range cruise missiles that would allow the country to strike targets in North Korea, either in retaliation or pre-emptively if it concluded that an attack by the North was imminent. Deploying such weapons would break with decades of precedent, and the idea is contentious. In keeping with the pacifist constitution, Japan’s military is meant to protect the country from direct attack, while its partner the United States handles offensive duties like striking enemy bases — a shield and spear arrangement. Most Japanese appear happy with that division of labor, despite concerns about North Korea, and Abe needs to tread carefully if he hopes to change it. The prime minister’s approval ratings have tumbled in recent months, specialists say, in part because voters believe he is overreaching in his efforts to roll back restrictions on the military, including with controversial proposed changes to the constitution. Polls show that only about one-third of voters support such constitutional changes. “Abe will want to spend his dwindling political capital on his long-held goal of constitutional revision,” James L. Schoff, a senior fellow at the Carnegie Endowment for International Peace, wrote in an article posted yesterday. A “bold move” to acquire offensive weapons, he added, “would undermine this effort.” Abe faces a leadership contest in the governing Liberal Democratic Party next year. His main rival, Kishida Fumio, a former foreign minister, appears to be betting that the public favors a more cautious approach to transforming the military. “In terms of our philosophies as politicians, to put it simply, Abe is a conservative. One might even call him a hawk,” Kishida said yesterday on a television debate program, adding, “I’m a liberal, a dove.” Trump’s combative language on North Korea makes matters trickier for Abe. The president has doubled down on his war of words with Kim’s government, saying a previous threat to rain down “fire and fury” on the North might not have been tough enough. In Japan, such comments have served as a reminder of the risks involved in confronting the North militarily. Despite the North’s recent development of ballistic missiles that experts say could reach the United States, North Korea’s neighbors would probably bear the brunt of its attacks. For that reason, support for military action against the North is low in both South Korea and Japan — a fact that Trump’s statements are hardly helping to change. “There’s growing concern,” said Takesada Hideshi, a specialist on defense issues at the Institute of World Studies at Takushoku University, “about whether the U.S. is really thinking about the security of Japan and South Korea.” (Jonathan Soble, “Neighbor’s Escalation Puts Japanese Premier in a Delicate Position,” New York Times, August 12, 2017, p. A-8)

Bermudez: “Recent commercial satellite imagery reveals several developments suggesting that North Korea may be accelerating the development of the sea-based leg of its nuclear forces. Of particular interest in the imagery is that netting or tarps have been suspended above both the fore and aft decks of the SINPO-class submarine obscuring any activity taking place beneath them. This was last done prior to the July 9, 2016 test of the Pukguksong-1, suggesting that the North may be preparing for a new series of “at sea” test launches, has undertaken modifications or
After a four-day fusillade of apocalyptic threats against North Korea, President Trump left many in Washington and capitals throughout the Pacific wondering whether it was more method or madness. Among those wondering were members of Trump’s own administration. It was not the first time in his unconventional presidency that Trump had unnerved friend and foe alike, but never before had it seemed so consequential. But as with so much with Trump, the line between calculation and impulse can be blurry. In the broadest sense, Trump’s “fire and fury” and “locked and loaded” warnings fit the strategic imperatives of the advisers who gave him classified briefings at his golf club in Bedminster, N.J., over the last week. The president showed resolve in the face of Pyongyang’s defiance, as his aides had counseled, while increasing pressure on China to broker some kind of deal to denuclearize the tinderbox Korean Peninsula. But Trump, who bridles at being stage-managed, ignored their advice to project dignified steadfastness. Carefully calibrated briefings for the president by Lt. Gen. H. R. McMaster, the national security adviser, and Defense Secretary Jim Mattis came out through a Trump bullhorn, magnified and maximized for effect. For perhaps the first time in generations, an American leader became the wild card in a conflict typically driven by a brutal, secretive despot in Pyongyang. “On the U.S. side, the tradition has been steady resolve and preparation,” said Dennis C. Blair, a retired admiral and head of the United States Pacific Command who went on to serve as director of national intelligence. “But now we have a president who reacts to braggadocio with an attempt to top it on his own side. He’s out there in territory he thinks is familiar, which is meeting exaggerated statement with exaggerated statement, convincing the other side that we’re tough, you’re going to fold.” In other words, the magnitude of the challenges that Trump faces has grown dramatically, but his tone has not. And it remains to be seen if the don’t-mess-with-me attitude that cowed Republican primary rivals like Jeb Bush will have a similar effect on a regime that has managed to develop an intercontinental ballistic missile that could reach the United States while making progress toward miniaturizing a nuclear warhead that would fit on top. In this case, Trump has told people around him that he thinks Kim Jong-un, the unpredictable North Korean leader, will ultimately be prodded to cut a deal, and that the bluntness of his language is intended to create a crisis that drives him to negotiate before North Korea perfects a nuclear-tipped missile capable of striking the American mainland. “If Kim were to respond positively, Trump might end up as his best friend,” said Scott Snyder, director of the program on United States-Korea policy at the Council on Foreign Relations. “I think it is as plausible that we could end up with a ‘hamburger summit’ between Trump and Kim as that we will end up in a second Korean War.” While Trump and his staff say his statements reflect a desire to deal with the North Korea problem once and for all, they also have an unmistakable domestic political component, according to people in the president’s orbit. He feels besieged by the investigation into his campaign’s possible collusion with Russia and frustrated by his sinking poll numbers, and he is seeking targets to attack. Asserting his strength abroad in such stark terms when he is so weak at home helps him politically and, more
important, improves his wavering state of mind, according to current and former advisers. The tough talk also seems to appeal to many of his most ardent supporters. As for the effect on North Korea, Blair said the dictatorship has stood down from confrontations when convinced that the United States was serious. “It’s probably good to throw back at them what they throw at us,” he said. “When they think we’re angry, they back off.” To much of the foreign policy establishment in both parties, however, the approach is alarming. “When I was watching the president talk, I thought, ‘Oh, my god, why is he doing this?’” said Senator Dianne Feinstein, Democrat of California and the former chairwoman of the Senate Intelligence Committee. “Anybody who knows anything about this young Korean leader knows it’s going to promote an even more aggressive response.” “I just wished he’d stop it, with the tweeting one day and the next day, it’s something else,” Feinstein added. “Why isn’t the secretary of state the one making the statements? Why didn’t he at least make it at the White House and not some golf course, or wherever he was? He speaks for the whole country, not just for his feelings at the moment. It’s just dangerous.”

Trump’s statements have been as vague as they have been vivid, not clearly defining what his red line would be. What would prompt an American strike? When Trump made his fire-and-fury comment August 8, he said it would come in reaction to a threat to the United States, not necessarily an attack. In subsequent comments, he has said he would react if North Korea launched a strike against American interests, like the Pacific territory of Guam, or United States allies in the region. What would he require as the goal of any negotiations? Would North Korea have to freeze its nuclear program or give it up altogether? Could he live with a deal that merely puts off the problem, like the Iran nuclear agreement brokered by his predecessor that he routinely excoriates? Trump said in recent days that he wanted to “denuke the world,” but many doubt North Korea would ever surrender its weapons now that it has developed them. Some of Trump’s advisers, including Stephen K. Bannon, his chief strategist, have urged him to take a less interventionist stance, but Bannon has been kept out of most of the deliberations. Mattis, for his part, has advised Trump to project strength and resolve. But he has quietly lamented to lawmakers from both parties the absence of military options against North Korea that would not imperil the lives of millions of civilians in South Korea and Japan. And Secretary of State Rex W. Tillerson, who flew to New Jersey to meet with Trump after consulting with leaders in Asia over the past week, has complained privately about the lack of coordination between the White House and his department, which has often been blindsided by the president’s statements. Even some of the president’s own advisers have quietly asked each other in recent days if Trump’s bellicosity toward North Korea is part of some thought-out strategy that they have not been told about or what they suspect is just more on-the-fly instinct. But some aides have found themselves surprised at other moments when Trump has done something unexpected and seemingly random, only to explain his thinking afterward in a way that indicated more calculation than they had thought. Aides do know that after a lifetime in the real estate business, Trump starts a negotiation with an extreme position intended to ensure that the other side meets him not just in the middle but closer to his side. While he has little experience in translating that into international diplomacy, Trump has shown that he is not so wedded to any particular position on almost any issue, meaning he might be more likely to accept a compromise that would seem unthinkable judging by the stark language he uses at the start. Snyder of the Council on Foreign Relations said that Trump could be North Korea’s greatest nightmare and its greatest opportunity. He might be a nightmare, Snyder said, because he would not be constrained by norms that would favor acquiescence over military force. And he might be an opportunity because, Snyder said, “the chances of Kim being able to cut a deal with an unconventional Trump are higher than they would be with a president more sensitive to the politics of nuclear diplomacy with North Korea.” Still, many former diplomats remain deeply skeptical. Ivo H. Daalder, a former ambassador to NATO who is now the president of the Chicago Council on Global Affairs, said the likelihood of forging a workable agreement with North Korea was so slim that it suggested Trump’s language of the past week was meant more for domestic audiences and to show his base that he was tough. “If their bottom line is denuclearization or even eliminating a nuclear capability that can reach the U.S., that strikes me as unrealistic,” Daalder said. “Pyongyang has gone through great effort to acquire this capability, which its leaders judge necessary to ensure their survival. They’re not about to give it up. So that leaves me to think that strong rhetoric is its own purpose.” (Glenn Thrush and Peter Baker, “Leader of U.S. Has a New Role: Wild Card,” New York Times, August 13, 2017, p. A-1)
In a diplomatic gamble, President Trump is seeking to enlist China as a peacemaker in the bristling nuclear-edged dispute with North Korea at the very moment he plans to ratchet up conflict with Beijing over trade issues that have animated his political rise. Trump spoke late August 11 with President Xi Jinping to press the Chinese to do more to rein in North Korea as it races toward development of long-range nuclear weapons that could reach the United States. Xi sought to lower the temperature after Trump’s vow to rain down “fire and fury” on North Korea, urging restraint and a political solution. But the conversation came as Trump’s administration was preparing new trade action against China that could inflame the relationship. Trump plans to return to Washington tomorrow to sign a memo determining whether China should be investigated for intellectual property violations, accusing Beijing of failing to curb the theft of trade secrets and rampant online and physical piracy and counterfeiting. An investigation would be intended to lead to retaliatory measures. The White House had planned to take action on intellectual property earlier but held off as it successfully lobbied China to vote at the United Nations Security Council for additional sanctions on North Korea a week ago. Even now, the extra step of determining whether to start the investigation is less than trade hawks might have wanted, but softens the blow to China and gives Trump a cudgel to hold over it if he does not get the cooperation he wants. While past presidents have tried at least ostensibly to keep security and economic issues on separate tracks in their dealings with China, Trump has explicitly linked the two, suggesting he would back off from a trade war against Beijing if it does more to pressure North Korea. “If China helps us, I feel a lot differently toward trade, a lot differently toward trade,” he told reporters August 10. In their phone conversation on Friday night, Xi stressed that it was “very important” for the two leaders to maintain contact to find “an appropriate solution to the nuclear issue on the Korean Peninsula,” according to a statement carried in the Chinese state-run media. The language indicated China wants to push forward with a diplomatic proposal for North Korea that the Trump administration has brushed aside. The Chinese statement urged the “relevant sides” — a reference to North Korea and the United States — to “avoid words and actions that exacerbate tensions.” It did not explicitly criticize North Korea, which issued its own searing rhetoric all week, including a threat against Guam, and did not draw a clear distinction between Washington and Pyongyang. In its own account of the call, the White House emphasized points of concurrence. “President Trump and President Xi agreed North Korea must stop its provocative and escalatory behavior,” read a statement from the White House issued early Saturday morning. “The presidents also reiterated their mutual commitment to denuclearization of the Korean Peninsula.” If Trump was trying to move Xi toward bolder action against the North, he did so while the Chinese leader is preoccupied with his own domestic political machinations, attending to a once-every-five-year political shake-up in the top ranks of the Communist Party. Xi is believed to be at the beach resort at Beidaihe on the coast east of Beijing, where the leadership conducts a secretive retreat every summer, sometimes emerging casually dressed in open neck shirts and Windbreakers for photographs on the strip of sand along the beachfront. The final stages of the political process to win Xi’s favor for a place on the standing committee of the party, now a seven-member body that makes the final decisions on the nation’s affairs, is underway among the resort’s villas and hotels, China’s political analysts said. The selection will be unveiled at a national congress in Beijing sometime between September and November. Until then, almost all other matters, including foreign policy, are put on hold, the analysts said. Still, the leadership has been vexed that the Trump administration has paid scant attention to China’s proposal for a “freeze for freeze” solution to North Korea. Instead, to China’s irritation, the United States is looking to increase missile defenses in South Korea. In some respects, though, Secretary of State Rex W. Tillerson has tried to please Beijing by pledging that Washington does not seek to overthrow the North Korean leader, and does not plan to send American troops north of the 38th parallel that divides North and South Korea. In rebuffing the “freeze for freeze” proposal, Washington has raised suspicions in Beijing about its true intentions, said Yun Sun, a China expert at the Stimson Center in Washington. Chinese leaders believe the United States sees its true rival as China, a mammoth economy, and not North Korea, one of the poorest countries on earth, Sun said. In this estimation, Washington is merely using North Korea to mount a military containment strategy around China, she said. “The Chinese operate from the conviction that China remains and will always be the No. 1 strategic threat to the U.S., so the issue of North Korea will be used against China — through sanctions, provocations and everything else,” she said. China was also annoyed, Ms. Sun said, that
the United States refuses to discuss a “grand bargain” or “end game” on the future of the Korean Peninsula. Of most interest to China, she said, is the future disposition of American forces in South Korea, now standing at 28,500 troops. The phone conversation between Trump and Xi will be followed by a visit from the chairman of the Joint Chiefs of Staff, Gen. Joseph F. Dunford Jr., who is expected in Beijing August 14. The general’s visit, planned earlier this summer, is the first by a senior American official to Beijing since Tillerson met with Xi in March. Much of the diplomacy between China and the United States has been conducted between Trump’s son-in-law, Jared Kushner, and the Chinese ambassador in Washington, Cui Tiankai. Those talks have concentrated on Cui’s efforts to stave off punishing trade tariffs against China that are gathering momentum in White House discussions. During his two-day visit, General Dunford is likely to use the opportunity to drive home arguments for the Chinese to put more pressure on the Kim government, said Brian McKeon, who was a senior Pentagon official in the Obama administration. A major point of dispute will likely be American plans to deploy more missile defenses in South Korea, he said. China vehemently opposes the Terminal High Altitude Area Defense system, or THAAD, that has already been deployed in South Korea, calling it a threat to its own security. “I would expect that Dunford will make the usual request that they put more pressure on the regime to behave, and to recognize that Kim’s actions threatens our core interests, which means we will have to continue to take measures that Beijing doesn’t like, for example the deployment of Thaad,” McKeon said. (Jane Perlez and Peter Baker, “To Enlist China, Trump Gambles on Dual Fronts,” New York Times, August 13, 2017, p. A-1)

In preparation for North Korea’s possible firing of ballistic missiles toward Guam, the Defense Ministry deployed surface-to-air Patriot Advanced Capability-3 (PAC-3) guided missiles at Ground Self-Defense Force camps in four prefectures in the Chugoku and Shikoku regions. As the trajectory of North Korean missiles fired toward Guam means they would fly over the four prefectures if they were launched, the ministry is preparing for a state of emergency to mitigate a scenario in which shells or debris land in these regions. Trucks carrying equipment for PAC-3 units arrived at the GSDF’s Kochi Camp in Kochi Prefecture at around 2:45 a.m. Soon after, vehicles carrying the launchers arrived and GSDF personnel checked the equipment. PAC-3 units were also deployed at GSDF camps in Matsuyama; Izumo, Shimane Prefecture; and Kaitaichi, Hiroshima Prefecture. Defense Minister Onodera Itsunori yesterday issued an order to destroy North Korean missiles. A destruction order has been in place since August last year. However, because PAC-3 deployment locations have changed, the order was issued anew on procedural grounds. (Yomiuri Shimbun, “PAC-3 Units Deployed in Chugoku, Shikoku,” August 12, 2017)

Kissinger: “For more than 30 years, the world’s response to North Korea’s nuclear program has combined condemnation with procrastination. Pyongyang’s reckless conduct is deplorable. Warnings are issued that its evolution toward weaponization will prove unacceptable. Yet its nuclear program has only accelerated. The August 5 sanctions resolution passed unanimously by the United Nations Security Council marked a major step forward. Still, an agreed objective remains to be established. But the North Korean success in testing a prototype intercontinental ballistic missile eliminates the scope for further equivocation. If Kim Jong Un maintains a nuclear program against the opposition of China and the U.S. and a unanimous Security Council resolution, it will alter the geostrategic relationship among the principal players. If Pyongyang develops a full-scale nuclear capacity while the world dithers, it will seriously diminish the credibility of the American nuclear umbrella in Asia, especially for our allies in Tokyo and Seoul. The long-term challenge reaches beyond the threat to American territory to the prospect of nuclear chaos. An operational North Korean ICBM arsenal is still some time away given the need to miniaturize warheads, attach them to missiles, and produce them in numbers. But Asia’s nations are already under threat from North Korea’s existing short- and intermediate-range missiles. As this threat compounds, the incentive for countries like Vietnam, South Korea and Japan to defend themselves with their own nuclear weapons will grow dramatically—an ominous turn for the region and the world. Reversing the progress Pyongyang has already made is as crucial as preventing its further advancement. American as well as multilateral diplomacy on North Korea has been unsuccessful, owing to an inability to merge the key players’ objectives—especially
those of China and the U.S.—into an operational consensus. American demands for an end to the North Korean nuclear program have proved unavailing. U.S. leaders, including in the military, have been reluctant to use force; Defense Secretary Jim Mattis has described the prospect of a war over Korea as “catastrophic.” Thousands of artillery tubes entrenched within range of the South Korean capital demonstrate Pyongyang’s strategy of holding hostage greater Seoul’s population of 30 million. Unilateral pre-emptive military action by the U.S. would involve a risk of conflict with China. Beijing, even if it temporarily acquiesced, would not long abide an American strategy of determining by itself outcomes at the very edge of China’s heartland, as its intervention in the Korean War of the 1950s demonstrated. The use of military force must be carefully analyzed, and its vocabulary must be restrained. But it cannot be precluded. Considerations such as these have caused the administration’s attempt to enlist China in a diplomatic effort to press Korea toward denuclearization. These efforts so far have had only partial success. China shares the American concern regarding nuclear proliferation; it is in fact the country most immediately affected by it. But while America has been explicit about the goal, it has been less willing to confront its political consequences. Given North Korea’s enormous and disproportionate allocation of national resources to its nuclear-weapons program, abandoning or substantially curtailing it would produce a political upheaval, perhaps even regime change. China surely understands this. Therefore one of the most conspicuous events of current diplomacy is Beijing’s support in principle of North Korean denuclearization. At the same time, the prospect of disintegration or chaos in North Korea evokes at least two major concerns in China. The first is the political and social effects of a North Korean internal crisis on China itself, re-enacting events familiar from millennia of history. The second involves security in Northeast Asia. China’s incentive to help implement denuclearization will be to impose comparable restraints on all of Korea. To be sure, South Korea has no visible nuclear program or announced plans for it, but an international proscription is another matter. China would also have a stake in the political evolution of North Korea following denuclearization, whether it be a two-state solution or unification, and in restrictions on military deployment placed on North Korea. Heretofore, the administration has urged China to press North Korea as a kind of subcontractor to achieve American objectives. The better—probably only feasible—approach is to merge the two efforts and develop a common position jointly pursued with the other countries involved. Statements defining the U.S. goal as bringing Pyongyang to the conference table reflect the assumption that negotiations are their own objective, operating according to their own momentum, separate from the pressures that brought them about and are needed to sustain them. But American diplomacy will, in the end, be judged by the outcome, not the process. Repeated assurances that the U.S. seeks no unilateral advantage are not sufficient for countries that believe the Asian security structure is at risk. So which parties should negotiate, and over what? An understanding between Washington and Beijing is the essential prerequisite for the denuclearization of Korea. By an ironic evolution, China at this point may have an even greater interest than the U.S. in forestalling the nuclearization of Asia. Beijing runs the risk of deteriorating relations with America if it gets blamed for insufficient pressure on Pyongyang. Since denuclearization requires sustained cooperation, it cannot be achieved by economic pressure. It requires a corollary U.S.-Chinese understanding on the aftermath, specifically about North Korea’s political evolution and deployment restraints on its territory. Such an understanding should not alter existing alliance relationships. Paradoxical as it may seem in light of a half-century of history, such an understanding is probably the best way to break the Korean deadlock. A joint statement of objectives and implicit actions would bring home to Pyongyang its isolation and provide a basis for the international guarantee essential to safeguard its outcome. Seoul and Tokyo must play a key role in this process. No country is more organically involved than South Korea. It must have, by geography and alliance relationship, a crucial voice in the political outcome. It would be the most directly affected by a diplomatic solution and the most menaced by military contingencies. It is one thing for American and other leaders to proclaim that they would not take advantage of North Korea’s denuclearization. Seoul is certain to insist on a more embracing and formal concept. Similarly, Japan’s history has been linked with Korea’s for millennia. Tokyo’s concept of security will not tolerate indefinitely a nuclear Korea without a nuclear capability of its own. Its evaluation of the American alliance will be importantly influenced by the degree to which the U.S. management of the crisis takes Japanese concerns into
account. The alternative route of a direct U.S. negotiation with Pyongyang tempts some. But it would leave us a partner that can have only a minimum interest in implementation and a maximum interest in playing China and the U.S. off against each other. An understanding with China is needed for maximum pressure and workable guarantees. Instead, Pyongyang could best be represented at a culminating international conference. There have been suggestions that a freeze of testing could provide an interim solution leading to eventual denuclearization. This would repeat the mistake of the Iranian agreement: seeking to solve a geostrategic problem by constraining the technical side alone. It would provide infinite pretexts for procrastination while “freeze” is defined and inspection mechanisms are developed. Pyongyang must not be left with the impression that it can trade time for procedure and envelop purpose in tactics as a way to stall and thus fulfill its long-held aspirations. A staged process may be worth considering, but only if it substantially reduces the Korean nuclear capacity and research program in the short term. A North Korea retaining an interim weapons capability would institutionalize permanent risks: • that a penurious Pyongyang might sell nuclear technology; • that American efforts may be perceived as concentrating on protecting its own territory, while leaving the rest of Asia exposed to nuclear blackmail; • that other countries may pursue nuclear deterrent against Pyongyang, one another or, in time, the U.S.; • that frustration with the outcome will take the form of mounting conflict with China; • that proliferation may accelerate in other regions; • that the American domestic debate may become more divisive. Substantial progress toward denuclearization—and its attainment in a brief period—is the most prudent course.” (Henry A. Kissinger, “How to Resolve the North Korea Crisis,” Wall Street Journal, August 12, 2017)

8/13/17

Wit: “While the Trump administration’s policy on North Korea is gyrating in all directions—mostly bad—someone in Washington is keeping hope alive. Namely, despite escalating tensions which appear to be approaching a violent breaking point, there might be a peaceful way out of what some pundits are calling a “slow-motion Cuban missile crisis.” Reports emerged last week that American and North Korean diplomats were holding secret meetings in New York City. In fact, the “New York” channel between the United States and North Korea has existed since the early 1990s. For decades after the Korean War, there were no official contacts between the two countries as Washington pursued a policy of isolating Pyongyang. The Reagan administration shifted gears in the late 1980s and began a policy of limited engagement with North Korea because of concerns about its nascent nuclear weapons program and a desire to support South Korea’s policy of reaching out to Pyongyang. American and North Korean diplomats in Beijing held occasional meetings to discuss important issues. But as the crisis over Pyongyang’s nuclear program mounted at the beginning of the Clinton administration, the U.S. decided that it was more convenient for executive branch officials to hop on an airplane shuttle for the short ride from Washington to New York to meet North Korean diplomats at the United Nations than to endure the grueling 14-hour trek to Beijing. Those New York sessions often took place in isolated, dingy basement rooms at UN headquarters beyond the prying eyes of reporters. The New York channel has had highs and lows. In its heyday in the 1990s, frequent meetings laid the groundwork for the 1994 U.S.-North Korea Agreed Framework, the first denuclearization arrangement with the North—as well as other initiatives to improve bilateral relations. The channel’s low point came at the end of the Obama administration, when the North Koreans shut it down after U.S. sanctions for the first time personally targeted Kim Jong Un in July 2016. But the channel had already fallen on hard times, prompting North Korean officials to rename it the “Kenneth Bae” channel since, according to them, the Obama administration only wanted to meet to press for the release of the detained Korean American missionary who spent 18 months in a North Korean jail from 2013 until late 2014. Almost immediately after the election of President Trump, North Korean government officials, meeting with myself and other former U.S. officials in Geneva, stated that they were willing to wipe the slate clean and revive the New York channel once the Obama administration left office. Moreover, they also expressed an interest in starting a security dialogue with the new administration, one that could serve as a stepping-stone to the resumption of formal negotiations for the first time since the Six Party Talks ended in 2008. This wasn’t new news; the concept of “talks about talks” had been discussed in meetings between the North Koreans and former U.S. officials in Geneva, Berlin, London, and Ulan Bator dating back to fall 2013. But it
was important that they were still open to the idea with a new administration entering office. While those contacts have resumed, getting a serious security dialogue off the ground will be much more challenging. First, the North Korean view has been that initial discussions must be held without preconditions. They would not agree to the Obama administration’s demands for much of its last few years in office that Pyongyang sign on to giving up its nuclear program even before discussions were held, a non-starter for any country since it would mean preemptive capitulation. Rather, they insisted that denuclearization could be a subject of discussion for these preliminary talks and might even be addressed in formal negotiations. But as time has gone by, as the North has conducted test after test of missiles and nuclear weapons, and as Pyongyang’s WMD arsenal has grown, it has become clear that achieving denuclearization, if possible at all, would have to be a long-term, not a short-term objective. A second challenge for backchannel talks is to agree to tension-reducing measures intended to create the right political atmosphere that would give formal negotiations some breathing room to move forward. The North has indicated that it could agree to a temporary end to threatening missile and nuclear tests, a requirement Secretary of State Rex Tillerson has frequently mentioned for resuming negotiations. But that would come at a price. The United States would have to cancel joint military exercises with South Korea that Pyongyang finds threatening. For the same reason that the U.S. will not sit at the negotiating table while Pyongyang continues missile and nuclear tests, North Korean Foreign Ministry officials will refuse to negotiate while the U.S. and South Korean militaries practice killing their leaders and Americans fly bombers over the Korean peninsula capable of dropping nuclear weapons on the North. Pyongyang first floated the proposal in a private meeting in Ulan Bator in 2014 and then publicly six months later. It was quickly rejected by the Obama administration. American pundits argued that it would seriously undermine Washington’s ability to protect its ally, South Korea, and didn’t seem to care that it would check Pyongyang’s continued development of missiles and nuclear weapons. However, if Washington had taken the time to discuss the idea with the North Koreans, the U.S. would have learned that they did not mean the complete cancellation of all exercises, only the end of activities intended to show that the U.S. and South Korean could remove Kim Jung Un from power and use nuclear weapons against the regime. As any informed military planner will tell you, that’s possible while also maintaining the readiness of American forces on the Korean peninsula. And had Pyongyang halted testing in 2015, Washington wouldn’t be facing the imminent threat of a North Korean ICBM today. It is unclear whether backchannel contacts can still take us down this peaceful road and help ease tensions. Aside from pressing security challenges, the Trump administration is rightly concerned about securing the freedom of three Americans still detained in North Korean jails, particularly in the aftermath of the late spring release of a fourth detainee—American university student Otto Warmbier—who tragically died soon afterwards. That will not be easy as Washington and Pyongyang hurl threats back and forth. But Mr. Warmbier’s release might never have happened without backchannel discussions between the U.S. and North Korean diplomats. If the three remaining detainees are freed, that might also pave the way to a further easing of tensions and provide some momentum to diplomacy, although the relentless growth of the WMD threat and the deterioration in U.S.-North Korean relations from bad to worse will make it harder to move down this path. There are reasons, however, for both sides to find a way out of this confrontation. The North Koreans face the immediate danger of an armed clash with the U.S. that could lead to the destruction of their country. Easing tensions could also help lessen the North’s dependence on China, a country it distrusts almost if not just as much as the United States, by opening the possibility of better ties with the United States and South Korea. In the long run that might help the North modernize its economy—an important priority for Kim Jung Un. The Trump administration confronts the horrendous prospect of an armed clash that could result in millions of casualties and trillions of dollars in economic damage in South Korea and Japan, triggering a word-wide recession if not depression. But beyond that, Washington’s confrontational and sometimes erratic behavior in dealing with Pyongyang is undermining confidence in its alliance leadership at a time when Asians have serious doubts about America’s commitment to remaining a Pacific power. Most Americans have forgotten or never knew that the Cuban missile crisis, which brought the United States and Soviet Union to the brink of nuclear war, was not solved by public threats or by playing a successful game of nuclear chicken. Rather it was solved through quiet backchannel diplomacy between Robert Kennedy, the president’s brother and
Jean Lee: “A few years ago, when I was a reporter working in Pyongyang, North Korea’s capital, I went to visit a kindergarten. While I was there, I picked up a children’s book called “A Hedgehog Defeats the Tiger.” It was a tale, a North Korean told me, about a feisty little hedgehog that bests a much larger and fiendishly ravenous tiger using the only weapons at its disposal: the small but sharp quills on its back. The tiny but clever hedgehog pounces on the big nose of the blundering tiger, blinding him into submission. “Do you know who the tiger is?” the North Korean asked me, an American, with a slight smirk. From kindergarten classrooms to the halls of power, this is how North Korea views itself: as a scrappy little country that has been bullied by the United States for far too long and is willing to fight back. North Korea takes pride in standing up to its much larger archenemy. That is why the Korean War armistice of 1953 — a truce that was seen in Washington as a failure to bring the conflict to a close and to stop the march of communism in Asia — is celebrated in Pyongyang as Victory Day. To fight the United States to a draw is tantamount to victory, as far as the North Koreans are concerned. If President Trump thinks that his threats last week of “fire and fury” and weapons “locked and loaded” have North Koreans quaking in their boots, he should think again. If anything, the Mao-suit-clad cadres in Pyongyang are probably gleeful that the president of the United States has played straight into their propaganda. They know that their country is a tiny hedgehog, but it seems to have disturbed the tiger. Inside North Korea, this propaganda is everywhere: The big, bad United States is preparing to attack us, and our leader, Kim Jong-un, is building nuclear weapons to defend us. With his threats, Mr. Trump has given Mr. Kim exactly the justification he needs to keep his nuclear and missile programs going, even as his countrymen go hungry. From the time they are toddlers, North Koreans are raised to see the United States as their enemy. At that same kindergarten, there were two rooms devoted to teaching children to hate Americans. The walls of one were plastered with posters depicting American missionaries torturing boys tied to trees and hooked-nose American soldiers setting wild dogs on Korean girls. A second room housed toy weapons with which children practiced stabbing and attacking the “imperialist aggressors.” It’s shockingly violent stuff for 4- and 5-year-olds, but it works. A few years ago Mr. Kim poured millions of dollars into a museum in the farming town of Sinchon that serves as a mecca of anti-Americanism, a house of horrors with room after room cataloging — in full, bloody, life-size detail — the (largely unsubstantiated) war crimes pinned on the Americans. All spring and summer, students are taken by bus to the museum for field trips intended to scare them into hating and fearing the United States. There is method to the madness. Mr. Kim is using the threat of attack from the United States to enforce a sense of unity among North Koreans. He knows that few things work better to inspire nationalism and patriotism than the threat of invasion. (Mr. Trump’s xenophobic presidential campaign suggests that he recognizes that, too.) This propaganda is especially effective with Koreans, whose cultural identity has been shaped by thousands of years of aggression from outside forces: the Chinese, the Mongols, the Japanese, the Americans. That’s why Korea became known as the Hermit Kingdom. For centuries, long before the Korean Peninsula was divided, guarding against foreign infiltration was a national creed. Now in his mid-30s, Mr. Kim inherited in 2011 the leadership of a people who didn’t know anything about him until three years before he took power, and perhaps were disgruntled by another hereditary succession. To maintain power and promote stability, Mr. Kim and his strategists have worked to obtain the modern equivalent of a hedgehog’s quills — nuclear weapons — and the simple narrative that with this “treasured sword,” and the clever wits of his atomic scientists, Mr. Kim will protect his country from imminent destruction by the “marauding” United States. The regime has used this narrative to justify pouring more than a fifth of its meager national budget into defense at a time when millions of North Koreans go hungry every day, according to the World Food Program. The leadership also uses this David vs. Goliath narrative to explain to North Koreans why they must suffer ever-tightening sanctions that, if enforced, will make their already difficult lives even more onerous. Mr. Trump’s fiery rhetoric mainly serves to advance Kim Jong-un’s agenda by giving him more reason and justification to build nuclear weapons under the guise of protecting his people. This is not to say the North Koreans weren’t thrown off by Mr. Trump’s comments. No previous
American president since Harry Truman has returned rhetorical fire with fire quite so enthusiastically, not even George W. Bush when he grouped North Korea in with the “axis of evil” in his 2002 State of the Union speech. And the North Koreans know they would quickly be overwhelmed in a conflict with the United States, which has stationed powerful weaponry in the Pacific and conducted sporadic flyovers of B-52s and B-1 bombers to remind and warn them. But with nuclear weapons, they feel somewhat invincible. North Korea responded to Mr. Trump’s recent threats with a warning that it was devising a plan to fire missiles into waters near Guam, a United States territory with two military bases and 160,000 residents. Whether or not it follows through on that threat, the North will keep test-firing missiles, improving the technology with every launching. The savvy move by Washington would be to find a face-saving way to back down from the escalating rhetoric and to stop giving Kim Jong-un what he wants: propaganda victories and a justification to keep building bombs and missiles. But perhaps Mr. Trump is taking a page out of Mr. Kim’s playbook: He’s drumming up fear and provoking America’s enemies in order to distract from his own problems and establish his reputation as a leader who can defend his people, even if it comes at a cost to global peace and security.” (Jean H. Lee, “What Kim Jong Un Wants,” New York Times, August 13, 2017, p. E-1)

KCNA: “Respected Supreme Leader Kim Jong Un inspected the Command of the Strategic Force of the Korean People’s Army (KPA) on August 14. He waved back to enthusiastically cheering service members and posed for a picture with them. He went round historical mementoes and data displayed at the Kimilsungism-Kimjongilism Study Hall. Going round them, he looked back with deep emotion on the great leadership feats of the brilliant commanders of Mt. Paektu, recorded on every page of the history of the KPA Strategic Force displaying its might with the strength unprecedented in the world as a powerful strike service, symbolic of the dignity and power of Korea. Then he listened to General Kim Rak Gyom’s decision on the Strategic Force’s plan for an enveloping fire at Guam at the command post. He examined the plan for a long time and discussed it with the commanding officers in real earnest. He praised the KPA Strategic Force for drawing up a close and careful plan as planned and intended by the Party and examined the preparations for a [fire]power demonstration. After listening to the commander of the Strategic Force that it is waiting for the order of the Party Central Committee after rounding off the preparations for the enveloping fire at Guam, he said with great satisfaction that the spirit of Hwasong artillerymen is very high and he was freshly determined, seeing by himself the combat preparedness and the sky-high spirit of the Hwasong artillerymen of the large combined unit. He said that the U.S. imperialists caught the noose around their necks due to their reckless military confrontation racket, adding that he would watch a little more the foolish and stupid conduct of the Yankees spending a hard time of every minute of their miserable lot. He said that he wants to advise the U.S., which is driving the situation on the Korean peninsula into the touch-and-go situation, running helter-skelter, to take into full account gains and losses with clear head whether the prevailing situation is more unfavorable for any party. In order to defuse the tensions and prevent the dangerous military conflict on the Korean peninsula, it is necessary for the U.S. to make a proper option first and show it through action, as it committed provocations after introducing huge nuclear strategic equipment into the vicinity of the peninsula, he said, adding that the U.S. should stop at once arrogant provocations against the DPRK and unilateral demands and not provoke it any longer. He said that if the Yankees persist in their extremely dangerous reckless actions on the Korean peninsula and in its vicinity, testing the self-restraint of the DPRK, the latter will make an important decision as it already declared, warning the U.S. that it should think reasonably and judge properly not to suffer shame that it is hit by the DPRK again. He said that if the planned fire of power demonstration is carried out as the U.S. is going more reckless, it will be the most delightful historic moment when the Hwasong artillerymen will wring the windpipes of the Yankees and point daggers at their necks, underlining the need to be always ready for launching to go into action anytime once our Party decide. … Accompanying him were KPA Vice Marshal Hwang Pyong So, director of the KPA General Political Bureau, and Kim Jong Sik, vice department director of the C.C., the Workers’ Party of Korea.” (KCNA, “Kim Jong Un Inspects KPA Strategic Force Command,” August 15, 2017)
Carlin: “The North Korean report that Kim Jong Un has said he will wait and see what the United States does before deciding whether or not to order execution of a plan to envelope Guam with four Hwasong-12 missiles signals a decisive break in the action. This is no mixed message. It is exactly how the North moves back from the edge of the cliff. It’s classic, and anyone paying attention could have seen it coming. This is not a question of parsing the precise language Kim used. It’s the act itself that speaks volumes. Put that together with the fact that the regime hadn’t been mobilizing the population for imminent crisis over the preceding four or five days, and you get a familiar North Korean dance move. Didn’t Kim say he was just giving the Americans a little more time? Of course! He’s not going to say “I surrender” or “I’ve decided that launching missiles would be a bad idea.” This way he can project the aura of the one still in control of the situation, of the one who scored the victory, of the one who kept the region from descending into war. He can be seen as the one who has the whip hand. Who is Kim Jong Un? That seemed to be the core question asked many times this past week. But it was the wrong question. There was no way to answer something like that. The real question, the important question, the one that could be answered was: what were the North Koreans doing from August 9-14 while the US was huffing and puffing over Pyongyang’s threat about Guam? The answer, it turns out, was easy: almost nothing. There were rallies in Pyongyang and the provinces. (The two laggards held their rallies yesterday.) There were reports of youths and students rushing to declare their willingness to enlist in the army. But for the rest of the country, the message was that the way to defeat the Americans was: Stay at work! Produce more! In other words, there was no mobilization of the population in preparation for a military confrontation. Even more telling, although Western media were fixated on Guam during this period, North Korean media barely mentioned it after the initial statements appeared announcing the planning. None of the reports on the rallies mentioned Guam. The focus, instead, was on the August 7 DPRK Government statement issued in response to the new UN Security Council sanctions resolution passed just a few days before. What’s next? At this point, having broken the tension, it would not be unusual for Pyongyang to pivot to diplomacy. Kim had already signaled in early July that the North was open to putting the topics that interested the US—the DPRK nuclear and missile programs—“on the table.” In their Wall Street Journal op-ed, Secretaries Tillerson and Mattis underlined Washington’s interest in negotiations. There are still hurdles to jump over and potholes to avoid, but both sides may now be in position to probe to see if they can take a step down that road. Today, in fact, the North Korean foreign ministry put out a two sentence statement denying that the Americans “being detained” were a topic of US-DPRK talks in the New York channel. But what else does that do? It essentially admits in public that the channel is in operation, and that the Americans could become the topic of conversation at some point.” (Robert Carlin, “Kim Jong Un Steps back from the Nuclear Cliff,” 38North, August 15, 2017)

Tillerson and Mattis: “In the past few months, multiple illegal North Korean ballistic-missile and ICBM tests—coupled with the most recent bellicose language from Pyongyang about striking the U.S., Guam, our allies and our interests in the Asia-Pacific region—have escalated tensions between North Korea and America to levels not experienced since the Korean War. In response, the Trump administration, with the support of the international community, is applying diplomatic and economic pressure on North Korea to achieve the complete, verifiable and irreversible denuclearization of the Korean Peninsula and a dismantling of the regime’s ballistic-missile programs. We are replacing the failed policy of “strategic patience,” which expedited the North Korean threat, with a new policy of strategic accountability. The object of our peaceful pressure campaign is the denuclearization of the Korean Peninsula. The U.S. has no interest in regime change or accelerated reunification of Korea. We do not seek an excuse to garrison U.S. troops north of the Demilitarized Zone. We have no desire to inflict harm on the long-suffering North Korean people, who are distinct from the hostile regime in Pyongyang. Our diplomatic approach is shared by many nations supporting our goals, including China, which has dominant economic leverage over Pyongyang. China is North Korea’s neighbor, sole treaty ally and main commercial partner. Chinese entities are, in one way or another, involved with roughly 90% of North Korean trade. This affords China an unparalleled opportunity to assert its influence with the regime. Recent statements by members of the Association of Southeast Asian Nations, as well as other regional and global voices, have made clear the international community holds one
view regarding North Korea’s provocative and dangerous actions: They must stop. Pyongyang must stand down on those actions. **China has a strong incentive to pursue the same goals as the U.S. The North Korean regime’s actions and the prospect of nuclear proliferation or conflict threaten the economic, political and military security China has worked to build over decades. North Korea’s behavior further threatens China’s long-term interest in regional peace and stability.** If China wishes to play a more active role in securing regional peace and stability—from which all of us, especially China, derive such great benefit—it must make the decision to exercise its decisive diplomatic and economic leverage over North Korea. Our diplomatic approach also proceeds through the United Nations. The Security Council’s recent unanimous vote imposes new sanctions on North Korea and underscores the extent to which the regime has chosen to isolate itself from the international community. This vote, which also had Russia’s support, reflects the international will to confront the North Korean regime’s continuing threat to global security and stability. We urge all nations to honor their commitments to enforce U.N. Security Council sanctions against North Korea and to increase diplomatic, economic and political pressure on the regime, specifically through the abandonment of trade, which finances the development of ballistic and nuclear weapons. The U.S. continues to consolidate international unity on the North Korean issue through increased engagement at the U.N., at regional diplomatic forums, and in capitals around the world. **While diplomacy is our preferred means of changing North Korea’s course of action, it is backed by military options.** The U.S. alliances with South Korea and Japan are strong. But Pyongyang has persistently rebuffed Seoul’s attempts to create conditions whereby peaceful dialogue can occur, and has instead proceeded on its reckless course of threats and provocation. As a result of these dangers, South Korea’s new government is moving forward with the deployment of U.S. Terminal High- Altitude Area Defense against the threat. We commend South Korea’s decision to deploy this purely defensive capability. Installing Thaad launchers on the Korean Peninsula and conducting joint military exercises are defensive preparations against the acute threat of military actions directed against the U.S., our allies and other nations. China’s demand for the U.S. and South Korea not to deploy Thaad is unrealistic. Technically astute Chinese military officers understand the system poses no danger to their homeland. **Absent China using its influence to show the world how a great power should act to resolve such a well-defined problem as North Korea’s pursuit of nuclear weapons and long-range missile capability, others in the region are obliged to pursue prudent defensive measures to protect their people.** China’s Security Council vote was a step in the right direction. The region and world need and expect China to do more. **The U.S. is willing to negotiate with Pyongyang. But given the long record of North Korea’s dishonesty in negotiations and repeated violations of international agreements, it is incumbent upon the regime to signal its desire to negotiate in good faith. A sincere indication would be the immediate cessation of its provocative threats, nuclear tests, missile launches and other weapons tests.** The U.S. will continue to work with our allies and partners to deepen diplomatic and military cooperation, and to hold nations accountable to their commitments to isolate the regime. That will include rigorous enforcement of sanctions, leaving no North Korean source of revenue untouched. In particular, the U.S. will continue to request Chinese and Russian commitments not to provide the regime with lifelines and to persuade it to abandon its dangerous path. As always, we will embrace military preparedness in the defense of our homeland, our citizens and our allies, and in the preservation of stability and security in Northeast Asia. And we will say again here: Any attack will be defeated, and any use of nuclear weapons will be met with an effective and overwhelming response. North Korea now faces a choice. Take a new path toward peace, prosperity and international acceptance, or continue further down the dead alley of belligerence, poverty and isolation. The U.S. will aspire and work for the former, and will remain vigilant against the latter.”

President Moon Jae-in said there cannot be another war on the Korean Peninsula and the North Korean nuclear and missile issues should be resolved peacefully. Moon vowed that the government will make all-out efforts to resolve tension through close cooperation with major allies including the United States. Stressing the top priority of South Korea is maintaining peace, Moon said North Korean issues should be resolved peacefully and that the U.S. government’s
position is the same. “A tragic war can never be allowed to break out on the Korean Peninsula again,” Moon said. “I am sure the U.S. will keep itself calm and respond to the current situation responsibly.” Moon added that peace on the peninsula will not be achieved through the use of arms. Moon’s comments were construed as putting the brakes on the North’s young leader and President Trump, as well as some U.S. politician’s increasingly mentioning various military options including a pre-emptive strike or a war on the peninsula. Later in the day, President Moon held a meeting with Chairman of the U.S. Joint Chiefs of Staff (JCS) Gen. Joseph Dunford at Cheong Wa Dae to discuss how to deal with rising tensions and enhance the two countries’ security cooperation. During the meeting, Moon called on the U.S. to play a leading part in resolving North Korea nuclear issues and the crisis facing the peninsula, according to presidential spokesman Park Soo-hyun. Moon also called on the North to come forward for negotiations after stopping its provocations, apparently considering his previous proposals to hold military and Red Cross talks, which the North has not responded to. In response, Gen. Dunford said the U.S. armed forces are putting top priority on supporting Washington’s diplomatic and economic efforts to better deter the Kim regime, according Park. The top U.S. general noted that the armed forces are also preparing for military options if these efforts fail. Park quoted Dunford as saying that the U.S. will keenly cooperate with South Korea in carrying out any measures; and that the U.S. hopes that the situation will be resolved without a war. At the meeting at Cheong Wa Dae, the general was accompanied by U.S. Forces Korea Commander Gen. Vincent Brooks as well as Marc Knapper, the acting U.S. ambassador to Seoul. From the South Korean government, National Security Office (NSO) head Chung Eui-yong and the deputy commander of the Republic of Korea-U.S. Combined Forces Command (CFC), Gen. Kim Byeong-joon, were present. NSO chief Chung earlier canceled his summer vacation plans amid mounting military tension here.

Regarding the North’s threats to strike areas around Guam, Gen. Dunford said any military action in response to the North’s possible attack will be made by the U.S. president and in the context of the alliance. “Our job is to make sure our leadership has an option available to them,” he said at a press meeting held at the CFC headquarters in Yongsan after his meeting with Moon. “I believe there are two things we are clear about _ one is our responsibility to defend against attack, and two is our requirement to make sure we have a decisive response in the event of a threat.” The general, however, again stressed that Washington’s current policy is focused on diplomatic and economic pressure, and sanctions. “We are seeking a peaceful resolution to the crisis. That is an important message,” he said. Prior to the visit of Gen. Dunford to three Asian countries including Japan and China, the U.S. Department of Defense said in a statement that the visit was to “support Secretary of State Rex Tillerson’s diplomatic and economic campaign to deter North Korea.” Dunford visited Japan before coming to South Korea, and then left for China later after wrapping up his two-day trip here. When asked what he will discuss in China, he said he will require Beijing “not only to do what they did at the U.N. Security Council, which was to vote for sanctions, but to enforce those sanctions.” Earlier in the day, Dunford held separate talks with Defense Minister Song Young-moo at the Ministry of National Defense in Seoul. After the meeting with Song, Gen. Dunford also held short talks with his South Korean counterpart, JCS Chairman Gen. Lee Sun-jin. A statement on the U.S. Joint Staff Facebook page said, “The trip highlights our ironclad commitment to the defense of the Republic of Korea in the face of North Korea’s provocations and threats.” (Jun Ji-hye, “Moon Stresses Peaceful N.K. Resolution,” Korea Times, August 14, 2017)

North Korea’s success in testing an intercontinental ballistic missile that appears able to reach the United States was made possible by black-market purchases of powerful rocket engines probably from a Ukrainian factory with historical ties to Russia’s missile program, according to an expert analysis published today and classified assessments by American intelligence agencies. The studies may solve the mystery of how North Korea began succeeding so suddenly after a string of fiery missile failures, some of which may have been caused by American sabotage of its supply chains and cyberattacks on its launches. After those failures, the North changed designs and suppliers in the past two years, according to a new study by Michael Elleman, a missile expert at the International Institute for Strategic Studies. Such a degree of aid to North Korea from afar would be notable because President Trump has singled out only China as the North’s main source of economic and technological support. He has never blamed Ukraine or Russia, though his

mystery. Elleman was unable to rule out the possibility that a large Russian missile enterprise,
country.” How the Russian
North Korea as “totalitarian, dangerous and unpredictable, and supports all sanctions against this
official in the government of Poroshenko, denied any Ukrainian involvement. “This information is
not based on any grounds, provocative by its content, and most likely provoked by Russian secret
services to cover their own crimes,” Turchynov said. He said the Ukrainian government views
North Korea as “totalitarian, dangerous and unpredictable, and supports all sanctions against this
country.” How the Russian-designed engines, called the RD-250, got to North Korea is still a
mystery. Elleman was unable to rule out the possibility that a large Russian missile enterprise,
Energomash, which has strong ties to the Ukrainian complex, had a role in the transfer of the RD-250
engine technology to North Korea. He said leftover RD-250 engines might also be stored in
Russian warehouses. But the fact that the powerful engines did get to North Korea, despite a raft
of United Nations sanctions, suggests a broad intelligence failure involving the many nations that
monitor Pyongyang. Since President Barack Obama ordered a step-up in sabotage against the
North’s missile systems in 2014, American officials have closely monitored their success. They
appeared to have won a major victory last fall, when Kim ordered an end to flight tests of the
Musudan, an intermediate-range missile that was a focus of the American sabotage effort. But no
sooner had Kim ordered a stand-down of that system than the North rolled out engines of a
different design. And those tests were more successful. American officials will not say when they
captured on to the North’s change of direction. But there is considerable evidence they came to it
late. Leon Panetta, the former C.I.A. director, said on CBS’ “Face the Nation” yesterday that the
North Korean drive to get workable ICBMs that could be integrated with nuclear weapons moved
more quickly than the intelligence community had expected. “The rapid nature of how they’ve
been able to come to that capability is something, frankly, that has surprised both the United States
Another U.S. intelligence official said that the modifications to the RD-250 imports of engines, "one U.S. intelligence official told Reuters. "Instead, we judge they have the mirrored the IISS finding. "We have intelligence to suggest that North Korea is not Russia and probably North Korea is developing to hit the United States likely were made in factories in Ukraine or based International Institute for Strategic Studies that said that the engines for a nuclear missile intelligence officials said on August 15. The assessments derived from the RD-250's. Elleman said the North's into about 2,800 miles, or far enough to fly beyond the American military base at Guam. On June 1, Elleman struck an apprehensive note. He argued that the potent engine clearly hailed from "a different manufacturer than all the other engines that we've seen." Elleman said the North's diversification into a new line of missile engines was important because it undermined the West's assumptions about the nation's missile prowess: "We could be in for surprises." That is exactly what happened. The first of the North's two tests in July of a new missile, the Hwasong-14, went a distance sufficient to threaten Alaska, surprising the intelligence community. The second went far enough to reach the West Coast, and perhaps Denver or Chicago. Last week, the Bulletin of the Atomic Scientists featured a detailed analysis of the new engine, also concluding that it was derived from the RD-250. The finding, the analysts said, "raises new and potentially ominous questions." The emerging clues suggest not only new threats from North Korea, analysts say, but new dangers of global missile proliferation because the Ukrainian factory remains financially beleaguered. It now makes trolley buses and tractors, while seeking new rocket contracts to help regain some of its past glory. (David E. Sanger and William J. Broad, "Tracing of North Korean hands came in September when Kim supervised a ground test of a new rocket engine that analysts called the biggest and most powerful to date. Norbert Brügge, a German analyst, reported that photos of the engine firing revealed strong similarities between it and the RD-250, a Yuzhmash model. Alarms rang louder after a second ground firing of the North’s new engine, in March, and its powering of the flight in May of a new intermediate-range missile, the Hwasong-12. It broke the North’s record for missile distance. Its high trajectory, if leveled out, translated into about 2,800 miles, or far enough to fly beyond the American military base at Guam. On June 1, Elleman struck an apprehensive note. He argued that the potent engine clearly hailed from "a different manufacturer than all the other engines that we’ve seen." Elleman said the North’s diversification into a new line of missile engines was important because it undermined the West’s assumptions about the nation’s missile prowess: "We could be in for surprises." That is exactly what happened. The first of the North’s two tests in July of a new missile, the Hwasong-14, went a distance sufficient to threaten Alaska, surprising the intelligence community. The second went far enough to reach the West Coast, and perhaps Denver or Chicago. Last week, the Bulletin of the Atomic Scientists featured a detailed analysis of the new engine, also concluding that it was derived from the RD-250. The finding, the analysts said, "raises new and potentially ominous questions." The emerging clues suggest not only new threats from North Korea, analysts say, but new dangers of global missile proliferation because the Ukrainian factory remains financially beleaguered. It now makes trolley buses and tractors, while seeking new rocket contracts to help regain some of its past glory. (David E. Sanger and William J. Broad, “Tracing of North Korea to Ukraine Plant,” New York Times, August 14, 2017, p. A-1) North Korea likely has the ability to produce its own missile engines and intelligence suggests it does not need to rely on imports, U.S. intelligence officials said on August 15. The assessment disputes a new study by the London-based International Institute for Strategic Studies that said that the engines for a nuclear missile North Korea is developing to hit the United States likely were made in factories in Ukraine or Russia and probably obtained via black market networks. The New York Times cited the study on August 14. The newspaper's report said that classified assessments by U.S. intelligence agencies mirrored the IISS finding. "We have intelligence to suggest that North Korea is not reliant on imports of engines," one U.S. intelligence official told Reuters. "Instead, we judge they have the ability to produce the engines themselves." The U.S. officials did not disclose any details of what underpinned the assessment on the high-performance liquid-fuelled engines, called RD-250's. Another U.S. intelligence official said that the modifications to the RD-250 that resulted in
improved reliability may have relied in part on foreign scientists recruited by North Korea or been
developed by North Koreans educated in Russia or elsewhere. The IISS study is also being
disputed by some leading independent nuclear weapons experts. “It’s completely wrong,” asserted
Jeffrey Lewis, head of the East Asia Nonproliferation Program at the Middlebury Institute of
Strategic Studies at Monterey, California. Lewis said his research team performed measurements
independent from each other on the same photographs used in the IISS study and determined that
they were of different sizes. They concluded that the motors for the North Korean ICBM likely
were indigenously built. Lewis also pointed to a Jan. 17, 2016, U.S. Treasury announcement of
U.S. financial sanctions on Iranian firms for helping North Korea develop the engine that was
tested in November and most closely resembles the Ukrainian engine. “To me, they don’t look like
those (RD-250s) engines except in the way that all (rocket) engines look,” Lewis said. (Jonathan
Landay, “North Korea Can Likely Make Missile Engines without Imports: U.S.,” Reuters, August
15, 2017) The government of Ukraine confirmed a U.S. media report that the engine of North
Korea's Hwasong-14 intercontinental ballistic missile was Ukrainian in origin and apparently
supplied to the North by Russia. But Ukraine claimed it merely built the engine and blamed Russia
for letting it fall into North Korean hands. According to Radio Free Asia, Yuriy Radchenko of the
State Space Agency of Ukraine told reporters in Kiev on Tuesday that the engine was the same as
the RD-250 manufactured at Ukraine's state-owned Yuzhmash plant until 2001. Radchenko added
that 223 of the engines were made and all were supplied for Russia's space rockets. He denied that
Ukraine sold them to North Korea and added Russia still owns the engines and blueprints. Russia
denied the allegations and claimed that six to 10 engineers from Yuzhmash went to North Korea
from March 30 to June 1 of last year and 12 to 16 others made the same trip a few years ago.
Former Russian deputy prime minister Dmitry Rogozin said on Facebook that any attempt at
reproducing the engines requires the help of Ukrainian experts, who have detailed blueprints and
production knowhow. He claimed the engines may have been smuggled into the North. Ukraine
was the key production base for missiles in the former Soviet Union. (Lee Kil-seong, “N. Korean
Missiles Came from Russia,” Chosun Ilbo, August 17, 2017) Contrary to the IISS report’s
assertion that no facilities for producing large liquid-fueled engines are known to exist in North
Korea, a certain amount of information is already available about where North Korea makes
missiles. Defectors who left the country during the famine of the mid-to-late 1990s included
people with knowledge of the missile program. Two notable accounts that are available to the
public were offered in testimony before a U.S. Senate subcommittee in October 1997. Ko Young
Hwan, a former diplomat, described the training and employment of his brother as a designer of
rocket engines for ballistic missiles, before being transferred to a program for the development of
anti-ship missiles. Choi Ju Hwal, a former colonel in the Korean People’s Army, who had served
in a military trading company, named four specific facilities as involved in missile production,
including the “Number 125 Factory” on the outskirts of Pyongyang. There, he stated, military
delegations from Iran and Egypt visited at different times to inspect missile assembly lines. The
Number 125 Factory—also known as the Tae-Sung Machine Plant or the Chamjin Missile
Factory—also received a senior military delegation from Myanmar (Burma) in November 2008.
The delegation’s trip report, illustrated with photographs, was later leaked to an opposition group,
which translated it and published it online. On November 28, 2008, according to the report, “from
09:05 until 10:10 local time, the group went to Surface to Surface Missile (SCUD Missile) Factory
and was welcomed by the Director Kim Su Gil. The group observed in detail how missiles were
produced in the factory.” The factory, it continued, “is located in a suburb in Pyongyang. It
produces SCUD missiles. The component producing lines are kept in the underground tunnel.
There are also above-ground factory where missile engines are assembled, where missile bodies
are produced and assembled, and where complete missiles are assembled. In the factories that
produce complete missiles, there are places that produce and assemble SCUD-D and SCUD-E.
While SCUD-D can shoot a target up to 700 kilometers away, SCUD-E [Rodong] can shoot up to
1,500 kilometers, and SCUD-F [Musudan] can shoot up to 3,000 kilometers.” An analysis of
satellite photographs of the facility and nearby entrances to underground facilities was published
by Joseph Bermudez in 2011. Kim Jong Un, North Korea’s third-generation leader, has made a
series of visits to the Chamjin plant. He appeared there at least twice in March 2016. On the first
occasion, he observed a ground test of a new heat shield for missile reentry. The second time was
his infamous photo opportunity with a variety of missiles, as well as what was described as a
nuclear warhead. North Korea’s missile designers remain decades behind their counterparts in countries like Russia or China, and they continue to lean on the technological legacy of the Soviet Union. But we can be confident that they are hard at work, on both liquid-fueled engines and solid rocket motors. The new engines of September 2016 and March 2017 are probably not the last they will produce. (Joshua H. Pollack, “How North Korea Makes Its Missiles,” NKNews, August 18, 2017)

Just over three months in office, South Korea's president is finding little room to maneuver between old enemy North Korea and increasing combativeness from long-time ally, the United States. North Korea has snubbed offers for talks from President Moon Jae-in, the South's first liberal leader in a decade. And U.S. President Donald Trump has alarmed Seoul with his warnings that the United States will unleash "fire and fury" if threatened by North Korea's nuclear and missile programs. Any confrontation between the two will inevitably draw in South Korea, which faces thousands of North Korean troops and artillery guns across the heavily militarized border. With few options at his command, Moon has been encouraging Washington to talk directly to Pyongyang to resolve differences, according to senior officials and advisers to the president. "Dialogue is urgently needed to stop the North from developing its weapons programs further," said Moon Chung-in, a special adviser to the president on foreign affairs and national security. "But North Korea sees the South as powerless and won't negotiate with us. They want to have direct talks with the United States," said Moon, who also holds the post of distinguished professor at Yonsei University in Seoul. Washington is insistent on maximizing economic sanctions and keeping up pressure on the North to stop its pursuit of nuclear weapons. "Moon has been telling Trump that a military option should never be considered, but there is not much we can do when two strong leaders (of North Korea and the United States) are clashing," said Lee Su-hoon, who headed a group of national security advisers for the president until July. "But no one wants a catastrophic end. Down the road, I expect there will be a compromise and dialogue." In comments today, President Moon insisted on dialogue to resolve differences with the North, "whatever ups and downs we face." "I am certain the United States will respond to the current situation calmly and responsibly in a stance that is equal to ours," he said in opening remarks at a meeting with senior aides. But there seems little likelihood of dialogue at this point. (Ju-min Park and Heekyong Yang, “Between Old Foe and Aggressive Ally, No Honeymoon for South Korea’s Moon,” Reuters, August 14, 2017)

KCNA: “Respected Supreme Leader Kim Jong Un inspected the Command of the Strategic Force of the Korean People's Army (KPA) on August 14. He waved back to enthusiastically cheering service members and posed for a picture with them. He went round historical mementoes and data displayed at the Kimilsungism-Kimjongilism Study Hall. Going round them, he looked back with deep emotion on the great leadership feats of the brilliant commanders of Mt. Paektu, recorded on every page of the history of the KPA Strategic Force displaying its might with the strength unprecedented in the world as a powerful strike service, symbolic of the dignity and power of Korea. Then he listened to General Kim Rak Gyom's decision on the Strategic Force's plan for an enveloping fire at Guam at the command post. He examined the plan for a long time and discussed it with the commanding officers in real earnest. He praised the KPA Strategic Force for drawing up a close and careful plan as planned and intended by the Party and examined the preparations for a [fire]power demonstration. After listening to the commander of the Strategic Force that it is waiting for the order of the Party Central Committee after rounding off the preparations for the enveloping fire at Guam, he said with great satisfaction that the spirit of Hwasong artillerymen is very high and he was freshly determined, seeing by himself the combat preparedness and the sky-high spirit of the Hwasong artillerymen of the large combined unit. He said that the U.S. imperialists caught the noose around their necks due to their reckless military confrontation racket, adding that he would watch a little more the foolish and stupid conduct of the Yankees spending a hard time of every minute of their miserable lot. He said that he wants to advise the U.S., which is driving the situation on the Korean peninsula into the touch-and-go situation, running helter-skelter, to take into full account gains and losses with clear head whether the prevailing situation is more unfavorable for any party. In order to defuse the
tensions and prevent the dangerous military conflict on the Korean peninsula, it is necessary for the U.S. to make a proper option first and show it through action, as it committed provocations after introducing huge nuclear strategic equipment into the vicinity of the peninsula, he said, adding that the U.S. should stop at once arrogant provocations against the DPRK and unilateral demands and not provoke it any longer. He said that if the Yankees persist in their extremely dangerous reckless actions on the Korean peninsula and in its vicinity, testing the self-restraint of the DPRK, the latter will make an important decision as it already declared, warning the U.S. that it should think reasonably and judge properly not to suffer shame that it is hit by the DPRK again. He said that if the planned fire of power demonstration is carried out as the U.S. is going more reckless, it will be the most delightful historic moment when the Hwasong artillermen will wring the windpipes of the Yankees and point daggers at their necks, underlining the need to be always ready for launching to go into action anytime once our Party decide. … Accompanying him were KPA Vice Marshal Hwang Pyong So, director of the KPA General Political Bureau, and Kim Jong Sik, vice department director of the C.C., the Workers’ Party of Korea.” (KCNA, “Kim Jong Un Inspects KPA Strategic Force Command,” August 15, 2017)

Carlin: “The North Korean report that Kim Jong Un has said he will wait and see what the United States does before deciding whether or not to order execution of a plan to envelope Guam with four Hwasong-12 missiles signals a decisive break in the action. This is no mixed message. It is exactly how the North moves back from the edge of the cliff. It’s classic, and anyone paying attention could have seen it coming. This is not a question of parsing the precise language Kim used. It’s the act itself that speaks volumes. Put that together with the fact that the regime hadn’t been mobilizing the population for imminent crisis the preceding four or five days, and you get a familiar North Korean dance move. Didn’t Kim say he was just giving the Americans a little more time? Of course! He’s not going to say “I surrender” or “I’ve decided that launching missiles would be a bad idea.” This way he can project the aura of the one still in control of the situation, of the one who scored the victory, of the one who kept the region from descending into war. He can be seen as the one who has the whip hand. Who is Kim Jong Un? That seemed to be the core question asked many times this past week. But it was the wrong question. There was no way to answer something like that. The real question, the important question, the one that could be answered was: what were the North Koreans doing from August 9-14 while the US was huffing and puffing over Pyongyang’s threat about Guam? The answer, it turns out, was easy: almost nothing. There were rallies in Pyongyang and the provinces. (The two laggards held their rallies yesterday.) There were reports of youths and students rushing to declare their willingness to enlist in the army. But for the rest of the country, the message was that the way to defeat the Americans was: Stay at work! Produce more! In other words, there was no mobilization of the population in preparation for a military confrontation. Even more telling, although Western media were fixated on Guam during this period, North Korean media barely mentioned it after the initial statements appeared announcing the planning. None of the reports on the rallies mentioned Guam. The focus, instead, was on the August 7 DPRK Government statement issued in response to the new UN Security Council sanctions resolution passed just a few days before. What’s next? At this point, having broken the tension, it would not be unusual for Pyongyang to pivot to diplomacy. Kim had already signaled in early July that the North was open to putting the topics that interested the US—the DPRK nuclear and missile programs—“on the table.” In their Wall Street Journal op-ed, Secretaries Tillerson and Mattis underlined Washington’s interest in negotiations. There are still hurdles to jump over and potholes to avoid, but both sides may now be in position to probe to see if they can take a step down that road. Today, in fact, the North Korean foreign ministry put out a two sentence statement denying that the Americans “being detained” were a topic of US-DPRK talks in the New York channel. But what else does that do? It essentially admits in public that the channel is in operation, and that the Americans could become the topic of conversation at some point.” (Robert Carlin, “Kim Jong Un Steps back from the Nuclear Cliff,” 38North, August 15, 2017)
Provisional threats, nuclear tests, missile launches and other weapons tests—coupled with the most recent bellicose language from Pyongyang about striking the U.S., Guam, our allies and our interests in the Asia-Pacific region—have escalated tensions between North Korea and America to levels not experienced since the Korean War. In response, the Trump administration, with the support of the international community, is applying diplomatic and economic pressure on North Korea to achieve the complete, verifiable and irreversible denuclearization of the Korean Peninsula and a dismantling of the regime’s ballistic-missile programs. We are replacing the failed policy of “strategic patience,” which expedited the North Korean threat, with a new policy of strategic accountability. The object of our peaceful pressure campaign is the denuclearization of the Korean Peninsula. The U.S. has no interest in regime change or accelerated reunification of Korea. We do not seek an excuse to garrison U.S. troops north of the Demilitarized Zone. We have no desire to inflict harm on the long-suffering North Korean people, who are distinct from the hostile regime in Pyongyang. Our diplomatic approach is shared by many nations supporting our goals, including China, which has dominant economic leverage over Pyongyang. China is North Korea’s neighbor, sole treaty ally and main commercial partner. Chinese entities are, in one way or another, involved with roughly 90% of North Korean trade. This affords China an unparalleled opportunity to assert its influence with the regime. Recent statements by members of the Association of Southeast Asian Nations, as well as other regional and global voices, have made clear the international community holds one view regarding North Korea’s provocative and dangerous actions: They must stop. Pyongyang must stand down on those actions. China has a strong incentive to pursue the same goals as the U.S. The North Korean regime’s actions and the prospect of nuclear proliferation or conflict threaten the economic, political and military security China has worked to build over decades. North Korea’s behavior further threatens China’s long-term interest in regional peace and stability. If China wishes to play a more active role in securing regional peace and stability—from which all of us, especially China, derive such great benefit—it must make the decision to exercise its decisive diplomatic and economic leverage over North Korea. Our diplomatic approach also proceeds through the United Nations. The Security Council’s recent unanimous vote imposes new sanctions on North Korea and underscores the extent to which the regime has chosen to isolate itself from the international community. This vote, which also had Russia’s support, reflects the international will to confront the North Korean regime’s continuing threat to global security and stability. We urge all nations to honor their commitments to enforce U.N. Security Council sanctions against North Korea and to increase diplomatic, economic and political pressure on the regime, specifically through the abandonment of trade, which finances the development of ballistic and nuclear weapons. The U.S. continues to consolidate international unity on the North Korean issue through increased engagement at the U.N., at regional diplomatic forums, and in capitals around the world. While diplomacy is our preferred means of changing North Korea’s course of action, it is backed by military options. The U.S. alliances with South Korea and Japan are strong. But Pyongyang has persistently rebuffed Seoul’s attempts to create conditions whereby peaceful dialogue can occur, and has instead proceeded on its reckless course of threats and provocation. As a result of these dangers, South Korea’s new government is moving forward with the deployment of U.S. Terminal High-Altitude Area Defense against the threat. We commend South Korea’s decision to deploy this purely defensive capability. Installing Thaad launchers on the Korean Peninsula and conducting joint military exercises are defensive preparations against the acute threat of military actions directed against the U.S., our allies and other nations. China’s demand for the U.S. and South Korea not to deploy Thaad is unrealistic. Technically astute Chinese military officers understand the system poses no danger to their homeland. Absent China using its influence to show the world how a great power should act to resolve such a well-defined problem as North Korea’s pursuit of nuclear weapons and long-range missile capability, others in the region are obliged to pursue prudent defensive measures to protect their people. China’s Security Council vote was a step in the right direction. The region and world need and expect China to do more. The U.S. is willing to negotiate with Pyongyang. But given the long record of North Korea’s dishonesty in negotiations and repeated violations of international agreements, it is incumbent upon the regime to signal its desire to negotiate in good faith. A sincere indication would be the immediate cessation of its provocative threats, nuclear tests, missile launches and other weapons tests. The U.S. will
continue to work with our allies and partners to deepen diplomatic and military cooperation, and to hold nations accountable to their commitments to isolate the regime. That will include rigorous enforcement of sanctions, leaving no North Korean source of revenue untouched. In particular, the U.S. will continue to request Chinese and Russian commitments not to provide the regime with economic lifelines and to persuade it to abandon its dangerous path. As always, we will embrace military preparedness in the defense of our homeland, our citizens and our allies, and in the preservation of stability and security in Northeast Asia. And we will say again here: Any attack will be defeated, and any use of nuclear weapons will be met with an effective and overwhelming response. North Korea now faces a choice. Take a new path toward peace, prosperity and international acceptance, or continue further down the dead alley of belligerence, poverty and isolation. The U.S. will aspire and work for the former, and will remain vigilant against the latter.”

(Secretary of Defense Jim Mattis and Secretary of State Rex Tillerson, “We’re Holding Pyongyang to Account,” Wall Street Journal, August 14, 2017, p. A-17)

President Moon Jae-in said there cannot be another war on the Korean Peninsula and the North Korean nuclear and missile issues should be resolved peacefully. Moon vowed that the government will make all-out efforts to resolve tension through close cooperation with major allies including the United States. Stressing the top priority of South Korea is maintaining peace, Moon said North Korean issues should be resolved peacefully and that the U.S. government’s position is the same. “A tragic war can never be allowed to break out on the Korean Peninsula again,” Moon said. “I am sure the U.S. will keep itself calm and respond to the current situation responsibly.” Moon added that peace on the peninsula will not be achieved through the use of arms. Moon’s comments were construed as putting the brakes on the North’s young leader and President Trump, as well as some U.S. politicians’ increasingly mentioning various military options including a pre-emptive strike or a war on the peninsula. Later in the day, President Moon held a meeting with Chairman of the U.S. Joint Chiefs of Staff (JCS) Gen. Joseph Dunford at Cheong Wa Dae to discuss how to deal with rising tensions and enhance the two countries’ security cooperation. During the meeting, Moon called on the U.S. to play a leading part in resolving North Korea nuclear issues and the crisis facing the peninsula, according to presidential spokesman Park Soo-hyun. Moon also called on the North to come forward for negotiations after stopping its provocations, apparently considering his previous proposals to hold military and Red Cross talks, which the North has not responded to. In response, Gen. Dunford said the U.S. armed forces are putting top priority on supporting Washington’s diplomatic and economic efforts to better deter the Kim regime, according Park. The top U.S. general noted that the armed forces are also preparing for military options if these efforts fail. Park quoted Gen. Dunford as saying that the U.S. will keenly cooperate with South Korea in carrying out any measures; and that the U.S. hopes that the situation will be resolved without a war. At the meeting at Cheong Wa Dae, the general was accompanied by U.S. Forces Korea Commander Gen. Vincent Brooks as well as Marc Knapper, the acting U.S. ambassador to Seoul. From the South Korean government, National Security Office (NSO) head Chung Eui-yong and the deputy commander of the Republic of Korea-U.S. Combined Forces Command (CFC), Gen. Kim Byeong-joo, were present. NSO chief Chung earlier canceled his summer vacation plans amid mounting military tension here.

Regarding the North’s threats to strike areas around Guam, Gen. Dunford said any military action in response to the North’s possible attack will be made by the U.S. president and in the context of the alliance. “Our job is to make sure our leadership has an option available to them,” he said at a press meeting held at the CFC headquarters in Yongsan after his meeting with Moon. “I believe there are two things we are clear about _ one is our responsibility to defend against attack, and two is our requirement to make sure we have a decisive response in the event of attack.” The general, however, again stressed that Washington’s current policy is focused on diplomatic and economic pressure, and sanctions. “We are seeking a peaceful resolution to the crisis. That is an important message,” he said. Prior to the visit of Gen. Dunford to three Asian countries including Japan and China, the U.S. Department of Defense said in a statement that the visit was to “support Secretary of State Rex Tillerson’s diplomatic and economic campaign to deter North Korea.” Dunford visited Japan before coming to South Korea, and then left for China later after wrapping up his two-day trip here. When asked what he will discuss in China, he said he will require Beijing “not only to do what they did at the U.N. Security Council, which was to vote for sanctions, but to
North Korea’s success in testing an intercontinental ballistic missile that appears able to reach the United States was made possible by black-market purchases of powerful rocket engines probably from a Ukrainian factory with historical ties to Russia’s missile program, according to an expert analysis published today and classified assessments by American intelligence agencies. The studies may solve the mystery of how North Korea began succeeding so suddenly after a string of fiery missile failures, some of which may have been caused by American sabotage of its supply chains and cyberattacks on its launches. After those failures, the North changed designs and suppliers in the past two years, according to a new study by Michael Elleman, a missile expert at the International Institute for Strategic Studies. Such a degree of aid to North Korea from afar would be notable because President Trump has singled out only China as the North’s main source of economic and technological support. He has never blamed Ukraine or Russia, though his secretary of state, Rex W. Tillerson, made an oblique reference to both China and Russia as the nation’s “principal economic enablers” after the North’s most recent ICBM launch last month.

Analysts who studied photographs of the North’s leader, Kim Jong-un, inspecting the new rocket motors concluded that they derive from designs that once powered the Soviet Union’s missile fleet. The engines were so powerful that a single missile could hurl 10 thermonuclear warheads between continents. Those engines were linked to only a few former Soviet sites. Government investigators and experts have focused their inquiries on a missile factory in Dnipro, Ukraine, on the edge of the territory where Russia is fighting a low-level war to break off part of Ukraine.

During the Cold War, the factory made the deadliest missiles in the Soviet arsenal, including the giant SS-18. It remained one of Russia’s primary producers of missiles even after Ukraine gained independence. But since Ukraine’s pro-Russian president, Viktor Yanukovych, was removed from power in 2014, the state-owned factory, known as Yuzhmash, has fallen on hard times. The Russians canceled upgrades of their nuclear fleet. The factory is underused, awash in unpaid bills and low morale. Experts believe it is the most likely source of the engines that in July powered the two ICBM tests, which were the first to suggest that North Korea has the range, if not necessarily the accuracy or warhead technology, to threaten American cities. “It’s likely that these engines came from Ukraine — probably illicitly,” Elleman said in an interview. “The big question is how many they have and whether the Ukrainians are helping them now. I’m very worried.” Bolstering his conclusion, he added, was a finding by United Nations investigators that North Korea tried six years ago to steal missile secrets from the Ukrainian complex. Two North Koreans were caught, and a U.N. report said the information they tried to steal was focused on advanced “missile systems, liquid-propellant engines, space craft and missile fuel supply systems.” Investigators now believe that, amid the chaos of post-revolutionary Ukraine, Pyongyang tried again. Elleman’s detailed analysis is public confirmation of what intelligence officials have been saying privately for some time: The new missiles are based on a technology so complex that it would have been impossible for the North Koreans to have switched gears so quickly themselves. They apparently fired up the new engine for the first time in September — meaning that it took only 10 months to go from that basic milestone to firing an ICBM, a short time unless they were able to buy designs, hardware and expertise on the black market. Last month, Yuzhmash denied reports that the factory complex was struggling for survival and selling its technologies abroad, in particular to China. Its website says the company does not, has not and will not participate in “the transfer of potentially dangerous technologies outside Ukraine.” American investigators do not believe that denial, though they say there is no evidence that the government of President Petro O. Poroshenko, who recently visited the White House, had any knowledge or control over what was happening inside the complex. Today, after this story was published, Oleksandr Turchynov, a top national security official in the government of Poroshenko, denied any Ukrainian involvement. “This information is not based on any grounds, provocative by its content, and most likely provoked by Russian secret
services to cover their own crimes,” Turchynov said. He said the Ukrainian government views North Korea as “totalitarian, dangerous and unpredictable, and supports all sanctions against this country.” How the Russian-designed engines, called the RD-250, got to North Korea is still a mystery. Elleman was unable to rule out the possibility that a large Russian missile enterprise, Energomash, which has strong ties to the Ukrainian complex, had a role in the transfer of the RD-250 engine technology to North Korea. He said leftover RD-250 engines might also be stored in Russian warehouses. But the fact that the powerful engines did get to North Korea, despite a raft of United Nations sanctions, suggests a broad intelligence failure involving the many nations that monitor Pyongyang. Since President Barack Obama ordered a step-up in sabotage against the North’s missile systems in 2014, American officials have closely monitored their success. They appeared to have won a major victory last fall, when Kim ordered an end to flight tests of the Musudan, an intermediate-range missile that was a focus of the American sabotage effort. But no sooner had Kim ordered a stand-down of that system than the North rolled out engines of a different design. And those tests were more successful. American officials will not say when they caught on to the North’s change of direction. But there is considerable evidence they came to it late. Leon Panetta, the former C.I.A. director, said on CBS’ “Face the Nation” yesterday that the North Korean drive to get workable ICBMs that could be integrated with nuclear weapons moved more quickly than the intelligence community had expected. “The rapid nature of how they’ve been able to come to that capability is something, frankly, that has surprised both the United States and the world,” he said. It is unclear who is responsible for selling the rockets and the design knowledge, and intelligence officials have differing theories about the details. But Elleman makes a strong circumstantial case that would implicate the deteriorating factory complex and its underemployed engineers. “I feel for those guys,” said Elleman, who visited the factory repeatedly a decade ago while working on federal projects to curb weapon threats. “They don’t want to do bad things.” Dnipro has been called the world’s fastest-shrinking city. The sprawling factory, southeast of Kiev and once a dynamo of the Cold War, is having a hard time finding customers. American intelligence officials note that North Korea has exploited the black market in missile technology for decades, and built an infrastructure of universities, design centers and factories of its own. It has also recruited help: In 1992, officials at a Moscow airport stopped a team of missile experts from traveling to Pyongyang. That was only a temporary setback for North Korea. It obtained the design for the R-27, a compact missile made for Soviet submarines, created by the Makeyev Design Bureau, an industrial complex in the Ural Mountains that employed the rogue experts apprehended at the Moscow airport. But the R-27 was complicated, and the design was difficult for the North to copy and fly successfully. Eventually, the North turned to an alternative font of engine secrets — the Yuzhmash plant in Ukraine, as well as its design bureau, Yuzhnoye. The team’s engines were potentially easier to copy because they were designed not for cramped submarines but roomier land-based missiles. That simplified the engineering. Economically, the plant and design bureau faced new headwinds after Russia in early 2014 invaded and annexed Crimea, a part of Ukraine. Relations between the two nations turned icy, and Moscow withdrew plans to have Yuzhmash make new versions of the SS-18 missile. In July 2014, a report for the Carnegie Endowment for International Peace warned that such economic upset could put Ukrainian missile and atomic experts “out of work and could expose their crucial know-how to rogue regimes and proliferators.” The first clues that a Ukrainian engine had fallen into North Korean hands came in September when Kim supervised a ground test of a new rocket engine that analysts called the biggest and most powerful to date. Norbert Brügge, a German analyst, reported that photos of the engine firing revealed strong similarities between it and the RD-250, a Yuzhmash model. Alarms rang louder after a second ground firing of the North’s new engine, in March, and its powering of the flight in May of a new intermediate-range missile, the Hwasong-12. It broke the North’s record for missile distance. Its high trajectory, if leveled out, translated into about 2,800 miles, or far enough to fly beyond the American military base at Guam. On June 1, Elleman struck an apprehensive note. He argued that the potent engine clearly hailed from “a different manufacturer than all the other engines that we’ve seen.” Elleman said the North’s diversification into a new line of missile engines was important because it undermined the West’s assumptions about the nation’s missile prowess: “We could be in for surprises.” That is exactly what happened. The first of the North’s two tests in July of a new missile, the Hwasong-14, went a distance sufficient to threaten Alaska, surprising the intelligence community. The second went far
enough to reach the West Coast, and perhaps Denver or Chicago. Last week, the Bulletin of the Atomic Scientists featured a detailed analysis of the new engine, also concluding that it was derived from the RD-250. The finding, the analysts said, "raises new and potentially ominous questions." The emerging clues suggest not only new threats from North Korea, analysts say, but new dangers of global missile proliferation because the Ukrainian factory remains financially beleaguered. It now makes trolley buses and tractors, while seeking new rocket contracts to help regain some of its past glory. (David E. Sanger and William J. Broad, "Tracing of North Korea to Ukraine Plant," New York Times, August 14, 2017, p. A-1) North Korea likely has the ability to produce its own missile engines and intelligence suggests it does not need to rely on imports. U.S. intelligence officials said on August 15. The assessment disputes a new study by the London-based International Institute for Strategic Studies that said that the engines for a nuclear missile North Korea is developing to hit the United States likely were made in factories in Ukraine or Russia and probably obtained via black market networks. The New York Times cited the study on August 14. The newspaper's report said that classified assessments by U.S. intelligence agencies mirrored the IISS finding. "We have intelligence to suggest that North Korea is not reliant on imports of engines," one U.S. intelligence official told Reuters. "Instead, we judge they have the ability to produce the engines themselves." The U.S. officials did not disclose any details of what underpinned the assessment on the high-performance liquid-fuelled engines, called RD-250's. Another U.S. intelligence official said that the modifications to the RD-250 that resulted in improved reliability may have relied in part on foreign scientists recruited by North Korea or been developed by North Koreans educated in Russia or elsewhere. The IISS study is also being disputed by some leading independent nuclear weapons experts. "It's completely wrong," asserted Jeffrey Lewis, head of the East Asia Nonproliferation Program at the Middlebury Institute of Strategic Studies at Monterey, California. Lewis said his research team performed measurements independent from each other on the same photographs used in the IISS study and determined that they were of different sizes. They concluded that the motors for the North Korean ICBM likely were indigenously built. Lewis also pointed to a Jan. 17, 2016, U.S. Treasury announcement of U.S. financial sanctions on Iranian firms for helping North Korea develop the engine that was tested in November and most closely resembles the Ukrainian engine. "To me, they don't look like those (RD-250s) engines except in the way that all (rocket) engines look," Lewis said. (Jonathan Landay, “North Korea Can Likely Make Missile Engines without Imports: U.S.”, Reuters, August 15, 2017) The government of Ukraine confirmed a U.S. media report that the engine of North Korea's Hwasong-14 intercontinental ballistic missile was Ukrainian in origin and apparently supplied to the North by Russia. But Ukraine claimed it merely built the engine and blamed Russia for letting it fall into North Korean hands. According to Radio Free Asia, Yuriy Radchenko of the State Space Agency of Ukraine told reporters in Kiev on Tuesday that the engine was the same as the RD-250 manufactured at Ukraine's state-owned Yuzhmash plant until 2001. Radchenko added that 223 of the engines were made and all were supplied for Russia's space rockets. He denied that Ukraine sold them to North Korea and added Russia still owns the engines and blueprints. Russia denied the allegations and claimed that six to 10 engineers from Yuzhmash went to North Korea from March 30 to June 1 of last year and 12 to 16 others made the same trip a few years ago. Former Russian deputy prime minister Dmitry Rogozin said on Facebook that any attempt at reproducing the engines requires the help of Ukrainian experts, who have detailed blueprints and production knowhow. He claimed the engines may have been smuggled into the North. Ukraine was the key production base for missiles in the former Soviet Union. (Lee Kil-seong, “N. Korean Missiles Came from Russia,” Chosun Ilbo, August 17, 2017) Contrary to the IISS report's assertion that no facilities for producing large liquid-fueled engines are known to exist in North Korea, a certain amount of information is already available about where North Korea makes missiles. Defectors who left the country during the famine of the mid-to-late 1990s included people with knowledge of the missile program. Two notable accounts that are available to the public were offered in testimony before a U.S. Senate subcommittee in October 1997. Ko Young Hwan, a former diplomat, described the training and employment of his brother as a designer of rocket engines for ballistic missiles, before being transferred to a program for the development of anti-ship missiles. Choi Ju Hwal, a former colonel in the Korean People's Army, who had served in a military trading company, named four specific facilities as involved in missile production, including the "Number 125 Factory" on the outskirts of Pyongyang. There, he stated, military.
delegations from Iran and Egypt visited at different times to inspect missile assembly lines. The Number 125 Factory—also known as the Tae-Sung Machine Plant or the Chamjin Missile Factory—also received a senior military delegation from Myanmar (Burma) in November 2008. The delegation’s trip report, illustrated with photographs, was later leaked to an opposition group, which translated it and published it online. On November 28, 2008, according to the report, “from 09:05 until 10:10 local time, the group went to Surface to Surface Missile (SCUD Missile) Factory and was welcomed by the Director Kim Su Gil. The group observed in detail how missiles were produced in the factory.” The factory, it continued, “is located in a suburb in Pyongyang. It produces SCUD missiles. The component producing lines are kept in the underground tunnel. There are also above-ground factory where missile engines are assembled, where missile bodies are produced and assembled, and where complete missiles are assembled. In the factories that produce complete missiles, there are places that produce and assemble SCUD-D and SCUD-E. While SCUD-D can shoot a target up to 700 kilometers away, SCUD-E [Rodong] can shoot up to 1,500 kilometers, and SCUD-F [Musudan] can shoot up to 3,000 kilometers.” An analysis of satellite photographs of the facility and nearby entrances to underground facilities was published by Joseph Bermudez in 2011. Kim Jong Un, North Korea’s third-generation leader, has made a series of visits to the Chamjin plant. He appeared there at least twice in March 2016. On the first occasion, he observed a ground test of a new heat shield for missile reentry. The second time was his infamous photo opportunity with a variety of missiles, as well as what was described as a nuclear warhead. North Korea’s missile designers remain decades behind their counterparts in countries like Russia or China, and they continue to lean on the technological legacy of the Soviet Union. But we can be confident that they are hard at work, on both liquid-fueled engines and solid rocket motors. The new engines of September 2016 and March 2017 are probably not the last they will produce. (Joshua H. Pollack, “How North Korea Makes Its Missiles,” NKNews, August 18, 2017)

Just over three months in office, South Korea’s president is finding little room to maneuver between old enemy North Korea and increasing combativeness from long-time ally, the United States. North Korea has snubbed offers for talks from President Moon Jae-in, the South’s first liberal leader in a decade. And U.S. President Donald Trump has alarmed Seoul with his warnings that the United States will unleash “fire and fury” if threatened by North Korea’s nuclear and missile programs. Any confrontation between the two will inevitably draw in South Korea, which faces thousands of North Korean troops and artillery guns across the heavily militarized border. With few options at his command, Moon has been encouraging Washington to talk directly to Pyongyang to resolve differences, according to senior officials and advisers to the president. “Dialogue is urgently needed to stop the North from developing its weapons programs further,” said Moon Chung-in, a special adviser to the president on foreign affairs and national security. “But North Korea sees the South as powerless and won't negotiate with us. They want to have direct talks with the United States,” said Moon, who also holds the post of distinguished professor at Yonsei University in Seoul. Washington is insistent on maximizing economic sanctions and keeping up pressure on the North to stop its pursuit of nuclear weapons. "Moon has been telling Trump that a military option should never be considered, but there is not much we can do when two strong leaders (of North Korea and the United States) are clashing," said Lee Su-hoon, who headed a group of national security advisers for the president until July. "But no one wants a catastrophic end. Down the road, I expect there will be a compromise and dialogue." In comments today, President Moon insisted on dialogue to resolve differences with the North, "whatever ups and downs we face." "I am certain the United States will respond to the current situation calmly and responsibly in a stance that is equal to ours," he said in opening remarks at a meeting with senior aides. But there seems little likelihood of dialogue at this point. (Ju-min Park and Heekyong Yang, “Between Old Foe and Aggressive Ally, No Honeymoon for South Korea’s Moon,” Reuters, August 14, 2017)
China, Trump used uncharacteristically restrained language and a multistep bureaucratic process that will likely push off punitive steps against Beijing for months, if not forever. On North Korea, several of the president’s top advisers tried to tamp down fears of a clash after his threat to rain “fire and fury” on the regime there. In Seoul, Gen. Joseph F. Dunford Jr., the chairman of the Joint Chiefs of Staff, assured President Moon Jae-in of South Korea that military options against North Korea were a last resort. His message was the latest effort to reinforce a sense of calm that was earlier telegraphed by Defense Secretary Jim Mattis and Secretary of State Rex W. Tillerson. Taken together, the administration’s tempered words underscored the complex reality that Trump faces in Asia: Having explicitly linked China’s cooperation on North Korea with his trade policy toward Beijing, the president is now softening his tough trade rhetoric to enlist China’s support in combating a nuclear threat from Pyongyang. Trump campaigned against China as a relentless thief of American jobs, and promised to stand up to Beijing. But today, as he signed a memo authorizing an investigation of China’s theft and forced transfer of technology from American companies, the president mentioned China by name only once, and framed the issue as a broader problem. That all but guarantees that the United States will not take any action against China, at least until after Trump meets President Xi Jinping in Beijing this fall. Trump, a senior official said, warned Xi of the impending trade action in a phone call late on August 11 that was largely devoted to cooperating on the North Korea threat. The White House had deferred the announcement of the trade investigation until this week to secure China’s support for additional sanctions against North Korea at the United Nations Security Council earlier this month. It was only the latest example of Trump pulling back on the trade front to encourage a more constructive Chinese role on North Korea. Chinese officials have historically tried to link disparate issues, like North Korea and American arms sales to Taiwan. Trump’s modulated tone seemed calculated to open a negotiation with China rather than ignite a trade war. “The big issue is, what does Trump do? After you find that China has acted unreasonably, what is the remedy?” said Gary Clyde Hufbauer, a trade expert at the Peterson Institute for International Economics. If the United States pursues China through the World Trade Organization, the case could stretch out through the remainder of the Trump administration. Trump could impose tariffs, but Hufbauer said, “You can be sure that the Chinese will retaliate.” Some senior officials said Trump’s decision to lead with an intellectual property case after weeks of talking about steel amounted to a “head fake” on the Chinese. But while Trump is delivering on one of his core campaign promises, the protection of intellectual property is not an issue that particularly animates his political base. Today, before Trump’s announcement, the official China Daily newspaper warned that his investigation would poison relations between the two countries. “Given Trump’s transactional approach to foreign affairs,” the paper said, “it is impossible to look at the matter without taking into account his increasing disappointment at what he deems as China’s failure to bring into line the Democratic People’s Republic of Korea.” Far from giving him leverage, however, experts said Trump’s linkage of trade and security was binding his hands. “It implies that China’s action on North Korea is a gift to the United States, and not that these actions are in China’s own interests,” said Evan S. Medeiros, a former top China adviser to President Barack Obama. “It is a wrong assumption, and it plays into China’s own strategy.” On the diplomatic front, administration officials fanned out in an attempt to lower the temperature following Trump’s remarks last week. “The United States military’s priority is to support our government’s efforts to achieve the denuclearization of the Korean Peninsula through diplomatic and economic pressure,” General Dunford was quoted as saying in a statement released by Moon’s office. He was echoing a point made by Mattis and Tillerson in an opinion column posted yesterday by The Wall Street Journal. “The U.S. has no interest in regime change or accelerated reunification of Korea,” they wrote. “We have no desire to inflict harm on the long-suffering North Korean people, who are distinct from the hostile regime in Pyongyang.” Today, Mattis sent a message of deterrence. When asked about North Korea’s threat to fire ballistic missiles into the waters off Guam, an American territory in the Pacific, he said, “If they fire at the United States, it could escalate into war very quickly.” Kim has been told that his military is ready to launch ballistic missiles toward Guam, but he said he would wait before telling them to proceed, the North’s state-run news media reported on August 15. (Mark Landler, “After Promising ‘Fire and Fury,’ a Push to Assuage Fears,” New York Times, August 15, 2017, p. A-1) Mattis acknowledged that it would be “a wartime situation” if North Korea fired a missile toward Guam. “If they do that, then it’s game on,” he told reporters,
indicating that such a missile would be shot down. But “let’s not do this, okay folks? Let’s not start saying ‘General Mattis said it’s war.’ ‘We will defend the country — hear me, now — we will defend the country from any attack . . . at any time, from any quarter. . . . But it is not declaring war. It’s not that I’m over here, you know, Dr. Strangelove, you know, doing things like that, okay?” (Karen DeYoung, “Top Officials Move to Clarify U.S. Policy on North Korea,” Washington Post, August 18, 2017 p. A-1)

Respected Supreme Leader Kim Jong Un inspected the Command of the Strategic Force of the Korean People's Army (KPA) on August 14. He waved back to enthusiastically cheering service members and posed for a picture with them. He went round historical mementoes and data displayed at the Kimilsungism-Kimjongilism Study Hall. Looking round them, he recalled with deep emotion the great leadership feats of the brilliant commanders of Mt Paektu, recorded on every page of the history of the KPA Strategic Force displaying its might with the strength unprecedented in the world as a powerful strike service, symbolic of the dignity and power of Korea. Then he listened to General Kim Rak Gyom's decision on the Strategic Force's plan for an enveloping fire at Guam at the command post. He examined the plan for a long time and discussed it with the commanding officers in real earnest. He praised the KPA Strategic Force for having drawn up a close and careful plan as intended by the Party and examined the firing preparations for power demonstration. **Being told by the commander of the Strategic Force that it is waiting for the order of the Party Central Committee after rounding off the preparations for the enveloping fire at Guam, he said** with great satisfaction that the spirit of Hwasong artillerymen is very high and he was freshly determined, seeing by himself the combat preparedness and the sky-high spirit of the Hwasong artillerymen of the large combined unit. He said that the U.S. imperialists put their own necks into the noose through their reckless military confrontation racket, adding that he would watch a little longer the conduct of the foolish and stupid Yankees spending a hard time of every minute for their miserable lot. He said that he wants to advise the U.S., which is running helter-skelter to driving the situation on the Korean peninsula into the worst brink of explosion, to take into full account the gains and losses with clear head, whether the present situation is more unfavorable for which side. **In order to defuse the tensions and prevent the dangerous military conflict on the Korean peninsula, it is necessary for the U.S. to make a proper option first and show it in action, as it deployed huge nuclear strategic equipment around the peninsula to provoke the DPRK**, he said, adding: The U.S. should stop at once its arrogant provocation and unilateral pressure on the DPRK and provoke the latter no longer. **He said that if the Yankees persist in their extremely dangerous actions around the Korean peninsula, testing the self-restraint of the DPRK, the latter will make a crucial decision as it had already declared**, warning the U.S. that it should think reasonably and judge properly so as not to suffer another shame by the DPRK under the eyes of the world. If the planned fire of power demonstration is carried out due to the U.S. rashness going beyond the limit line, this will be the most delightful historic moment when our Hwasong artillerymen wring the windpipes of the Yankees and point daggers at their necks, he said, underlining the need to always stand on fire readiness for going into action once our Party decides. Then the Supreme Leader went round a military training school and a gymnasium and called for firmly establishing Juche in education and steadily improving the quality of military training to prepare all the Hwasong artillerymen of the large combined unit to be fighters good at the campaign of brains, well versed in the modern military science and technology, the enemy's changed ways of war and Korean-style war methods against them. He stressed the need to establish a system of reeducating commanding officers and technical personnel of the Strategic Force in line with the modernization and upgrading of ballistic rockets. Going round the supply service facilities of the large combined unit, including a dining hall of sub-unit, he showed paternal care for servicepersons' life. He enjoyed a performance given by an art squad of the large combined unit at the soldiers’ hall. Expressing satisfaction over the good performance which vividly represented the operational mission and features of the Strategic Force and the desire, thoughts and feelings of the Hwasong artillerymen, he gave precious teachings for the art squad's performance activities. The Strategic Force has a very important position and duty to play in carrying out the strategic plans of the Workers' Party of Korea, he said, calling on the Strategic Force to firmly establish the monolithic leadership system, the monolithic command and management system of the Supreme Commander over the nuclear
force and further complete the Juche-oriented rocket strike methods. Saying with deep trust that it is reassuring to have the KPA Strategic Force, reliable treasured sword guaranteeing the everlasting future of the country and nation, he expressed expectation and belief that all the officers and men of the Strategic Force would bring about a fresh turn in rounding off the combat preparedness, well aware of the important mission they have assumed before the Party, the country and the people. With his deep trust, the officers and men of the KPA Strategic Force hardened their resolve to win the final victory in the standoff with the U.S. by scorching with super strong strikes the targets in south Korea, Japan, operational area in the Pacific and the U.S. mainland, flying the sacred red flags of the Party and flags of the Supreme Commander at every matchless launching pad once he gives an order. Accompanying him were KPA Vice Marshal Hwang Pyong So, director of the KPA General Political Bureau, and Kim Jong Sik, vice department director of the C.C., Workers’ Party of Korea. (KCNA, “Kim Jong Un Inspects KPA Strategic Force,” August 15, 2017)

“There’s news,” Pak [Song-il, Foreign Ministry’s Institute for American Studies] said. The broadcast showed photographs of Kim Jong Un in a dark pin-striped suit, surrounded by military men in uniform. The announcer reported that the missile unit had been tasked with preparing to strike the Pacific Ocean near Guam. Another photograph showed Kim beside a screen bearing a satellite image of Andersen Air Force Base, in Guam. The announcer quoted Kim as saying that he “would watch a little more of the foolish and stupid conduct of the Yankees” before making his final decision to launch. The segment ended with orchestral music over a video montage of missiles soaring from the launch pad, rockets blazing out of their launchers, and soldiers cheering as fighter jets screamed overhead. I glanced around the room and noticed that the other diners were engrossed in lunch. I was confused. “So is he going to launch them or not?” I asked. “I don’t know,” Pak said. “It depends on whether the United States sends another nuclear asset, like a B-1B, over the Korean Peninsula.” “Does the U.S. know that’s the determining factor?” I asked. “We haven’t told them! But they should know, because we said they should not send any further ‘nuclear provocations.’ ” (Evan Osnos, “The Risk of Nuclear War with North Korea,” The New Yorker, September 18, 2017, p. 46)

With his public alarmed by President Trump’s recent threats to North Korea, President Moon Jae-in of South Korea issued an unusually blunt rebuke to the United States, warning that any unilateral military action against the North over its nuclear weapons program would be intolerable. “No one should be allowed to decide on a military action on the Korean Peninsula without South Korean agreement,” Moon said in a nationally televised speech. As a candidate for the presidency, Moon, a liberal who took office in May, said he would “say no to the Americans” if necessary. But he has aligned South Korea more closely with its military ally than many had expected. Though he suspended the deployment of a United States missile defense system opposed by China, he reversed that decision last month after North Korea tested two intercontinental ballistic missiles. But President Trump’s threat to bring “fire and fury” to North Korea, along with other statements from American officials about the possibility of war, has unnerved many South Koreans and put pressure on Moon to live up to his campaign promise. “Our government will do everything it can to prevent war from breaking out,” he said in his speech. Moon’s pushback was the latest indication that Trump’s unorthodox approach to foreign policy, coupled with Pyongyang’s rapid progress toward its goal of nuclear missiles that can reach the mainland United States, was putting new strain on the longstanding alliance. And it underscored how Trump’s volatile language is sowing division with an ally whose help would be vital to the success of any American military campaign on the divided peninsula. “The Americans had always been an ally who would prevent, not start, war on the Korean Peninsula,” said Kim Ji-woon, a college student attending a rally yesterday in central Seoul that featured a large banner reading: “Trump, shut up!” “With his trash war talk, Trump makes me wonder what’s the use of the alliance.” Moon has been careful not to do anything that his conservative enemies could use to accuse him of undermining the relationship with the United States. But all South Korean leaders have learned that it is political suicide to look too weak to stand up to a bigger power, even if it happens to be the country’s main ally. Many South Koreans have seethed in recent days over what they considered
irresponsible statements from American leaders about the possibility of war, particularly since comments by Senator Lindsey Graham were widely reported here. “If thousands die, they’re going to die over there — they’re not going to die here,” Graham, a South Carolina Republican, told NBC’s “Today Show” this month, summing up what he said were the views of Trump. “He’s told me that to my face — and that may be provocative, but not really. When you’re president of the United States, where does your allegiance lie?” Around the same time, Trump’s national security adviser, H.R. McMaster, said the American military options for North Korea included launching a “preventive war.” South Korean newspapers have reacted with dismay. Kim Young-hie, a prominent columnist at JoongAng Ilbo, a conservative mass-circulation daily, called Mr. Trump “a dangerous president who doesn’t understand the basic concept of war.” “It is shameless for someone to openly say that he does not care if Korea is destroyed and that hundreds of thousands of Koreans might die in military action aimed at defending the U.S. mainland,” he wrote last week. Members of Moon’s governing Democratic Party have also been critical, including its chairwoman, Choo Mi-ae, who accused “high-ranking American officials” of worsening the situation with their “impromptu and not carefully thought-out messages.” Moon has faced pressure from the conservative opposition as well. The Korea Liberty Party called him an “invisible man” for failing to defuse the standoff between Washington and Pyongyang. Trump and Moon have spoken only a handful of times, most recently in an Aug. 6 phone call. Trump has yet to appoint an ambassador to South Korea. South Koreans had chafed at some of Trump’s remarks well before the latest tensions with Pyongyang. As a presidential candidate, Trump repeatedly accused the country of not contributing enough to the American military presence. In April, he caused offense by saying that Korea “used to be a part of China.” His policy toward North Korea has been baffling to many in the region. “We are very much confused,” Moon Jung-in, a special policy adviser to President Moon, told ABC News on Sunday. “Therefore, we think that now the American government has moved from strategic patience” to “strategic confusion.” In his speech today, President Moon repeated his argument that sanctions and pressure alone would not deter North Korea from its nuclear pursuits, but he said war should not be an option. “The purpose of strong sanctions and pressure against North Korea is to bring it to the negotiating table, not to raise military tensions,” he said. Analysts expect North Korea to conduct more missile tests after the United States and South Korea begin annual joint military exercises on August 21. The North regards those drills as rehearsals for invasion. (Choe Sang-hun, “South Korea’s President Bluntly Warns U.S. against Striking North,” New York Times, August 15, 2017)

You might think from recent press accounts that Steve Bannon is on the ropes and therefore behaving prudently. In the aftermath of events in Charlottesville, he is widely blamed for his boss’s continuing indulgence of white supremacists. Allies of National Security Adviser H.R. McMaster hold Bannon responsible for a campaign by Breitbart News, which Bannon once led, to vilify the security chief. Trump’s defense of Bannon, at his press conference yesterday, was tepid. But Bannon was in high spirits when he phoned me this afternoon to discuss the politics of taking a harder line with China, and minced no words describing his efforts to neutralize his rivals at the Departments of Defense, State, and Treasury. “They’re wetting themselves,” he said, proceeding to detail how he would oust some of his opponents at State and Defense. Needless to say, I was a little stunned to get an email from Bannon’s assistant midday, just as all hell was breaking loose once again about Charlottesville, saying that Bannon wished to meet with me. I’d just published a column on how China was profiting from the U.S.-North Korea nuclear brinkmanship, and it included some choice words about Bannon’s boss. “In Kim, Trump has met his match,” I wrote.
“The risk of two arrogant fools blundering into a nuclear exchange is more serious than at any time since October 1962.” Bannon began, “It’s a great honor to finally track you down. I’ve followed your writing for years and I think you and I are in the same boat when it comes to China. You absolutely nailed it.” “We’re at economic war with China,” he added. “It’s in all their literature. They’re not shy about saying what they’re doing. One of us is going to be a hegemon in 25 or 30 years and it’s gonna be them if we go down this path. On Korea, they’re just tapping us along. It’s just a sideshow.” Bannon said he might consider a deal in which China got North Korea to freeze its nuclear buildup with verifiable inspections and the United States removed its troops from the peninsula, but such a deal seemed remote. Given that China is not likely to do much more on North Korea, and that the logic of mutually assured destruction was its own source of restraint, Bannon saw no reason not to proceed with tough trade sanctions against China. Contrary to Trump’s threat of fire and fury, Bannon said: “There’s no military solution [to North Korea’s nuclear threats], forget it. Until somebody solves the part of the equation that shows me that ten million people in Seoul don’t die in the first 30 minutes from conventional weapons, I don’t know what you’re talking about, there’s no military solution here, they got us.” Bannon went on to describe his battle inside the administration to take a harder line on China trade, and not to fall into a trap of wishful thinking in which complaints against China’s trade practices now had to take a backseat to the hope that China, as honest broker, would help restrain Kim. “To me,” Bannon said, “the economic war with China is everything. And we have to be maniacally focused on that. If we continue to lose it, we're five years away, I think, ten years at the most, of hitting an inflection point from which we'll never be able to recover.” Bannon’s plan of attack includes: a complaint under Section 301 of the 1974 Trade Act against Chinese coercion of technology transfers from American corporations doing business there, and follow-up complaints against steel and aluminum dumping. “We’re going to run the tables on these guys. We’ve come to the conclusion that they’re in an economic war and they’re crushing us.” But what about his internal adversaries, at the departments of State and Defense, who think the United States can enlist Beijing’s aid on the North Korean standoff, and at Treasury and the National Economic Council who don’t want to mess with the trading system? “Oh, they’re wetting themselves,” he said, explaining that the Section 301 complaint, which was put on hold when the war of threats with North Korea broke out, was shelved only temporarily, and will be revived in three weeks. As for other cabinet departments, Bannon has big plans to marginalize their influence. “I’m changing out people at East Asian Defense; I’m getting hawks in. I’m getting Susan Thornton [acting head of East Asian and Pacific Affairs] out at State.” But can Bannon really win that fight internally? “That’s a fight I fight every day here,” he said. “We’re still fighting. There’s Treasury and [National Economic Council chair] Gary Cohn and Goldman Sachs lobbying.” “We gotta do this. The president’s default position is to do it, but the apparatus is going crazy. Don’t get me wrong. It’s like, every day.” Bannon explained that his strategy is to battle the trade doves inside the administration while building an outside coalition of trade hawks that includes left as well as right. Hence the phone call to me. (Robert Kuttner, “Steve Bannon, Unrepentent,” American Prospect, August 16, 2016)

8/16/17

Kim Jong Un made a "very wise and well-reasoned decision" to delay any military action against the United States and back away from his threat to strike near the U.S. territory of Guam, President Donald Trump said today. "The alternative would have been both catastrophic and unacceptable!" President Trump wrote on Twitter. (Veronica Stracqualursi, “Trump Praises North Korea’s ‘Wise’ Decision to Back off Guam Threats,” NBC, August 16, 2017)

The United States Forces in Korea said on Wednesday that it has completed a large-scale improvement project of the Patriot systems (PAC-2 and PAC-3) operated by the Dragon Brigade (35th Air Defense Artillery Brigade) and confirmed its operational status. The USFK completed the Patriot modernization project intended to counter sophisticated nuclear and missile threats from North Korea in seven months after its kickoff in early January. The USFK has replaced all components of the Patriot systems, including detection radar, engagement control station and communication and generation installations, deployed and operated in the Gunsan Air Base in North Jeolla Province and the Osan Air Base in Gyeonggi Province with the newest versions.
According to the USFK, a touch screen and high-tech computer and communication technology of the systems will drastically streamline the existing detection and interception process for missiles fired by an enemy. “The Dragon Brigade will have the most powerful and advanced defense capability against the lower-tier layer of a ballistic missile among U.S. air defense artillery units. The systems will help soldiers detect the North’s ballistic missiles more precisely and swiftly and destroy,” said the USFK. “This is the largest Patriot modernization project ever conducted outside the U.S. It shows that the U.S. Department of Defense considers nuclear and missile threats from the North very seriously.” (Yun Sang-ho, “USFK Upgrades Patriot Missile Defense System to Counter N. Korea,” Donga Ilbo, August 17, 2017)

James Acton: “The time for denial is over. North Korea has — or will very shortly have — the capability to launch a nuclear weapon against the United States. In the coming decades, historians can assign blame. For now, it is the task of policymakers to ensure that historians will still be around in the future to dissect this failure. While denuclearization should remain the international community’s formal goal, it is no longer a practical policy. A freeze on missile and nuclear testing, which I advocated only seven months ago, has lost value as North Korea’s capabilities have rapidly advanced. Analysts can happily theorize about a disarming preventative strike, but the risks — to both the United States and its allies — are so serious that no sane politician would authorize one. Instead, Washington should try to establish some basic rules of the road with a newly nuclear Pyongyang. The first priority must be to create a plausible off ramp to the current standoff. Contrary to media reporting, North Korea has not backed off its threat to “bracket” Guam with missiles, and could enact its plan during U.S.-South Korea military exercises that begin next week. Before then, North Korea could agree not to conduct missile tests that overfly South Korea or Japan, in return for the United States ending strategic bomber training flights within an agreed distance of North Korean airspace. The restriction on North Korea would preclude it from firing ballistic missiles anywhere near Guam. Given that Kim Jong Un would want to demonstrate to military and party elites, rather than the population at large, that he had won a concession in return, face-saving might not even require the agreement to be made public. Indeed, an unacknowledged agreement (officially shared only with the Japanese, South Korean, Chinese, and Russian governments) might be more palatable to all concerned. More generally, an agreement over missile testing and bomber flights would exemplify how mutually agreed rules could reduce the likelihood of U.S.-North Korea crises in the future. Without an agreement regulating military activities, Pyongyang could interpret U.S. bomber training flights near its borders, especially at a time of heightened tensions, as the opening salvo of a sneak attack to destroy its nuclear forces or “decapitate” its leadership (especially given the inconsistent U.S. position on whether or not it seeks regime change). Meanwhile, North Korean missile tests over Japan or South Korea would be extremely provocative, regardless of the target, and create pressure within the “hub-and-spoke” alliance for a forceful response. Foreclosing these escalation pathways is in the interests of Washington, its allies, and Pyongyang. Another immediate initiative should be a hotline between Washington and Pyongyang. Given how difficult it is to foresee exactly how and why future crises could arise, risk-reduction measures that are useful in a wide range of circumstances would be particularly valuable.” (James Acton, “Some Nuclear Ground Rules for Kim Jong Un,” Foreign Policy, August 16, 2017)

Adam Mount: “US President Donald Trump implied in one of his latest tweets that he forced North Korea to back down over its threat to Guam. It’s a dangerous miscalculation that could cause the crisis to escalate and Trump to miss what could be the best chance he will have to halt the tests of missiles that can now threaten the American homeland. Anxious about annual US-South Korea military exercises that begin next week, Pyongyang has presented the United States with a clear, coercive choice: reduce tensions or face a highly destabilizing missile strike to the waters around Guam. A close reading of the threat shows it remains very much in effect and deserves a firm and deliberate response. For the last year, US conventional B-1B bombers have flown missions from Andersen Air Force Base in Guam to the Korean Peninsula, most recently on August 8. The next day, North Korea’s state media service, KCNA, declared that the regime’s strategic force was "carefully examining the operational plan for making an enveloping fire at the areas around
Guam." The statement designated a specific missile (the Hwasong-12) and said that B-1B flights had provoked the threat. Two days later, KCNA refined the threat, specifying the launches would be a salvo fire of four missiles and detailing their trajectory over Japan. The Strategic Force would report the option to Kim in mid-August. In short, North Korea presented the United States with a clear choice: stop B-1B flights or risk highly destabilizing missile launches. These statements represent a new model of threat for North Korea: the threat of damaging or menacing missile launches to coerce its enemies into altering their military posture. The United States should expect more threats of this sort from Pyongyang, potentially threatening more dangerous strikes to coerce US allies or demand withdrawal of US forces, a fact that makes it even more important that the United States make a firm and deliberate response quickly. On August 15, KCNA reported that Kim Jong Un was briefed on the plan and released pictures of Kim dutifully inspecting maps in front of a satellite image of Andersen. It was a textbook and skillful display of brinksmanship intended to remind the United States that the threat is still on the table. However, the threat also evolved in a critical way: it was no longer explicitly linked to B-1B flights. The statement has been widely misreported as North Korea unilaterally backing down from its earlier threat or putting it off indefinitely. In fact, Pyongyang took the next step down the path that it had clearly telegraphed and says it is waiting "a little more" for a response: "If the Yankees persist in their extremely dangerous reckless actions... [we] will make an important decision as it already declared..." The threat has not been lifted; they have thrown the ball into our court. Because North Korea has consistently cheated on its agreements, in no circumstance should the United States make an offer that would degrade its deterrent capabilities. For example, the United States should not offer to halt upcoming military exercises summarily but—provided Gen. Vincent K. Brooks, commander of US Forces Korea, can certify that military readiness could be maintained—we might offer to modify the scope, scale, and location of US exercises, including the largely symbolic B-1B flights. If this is successful—and the test freeze holds—the next step would be to build out to other areas of conventional arms control to decrease the possibilities for escalation along the land and naval borders that separate the two Koreas. The chance of talks remains low. Trump administration officials have repeatedly denigrated the Iran nuclear deal; any talks with North Korea would be even more grueling, any agreement modest and prone to failure. Though Secretaries James Mattis and Rex Tillerson support negotiations, their insistence that North Korea indicate its good faith through "immediate cessation of its provocative threats, nuclear tests, missile launches, and other weapons tests" may in practice prevent talks. Yet (intentionally or not) North Korea has not tested a missile since it crossed the critical ICBM threshold three weeks ago. The United States (intentionally or not) has not flown a B-1B to the peninsula since the Guam threat was first issued. There is also significant risk that a White House distracted by domestic crisis, that has little experience with diplomacy, and that has walled itself off from the State Department rank-and-file, never understood the nature of the threat to Guam or that there was an opening for restraint. If the United States does not respond by the start of exercises next week, North Korea will likely take it as a sign that their threat was deliberately defied, and Kim could decide to order the launch. This is precisely the kind of miscalculation and miscommunication that history tells us can lead to a war nobody wants. This is the best opportunity the United States has had to restrict North Korea's missile program in more than a decade. It is very possibly the Trump administration's only chance. If the United States fails to seize it, the missiles will continue to fly. Without a negotiated constraint, the threatened launches toward Guam may or may not occur—but North Korea will certainly continue to perfect its new ICBM." (Adam Mount, “North Korea Gives U.S. a Clear Choice: Restraint or Missile Launch,” CNN, August 16, 2017)

Twice a year, American and South Korean troops get together for large-scale war games to prepare for a possible attack by North Korea. And year after year, the North condemns the joint exercises as a rehearsal for an invasion and demands that they be called off. Now, with President Trump and North Korea’s leader, Kim Jong-un, recently trading threats of nuclear war, another round of the biannual drills is set to begin August 21 in South Korea. They are the first to be conducted since North Korea test-fired missiles that appear capable of hitting the United States, and some are asking whether they might be used as a bargaining chip to persuade the North to freeze its nuclear program. The United States and South Korea describe the exercises as defensive in nature. North Korea, on the other hand, views them as much more threatening, particularly
components that include plans for assassinations of the country’s leadership in the event of an outbreak of war. Last weekend, the North said the exercises were “kicking up war zeal.” Two years ago, the North proposed a temporary moratorium on nuclear tests if Washington canceled the joint biannual military exercises. The exercises starting on August 21 are known as Ulchi-Freedom Guardian and consist mainly of computer simulations carried out in a large bunker in mountains south of Seoul. Much larger war games in the spring usually involve live-fire training and tank movements as well as drills with ships and aircraft. China has also recently suggested a similar two-sided freeze, although the United States has so far refused. In a statement released yesterday by North Korea’s state media, Kim Jong-un, the country’s leader, said the country would wait before carrying out its threat to launch ballistic missiles into the waters off the American territory of Guam. But in order for the United States to prevent “dangerous military conflict on the Korean Peninsula,” Kim added, it needed to “show it in action.” That language is vague enough to encompass a wide range of American behavior. But the military exercises are a continuing flash point, said Adam Mount, a senior fellow at the Center for American Progress in Washington, and curtailing them could be an important gesture that could coax North Korea toward dialogue. “There is an opportunity here to put an offer on the table,” Mount said. Even if the United States does not want to suspend or cancel the exercises entirely, he said, “we absolutely should be considering ways to modify their scope.” But using the exercises as leverage for talks is likely to meet resistance from military and political officials. “It would take a pretty extraordinary act of leadership to do something like that,” said Robert Carlin, a retired C.I.A. and State Department analyst of North Korea. “You’re going to take a lot of flak from a lot of people.” Carlin, who agrees with proposals to scale back the exercises, said many policy makers would regard any concessions on the annual drills as rewarding North Korea’s bad behavior. “You have a huge crowd saying, ‘You’ve given in to this dictator and he will take advantage of us.’” Heather Nauert, spokeswoman for the State Department, said at a briefing on Tuesday that there was “no moral equivalency” between joint military maneuvers and the North’s missile tests, adding that there would be no change in the exercises. The August exercises typically involve around 30,000 American soldiers and about 56,000 South Korean troops. The numbers swell to a total of about 530,000 because government officials and civilians also take part in some of the exercises. In the spring, about 300,000 South Korean soldiers participate, along with about 17,000 American troops. “Anyone who wants to cancel exercises has to realize that we make ourselves weaker and vulnerable,” said David Maxwell, associate director for the Center for Security Studies at Georgetown University and a veteran of five tours in South Korea with the United States Army. Maxwell said the United States and South Korea had previously agreed to cancel military maneuvers, known as Team Spirit, in the early 1990s, in exchange for North Korea allowing international inspections of its secret nuclear installations. But the North quickly reneged and continued to develop its nuclear program. “I think it is a fool’s errand to think that our postponing or canceling exercises will cause a positive reaction from the North,” Maxwell said. With the United Nations Security Council adopting punishing new sanctions on North Korea earlier this month, some analysts said those measures should be allowed to work first. “If we concede our military drills as an incentive to North Korea, North Korea will see that as a weakness of South Korea and the United States,” said Shin Beom-chul, a professor of national security at the Korea National Diplomatic Academy in Seoul and a former defense ministry adviser who has participated in the exercises. “To bring North Korea back to the table, we need pressure and to bring problems to Kim Jong-un.” But with tensions so high on the peninsula, some analysts say that rigid thinking could lead to miscommunication or military escalation. The worry, analysts say, is that if the exercises proceed as usual — and if the United States decides to add other maneuvers like flying B-1B bombers over the Korean Peninsula or bringing aircraft carriers into nearby waters — the North may revive its plan to launch missiles near Guam or conduct some other act of aggression. In November 2010, North Korea shelled the South Korean island of Yeonpyeong, killing two soldiers, after the South fired test shots during a military drill. If the North were to react to the joint exercises between South Korea and the United States in a similar way, the violence could spiral out of control. “I simply want somebody to help cool the temperature,” said Katharine H.S. Moon, a professor of political science and Asian studies at Wellesley College, “to buy time for the U.S. and North Korea to cool off and eventually figure out how to talk, what to talk about, when to talk about it and for what end.” Even if the two sides could agree to some kind
of temporary suspension of the exercises to open the way to talks, said Lee Jong-won, professor of East Asian international relations at Waseda University in Tokyo, “that will be only the beginning of very long and tough negotiations, because the positions of the two are very far apart.” The question is how to get either side to agree to any kind of concession before talks take place. “It’s hard to go to a quid pro quo when we’ve not had any form of negotiations to build any sense of trust in the two parties,” said Col. William R. McKinney, a retired Army officer and adjunct fellow at the Center for Strategic and International Studies who had extensive experience on the Korean Peninsula during his military career. But some analysts worry that the longer the United States waits to engage in talks, the more tensions will rise. If talks do not happen, said John Delury, associate professor of Chinese studies at Yonsei University in Seoul, “then the risks of a match falling on the kindling is very real on the Korean Peninsula.” (Motoko Rich, Looming War Games in South Korea Could Be Bargaining Chip,” New York Times,” August 17, 2017, p. A-7)

U.N. Secretary-General Antonio Guterres warned that tensions on the Korean peninsula are at their highest level in decades and said it’s important “to dial down the rhetoric and to dial up diplomacy.” Guterres warned that “as tensions rise, so does the risk of miscalculation or escalation.” “The solution to this crisis must be political,” he added. “The potential consequences of military action are too horrific to even contemplate.” Guterres said the recently adopted U.N. Security Council resolution imposing the toughest sanctions yet on North Korea also represents “an opportunity for diplomatic engagement and renewed dialogue to solve this crisis.” The secretary-general said there are “many possible avenues for this dialogue” including bilateral talks and reviving the six-party negotiations on North Korea’s nuclear program that have been stalled since 2009 when Pyongyang pulled out. Guterres said that on Tuesday he told representatives of the countries in the six-party talks — North Korea, South Korea, the United States, Russia, China and Japan — that he “will remain in close contact with all concerned parties and stand ready to assist in any way.” He also said the international community must send a clear message to North Korea’s leadership to fully comply with its international obligations, reopen communication channels and deescalate the situation. The U.N. chief said he supports South Korea’s call on North Korea “to engage in a credible and meaningful dialogue,” adding, “This includes through confidence-building measures to defuse tension and to enable steps aimed at the denuclearization of the Korean peninsula.” (Edith M. Lederer, “U.N. Chief: It’s Time for Diplomacy on Tense Korean Peninsula,” Associated Press, August 16, 2016)

The United States has agreed not to take any military action against North Korea without first getting South Korea’s approval, President Moon Jae-in said as he marked 100 days in office. Backing up the president’s assertion, Gen. Joseph Dunford, the chairman of the U.S. Joint Chiefs of Staff, said in Beijing that there was “no question” that South Korea would be consulted before any possible military action was taken on the Korean Peninsula. “South Korea is an ally and everything we do in the region is in the context of our alliance,” Dunford told reporters traveling with him on a trip that has taken him to Seoul and then to Beijing, where he met with President Xi Jinping. Dunford will later travel to Tokyo. A strike on North Korea would likely cause Pyongyang to unleash conventional artillery at Seoul, just over the border. Ten million people live in the South Korean capital but as many as 25 million people — half the population — live in the greater Seoul region and within North Korean artillery range. Although the U.S. and South Korean militaries would respond quickly, the initial volleys could cause significant damage and panic.

Moon, the liberal president elected in May, ruled out the prospect of another war on the Korean Peninsula, even as he warned Pyongyang that it was rapidly approaching a “red line” with its missile program. “I would define the red line as completing the development of an intercontinental ballistic missile and being able to weaponized it with a nuclear warhead,” Moon said. “In that respect, North Korea is nearing the red line.” The U.S. Embassy in Seoul had no immediate response, instead referring requests for comment to the White House. “We can’t afford to lose all that we’ve built from the ashes of the Korean War. I will prevent another war at all cost,” Moon said at the presidential Blue House, which lies just 30 miles south of the Demilitarized Zone that separates the two Koreas. Analysts said that, for all the recent bluster, there seemed to be little dispute that military action would be catastrophic. “It struck me that Steve Bannon said more or
less the same thing, but in more colorful language,” said Christopher Green, senior adviser on the Korean Peninsula at the International Crisis Group. Bannon, Trump’s chief strategic, was quoted Wednesday as saying that “there’s no military solution” to the North Korean problem. “Until somebody solves the part of the equation that shows me that 10 million people in Seoul don’t die in the first 30 minutes from conventional weapons … there’s no military solution here, they got us,” Bannon said in an interview with American Prospect magazine. His words echo statements by Defense Secretary Jim Mattis and Secretary of State Rex Tillerson, both of whom have spoken about the problems involved in any military action on the Korean Peninsula. “So behind the scenes, there seems to be a fair amount of consensus,” Green said. In Beijing, Gen. Dunford agreed that a military solution to the North Korean problem “absolutely horrific.” Fan Changlong, a vice chairman of China's powerful Central Military Commission, told his American counterpart that military means should not be an option in solving the Korean Peninsula issues. “China insists that consultation through dialogue is the only effective way to solve the problems on the peninsula, and military means cannot be an option,” Fan said when meeting with Dunford. “At the moment, all parties concerned should maintain restraint, and avoid words and actions that would intensify the tension of the situation on the Korean Peninsula.” Still, Dunford said that Trump had told American military leaders “to develop credible viable military options and that’s exactly what we’re doing.” Kim appeared to back away from action this week, with state media reporting that he would “watch a little longer” before deciding whether to go ahead with a plan to launch missiles toward the American territory of Guam. Trump tweeted that Kim had “made a very wise and well-reasoned decision.” Still, even amid calls for a combination of diplomacy and pressure to dissuade North Korea, some conservatives in South Korea are calling for the U.S. to redeploy tactical nuclear weapons to the southern half of the peninsula. The main South Korean opposition Liberty Korea Party, the reincarnation of the conservative party that had been led by disgraced former president Park Geun-hye, this week added bringing American nuclear weapons back to its party platform. The United States withdrew its nuclear weapons from South Korea in 1991, when the two Koreas signed an agreement to make the peninsula nuclear-free. “The joint declaration for a nuclear-free peninsula has already been scrapped by the North, and I believe it has become virtually meaningless for us to hold fast to it,” Chung Woo-taik, the conservative party’s floor leader, said during its meeting yesterday. Amid the current tensions, these calls have been gaining ground. A survey conducted by polling company Embrain this week found that two-thirds of respondents wanted South Korea to have tactical nuclear weapons and nuclear-powered submarines. “The time is ripe for us to hold in-depth discussions over the redeployment of the U.S. military's tactical nukes to cope with the dangers of the North's nuclear and missile programs and deter any conflict on the Korean Peninsula,” Chung said, according to the Yonhap News Agency. However, analysts say the idea has little chance of becoming reality as long as Moon’s liberal government is in power. (Anna Fifield, “No Military Strike on North Korea without My Permission, Says South’s President,” Washington Post, August 17, 2017)

North Korea will be crossing a “red line” if it builds intercontinental ballistic missiles with nuclear warheads, President Moon Jae-in said, warning that the regime is “approaching” that very threshold. “I think the red line is when North Korea completes intercontinental ballistic missiles and weaponizes them with nuclear warheads,” Moon said. “And the North is nearing that red line.” But he said there will not be war on the Korean Peninsula, stressing that the United States has promised to seek the South’s consent before taking any military action against the North. Moon addressed a wide range of issues including the latest security crisis in a press conference marking his 100th day in office. Moon said the North will face tougher sanctions if it stages another provocation. “And the North won’t be able to endure it,” he said, “I want to warn the North that it must stop this dangerous brinkmanship.” But he assured the public there will not be another war on the peninsula. “I will stop a war at all costs,” he said. “And it is the international community’s agreement that the North Korean issue must be resolved peacefully in the end.” The latest sanctions on the North are meant to prevent a war, Moon said, explaining that they are intended to force the North to negotiate. “Furthermore, only South Korea can decide a military action on the Korean Peninsula,” Moon said. “Without our consent, no one can decide to take a military action. The United States and President Trump have promised to consult with us and seek our consent for all options they will take against the North. This is a firm agreement between
South Korea and the United States, and I want the people to trust my word that there will be no war.” He said the U.S. is entitled to take measures if the North acts aggressively toward it, but the South’s permission is necessary for military action on the peninsula. “Even if the United States takes a military action outside the peninsula, I believe the United States will still consult with us in advance if it will escalate inter-Korean tensions. I believe that is the spirit of the Korea-U.S. alliance.” Moon also dismissed concerns that Trump will follow through with his threats to the North. “I don’t think they were made with an absolute intention for a military action,” Moon said. “I want to assure that Seoul and Washington are having enough communication and agreement on this.” Moon admitted his offers for inter-Korean talks were all snubbed by Pyongyang. But he expressed a reluctance to send a special envoy to achieve some kind of breakthrough. “To have talks, we need the right condition and a guarantee that the talks will produce a good outcome. At the least the North must stop additional provocations to create the conditions for talks,” he said. “If the conditions for talks are created and if it will be helpful to improve inter-Korean relations and resolve the nuclear crisis, then I will consider sending a special envoy.” Moon was questioned by a Japanese journalist about his position on relations with Japan, particularly the ongoing efforts to address Japan’s wartime sexual slavery and conscription of Korean laborers. Rejecting Japan’s position that the comfort women issue was settled by the Korea-Japan normalization treaty in 1965, Moon said it was never addressed at the time. “It was an issue that we did not know back then,” he said. “The comfort women issue was made public and became a social issue far after the treaty. So it is wrong to say that the treaty settled the issue.” He also said the Foreign Ministry is reviewing the legitimacy of the controversial 2015 agreement between Seoul and Tokyo to settle the comfort women issue, hinting at a possible annulment. The deal was concluded by the governments of now-impeached President Park Geun-hye and Japanese Prime Minister Shinzo Abe in December 2015. Moon has repeatedly expressed his own doubts about that arrangement. “A Foreign Ministry task force is investigating the process of how the two sides reached agreement and evaluating its contents,” he said. “After the review is over, the ministry will make a decision on what to do with it.” He said Koreans subjected to forced labor during World War II and colonial times have not been fully compensated by the 1965 treaty. “The agreement between the two governments cannot infringe upon individual victim’s right,” he said. He cited Constitutional Court and Supreme Court decisions that the forced laborers have valid rights to seek compensation from Japanese companies through civil suits (Ser Myo-ja, “Moon Sets a ‘Red Line’ for North,” JoongAng Ilbo, August 18, 2017)

When Kim Yong-nam, North Korea’s ceremonial leader, attended the Iranian presidential inauguration this month, he flew via Moscow, even though a flight via Beijing would have been much more convenient. To some observers, the choice of stopover is emblematic of a North Korean regime that seems increasingly estranged from its Chinese ally and more reliant on longstanding ties with Russia. Pyongyang’s shift of attention also creates a potential opening that U.S. diplomats are keen to explore as they search for ways to curb North Korea’s fast-developing nuclear missile program. “The North Koreans are offended with China, and many of their political contacts are either frozen or seriously narrowed,” said Valeriy Sukhinin, Russia’s former ambassador to Pyongyang. Some Western observers believe that inside North Korea, contacts between Pyongyang officials and Russian diplomats now surpass those with China. Even though relations between the U.S. and Russia are poor, Washington has begun to look to Moscow to hold sway in Pyongyang. “You can see the U.S. testing Russian access and influence in North Korea,” Said a Western diplomat. In March and April Tillerson was testing Chinese access and influence and that’s being tested now with Russia.” This month, Tillerson spoke of China and Russia in the same breath when he said the pair had “very good open channels of communication” with Pyongyang. “I’m hopeful that they can use their influence — and I do think they have influence with the regime — to bring them to a point of dialogue,” he said. Moscow has in recent months tried to appear reasonably neutral as tensions rose. “The U.S. is waiting to see if there’s a positive response from Pyongyang or if it’s dismissive, to see how much leverage Russia Has in terms of bringing them to the table,” said the diplomat. But U.S. expectations are treated with skepticism in Moscow. Russian experts warn that Moscow’s support for the latest U.N. Security Council sanctions on North Korea has undermined what little leverage it had left. More than 17 years ago, Russia relased the Soviet Union’s treaty with North Korea, under which it was required
A military solution to the North Korean missile threat would be "horrific" but allowing Pyongyang to develop the capability to launch a nuclear attack on the United States is "unimaginable," the top U.S. military officer said in Beijing. The chairman of the U.S. Joint Chiefs of Staff, Marine Corps Gen. Joseph Dunford, told reporters that President Donald Trump directly has "told us to develop credible viable military options and that's exactly what we're doing." Dunford was responding to questions about Trump's chief strategist Steve Bannon saying in a new interview that there's no military solution to the threat posed by North Korea. In Beijing, Dunford said it's "absolutely horrific if there would be a military solution to this problem, there's no question about it." But, he added, "what's unimaginable is allowing KJU [North Korean leader Kim Jong Un] to develop ballistic missiles with a nuclear warhead that can threaten the United States and continue to threaten the region." Dunford has met with his Chinese counterpart Fang Fenghui, chief of the People's Liberation Army's joint staff department. He also met with Fan Changlong, vice chairman of the ruling Communist Party's Central Military Commission, and Yang Jiechi, China's top diplomat. Fan, the Chinese general, told Dunford that Beijing insists military action should be ruled out and "negotiations are the only effective option" in addressing the situation on the Korean Peninsula, according to a statement by China's defense ministry. Dunford also told reporters in Beijing that "there's no question" any potential military action in the Korean Peninsula would be taken only in consultation with South Korea. "South Korea is an ally and everything we do in the region is in the context of our alliance," Dunford said. Dunford told reporters that he has advised the U.S. leadership not to dial back on the exercises with South Korea. "As long as the threat in North Korea exists we need to maintain a high state of readiness to respond to that threat," he said. (Christopher Bodeen, Hyung-Jin Kim & Kim Tong-Hyung, “U.S.: War Would Be ‘Horrific’ but N. Korea Nukes ‘Unimaginable,’” Associated Press, August 17, 2017)
pressure. We will call on China to take specific measures to make North Korea change its behavior. On the threat of ballistic missiles, as an alliance, we will strengthen our defense posture and capabilities and respond. We have agreed on this point. We have confirmed the importance of cooperation through the security treaty. We shared our concerns regarding the situation surrounding East and South China Sea. We reaffirmed that the Senkaku Islands are within the scope of Article V of the Japan-U.S. Security Treaty and that we would oppose any unilateral behavior attempting to undermine Japan’s administration of the Senkaku Islands. For the peace and stability of East Asia and the East China Sea, we will continue to cooperate with the United States. …At the conference today, we reaffirmed that it is indispensable to steadily promote realignment of the U.S. armed forces in Japan from the perspective of maintaining the deterrence of Japan-U.S. alliance while mitigating the impact on Okinawa and other local regions. In order to avoid Futenma Air Station becoming a permanent facility, it was reaffirmed between the U.S. and Japan that the only solution was relocation to Henoko. I explained that in compliance with the present agreement between Japan and the United States that we would proceed with relocation to Henoko with strong resolve. We will make an all-out effort to realize the complete return of Futenma Air Station. I also pointed out that it is important to make the effort to have the understanding of the local citizens on issues such as that of Kadena Air Base. As a result of the conference today, we were able to elucidate the path that the Japan-U.S. alliance should pursue in a security environment that is becoming increasingly severe. Based on the results obtained today, we want to firmly move forward with measures to further strengthen the deterrence and response capabilities of a Japan-U.S. alliance. Thank you. MATTIS: It’s been an honor for us to host Japan’s defense and foreign ministers here. I don’t think anything better demonstrates that importance that our two nations place on this alliance than our counterparts traveling here so soon after assuming their positions. …Today’s meeting is a reminder that each nation gains security in concert with other nations. The international community is speaking with one voice: North Korea must stop its dangerous actions as we work to maintain security and denuclearize the Korean Peninsula. In light of the serious situation we face, we are accelerating implementation of the 2015 Guidelines for the U.S.-Japan Defense Cooperation and continuing to realign U.S. forces in Japan and Guam. Our militaries are also cooperating in new ways, and you’ve heard several of them mentioned here already. This includes our emerging cooperation in such areas as space and counterspace – cyberspace as well as ballistic missile defense and maritime security. Together, we will deter and, if necessary, defeat any threat. Any initiation of hostilities will be met with an effective and overwhelming response. Our two nations will demonstrate the strength of our alliance by continuing those bilateral activities and by enhancing cooperation with the Republic of Korea. We call on North Korea to choose a better path than one of provocation and threats. Such a path is not in its own best interests nor in the best interest of any other nation. DEFENSE MINISTER ONODERA: (Via interpreter) My name is Onodera. …In light of the threat of North Korea, the four of us confirmed the importance of the unwavering U.S. commitment to extended deterrence. Also, the U.S. forces have been deploying even more assets in the Asia Pacific region and has been showing their commitment visibly to this region. I would like to highly evaluate the efforts of the United States and also, continuing with the United States, I would like to make efforts to enhance the defense capability and defense posture of Japan. … Moving forward, we will accelerate the implementation of a guideline and we will further promote cooperation under the peace and security legislation. We will expand peacetime cooperation such as surveillance and joint training. And furthermore, we will continue to promote cooperation in ballistic missile defense, including acquisition of new assets, and enhanced capability in new domains such as space and cyberspace. Through this, we intend to strengthen further our joint responsive posture. Along with this, in order to strengthen our own defense capability, we intend to review the national defense program and also work on the new midterm defense program, and this was explained in the meeting today. The presence of the U.S. forces in Japan is at the core for the alliance to function as deterrence. At the same time, the operation of U.S. forces should take into consideration the local residents and secure safety. These are indispensable. From this standpoint, we were able to confirm our steady advancement of the realignment of the U.S. forces in order to reduce the burden on the local people, maintaining the deterrence at the same time. The transfer of Futenma Air Station to Henoko would – is the only solution to avoid continuous usage of the Futenma Air Station, so we will steadily proceed with the construction of this transfer. Kadena Air
Base issue and the Osprey are matters that I have renewed my request for the consideration to the local residents and securing the safety. In light of today’s outcome, we would – I would devote myself even further for the securing the safety and security of the people in preparation for any situation to occur. **MS NAUERT:** Elise Labott from CNN for Secretary Tillerson. **Q:** I’d love if both Secretary Tillerson and Mattis could answer a question on North Korea. You wrote in your op-ed last week that, obviously, the U.S. prefers a diplomatic solution to the crisis in North Korea, but you said that that diplomatic and economic efforts and pressure were, quote, backed by a credible military option. In recent days, the White House strategist Steve Bannon called the ratcheting – the diplomatic and economic ratcheting up of North – tensions with North Korea a, quote, “sideshow.” He said that there was no military solution and that the real issue is an economic war with China. Does this reflect some kind of new opinion by the administration or was he speaking for himself, and are you afraid that comments like this might dilute the credible military deterrent that is backing your diplomatic and economic efforts? **TILLERSON:** Well, I don’t really have a comment on what Mr. Bannon’s remarks were in that particular interview. I read those. I think we have been quite clear as to what the policy and the posture towards North Korea is, and I think Secretary Mattis and I in that op-ed wanted to inform – as best we were able to do, inform the American people first, but also inform our important friends and allies as to what our approach is. And our approach has been endorsed by the President. It is reviewed with him periodically in terms of the status of how the approach is working, and it is first and foremost, as you have seen, to undertake a very concerted, deliberate campaign of exerting pressure on the regime in North Korea to an extent that, as best we can tell – and we did study previous attempts over the past two decades. What’s different about this campaign is, I think, the level of international unity around this campaign, the level of cooperation we are getting from China and from others in the region, and the intensity with which we are carrying out the campaign. Obviously, any diplomatic effort in any situation where you have this level of threat that we’re confronted with – a threat of proportions that none of us like to contemplate – has to be backed by a strong military consequence if North Korea chooses wrongly. And I think that is the message that the President has wanted to send to the leadership of North Korea, and it was really in response to this ever-escalating levels of threat and rhetoric that were coming from the regime in Pyongyang. And you’ve heard the words; you’ve seen the videos that they have produced. I think the President just felt it was necessary to remind the regime of what the consequences for them would be if they chose to carry out those threats. We … are prepared militarily, we’re prepared with our allies to respond if that is necessary. That is not our preferred pathway, and that was – that’s been made clear as well. So we continue our full-out efforts, working with partners, working with allies, to bring that pressure on the regime in North Korea with a view that at some point, with a unified international message like we’ve never had before, they will realize the level of isolation they find themselves in and that the future that they will face with that level of isolation is bleak and will only become bleaker if they continue this pathway. So that is – our effort is to cause them to want to engage in talks, but engage in talks with an understanding that these talks will led to a different conclusion than talks of the past. And so we will continue that effort diplomatically first and foremost, but knowing that North Korea sits with a significant capability already within their grasp, I think it is only prudent that they fully understand the consequences should they make a bad choice for themselves and, obviously, there are consequences for others as well. **Q:** (Via interpreter) My name is Sugimoto from Sankei Shimbun newspaper. My question is addressed to Minister Kono and Secretary Tillerson. The question is the following: It’s related to dialogue and pressure in connection with North Korea. With regard to North Korea, what conditions must be met for you to decide that you can start a dialogue? Could you outline your thinking? And in addition, at today’s conference, to China, which has influence over North Korea, you’ve asked for resolute measures to be taken. However – and there was agreement on this. However, up until now, with regard to China, they have not sufficiently applied the kind of pressure that the United States and Japan are seeking. In the efforts made by Japan and the United States, in what respect is it lacking so that you’re – China is not being fully mobilized, please? **KONO:** (Via interpreter) The July Japan-U.S.-ROK summit meeting confirmed that North Korea, if it changes its course and if it refrains from intimidating and provocative action and toward denuclearization, if it is ready to come back to serious dialogue, these measures to be taken are important, first and foremost. There’s no sense to
dialogue for the sake of dialogue; we agreed on this point between Japan and the United States, or Japan, U.S., and ROK at the center. The international community will continue to apply maximum pressure to North Korea. I think there’s a necessity of doing so. The trade amount with North Korea is such that 90 percent is accounted for by China, and their role is very important. And I agree with that. The new UNSC Resolution 2372, if that’s fully implemented—strictly and fully implemented, foreign reserves of North Korea can be decreased to the tune of over $1 billion. China must fully and strictly implement—we would like to encourage China to strictly and fully implement these measures after the 15th. Oil and steel and seafood—China announced that it would restrict importation of this. As we saw an agreement to encourage a specific action by North Korea, we will work on Japan to take responsible and constructive action, and we would like to continue to seek that China do this. … MATTIS: Certainly. First, in response to CNN’s earlier question, I can just assure you that in close collaboration with our allies, there are strong military consequences if DPRK initiates hostilities. … Q: My name is Shiga from NHK. I have a question to Secretary Mattis and to Minister Onodera on the missile defense. North Korea has plan to launch some ballistic missile to the surrounding waters of Guam and we are seeing tension mount. In the 2+2 joint statement, the—it is incorporated that Japan’s role would be expanded in the alliance. When the missile is launched, what specific actions would the U.S. take? And then for Japan, what would Japan’s role be in the missile defense? Also, what would the U.S. expect Japan to do in the case of the launch of the missile? MATTIS: In the event of a missile launch towards the territory of Japan, Guam, United States, Korea, we would take immediate, specific actions to take it down. ONODERA: (Via interpreter) Yes, simply if—my response would be in the event there’s an attack on Japan, then we will use the asset available to us for the missile defense and we will defend Japan. But should different circumstances occur, then we will solidify the relation that we have with the U.S. with a closer communication, we will defend the country. And that is—we discussed today.” (DoS, Secretary of State Rex Tillerson, Remarks with Secretary of Defense James Mattis, Japanese Foreign Minister Kono Taro, and Japanese Defense Minister Onodera Itsunori, Washington, August 17, 2017)

Like all North Korean adults, Song Un Pyol wears the faces of leader Kim Jong Un’s father and grandfather pinned neatly to her left lapel, above her heart. But on her right glitters a diamond-and-gold brooch. Song, who manages a state-run supermarket with freezers stocked full of pork and beef and rows of dairy, bakery and canned goods, is part of a paradigm shift within North Korea. Three generations into the Kim family’s ruling dynasty, markets have bloomed and a consumer culture is taking root. From 120 varieties of May Day Stadium-brand ice cream to the widespread use of plastic to pay the bills, it is a change visibly and irreversibly transforming her nation. While Kim has in recent weeks gained attention for his threat to fire missiles near Guam, his trademark two-track policy focuses on the development of both nuclear weapons and the economy. But like nuclear weapons, a more consumer-friendly economy is a risky business. Facing even more international sanctions and a flood of Chinese imports that has generated a huge trade imbalance, the North Korean economy may be in a bubble that could soon burst. Prices for gasoline imports have soared more than 200 percent in less than six months, the AP has found. The wealth brought by new markets could also come with political instability. Kim Jong Un’s slogan of “Parallel Development”—guns and butter, so to speak—reflects an inescapable reality of his era. In the 1990s, reeling from floods, famine and the collapse of the Soviet Union, North Korea could no longer afford to provide its citizens with basic needs. North Koreans turned to grass roots barter and trade, which has swollen into today’s market economy. Life in rural North Korea is still marked by far more hardship and scarcity than in its urban areas. Yet there is, surprisingly, a bustling, almost booming, feeling in much of the country. North Korean factories are putting a new priority on making more and better daily-life products. Managers, meanwhile, have more freedom to decide what to make, how much to pay workers and how to forge profitable partnerships. Along the roads into virtually every city, street vendors, usually weather-beaten old women, sell fruits, vegetables and other food. In specialty shops, the latest “Pyongyang” model smartphones go for $200, with apps like the popular “Boy General” role-playing game at $2 a pop. Pyongyang’s premier brewery, Taedonggang, just added an eighth kind of beer to its product line. Despite the ever-tightening sanctions, foreign products are still available. A can of Pokka coffee from Japan costs about 80 cents. Purchasing a Mercedes-Benz Viano might require some
connections, but is doable — for a $63,000 sticker price. Some blatant manifestations of commercialism remain taboo. There are only three billboards in Pyongyang, a city of about 3 million, and no advertisements on television or in the newspapers. But stores are under instructions to be more consumer-friendly. “At first, we opened the store from 10 in the morning to 6 in the evening,” said Song. “But in 2015, our dear respected Marshal Kim Jong Un made sure that we serve from 10 in the morning to 8 in the evening so one can use late (nights) at any given time, as many working people often used the shop during the evening after work.” Stores commonly offer buy-two-get-one-free type sales. Posters for new medicines or sports drinks can be seen inside shops, and customers can sign up for loyalty cards to earn discounts. “In today’s North Korea there is a growing competition between the domestic companies themselves as they try to attract customers and establish reputable brands,” said Michael Spavor, a Canadian entrepreneur who is one of the only Westerners to have ever met Kim Jong Un. Spavor calls it a “brilliant strategy.” The emphasis on locally produced consumer goods is partially an attempt to counter China’s gravitational pull. China accounts for nearly all of North Korea’s trade and fuel. The North did $2 billion in business with China in the first five months of this year alone. Cutting off trade with China would be catastrophic for Pyongyang. But North Korean leaders, including Kim Jong Un himself, have also shown concern over what might happen if trade continues, or grows even larger. North Korea imports from China far more than it exports, particularly because of its energy needs. That imbalance widened dramatically this year as China cut back on buying from the North. The new U.N. sanctions will further squeeze the North’s export income. The result could be shortages and inflation. Right around April, according to data compiled by the AP, gasoline prices started to soar. Many stations either closed their gates or restricted sales. Georgetown University economist William Brown says the price of rice was also up nearly 20 percent in July from May, and estimates the North is suffering an outflow of $200 million in foreign exchange every month. “This may represent the greatest near-term threat to the regime stability,” Brown said, although he also cautioned that North Korea often finds its way out of economic problems. The goods and trading opportunities spilling across the Chinese border are also spurring the growth of profitable enterprises, which has substantial financial benefits for well-connected individuals and, at least initially, the regime’s elite. However, the same opportunities have widened the gap between the haves, who benefit disproportionately from the new economy, and the far larger number of have-nots living mostly outside the Pyongyang bubble of affluence. The regime is not blind to what is happening. Kang Chol Min, a researcher with the Economics Institute of the Academy of Social Science, said it is trying to produce more, and better, goods to woo consumers back to state-run businesses. “The number of people relying on the state-run commercial networks is increasing,” he told AP Television News. But many outside experts believe state enterprises and farms are too inefficient to provide enough goods and services without the help of markets and private activities. In the end, North Korea’s economic future might lie with stores like the new Miniso. It is an international brand name — found in Hong Kong, Tokyo, Sydney — selling bargain-priced goods such as backpacks and consumer electronics. Its Pyongyang store just opened in April. It is the trendiest shop in town. It is also a joint venture. With China. (Eric Talmadge, “The Real Revolution in North Korea Is Rise of Consumer Culture,” Associated Press, August 18, 2017)

Prime Minister Abe Shinzo of Japan has never seemed to waver in his support for President Trump, seeking out meetings and regularly speaking by telephone. He is one of a few world leaders who rarely criticize or even comment on Trump’s political turmoil at home. That approach, as much as a personal relationship, reflects Japan’s keen awareness that it needs the United States as its primary protector in a volatile region. But amid public proclamations that appear to show little difference between the countries — and as North Korea accelerates its nuclear program — Abe has started to consider a more independent role for Japan in Asia: one that looks beyond the current White House as Japan prepares for an era in which American influence may be waning. Japan is beginning to confront whether it wants to assert itself as a regional leader and carry on the values that have long been the foundation of American policy. “In the long term, Japan has to think about how to preserve liberal order and free trade,” said Hikotani Takako, associate professor of modern Japanese politics and foreign policy at Columbia University. “That’s not just in the interest of Japan, but the region as a whole.” Last month, Japan led trade talks among 11
countries that had negotiated the so-called Trans-Pacific Partnership, which Trump abandoned in his first week in office. Japan is eager to salvage the deal and proceed, even if it means forging ahead without the United States. And in a sign that Japan recognizes it may need to build a stronger relationship with China independent of its American ally, Mr. Abe, in a reversal, said this summer that his country would cooperate with Beijing’s “One Belt, One Road” infrastructure initiative. Japan, for its part, has been investing in infrastructure projects throughout Southeast Asia. Of course, Japan, whose military has long been constrained by its pacifist Constitution, has no intention of weakening its ties with the United States, particularly when it comes to security. In Washington on August 17, Onodera Itsunori, Japan’s defense minister, and Kono Taro, the foreign minister, met with Jim Mattis, the United States defense secretary, and Rex W. Tillerson, the secretary of state, to cement the alliance between the two countries at a time of heightened tensions on the Korean Peninsula. A joint statement from the officials confirmed that the United States would offer its full protection, “including U.S. nuclear forces,” to Japan. As the United States and North Korea trade saber-rattling threats and China continues to send ships into disputed waters near Japan, “the reality is Japan just doesn’t have a choice,” said Tobías Harris, a Japan analyst at Teneo Intelligence, a political risk consultancy based in New York. To deal with the standoffs in its backyard, Japan “needs the U.S. engaged.” But even on policy toward North Korea, some in Japan have called for the government to cut a separate path. An editorial in the right-wing Sankei Shimbun yesterday suggested that Japan “get between the two who don’t have any room to accept the other” — referring to the United States and North Korea — and approach Pyongyang to negotiate the return of Japanese citizens abducted by North Korea four decades ago. Others wondered whether Trump’s bellicose talk this month, including a promise to bring “fire and fury” to North Korea, could spook Japan into distancing itself from the United States. “There might be a question of how far Japan is willing to put up with Trump’s tough stance against North Korea,” said Kotani Tetsuo, a senior fellow at the Japan Institute of International Affairs. The Japanese news media fanned such speculation this week after reporting that Kono, the foreign minister, had met with his North Korean counterpart, Ri Yong-ho, at a regional security forum in Manila this month. The news media said that Ri indicated that North Korea was open to talks with Japan, although Japan’s Foreign Ministry declined to confirm those reports. Some analysts suggested Japan should help mediate dialogue between North Korea and the United States. “To keep pressing on North Korea with military power is not effective,” said Yanagisawa Kyoji, a former assistant chief cabinet secretary and the director of a foreign policy think tank in Tokyo. “Japan should be softening the tension between the U.S. and North Korea,” he added. But Japan is unlikely to play a meaningful role in instigating talks, said a person familiar with the thinking of Mr. Abe and his cabinet. Neither North Korea nor China see Tokyo as capable of laying the groundwork for multilateral talks, said the person, who was not authorized to speak publicly. Both assume that it is either Beijing or Washington, not Moscow, Seoul or even Tokyo, that could pursue such a role. For now, Japan plans to increase its ballistic missile defense. The Defense Ministry said that it would request funding to buy an American system known as Aegis Ashore that can intercept missiles mid-flight above the earth’s atmosphere. Critics say Abe should use his close relationship with Trump to nudge him toward dialogue. “I don’t think there is any reason for Japan to break its ties with the United States,” said Koichi Nakano, a political scientist at Sophia University in Tokyo. “But being a real partner should also include being able to give honest — and maybe painful — advice to calm down.” But other analysts said Abe is capable, when he sees it in the interests of Japan, of diverging from the United States. Under the Obama administration, Japan imposed more limited sanctions on Russia than the White House wanted after Russia annexed the Crimean peninsula in 2014. And Japan’s efforts to revive the Trans-Pacific Partnership could also offer a template for some independence. “That’s an example of Prime Minister Abe deftly keeping the right positive tone on the alliance at the highest levels,” said Oba Mintaro, a former State Department diplomat specializing in the Korean Peninsula and now a speechwriter in Washington, “but still managing to do his own thing outside of it.” (Motoko Rich, “Japan Still Seeks U.S. Protection but Quietly Stakes Its Own Path,” The New York Times, August 19, 2017, p. A-8)
exercises. The allies' Ulchi Freedom Guardian (UFG) exercises will kick off August 21 and run until August 31. North Korea has long denounced the drills as war rehearsal for a northern invasion. It is a computerized command post exercise (CPX) without field maneuvers. "This year's military drills will be similar in size to those conducted last year," an official at the Joint Chiefs of Staff told a press briefing. Seoul's defense ministry said that it has not considered whether to adjust the size of the drills. But this year's exercises will involve smaller U.S. forces compared to last year. The upcoming exercises are expected to involve about 17,500 U.S. servicemen including around 3,000 forces outside of South Korea. Last year, the drills brought in some 25,000 U.S. soldiers including about 2,500 forces from the U.S. mainland and the U.S. Pacific Command. Some 50,000 South Korean forces will join the drills, according to the ministry. It is not known whether the U.S. would send strategic assets to the Korean Peninsula. (Yonhap, “Allies to Conduct Military Drills Similar to Last Year’s: Military,” August 18, 2017) South Korea has no plans to reduce the scale of an annual joint military exercise with the United States or demand the withdrawal of US troops stationed on the Korean Peninsula, the man set to become Seoul’s chief of Joint Chiefs of Staff said. “We have never considered such measures,” Air Force Gen. Jeong Kyeong-doo said during a parliamentary hearing when asked about whether the military would seek to scale back the military drill or withdraw the US troops to bring about suspension on North Korea’s nuclear and missile program. In a parliamentary hearing devoted mostly to the military’s response to North Korea’s escalating nuclear and missile threat, the JCS chairman nominee expressed confidence that South Korea would overwhelm the North in the event of war. The former Air Force chief predicted that it would take “less than three days” to seize air supremacy over North Korea, suggesting that the allies’ air forces can neutralize the North Korean Air Force and its densely deployed missile defense system. The general also said although it is “threatening” to see North Korea enhance its asymmetrical capability — such as nuclear and biological weapons — South Korea still has military edge over the North, even without the US military presence on the peninsula. “North Korea has devoted most of their focus on developing nuclear and missile capabilities,” said Jeong. "I will build the military that brings fear to the enemy and accomplish my mission by uniting our forces.” The general reiterated that South Korea is working on improving its counter-fire capability against North Korea’s long-range artillery units, which Bannon said would kill ten million people in Seoul in the first 30 minutes of the war. “I don’t think there is a big problem (in our capability). We are ready to respond,” said Jeong, when asked about whether he agreed with Bannon’s assessment. “We are doing our best to neutralize North Korea by minimizing our sacrifice.” The lawmakers passed the motion to approve Jeong. If he takes office as scheduled, Jeong will become the second Air Force officer to take the highest active-duty post, which was mostly devoted by the Army generals who have graduated from the elite Army military Academy. When grilled by conservative opposition lawmakers about the Moon Jae-in administration’s security policy, Jeong defended the president’s initiatives, such as his “phased approaches” toward the North’s nuclear crisis and pledge not to redeploy US tactical nuclear weapon. “I think we should stick to the principle of denuclearization (on the Korean Peninsula),” he said when asked about lawmakers from the main opposition Liberty Party of Korea, who vowed to push for redeployment of US tactical nuclear weapons to prevent against the North’s military threat. When asked about how to resolve the North Korean nuclear program, Jeong said he agrees with President Moon’s two-phased approach to resolving the standoff, starting with a freeze on North Korea’s nuclear and missile development followed by complete dismantlement. "I think it is important for us to use dialogue and pressure the resolve the situation diplomatically. We have to do our best to prevent North Korea from declaring (full nuclear armament),” the Air Force general told the lawmakers. (Yeo Jun-suk, “JCS Chief Nominee Says No Plans to Scale back Korea-U.S. Drill,” Korea Herald, August 18, 2017) The Ulchi Freedom Guardian exercise, a computer-based military drill, is to kick off with some 50,000 South Korean and 17,500 US troops participating to simulate a war with North Korea. It will last until the end of the month. The number of US forces mobilized this year is markedly lower than last year’s 25,000. This year’s exercise will focus on deterring North Korea from launching nuclear attacks and preparing the allies’ forces for a pre-emptive strike against it. The drill is reportedly based on Operational Plan 5015, which contains a scenario for carrying out a pre-emptive “decapitation” of North Korean leadership. “If the enemy provokes, (our military) will retaliate resolutely and strongly to make it regret it bitterly,” Seoul’s Joint Chiefs of Staff Air Force Gen. Jeong Kyeong-
Top South Korea and U.S. defense officials sought to dispel public concerns that North Korea's fast-evolving nuclear and missile program may undermine the alliance as they discussed joint deterrence strategies. Meeting with South Korean Defense Minister Song Young-moo in Seoul, Gen. John Hyten, commander of the U.S. Strategic Command, promised all efforts to effectively deterrence strategies. Meeting with South Korean Defense Minister Song Young
offer strategic assets and missile defense means for the defense of the ally, according to Song's ministry. Hyten is on a visit here, along with Pacific Command chief Adm. Harry Harris, to inspect the allies' annual combined command post training, named Ulchi Freedom Guardian (UFG), that opened earlier in the day. In separate talks with Hyten, Gen. Jeong Kyeong-doo, chairman of South Korea's Joint Chiefs of Staff (JCS), requested the "aggressive and timely" deployment of U.S. strategic assets to Korea for deterrence, the JCS said. The U.S. has sent strategic bombers, aircraft carriers and nuclear-powered submarines here in a show of force and the robust alliance against North Korea for its provocative acts. (Lee Chi-dong, “U.S., S. Korea Seek Closer Ties on Deterrence against N. Korea,” Yonhap, August 21, 2017)

The collision of a second guided-missile destroyer in Asian waters within two months will seriously hobble the Japan-based U.S. Seventh Fleet, whose main aim is to contain an ambitious China and counter an ICBM-armed North Korea. Rescue operations were on for 10 missing sailors when the USS John S. McCain collided with a merchant ship east of the Straits of Malacca early this morning. On June 17, seven sailors were killed when another guided-missile destroyer, the USS Fitzgerald, collided with a container ship off the coast of Japan. The Fitzgerald and John S. McCain are both ballistic missile defense (BMD) ships and part of the same destroyer squadron based on Yokosuma. The Seventh Fleet is the largest of the US Navy’s deployed sea forces, with roughly 50-70 ships and submarines, and 140 aircraft across the Indian Ocean and the Pacific. It is the only one that is “forward deployed,” meaning it is the first to respond when something happens in the region, the Associated Press reported. The USS Ronald Reagan, a nuclear-powered supercarrier, is permanently deployed as the fleet’s flagship carrier at Yokosuma. The fleet also includes up to 14 destroyers and cruisers at any given time armed with long-range Tomahawk land attack missiles, anti-aircraft missiles; and up to 12 nuclear-powered submarines. The threat from North Korea escalated swiftly when the country conducted two ICBM tests in July and announced the "entire" US mainland within range of its missiles. With two ships — capable of provide missile defense against short to intermediate-range ballistic missiles and fitted with the most advanced anti-submarine warfare equipment — retiring hurt, the Navy has lost critical assets in the western Pacific. Both were Arleigh Burke- class destroyers equipped with the Aegis missile defense system. They are part of a multibillion-dollar mission to protect the United States from foreign ballistic missiles, especially from North Korea. The Aegis system on the ships can track ballistic missiles and provide targeting data for ground-based interceptors stationed in Alaska and California. Another layer of this shield is the Terminal High-Altitude Area Defense system, or THAAD, that the U.S. has installed in South Korea, and which is capable of intercepting or destroying incoming missiles mid-flight. There are more destroyers and cruisers based in Japan that can be used to destroy North Korean missiles. (Chandan Prasad, “USS John McCain: Destroyer Collision Opens Gap in Missile Defense against North Korea,” International Business Times, August 21, 2017)

Not since 2002, as the United States built a case for war in Iraq, has there been so much debate inside the White House about the merits — and the enormous risks — of pre-emptive military action against an adversary nation. Like its predecessors, the Trump administration is trying to pressure North Korea through sanctions to dismantle its nuclear program. But both President Trump and his national security adviser, Lt. Gen. H. R. McMaster, have talked openly about a last-resort option if diplomacy fails and the nuclear threat mounts: what General McMaster describes as "preventive war." Though the Pentagon has prepared options to pre-emptively strike North Korea’s nuclear and missile sites for more than a decade and the past four presidents declared that “all options are on the table,” the rote phrase barely seemed credible, given the potential for a North Korean counterstrike against Seoul, South Korea, that could result in tremendous casualties in a metropolitan area of 25 million people. But as the Trump administration moves ahead today with a new round of long-planned military exercises that involve tens of thousands of American and South Korean troops, computer simulations of escalating conflict and perhaps overflights of nuclear-capable aircraft, the White House is determined to leave the impression the military option is real. “Are we preparing plans for a preventive war?” General McMaster asked recently in a television interview, defining the term as
“a war that would prevent North Korea from threatening the United States with a nuclear weapon.” He answered his own question: “The president’s been very clear about it. He said he’s not going to tolerate North Korea being able to threaten the United States.” Much of this could be posturing, designed to convince the North’s unpredictable dictator, Kim Jong-un, and Chinese leaders who are eager to preserve the status quo, that they are dealing with a different American president who is determined to “solve” the North Korean problem, as Trump puts it, rather than hope that sanctions will eventually take their toll. But even if Trump has no real intention of using military force, convincing adversaries and allies that he is willing to make a move that Bill Clinton, George W. Bush and Barack Obama all considered too dangerous has significant value. Whether. Trump is truly prepared or bluffing, presidential advisers, military officials and experts whom the White House has consulted leave little doubt in conversations that the Trump administration is confronting North Korea’s nuclear program with a different set of assumptions than its three immediate predecessors. There are two notable departures from past assumptions. General McMaster, a military historian, insists that the United States cannot count on containing or deterring North Korea the way it deterred the Soviet Union and China during the Cold War. That runs contrary to the conclusion of past senior policy makers that what worked against large nuclear powers will suffice against an economically broken nation with a modest arsenal. And General McMaster and other administration officials have challenged the long-held view that there is no real military solution to the North Korea problem — though they are quick to acknowledge that it would be “horrible,” as Secretary of Defense Jim Mattis put it. Already those two new assumptions have prompted a sharp reaction. President Moon Jae-in of South Korea, in an effort to calm his own public, insisted at a news conference last week that he holds a veto to any military action. “No matter what options the United States and President Trump want to use, they have promised to have full consultation with South Korea and get our consent in advance,” he said. “The people can be assured that there will be no war.” The North has also seized upon General McMaster’s line and declared yesterday that as the military exercises begin, “the Korean People’s Army is keeping a high alert” and “will take resolute steps the moment even a slight sign of the preventive war is spotted.” Trump’s top national security officials seem to be trying to walk a fine line, stopping short of the kind of bald threats that the president has issued in tweets but making clear he is ready to wield a big stick. “Knowing that North Korea sits with a significant capability already within their grasp, I think it is only prudent that they fully understand the consequences should they make a bad choice for themselves,” Secretary of State Rex W. Tillerson told reporters on August 17 after meeting with the Japanese foreign and defense ministers in Washington. He never specified the “bad choice.” At the same news conference, Mattis described a situation in which the United States would act without seeking agreement from the South. If American forces in the Pacific detected a missile launch by North Korea toward American or allied soil, “we would take immediate, specific actions to take it down,” he said. Mattis’s assertion left open the question of whether the United States would, through direct attack or cybersabotage, try to destroy North Korea’s missiles before they left the launchpad. That, in turn, could trigger a bigger operation — a plan called Kill-Chain that was named in a recent joint statement from the United States and South Korea — to systematically wipe out North Korea’s launch sites, nuclear facilities and command and control centers. Its own authors have doubts about whether Kill-Chain could be executed swiftly enough to work, but the decision to publicly refer to it was deliberate, senior officials say. While the plan itself is classified, its goal is a systematic elimination of the North’s ability to threaten South Korea, Japan and the United States. Among the skeptics of a pre-emptive strike was Stephen K. Bannon, Trump’s chief strategist, who was fired on August 18. Just days before, he had declared in an interview with The American Prospect, a liberal magazine, that “there is no military solution here, they got us.” That is the conventional view. But General McMaster took issue with his predecessor in the Obama administration, Susan E. Rice, who argued in a recent Op-Ed in The New York Times that preventive war would be “lunacy.” (Preventive war describes a conflict that a stronger power starts to defeat a weaker rival and is widely considered illegal under international legal conventions. A pre-emptive strike involves attacking first when an imminent attack is detected. In American history, the debate over the two goes back 180 years, to an 1837 dust-up with Canada.) “History shows that we can, if we must, tolerate nuclear weapons in North Korea — the same way we tolerated the far greater threat of thousands of Soviet nuclear weapons during the Cold War,” she wrote. General McMaster, appearing on ABC’s “This Week” a few
days later, shot back, “How does that apply to a regime like the regime in North Korea?” Kim is more unpredictable than the Soviet Union was, aides to Trump have argued. And they have raised the possibility that Kim’s real motive is blackmail, according to officials familiar with Situation Room discussions about the North. By threatening Los Angeles or Chicago, they argued, he may be hoping to intimidate the United States into providing aid, or cast doubt in South Korea and Japan that the United States would come to their aid if a regional war broke out. White House and Pentagon strategists have internally talked about another scenario, in which an uprising in North Korea leads American, South Korean and Chinese forces into a scramble to find the weapons, or tempts a rogue North Korean military officer to let loose a single nuclear device to take out Americans or their allies in one last blast of retribution. All these factors, American officials insist, lie behind the public talk about taking military action. And they expect diplomacy to fail, they say, doubting that Kim would ever give up the nuclear deterrent that he views as his only insurance policy. Pyongyang’s official newspaper declared anew on August 18 that the country “will never put the nuclear deterrent for self-defense on the negotiating table and flinch even an inch from the road of bolstering up the state nuclear force.” That leaves Trump facing the potential consequence of his own threats. If he lets Tillerson try to negotiate a freeze of nuclear and missile tests in North Korea, as many experts argue he should, he will have delayed the crisis, but not resolved it. If he orders more cyber and electronic attacks, he may delay progress on weapons, but little else. And yet the military options he has so openly threatened may prove hollow. “There is no such thing as a surgical strike against North Korea,” Bruce Bennett, a North Korea expert at the RAND Corporation, said in one of its recent publications. “We don’t really know for sure where all their weapons are.” (David E. Sanger, “To ‘Solve’ North Korea Issue, White House Mulls Military Option,” New York Times, August 21, 2017, p. A-6)

President Donald Trump said North Korean leader Kim Jong Un is beginning to respect the U.S., the latest comments that suggest his administration is moving closer to seeking talks over Pyongyang’s nuclear arsenal. “I respect the fact that I believe he is starting to respect us,” Trump said of Kim at a rally in Phoenix, Arizona this evening. “Maybe, probably not, something positive will come out of it.” Secretary of State Rex Tillerson went out of his way earlier today to note that North Korea hadn’t carried out “provocative acts” since the UN Security Council imposed new sanctions on the country. “I am pleased to see that the regime in Pyongyang has certainly demonstrated some level of restraint that we have not seen in the past,” Tillerson told reporters at the State Department. “Perhaps we are seeing our pathway to sometime in the near future having some dialogue.” Tillerson volunteered the remarks on North Korea without prompting at a briefing that was arranged to discuss the Trump administration’s new approach to Afghanistan. That suggested his intent was to give Kim Jong Un’s regime an opening and a signal. (Nick Wadhams and Jennifer Epstein, “Trump Says North Korea’s Kim Is ‘Starting to Respect’ America,” Bloomberg, August 23, 2017)

Tillerson: “And before taking your questions, I do want to make one comment on North Korea. I think it is worth noting that we have had no missile launches or provocative acts on the part of North Korea since the unanimous adoption of the UN Security Council resolution. And I want to take note of that; I want to acknowledge it. I am pleased to see that the regime in Pyongyang has certainly demonstrated some level of restraint that we've not seen in the past. We hope that this is the beginning of this signal that we've been looking for that they are ready to restrain their level of tensions, they're ready to restrain their provocative acts, and that perhaps we are seeing our pathway to sometime in the near future having some dialogue. We need to see more on their part, but I want to acknowledge the steps they've taken thus far. I think it's important to take note of that.” (DoS, Secretary of State Rex Tillerson Press Availability, Press Briefing Room Washington, August 22, 2017)

A group of U.S. military leaders stressed the importance of getting a credible military option ready to support diplomacy in efforts to resolve the North Korea issue. Speaking at a rare joint press conference in South Korea, they agreed that diplomacy is a priority but it’s a tall order without powerful deterrence. “We hope and we work for diplomatic solutions to the challenge presented
by Kim Jong-un," Adm. Harry Harris, chief of the Hawaii-headquartered Pacific Command (PACOM), told reporters, calling the North's leader by his name. "A strong diplomatic effort backed by a strong military effort is key." He added, "credible combat power" should be used to support diplomacy. Harris made the remarks in a press conference at the Osan Air Base in Gyeonggi Province along with Gen. Vincent K. Brooks, commanding general of the U.S. Forces Korea (USFK), the Strategic Command chief Gen. John Hyten, and Missile Defense Agency Director Lt. Gen. Samuel Greaves. The Osan base is the U.S. Air Force base closest to the North and home to the U.S. Patriot missile defense system. In that sense, the USFK emphasized the need for continuing regular combined military drills with South Korea. Some observers here raised the possibility that Seoul and Washington many seek to downsize the drills. "These exercises are very important," Brooks said, pointing out that the U.S. leadership has been clear that "the actions and activities of North Korea are dangerous." The commander of the 28,500-strong USFK said his troops have the responsibility for providing military options to their leaders. "And exercises are a way of making sure that the option is a ready option and it's a capable option. And that's what underpins deterrence," he stressed. He said the allies should continue combined training despite "routine noise" from the North until they have a reason not to do. Hyten said his STRACOM is committed to providing the USFK with "all strategic capabilities" including missile defense systems. It's quite unusual for the U.S. commanding generals serving abroad to gather in South Korea and release public statements together. It apparently reflects Washington's alertness against North Korea's rapid development of nuclear bombs and missiles. The commanders inspected the UFG command-post drills scheduled to last through August 31. They then headed to the new USFK base for the THAAD missile defense system in Seongju, some 300 kilometers southeast of Seoul. Their simultaneous trips here are also intended for introductory meetings with South Korea's new military leaders, including Defense Minister Song Young-moo and Gen. Jeong Kyeong-doo, chairman of the Joint Chiefs of Staff. (Lee Chi-dong, "U.S. Military Leaders: Diplomacy Is Backed by Viable Military Options," Yonhap, August 22, 2017) "The most important starting point is the diplomatic starting point," Adm. Harry Binkley Harris, chief of the United States Pacific Command, told reporters at the Osan Air Base in Gyeonggi. "So we hope, and we work for a diplomatic solution to the challenge presented by [North Korean leader] Kim Jong Un. And a strong diplomatic effort — backed by a strong military effort — is key because credible combat power should ... support diplomacy, and not the other way around." Harris explained that the ballistic missile defense destroyers and cruisers in the region are part of a layered defense to protect the United States and its allies, along with its Patriot interceptor missiles and THAAD battery. "A diplomatic lever has to be applied first and a diplomatic lever is stronger, more effective, more powerful, if backed it’s backed by credible military power," Harris said.

"And that is what the Republic of Korea-U.S. alliance represents. It represents a very strong military back-up to our diplomats who should take the frontline, in my estimation." Harris said he did not publicly describe "tripwires in advance" — what sort of red line North Korea would have to cross for Washington to take military action. "These exercises are very important," Gen. Brooks said on the ongoing joint military drills. "We have had the responsibility of providing military options to our national leaders, and exercises are a way of making sure that the option is a ready option, a capable option. And that’s what really underpins deterrence. So in our view, we have to continue to exercise until we have a reason not to." He continued, "That may cause some noise from North Korea. That’s what we routinely expect. But it doesn’t stop us in our resolve to be as ready as possible and leave the greatest number of options." Brooks also addressed North Korea’s intercontinental ballistic missiles (ICBM) threat and said, "We have seen through demonstrated ability that there is a rapidly developing capability in North Korea; they’re learning quickly, and they’ve stated what they’re after." He continued, "As a military man, I take them at their word and have to be prepared to counter that if possible and to ensure that it doesn’t happen in the first place if we can - that’s the credible deterrence that we spoke about earlier, while we are giving diplomatic actions and economic actions a chance to be successful." Brooks said that whether North Korea has mastered the technology to miniaturize a nuclear warhead and place it on an ICBM is "frankly a bit academic ... Their expressed intent is what I operate off of." Harris stressed a similar message in a meeting with South Korean Minister of Foreign Affairs Kang Kyung-wha the same day, saying, "Diplomacy should always be the main battery," supported by military defense. A bipartisan, bicameral U.S. congressional delegation led by Sen. Edward J. Markey of
Massachusetts, the senior Democrat on the U.S. Foreign Relations Committee’s East Asia Subcommittee, likewise emphasized there is no military option and called for a peaceful solution to the North Korea issue. “We must acknowledge that a preventive war will not solve this problem and it would make matters much, much worse,” Markey said at a press conference Tuesday at the Four Seasons Hotel in central Seoul. His remarks come after a period of escalated tensions following President Donald Trump’s “fire and fury” warning to the North, which threatened to strike the waters near Guam. Markey was joined by Democratic lawmakers Sen. Jeff Merkley of Oregon, Sen. Chris Van Hollen of Maryland and Rep. Carolyn B. Maloney of New York, as well as Republican Rep. Ann Wagner of Missouri. They were on the second leg of a three-country tour of Japan, South Korea and China to meet with elected leaders and military and government officials to discuss the North Korean threat to the region. The group also met with President Moon Jae-in yesterday, and Markey said based on his discussions with the South Korean leader, “I have concluded that the United States can only peacefully resolve the threat of a nuclear North Korea by pursuing a bold, realistic strategy in close concert with our allies in [South] Korea and Japan.”

Markey called for direct diplomacy with Pyongyang. “Talking with North Korea is not a concession; it is the only way to reach agreement to denuclearize the Korean Peninsula.” The congressional delegation called for intensifying economic pressure to bring Pyongyang to the negotiating table and urged China to exercise its economic leverage and cut the flow of oil to North Korea. (Sarah Kim, “Visiting U.S. Bigwigs Talk Peace,” JoongAng Ilbo, August 23, 2017)

"We must acknowledge that a preventive war would not solve this problem, and it would make matters much, much worse," Sen. Edward Markey (D-MA) told a press conference held in Seoul. "I should say people who live in the region should understand that overwhelmingly American people understand that a preemptive war on Korean Peninsula would turn into a catastrophe, leading to hundreds of thousands, if not millions of deaths," he noted. Markey is a ranking member of the Senate Subcommittee on East Asia and Pacific Affairs. He is in Seoul leading a congressional delegation that includes Sens. Jeff Merkley (D-OR) and Chris Van Hollen (D-MD), as well as two members of the House of Representatives: Carolyn Maloney (D-NY) and Ann Wagner (R-MO). Their trip to South Korea comes as tensions remain high after the U.S. and the North recently exchanged bellicose rhetoric, some of which even alluded to military actions on and around the Korean Peninsula. To defuse tensions on the Korean Peninsula, Markey underlined the need for negotiations, saying, "Talking with North Korea is not a concession. It is the only way to reach agreement to denuclearize the Korean Peninsula. He proposed a "two-track" negotiation approach. "We must begin direct discussions with North Korea on two closely coordinated tracks. On track one, the United States will lead direct negotiations toward the denuclearization of the Korean Peninsula," the senator said. "On track two, the Republic of Korea (South Korea) will lead direct negotiations toward social, cultural and inter-governmental relations necessary for the long-term wellbeing of the people on both sides of the border," he added. Markey still emphasized the need for tougher sanctions to bring the North to the negotiating table, calling on China, the closest ally to the reclusive Pyongyang, to do more to be able to produce more substantial progress.

"North Korea's trading partners must intensify economic pressure to bring North Korea to the negotiating table. That starts with getting China cut off the flow of oil to North Korea. That is the one sure way to have a decisive impact on North Korea's decision-making," he said. "Later this afternoon, we will depart for China, where we will visit Dandong, the gateway city on the border of China and North Korea," he added. "We hope to learn what our Chinese partner can do to exercise economic leverage to get Kim to the table." Saying that the existing sanctions imposed on the North are so "porous" and easy to be circumvented, he vowed to seek legislation that would make any countries maintaining economic relations with the North pay a "price," in an apparent bid to put more pressure on China and other traditional allies of the North. "We've come to the conclusion that the system of sanctions that already exist are too porous and it is too easy for there to be a black market economy, for there to be strategies to skirt the attempt to put a 'closed for business' sign on North Korea," he said. "So we are going to be returning to Washington with the goal of constructing legislation that can ensure that China and other countries in their economic relations with North Korea understand that there will be a price that will be paid economically," he added. (Koh Byung-joon and Park Boram, “Senior U.S. Senator Says Preventive War Will Make N.K. Issue Worse, Calls for Peaceful Approach,” Yonhap, August 22, 2017)
Japanese Foreign Minister Taro Kono Japan said the world must keep pressure on North Korea to rein in its nuclear and missile programs as the United States spelt out the choice for impoverished Pyongyang between belligerence and prosperity. "It's not the time to discuss (the resumption of) six-party talks," Kono said, referring to international negotiations involving both Koreas, the United States, Russia, China and Japan for the denuclearization of the Korean peninsula. "It's time to exert pressure," he told reporters. "It's time to exert pressure," he told reporters. (Kiyoshi Takenaka and Stephanie Nebehay, “Japan Urges Pressure on North Korea as US. Spells out Choices,” Reuters, August 22, 2017)

As part of a broad effort to further isolate North Korea, the Treasury Department placed sanctions on Chinese and Russian individuals and firms it said had conducted business with the country in ways that advanced its missile and nuclear weapons program. The sanctions against 10 companies and six individuals are designed to disrupt the economic ties that have allowed Pyongyang to continue funding its missile and nuclear program despite strict United Nations sanctions prohibiting it. U.S. sanctions, even though they are imposed by just one country, have an outsized influence because most international banking is conducted in U.S. dollars. The measures prohibit U.S. citizens and companies from doing business with the sanctioned companies. The sanctions announced by the Office of Foreign Assets Control were predominantly against Chinese companies that have dealt with North Korea by purchasing and selling coal, oil and mineral resources, or have provided banking services that made the transactions possible. The sanctions also hit two companies that arranged for North Korean laborers to build statues in foreign countries. Tillerson has been urging countries that have relations with North Korea to downsize Pyongyang’s diplomatic presence, and refuse to hire North Korean labor. Overseas labor is a source of revenue for the North Korean government, and the Treasury Department contends some of the laborers’ income helped finance ballistic missile testing. “Treasury will continue to increase pressure on North Korea by targeting those who support the advancement of nuclear and ballistic missile programs, and isolating them from the American financial system,” Treasury Secretary Steven Mnuchin said. He added: “It is unacceptable for individuals and companies in China, Russia, and elsewhere to enable North Korea to generate income used to develop weapons of mass destruction and destabilize the region.” The sanctions hit three specific types of business dealings that provide a window into how North Korea uses companies in other countries to evade sanctions. China-based Dandong Rich Earth Trading Co. was sanctioned for buying vanadium ore from a company tied to North Korea’s atomic energy agency. The Russian firm Gefest-M allegedly procured metals for a North Korean mining company with a Moscow office. The Chinese company Mingzheng International Trading was accused of facilitating dollar transactions on behalf of North Korea’s proliferation network. In addition, three Chinese coal companies were sanctioned for importing nearly $500 million of North Korean coal between 2013 and 2016. The Treasury Department said coal trade generates more than $1 billion a year for North Korea, an activity that was targeted in U.N. sanctions imposed last November. One company sold North Korean anthracite coal and allegedly used the proceeds to buy goods it shipped to North Korea, including nuclear and missile components. Three Russian individuals and two Singapore-based companies were accused of buying millions of dollars of oil that was delivered to North Korea. In a blow to North Korea’s revenue from overseas labor, the Treasury Department sanctioned Mansudae Overseas Projects for helping North Koreans work abroad, usually in countries with authoritarian rulers, to build statues that immortalize the dictators. According to the Treasury, Kim Tong-Chol, Mansudae’s managing director, arranged for Qingdao Construction, a Namibia-based subsidiary of a Chinese company, to take over four Namibian government-sponsored construction projects as well as the employees and materials associated with the work. (Carol Morello, “U.S. Sets New Sanctions Related to North Korea,” Washington Post, August 23, 2017, p.A-1)

Sigal: “Nuclear diplomacy with North Korea has a bad history by most journalistic accounts. That bad history, however, is mostly just bad journalism. The latest example is Russell Goldman’s erroneous account in the August 18 edition of the New York Times.[1] The negotiating record is much more successful than he or other journalists acknowledge and far superior to the record of pressure of sanctions and isolation without negotiations. Any achievements have been temporary,
however, because neither side kept its commitments or sustained negotiations. At the root of that bad history is a misreading of Pyongyang’s purpose, which has never been about blackmail or money. During the Cold War, Kim Il Sung played China off against the Soviet Union to maintain his freedom of maneuver. In 1988, anticipating the collapse of the Soviet Union, he reached out to improve relations with the United States, South Korea and Japan in order to avoid becoming overly dependent on China. That has been the Kims’ main aim ever since. From Pyongyang’s vantage point, that aim was the basis of the 1994 Agreed Framework, which committed Washington to “move toward full normalization of political and economic relations,” or, in plain English, end enmity. That was also the essence of the September 2005 Six Party Joint Statement in which Washington and Pyongyang pledged to “respect each other’s sovereignty, exist peacefully together, and take steps to normalize their relations subject to their respective bilateral policies” as well as to “negotiate a permanent peace regime on the Korean Peninsula.” For Washington, suspension of Pyongyang’s nuclear and missile programs was the point of these agreements, which succeeded for a time in shuttering the North’s production of fissile material and stopping the test-launches of medium and longer-range missiles. Would North Korea have kept its word? No one will ever know because both agreements collapsed when Washington did little to implement its commitment to improve relations and Pyongyang reneged on denuclearization. The 1994 agreement is a case in point. Not only did the North shut down its 5 MWe reactor and reprocessing facility at Yongbyon under inspectors’ watchful eyes, but it also stopped construction of two much larger reactors that together were capable of generating 30 bombs’ worth of plutonium a year, by US estimates. No sooner had the agreement been concluded than Republicans took control of the House and Senate, putting it in jeopardy. In 1997, after the Clinton administration had taken only minimal steps to end enmity, was slow to get the reactor project off the ground, and seldom delivered promised heavy fuel oil on schedule, Pyongyang began warning that if Washington did not live up to the Agreed Framework, it was not obliged to either. It then began to acquire the means to enrich uranium from Pakistan and elsewhere. Yet it made no attempt to reprocess the spent fuel stored under inspection at Yongbyon or to restart its reactor. Indeed, it let its other nuclear facilities deteriorate to a point where they could not be salvaged. Pyongyang tried again to get Washington to end enmity, this time offering to curtail its missile programs as an inducement. The United States had begun missile negotiations with North Korea in 1996 but had held just two rounds of talks, hardly a sign of seriousness. On June 16, 1998, North Korea made public an offer to negotiate an end not only to its missile exports but also to “development”—its word—of new missiles. It linked that offer to the conclusion of a “peace agreement.” Along with the offer, it issued a threat to resume missile tests, a threat the North carried out on August 31 when it launched a three-stage rocket, the Taepodong, in a failed attempt to put a satellite into orbit. Former Secretary of Defense William Perry broached the possibility of a missile deal in talks in Pyongyang in May 1999. He also gave the North a draft of a joint communique that would be issued during the visit to Washington of Marshal Jo Myung Rok, vice chairman of the National Defense Commission, in October 2000, pledging “steps to fundamentally improve…bilateral relations,” including “replacing the 1953 Armistice Agreement with permanent peace arrangements.” It was explicit about an end to enmity: “As a crucial first step,” it noted, “neither government would have hostile intent toward the other.” That helped pave the way for the first ever North-South summit meeting. It also led to the resumption of missile talks and North Korean acceptance of a test-launch moratorium while the talks proceeded. Within weeks of Jo’s visit, Secretary of State Madeleine Albright went to Pyongyang to meet with Kim Jong II, who offered to end not only exports of missile technology but also development, production and deployment of all medium and longer-range missiles in return for an end to enmity. In Perry’s recollection: ‘In October of 2000, we had already come to a full verbal agreement on a detailed agreement on North Korea, by which they would agree to give up their nuclear program, and their long-range missile program. We were, I think, three to six months from having a signed, formal, agreement for doing that. Persuaded that President-elect Bush would continue the negotiation once in office, Clinton decided to leave the matter to him. Clinton’s assumption proved wrong. In October 2002, having balked at talks for nearly two years, President Bush sent James Kelly, Assistant Secretary of State for East Asian and Pacific Affairs, to Pyongyang—not to negotiate but to confront it over its clandestine uranium enrichment program. The North Koreans offered to forego uranium enrichment, as well as plutonium production, in return for diplomatic recognition,
legal assurances of nonaggression, including nonuse of nuclear weapons, and not impeding its economic development, as Kelly himself acknowledged three weeks later: “They did suggest after this harsh and—personally, to me—surprising admission that there were measures that might be taken that were generally along those lines.”[6] Under strict instructions, Kelly ignored the offer. In her memoir, Condoleezza Rice is more forthcoming. Kelly, she recalls, was bound in a diplomatic straitjacket: “Usually there is enough trust in an experienced negotiator that the guidance is used more as points of reference than as a script. But in this case, given the fissures, the points were to be read verbatim. There were literally stage directions for Kelly. He was not to engage the North Koreans in any side conversation in any way. That left him actually moving to the corner of the table to avoid Pyongyang’s representatives’. [7] Rice’s conclusion is worth underscoring: “Because his instructions were so constraining, Jim couldn’t fully explore what might have been an opening to put the program on the table.”[8] Instead, administration officials claimed that the North Koreans had “admitted” they had an enrichment “program” and said they should be punished. They overcame resistance from South Korea and Japan to suspend shipments of heavy fuel oil, thereby tearing up what little was left of the Agreed Framework. While US forces were tied down preparing to invade Iraq, North Korea retaliated by reprocessing the five or six bombs’ worth of plutonium, which, when weaponized, would allow it to conduct nuclear tests for the first time. It also moved to restart its plutonium reactor, ramped up imports of enrichment equipment, and aided Syria in constructing a reactor of its own. The North’s nuclear effort, largely held in check for a decade through negotiations, was now unleashed. Bush’s initial response was to ignore North Korea’s nuclear actions while hard-liners in his administration began touting regime change. On the very day that Saddam Hussein’s statue was toppled from its pedestal in Baghdad, Assistant Secretary of State John Bolton said, “We are hopeful that a number of regimes will draw the appropriate lesson from Iraq.”[9] Far from making Pyongyang more pliable, however, the war on Iraq strengthened its determination to arm. As a DPRK Foreign Ministry spokesman noted on April 6, 2003, “Only military deterrent force, supported by ultra-modern weapons, can avert a war and protect the security of the nation. This is the lesson drawn from the Iraqi war.”[10] Yet Pyongyang was still prepared to suspend arming if Washington moved to end enmity. Pressed by President Kim Dae Jung in Seoul and Prime Minister Koizumi Junichiro in Tokyo, President Bush eventually relented and resumed talks in 2003. It took two years before Washington, again under allied pressure, allowed its negotiators to meet directly with the North Koreans in August and September 2005. Diplomacy worked. Pyongyang grudgingly accepted a Six Party joint statement, incorporating the main goal Washington was seeking, a pledge to abandon “all nuclear weapons and existing nuclear programs.” Yet Pyongyang was not about to settle for fine words any more than Washington was. It insisted on phased reciprocal steps by Washington to reconcile—end enmity—as it eliminated its nuclear programs. The September 19, 2005, joint statement embodied that point: “The six parties agreed to take coordinated steps to implement the aforementioned consensus in a phased manner in line with the principle ‘commitment for commitment’ and ‘action for action.’”[11] The accord laid out some of the steps Pyongyang sought. The United States undertook to “respect [the DPRK’s] sovereignty,” diplomatic code for not attempting to overthrow its government. It stopped short of agreeing to normalize relations, wanting the North to reduce its forces along the DMZ and embrace human rights first. At the urging of the other parties, Washington committed to “respecting” Pyongyang’s right to nuclear power and “agreed to discuss at an appropriate time the subject of the provision of light-water reactors [LWRs] to the DPRK.” The North would not be entitled to reactors until it eliminated its weapons and weapons programs to the satisfaction of the International Atomic Energy Agency and rejoined the NPT as a member in good standing. Yet the ink was hardly dry on the September 19 accord when administration hard-liners struck back, undoing the deal and hamstringing US negotiators. In a closing plenary statement, US negotiator Christopher Hill announced a decision, dictated by the hard-liners, to “terminate KEDO,” the international consortium set up to provide the reactors.[12] Later that day, Secretary of State Condoleezza Rice implied that the “appropriate time” for discussion of replacement reactors was when hell froze over: “When the North Koreans have dismantled their nuclear weapons and other nuclear programs verifiably and are indeed nuclear-free…I suppose we can discuss anything.”[13] Pyongyang reacted sharply. “The basis of finding a solution to the nuclear issue between the DPRK and the U.S. is to wipe out the distrust historically created between the two countries and a
physical groundwork for building bilateral confidence is none other than the US provision of LWRs to the DPRK,” said a Foreign Ministry spokesman. “The U.S. should not even dream of the issue of the DPRK’s dismantlement of its nuclear deterrent before providing LWRs, a physical guarantee for confidence-building.”[14] Even worse, having declared in the September 19 accord that it had “no intention” of attacking the North “with conventional or nuclear weapons” and having pledged to “respect [DPRK] sovereignty,” renounce military attack and regime change, and “negotiate a permanent peace regime on the Korean Peninsula,” the Bush administration backed away. Under pressure from hard-liners, Hill undercut those commitments in prepared testimony to Congress days later by echoing a familiar refrain, “All options remain on the table.” Worse yet, the administration began taking action under the Illicit Activities Initiative (IAI) to put a roadblock in the way of negotiations. On September 15, the day that the Six Party accord was reached but two days before it was made public, it had capitalized on a Treasury Department investigation of money-laundering at the Banco Delta Asia in Macao to convince banks around the globe to freeze North Korean hard currency accounts—some with ill-gotten gains from illicit activities, but many with proceeds from legitimate foreign trade. By late summer, a senior official told the New York Times, the administration decided “to move toward more confrontational measures.” He described the strategy: “Squeeze them, but keep the negotiations going.” In the words of Undersecretary of State Robert Joseph, “We believe that they will reinforce the prospect for success of those talks.” What did success mean? Another senior State Department official put it this way: IAI turned Six Party Talks into nothing more than “a surrender mechanism.”[15] How much the freezing of North Korea’s hard currency accounts curtailed its trade is unclear, but it looked a lot like regime change to Pyongyang, which responded by refusing to return to Six Party Talks until its accounts at the Banco Delta Asia were unblocked. In talks in New York on March 17, 2006, it proposed a bilateral US-DPRK mechanism to resolve the issue.[16] Hill, however, was not allowed to meet with the North Koreans. Far from giving Washington leverage, the financial sanctions provoked Pyongyang to begin preparations for missile test launches. When a high-level Chinese delegation came to Pyongyang to urge top officials to call them off and warn of UN action, they were kept waiting for three days—and then ignored. The July 4, 2006, fireworks display, conducting seven test launches including the Taepodong-2, prompted China to vote for a US-backed resolution in the UN Security Council condemning the tests and threatening sanctions. Undaunted, North Korea immediately began preparations for a nuclear test, which it carried out on October 9, 2006. It was demonstrating that it would never bow to pressure—whether from the United States or China or both. Only US moves to end enmity would get it to change course. In announcing the nuclear test three days before conducting it, the DPRK Foreign Ministry denounced the UN Security Council resolution and warned, “The U.S. extreme threat of a nuclear war and sanctions and pressure compel the DPRK to conduct a nuclear test, an essential process for bolstering [our] nuclear deterrent, as a corresponding measure for defense.” Nevertheless, the North insisted, its aim of negotiated denuclearization of the Korean Peninsula remained unchanged. So did its price—an end to enmity: “The ultimate goal of the DPRK is not “denuclearization” to be followed by its unilateral disarmament but one aimed at settling the hostile relations between the DPRK and the U.S. and removing the very source of all nuclear threats from the Korean Peninsula and its vicinity.”[17] “The North Koreans successfully gamed the United States,” Russell Goldman claims. Far from it: when President Bush took office, thanks to diplomacy, North Korea had stopped testing longer-range missiles. It had less than a bomb’s worth of plutonium and was verifiably not making more. Six years later, as a result of Washington’s broken promises and financial sanctions, it had seven to nine bombs’ worth, had resumed longer-range test launches, and felt free to test nuclear weapons. The strategy of pressure had failed. On October 31, just three weeks after the nuclear test, President Bush returned to diplomacy, permitting US negotiator Hill to meet bilaterally with his DPRK counterpart. Hill offered a compromise on North Korean accounts frozen in the Banco Delta Asia. That opened the way to negotiations to implement the September 2005 joint statement, which yielded a first-phase agreement on February 13, 2007, suspending nuclear testing, and shutting down the North’s reactor and reprocessing facility at Yongbyon. [18] A second-phase agreement on October 3, 2007, committed the North to provide “a complete and correct declaration of all its nuclear programs” and put Pyongyang on a path to disable its plutonium facilities at Yongbyon, making it more time-consuming and costly to restart and thereby whittling away its nuclear leverage. In return, the other parties pledged to supply the
North with energy aid and the United States agreed to ease sanctions under the Trading with the Enemy Act and delist the DPRK as a “state-sponsor of terrorism.”[19] The second-phase agreement said nothing about verifying the North’s declaration, which was left to a subsequent phase of implementation. Once again, however, Washington failed to sustain this promising diplomatic course, this time with enthusiastic backing from the incoming president in Seoul, Lee Myung-bak, who was determined to back away from his predecessors’ “sunshine policy” and impede implementation of the Six Party agreements. [20] On June 26, 2008, the DPRK handed China a written declaration of its plutonium program, as required by the October 2007 accord. North Korea reportedly declared it had separated 38 kilograms of plutonium—within the range of US estimates, albeit at the low end. In a side agreement with Washington, Pyongyang committed to disclose its enrichment and proliferation activities, including its help for Syria’s reactor. Many in Washington, Tokyo and Seoul questioned whether the declaration was “complete and correct,” as required by the October 2007 agreement. The crux of the dispute was how much plutonium the North had separated before the end of 1991. Washington decided to demand arrangements to verify the declaration. The trouble was the October 2007 agreement contained no provision for verification in the second phase of denuclearization. The day that Pyongyang turned in its declaration, the White House announced its intention to relax sanctions under the Trading with the Enemy Act and to delist the DPRK as a “state-sponsor of terrorism”—but with a caveat. As Secretary of State Rice told the Heritage Foundation on June 18, “[B]efore those actions go into effect, we would continue to assess the level of North Korean cooperation in helping to verify the accuracy and completeness of its declaration. And if that cooperation is insufficient, we will respond accordingly.” Rice acknowledged Washington was moving the goalposts: “What we’ve done, in a sense, is move up issues that were to be taken up in phase three, like verification, like access to the reactor, into phase two.”[21] In bilateral talks with Hill, the DPRK agreed to allow “sampling and other forensic measures” at the three declared sites at Yongbyon—the reactor, reprocessing plant, and fuel fabrication plant—which might suffice to ascertain how much plutonium it had produced. If not, he also accepted “access, based on mutual consent, to undeclared sites,” according to a State Department announcement. [22] Yet Japan and South Korea insisted the North’s commitment be put in writing and insisted on halting energy aid. Washington went along. The North responded to the suspension of promised energy aid by assembling a rocket at its Musudan-ri launch site starting in late January 2009. It did not launch the rocket until April 5, giving the incoming Obama Administration more than two months to undo North Korea’s walkback or open talks to resolve the issue. It did neither. On June 12, the Security Council, with China’s backing, responded to the launch by enacting Resolution 1874, which “sharpened its weapons import-export ban…by calling on States to inspect, seize and dispose of the items and by denying fuel or supplies to service the vessels carrying them,” including intercepting vessels at sea. It also banned “the provision of financial services…that could contribute to the Democratic People’s Republic of Korea’s nuclear-related, ballistic missile-related or other weapons of mass destruction-related programs or activities.” The DPRK Foreign Ministry responded within hours, saying that “nuclear abandonment has now become absolutely impossible” and warning that all the plutonium it had just removed from its reactor would “be weaponized” and that its uranium-enrichment program would move beyond the test phase to an operational plant.[23] As it had in 2006 when Washington and Beijing had agreed on sanctions at the UN Security Council, Pyongyang then conducted a nuclear test to drive them apart. It was demonstrating once again that an end to enmity with Washington, not tougher sanctions by Beijing, was the key to denuclearization. Once again, the resort to pressure had failed to stop North Korean nuclear and missile advances. Now, Washington is again pressing Pyongyang to accept talks on its terms. If the past is prologue, pressure without negotiations to end enmity is a recipe for failure. [4] As President Clinton described the deal this way, “They stop missile development and the sale of missiles. Now, they obviously need to earn some funds from some other places and we think there are ways they can do that.” (White House transcript of Associated Press interview aboard Air Force One, November 4, 2000.) North Korea’s version is in “Conclusion of Non-Aggression Treaty between DPRK and US Called for,” Korean Central News Agency, October 25, 2002. [5] William J. Perry, Transcript
North Korean leader Kim Jong Un has ordered the country's key science institute to produce more solid-fuel rocket engines and warhead tips, state media reported. Kim was briefed about the process to manufacture intercontinental ballistic missile warhead tips and solid-fuel rocket engines during his inspection of the Chemical Material Institute of the Academy of Defense Science, the Korean Central News Agency said without mentioning when the visit was made. "He instructed the institute to produce more solid-fuel rocket engines and rocket warhead tips by further expanding the engine production process and the production capacity of rocket warhead tips and engine jets by carbon and carbon compound material," KCNA said. The institute produces intercontinental ballistic missile warheads and also develops carbon compound materials used in rocket engines. KCNA said Kim "gave special thanks and a special bonus" to officials at the institute, describing them as "unassuming heroes" and "patriotic scientists." Kim's order to increase production of solid-fuel rocket engines and warhead tips is seen as reflecting Pyongyang's resolve, despite international condemnation, to develop intercontinental ballistic missiles capable of reaching the U.S. mainland. Solid-fuel engines help cut the required preparation time for a missile launch and make it more difficult for outside observers to detect a launch in advance. For example, the Pukguksong-2 missile, a new medium- to long-range ballistic missile tested by the North, is known to be using pre-loaded solid fuel. Meanwhile, Rodong Sinmun released photos that appear to show the country may be developing a new submarine-launched, solid-fuel ballistic missile. On a wall at the institute inspected by Kim was a sign board showing a concept diagram for the underwater strategic Pukguksong-3 missile. It also showed Kim picking up an object that could be the tip of a missile warhead, which appeared to be intended to counter skepticism of experts in the United States, South Korea and Japan as to whether North Korea has mastered the technology needed to ensure the survival of an ICBM-mounted nuclear warhead when re-entering the Earth's atmosphere from space. Despite the start of a 10-day joint military exercise by U.S. and South Korean troops this week, Today's KCNA report did not include any provocative rhetoric against the United States nor remarks regarding a plan to launch another missile. In the United States, President Donald Trump expressed cautious hope yesterday for possible improvement in relations with North Korea, saying at a campaign rally in Phoenix, Arizona, that Kim "is starting to respect us." "And maybe, probably not, but maybe something positive can come about," Trump said. (Kyodo, "N. Korea Orders More Rocket Engine, Warhead Production," August 23, 2017)
KCNA: “Kim Jong Un, chairman of the Workers’ Party of Korea, chairman of the State Affairs Commission of the DPRK and supreme commander of the Korean People’s Army, gave field guidance to the Chemical Material Institute of the Academy of Defense Science. Shaking hands of officials who came out to greet him, respected Supreme Leader Kim Jong Un said that he came to learn about the situation of the institute and help its work. He noted that in recent years the institute has done a lot of jobs in a patriotic drive for breaking through the cutting edge, whether they are known or not, true to the Workers’ Party of Korea’s policy of attaching importance to the defense science and technology and policy of the munitions industry. After looking round the newly-built room for the education in the revolutionary history and exhibition hall of scientific and technological achievements, he learned about the processes for manufacturing ICBM warhead tip and solid-fuel rocket engine. Acquainting himself with the processes for preform weaving by carbon fiber, chemical deposition, high pressure liquid deposition and final treatment, he learned about in detail the density of preform, deposition temperature, vacuum degree and deposition time in the chemical deposition process, deposition temperature, pressure, working medium and deposition frequency in the high pressure liquid deposition process and technological specifications in the final treatment process. He then made a field survey of the process for manufacturing solid-fuel rocket engine and specified tasks and ways for normalizing the production at a higher level. He set forth important tasks facing the institute. He instructed the institute to produce more solid-fuel rocket engines and rocket warhead tips by further expanding engine production process and the production capacity of rocket warhead tips and engine jets by carbon/carbon compound material. Highly appreciating that it is the pride of our Party to have such unassuming heroes, unit of patriotic scientists as the officials of this institute who have devoted themselves to carrying out the Party’s policy of defense science, keeping in mind the pure single mind of loyalty to the Party, whether they are appreciated or not, and gave special thanks and special bonus to them in the name of the Party Central Committee. He had a photo session with the scientists, technicians and workers of the Chemical Material Institute of the Academy of Defense Science. Accompanying him were Jo Yong Won and Kim Jong Sik, vice department directors of the C.C., the Workers’ Party of Korea.” (KCNA, “Kim Jong Un Inspects Chemical Material Institute of Academy of Defense Science,” August 23, 2017)

North Korea denounced the ongoing joint U.S.-South Korea drills on the peninsula and warned Washington and Seoul not to engage in "rash acts." A Pyongyang "peace" committee specializing in propaganda called the annual Ulchi Freedom Guardian drills a "provocative war exercise" targeting North Korea, Yonhap reported. "Needless to say, we will ultimately not stand by and watch the dangerous pranks of the stupid fools before our nuclear and chemical weapons. Our blood boils with the will to retaliate and destroy our enemy," the committee said. (Elizabeth Shim, “North Korea Condemns ‘Dangerous Pranks’ of U.S., South Korea,” UPI, August 23, 2017)

James Clapper, former director of National Intelligence, this morning questioned President Donald Trump's fitness for office. "I really question his ability to be — his fitness to be — in this office, and I also am beginning to wonder about his motivation for it," Clapper told CNN's Don Lemon on "CNN Tonight." Hours after Trump delivered a defiant speech in Phoenix, Arizona, Clapper said he found the President's rally "downright scary and disturbing." Clapper denounced Trump's "behavior and divisiveness and complete intellectual, moral and ethical void." "How much longer does the country have to, to borrow a phrase, endure this nightmare?" "He should have quit while he was ahead after last night," Clapper referring to Trump's announcement on US strategy in Afghanistan. "Again, I think the real Trump came through." Clapper also said he is worried about the President's access to the nuclear codes. "In a fit of pique he decides to do something about Kim Jong Un, there's actually very little to stop him," Clapper said. "The whole system is built to ensure rapid response if necessary. So there's very little in the way of controls over exercising a nuclear option, which is pretty damn scary." (Leinz Vales, “James Clapper Calls Trump Speech ‘Downright Scary and Disturbing,’” CNN, August 24, 2017)
China decried “secondary sanctions” as an act of “long-arm jurisdiction” that violates its sovereign right to police companies using local laws. “If there are suspected violations of [UN] resolutions on the part of Chinese enterprises and individuals, we will investigate and dispose according to our domestic law,” the Chinese foreign ministry said. “The [U.S. sanctions] do not help solve the problem, nor are they conducive to China-U.S. cooperation and mutual trust.” Most analysts believe China is unlikely to do more than engage in another war of words as it puts diplomatic stability ahead of a leadership transition this year. “China has foreseen and priced in secondary sanctions and will refrain from responses beyond verbal protests,” said Xie Yanmei at Gavelkal Dragonomics, a Beijing consultant. “China wants to mollify rather than provoke.” The Trump Administration’s latest sanctions have targeted only small private sector companies rather than large state-owned enterprises. “The sanctions have a modest reputational cost as they imply China is not serious about curbing North Korea’s nuclear weapons program,” Ms. Xie said. “But they have negligible material effect as most entities that deal with it are marginal private players.” (Tom Mitchell, Charles Clover, and Demetri Sevastopulo, “China Limits Protest over N. Korea Sanctions,” Financial Times, August 24, 2017, p. 4)

8/25/17

North Korea has increased its efforts to produce parts for a new nuclear reactor it is building while continuing to operate the main existing one that provides fuel for its atom bombs, the U.N. nuclear watchdog has said in an annual report. Its effort to produce material for nuclear bombs, however, has rumbled on, the International Atomic Energy Agency (IAEA) said in a report to its annual general conference. The IAEA does not have access to North Korea and monitors its activities mainly by satellite imagery. “There were indications in the LWR (light-water reactor) construction yard of an increase in activities consistent with the fabrication of certain reactor components,” the IAEA report posted on the General Conference's website said. "The agency has not observed indications of the delivery or introduction of major reactor components into the reactor containment building," it said. The new reactor is expected to be larger than the current experimental one at Yongbyon. There was no indication in the past year, however, that the Communist state had used the laboratory near its main reactor where it usually produces plutonium from spent fuel rods, the IAEA said. That appeared to contradict a recent report by a U.S. think tank that said the lab had operated intermittently. There were indications the experimental reactor had kept running, the IAEA said. Its previous report said the reactor had been refuelled in 2015 and those fuel rods would probably be removed two years later. Today's report confirmed that prediction, saying this fuel cycle should last until late 2017. Even less is known about North Korea’s efforts to produce another material that can fuel nuclear weapons — highly enriched uranium — but the report suggested those had continued at Yongbyon. "There were indications consistent with the use of the reported centrifuge enrichment facility located within the plant. Construction work was undertaken on a building which adjoins the reported centrifuge enrichment facility,” it said. (Francois Murphy, “North Korea Steps up Work on Parts for New Reactor, IAEA Says,” Reuters, August 25, 2017)

Japan's Cabinet approved the imposition of new unilateral sanctions on a number of companies and individuals from China, Namibia and North Korea in a bid to further pressure Pyongyang over its nuclear and ballistic missile programs. Tokyo identified four Chinese companies and two Namibian firms, as well as one Chinese individual and one North Korean individual as new targets for sanctions. While Beijing is widely considered to have significant influence over Pyongyang, the southern African nation of Namibia has been deepening relations with North Korea in recent years, a source close to the matter said. "North Korea has been repeatedly carrying out provocative acts...we have decided to work in close coordination with the United States and have taken these new measures reflecting on those taken by the United States on the 22nd (of August)," Chief Cabinet Secretary Suga Yoshihide told a press conference. (Kyodo, “Japan Freezes Assets of More Firms, Individuals Linked on N. Korea,” August 25, 2017)

South Korea's point man on North Korea said that the now-suspended joint industrial town in Kaesong will be the first issue to be reviewed if Pyongyang halts provocations and international sanctions are eased. Speaking at a forum here, Unification Minister Cho Myoung-gyon reaffirmed
the Moon Jae-in administration's resolve to maintain economic sanctions to punish the impoverished communist neighbor for its repeated nuclear and missile tests. Asked about the possibility of reopening the joint industrial complex in Kaesong, a North Korean border city, he said, "Realistically, it's difficult in the current situations." But the government plans to put a priority on resolving the issue if there's a change in the "sanctions phase" some day, he added. The minister stressed that there's no better way he thinks to bring a change to the isolated communist nation. He said the resumption of the inter-Korean program may proceed gradually starting from the on-site management of related facilities and assets that remain in the zone. Until the closure, 124 South Korean firms hired around 54,000 North Korean workers to produce socks, wristwatches and other goods there. On the North's missile capability, meanwhile, Cho predicted that it will take around two more years for the North to perfect its intercontinental ballistic missile technology. "It may be shorter than we expect as it's pushing for that faster than our judgment," he said. "Now is viewed as a stage (for the North) to escalate tensions, and there's a possibility of additional provocations." (Yonhap, “Kaesong Revival Will Be the First Issue Pushed If N.K. Sanctions Ease: Minister,” August 25, 2017)

Among 10 businesses and six individuals of China and Russia, which dealt business transactions with North Korea, the U.S. has decided to levy sanctions and forfeit 11 million U.S. dollars from three companies. Furthermore, Washington is reportedly undergoing investigations into around 100 companies as well. As the U.S. Treasury Department is highly likely to announce additional companies subject to the sanction next month, a fierce backlash from Beijing awaits Washington. "There are hundreds of Chinese companies directly and indirectly supporting the North Korean nuclear and missile development by providing luxury goods and facilitating financial transactions, but the Chinese government never seems to hold grasp of their existence," said a U.S. State Department official during a telephone interview. "An additional announcement on other companies subject to the sanctions will be made next month regardless of whether China is cooperating with the North Korean nuclear issue." The U.S. Treasury Department has designated this year a total of 23 institutions and 22 individuals for sanctions, and is reviewing plans on sanctioning a state-owned large bank in China. "The recent move comes as an effort from Washington that will bind Beijing to participate with the international society by disclosing the violations on UNSC resolutions, so that China as the permanent member of the UNSC cannot side with North Korea with no rational grounds," said a diplomacy expert in Washington. (Park Jeong-Hun, “U.S. Claims over 100 Chinese Companies Covertly Deal with N. Korea,” Dong-A Ilbo, August 25, 2017)

Rodong Sinmun commentary: “The U.S. and the south Korean puppet warmongers started Ulji Freedom Guardian joint military exercises for invading the DPRK on August 21. This is a clear indication of the attempt to mount a preemptive attack on the north and an unpardonable provocation against it. The warmongers at home and abroad are veiling the Ulji Freedom Guardian military exercises as "annual" ones just as they used to do in the past. ...But with nothing can the U.S. and the puppet warmongers cover up the aggressive and provocative nature of the joint military exercises. The exercises are the ones for a war of aggression for mounting a surprise preemptive attack on the DPRK from all aspects. A clear proof is that OPLAN 5015 has been applied to the exercises this time. OPLAN 5015 is a hideous preemptive strike scenario focusing on the "precision strike" at the supreme headquarters and major strategic strongholds of the DPRK. The warmongers at home and abroad are working hard to master and perfect the performance procedures and the actual maneuverability of "beheading operation" and "secret operation" under OPLAN 5015. This clearly proves the nature of the U.S. and the puppet warmongers who work hard to stifle the DPRK in a military way even though they talk about "annual" and "defensive." It is a very ill-boding development that timed to coincide with the exercises, the U.S. Pacific Command chief, the U.S. Strategic Command head, the Missile Defense Agency director and other U.S. high-ranking military officers flew into south Korea to hold confabs against the DPRK. The situation clearly proves that the U.S. and the warmongers' scenario for provoking a nuclear war against the north has reached the phase of implementation.” (KCNA, “Rodong Sinmun on Danger of U.S.-S. Korea Joint Exercises,” August 25, 2017)
North Korea launched three missiles into the sea between the Korean Peninsula and Japan this morning, reigniting tensions after a month of heated rhetoric between Pyongyang and Washington and dispelling President Trump’s assertion that Kim Jong Un had come to “respect” him. The missiles appeared to be short-range and at least one of them quickly failed. Still, the latest launches underscore Kim’s continued focus on making strides in his weapons program and his continued defiance of international calls for him to desist. Analysts said the launches appeared to be a response to the ongoing joint exercises between the United States and South Korean militaries, exercises that North Korea always strongly protests because it considers them preparation for an invasion. Furthermore, South Korea fired three missiles of its own this week.

“When they [North Korea] fire salvos of missiles, it’s usually because they’re training, so in a way, they’re doing their own exercises,” said Melissa Hanham of the Center for Nonproliferation Studies in California. Kim had just supervised a special forces target-striking contest, practicing attacks on two South Korean islands, KCNA reported separately Saturday. The North Korean People’s Army “should think of mercilessly wiping out the enemy with arms only and occupying Seoul at one go and the southern half of Korea,” Kim told his special forces. Today’s salvo was composed of three short-range missiles fired over the course of half an hour from Kittaeryong on North Korea’s east coast, according to U.S. Pacific Command in Hawaii. The first and third missiles flew 150 miles before falling into the sea, according to South Korea’s Joint Chiefs of Staff. The second missile appears to have blown up almost immediately. “We are working with our interagency partners on a more detailed assessment and we will provide a public update if warranted,” Cmdr. Dave Benham, a spokesman for the U.S. Pacific Command, said in a statement. The missiles did not pose a threat to the United States, he added. The launches puzzled analysts because North Korea does not typically have problems with tried and tested short-range missiles like Scuds. The White House said that the president had been briefed on the launches and that it was monitoring the situation. South Korea’s Joint Chiefs of Staff said they were working to determine the types of missiles fired. South Korea’s national security council convened to discuss the latest provocations. (Anna Fifield, “Defiant North Korea Launches Three More Missiles,” Washington Post, August 26, 2017, p. A-1) North Korea fired three short-range projectiles off its eastern coast Saturday morning in what Seoul considers a protest of the ongoing military exercises between South Korea and the United States. A senior Blue House said that North Korea seemed to have fired the rockets in a show of protest of the ongoing Ulchi Freedom Guardian drill between South Korea and the United States. (Lee Sung-eun, “North’s Missiles Are Protests of Joint Drills,” JoongAng Ilbo, August 28, 2017) Why did North Korea threaten to launch missiles toward Guam?

The primary objective is believed to be to deter the routine U.S.-South Korea joint military exercises that began on August 21 in South Korea. North Korea has consistently made threats whenever U.S.-South Korea military exercises took place in the past. This time, they are again threatening to turn Seoul into a “sea of fire” and “seize control of U.S. military bases in the Pacific.” According to a former Defense Ministry official: “The U.S.-South Korea joint military exercises are what Kim Jong Un, chairman of the Workers’ Party of Korea, fears most. He fears a surprise attack by the U.S. military. These latest threats are simply the same hysterical response he repeats whenever there are military exercises. It’s best to view the situation calmly.” It is also believed within the Japanese government that the threat to launch missiles toward Guam was prompted by the U.N. Security Council resolution for new sanctions against North Korea that was unanimously approved on August 5. Miyamoto Satoru, a professor at Seigakuin University who is well versed in issues involving the Korean Peninsula, described the current situation based on deterrence theory, the game theory-based strategy North Korea has adopted to deter the United States. According to Miyamoto, North Korea believes that sending a friendly message to the United States would increase the likelihood that the United States will choose to attack North Korea, and lead to such outcomes as reconciliation and capitulation, or war. They believe the most peaceful state of affairs can be more reliably maintained by adopting a hostile stance and demonstrating their ability to retaliate with nuclear and missile tests. Based on the deterrence theory, North Korea therefore conducts repeated tests and maintains a hostile stance toward the United States as the best course of action. Miyamoto also said North Korea’s threat to launch missiles is meant to serve as a deterrent, and that they do not intend to actually carry out the threat. “The U.S. position that launching the missiles will lead to war is also intended to maintain deterrence. As long as both sides have effective deterrents in place, neither can attack the other,”
he said. Regarding the plan to launch missiles toward Guam, North Korea’s commander of the Strategic Force of the Korean People’s Army stated the missiles would fly over the three prefectures of Shimane, Hiroshima, and Kochi. If the missiles are launched according to the plan, it would be the third time for North Korean missiles to pass over the Japanese mainland — the first two being a two-stage Taepodong-1 in August 1998 and an improved three-stage Taepodong-2 in April 2009. It would be the first such missile test under the Kim Jong Un regime. The Hwasong-12 is believed to be a single-stage booster design with an attached warhead. If successful, it would be the first time for a North Korean missile to make it over the Japanese mainland with only a single-stage booster. Although North Korea’s ballistic missiles have splashed down in Japan’s exclusive economic zone (EEZ) six times in the past, none have fallen within 100 kilometers of Japanese territory. If North Korea successfully launches missiles 30 to 40 kilometers from Guam, it may strongly provoke the U.S. administration led by Donald Trump and provide justification for military retaliation. It is highly doubtful North Korea would take such a risk. To begin with, there are many uncertainties as to whether it is even technically possible to carry out an “enveloping strike around Guam” with the Hwasong-12. Prof. Toshiyuki Ito at the Kanazawa Institute of Technology’s Toranomon Graduate School of Innovation Management was doubtful that the threat would be carried out. Said Ito, who served as a vice admiral of the Maritime Self-Defense Force: “Such an act would be just like stepping on a tiger’s tail and induce the United States to exercise its right to self-defense. It’s unlikely they are capable of launching missiles to such a location.” Ito also pointed to technical issues with the less-than-fully-developed Hwasong-12. “Having only been tested once in May, the missile is still incomplete, and they do not have the necessary data for when it reenters the Earth’s atmosphere after being launched at a normal angle. There is simply no way they are capable of an enveloping strike,” he said. For a warhead to survive reentry into the Earth’s atmosphere, it is necessary to have not only the technology to protect it from high temperatures of several thousand degrees but also data to guide it on an entry angle of approximately six degrees. How will the U.S. military respond if North Korea carries out its plan to launch Hwasong-12 missiles toward Guam, as they earlier threatened? A source close to the defense ministry said, “If the missiles are predicted to splash down outside U.S. territorial waters, the U.S. military will ignore them, not intercept them.” According to Koda Yoji, a former commander in chief of the Self-Defense Fleet and a retired vice admiral: “The U.S. military will not intercept, as it will be able to gather more data on the Hwasong-12. However, it will probably intercept any missiles that are likely to strike urban areas or military bases.” Gathering data on North Korea’s new missiles would help improve the accuracy of technologies such as the SM-3 interceptor missile installed on the U.S. Navy’s Aegis cruisers and the state-of-the-art Terminal High-Altitude Area Defense (THAAD) missile defense system deployed in Guam. However, Koda also said: “The United States does not have the option of allowing the emergence of rogue states possessing nuclear missiles. It should be assumed that the conditions under which the United States would attack North Korea are already in place.” The dangerous diplomatic game between the United States and North Korea is unlikely to end for some time. How can we avoid military conflict and pave the way to denuclearize the Korean Peninsula? Countries involved in the issue are continuously seeking a possible way. (Fukumoto Tatsuya, “Targeting of Guam Another Empty Threat; N. Korea Threats Result from Anxiety over U.S.-S. Korea Military Exercises,” Yomiuri Shimbun, August 28, 2017) North Korea fired "several unidentified projectiles" from the vicinity of Kitaeryong in Kangwon Province starting at around 6:49 a.m., said South Korea's Joint Chiefs of Staff. Some of those flew more than 250 kilometers (155 miles) in a northeastern direction, it added. The U.S. Pacific Command also said, "Initial assessment indicates three short-range ballistic missile launches." "The first and third missiles at 11:49 a.m. (Hawaii time) and 12:19 p.m. failed in flight," the Pacific Command's spokesman Cdr. David Benham said in an emailed statement. "The second missile launch at 12:07 p.m. appears to have blown up almost immediately." The North American Aerospace Defense Command determined the launches from North Korea did not pose a threat to North America, he added. During the National Security Council's standing committee session presided over by Moon's national security adviser Chung Eui-yong, participating officials "reviewed the defense posture" of South Korean troops, said Yoon Young-chan, senior presidential secretary for public relations. "They have also decided to proceed more thoroughly with the ongoing UFG drills," he said, referring to Ulchi Freedom Guardian, an annual combined training drill between South Korea and
South Korea's presidential office said that North Korea's latest low-intensity provocation may indicate its intent not to aggravate the security situation, voicing hope for future dialogue with Pyongyang. The assessment came after North Korea fired what's seen as three short-range ballistic missiles yesterday, the first provocative act in a month after its tests of two intercontinental ballistic missiles (ICBMs) last month. Cheong Wa Dae is viewing the North's latest test as a widely expected move as North Korea made provocative acts before or during joint military drills between Seoul and Washington. "It is clear that the current situation has nothing to do with strategic provocations," a senior official at the presidential office told reporters. The office said that Seoul thinks the projectiles were artillery rockets fired from a multiple-rocket launcher, while the U.S. military reaffirmed its assessment characterizing those as short-range ballistic missiles, given that their altitude is far lower than that of a ballistic missile. Cheong Wa Dae refrained from issuing a statement condemning the North's act, which experts say reflects South Korea's hope that the current situation could set the tone for dialogue with the North. "It seems that North Korea is trying not to aggravate the situation," a presidential official said. "This kind of low-intensity provocation can be read as a signal that a mood for dialogue can follow the allies' military exercises." He said that President Moon Jae-in called for the need to review whether North Korea's restraint from provocative acts could pave the way for dialogue. Tensions somewhat eased after exchanges of bellicose rhetoric between U.S. President Donald Trump and the North Korean leadership. Experts said that if North Korea does not make additional provocations until Sept. 9, an anniversary of the establishment of its regime, anticipation for dialogue could gain traction. The government is hoping that the two Koreas hold a joint civilian event to celebrate the 10th anniversary of the second inter-Korean summit on Oct. 4 and have reunions for families separated

Secretary of State Rex Tillerson said on "Fox News Sunday," he is willing to have talks with North Korea even after its latest missile provocation. "The firing of any ballistic missile is a violation of U.N. Security Council resolutions," the secretary said. "We do view it as a provocative act against the United States and our allies." He said the launches sent a signal that Pyongyang is still not prepared to back away from its nuclear and ballistic missile programs.

"Having said that, we're going to continue our peaceful pressure campaign, as I have described it, working with allies and working with China as well to see if we can bring the regime in Pyongyang to the negotiating table with a view to begin a dialogue on a different future for Korean Peninsula and for North Korea," he said. Tillerson last week noted that North Korea has exercised "restraint" since the U.N. Security Council sanctioned it on August 5 for testing two intercontinental ballistic missiles in July. U.S. President Donald Trump later said North Korean leader Kim Jong-un was "starting to respect us." Tillerson denied they were wrong to say that. "I think it's going to take some time to tell," he said. "We continue to want the Kim regime to understand there is a different path he can choose," Tillerson said. "There is also a unified international voice echoing our messages that no one wants to see a nuclear Korean Peninsula. We hope for the opportunity to engage with them as to how we might achieve that." South Korea's presidential office, Cheong Wa Dae, played down the missile launch as a typical response to the drills. "It seems that North Korea is trying not to aggravate the situation," a presidential official said on the customary condition of anonymity. "This kind of low-intensity provocation can be read as a signal that a mood for dialogue can follow the allies' military exercises." (Yonhap, “U.S. Open to Talks with N. Korea despite Missile Launch: Tillerson,” August 27, 2017)

Secretary of State Rex Tillerson is moving to eliminate or downgrade special envoy positions at the State Department. In a letter obtained by CNN and written to Senator Bob Corker, the Tennessee Republican who heads the foreign relations committee, Tillerson said he would end or transfer as many as three dozen special envoy positions. A State Department official said that of 66 positions outlined in the letter, Tillerson will keep 30 envoys and representatives with their title. The work of another 21 will be integrated into bureaus, nine positions will be eliminated entirely and another five will be folded into existing positions. Corker expressed support for Tillerson's move, noting that the State Department reauthorization bill his committee passed directed Foggy Bottom to tell Congress which special envoys it wanted to keep in place. "Through the years, numbers of special envoys have accumulated at the State Department, and in many cases, their creation has done more harm than good by creating an environment in which people work around the normal diplomatic processes in lieu of streamlining them," Corker said in a statement to CNN. The functions and staff of the special envoy for North Korean human rights issues would now fall under the office of the undersecretary for civilian security, democracy and human rights, who will now also assume that title. The position of special envoy for the six-party talks dealing with North Korea will be removed, as the talks ended in 2008. (Elise Labott, Nicole Gaouette and Jeremy Herb, “Tillerson Moves to Ditch Special Envoy, CNN, August 29, 2017)

Despite unabated tensions, denuclearization talks with North Korea would be possible if Pyongyang refrains from additional provocations until its major holidays in October, South Korea’s Foreign Minister Kang Kyung-wha said. Recent signs of de-escalation from both Pyongyang and Washington are nurturing expectations for a “window of new opportunity,” she said. The Moon Jae-in government, meanwhile, will soon announce measures to squeeze the Kim Jong-un regime, Kang said, stressing the significance of tougher sanctions and robust security posture. “The possibility that another provocation will take place at any time, and it’s never acceptable for us to be unguarded,” Kang said at a news conference in Seoul. “At the same time, if we manage well the situation from now until key events in October, I think there could be room for diplomacy to be activated for denuclearization dialogue,” she added, referring to the Oct. 4 anniversary of a watershed inter-Korean declaration and October 10 anniversary of the founding
of the North’s ruling Workers’ Party. She acknowledged that the administration has, since it took off in May, been facing “extremely difficult” circumstances due to an ongoing, various series of the North’s ballistic missile tests, which put to test the new government’s resolve to respond. This appeared to have taken into account the Donald Trump administration’s recent softened tone toward Pyongyang, with top diplomatic and security officials and military commanders relaying calls for a diplomatic solution to the drawn-out standoff. Hopes for a turnaround in the mood accelerated after North Korea fired three short-range rockets into the East Sea on August 26 in an apparent display of force against an ongoing South Korea-US military exercise. The relatively weaker response prompted Cheong Wa Dae to speculate that Pyongyang might now move toward dialogue. Kang, however, refused to set a time frame that might define how long the allies would wait to consider talks, saying it would “constrain our own flexibility.” “We’re looking at North Korea’s record of provocations that coincided with major events,” she said. “It’s hard for me to tell you that how many days the North shouldn’t commit provocations but we’re having close consultations with the US and the military and intelligence authorities.” (Shin Hyon-hee, “Talks Possible If No N.K. Provocations until October: Kang” Korea Herald, August 28, 2017)

North Korea launched a ballistic missile this morning that flew over the northern Japanese island of Hokkaido, the most brazen provocation of Kim Jong Un’s five-year-long rule and one that elicited strong condemnation from U.S. allies Japan and South Korea. This missile appeared to have broken into three during flight, but all of the parts landed in the sea. The missile appears to have been a Hwasong-12, the intermediate-range ballistic missile technically capable of flying 3,000 miles that North Korea has been threatening to launch toward the U.S. territory of Guam. But North Korea launched today’s missile to the east, over Hokkaido and into the Pacific Ocean, rather than on a southward path toward Guam, apparently to test its flight on a normal trajectory without crossing a “red line” of aiming at the United States. The missile was launched at 5:58 a.m. Japan time from a site at Sunan, north of Pyongyang and the location of the country’s main international airport. U.S. intelligence agencies were monitoring the site and had seen signs of the impending launch hours earlier, when they spotted Hwasong-12 missile equipment being moved into place. The Hwasong-12, known to American agencies as the KN-17, is fired from a road-mobile launcher — usually a modified truck — making it easy to move around the country and launch on short notice. North Korea has sent rockets over Japan before, in 1998 and again in 2009. But both times it claimed that they were satellite launches, and in the second case, it gave Japan notice before the launch. This time, there was no notice, and analysts said that this launch was clearly for military purposes. The missile traveled almost 1,700 miles in total, flying over Hokkaido at 6:06 a.m. before landing in the Pacific Ocean 730 miles to the east of Hokkaido’s Cape Erimo at about 6:12 a.m. During this time, it traveled through Japanese airspace for about two minutes, government officials said. The Pentagon said it had detected the launch but was still in the process of assessing it. Japanese military aircraft and ships headed to the landing site this morning to try to recover debris from the missile, which could yield important information about its technical capabilities. The launch poses a further challenge, in particular, to President Trump, who has made North Korea a favorite rhetorical target. In Japan, the prime minister was visibly agitated by North Korea’s actions. “A missile launch across Japan is an outrageous act that poses an unprecedented, grave and serious threat, and significantly undermines the peace and security of the region,” Abe Shinzo said after an emergency national security council meeting. Japan’s upgraded missile response system swung into action, sending emergency alerts through cellphones and over loudspeakers shortly after 6 a.m., warning people on the potential flight path of the threat and advising them to take cover. Kim has now ordered the launch of 18 missiles this year alone, compared with the 16 missiles his father, Kim Jong Il, fired during 17 years in power. The White House did not immediately respond to the latest provocation, but the Japanese prime minister’s office said Trump and Abe talked by phone for 40 minutes after the launch, agreeing that the test was unprecedented and that they should further increase the pressure on North Korea. The U.N. Security Council confirmed it would hold an emergency meeting in New York today to discuss the latest provocation. In Seoul, President Moon Jae-in, a liberal who has promoted engagement with Pyongyang, ordered an “overwhelming show of force” in response to the missile launch. Analysts said today’s launch marked a worrying escalation from North Korea. “This is a much more dangerous style of test,” said Abraham Denmark, director of the Asia program at the Wilson
Center and a former top East Asia official at the Pentagon. North Korea’s recent missile tests had been carefully calibrated to go nearly straight up and land in the sea between the Korean Peninsula and Japan, rather than overflying Japan. “North Korean missiles have a habit of breaking apart in flight, so if this happened and parts of it landed in Japan, even if it was not North Korea’s intention, this would amount to a de facto attack on Japan,” Denmark said. The Japanese broadcaster NHK showed Patriot missiles installed at sites around the country. “We will make every possible effort to protect citizens’ lives and property,” Abe told reporters before heading into the national security council meeting. However, the Japanese military did not attempt to intercept the missile. Government officials said they could tell the missile was heading into the sea, rather than toward Japanese territory. But analysts said that the PAC-3 missile defense system has a range of less than 20 miles and is designed to intercept the missile as it’s coming down, meaning that even the batteries on Hokkaido would not have been able to intercept this one. Today’s launch, on the heels of three short-range missiles fired Saturday, comes amid ongoing joint exercises between the United States and South Korean military, exercises that North Korea always strongly protests because it considers them preparation for an invasion. The exercises, which mainly involve computer simulations rather than battlefield maneuvers, are due to end in two days. “We should expect a kinetic reaction from North Korea during the exercises, but this pushes the boundaries of an ordinary response,” said Daryl Kimball, the director of the Arms Control Association. However, Kimball said that talks still remain the best course of action for dealing with North Korea. “The U.S. and Japan have so few options to respond to these ballistic missile tests short of negotiations that would have North Korea agree to halt these launches in return for a modification of future military exercises,” he said. “This is why North Korea is such a problem — there are no good options.” (Anna Fifield, “N. Korean Missile Flies over Japan,” Washington Post, August 29, 2017 p. A-1) Public television programs in Japan were interrupted with a rare warning screen announcing the missile’s flight over the country. Several bullet train lines were temporarily halted, and the government spoke of the missile — only the third North Korean projectile to fly over the country since 1998 — in unusually dire terms. “North Korea’s reckless action of launching a missile that passed over Japan is an unprecedented, serious and grave threat,” said Japan’s prime minister, Abe Shinzo. He later told reporters that he had spoken by telephone with President Trump. “Japan and the U.S. stances are completely matched,” he said, adding that they discussed ways to tighten pressure on North Korea. Only twice before has the North fired projectiles over Japanese territory: once in 1998, prompting a minor diplomatic crisis in Asia, and once again at the beginning of the Obama administration in 2009. In both those cases, the North said the rockets were carrying satellites into orbit. In this case, it made no such claim. Notably, the missile fired today took off from near Pyongyang, North Korea’s capital. Early reports, which are often corrected later, indicated it was launched from a site near Pyongyang’s international airport, not the usual launch site in the northeast, according to the South Korean military. They said they were still trying to determine what type of missile was launched. U.S. officials noted that if it was in fact launched from the capital’s outskirts, it may have been meant to complicate recent American threats to hit the North with pre-emptive strikes. That possibility was explicitly raised this month by Trump administration officials, as a way of seeking to deter the North Koreans. While the North’s usual launch sites are in remote areas, where there would be little concern about civilian casualties, any strike near Pyongyang would risk many civilian deaths and would suggest the real goal was to strike at the regime. An attack near Pyongyang would also be far more likely to result in North Korean retaliation against Seoul. Lt. Gen. Maehara Hiroaki, the commander of the Japan Air Self-Defense Force’s Air Defense Command, said that the armed forces did not try to shoot down the missile from North Korea because they did not detect a threat to Japanese territory. But when the government detected the launch and followed the path of the missile, it warned citizens in its path to take cover — just in case any parts fell on Japan. The North Korean missile tests came during joint military drills that the United States and South Korea started a week ago. The United States has also been conducting joint exercises with Japanese forces for the past two weeks, and it was Japan that seemed most directly affected by today’s launch. Speaking on national television, Abe said his government “was prepared to take all the measures to protect people’s lives.” “We have lodged a firm protest to North Korea. We have requested an urgent meeting of the U.N. Security Council,” he added. The Japanese government sent a text alert to citizens about the launch and advised them to take protective cover. In a post on
Abe’s Twitter account, the government confirmed that the missile was fired at 5:58 a.m. local time, before breaking into three pieces and landing about 730 miles off the coast of Cape Erimo on Hokkaido, around 6:12 a.m. Usugi Takaaki, a security guard at the town hall of Erimo, on the southern tip of Hokkaido, said he first heard about the launch from an alert on his phone. “I’m really worried about how America will react,” he said. “It’s possible that Japan could be dragged into a dangerous situation depending on how President Trump responds to this.” A woman in Tokyo, Kuroko Kaoru, also said she had heard an alarm on her telephone soon after the missile was launched. “It was scary,” she said. “I wondered, where will the missile go to?” South Korea said it was ready to defend itself from the North Korean threat. “North Korea must come to the negotiating table, realizing that denuclearization is its only way to ensure its security and economic development,” the South Korean Foreign Ministry said in a statement. With China to the west and Russia to the north, North Korea can flight-test its mid- or intermediate-range missiles only to the south or to the east, analysts said. “In a way, this was a hard choice to make for the North because it meant to fire the missile over Japan or toward Guam,” said Kim Yong-hyun, a professor of North Korean studies at Dongguk University in Seoul. “In the end, it chose to fire over Japan, demonstrating its capability to launch a missile to Guam but without actually launching one in that direction, which would have been a huge provocation to the United States.” Along with South Korea, Japan and Guam would most likely be the first targets of a North Korean attack should war break out on the Korean Peninsula, analysts said. Both are home to major American military bases. (Choe Sang-Hun and David E. Sanger, “Route of Missile by North Korea Unnerves Japan,” New York Times, August 29, 2017, p. A-1)

KCNA: “Kim Jong Un, chairman of the Workers' Party of Korea, chairman of the State Affairs Commission of the DPRK and supreme commander of the Korean People's Army, guided an intermediate-and-long range strategic ballistic rocket launching drill of the KPA Strategic Force on the spot. The drill was observed by senior officials of the Central Committee of the WPK including Ri Pyong Chol, Kim Jong Sik, Jo Yong Won and Yu Jin, and officials in the field of defense scientific research including Jang Chang Ha and Jon Il Ho. Respected Supreme Leader Kim Jong Un was greeted by commanding officers of the KPA Strategic Force including its Commander of the KPA Strategic Force. Involved in the drill were Hwasong artillery units of the KPA Strategic Force tasked with striking the bases of the U.S. imperialist aggressor forces located in the Pacific operational theater in contingency and intermediate-range strategic ballistic rocket Hwasong-12. As known to the world, the intermediate-and-long range strategic ballistic rocket launching drill of the KPA Strategic Force was conducted as a part of the muscle-flexing to counter the Ulji Freedom Guardian joint military drills the U.S. and the south Korean puppet forces finally kicked off in disregard of the DPRK's meaningful and crucial warning. The drill was carried out through the combination of sudden maneuvers and strike in order to estimate and examine the posture of the KPA Strategic Force for prompt counteraction in contingency on the Korean peninsula and to confirm the actual war operation capacity of the intermediate-and-long range strategic ballistic rocket newly equipped by it. The Hwasong artillery personnel, who were to conduct the launching drill for the first time in the capital city of the DPRK by order of Kim Jong Un, were all filled with strong militant enthusiasm. Kim Jong Un arrived at the launching ground early at dawn and watched the artillerymen promptly moving and deploying the Hwasong-12 rocket launcher, praising them for their smart and accurate movement. He learned in detail about the launch plan, preset flight track and target waters and issued an order to launch the rocket. The fired ballistic rocket reflecting the dignity and might of the Juche-based nuclear power crossed the sky above Oshima peninsula of Hokkaido and Cape Erimo of Japan along the preset flight track and accurately hit the preset target waters in northern Pacific. The drill had no impact on the security of the neighboring countries. In the drill the rocket operational capacity of the Hwasong artillery units of the KPA Strategic Force for an actual war and the combat efficiency of the intermediate-and-long range strategic ballistic rocket it is newly equipped with were all proved perfect. Kim Jong Un expressed great satisfaction over the successful launching. Praising the Hwasong artillerymen of the Strategic Force for being well versed in the new ultra-modern rocket system and properly operating it, he said the drill would offer them an opportunity for gaining a good experience in their rocket operation for an actual war. Noting that the current ballistic rocket
launching drill like a real war is the first step of the military operation of the KPA in the Pacific and a meaningful prelude to containing Guam, advanced base of invasion, he said that it is necessary to positively push forward the work for putting the strategic force on a modern basis by conducting more ballistic rocket launching drills with the Pacific as a target in the future. Sternly saying that the U.S. answered the DPRK’s warning that it will closely watch the U.S. behavior with the bellicose war exercises for aggression, he added that the drill conducted by the Strategic Force is a curtain-raiser of its resolute countermeasures against the Ulji Freedom Guardian joint military exercises being conducted by the U.S. and its stooges. Noting that it is a lesson the DPRK drew this time again that it should show action, not talk, to the U.S. imprudently denying the DPRK’s initiative measure for easing the extreme tension, he stressed that the DPRK will continue to watch the U.S. demeanor as was already declared and decide its future action according to them. He expressed great belief and conviction that the officers and men of the Strategic Force will further strengthen the combat preparations of Hwasong artillery pieces as required by the grim situation, be fully ready to go into action for decisive battle so as to launch powerful ballistic rockets anytime and thus check military racket of the U.S. imperialists and their followers and firmly guarantee the security of the country and the happiness of the people. Officers and men of the KPA Strategic Force extended the warmest thanks to Kim Jong Un, peerless patriot and hero of the nation, who gave vent to the long-pent grudge of the Korean people by mapping out a bold plan to make the cruel Japanese islanders insensible on Aug. 29 when the disgraceful "Korea-Japan Annexation Treaty" was proclaimed 107 years ago and approving ballistic rocket launching in the capital region, and pledged that once the Party Central Committee issues an order, they will fulfill their sacred mission and duty as the reliable nuclear force of the WPK in the van of the final sacred war which will win victory in the standoff with the imperialists and the U.S.” (KCNA, “Kim Jong Un Guides Strategic Missile Rocket Drill of KPA Strategic Force,” August 30, 2017)

Elleman: “While North Korea’s missile test on August 28, reportedly of the intermediate range Hwasong-12 (KN-17), broke up into three pieces during flight only flying 2,700 kilometers—far short of its 4,000 kilometer range—the launch was a disturbing development in Pyongyang’s continuing program to develop long-range missiles. The test launch had two primary objectives. First, Kim Jong Un likely sought to take measure of the international community’s response to the overflight of Japanese territory. Though North Korea twice before attempted to launch a satellite using a flight path that passed over Japan, the Hwasong-12 is the first ballistic missile to overfly the island nation. If the U.S. response to the test firing is judged to be mild by Pyongyang, North Korea may feel that future flights will be similarly accepted by Washington and its regional allies. Second, the flight was likely intended to evaluate the missile’s performance and reliability under operational conditions. Before the Hwasong-12 and the intercontinental range Hwasong-14 can be deployed, engineers must demonstrate that they work reliably when flown to maximum range. To date, the two missiles have been launched on steep flight paths that reach high altitudes, ensuring that the mock warheads land in the sea just short of Japan. Much can be learned from the tests, but full-range flights replicating the conditions a combat-capable missile would experience are needed. This flight begins to address that requirement. The most recent Hwasong-12 flight ended with the mock warhead landing in the Pacific Ocean about 2,700 km from the launch site, well short of its maximum range. North Korean engineers may have shut the Hwasong-12’s engine down early, resulting in a shorter flight. Turning off the engine roughly five seconds early would yield a range and apogee matching the reported values. Or the payload mass of the first test may have been considerably lighter than that of North Korea’s nuclear warhead, allowing the missile to achieve a much higher altitude, thus exaggerating the derived maximum range when the missile is flown on a standard flight path. For example, if the May flight carried a payload of 250 kg, and the most recent test fitted the Hwasong-12 with a 1,250-kg package, the range is reduced to about 2,700 km, with a peak altitude of roughly 550 km. Finally, the Hwasong-12 may have been flown on a non-optimal trajectory, one that was steeper or flatter than a normal flight path employed to maximize achievable range. However, the reported apogee of the Hwasong-12 flight is inconsistent with this explanation. An alternative disturbing hypothesis is that tests of the missile have included a small post-boost vehicle (PBV) to provide extra boost to the payload after the main stage is discarded. The May 14 test of the Hwasong-12 was previously modeled, but could

Daily NK: “To North Koreans, marketization is the antithesis of the bedrock of state socialism, which is the system of planning, allocation and distribution. Marketization does not merely mean the emergence and spread of markets, but also indicates changes in the way North Koreans live. Likewise, it speaks to the fact that the way the North Korean state seeks to control its people has changed. Hence, "marketization" must be seen as the transformation of the social system of the North Korean state. … At the microeconomic level, consumer, financial, labor, service and real estate markets have developed as separate sub-sections of the emergent market economy. Marketization has exercised a transformative influence on the way North Koreans think and behave. Marketization began with the collapse of the planned economy. As state distribution of food and consumer goods ceased, many were faced with the impending prospect of starvation. The North Korean government continued to uphold the principles of state socialist economics, meaning that all market activities were initially conducted underground. The state pursued a variety of contradictory policies in the face of this rising underground economy including control, punishment and tacit acceptance, while suppressing dissent where it arose. However, with the July1st Measures of 2002, the state recognized the existence of certain markets and related practices, and reorganized the institutional and legal order. Accordingly, from 2004, General Markets – legalized consumer markets – emerged across the country. In November 2009, however, Kim Jong Il, apparently believing that continued marketization posed a threat to the sustainability of the North Korean political system, took the extreme step of closing General Markets and implementing a snap currency reform policy. However, the clampdown on market forces was abruptly halted just weeks later in late January in order to forestall rising instability. The government quickly allowed the reopening of the General Markets, and gradually readopted the position of tacit acceptance of marketization as a whole. Indeed, since 2012 the state has actually begun to promote marketization with policies designed to strengthen incentives at the individual and production-unit level. Hence, North Korean marketization under Kim Jong Un does not just mark a change in the economic system; it is a phenomenon that helps us further understand the thoughts and actions of the North Korean people today. It can be seen as a
The response of the North Korean state to how the people, their ideas and actions change over time. The North Korean people define these changes as an “irresistible current.” Because market practices and forces are becoming ever more widespread and prevalent, the North Korean government cannot readily reverse course by simply enacting new policies. Daily NK concludes that there are 387 General Markets in North Korea across 66 urban areas, 147 counties, 66 districts and three larger districts, each of which has a population large enough to support a General Market. In those administrative units with high population densities, there are 2-3 General Markets. North Korea has an estimated population of 24,851,627; thus there is roughly one General Market for every 64,216 North Korean people. There are approximately 612,661 stalls across all General Markets, one for every 40 North Koreans. Pyongyang has 4,000 such stalls across Kwanmun, Chilgol, Songsin and Pyongyang markets, among others. Each province has a major General Market: South Pyongan Province has Toksan Fanners Market (8,658 stalls), North Pyongan Province has Chaeha Market (5,685), Chagang Province has Huichon Market (2,840), Ryanggang Province has Hyesan Farmers Market (4,092), North Hamgyong Province has Sunam Market (12,098), South Hamgyong Province has Sapo Market (8,692), Kangwon Province has Kalma Market (4,860), South Hwanghae Province has Tonghaeju Market (4,230), and North Hwanghae has Kuchon Market (4,860). There are also makeshift street markets that do not have fixed locations and whose size can therefore not be verified. However, evidence from sources across the country indicates that makeshift markets near General Markets average 30 percent of the scale of official General Markets. From these numbers, it is thus estimated that around one million people are involved in the market retail sector, most of whom engage in market activities to ensure the survival of their families. The average size of a North Korean household is 4.1, meaning that around four million people survive directly through market activities or the market activities of family members. This represents 15 percent of the population. According to South Korean Government statistics, a total of 8.23 million North Koreans either work at collective farms or are family members of collective farm workers. There are also two million family members of North Korean soldiers. Thus, the non-military, non-farm population of North Korea is estimated at around 15 million people, of whom four million survive directly or indirectly through activities linked to the General Market system. This group has been decisive in the North Korean marketization process. Physically, General Markets are comprised of entrances, signs, walls and fences, market stalls, toilet facilities, and market management offices. Above the entrance is a sign, and next to the entrance sits the market management office with its staff and a police office with its assignment of officers. Stalls specialize in different kinds of goods, everything from industrial produce to shoes, secondhand clothing to pharmaceuticals, rice to fish, and meat to accessories. Sellers of food have to wear hygienic clothing. Each is also required to wear a service permit indicating name, address, stall number and the type(s) of goods on sale on the right side of the chest (a Kim Il Sung/Kim Jong Il badge is worn on the left side). Management staff at the market management center wear armbands indicating their position. Many General Markets lack mains electric lighting and water, and most have very limited heating or insulation. Only General Markets in large cities are connected to main electricity, which allows for refrigeration of foodstuffs, with stallholders paying extra for electricity consumption. As long as a woman pays her market usage fee to the market management office and taxes on income, she is permitted to trade. Merchants with stalls are required to purchase usage operations permits, and when purchased, a service permit is issued — with merchants required to wear such permits when sitting at their stalls. Each stall has its own number assigned by the market management office. Stalls may be traded between individuals; market management offices do not regulate or otherwise control that trade. For example, in May 2015 a stall in Hyesan Farmers Market from which industrial goods could be sold could be bought for six million Korean People's Won (KPW). At the time this was the equivalent of one ton of rice. Compared to the average wage of a North Korean worker (5,000 KPW/m), this indeed represents a substantial sum. Market merchants pay 500-1,500 KPW per day in usage fees to market management offices. The fee is determined by the price range of the products each sells. The average is estimated at around 1,000 KPW/day. It is thus estimated that 64 million KPW is collected daily in the form of market usage fees.
When public holiday market closures are factored in, a total of 22.4 billion KPW is collected over the course of a year. At market exchange rates, this equals approximately 2.8 million USD, enough to buy 4,400 tons of rice. This is a non-trivial quantity of unearned income going directly to the state. There are five major markets in North Korea today, each of which is growing more and more complex over time. In addition to (1) the market for consumer goods, these are (2) the market for services; (3) the market for real estate; (4) the financial market; and (5) the labor market. Each one impacts state-society relations in a variety of ways. There are four main types of economic entity in the consumer goods market. The dominant one is general markets. The others are state retail outlets, direct-sales points, and department stores. General Markets are the largest single provider of consumer goods in North Korea today. They have been around since 2003, when legal restrictions on trade in consumer goods were, to an extent, lifted. The development of the General Market system also stimulated the development of logistics networks, and expanded the scope of financial and labor markets. In the past, North Korean markets did not develop much beyond exchanges of consumer goods, and until the reforms that created the General Market network were implemented in 2003, the only legal markets were Farmers’ Markets. However, since long before the 2003 reforms took effect, North Korea had suffered from chronic shortages of consumer goods, a situation that stimulated the development of unofficial, illegal markets. In the 1990s, with famine (the period known as "the Arduous March" in Korean) and the collapse of the Public Distribution System (PDS), the size and capacity of consumer goods markets expanded dramatically. The period prior to 1994 is known as the Farmers Market (jangmadang) period. As the state socialist system was established in the 1950s, consumer goods markets largely disappeared in North Korea. Markets survived in the cities as "night markets," and in the countryside "between individuals" (i.e. farmers). The scale was also very small, the number of transactions being small, and the products usually being limited to basic daily necessities and farm produce. From 1994, with the collapse of the PDS, between one and two million North Koreans starved to death. As a result, state retail units ceased to function and Jangmadang began to proliferate in a disorderly fashion. Amidst these developments, Kim Jong II introduced "Military-first Politics" and began to attempt repairs to the old system. With this began state attempts to regulate the market system. Officials tasked with monitoring and regulating the Jangmadang, with market management offices central to this process, were dispatched and began to work onsite at market places. However, in spite of this, with serious consumer goods shortages remaining unresolved, the scale and number of markets continued to increase. Kim Jong II’s approval of the General Market Plan in 2003 meant that by the spring of 2004, General Markets were to be found in every city and county in the country. These were the first permanent marketplaces that the country had ever seen – complete with fences, roofs, stalls and designated entrances. At the same time, up until that point, imported consumer goods had been sold at state-operated Foreign Currency Shops, but market reforms led state Foreign Trade Companies (FTCs) to open sales points (branches) in General Markets. For many years there were state retail outlets that specialized in foodstuffs, industrial goods, vegetables, pharmaceuticals et al., but the famine meant that many of these outlets were put in financial difficulties. As a result, the number of individuals entering into partnerships with state organizations to sell goods inside state retail outlets increased. Such people are investors who have reliable suppliers and cash holdings. There are also merchants who obtain large consignments of products from wholesalers on credit and sell them in state retail outlets, dividing the profits post-sale, and a large number of nominally state retail outlets that sell goods unavailable in General Markets, including construction materials, and household appliances like rice cookers, computers and freezers that are comparatively expensive. They also sell furniture. Since 2010, there has also been an increase in state investment in the retail sector in Pyongyang, with the rise of meat and seafood outlets. Although they are state outlets, they do not sell at state-set prices, but rather at market prices. Thus, the state is profiting from the consumer goods market. There are also a growing number of stalls run by individuals, not by the state itself, State-owned enterprises (SOE) or other state institutions, with these individuals paying for the use of their stalls. For example, the state gives the right to operate a stall to
a factory enterprise, the factory sets up the stall and gives the right to use it to an individual, or sells said right to an individual who then sets up the stall himself/herself. These stalls usually sell food (noodles for instance), but sometimes also sell industrial goods. As the consumer goods situation worsened in the 1980s, the North Korean government created a single direct-sales point for every county/township that would sell 8.3 Products only. A direct-sales point is a retail outlet directly managed by a factory. 8.3 Products are products made from raw materials unused after all goods have been produced in accordance with the command economic plan. These instructions were handed down on August 3rd, 1984 by Kim Jong Il, hence the name. Factories that produced 8.3 Products are known as 8.3 Factories, while workers who work at such factories are known as 8.3 Workers. On the basis of these instructions, 8.3 Products were sold directly by the factories where they were produced. At times, products brought from China by relatives were sold in such outlets, and helped them to gain market share. In the 2003 General Market Plan, it was decided that these direct-sales points would be further expanded, but they were not able to successfully compete against General Markets in many areas. From the late 2000s, individuals started to take over old state retail outlets, and direct-sales points also got taken over by private capital. All state factories and institutions are permitted to operate direct-sales points or other kind of outlet of a certain size. SOEs that produce products are also allowed to operate such outlets for the sale of their produce, as well as engage in commercial activities to fulfill their 8.3 Plans. Independent budgetary institutions and cooperatives are permitted to open retail outlets in order to obtain necessary financial resources. The market for consumer goods also includes large-scale department stores. While there remain some large stores, like Pyongyang's No. 1 Department Store, that sell at state prices, most large-scale retail outlets sell at market prices. Department stores differ from General Markets and direct-sales points only in the price and type of goods offered; they are essentially the same in all other respects. That said, the creation of large, modern retail operations requires large investments that are beyond the capacity of most private investors. Thus, foreign capital, in cooperation with the state, or local governments themselves, modernize existing facilities and import goods directly from China for sale; alternatively, they rent space out and subcontract sale to individual merchants. State-centered marketized large retail outlets come in several forms. The most typical is the use of Chinese capital or domestic state funds to construct and operate the facility. The Kwangbok Street Commercial Center, completed in 2010, is a typical example of this; akin to a Walmart, it mainly sells products imported from China, along with domestic vegetables, seafood, and alcoholic beverages. While this facility is state-owned and operated, it is not part of the PDS. It is effectively a massive, foreign currency earning retail outlet, and that is how it is run. There are seven main actors in the consumer goods market: Overseas Chinese (Hwagyo) are people who were born in China, or the children of those who were. Korean-Chinese (Joseonjok) are also Chinese nationals, but being considered part of the Korean nation, if they moved to North Korea they were absorbed into the North Korean population. Overseas Chinese residents of North Korea have a different status from normal North Koreans. Their identity papers indicate that they are "Han [Chinese]." They are thus, as the name implies, Chinese people living in North Korea. They do not serve in the North Korean armed forces, nor are they permitted to join the Korean Workers' Party. They have permanent residency, but do not have the same rights as North Korean citizens. From the Korean War in the 1950s through the Cultural Revolution in the 1960s, a fair number of Chinese people moved to North Korea and settled there. Unless they commit very serious criminal offenses, they are allowed to travel relatively freely between China and North Korea, and buy and bring back Chinese goods and Chinese RMB. As North Korean dependency on China deepened in the 2000s, controls on overseas Chinese became laxer still. Some overseas Chinese took the opportunity to relocate back to China with their families, while others travelled to their northern neighbor on the pretext of visiting relatives in order to bring back much-needed products to sell, beginning a cycle of trade and import, and reaping significant profits. North Korean officials soon sought to forge special relationships with overseas Chinese so as to take advantage of their privileges. Overseas Chinese were compliant; they needed the help of officials to get passports issued and overcome
other immigration hurdles. By way of example, in the 2000s it was with the help of overseas Chinese that the ministries of State Security and People's Security, North Korea's two main security services, were able to install computers in their offices. As we can see, the overseas Chinese community has played a decisive role in the development of consumer, producer, and capital markets in North Korea, and is still a vital network for the country.

With the withdrawal of Chinese forces (that had fought in the Korean War) in 1958, the North Korean government launched a campaign encouraging overseas Koreans in Japan to return home and contribute to the reconstruction of the country. Their principal target arrived in large numbers, and soon played a key role in nurturing the seeds of capitalism in the form of underground markets during the early stage of socialist construction. They brought high-quality Japanese products to the North, which had grave problems with scarcity; this had a significant impact. Living standards were extremely low in the country, such that North Koreans were exposed to a completely new world through returnees, whose watches were worth more than local residents could earn in a decade. The North Korean government recognized the right of the returnees to private property, but by the 2000s relations between Japan and North Korea had soured, the returnees' cash reserves had become exhausted, and their influence on economic development had decreased markedly. Whereas Japanese Koreans saw their economic standing decline in the 1990s, from the 2000s Korean-Chinese, the aforementioned Joseonjok, became an important supplier of products to the North Korean market. Korean-Chinese living on the Chinese side of the Sino-North Korean border worked with relatives on the North Korean side to begin small-scale trading operations. They would visit relatives on the North Korean side, stay with them for a time, and utilize family networks in-country to buy and sell to North Koreans in the area. From the 1990s, they assembled in officially designated locations to sell Chinese produce to North Koreans, and would go to and from China daily by truck. As a result, Namyang, Hoeryong, Musan, Hyesan, and Sinuiju, the major cities on the North Korean side of the border, witnessed the emergence of markets exclusively for Chinese goods and merchants. There are two kinds of farmland in North Korea: (1) collective farms; and (2) tacitly recognized private plots. Private lots have developed in small and medium-sized cities as well as in rural areas. From the 1970s, the North Korean government distributed private plots of 30 pyong to each family on collective farms, and allowed farmers on collective farms to sell the produce thereof in Farmers Markets. These plots became sources of income for farmers, and naturally incentivized them to focus their major energies in that direction. This was a major cause of the marketization of the village economy. Farmers used money generated from selling produce to buy daily necessities, going to local markets to sell and buy directly. With the emergence of General Markets, many of these entrepreneurial individuals became merchants. In recent years, cultivation of cash crops like chili, garlic, tomatoes and tobacco have become more widespread; in other words, crops are increasingly being grown for sale not merely for subsistence, and with the passage of time the marketization of private fanning has become more pronounced. Many have taken to farming products like tobacco, fruit and vegetables as cash crops, while there are also private enterprises turning harvested crops into processed foods like tofu and alcoholic drinks. Livestock farming has also become a way to make money. These trends are indicative of the fact that the economic lives of North Koreans have improved. Items that were previously impossible to get from the state distribution system are now easily obtained, and at prices within the reach of many North Koreans. Smuggling grew along the Sino-North Korean border in the 1990s. Peddlers began to profit from arbitraging price differentials between the borderland and inland markets. These price differences drove many merchants to move to the borderlands. The biggest customers of border market merchants are inland wholesalers. By utilizing price differentials, a network encompassing Chinese traders on the Chinese side of the border, North Korean borderland traders and "runners" who buy low on the border and sell higher inland has taken shape. As merchants from all over the country have concentrated on the border, a single borderland market for goods, personnel, and even information has developed, and the area has become the principal location for wholesale distribution nationwide. However, with Kim Jong Un's rise to power, volumes of official cross-border trade have risen and the power
of the market middlemen and middle-women has begun to decline. Items can now go directly from China to Pyongyang and other inland regions. The development of scaled up logistics networks within North Korea is an important driver of these developments. The North Korean government's General Market reforms of 2003 meant that a diverse range of actors were empowered to participate in market activities. This was also the time when FTCs expanded the bounds of the market. Until then, FTC imports had only been sold in Foreign Currency Shops, but following the establishment of General Markets, FTCs were able to sell their products directly. North Korean FTCs were entirely beholden to the state until well into the 1990s, fulfilling orders on its behalf. However, since 2004, FTCs have been constructing warehouses and stockpiling Chinese products autonomously. Middlemen and entrepreneurs have become involved in these operations, selling many goods across the country through the General Market system. As the FTCs as institutions have become more active, as foreign currency earning activities have taken off, the availability of products has expanded, and the size of consumer product markets has also expanded. The development of consumer markets has stimulated productivity. As consumer markets have expanded, the number of people involved in production has also risen. First, "cottage industry" production increased. In the 1990s, food security was the most pressing problem, but everything else was in short supply, too. In response, individuals began to produce all kinds of daily necessities, from toothbrushes and toothpaste to footwear, underwear and much more. There also emerged merchants who specialized in selling these commodities. From the 2000s, individual and SOE production began to merge in the drive for various efficiencies. Shoe factories produce rubber soles, for instance, and assembly of the final shoes is done in homes. Since Kim Jong Un came to power, mechanized production has grown more widespread, with individuals introducing machines and attempting to achieve economies of scale. Of course, because the North Korean state does not recognize private ownership over the means of production, individuals first have to "borrow" the name of a SOE. Mechanized production is dependent upon regular supplies of electrical power; thus, business people seek out SOEs with reliable access to electricity supplies in order to maximize production. Factories have also embraced division of labor to further improve performance. To the average North Korean person, consumer markets are the means by which food and daily necessities are obtained. The construction of General Markets in various parts of the country meant that it has become easier to enter the marketplace. It is no longer necessary to travel in order to obtain the tools of survival. As the selection of goods available in markets has diversified, the desires of consumers have been satisfied, and expectations have risen naturally in response. With money, one can obtain almost anything. The market system provides a degree of comfort that was unimaginable under the PDS of the Kim Il Sung era. The development of consumer markets has not merely increased levels of consumption, it has also led to a concomitant rise in private production, from foodstuffs like bread and alcohol in private homes to the cottage industry production of toothbrushes, toothpaste and shoes. Moving up the value chain, there are private companies working with SOEs to produce pharmaceuticals. Furniture is mostly made by individuals, and the market for home renovation projects is expanding. It is not only consumer goods that are made privately, but also capital goods like injection molds and the essential tools of the engineering trade. The development of consumer markets has also stimulated SOE production. State-run brick factories now distribute their produce primarily through markets, and it is thanks to the existence of wholesale merchants that this is possible. A growing number of SOEs employ existing facilities and workers to produce machines to order, and pay their workers autonomously from the profits they generate. The development of consumer markets has reduced unemployment from its peak in the 1990s. The development of consumer markets has also spurred the development of markets for factors of production – labor, capital, land, etc. Individual enterprises hire workers, lease land, and borrow funds from the rich in order to expand production and generate profits. With food and consumer goods shortages leading to mass starvation, the North Korean government had no choice but to permit the spread of consumer markets. The supply of consumer goods is a fundamental problem facing the socialist planned economy. If supply is disrupted, the socialist system effectively ceases to function, and at the time this had the
potential to lead to the collapse of the Kim government. Hence, the North Korean government had no choice but to permit the distribution of consumer goods via the market. This can be seen as the gradual collapse of state power over the people due to the state's inability to supply consumer goods. In the 2000s, the Kim Jong Il government tried twice to suppress markets and revive the PDS as a source of consumer goods. Clearly the state was aware of the dangers it faced. However, since Kim Jong Un came to power, market disrupting or control policies have vanished. At the same time, the state has raised market taxes, and under Kim Jong Un it has sought to co-opt the credit for living standard improvements brought by marketization. These circumstances seem to indicate that consumer goods will continue to foster rapid economic growth in North Korea- at least for the time being. The development of consumer markets resulting from the establishment of General Markets has also had a dramatic impact on how North Koreans see the world. The most important features of this are arguably the emergence of a self-reliant attitude and disappearance of dependence on the ruling Korean Workers’ Party and state. Many witnessed deaths firsthand with the collapse of the PDS in the 1990s, and with the establishment of General Markets in the 2000s they also saw the emergence of nouveau riche. Marketization has been a relatively welcome development for Kim Jong Un. Indeed, while the early Kim Jong Il era was characterized by mass starvation, the Kim Jong Un era has accompanied more opportunities to get rich. Kim Jong Un continues to test nuclear weapons, and indeed, has unleashed a reign of terror amongst the elite, but to the average North Korean without political ambitions, this is the first genuine economic boom they have ever experienced. That said, however, in fostering a wide range of collaborative relations between individuals, the consumer market system has the potential to act as a threat to the system. Buyers, sellers, lenders, borrowers and contractors; cooperative sets of relations are becoming more varied and extensive. Middle- and low-ranking officials are already dependent on the market for their survival, hence the potential for social upheaval is immense. These phenomena are not welcome to some in the top leadership, which desires a vertical, hierarchical power relationship between citizen and state. If Kim Jong Un were to implement policies that damaged market interests, active resistance to the regime could in principle break out.” (Park In-ho, “The Creation of the North Korean Market System,” *Daily NK*, August 28, 2017)

"The world has received North Korea's latest message loud and clear: this regime has signaled its contempt for its neighbors, for all members of the United Nations, and for minimum standards of acceptable international behavior," President Trump said in a statement, taking a more measured tone than in his previous remarks. "Threatening and destabilizing actions only increase the North Korean regime's isolation in the region and among all nations of the world. All options are on the table." (Joshua Berlinger, Yoko Wakatsuki and Will Ripley, “Trump Says 'All Options on Table' after North Korea Fires Missile over Japan,” CNN, August 29, 2017) Shortly after the U.S. detected the launch of a North Korean missile that soared over Japan, Secretary of State Rex Tillerson and United Nations Ambassador Nikki Haley joined national security aides on calls to craft an urgent response. The idea was to reach out first to reassure allies and ensure the initial response came not as an off-the-cuff presidential tweet but a statement that reflected measured thinking, according to people familiar with the process, who asked not to be identified discussing internal policy. Deliberations were cut off early in the evening as National Security Adviser H.R. McMaster — who was joined in his office by Tillerson for the calls on how to respond — prepared a statement for President Donald Trump’s approval, the people said. The response, announced this morning in Washington, said North Korea’s latest launches “signaled contempt” for its neighbors and restated the U.S. position that “all options are on the table.” There was no repeat of Trump’s “fire and fury” comment from earlier this month. The more restrained approach helped ease market jitters, as the dollar erased losses and U.S. stocks gained. But the brief remarks were also a tacit concession that officials were unable to articulate a response equal to Kim’s latest move. Facing an acceleration in North Korea’s weapons testing, Trump finds himself confronting the same predicament that bedeviled predecessors Barack Obama, George W. Bush and Bill Clinton. “Kim Jong Un is pretty much in the driver’s seat,” said former U.S. Ambassador to China Max Baucus. The Trump administration “is in a real tough spot,” he added. That view was echoed
by Gary Samore, former White House coordinator for arms control and weapons of mass destruction under Obama. “The fundamental obstacle to negotiations is Kim Jong Un, not President Trump,” Samore said in an interview. “At this time, Kim is not interested in negotiations until he’s demonstrated that he has the capacity to attack the United States directly.” Tillerson himself acknowledged the dilemma in July, when he said the U.S. wouldn’t have “very many good options left” if diplomacy fails. But the administration’s earlier comments have also boxed itself in. “These folks ought to stop talking.” Robert Gallucci, a former chief North Korea negotiator in the Clinton administration, said by phone. “We should stop talking and engage them quietly because anything done publicly requires the other side to do something in response.” For now, several officials said it was a victory that various arms of the administration were on the same page and that Trump — as of late this evening — had not written a tweet that contradicted his morning statement. Some staff had wanted an immediate statement after the missile launch but the decision was made to consult with allies — Tillerson spoke by phone with his counterparts in Japan and South Korea while Trump had a 40 minute call with Japanese Prime Minister Shinzo Abe — before going public. The effort was aided by the fact that Tillerson and Defense Secretary Jim Mattis had already, with Trump’s support, settled on a plan that outlines possible U.S. responses to North Korean actions. The more restrained response may also reflect the fact that North Korea’s move occurred with the U.S. and South Korea in the midst of major annual military exercises, an event that has long infuriated the Pyongyang regime. “There is a large-scale exercise ongoing now and it was way beyond reality to think that the North Koreans were going to do nothing,” said Joel Wit, a senior fellow at the US-Korea Institute at the Johns Hopkins School of Advanced International Studies. “We need to through this without losing our heads. We can’t run off half-cocked every time these guys test a missile.” (Nick Wadhams and Jennifer Jacobs, “Latest North Korean Missile Launch Spurred White House Game Plan,” Bloomberg, August 29, 2017)

A squadron of four South Korean F-15K fighter jets staged a live-bombing drill against North Korea's leadership in response to its latest ballistic missile launch, the Air Force announced. The aircraft dropped eight MK-84 bombs, each weighing about a ton, at a simulated target at the Pilseung Range in the eastern province of Gangwon. They hit the target accurately, it said, adding the practice was aimed at sharpening the capability of completely destroying "the enemy's leadership" in case of an emergency. The MK-84 general-purpose bomb is known to be mainly used for destroying underground bunkers. It confirmed the South Korean Air Force's attack ability for a strong warning message to the North, defense officials said. "Our Air Force will wipe out the leadership of the North Korean regime with the strong strike capability if it threatens the security of our people and the South Korea-U.S. alliance with nuclear weapons and missiles," Maj. Lee Kuk-no, who led the training mission, was quoted as saying. South Korea also made public rare footage of its testing on new ballistic missiles. The 86-second-long video clip shows the vivid scene of the test-firing of a 500-kilometer-range ballistic missile, Hyunmoo-2B, with improved warhead power and that of another one with a range of 800 km, called Hyunmoo-2C. It was released by the state-run Agency for Defense Development (ADD). In the footage, the missiles are fired and accurately hit mock targets on the ground and in the water. The tests were conducted last week and were the last ones before the deployment of the missiles, the ADD said. It added the missiles will serve as core elements in South Korea's Kill Chain pre-emptive strike system and the Korea Massive Punishment and Retaliation (KMPR) scheme. "Our military has the missile capability with top-level precision and power to strike any place in North Korea if necessary," the ADD said. "It will greatly reinforce missile forces and power down the road as well." The U.S. is expected to dispatch strategic bombers or an aircraft carrier in a show of force and security commitment to the defense of South Korea. (Yonhap, “Four F-15K’s Hold Exercises against N. Korea’s Leadership,” August 29, 2017)

The Japanese government has insisted that it is taking necessary steps to counter North Korea’s missile threat, but the ballistic missile that flew over northern Japan yesterday exposed the limits to which the country can fully prepare for the highly unpredictable launches. “We’ve been completely tracking the movement (of the missile) ever since its launch and are thoroughly ready to protect the lives of the people,” Prime Minister Abe Shinzo told reporters as he announced that a missile had crossed over Japan before splashing into the Pacific Ocean. The Self-Defense Forces did not take actions to intercept the missile, with Defense Minister Onodera Itsunori saying the decision not to blow it out of the sky had been taken because radar data ruled out the possibility of the projectile falling on Japan. Despite reassurances from the government leadership, Lt. Gen. Maehara Hiroaki — the Air Self-Defense Force commander in charge of anti-missile operations — admitted the same day that the timing of the launch was “a total surprise.” Under the country’s current two-tier ballistic missile-defense system, the Maritime Self-Defense Force’s Aegis destroyers, equipped with Standard Missile-3 interceptors, are tasked with stopping missiles in the outer atmosphere. If they fail, the ASDF’s ground-based Patriot Advanced Capability-3 interceptors are the next line of defense against missile attacks. Japan has more than 30 PAC-3 batteries deployed nationwide, each with a range of several dozen kilometers. While the government plans to introduce interceptors that would double their range, the current system does not have the coverage to defend the entire landmass of Japan, and the SDF have adjusted the locations of the batteries to prepare for the eventuality of missiles coming down due to malfunctions or other reasons. After the North said earlier in the month that it is considering launching ballistic missiles over Japan, into waters near the U.S. Pacific territory of Guam, some PAC-3 units were moved to four prefectures in the country’s west along a projected path of the projectiles. But the missile Pyongyang launched yesterday headed in a completely different direction, passing Cape Erimo in Hokkaido and dropping into the sea 1,180 kilometers east of the cape. At the U.S. Air Force’s Yokota Air Base in a Tokyo suburb, where the ASDF practiced the deployment of the PAC-3 system the same day, Maehara stressed the importance of positioning the batteries near areas where a missile is projected to fall, saying, “PAC-3 units need to be deployed at the right location at the right time.” In Hokkaido, there was only one anti-missile group stationed at the ASDF’s Chitose base, some 160 km away from Cape Erimo. There was apparently no time to bring in other units. As North Korea continues the test-firing of ballistic missiles, many of which have fallen into the Sea of Japan, the Defense Ministry has stepped up efforts to improve Japan’s defense capabilities. Among the options being considered is introducing a land-based Aegis missile defense system known as Aegis Ashore. The system uses similar components to those fitted on MSDF Aegis destroyers, but is expected to reduce the workload of SDF members in missile intercept operations because it will be permanently installed on land. The ministry plans to secure funds in the next fiscal year, starting in April, for possible introduction of Aegis Ashore, but installing the new system is expected to take several years. Japan only needs three Aegis ships equipped with the missile shield capability to protect all of the nation’s territory, and it has four now, though this “barely” enables the country to continuously keep watch on missile threats because there are times when ships cannot be used due to maintenance, a government official said. The Defense Ministry plans to double the number of its Aegis vessels to eight, but those warships are unlikely to be plying nearby waters until around 2021. The ministry has also been growing wary about what seem to be demonstrations by North Korea of its ability to conduct a surprise attack, using mobile launchers and firing missiles during the night. The fact that North Korea launched the missile from a location it had never used before — Sunan in the capital, Pyongyang — may also be a sign that it was testing its abilities to conduct a sneak attack, one ministry official said. “No matter how much we strengthen our missile defense, there will still be holes,” another senior ministry official said. “It’s endless.” (Kyodo, “As North Korea’s Missile Capabilities Grow, Japan’s Defensive Capabilities Fail to Keep up,” Japan Times, Aug 30, 2017)
President Moon Jae-in nominated Cho Yoon-je, an economist who served as ambassador to the United Kingdom and economic adviser to the Roh Moo-hyun Blue House, as ambassador to the United States. During the presidential campaign, Cho headed Moon’s policy think tank. After Moon took office in May, he visited the European Union and Germany as a special presidential envoy. The appointment of the ambassador to Washington was delayed because the Blue House wanted a heavyweight candidate who can deal with the Donald Trump administration amid the latest security crisis. Former lawmaker Noh Young-min of the Democratic Party was selected as the ambassador to China, the Blue House said. Lee Su-hoon, a professor at Kyungnam University, was named ambassador to Japan. Noh, a former three-term lawmaker, was named ambassador to China despite concerns within the ruling party about losing a key politician ahead of next year’s local elections. Lee, an international relations professor, is an advocate of inter-Korean dialogue. He served as chairman of the presidential advisory group for Northeast Asia policy during the Roh administration. In Moon’s transition team, he headed the foreign affairs and security division. The appointments were announced as Reuters reported that the Trump administration plans to name Victor Cha as U.S. ambassador to Seoul. Cha served as a director for Asian affairs on the White House National Security Council during the George W. Bush administration. He was also deputy head of the U.S. delegation in multilateral talks with North Korea over its nuclear program. Cha, a Korean-American, is currently the Korea Chair at Washington’s Center for Strategic and International Studies and director of Asian Studies at Georgetown University’s Department of Government and School of Foreign Service. (Ser Myo-ja, “Cho Yoon-je Going to Washington, Victor Cha Coming to Seoul,” JoongAng Ilbo, August 30, 2017)

Just days after North Korea tested an intermediate range ballistic missile that overflew Japan, the U.S. Navy intercepted a medium range ballistic missile target on August 30 using a Raytheon Standard SM-6 missile. The weapon, which was launched from USS John Paul Jones (DDG-53), intercepted the target in its final seconds of flight. "Earlier this year, our customer requested an enhanced capability to deal with a sophisticated medium-range ballistic missile threat," Mike Campisi, Raytheon's SM-6 senior program director, said. "We did all this – the analysis, coding and testing – in seven months; a process that normally takes one to two years." Unlike dedicated ballistic missile interceptor versions of the Standard missile, the SM-6 is a multirole weapon that can perform anti-air warfare, anti-surface warfare and the ballistic missile defense (BMD) at sea. According to Raytheon, this marked the third time that the SM-6 missile successfully engaged a ballistic missile target in its terminal phase. The weapon was first tested in the ballistic missile defense role in August 2015 and then again in late 2016. Raytheon has delivered more than 330 SM-6 missiles with production continuing indefinitely. However, while the SM-6 will become the mainstay of the fleet, the dedicated ballistic missile defense role falls to the SM-3 variants of the Standard missile. The Standard missile family—and indeed most U.S. theatre missile defenses—has a good track record, but they only offer a limited defense. In the event of a war, thousands of North Korean ballistic missiles would likely overwhelm the system. Indeed, a 2016 report from the Pentagon’s Director, Operational Test and Evaluation bears that out. "The Regional/Theater BMDS demonstrates a limited capability to defend the U.S. Pacific Command (USPACOM), U.S. European Command (USEUCOM), and U.S. Central Command (USCENTCOM) areas of responsibility for small numbers of medium- and intermediate-range ballistic missile threats (1,000 to 4,000 km), and a fair capability for short-range ballistic missile threats (less than 1,000 km range),” reads the report. Kingston Reif, director for disarmament and threat reduction policy at the Arms Control Association told The National Interest that he agrees with the report. “Even though these systems have good test records, the capability of our and Japan's regional defenses (Patriot PAC-3, Aegis capable ships armed with SM3-IA and IB interceptors and THAAD) against small numbers of missiles that travel within the defended area of these systems is limited,” Reif said. Moreover, shooting down North Korean test missiles would be even more difficult—despite the ill-informed pontifications of various commentators. “Shooting down a North Korean missile on a test trajectory—as was the case with the 8/29 HS-12 test — is an entirely different and even more difficult challenge,” Reif said. “Our BMD systems are not designed or postured to defend the open ocean. And we couldn't rely on THAAD, since there are no THAAD batteries in the Japan. Patriot is also a no go, since it is designed to defend against slower short-range missiles during their terminal phase.” In theory, it might be possible to shoot down North Korean ballistic
The DPRK categorically rejects the "presidential statement" of the United Nations Security Council (UNSC) condemning the intermediate-range strategic ballistic rocket launching drill of the Korean People’s Army (KPA): On August 30, the UNSC released a "presidential statement" distorting the truth as if the DPRK’s launch of intermediate range strategic ballistic rocket Hwasong-12 undermined regional peace and stability and caused grave security concerns around the world. The DPRK categorically rejects the "presidential statement" of UNSC that flagrantly violated the right to self-defense of a sovereign state.

Missiles below the intercontinental ballistic missile (ICBM) class using the U.S. Navy’s Aegis cruisers and destroyers. However, it would be extremely difficult—and would compromise the defenses of populated areas. “Shooting down a North Korean non-ICBM test might theoretically be possible using SM-3 interceptors launched from Aegis ships in the region,” Reif said. “But it would be a highly demanding task and entail a significant amount of guesswork, as the ships would have to be in the right place at the right time to stop a test at sea. Doing so also would mean taking them away from optimal positions to defend actual targets on land.” But even then, Reif notes that the SM-3 has only been tested against an IRBM target once. “According to Missile Defense Agency data, the existing Aegis interceptors have only been successfully tested once against an IRBM-class target. The faster SM3-IIA under development by the United States and Japan will provide much great capability versus IRBMs, but it is not yet deployed.” At best, the SM-3 would be able to intercept a ballistic missile in the mid-course part of its flight. “We’d have no shot against an IRBM, or a MRBM or SRBM for that matter, during the missiles boost phase as that is beyond the capability of the SM-3 interceptor,” Reif said. “For a midcourse intercept, that would depend on the trajectory, how much warning we had, and how many ships were deployed and where (Note: that the recent accidents involving the Aegis-equipped USS Fitzgerald and McCain how many ships the U.S Navy could bring to bear in the region).” It would have taken an incredible stroke of luck for the United States and Japan to have intercepted the recent North Korean IRBM test. “Aegis ships positioned in the Sea of Japan to protect key populations centers and critical military assets in Japan against SRBMs/MRBMs likely would not have been able to engage an IRBM flying over northern Japan,” Reif said. “Unless a ship happened to be positioned exactly along or near the flight path of the test, midcourse intercept is probably out of the question. A terminal shot—as the RV is reentering the earth’s atmosphere—might have been possible, but the SM3 has never been tested in that mode and would require North Korea to tell us where the missile would land.” In Reif’s view, shooting down a North Korean ballistic missile—or worse—trying to shoot one down and missing would be counterproductive. “Even if the stars were aligned however, attempting to shoot down a non-threatening missile test would be hugely provocative act and supply invaluable data to adversaries,” Reif said. “A miss, which is more likely than an intercept, would be embarrassing and undermine confidence in U.S. defenses. Even a hit would be escalating, expend an expensive round, and create an expectation to shoot down future tests, which could lead to a failure down the road.” Ultimately, the problem is that missile defenses can be overcome easily by adding more or better decoys and other countermeasures—or simply overwhelming the system with numbers. Interceptors are expensive and several missiles have to be launched at an incoming target to ensure a reasonable probability of kill. “Calls to shoot down DPRK missiles tests reflect widespread overconfidence in the efficacy and importance of missile defense,” Reif said. “Missile defense is not an escape route from our or our allies vulnerability to a nuclear-armed North Korea, which is taking steps to evade our defenses and can build more missiles to overwhelm our defenses.” In the end, only diplomacy has any chance of resolving the North Korea problem. (Dave Majumdar, “There May Be Now Way to Counter North Korea’s Missiles,” The National Interest, August 30, 2017)
learned by the DPRK that only actions speak to the U.S., not polite words. The revolutionary armed forces of the DPRK shall conduct many more of ballistic rocket launching drill targeting the Pacific to further modernize and increase the actual combat efficiency of its strategic force.” (KCNA, “FM Spokesman Rejects ‘Presidential Statement’ of UNSC,” August 31, 2017)

The United States flew some of its most advanced warplanes in bombing drills with ally South Korea, a clear warning after North Korea launched a midrange ballistic missile designed to carry nuclear bombs over Japan earlier this week, the U.S. and South Korean militaries said. North Korea hates such displays of U.S. military might at close range and will likely respond with fury. Two U.S. B-1B supersonic bombers and four F-35B stealth fighter jets joined four South Korean F-15 fighters in live-fire exercises at a military field in eastern South Korea that simulated precision strikes against the North's "core facilities," according to the U.S. Pacific Command and South Korea's Defense Ministry. The B-1Bs were flown in from Andersen Air Force Base in Guam while the F-35Bs came from a U.S. base in Iwakuni, Japan. The North, which claims Washington has long threatened Pyongyang by flaunting the powerful U.S. nuclear arsenal, describes the long-range B-1Bs as "nuclear strategic bombers" although the United States no longer arms them with nuclear weapons. A strong North Korean reaction to the drills is almost certain. The dueling military displays open up the risk that things will get worse as each side seeks to show it won't be intimidated. North Korea has made it clear that it sees its weapons program, which demands regular testing to perfect, as the only way to contest decades of U.S. hostility, by which it means the huge U.S. military presence in South Korea, Japan and the Pacific.

Washington, in turn, seeks with its joint drills with Seoul and bomber flights to show that it will not be pushed from its traditional role of supremacy in the region. The U.S. Pacific Command said the exercises were conducted in direct response to North Korea's recent missile launch. Over the course of a 10-hour mission, the B-1Bs, F-35Bs and two Japanese F-15 fighters first flew together over waters near Kyushu, Japan. The U.S. and South Korean warplanes then flew across the Korean Peninsula and participated in the live-fire training before returning to their respective home stations, according to the Pacific Command. "North Korea's actions are a threat to our allies, partners and homeland, and their destabilizing actions will be met accordingly," Gen. Terrence J. O'Shaughnessy, commander of the U.S. Pacific Air Forces, said in a statement. "This complex mission clearly demonstrates our solidarity with our allies and underscores the broadening cooperation to defend against this common regional threat. Our forward-deployed force will be the first to the fight, ready to deliver a lethal response at a moment's notice if our nation calls." (Kim Tong-hyung, “U.S. Flies Bombers, Fighters in Show of Force against North Korea,” Associated Press, August 31, 2017)

"We continue to work together, and the minister and I share a responsibility to provide for the protection of our nations, our populations and our interests." Japanese Defense Minister Onodera Itsunori spoke to Mattis by telephone and agreed to keep putting pressure on North Korea in a "visible" form, Japan's defense ministry said. The 15-member U.N. Security Council two days ago condemned the firing of an intermediate range ballistic missile over Japan as "outrageous," and demanded that North Korea halt its weapons program, but the U.S.-drafted statement did not threaten new sanctions. Japan was pushing the United States to propose new U.N. Security Council sanctions, which diplomats said could target North Korea's laborers working abroad, oil supply and textile exports. Diplomats expected resistance from Russia and fellow veto-wielding power China, particularly given new measures were only recently imposed after North Korea staged two long-range missile launches in July. Asked if Japanese Prime Minister Abe Shinzo and Trump talked about restricting North Korea's fuel supply when the two spoke by telephone on Wednesday, Chief Cabinet Secretary Suga Yoshihide said an embargo on oil and oil-related products would be an option. China, North Korea's neighbor and main ally and trading partner, again urged restraint from all parties. Defense ministry spokesman Ren Guoqiang told a monthly briefing that China would never allow war or chaos on the Korean peninsula, its doorstep, and military means were not an option. "China strongly demands all sides to exercise restraint and remain calm and not do anything to worsen tensions," Ren said, adding that Chinese forces were
maintaining a normal state of alert along the North Korean border. Chinese foreign ministry
spokeswoman Hua Chunying said the situation on the peninsula was serious. "I also want to stress
that the current tense situation on the peninsula isn't a screenplay or a video game," she told
reporters. "It's real, and is an immense and serious issue that directly involves the safety of people
from both the north and south of the peninsula, as well as peace and stability of the entire region."
(Jack Kim and Kaori Kaneko, “U.S. Bombers Drill over Korean Peninsula after North Korea’s
Latest Launch,” Reuters, August 31, 2017)

Talk of South Korea’s nuclear armament resurfaced, after Seoul’s defense chief raised the issue in
a meeting with his U.S. counterpart. Meeting Defense Secretary James Mattis yesterday, Seoul’s
Defense Minister Song Young-moo floated the idea of South Korea manufacturing indigenous
nuclear-powered submarines and bringing back U.S. tactical nukes that were withdrawn from the
Korean Peninsula in 1991. The proposal was discussed in the context of the allies’ efforts to
enhance their deterrence against escalating threats from North Korea. The government, however,
sought to quell the speculation, with the Foreign Ministry saying South Korea continues to
observe the current nuclear-free principle and the Defense Ministry downplaying Song’s remark as
an “introduction” of calls for nuclear armament here. “I don’t think it was a serious discussion,”
Vice Defense Minister Seo Joo-seok told lawmakers today at the National Assembly. “My
understanding is that the South Korean and U.S. defense ministers only mentioned such ideas (of
redeploying US tactical nukes and developing nuclear submarines).” Mattis’ response has yet to be
confirmed. Washington has previously opposed the measure out of concern it would prompt
backlash from China and Russia and deepen an already-intense arms race in Northeast Asia.
Since taking office in July, Defense Minister Song has hinted at pursuing the development of a
nuclear-powered submarine. On August 1, days after North Korea launched an intercontinental
ballistic missile capable of hitting the contiguous US, Song said Seoul was “ready” to consider the
development. Pyongyang’s successful ICBM launch and ensuing missile provocations have also
prompted calls to bring back U.S. nuclear weapons, particularly among conservative opposition
parties who criticized President Moon Jae-in’s approach of engaging with North Korea in dialogue
to address its military threats. The Moon administration has thus far remained skeptical of
redeploying US tactical nukes, saying the move would violate Seoul’s previous pledge to stay
nuclear-free in 1991. Seoul is also banned from developing nuclear weapons under various
international agreements, including the Non-Proliferation Treaty. “The government’s basic
position is to denuclearize the Korean Peninsula by ensuring North Korea completely
abandons its nuclear weapons,” Foreign Ministry spokesman Cho June-hyuck said in a press
briefing today. Given the diplomatic and institutional hurdles facing efforts to deploy nuclear
weapons, Song’s remark appeared to be in line with pressure on Washington to send more
strategic assets and honor its commitment to providing extended nuclear deterrence, analysts said.
Today, the US deployed its stealth fighters and strategic bombers to take part in bombing drills
aimed at North Korea. Two US B-1B supersonic bombers and four F-35 stealth fighter jets joined
four South Korean F-15 fighters in live-fire exercises at a military field in eastern South Korea
that simulated precision strikes against the North’s “core facilities,” an official from Seoul’s
Defense Ministry said. (Yeo Jun-suk, “Talk of Tactical Nuclear Weapons Resurfaces,” Korea
Herald, August 31, 2017) The Blue House dismissed the possibility of bringing U.S. tactical
nuclear weapons to South Korea after reports got out that Korean Defense Minister Song Young-
moo mentioned the idea in a meeting with his counterparts in Washington. “We have not
discussed anything related to the tactical nuclear weapons in this administration,” said a senior
government official of the Blue House. “The Korean government respects the international efforts
on nonproliferation and its policies have been and will be in line with these efforts. What Minister
Song Young-moo talked about in the meeting in Washington was part of his explanation of
domestic issues in Korea,” the official added, “and we have also confirmed with Song that he
wasn’t requesting the U.S. government to deploy nuclear weapons here.” In a meeting with U.S.
Defense Secretary James Mattis, Song mentioned that conservative opposition parties were
demanding the redeployment of nuclear weapons to resolve the security crisis. Song also met with
U.S. Pacific Command (Pacom) chief Adm. Harry Harris in Hawaii on August 30. “[Adm. Harris]
reaffirmed the ironclad U.S. commitment to the Mutual Defense Treaty, which states that a North
Korean attack on one is an attack on both nations,” said Pacom’s spokeswoman Marine Capt.

Armchair experts on North Korea — and a fair few who watch from their desks too — like to write off Kim Jong Un as unpredictable. Who knows what this nuclear-armed madman might do next, the refrain goes. But anyone who’s surprised by the last month’s events — from North Korea’s threat to fire missiles close to Guam, to the actual launch of a missile over Japan — hasn’t been paying attention. For Pyongyang’s actions have been clearly telegraphed. Take the August 9 statement from the North’s official Korean Central News Agency. The army’s top missile unit was drafting a plan to create “an enveloping fire” around Guam with Hwasong-12 missiles, KCNA reported. The plan would be sent to Kim, who would make a decision mid-month. Sure enough, on August 15, the agency reported Kim had been to see the missile unit’s leaders — he had a great time there, if his broad smile in the photos is anything to go by — and had reviewed the plan. He was going to keep an eye on “the foolish and stupid Yankees” a bit longer, KCNA quoted him as saying, making it clear he was talking about the joint U.S.-South Korean military exercises starting on August 21. North Korea always protests against the exercises, which it views as a pretext for an invasion, and China and Russia had been urging the United States to tone it down a bit. But they went ahead as planned. So what did Kim do? On August 29, two days before the end of the exercises, he fired a Hwasong-12 intermediate range ballistic missile technically capable of reaching beyond Guam. The United States responded by sending stealth planes and fighter jets on a bombing drill near South Korea’s border with North Korea Thursday, the final day of the exercises. “You can go back years and find them pretty clearly stating that this is what they’re going to do and this is why they’re going to do it,” said Van Jackson, an international security expert at Victoria University in New Zealand. “And now it’s just happening.” In a statement after the launch, KCNA said the missile units were practicing “striking the bases of the U.S. imperialist aggressor forces located in the Pacific operational theater” — an apparent reference to Guam. There have been clear signals before many of North Korea’s recent provocations. Take its launch of an inter-continental ballistic missile technically capable of reaching the mainland United States. In his New Year’s address on January 1, Kim said his rocket scientists were in the final stages of preparing for launch. On July 4, he made good on this. “They show their hand when they’re going to do something that could create actual instability,” Jackson said, citing aircraft and maritime warnings head of missile launches over the years, and the advance notification to Japan before it launched a rocket over its neighbor in 2009. So, despite its often over-the-top language, there’s plenty of reason to take North Korea seriously when it warns, as it did this week, there will be more missile launches. Kim called Tuesday’s launch a “meaningful prelude to containing Guam” and ordered his missile unit to be “fully ready to go into action for decisive battle.” North Korea is doing several things with these launches, analysts said. One of them is practicing launching under a variety of conditions and from a variety of places. “This was an operational test,” said Vipin Narang, an expert on nuclear proliferation and strategy at the Massachusetts Institute of Technology, noting this launch took place at a new site, just north of the capital. “They’re getting units ready to fire a missile without being destroyed,” he said, adding KCNA has emphasized this was a rehearsal for a real-life situation. North Korea was also testing its technology. The August 28 missile was fired at only half-range, South Korea’s defense ministry said in a report to the National Assembly today. The missile had a full range of 3,100 miles, the ministry said. Guam is 2,100 miles from Pyongyang. North Korea is also taking advantage of the mayhem in Washington, said Robert Carlin, a retired U.S. intelligence specialist on North Korea. “The North Koreans read our media, they know that Trump is in trouble and that Washington is dysfunctional,” Carlin said. “They know that, for all of the fist-shaking, the United States really is a headless giant right now. They know that there’s not much we can do, so they’re willing to press us.” The Trump administration has not reciprocated with a clear message to the Kim regime, analysts say. President Trump has vacillated between calling Kim a “smart cookie” and warning him the U.S. military is “locked and loaded.” Sanctions have been Washington’s main tool for dealing with North Korea, but Pyongyang has found ways to get around them. “Sanctions are always one step
behind," Jackson said. "It's a whack-a-mole problem." A forthcoming report from the U.N. panel of experts on North Korea, seen by The Washington Post, says North Korea "continues to flout the arms embargo and robust financial and sectoral sanctions, showing that as the sanctions regime expands, so does the scope of evasion." Military action against North Korea would have "horrific" consequences, the chairman of the Joint Chiefs of Staff said earlier this month, not least because of the devastation North Korea could inflict on the South with its conventional artillery. Even as his officials try to find an opening for negotiations, Trump yesterday ruled out diplomacy. "Talking is not the answer!" he tweeted. But the president's message was quickly undercut by his own defense secretary, "We are never out of diplomatic solutions," Jim Mattis said at the Pentagon before meeting his South Korean counterpart, as if to back up Secretary of State Rex Tillerson's comment a few days earlier that "the president speaks for himself." Narang of MIT said the recent muddling of messages goes beyond ambiguity. "Incoherence is not a strategy, and this is really starting to look incoherent," he said. For that reason, North Korea is likely to continue lobbing threats and firing missiles for the foreseeable future. As Carlin, the former intelligence analyst puts it: "Until the United States gives them a good reason to stop testing, they're not going to stop." (Anna Fifield, "Don’t Be Surprised by North Korea’s Missile; Kim Jong Un Is Doing What He Said He Would,” Washington Post, August 31, 2017)

When Russia sent its bombers flying over the Korean peninsula last week, it was as much a signal to its allies in Beijing as it was a telegram to Washington that Moscow too, was pivoting to Asia. The Kremlin may not become Pyongyang's most steadfast and critical defender in this newest conflagration, but its cameo in the region is another attempt by Russian President Vladimir Putin to insert himself into a geo-political stalemate involving the U.S. Experts say it may also help deflect attention from upcoming military exercises in Belarus and western Russia next month, which have upset NATO members concerned about what amounts to a mass buildup of Russian troops on the edges of eastern Europe. China, which sent bombers into the air itself shortly after, declined to comment about the show of force from Moscow. In its regular press briefing on Wednesday, the Chinese Foreign Ministry said it would not "quantify how close China and Russia are cooperating on the North Korean nuclear issue," said Hua Chunying, a ministry spokeswoman. "Just like China, Russia plays a pivotal role in maintaining global peace and stability as well as promoting peaceful solutions to hotspot issues in the region," Hua said. "China is willing to strengthen its cooperation and coordination with Russia to jointly preserve peace and stability in the region and around the world." If China is perturbed by its once-dominant Communist partner seeking to commandeer more influence in the region, it's not outwardly displaying those concerns. "I think China is confident that its economic development, its military development, takes place at a faster pace than Russia, so in the long run Russia is in no position to seriously challenge Chinese core interests," said Tong Zhao, a fellow at the Carnegie-Tsinghua Center for Global Policy in Beijing. "There are certain elements of competition between the two countries, but their shared concerns about the US very much outweigh that right now." Both Moscow and Beijing "share the basic perception of who is the real trouble maker and who is the biggest common threat in the Korean peninsula," Tong told CNN. That trouble maker, he said, is the United States, and more specifically, the occupant in the White House. "Secretary (Rex) Tillerson says he wants to do diplomacy before considering other options but the rhetoric from other people in the White House — (US President Donald) Trump tweeting that talking is not the answer, I think from the Chinese perspective the US is still considering a military option so that doesn't reassure leaders in North Korea or China," Tong said. Putin appeared to reiterate this today when he called attempts to get the regime of Kim Jong Un to cease its nuclear program "a dead-end road." "Russia believes that the policy of putting pressure on Pyongyang to stop its nuclear missile program is misguided and futile," Putin said in an article released by the Kremlin. "Provocations, pressure and militarist and insulting rhetoric are a dead-end road." Russia has recently been making inroads to counter China's perceived clout with North Korea. Overtures include Russia's forgiveness of Soviet-era debt, of which $10 billion due from Pyongyang was written off by the Kremlin. Moscow is one of the largest donors of food aid to North Korea, and alongside Beijing, was recently hit with U.S. Treasury sanctions for selling oil to the North Korean regime. This is all intentional, says Samuel Ramani, a Russian foreign policy specialist. "As Russia takes an increasingly assertive approach to world affairs, it reminds its citizens of the Soviet Union's status as a superpower that could
The leaders of South Korea and the United States have agreed to enhance Seoul's deterrence against North Korea by increasing its missile capabilities, but also reaffirmed the need to bring the communist state back to the dialogue table, Seoul's presidential office, Cheong Wa Dae, said September 2. The agreement came in a telephone conversation between South Korean President Moon Jae-in and his U.S. counterpart, Donald Trump, yesterday, three days after Pyongyang staged its latest missile provocation. "President Moon and President Trump reaffirmed their view that it was important to have North Korea come out to the dialogue table to peacefully resolve the North Korean nuclear issue by applying maximum sanctions and pressure on the North," Cheong Wa Dae spokesman Park Soo-hyun said in a press release. Trump stressed the importance of sending a strong and clear message to the reclusive North. "The two leaders noted the need to strengthen the Republic of Korea's defense capabilities to counter provocations and threats from North Korea, and reached an agreement in principle to revise the 'missile guideline' to the extent
A group of American and Canadian humanitarian workers who were traveling in North Korea recently had to make a tough decision: leave the country immediately and hope to return to their lifesaving work in the future, or stay in the North and face possible problems trying to go home later. This time, however, the uncertainty of their situation was not because of the North Korean government, but rather because of the Trump administration’s intention to bar Americans from traveling to the already isolated country. Under the order, announced in July, Americans must leave the North by today. “I didn’t want any of the staff or any of the colleagues to potentially face issues when they were getting out,” said Kim Taehoon, founder of DoDaum, a humanitarian group based in the United States that has organized an H.I.V.-diagnosis and treatment program in North Korea for the past several years. “Because of the uncertainty of the travel ban, we don’t know if we will be able to do on-the-ground work anymore.” Washington announced the ban in response to the death of Otto F. Warmbier, 22, an American college student who had been serving a 15-year sentence of hard labor in North Korea after being convicted of trying to steal a political poster and died in June shortly after the North released him in a coma. The travel restrictions also reflected the United States’ growing impatience with North Korea over its missile tests and pursuit of nuclear weapons. By imposing the travel restriction, Washington hopes to discourage people from visiting North Korea, but at the same time, the sweeping ban threatens the efforts of hundreds of humanitarian workers in the North — Americans and those who collaborate with them — and the lives of North Koreans who badly need help. “One way or another, this program must go on. Otherwise, lives are lost,” said Stephen W. Linton, an American who oversees the Eugene Bell Foundation, a nonprofit group that has treated 250,000 tuberculosis patients in North Korea since 1997, including those with multidrug-resistant strains of the disease that are costlier to treat and harder to cure. Every six months, Linton leads a delegation of about 12 volunteer health care specialists, half of them American, on a three-week trip to North Korea. During the visits, which take place in May and November, they examine new patients and discharge from care those who
have completed an 18-month treatment program. The treatment must follow a strict schedule to be effective, hence the delegation’s fixed schedule for trips. Now, Linton is fretting over whether his team can visit in November. Under the ban, American passports are invalid for travel “to, through and in North Korea,” according to the State Department. The department says that “in extremely limited circumstances,” it can consider a special validation visa for humanitarian workers, Red Cross officials, journalists and others traveling for “the national interest.” They must apply for it each time they want to visit North Korea. Before the ban, about 1,000 Americans had been traveling to North Korea on organized tours each year. Hundreds of humanitarian workers operated there at any given time, with most allowed to stay for only a limited duration. As the travel restriction loomed, major humanitarian groups, like World Vision or the American Friends Service Committee, said they had no resident or visiting workers in the North. It is unknown how many Americans are still in the North in ignorance or defiance of the ban. Also unclear is how effectively the United States will enforce it. “U.S. citizens are not required to register their presence with the U.S. government,” said William Cocks, a spokesman for the State Department’s Bureau of Consular Affairs. North Korea has called the ban “childish” and has said it will keep its doors “wide open to any U.S. citizen who would like to visit our country out of good will.” Kim, the DoDaum founder, said a 15-member delegation from his group had been cleared by the North Korean authorities to visit in mid-September to deliver H.I.V. medication and help treat patients, but the trip had to be canceled. Kim is a Canadian citizen, but key members of the delegation are Americans affected by the ban. As a way around the restriction, DoDaum is joining with the Pyongyang University of Science and Technology to create an online medical education program so that volunteer professors can offer lessons remotely. Kim said. The university, a private one that is financed by evangelical Christians, has relied on dozens of volunteer teachers, mostly Korean-Americans. Now, it must find non-American replacements if no exemptions are offered. “I think this travel ban is being seen by North Korean officials as an explicitly inflammatory measure,” Kim said. “When we informed them of the need to pull out, there was a sense of understanding but at the same time, there was a sense of disappointment on both sides really.” The ban, by squeezing the flow of tourist cash, helps international efforts to undermine North Korea’s ability to finance its nuclear and missile programs. But critics of the ban say it will further restrict people-to-people interactions between the United States and North Korea. Among the hardest hit will be Korean-Americans who have been visiting to trace their family roots or for reunions with long-lost relatives. “Restricting humanitarian access puts lives in immediate jeopardy and increases the likelihood of humanitarian disaster,” said Daniel Jasper, advocacy coordinator for the American Friends Service Committee, a Quaker organization that has provided humanitarian relief in North Korea for decades. “Our long history in the region leads us to believe that the travel restrictions will greatly reduce the likelihood for peaceful relations on the Korean Peninsula.” American humanitarian workers said that the travel ban endangered the trust with the North Koreans that they had spent years building. To the North Korean authorities, who are hard-wired to consider Washington a mortal enemy, the fact that these American workers volunteered to visit despite their government’s warnings had been part of their credibility. “Getting permission from the government to go puts an X mark on your back because the North Koreans will never believe that you are there just for humanitarian purposes if the government gave you permission to go,” Linton said. “In fact, this travel ban, the way it’s set up, puts N.G.O.s in much greater danger by requiring official government permission to travel to North Korea. “There is no one I know in North Korea who would believe that there isn’t some connection between the N.G.O. and the government that made that permission possible,” he added. For Linton, helping Koreans has been a family mission for more than a century. His grandfather’s father-in-law, Eugene Bell, arrived in Korea in 1895 as an American missionary to engage in medical and evangelical activities. Mr. Linton’s grandfather, William Linton, also a missionary, served in Korea for half a century. In 1995, Linton established the Eugene Bell Foundation to help tuberculosis patients in North Korea. The members of Mr. Linton’s North Korean mission show that same dedication, including an 83-year-old Catholic priest who has been visiting the North despite a heart condition. They are determined to return, even if that means signing a waiver forsaking their right to consular service — a move they hope will make it easier for them to receive permission from the United States government to travel to the North. “We are not going to hold the U.S. government responsible for trying to get us out if we get into trouble,” Linton said. “We are doing this as mature adults who
have made a decision that this program is worth the risks involved.” (Choe Sang-hun, “Groups Fault Trump Ban on Travel to North Korea,” New York Times, September 1, 2017, p. A-8)

President Trump has instructed advisers to prepare to withdraw the United States from a free-trade agreement with South Korea, several people close to the process said, a move that would stoke economic tensions with the U.S. ally as both countries confront a crisis over North Korea’s nuclear weapons program. Withdrawing from the trade deal would back up Trump’s promises to crack down on what he considers unfair trade competition from other countries, but his top national security and economic advisers are pushing him to abandon the plan, arguing it would hamper U.S. economic growth and strain ties with an important ally. Officials including national security adviser H.R. McMaster, Defense Secretary Jim Mattis and National Economic Council director Gary Cohn oppose withdrawal, said people familiar with the process who spoke on the condition of anonymity to discuss internal White House deliberations. Although it is still possible Trump could decide to stay in the agreement to renegotiate its terms, the internal preparations for terminating the deal are far along, and the formal withdrawal process could begin as soon as this week, the people said. A White House spokeswoman said “discussions are ongoing, but we have no announcements at this time.” Trump has threatened before to withdraw from trade pacts only to pull back, but his threat to South Korea comes as the two countries look to create a united front against North Korea at a time when military tensions are at their highest level in years. The U.S.-South Korea deal, which was reached in 2007 and went into effect in 2012, reduces trade barriers between the two countries. Proponents say it gives U.S. companies more access to the wealthy South Korean economy, but critics charge that South Korea has reaped a greater share of the benefits of the deal, an allegation Trump has personally echoed multiple times since his election while calling for changes to the deal. South Korea elected a new president, Moon Jae-in, in May, and Trump has been frustrated that Moon is not willing to accept the initial U.S. trade demands, several trade experts said. Foreign leaders at first worked hard to build strong relations with Trump, but there has been a marked change in recent months as numerous leaders have stood up to his brand of nationalism. South Korean media have been telling trade representatives in Seoul to stand their ground against the United States in the renegotiations. “The North Korean nuclear crisis is pushing tension on this divided peninsula to new highs,” the Korea Times wrote in an editorial. “But that should be no reason for Seoul to put its economic interests far behind security matters, weakening its bargaining leverage and playing into the hands of the U.S. leader, the self-styled ‘artist of the deal.’” Trump is “playing with fire,” said Gary Schmitt, co-director of the Marilyn Ware Center for Security Studies at the American Enterprise Institute. “There is a new president in South Korea whose instincts probably are to be probably not as pro-America as his predecessor, and now you are putting him in a situation where he has to react. In fact, what you need now is as much cooperation as possible.” White House advisers are trying to stop Trump
North Korea sharply raised the stakes in its stand-off with the rest of the world, detonating a powerful nuclear device that it claimed was hydrogen bomb that could be attached to a missile capable of reaching the mainland United States. Even if the regime led by Kim Jong Un is exaggerating its feats, scientific evidence showed that North Korea has crossed an important threshold and had detonated a nuclear device that was exponentially more powerful than its last—and almost eight times the size of the bomb that destroyed Hiroshima. Today’s blast — North Korea’s sixth nuclear test but the first since Trump took office — could escalate those tensions to a new level. The nuclear device that North Korea tested appeared to be so large that Vipin Narang, an expert on nuclear proliferation and strategy at the Massachusetts Institute of Technology, called it a “city buster.” “Now, with even relatively inaccurate intercontinental ballistic missile technology, they can destroy the better part of a city with this yield,” Narang said. North Korea’s latest nuclear test took place at exactly noon local time at its Punggye-ri testing site and was recorded as a magnitude 6.3 earthquake, according to the United States Geological Survey. It was followed eight minutes later by a 4.1 magnitude earthquake that appeared to be a tunnel collapsing at the site. Japan immediately sent up sniffer planes to try to measure radiation levels. North Korean state media said that the test was carried to test “the accuracy and credibility” of its “H-bomb to be placed at the payload of the ICBM.” North Korea tested its intercontinental ballistic missile for the first time in July, and its second test later the same month showed the rocket could theoretically reach Denver or Chicago. Those launches caused Trump to tell reporters that if North
Korea continued its nuclear provocations, it would feel “fire and fury.” He later tweeted that the American military was “locked and loaded.” North Korean television broadcast footage of Kim signing the order to detonate. Today’s test, part of the regime’s plan for building “a strategic nuclear force,” was a “perfect success,” KCNA said. Earlier today, KCNA had released photos of Kim inspecting what was described as a hydrogen bomb that could be attached to an ICBM — the same device that appeared to be detonated just hours later. All the components of the “H-bomb” were “homemade” so North Korea could produce “powerful nuclear weapons as many as it wants,” the state-run agency quoted Kim as saying. Analysts were poring over the photos and the data today, especially questioning North Korea’s claim to have produced a “two-stage thermonuclear weapon.” David Albright, a nuclear weapons expert and president of the Institute for Science and International Security, was skeptical of North Korea’s claims and said that the photos were likely “propaganda.” But there was no doubt that North Korea was making progress. South Korean government officials and independent nuclear scientists estimated the yield — the amount of energy released by the weapon — to be 100 kilotons. That would make it almost eight times as strong as the American atomic bomb that destroyed the Japanese city of Hiroshima in 1945. At that level, North Korea’s nuclear device would be “very significant and destabilizing,” Albright said. “It would show that their design, whatever the specific design, has achieved a yield that is capable of destroying substantial parts of large modern cities.” Still, Albright doubted that North Korea had been able to make such a warhead small enough to fit onto a missile. Although governments and experts would continue to assess the technical aspects of the latest nuclear test, MIT’s Narang said the danger is significant, regardless of whether this was a lesser boosted fission device or a true hydrogen bomb, or whether North Korea had mastered the technology to deliver this accurately to a target. “It really doesn’t matter now from a deterrence perspective,” he said. “Mated on the ICBM, you don’t want this thing anywhere near a city near you.” Today’s test caused anger across the region, with South Korean President Moon Jae-in saying he would “never allow North Korea to continue advancing its nuclear and missile technologies,” according to his national security adviser. South Korean military leaders warned North Korea that they, together with their American allies, were “fully equipped” to punish North Korea. Japanese Prime Minister Shinzo Abe said he “would not tolerate” the nuclear test. Abe had spoken with Trump earlier in the day, and said afterwards that they had agreed to “increase pressure on North Korea and make it change its policies.” All eyes will now turn to China to see if it will be angry enough to impose true punishment on North Korea. China has expressed annoyance at North Korea’s frequent ballistic missile launches, but analysts have said Beijing probably would not take serious action unless there is another nuclear test. China’s primary concern is stability on its borders, and it has shied away from implementing sanctions that would seriously undermine the regime in Pyongyang, analysts have said. Almost all international sanctions, such as bans on recent bans on coal and seafood exports, rely on Chinese enforcement because about 90 percent of North Korean trade goes through China. China’s foreign ministry said today that North Korea had conducted the nuclear test “with no regard to the general objections of the international community.” “The Chinese government resolutely opposes and strongly condemns this,” the ministry said in a statement. “China will work together with the international community to comprehensively and completely implement the relevant resolutions of the Security Council of the UN, unsparingly push forward the denuclearization of the peninsula, and unsparingly maintain the peace and stability of the peninsula,” it said. (Anna Fifield, “In Latest Test, North Korea Detonates Its Most Powerful Nuclear Device Yet, Washington Post, September 3, 2017) North Korea’s detonation of a sixth nuclear bomb today prompted the Trump administration to warn that even the threat to use such a weapon against the United States and its allies “will be met with a massive military response.” The test — and President Trump’s response — immediately raised new questions about the president’s North Korea strategy and opened a new rift with a major American ally, South Korea, which Trump criticized for its “talk of appeasement” with the North. Though it was far from clear that the North had set off a hydrogen bomb, as it claimed, the explosion caused tremors that were felt in South Korea and China. Experts estimated that the blast was four to sixteen times more powerful than any the North had set off before, with far more destructive power than the bombs dropped on the Japanese cities of Hiroshima and Nagasaki. The United States Geological Survey estimated that the tremor set off by the blast, detected at 12:36 p.m. at the Punggye-ri underground test site in northwestern North Korea, had a magnitude of 6.3. The South Korean
Defense Ministry’s estimate was much lower, at 5.7, but even that would mean a blast “five to six times” as powerful as the North’s last nuclear test, a year ago, said Lee Mi-sun, a senior analyst at the South Korean Meteorological Administration. The South’s National Fire Agency, which operates an emergency hotline, said it had received 31 calls about buildings and the ground shaking, the first time that South Koreans had reported tremors after a North Korean nuclear detonation. The blast was so powerful that the first tremor was followed by a second, weaker one minutes later, which the United States Geological Survey called a “collapse,” probably a cave-in at the North’s underground test site. Yet after a day of meetings in the Situation Room involving Trump and his advisers, two phone calls between the president and Prime Minister Abe Shinzo of Japan, and even demands from some liberal Democrats to cut off North Korea’s energy supplies, Trump’s aides conceded that they faced a familiar conundrum. While the Pentagon has worked up a series of military options for targeted strikes at North Korea’s nuclear and missile sites, Trump was told that there is no assurance that the United States could destroy them all in a lightning strike, according to officials with knowledge of the exchange. Cyberstrikes, which President Barack Obama ordered against the North’s missile program, have also been judged ineffective. Trump hinted at one extreme option: In a Twitter post just before he met his generals, he said that “the United States is considering, in addition to other options, stopping all trade with any country doing business with North Korea.” Taken literally, such a policy would be tantamount to demanding a stoppage of any Chinese oil to North Korea, essentially an attempt to freeze out the country this winter and bring whatever industry it has to a halt. The Chinese would almost certainly balk; they have never been willing to take steps that might lead to the collapse of the North Korean regime, no matter how dangerous its behavior, for fear that South Korean and American troops would occupy the country and move directly to the Chinese border. Beyond that, the economic disruption of ending all trade with China would be so huge inside the United States that Trump’s aides declined today to discuss the implications. After meeting with Mr. Trump, Defense Secretary Jim Mattis emerged to warn North Korea that “any threat to the United States or its territory, including Guam or our allies, will be met with a massive military response.” But Mattis, in a terse statement delivered on the White House driveway with the chairman of the Joint Chiefs of Staff, Gen. Joseph F. Dunford Jr., also offered a word of reassurance to the North’s reclusive leader, Kim Jong-un. “We are not looking to the total annihilation of a country, namely North Korea,” he said. “But as I said, we have many options to do so.” Still, Mattis’s statement left open many questions. His formulation seemed to rule out the kind of “preventive war” that the national security adviser, Lt. Gen. H. R. McMaster, warned last month might be necessary after the North tested two intercontinental ballistic missiles in an effort to demonstrate that it could reach Los Angeles and beyond. Instead, Mr. Mattis seemed to be talking about “pre-emptive strikes,” which the United States might order if it determined that an attack seemed imminent. There was no public discussion of pursuing a diplomatic opening to the North. The North Korean leader has tried to portray his nuclear program as unstoppable and nonnegotiable, posing by a picture of what the North’s official news agency today called a hydrogen bomb that could be fitted into the nose cone of the ICBMs tested last month. Experts warned that the weapon, while shaped like a hydrogen bomb, could well have been a mock-up or decoy, one of the many steps the North takes to make it appear more powerful than it truly is. On September 4, South Korea’s army fired short-range ballistic missiles off its east coast in a simulated attack on North Korea’s nuclear test site, its military said in a statement. F-15K fighter jets also joined in the show of force, firing air-to-land missiles, it said. Only hours earlier, Trump reacted to the North Korean test by lashing out at South Korea. “North Korea is a rogue nation which has become a great threat and embarrassment to China, which is trying to help but with little success,” he said. “South Korea is finding, as I have told them, that their talk of appeasement with North Korea will not work, they only understand one thing!” Trump appeared to be referring to the offers by South Korea’s new president, Moon Jae-in, to enter into some kind of negotiations with the North that might lead to a renewal of the “Sunshine Policy,” an effort by some of his predecessors to lure the North into disarmament with economic engagement. Those efforts failed. Trump’s undisguised swipe at the South for “appeasement” was certain to exacerbate fears that the United States might put it in danger. And it came only a day after Trump threatened a new rift in relations with suggestions that the United States might withdraw from a trade deal with South Korea — one that was intended to bolster the alliance. In response to Trump’s criticism, Moon’s office said it was working closely
with Washington to exert “maximum sanctions and pressure.” But it also reiterated that the allies shared the understanding that the goal of these sanctions and pressure was to bring North Korea back to the negotiating table. “We have experienced an internecine war and can never tolerate another catastrophic war on this land,” Moon’s office said in a statement. “We will not give up our goal of working together with allies to seek a peaceful denuclearization of the Korean Peninsula.”

China expressed “strong condemnation” of the test, according to Xinhua, but suggested no new action. Its leaders feel as stymied as their American counterparts, according to many China experts. The test’s timing was a major embarrassment for President Xi Jinping of China, who today was hosting a summit meeting of the so-called BRICS countries — Brazil, Russia, India, China and South Africa. Peter Hayes, director of the Nautilus Institute, a U.S.-based research group specializing in North Korea, said the test seemed intended to jolt Xi and convince him that he needed to persuade the United States to talk to North Korea. Japan requested an emergency meeting of the United Nations Security Council, as it did earlier in the week after a missile test over Hokkaido, its northernmost island. In Europe, the Russian Foreign Ministry said that North Korea “deserves absolute condemnation,” and a joint statement from Chancellor Angela Merkel of Germany and President Emmanuel Macron of France said “the most recent provocation from Pyongyang reaches a new dimension.” The timing of the test was almost certainly no coincidence: It came during the American Labor Day weekend, and the anniversary of the founding of the North Korean government is September 12. “Pyongyang has a playbook of strategic provocations, throws off its adversaries through graduated escalation, and seeks maximum political impact by conducting weapons tests on major holidays,” said Lee Sung-yoon, a Korea expert at the Fletcher School of Law and Diplomacy at Tufts University. (David E. Sanger and Choe Sang-Hun, “Nuclear Blast by North Korea Amplifies Crisis,” New York Times, September 4, 2017, p. A-1)

Japan has raised its estimate of the explosive yield of North Korea’s sixth nuclear test to 160 kilotons, 10 times the force of the atomic bomb dropped on Hiroshima in 1945, Defense Minister Onodera Itsunori said September 6. “This is vastly greater than previous North Korean nuclear tests. We cannot rule out the possibility that this was a hydrogen bomb test,” Onodera told reporters. Onodera said the new estimate is based on definitive seismic data from a commission promoting ratification of the Comprehensive Nuclear Test Ban Treaty. The commission has informed Tokyo of its observation of magnitude-6.1 shaking during Sunday's nuclear test, up from provisional estimates of 5.8 and 6.0. (Kyodo, “N. Korea Nuke Yield Estimate Upgraded to 160 Kilotons: Japan,” September 6, 2017) Pabian, Bermudez, and Liu: “New commercial satellite imagery confirms earlier 38 North analysis identifying numerous landslides throughout the Punggye-ri Nuclear Test Site on the slopes of Mt. Mantap (and beyond) resulting from North Korea’s sixth nuclear test. These disturbances are more numerous and widespread than seen after any of the North’s previous five tests, and include additional slippage in pre-existing landslide scars and a possible subsidence crater. However, it is unclear from the imagery whether this subsidence is due to what has been reported as “a cave-in that was externally observable,” associated with the 4.6 magnitude event that occurred eight minutes after the test. There also appears to be increased water drainage in the North Portal Area, likely stimulated by the large underground nuclear test. Such underground water flow stimulation (brought about by expansion of existing cracks and fissures) could also be expected to promote the transport of radionuclides to the surface, and is not inconsistent with a more recent report that some radionuclides (traces of Xenon-133) were detected in the environment following the test (by South Korea). Imagery from September 8 also shows a large tractor/trailer cargo truck in the South Portal Area for the first time, and mining carts and other equipment are present outside the West Portal. Such activity, coming shortly after the largest underground nuclear test conducted at Punggye-ri to date (via the North Portal), suggests that onsite work could now be changing focus to further prepare those other portals for future underground nuclear testing. At the time of 38 North’s first report on the sixth nuclear test, the preliminary seismic magnitude estimates varied from 5.8, as published by both the CTBTO and NORSAR, to 6.3 by the United States Geological Survey (USGS). More recently, both the CTBTO and NORSAR have officially revised their estimates upward to 6.1.

This revision is significant because, rather than providing an equivalent yield of about 120 kilotons derived from the lower magnitude estimates, the application of standard formula with appropriate constants shows that the yield can now be estimated to have been roughly 250 kilotons (one quarter megaton). This large explosive yield is also quite close to what 38 North...
had previously determined to be the maximum estimated containable yield for the Punggye-ri test site. … If the claim that the device just tested has a variable yield is true (from tens to hundreds of kilotons), then this may also imply the North Koreans intend to adopt an expanded policy of using nuclear weapons, including tactical use, in addition to deterring threats to existence of the state. ” (Frank V. Pabian, Joseph S. Bermudez Jr., and Jack Liu, “North Korea’s Punggye-ri Nuclear Test Site: Satellite Imagery Shows Post-Test Effects and New Activity in Alternate Tunnel Portal Areas,” 38North, September 12, 2017)

KCNA: “Respected Supreme Leader Kim Jong Un guided the work for nuclear weaponization on the spot. He was greeted by senior officials of the Department of Munitions Industry of the Central Committee of the Workers’ Party of Korea (WPK) and scientists of the Nuclear Weapons Institute before being briefed on the details of nuclear weaponization. The institute recently succeeded in making a more developed nuke, true to the strategic intention of the WPK for bringing about a signal turn in nuclear weaponization. He watched an H-bomb to be loaded into new ICBM. Saying that he felt the pride of indomitably bolstering up the nuclear forces at a great price while seeing the Juche-oriented thermonuclear weapon with super explosive power made by our own efforts and technology, he expressed great satisfaction over the fact that our scientists do anything without fail if the party is determined to do. He acquainted himself with technical specifications and structural and operational characters of the H-bomb. The scientists further upgraded its technical performance at a higher ultra-modern level on the basis of precious successes made in the first H-bomb test. The H-bomb, the explosive power of which is adjustable from tens kiloton to hundreds kiloton, is a multi-functional thermonuclear nuke with great destructive power which can be detonated even at high altitudes for super-powerful EMP attack according to strategic goals. All components of the H-bomb were homemade and all the processes ranging from the production of weapons-grade nuclear materials to precision processing of components and their assembling were put on the Juche basis, thus enabling the country to produce powerful nuclear weapons as many as it wants, he said. Noting that the scientists, technicians, workers, soldiers and officials in the atomic power industry, who have made devoted efforts to raising the level of nuclear weaponization up to its perfection as intended by the Party, are creditable "nuclear combatants" of the Party who are upholding its line of simultaneously developing the two fronts with the strongest nukes, he highly praised their exploits. Underlining the need for the institute to dynamically conduct the campaign for successfully concluding the final-stage research and development for perfecting the state nuclear force, he set forth important tasks to be fulfilled in the research into nukes.” (KCNA, “Kim Jong Un Gives Guidance to Nuclear Weaponization,” September 3, 2017)

DPRK Nuclear Weapons Institute’s statement “in connection with the perfect success in the test of a hydrogen bomb for ICBM: Scientists in the nuclear field of the DPRK successfully carried out a test of H-bomb for ICBM in the northern nuclear test ground of the DPRK at 12:00 on September 3, true to the Workers’ Party of Korea’s plan for building a strategic nuclear force. The H-bomb test was carried out to examine and confirm the accuracy and credibility of the power control technology and internal structural design newly introduced into manufacturing H-bomb to be placed at the payload of the ICBM. The result of the experimental measurements showed that the power specifications of nuclear warhead including total explosion power and fission to fusion power rate and all other physical specifications reflecting the qualitative level of two-stage thermo-nuclear weapon fully complied with design figures. It was also confirmed that even though the recent test was carried out with the bomb of unprecedentedly big power, there were neither emission through ground surface nor leakage of radioactive materials nor did it have any adverse impact on the surrounding ecological environment. The test re-confirmed the precision of the compression technology and the fission chain reaction start control technology of the first system of the H-bomb and proved once again that the nuclear material utility rate in the first system and the second system reached the levels reflected in the design. Symmetrical compression of nuclear charge, its fission detonation and high-temperature nuclear fusion ignition, and the ensuing rapidly boosting fission-fusion reactions, which are key technologies for enhancing the nuclear fusion power of the second-system of the H-bomb, were confirmed to have been
realized on a high level. This helped prove that the directional combination structure and multi-layer radiation explosion-proof structural design of the first system and the second system used for the manufacture of the H-bomb were very accurate and the light thermal radiation-resisting materials and neutron-resisting materials were rationally selected. The test helped draw the conclusion that the Korean-style analytic method and calculation programs for the complicated physical processes occurring in the first and second systems were put on the high level and that the engineering structure of the H-bomb as a nuclear warhead designed on the Juche basis including the structure of the nuclear charge of the second system was creditable. The test once again confirmed the reliability of the concentration-type nuke detonation control system fully verified through a nuclear warhead detonation test and test-launches of various ballistic rockets. The perfect success in the test of the H-bomb for ICBM clearly proved that the Juche-based nukes of the DPRK have been put on a highly precise basis, the creditability of the operation of the nuclear warhead is fully guaranteed and the design and production technology of nuclear weapons of the DPRK has been put on a high level to adjust its destructive power in consideration of the targets and purposes. It also marked a very significant occasion in attaining the final goal of completing the state nuclear force. The Central Committee the WPK extended warm congratulations to the scientists and technicians in the nuclear field in the northern nuclear test ground on their successful H-bomb test for ICBM.” (KCNA, “DPRK Nuclear Weapons Institute on Successful Test of H-Bomb,” September 3, 2017)

KCNA: “The Presidium of the Political Bureau of the Central Committee of the Workers’ Party of Korea was convened in the morning on September 3, Juche 106 (2017). Present there were Kim Jong Un, Kim Yong Nam, Hwang Pyong So, Pak Pong Ju and Choe Ryong Hae who are Presidium members of the Political Bureau of the WPK Central Committee. The Presidium first analyzed and estimated the current international political situation and the military tension created on the Korean peninsula. Then they heard a report about the study on nuclear weaponization made by the Nuclear Weapons Institute of the DPRK, and discussed the issue of conducting test of H-bomb for ICBM as part of the efforts to attain the final goal of completing the state nuclear force set forth at the 7th Congress of the WPK. Adopted at the Presidium was a decision of the Presidium of the Political Bureau of the WPK Central Committee "On carrying out test of H-bomb for ICBM as part of efforts to attain the final goal of completing the state nuclear force" and Kim Jong Un signed the order for conducting the test. Also discussed at the Presidium were detailed ways and measures for containing the U.S. and other hostile forces’ vicious moves for sanctions against the DPRK and for making tasks of different fields set forth at the 7th Congress of the WPK be implemented with success.” (KCNA, “Presidium of Political Bureau of C.C., WPK Held,” September 3, 2017)

Not all nuclear arms are created equal. They have four main designs that progressively raise the destructive power of the weapons and their ability to obliterate large targets. Nuclear experts say that unusually large test explosions can be achieved in a variety of ways, making the field of atomic forensics quite difficult for distant experts. With today’s large North Korean blast, Norsar, short for the Norwegian Seismic Array, a research group based in Kjeller, noted that global shock waves alone provide insufficient information to determine if the detonation was a true hydrogen bomb, as the North declared. “But we can say in general,” the group added, “that the credibility of the claim increases with increasing explosive yield.” It said other evidence, such as leaks of radioactivity from the underground test site, might solve the riddle of the bomb type in the weeks to come. Nuclear experts said the blast was somewhere between four and 16 times as powerful as North Korea’s previous largest explosion, which was about the size of the Hiroshima bomb. The most basic kind of nuclear weapon — the kind experts say the North began with — is known as an atomic bomb. It gets its energy from splitting heavy atoms in chain reactions. The main fuels of atomic bombs are uranium or plutonium, both heavier than lead and both far more expensive than gold. The secret to achieving more destructive power is to increase the amount of thermonuclear fuel that an exploding atomic bomb can ignite. North Korea said that today’s test was a hydrogen bomb, but analysts were skeptical of this claim. A cheaper and more powerful way of freeing the atom’s hidden energies is to fuse two light atoms into one. The main fuels are deuterium and
tritium, both rare but inexpensive forms of hydrogen. They are known as thermonuclear fuels because their ignition requires the blistering heat of an exploding atomic bomb, which acts like a match. The United States in 1951 injected a tiny amount of thermonuclear fuel into the core of an atomic bomb, enhancing its power. The explosion was roughly three times as strong as the Hiroshima blast. Some experts say the North is now taking this second step in bomb design. Others say the isolated state may have raced ahead to the third stage. That method wraps alternating layers of thermonuclear fuel and uranium around atomic bombs, and burns more hydrogen than simple boosting. David Albright, a former United Nations weapons inspector and the president of the Institute for Science and International Security, noted in a recent report that Russians who first tried that approach produced a blast more than 25 times as strong as the Hiroshima bomb. A true hydrogen bomb, the fourth stage of development, works by positioning near the triggering atomic bomb a separate capsule that can hold a much larger amount of thermonuclear fuel. In 1954, on Bikini Atoll in the Pacific, the United States tried that approach. The fireball expanded for miles. The shock wave swept neighboring atolls clean of vegetation and animals. In minutes, the mushroom cloud rose some 25 miles. Slowly, its radioactivity spread around the globe. The force of that device turned out to be far greater than all explosives used in World War II, including the atomic bombs dropped on Hiroshima and Nagasaki, 1,000 times as powerful as the Hiroshima bomb. Experts say North Korea is unlikely to achieve that kind of destructive power anytime soon, if ever. But they say the accumulating evidence suggests that the reclusive state is trying to do so — and trying hard. (William J. Broad, “Was It a Hydrogen Bomb? It’s Too Soon to Determine,” New York Times, September 4, 2017, p. A-9)

Mattis: “We had a small group national security meeting today with the President and the Vice President about the latest provocation on the Korean peninsula. We have many military options, and the President wanted to be briefed on each one of them. We made clear that we have the ability to defend ourselves and our allies – South Korea and Japan – from any attack. And our commitments among the allies are ironclad. Any threat to the United States, or its territories – including Guam – or our allies will be met with a massive military response – a response both effective and overwhelming. Kim Jong Un should take heed the United Nations Security Council’s unified voice – all members unanimously agreed on the threat North Korea poses, and they remain unanimous in their commitment to the denuclearization of the Korean peninsula – because we are not looking to the total annihilation of a country – namely, North Korea. But, as I said, we have many options to do so.” (DoD, Secretary of Defense Jim Mattis Statement at the White House,” September 3, 2017)

Trump tweets: 9/3/17, 06:46: “South Korea is finding, as I have told them, that their talk of appeasement with North Korea will not work, they only understand one thing!”
9/3/17, 06:46: “South Korea is finding, as I have told them, that their talk of appeasement with North Korea will not work, they only understand one thing!”
Donald J. Trump (@realDonaldTrump)

South Korea will discuss with the United States deploying the “most powerful US tactical weapons” here, in response to North Korea’s sixth test of nuclear weapons, its chief security officer said. Chung Eui-yong, President Moon Jae-in’s top security adviser, also said the country would push for the “strongest sanctions” against the defiant regime led by Kim Jong-un in order to “completely” isolate it. “President Moon Jae-in said the country would not allow North Korea to continue advancing its nuclear and missile technologies,” Chung said after an emergency meeting of the National Security Council. The top security adviser did not elaborate, but the move comes amid a growing call here for nuclear rearmament. To beef up the South’s military capacity and the allies’ defense posture against the increasingly provocative North, the allies are likely to roll out this week four additional launchers for the US-led missile shield Terminal High Altitude Area Defense as well as US fighter jets. Two batteries and a powerful X-band radar are already deployed and operational in Seongju, North Gyeongsang Province. A typical THAAD battery consists of six launchers and a radar. Before today’s test, Seoul officials had revealed an ongoing discussion between the two sides for a possible rotational deployment of the US stealth jets F-22 and F-35B. The allies are known to be discussing the deployment of US strategic assets on a
quarterly basis at the US air base in Osan, Gyeonggi Province, or Kunsan Air Base in North Jeolla Province, they added. The US has periodically sent strategic assets to South Korea, including B-1B bombers, as a show of force when North Korea’s provocative acts escalate. “It is believed that the US is positive toward rotational deployment of F-22 and F-35B jets over Korea as it remains firm in countering North Korea’s provocations,” a government source said. Chung said that he had two telephone conversations with his US counterpart H.R. McMaster before and after Seoul’s NSC meeting today. South Korea’s Chairman of the Joint Chiefs of Staff Jeong Kyeong-doo also spoke with his US counterpart Gen. Joseph Dunford in a phone conservation, during which they stressed the need for “effective military responses” to the provocation, aimed at demonstrating the allies’ force and resolve, according to Jeong’s office. (Jung Min-kyung, “Seoul to Consider Deploying Most Powerful U.S. Weapons,” Korea Herald, September 3, 2017)

9/4/17

South Korea’s top security officials are beginning to lean towards strengthening military measures rather than dialogue with North Korea in response to the wayward regime’s latest nuclear test, Seoul’s defense minister said. “During a National Security Council meeting [held shortly after the nuke test yesterday], views converged on a direction that strengthens the military standoff (for now), rather than (pursuing) the Berlin declaration or dialogue,” Defense Minister Song Young-moo told a parliamentary session. The Berlin initiative refers to Moon’s policy that pursues Pyongyang’s denuclearization with a security guarantee and economic and diplomatic incentives while seeking a peace treaty and dismissing the prospect of forced unification. During the session, Song also said that during his recent talks with U.S. Defense Secretary James Mattis, he demanded the U.S. deploy its strategic assets to Korea on a “regular” basis. But he dismissed the news report that during the talks in Washington he demanded the redeployment of the U.S. nuclear arsenal that had been withdrawn from the peninsula in the early 1990s. In its report to the legislature’s defense committee, the defense ministry said that it, in consultation with Washington, will seek to deploy a nuclear-powered aircraft carrier, strategic bombers and other powerful assets to the peninsula as a response to the North’s nuclear experiment. It also unveiled its plan to stage unilateral live-fire drills involving Taurus air-to-surface guided missiles mounted on its F-15K fighter jets. The missile, with a range of 500 kilometers, is capable of launching precision strikes on the North’s key nuclear and missile facilities. In his assessment of the sixth nuke test, Song said that the North is presumed to have reduced the weight of a nuclear warhead to below 500 kilograms. “Yes, we presume so,” he said. "The smaller it becomes, the better it gets." Song added that the North’s warhead is seen as being able to be fitted onto an ICBM. In its parliamentary report, the ministry also said that it has continuously detected signs of the North's preparations for ballistic missile launches. "To show that it has secured a delivery vehicle that can target the U.S., the North could launch an ICBM-class ballistic missile,” the ministry said. (Yonhap, “Seoul Officials Leaning towards Military Measures than Dialogue with N.K.: Defense Chief,” September 4, 2017) South Korea’s defense minister said it was worth reviewing the redeployment of American tactical nuclear weapons to the Korean Peninsula to guard against the North, a step that analysts warn would sharply increase the risk of an accidental conflict. Defense Minister Song Young-moo said that he asked his American counterpart, Jim Mattis, during talks at the Pentagon last week that strategic assets such as U.S. aircraft carriers, nuclear submarines and B-52 bombers be sent to South Korea more regularly. “I told him that it would be good for strategic assets to be sent regularly to the Korean Peninsula and that some South Korean lawmakers and media are strongly pushing for tactical nuclear weapons [to be redeployed],” Song told a parliamentary hearing on North Korea’s nuclear test, without disclosing Mattis’s response. A poll that YTN, a cable news channel, commissioned in August found that 68 percent of respondents said they supported bringing tactical nuclear weapons back to South Korea. “The redeployment of tactical nuclear weapons is an alternative worth a full review,” Song said, echoing a position closely associated with conservatives in South Korea but not with progressives like Moon, who was elected president in May after vowing to engage with the North. After the defense minister spoke at the hearing, the South Korean president’s office said that it was not considering redeploying tactical nuclear weapons. “Our government’s firm stance on the nuclear-free peninsula remains unchanged,” said Kim Dong-jo, a spokesman for Moon. In Seoul, the Defense Ministry warned that Pyongyang might be preparing to launch another missile into the Pacific Ocean, perhaps an intercontinental ballistic missile theoretically capable of reaching the mainland United States. President Trump and
his South Korean counterpart, Moon Jae-in, spoke on the phone for 40 minutes tonight, Korean time — 34 hours after the nuclear test and more than 24 hours after Trump took to Twitter to criticize Moon’s “talk of appeasement.” The two agreed to remove the limit on allowed payloads for South Korean missiles — something Seoul had been pushing for — as a way to increase deterrence against North Korea, according to a statement from South Korea’s Blue House. They agreed as well to work together to punish North Korea for yesterday’s nuclear test, pledging “to strengthen joint military capabilities,” a White House statement said, and to “maximize pressure on North Korea using all means at their disposal.” As concern over Korea deepened following North Korea’s huge nuclear test Sunday, Nikki Haley, the U.S. ambassador to the United Nations, said the regime of North Korean leader Kim Jong Un was “begging for war.” At a U.N. Security Council meeting, Haley pressed for the “strongest possible” sanctions against the North. The administration plans to circulate a new sanctions draft this week. Haley did not spell out how she would overcome the objections of veto-wielding permanent members China and Russia. But she cautioned, “War is never something the United States wants. We don’t want it now. But our country’s patience is not unlimited. We will defend our allies and our territory.” Haley ruled out the “freeze for freeze” proposal backed by China and Russia, which would suspend U.S. joint military exercises with South Korea in return for suspension of North Korean nuclear and missile tests. “When a rogue regime has a nuclear weapon and an ICBM pointed at you, you do not take steps to lower your guard. No one would do that. We certainly won’t,” she said. Instead, she reiterated a White House threat from Sunday to cut off trade with any countries that also trade with North Korea. That would presumably include China, with which the United States had nearly $650 billion worth of trade in goods and services last year. “The United States will look at every country that does business with North Korea as a country that is giving aid to their reckless and dangerous nuclear intentions,” she said. Her remarks appeared to be unpersuasive. “China will never allow chaos and war” in Korea, said Liu Jieyi, the Chinese ambassador to the United Nations. Sanctions alone will not solve the crisis, said Russia’s U.N. ambassador, Vassily Nebenzia. Military experts in the United States are almost universally opposed to the idea of deploying strategic or tactical weapons in South Korea. “The thing that most concerns me about redeployment is that it introduces more room for miscalculation or unintended escalation,” said Catherine Dill of the Center for Nonproliferation Studies in Monterey, Calif. In that situation, the ability to react more quickly could be a negative factor. From the perspective of the military alliance between the United States and South Korea, having long-range ballistic missiles or strategic bombers is “perfectly sufficient” to continue to deter North Korea, Dill said. As the North Korean threat has increased this year, the United States has sent F-35 stealth aircraft and other strike fighters on flyovers across the southern half of the peninsula in a not-so-thinly veiled warning to Kim. The U.S. Pacific Command even released photos last week of B-1B Lancers dropping bombs on a range on the southern side of the demilitarized zone that separates the two Koreas. But a growing number of policymakers in Seoul say that Guam is too far away and that, if the South comes under attack from North Korea, it can’t wait the two-plus hours it would take American bombers to arrive from their base in the Pacific. “We need these strategic or tactical assets that can destroy North Korea’s nuclear-capable missiles before they can inflict harm on us,” said Chun Yung-woo, a former South Korean national security adviser. “Right now they can retaliate, but by that time, tens of thousands of people might have been killed,” Chun said. “We need a first layer of offensive weapons stationed closer to North Korea’s nuclear and missile sites.” Jon Wolfsthal, a nuclear expert who served on President Barack Obama’s National Security Council, said that in the South Korean context, “strategic assets” are all about giving “a tangible sense of reassurance” to the government in Seoul. “The reassurance bucket is bottomless,” Wolfsthal said. “You can pour stuff into it and it’s never going to fill up.” South Korean officials have been asking for fighter jets and ballistic missile-equipped submarines to be based on the peninsula, and have long wanted B-1Bs and B-52s to land rather than just fly over — all to give a greater sense of U.S. commitment to South Korea. But there are good logistical reasons that can’t happen, Wolfsthal said. For one, South Korea doesn’t have airstrips long enough for big, heavy B-52s, and second, the United States does not want its high-tech fighter jets sitting within North Korean artillery range. (Anna Fifield, “Return of U.S. Arms Discussed in Seoul,” Washington Post, September 5, 2017, p. A-1)
The Trump Administration, warning that North Korea is “begging for war,” is pressing China and other members of the United Nations Security Council to cut off all oil and other fuels to the country. The effort, which senior administration officials described as a last best chance to resolve the standoff with the North using sanctions rather than military means, came as South Korean officials said that they had seen evidence that North Korea may be preparing another test, likely of an intercontinental ballistic missile. The call for the fuel cutoff, which is expected to be part of a draft resolution that the United States is beginning to discuss privately with other members of the Security Council, came a day after North Korea’s most powerful nuclear test in the 11 years it has been detonating nuclear weapons. It is far from clear that China’s president, Xi Jinping, would be willing to go along with the highly aggressive step of cutting off fuel to the North. Roughly 90 percent of North Korea’s trade, and nearly all of its imported energy supplies, come from China. China’s overall trade with the North was up significantly in the past 12 months, and it has long feared that an oil cutoff would lead to the collapse of the regime. That, in China’s eyes, would only invite South Korea to take over the North, and put an American ally on China’s border. The subject of fuel cutoff is likely to come up in a phone call with President Xi that the White House was trying to arrange. Speaking to the Security Council in an emergency session on Monday, Nikki R. Haley, the American ambassador to the United Nations, said North Korea’s leader, Kim Jong-un, “is begging for war.” “We have kicked the can down the road long enough,” Haley told the council in an emergency meeting. “There is no more road left.” She said that “the time has come for us to exhaust all of our diplomatic means before it’s too late.” Even as Haley called for more diplomacy[?], Trump agreed in a phone call this evening with South Korea’s president, Moon Jae-in, to allow South Korea to build more powerful non-nuclear ballistic missiles, said Park Soo-hyun, a spokesman for Moon. While the South has pressed for such permission for many years, the change is unlikely to alter the strategic balance on the Korean Peninsula.

“President Trump reaffirmed the United States’ ironclad commitment to defend South Korea,” Park said. “The two leaders also agreed to push for maximum pressure and sanctions against North Korea.” Inside the White House, there is little expectation that the drive to cut off North Korea’s fuel — which echoes the energy embargo that the United States used to try to force Japan to change its behavior in 1941, before the attack on Pearl Harbor — will work because of the Chinese reluctance to take that step. Haley’s comments were notable in part because while they called for a last stab at diplomacy, they also ruled out the one diplomatic option considered the most viable first step — a Chinese and Russian proposal for a “freeze” on the North’s nuclear and missile testing in return for some kind of freeze on United States military exercises. (David E. Sanger and Choe Sang-Hun, “U.S. Is Pressing For Oil Embargo on North Korea,” New York Times, September 5, 2017, p. A-1)

Haley: “…To the members of the Security Council, I must say, “enough is enough.” We have taken an incremental approach, and despite the best of intentions, it has not worked. Members of this Council will no doubt urge negotiations and a return to talks. But as I have just outlined, we have engaged in numerous direct and multilateral talks with the North Korean regime, and time after time, they have not worked. The time for half measures in the Security Council is over. The time has come to exhaust all of our diplomatic means, before it’s too late. We must now adopt the strongest possible measures. Kim Jong-Un’s action cannot be seen as defensive. He wants to be acknowledged as a nuclear power. But being a nuclear power is not about using those terrible weapons to threaten others. Nuclear powers understand their responsibilities. Kim Jong-Un shows no such understanding. His abusive use of missiles, and his nuclear threats show that he is begging for war. War is never something the United States wants. We don’t want it now. But our country’s patience is not unlimited. We will defend our allies and our territory. The idea that some have suggested of a so-called freeze-for-freeze is insulting. When a rogue regime has a nuclear weapon and an ICBM pointed at you, you do not take steps to lower your guard. No one would do that. We certainly won’t. The time has come to exhaust all diplomatic means to end this crisis, and that means quickly enacting the strongest possible measures here in the UN Security Council. Only the strongest sanctions will enable us to resolve this problem through diplomacy. We have kicked the can down the road long enough. There is no more road left. This crisis goes well beyond the UN. The United States will look at every country that does business with North Korea as a country that is giving aid to their reckless and dangerous nuclear intentions.
And what we do on North Korea will have a real impact on how other outlaw nations who seek nuclear weapons choose to conduct themselves in the future. The stakes could not be higher. The urgency is now. Twenty-four years of half measures and failed talks is enough.” (DoS, Ambassador Nikki Haley, U.S. Permanent Representative to the United Nations, Remarks at an Emergency UN Security Council Briefing on North Korea, September 4, 2017)

The Moon Jae-in administration is being marginalized in its trilateral alliance with Washington and Tokyo as Pyongyang ratchets up its nuclear brinkmanship. As of 8 p.m. today, President Moon and President Donald Trump had yet to talk, although Trump did discuss the nuclear test with Japanese Prime Minister Abe Shinzo. “We are currently coordinating the schedule,” a spokesman for Seoul’s presidential official said this afternoon, hinting that the Moon and Trump may talk late today. “Remember that the last call took place at 10 a.m. in Washington time and 11 p.m. in Seoul time.” Moon and Trump had their last call at 11 p.m. on September 1, after the North fired an intermediate-range ballistic missile over Japan on August 26. While Seoul struggled to set up a call with the White House, Trump and Abe spoke on the phone call 11 p.m. Tokyo time, hours after the nuclear test. According to the Japanese government, they talked for about 10 minutes and agreed to put unprecedented pressure on North Korea. It was Abe and Trump’s second phone call Sunday. They talked earlier in the morning before reports of the nuclear test. Following their second call, Deputy Chief Cabinet Secretary Nishimura Yasutoshi briefed reporters shortly after midnight. “The two leaders reaffirmed that Japan and the United States will stay 100 percent together,” Nishimura said. “The two leaders also shared the perception that the roles of China and Russia are important and they also reaffirmed the position that Japan and the United States will closely cooperate in dealing with the situation including the UN measures.” A Japanese reporter, then, asked why South Korea was left out, pointing out that Trump and Abe stressed in the past the importance of trilateral cooperation among the South, Japan and the United States. “It was because this phone call was too short,” said Nishimura. When the North fired an intercontinental ballistic missile on July 28, Trump and Abe spoke on July 31. Moon, however, only talked to Trump 10 days after the test. Moon’s summer vacation for the delay. When concerns have been expressed about the delay in communications between Moon and Trump, the Blue House said there was no need for the two presidents to talk urgently because cooperation between Seoul and Washington is extremely close. Discord between Seoul and Washington on how to deal with Pyongyang is starting to show. Trump slapped down the Moon government with a tweet yesterday. “South Korea is finding, as I have told them, that their talk of appeasement with North Korea will not work, they only understand one thing!” he wrote. The Blue House issued a statement that day rebutting that tweet and defending Moon’s policy of wanting to negotiate with Pyongyang. “We have experienced the tragedy of fratricidal war. We cannot repeat it again on this land. We will seek denuclearization of the Korean Peninsula through peaceful means with our allies,” it said. “Trump’s tweet was quickly reported [to the Blue House],” a presidential official said Sunday. “So we had a discussion and decided to issue the statement.” The Blue House also said today that the National Security Council of the White House confirmed that Seoul and Washington have no differences over policies toward the North. The Blue House said it asked the White House through a diplomatic channel about Trump’s tweet. “We got the reply last night,” said a presidential official. “It said there was no disagreement between the South and the United States.” Today, the South Korean military conducted a live missile firing drill, designed to practice a strike on the North’s nuclear test site in Punggye-ri, North Hamgyong Province. According to the Joint Chiefs of Staff, the Army’s ground-to-ground ballistic missile and the Air Force’s air-to-ground missile accurately hit a target set up in open waters east of the peninsula. The Blue House also issued a press release today to dismiss concerns that the Moon administration was being neglected. Chung Eui-yong, the head of the Blue House’s National Security Office, talked to his U.S. counterpart, H.R. McMaster, for 30 minutes from 10:15 a.m. today to discuss the two countries’ coordinated countermeasures, presidential spokesman Park Soo-hyun said. “It was their third phone call since the North’s sixth nuclear test,” he added. (Ser Myo-ja and Soo Soong-wook, “Seoul Being Marginalized by U.S.,” JoongAng Ilbo, September 5, 2017)
Hayes and Von Hippel: “We estimate that the following measures could be taken by the DPRK line agencies to either substitute non-oil energy supplies for imported oil; or simply cut end use by fiat: 1. Curtailment of diesel fuel availability for half of users of on-site generation. 2. A 50 percent reduction in the use of heavy fuel oil as a starter fuel for coal-fired plants, and in the few heavy-oil-fired power plants in the DPRK. 3. A reduction in 80% of Minerals Subsector heavy fuel oil use due to sanctions, and a curtailment in heavy oil use in cement and other subsectors, as those sectors revert entirely to use of coal; or shut down anyway due to already imposed sanctions on minerals exports. 4. A 15% reduction in diesel truck use by substitution for diesel with biomass/charcoal in older gasifier trucks, plus a 10% reduction from use curtailment/mode shifting in diesel trucks, trains, and ships/boats. 5. A 50% reduction in the use of gasoline in autos (and gasoline trucks) by imposition of curtaillments for many vehicle owners. 6. A shift (50%) in the residential and commercial sectors from use of kerosene to electricity (including from solar photovoltaic panels) use for lighting, and curtailment in some instances, plus a reduction of LPG use for cooking by half through the use of substitute fuels (biomass and coal). Note that these reductions do not touch either the military sector; nor the fisheries and agriculture sector, which are needed to feed the DPRK population. …Please note that these are very rough and preliminary estimates, and should be set in the context of an updated estimate of supply and demand for oil products and other fuels in the DPRK, which is not yet available. Nonetheless, these calculations reveal that should the DPRK choose to take these measures to reduce oil consumption in the face of a supply cut-off, the result could be an annual reduction in oil demand nearly equivalent to the DPRK’s typical imports of crude oil in recent years (500,000 tonnes), or nearly 40 percent of what we (albeit very crudely and preliminarily) estimates to be DPRK oil and oil products demand in 2017. Thus, if China were to cut its roughly 500,000 tonnes of oil exports to the DPRK by 50 percent, that is, by 250,000 tonnes, the substitutions and cuts that the DPRK could achieve would enable it to buffer against major effects on its economy for at least a year—similar to the buffer that is already likely in place for the military users of oil in the DPRK by past stockpiling. This analysis assumes no prior stockpiling in the non-military sector, which is unrealistic. It also takes no account of very small-scale oil production in the DPRK itself, which may be on-going. This is a very crude estimate of the possible impacts of implementing energy sanctions on the DPRK. It assumes that such drastic measures could be implemented in a few months by fiat—North Korea being one of the few places where such command directives could be undertaken with some hope of success. It also does not account for local resilience whereby local coal, hydro and biomass resources could be drawn on quickly by mobilizing labor. And, it does not reflect the additional resilience that the existence of private markets for fuels would lend to the overall system, with likely emergence of shadow prices and black markets that would drive supply towards those with the greatest purchasing power. A detailed study is needed to understand more fully how various levels of cuts to Chinese and Russian oil supplies to the DPRK would play out. Even these basic estimates, however, suggest the following with regard to even massive (say 50 percent) Chinese oil export cuts to the DPRK: a) The DPRK could quickly cut its non-military use by about 40% of its annual oil use with a variety of end use reduction and substitution measures. b) There will be little or no immediate impact on the Korean Peoples’ Army’s (KPA’s) nuclear or missile programs. c) There will be little or no immediate impact on the KPA’s routine or wartime ability to fight due to energy scarcity, given its short war strategy and likely stockpiling. d) The DPRK has the ability to substitute coal and electricity for substantial fractions of its refined product use, as well as its heavy fuel oil use (the product of oil refining) for heat production. e) The immediate primary impacts of responses to oil and oil products cut-offs will be on welfare; people will be forced to walk or not move at all, and to push buses instead of riding in them. There will be less light in households due to less kerosene, and less on-site power generation. There will be more deforestation to produce biomass and charcoal used in gasifiers to run trucks, leading to more erosion, floods, less food crops, and more famine. There will be less diesel fuel to pump water to irrigate rice paddies, to process crops into foodstuffs, to transport food and other household necessities, and to transport agricultural products to markets before they spoil. f) Past experience—including extensive field observations of the DPRK populace responding to prior deprivations—suggests that even these deep cuts and resulting scarcity and welfare impacts will not lead to social instability. North Koreans mostly will obey and endure the strictures resulting from these sanctions. g) China cannot force the DPRK to the negotiating table by means of energy
sanctions, and it is unreasonable to demand that it do so, at least not before the United States demonstrates incontrovertibly that it is closing on engagement of the DPRK. Indeed, such demands are highly unrealistic and reflect “strategic confusion” in American policy towards the DPRK. If such demands were heeded and acted on now, the results would be counterproductive with respect to the overarching primary goals of avoiding war, resuming negotiations, and ending the North Korean nuclear threat. (Peter Hayes and David von Hippel, “Sanctions on North Korean Oil Imports: Impacts and Efficacy,” NAPSnet, September 4, 2017)

9/5/17

DPRK FoMin spokesman answer to a question put by KCNA “as regards the fact that the U.S. is attempting to impose additional sanctions and pressure on the DPRK over its test of H-bomb for ICBM: The U.S. is taking the lead in "condemning" the DPRK over its test of H-bomb for ICBM and going frantic in the sanctions campaign against the DPRK. At the emergency meeting of the United Nations Security Council convened on Monday [September 4], the U.S. representative demanded the adoption of a new "sanctions resolution" against the DPRK while dwelling on the ridiculous rhetoric that the DPRK is begging for war in defiance of their collective voice. The U.S. is running amuck to defame the DPRK, taking issue with our measures to bolster the self-defensive nuclear force, but this is only a sophistry to hide true colors of the U.S. as the main culprit for escalated tension and nuclear threat. The wild and belligerent remarks of "fire and fury" let loose by Trump and the frenzied moves of the U.S. to stifle the DPRK testify that the U.S. is indeed the heinous aggressor who is begging for war in defiance of the collective voice of the international community calling for peace and stability on the Korean peninsula. No one has the right to make a fuss about our test of H-bomb for ICBM as it is a routine and indispensable process for the implementation of the strategic line that we have chosen for ourselves, the line of simultaneously developing the two fronts. In order to thoroughly eradicate the hostile moves and nuclear threat of the U.S. going on for decades, the DPRK chose to possess nuclear weapons and is holding fast to the strategic line of simultaneously pushing forward economic construction and the building of nuclear force. With the emergence of the Trump administration, the U.S. has become all the more reckless in its attempts to completely obliterate the sovereignty and the rights to existence and development of the DPRK, and we were left with no other choice than redoubling our efforts to strengthen the state nuclear force. The recent test of H-bomb for ICBM is part of our efforts to attain the final goal of completing the state nuclear force. Now we are armed with the ultimate nuclear deterrence by which we can resolutely repel any aggression forces in any part of the world and reliably defend peace and security in the Korean peninsula and the region. The U.S. is terribly mistaken if it thinks it can frighten or persuade the DPRK by talking about "all options" on the table and imposing the toughest sanctions and pressure upon the latter in every dimension of political, economic and military fields. **We will respond to the heinous sanctions and pressure of the U.S. with our own mode of counteroffensive** and the U.S. shall be held totally responsible for all catastrophic consequences to follow. The U.S. should not forget even for a moment about the presence of the DPRK, the full-fledged nuclear power in possession of ICBM as well as A-bomb and H-bomb.” (KCNA, “FM Spokesman Denounces U.S. for Trying Impose Additional Sanctions on DPRK,” September 5, 2017)

Han Tae Song, DPRK ambassador to the United Nations in Geneva, told the U.N. Conference on Disarmament in Geneva, "I am proud of saying that just two days ago on the third of September, DPRK successfully carried out a hydrogen bomb test for intercontinental ballistic rocket under its plan for building a strategic nuclear force." "The recent self-defense measures by my country, DPRK, are a 'gift package' addressed to none other than the U.S.,” Han said. "The U.S. will receive more 'gift packages' from my country as long as its relies on reckless provocations and futile attempts to put pressure on the DPRK," he added without elaborating. Han said military measures being taken by North Korea were "an exercise of restraint and justified self-defense right" to counter "the ever-growing and decade-long U.S. nuclear threat and hostile policy aimed at isolating my country.” “Pressure or sanctions will never work on my country," Han declared, adding: "The DPRK will never under any circumstances put its nuclear deterrence on the negotiating table." (Stephanie Nebehay, “North Korea Warns of ‘More Gift Packages’ for the United States,” Reuters, September 5, 2017)
President Moon Jae-in said today that he sees the present moment as “not a time for dialogue, but a time for strong denunciations and pressure in response to North Korea’s dangerous provocations.” Moon’s remarks came in an interview with Russia’s TASS news agency a day ahead of his scheduled attendance of the Eastern Economic Forum in Vladivostok and a summit with Russian President Vladimir Putin. The message stood in stark contrast to the one delivered in a July 6 speech in Germany at the invitation of the Körber Foundation, when Moon stressed that the “need for [inter-Korean] dialogue is more urgent than ever before.” “We are not attempting to bring down the North Korean regime or achieve unification [of Korea] by absorption. We are working to resolve the nuclear issue while guaranteeing the [security of] the North Korean regime, and we want to build a robust peace regime on the Korean Peninsula,” Moon said in the TASS interview. At the same time, he also said that “achieving a peaceful resolution [to the nuclear issue] will require North Korea to stop additional nuclear and possible provocations, and I believe the international community needs to apply tougher sanctions and pressure to make that happen.” “Dialogue” and “peace,” two words that had previously appeared like mantras after every conversation or meeting between Moon and Trump, were completely absent from a press release issued by the Blue House after their telephone conversation the day before. Instead, the first line of the briefing referred to the US’s “abrupt agreement to remove limits on the weight of South Korean missile warheads according to the South Korea-US missile guidelines.” In place of references to a “peaceful, dialogue-based resolution” to the North Korean nuclear issue, the two leaders characterized North Korea’s sixth nuclear test as a “serious provocation of a different order from the past” and reaffirmed the US’s “ironclad pledge to defend the Republic of Korea,” while announcing their plans to pursue the “toughest possible pressure and sanctions” against the North and a “tougher UN Security Council resolution for sanctions.” Regarding the change, a Blue House source said the briefing had “merely made separate reference to the agreement to lift warhead weight [restrictions] because it accounted for a larger part [of the conversation].” “President Moon consistently talked about [a peaceful dialogue-based resolution] throughout his conversation with President Trump, and with an agreement already reached at one stage that there was ‘no need for dialogue for the sake of dialogue,’ this was not a case of different views by the two leaders,” the source added. Moon’s “not the time for dialogue” remarks also appeared aimed at maintaining leadership in North Korea policy by preemptively quieting accusations by conservatives about “incompetence at national security,” which have been rearing their head as the North Korean nuclear crisis mounts. Analysts suggested they may have further been based on a conclusion that by remaining on more or less the same page with Trump in dismissing the usefulness of dialogue, the administration may be able to quiet calls for a preemptive strike. But others said that in the absence of any “creative solutions” for peace on the peninsula as requested from the Blue House and government agencies, the tactical U-turn could end up deepening the same dependence on US and China diplomacy that Moon has been trying to get away from. “A ‘conditional dialogue’ approach is the same in direction and substance as the policies during the Lee Myung-bak and Park Geun-hye administrations, which did nothing at all in the name of ‘strategic patience,’” said an inter-Korean relations expert who worked with Moon’s camp during the presidential election. The expert also said Moon’s remarks “could end up an obstacle in getting inter-Korean dialogue off the ground in the future.” (Lee Jung-ae and Noh Ji-won, “Moon Eschews Talk of Dialogue as Standoff Continues over Nuclear Program,” Hankyore, September 6, 2017)

DoS: “North Korea's dangerous and destabilizing pursuit of nuclear-armed ballistic missiles represents a threat to all nations in the region and beyond. These actions will not alter the ironclad commitment of the United States and the Republic of Korea (ROK) Alliance to defend the ROK. North Korea's recent provocations and belligerent rhetoric only drives the United States and the ROK to work more closely to defend against and counter this grave threat. In line with President Donald J. Trump's and President Moon Jae-in's decision to regularize the Extended Deterrence Strategy and Consultation Group (EDSCG), the foreign affairs and defense agencies of the two countries have approved a new framework for the group and committed to holding an EDSCG meeting in the near future. This codification highlights the commitment by both partners to more closely consult and coordinate across the whole of our respective governments to strengthen the Alliance's posture and reinforce the U.S. commitment to extended deterrence. Going forward, the
EDSCG will hold a plenary session annually. A senior level Executive Session will take place in conjunction with the plenary session on years when a U.S.-ROK 2+2 ministerial meeting does not occur. The EDSCG will coordinate whole-of-government efforts to employ all elements of national power to strengthen extended deterrence. Designated officials from both countries will use the EDSCG mechanism to improve the Alliance's deterrence posture vis-à-vis North Korea through deeper coordination on diplomatic, information, military, and economic actions; to inform the 2+2 ministerial on Alliance efforts and advance whole-of-government deterrence; and to consult on strategic policy issues impacting deterrence and assurance from a regional security perspective.” (DoS Media Note, “Joint Statement on the Extended Deterrence Strategy and Consultation Group,” September 5, 2017)

Russian President Vladimir Putin said that imposing tougher sanctions on North Korea over its nuclear missile program would be counter-productive and said threats of military action could trigger “a global catastrophe.” Putin, speaking after a BRICS summit in China, criticised U.S. diplomacy in the crisis and renewed his call for talks, saying Pyongyang would not halt its missile testing program until it felt secure. “Russia condemns North Korea’s exercises, we consider that they are a provocation … (But) ramping up military hysteria will lead to nothing good. It could lead to a global catastrophe,” he told reporters. “There’s no other path apart from a peaceful one.” While describing additional sanctions as “the road to nowhere”, Putin said Russia was prepared to discuss “some details” around the issue, without elaborating. The Russian leader also lashed out at the United States. “It’s ridiculous to put us on the same (sanctions) list as North Korea and then ask for our help in imposing sanctions on North Korea,” said Putin. “This is being done by people who mix up Australia with Austria,” he added. (Denis Pinchuk, “Putin Calls Tougher North Korea Sanctions Senseless, Warns of ‘Global Catastrophe,” Reuters, September 5, 2017)

Further hardening his stance against North Korea, President Moon Jae-in said that it is time for the international community to consider cutting oil supplies to the defiant regime. The remark came in a late-night phone conversation with Russian President Vladimir Putin today, which capped a long day of trying to rally leaders of major powers against the North’s fast-advancing nuclear weapons program, while beefing up the South’s own military capabilities. “It is time that measures for fundamentally cutting off North Korea’s foreign currency income and cutting off crude oil supply should be considered by the UN Security Council,” Moon was quoted as saying by his chief press officer Yoon Young-chan. Moon’s remarks to Putin, which was not met by a direct answer, hints at Seoul’s desire to see a bigger role from Russia. While China is thought to be Pyongyang’s main source of crude oil, Russia is a major trading partner. According to reports, North Korea-Russia trade, which mainly consists of fuel, doubled from a year ago to come in at over $31 million in the first quarter of the year. Russia, along with China, had also opposed clauses prohibiting North Korea from importing fuel in the US sanctions adopted in August. (Choi He-suk, “Time to Consider Cutting Oil Supplies to NK: Moon,” Korea Herald, September 5, 2017)

The Trump administration circulated a draft resolution at the UN Security Council that would effectively empower the U.S. Navy and Air Force to interdict North Korean ships at sea, inspect them to determine whether they are carrying weapons material or fuel into the country, and use “all necessary measures” to enforce compliance. The language is included in a remarkably broad draft that would ban the shipment of all crude oil, refined petroleum and natural gas to North Korea, essentially seeking to plunge a country of 25 million people into a deep freeze this winter if its leaders fail to begin giving up their nuclear weapon and missile programs. The resolution — circulated three days after the North conducted its largest nuclear test to date — would also seek to block all the assets of Kim Jong-un, the country’s leader, and virtually all the assets of the country’s military and its sole political party. The resolution, which the American ambassador to the United Nations, Nikki R. Haley, said this week she wanted to bring to a vote by September 11, seems certain to meet vociferous objections from China and Russia. Both hold veto power at the Security Council. The resolution calls for something far less comprehensive than a total blockade, which is widely considered an act of war. But it would authorize a committee of the Security Council to “designate vessels for nonconsensual inspections” and authorize all members of the
United Nations — using military vessels and aircraft — “to inspect on the high seas any vessel designated by the committee.” That could set up the conditions for a conflict at sea. If the crew of a North Korean ship failed to stop or resisted a boarding party, one senior military official acknowledged in recent days, the result could be an exchange of fire at a time when Pyongyang is threatening to use its nascent nuclear arsenal, and the United States is warning of a “devastating response.” President Trump spoke with Xi Jinping, the Chinese president, from the White House this morning, just hours before the United States sent its draft of the resolution to all 15 members of the Security Council. Both Xi and Vladimir Putin, the Russian president, have opposed further sanctions, even after North Korea tested what it called a hydrogen bomb — experts have their doubts. “We should not act out of emotions and push North Korea into a dead end,” Putin said at a meeting in Vladivostok, according to dispatches from South Korean reporters. “We must act with calm and avoid steps that could raise tensions.” That sets up a confrontation at the Security Council pitting the United States, Britain and France against the other two permanent members. Trump appears to be using the resolution to highlight the contrast between the nations that support maximum sanctions pressure against the North and those seeking the status quo. The Trump administration repeated a drastic — if highly unlikely — warning if UN action is blocked. The Treasury secretary, Steven Mnuchin, told reporters aboard Air Force One during a flight from North Dakota that an executive order had been prepared that would authorize a halt in trade with “anybody that does trade with North Korea.” China is among dozens of nations that trade with the North. Even some Democrats have joined the Trump administration in calling for an oil cutoff, including Senator Edward J. Markey of Massachusetts. In an interview with CBS News today, President Barack Obama’s former defense secretary, Ashton B. Carter, said he supported “a strategy of coercive diplomacy” that would steadily increase pressure on the North if it continued to test its missiles and nuclear weapons, and would reduce sanctions if it complied with United Nations resolutions. Carter, now the director of the Belfer Center for Science and International Affairs at Harvard, said he considered it “in China’s interest” to “strangle North Korea,” but said he was not optimistic, “because China has consistently disappointed.” The fate of the Trump administration’s resolution may hinge in part on North Korean actions in the next few days. South Korea’s intelligence and defense agencies have said they see preparations for another missile test from the North’s main missile launch site on the northeast coast. There is some speculation that the test could be aimed at the waters off Guam, which Kim has said will be among his next targets. That has created a behind-the-scenes debate inside the Trump administration about how to respond — whether to consider a pre-emptive strike on the missile, try to intercept it with antiballistic missile batteries, or simply let the test proceed, especially if the missile appears headed for splashdown in international waters. Administration officials briefed members of Congress on the North Korean standoff, but they were vague about their plans, according to people who attended. Even if the United States managed to win approval of a complete ban on energy exports to the North, there is skepticism that it would be successful. Peter Hayes and David Von Hippel of the Nautilus Institute, experts on North Korea’s energy policies, argued in a paper this week that the country would adjust to an energy embargo. The country, they wrote, “could quickly cut its nonmilitary use by about 40 percent of its annual oil use,” substituting other fuels. “There will be little or no immediate impact on the Korean People’s Army’s nuclear or missile programs,” they added, and “little or no immediate impact on the K.P.A.’s routine or wartime ability to fight due to energy scarcity, given its short war strategy and likely stockpiling.” In a Skype conversation from Australia, Hayes said that “what worries me is that the American government may not understand that this will not work.” (David E. Sanger, “U.S. Seeks Power to Interdict Ships,” New York Times, September 7, 2017, p. A-7) “This [a U.S. drafted resolution] is a very different tactic — previously the U.S. worked behind closed doors with China and brought a finished product, taking weeks or months,” a Security Council diplomat pointed out. “This approach will expose the gaps between the U.S. and China and Russia — raising the pressure.” (Katrina Manson, “China Agrees to Further Moves to End North Korea Nuclear Tests,” Financial Times, September 8, 2017, p. 2) President Moon Jae-in’s attempt to get Vladimir Putin to put greater pressure on Pyongyang failed today, as the Russian president said he opposed cornering the North with “emotional” sanctions. Moon and Putin’s failure to agree was evident when the two leaders addressed the press after a summit in Vladivostok on the sidelines of a regional economic forum hosted by Russia. Putin said
President Trump renewed a threat to use military force against North Korea and raised doubts about whether negotiations could succeed in resolving the brewing crisis over Pyongyang’s nuclear weapons. “Military action would certainly be an option. Is it inevitable? Nothing’s inevitable,” Trump said during a news conference. “It would be great if something else could be worked out. We would have to look at all of the details, all of the facts.” U.S. officials said an offer to negotiate with North Korea remains on the table, but Trump has repeatedly discounted the value of beginning another effort to talk North Korea out of its arsenal. All previous efforts have

Russia is not interested in participating in stronger economic sanctions on the North. “The North Korean nuclear issue cannot be resolved by pressures and sanctions alone,” he said. “Without political and diplomatic resolutions, it is impossible to resolve the current situation.” The remark was a clear rejection of Moon’s requests. During a phone talk with Putin two days ago, Moon revealed a glimpse of the key points to be proposed in upcoming UN sanctions and asked for Moscow’s support. He asked Putin to support sanctions such as an oil embargo and a ban on North Korea’s labor exports. In July, China and Russia protested a proposal of an oil embargo when the United Nations discussed a new resolution. According to Yoon Young-chan, Moon’s senior press secretary, Moon made a particularly earnest request to Putin during the summit to support an oil embargo this time but was rejected. Moon reminded Putin of a precedent: China’s three-day cutting off of oil in 2003, which forced the North to attend six-party talks. “No matter how hard we press, the North won’t give up the nuclear weapons to protect its security. Russia only exports a tiny amount of oil to the North, about 40,000 tons a year,” Putin was quoted by Yoon as telling Moon. “We oppose and condemn the North’s nuclear development. But we are concerned that cutting the oil supply will hurt civilians and places such as hospitals.” Putin also said Russia and China created a road map to resolve the nuclear crisis, and asked concerned countries to pay attention to it. Moon’s failure to persuade Putin makes it clear that an upcoming UN resolution to punish the North will be another slap on the wrist. China, the main fuel oil supplier of the North and the largest importer of North Korean laborers, is expected to protest the proposal. Russia is also a main importer of Russian laborers. They are generally hired in the logging and mining industries, receiving relatively high incomes. Before the summit, Moon expressed a hope of winning Putin’s support to end Kim’s nuclear brinkmanship, warning that the situation could become “uncontrollable” if they fail to act now. “Because of the North’s repeated provocations, the international political situation has grown extremely serious,” Moon said. “Unless we stop the North’s provocations now, the situation could sink into an uncontrollable state.” While the two leaders disagreed on North Korea, their discussion on economic cooperation was more fruitful. They said they agreed to create a free trade zone between Korea and the Eurasian Economic Union. They also agreed on energy cooperation, including Korea’s imports of Russian liquefied natural gas and Korea’s construction of 15 tankers for Russia. Moon and Putin also said they will try to expand economic cooperation with North Korea to build a trilateral network. In remarks before the summit, Moon said his “new Northern policy,” designed to boost economic cooperation with countries in Northeast Asia and Eurasia, has the same ambitions as Putin’s new Eastern policy. “Korea is the best partner for Russia’s development of the Far East,” Moon said. “If the two countries will cooperate, the Far Eastern region will be an outpost of regional peace and prosperity.” Putin also expressed a hope for improved economic cooperation between Korea and Russia. “Bilateral trade went down by 16 percent last year, but increased about 50 percent during the first six months of this year,” Putin said. “I hope for further cooperation.” A key project in Moon’s New Northern Policy is linking railways and pipelines of South Korea and Russia through the North. In a speech at the Koerber Foundation in Germany in July, Moon described this vision. “The severed inter-Korean railway will be connected again. A train departing from Busan and Mokpo will run through Pyongyang and Beijing, and head towards Russia and Europe,” Moon said in the speech. “Cooperation projects in Northeast Asia, such as the gas pipeline project connecting the two Koreas and Russia, may also be implemented.” Connecting the South’s railway with Russia’s Trans-Siberian Railroad, a 9,288-kilometer (5,771-mile) railway between Vladivostok and Moscow, has been an ambition of all South Korean presidents since Seoul established diplomatic relations with Moscow in 1990. It has never made progress because North Korea’s participation is a must. (Ser Myo-ja, “Moon Fails to Sway Putin on Sanctions,” JoongAng Ilbo, September 7, 2017)
failed, and North Korea now possesses both a stockpile of weapons and missiles capable of threatening U.S. shores. “We’ve had presidents for 25 years now, they’ve been talking, talking, talking, and the day after an agreement is reached, new work begins in North Korea” on its rogue nuclear weapons program, Trump said. “So I would prefer not going the route of the military, but it’s something certainly that could happen.” Chinese Foreign Minister Wang Yi said Thursday that Beijing would support further U.N.-imposed “measures” against North Korea but stopped short of saying whether China would back crippling economic sanctions such as a halt to fuel shipments. “Given the new developments on the Korean Peninsula, China agrees that the U.N. Security Council should respond further by taking necessary measures,” Wang told reporters. “We believe that sanctions and pressure are only half of the key to resolving the issue. The other half is dialogue and negotiation.” Trump did not address sanctions as he spoke at the White House, where he appeared alongside Sheikh Sabah Ahmed al-Sabah, the visiting Kuwait ruler. Trump did not rule out an eventual U.S. strategy of containing North Korea’s nuclear weapons instead of eradicating them, saying he will not bargain with North Korea in public. “I don’t put my negotiations on the table, unlike past administrations. I don’t talk about them,” he said. “But I can tell you that North Korea’s behaving badly and it’s got to stop, Okay?” A U.S. official who briefed reporters later today suggested that Trump is merely being careful and has not backed off the demand that North Korea give up its nuclear weapons. That demand has been a mainstay of U.S. policy for more than a decade and was the basis for extensive negotiations under former president George W. Bush, which ultimately failed. “The president likes to keep his cards close to his chest, especially on matters of national security,” the senior administration official said. “I wouldn’t read too much into the absence of an assertion” that North Korea must renounce its nuclear weapons, said the official, who requested anonymity to discuss some aspects of the evolving U.S. policy toward North Korea. The kind of nuclear deterrence policy that the United States adopted toward the former Soviet Union would probably not work with North Korea, the official said. That policy relied on each nation’s interest in self-preservation to prevent either from launching a first strike. “We are very concerned that North Korea might not be able to be deterred, that there are real differences between North Korea and the small, small group of nations that have these weapons,” the official said. The official said the United States is worried about a rising threat of “miscalculation” by North Korea, which may think the warnings of U.S. force are hollow. That partly explains the recent emphasis by Trump, Defense Secretary Jim Mattis and others on the overwhelming strength of U.S. military capabilities. “Our military has never been stronger,” Trump said today. “Each day, new equipment is delivered; new and beautiful equipment, the best in the world — the best anywhere in the world, by far.” “Hopefully, we’re not going to have to use it on North Korea. If we do use it on North Korea, it will be a very sad day for North Korea.” State Department spokeswoman Heather Nauert insisted the strategy of applying diplomatic pressure on North Korea, while slow going, is effective. Several countries, including Spain, Peru and Kuwait, she said, have set numerical limits on guest workers and Pyongyang’s diplomats. “It will take time to help remove that money that the DPRK is getting, and which we believe is going to illegal nuclear and ballistic missile programs,” she said. The threat of force and the offer of negotiations can coexist, U.S. officials said. “We’ve left the door open to talks with the North Koreans from the earliest days of this administration,” said an official, noting that Pyongyang has responded with ballistic missile and nuclear tests. “Their actions have spoken louder than words. It’s just not the time to negotiate with North Korea. That’s plainly clear to us.” (Anne Gearan and Emily Rauhala, “Trump Renews Threat of Force against North Korea over Nuclear Weapons,” Washington Post, September 8, 2017, p. A-12)

Trump: “Go ahead, CBS. Q Thanks. Mr. President, on the question of North Korea, the country feels that a crisis is coming. Some lawmakers, Lindsey Graham among them, have almost described the situation as inevitably leading to war. I don’t want to ask you if you think it’s inevitable. What I do want to ask you is, as President of the United States, would you tolerate a nuclearized North Korea that is contained and deterred but still nuclear? Or would it have to abandon nuclear weapons? And would military action on the part of the United States be one of the options necessary to achieve that goal? TRUMP: Military action would certainly be an option. Is it inevitable? Nothing is inevitable. It would be great if something else could be worked out. We would have to look at all of the details, all of the facts. But we’ve had Presidents
for 25 years now — they’ve been talking, talking, talking — and the day after an agreement is reached, new work begins in North Korea, continuation on nuclear. **So I would prefer not going the route of the military, but it’s something certainly that could happen.** Our military has never been stronger. We are in a position now — and you know the new orders. You see the new numbers just like I see the new numbers. It’s been tens of billions of dollars more in investment. And each day new equipment is delivered — new and beautiful equipment, the best in the world, the best anywhere in the world, by far. Hopefully we’re not going to have to use it on North Korea. If we do use it on North Korea, it will be a very sad day for North Korea. **Q** Follow-up: Is it acceptable for you, as President, for North Korea to be nuclearized but contained and deterred? Is that a strategy you would …prefer? **PRESIDENT TRUMP:** No, I’m not negotiating with you. **Maybe we’ll have a chance to negotiate with somebody else, but I don’t put my negotiations on the table.** Unlike past administrations, I don't talk about them. But I can tell you that North Korea is behaving badly, and it’s got to stop. …” *(The White House Office of the Press Secretary, Remarks by President Trump and Emir Saber Al-Ahmed Al-Jaber of Kuwait at Joint Press Conference, September 7, 2017)*

Japan must consider whether the three principles of not producing, possessing or bringing in nuclear weapons offer a "sufficient deterrent," former Defense Minister Shigeru Ishiba told TV Asahi. While acknowledging the "emotional" aspects of the other side of the debate, Ishiba questioned whether it is "really right to say we'll be protected by the U.S. nuclear umbrella while not allowing [nuclear weapons] in Japan." That a Japanese national-security veteran is making this argument could create a stir inside and outside the country. At the same time, Ishiba opposed the idea of Japan getting nuclear arms of its own. "If Japan, the only country to have suffered a nuclear attack, possessed nuclear weapons, it would send a message that it's fine for anyone in the world to have them," he argued. Asked about Ishiba's comments, Chief Cabinet Secretary Suga Yoshihide asserted that the government "firmly stands by the three non-nuclear principles as a matter of policy." "We have not discussed reviewing them thus far, and we have no plans to consider it in the future," Suga told reporters. He also noted that Japan is "obligated not to receive or build" such arms under the Treaty on the Nonproliferation of Nuclear Weapons. *(Nikkei Review, “Former Defense Minister Questions Japan’s Anti-Nuclear Policy,” September 7, 2017)*

It has become commonplace for observers to speculate that North Korea will launch a missile or detonate a nuclear device on or near one of its big letter days. But how evidence-based is this speculation? We checked the dates of the DPRK’s 75 rounds of missile testing since 1990 and six nuclear tests against the DPRK’s most important anniversaries: 14 February (when Kim Jong Il was posthumously given the story of generalissimo); 16 February (Kim Jong II’s birthday); 15 April (Kim Il Sung’s birthday); 25 April (foundation of the guerrilla army in 1932); 1 May (labor day); 19 June (Kim Jong Il’s appointment to the Central Committee of the WPK); 3 July (foundation of the strategic forces in 1999); 27 July (victory against the U.S. in 1953); 15 August (victory against Japan in 1945); 25 August *(Songun* day); 9 September (DPRK’s Foundation Day, 1948); 10 October (WPK’s Foundation Day, 1945); 12 December (Constitution Day). Against all these dates, there has only ever been one round of missile testing that has actually fallen on a special day (15 April 2016), and one nuclear test (9 September 2016). In addition, there have been eight missile tests and one nuclear test which fell one day next to one of these special days. Once we look at the mathematical probabilities of a test happening on one of the DPRK’s special days, however, it looks like there is little significance to the correlation: there are so many special days, and so many tests, that some are bound to fall on special anniversaries whether intended to or not. In fact, based on tests so far, the probability of any test falling purely by chance on or immediately next to one of the special days listed above is 10.7% (39 days out of 365). The probability of the current track record (nine missile tests on or next to a special day) emerging from a purely haphazard testing program, with no special thought given to domestic anniversaries, is 44% (thanks to Dr. Stephen Sawiak of Cambridge University for running the numbers here). When a missile or nuclear test has fallen squarely on one of the DPRK’s major anniversaries, state media has placed very little emphasis on the fact. The 9 September 2016 nuclear test was mentioned in a couple of DPRK media reports covering the Foundation Day anniversary, but did not form an
especially central part of the celebrations. The 15 April 2016 missile test was a failure, so was not reported by the DPRK at all. Rather than looking at the DPRK’s domestic anniversaries to anticipate and explain its testing schedule, we ought, therefore, look at other possible factors. CSIS break down their analysis of North Korean tests by elections in South Korea, elections in the USA, visits by Chinese delegations, and U.S.-ROK military exercises. Presumably, they too have found little evidence to support a firm link between test dates and anniversaries. The suggests that for anticipating upcoming tests we should not look to DPRK anniversaries, but to foreign events – and the technical constraints and testing requirements of the missile and nuclear programs themselves. (Tristan Webb, “North Korea’s Anniversaries: Not Linked to Nuclear and Missile Tests, Data Suggests,” NKNews, September 7, 2017)

The Ministry of National Defense said that four launchers for the Terminal High Altitude Area Defense (THAAD) antimissile system were moved to a U.S. base in Seongju County, North Gyeongsang, completing the deployment of the American antimissile battery. Today’s installation of the four launchers completed the deployment of a THAAD battery, which typically consists of six launchers, 48 interceptors, a fire control and communications unit and radar. Two launchers were installed in Seongju in April. “With the deployment of the four launchers, the U.S. military secured the field operation capability of one Thaad battery,” said Moon Sang-ryun, spokesman of the National Defense Ministry. “We will make necessary preparations to use the capability as soon as the internal procedures are completed on the U.S. side.” (Ser Myo-ja, “THAAD Battery Fully Deployed in Seongju,” JoongAng Ilbo, September 7, 2017)

President Donald Trump, like his predecessors, may find that neither negotiations nor economic and military pressure can force North Korea to abandon its nuclear program, and that the United States has no choice but to try to contain it and deter North Korean leader Kim Jong Un from ever using a nuclear weapon. U.S. officials declined to discuss operational planning, but acknowledge that no existing plan for a preemptive strike could promise to prevent a brutal counterattack by North Korea, which has thousands of artillery pieces and rockets trained on Seoul. In an implicit recognition that the military options against the North are unpalatable at best and pyrrhic at worst, U.S. Defense Secretary Jim Mattis last week told reporters: “We are never out of diplomatic solutions.” U.S. and Asian officials believe it is necessary to try negotiations and more economic pressure but concede these are unlikely to curb, let alone eliminate, the nuclear and missile programs that North Korean considers essential to its survival. That leaves Washington and its allies in South Korea, Japan and elsewhere with an unwelcome question: Is there any way to live with a nuclear-armed North Korea, one that is contained and deterred from using its nuclear weaponry? Trump declined to answer that question at a news conference today, saying he would not disclose his negotiating strategy publicly and adding it would be a “very sad day” for North Korea if the U.S. military settles the matter. Still, a senior Trump administration official said it is unclear whether the Cold War-era deterrence model that Washington used with the Soviet Union could be applied to a rogue state like North Korea, adding: “I don’t think the president wants to take that chance.” “We are very concerned that North Korea might not be able to be deterred,” the official said, speaking to reporters on condition of anonymity shortly after Trump’s remarks. Among the U.S. options to strengthen its deterrent is the long-planned modernization of America’s aging nuclear forces that would assure that North Korea would be destroyed if it fired a nuclear-tipped missile at the United States, a U.S. military base, Japan, or South Korea. Another is stepped-up investment in U.S. missile defenses, particularly testing, research and development of technologies that could defeat a significant number of incoming missiles. Both steps would need to avoid triggering new arms races with Beijing and Moscow, experts say. Another factor weighing on Pentagon planners is their readiness for a major conventional conflict after 16 years of war in Afghanistan, Iraq, Syria and elsewhere. There has been no sign the White House, which has been cool to the idea of talks and hopes pressure can change the North’s calculus, is ready to settle for a containment strategy. Despite pessimism about talks, a U.S. official said there was a chance that economic pressure, especially from China, combined with an agreement to negotiate could convince Pyongyang to limit its nuclear arsenal or even sign the 1996 Comprehensive Nuclear Test-Ban Treaty. “Signing the CTBT would give the North tacit
admission to the nuclear club but end its testing program,” the official said. “That, along with assured destruction, might be the best that could be done.” The remaining question, however, is whether Trump would be willing to settle for that. “Discipline and steadiness are not words one usually uses in a sentence that also has the name Donald Trump,” said Robert Einhorn, a former State Department official who negotiated with North Korea and is now at the Brookings Institution think tank. “Would he over time recognize that he may have no choice?” Frank Jannuzi, president of the Mansfield Foundation, which promotes U.S.-Asia relations, is more optimistic. “Does he have the patience to manage a difficult process of deterrence and containment against the (North) rather than doing something impulsive? I think so,” he said. “Some of his deals have taken years to come to fruition.” (Arshad Mohammed and Phil Stewart, “Trump May Have to Settle for Deterring, Not Disarming, North Korea,” Reuters, September 7, 2017)

South Korea’s prime minister is saying publicly what American officials will not: In the next few days, intelligence reports predict, North Korea will launch another intercontinental ballistic missile. “A special measure is urgently needed to stop their recklessness,” Lee Nak-yon, told defense ministers in Seoul. He may be wrong about the timing. But at the White House and the Pentagon, and out in the Pacific, American officials are scrambling to decide how the United States should react, particularly if the North Koreans demonstrate without doubt that they can reach the American territory of Guam, or even a distance equivalent to striking the West Coast of the United States. Secretary of Defense Jim Mattis said this week that President Trump had been presented with all military options and would meet threats with a “massive military response” that would be “effective and overwhelming.” Trump’s aides will not indicate whether fueling up another ICBM constitutes a threat, saying they want to keep North Korea’s leader, Kim Jong-un, guessing. The options for a nonmilitary response are becoming clear. Yesterday, the United States circulated to members of the United Nations Security Council a draft resolution that would require all countries to cut off the North’s oil and all refined petroleum products; it would also allow the Security Council to designate North Korean ships that could be boarded and inspected using “all necessary measures,” meaning whatever force was needed. Ultimately, Secretary of State Rex W. Tillerson has said, the idea is to force North Korea to the negotiating table, but only after it begins to show a willingness to stop testing and gradually disarm. But as several of Trump’s advisers have noted in recent days, United Nations resolutions and negotiation strategies are for the medium term. How to handle the launch is the immediate, urgent question. Here is a look at the president’s choices, and their downsides: Trump told friends that he was proud of the moment in April when he ordered an airstrike on an air base where the Syrian government was believed to have launched chemical weapons attacks. The bombing unfolded during a visit to the United States by President Xi Jinping of China, giving Trump the chance to tell him about it during dinner and to send an unspoken message about what might happen in North Korea if it, like Syria, crossed a “red line.” Technologically, it would not be difficult to destroy North Korea’s missiles. American warships off the Korean coast could easily hit the North Korean launch site, which is near the Sea of Japan. They might even provide warning to the North Koreans to evacuate the base. But unlike the Syrians, the North Koreans know how to strike back — on the South Korean capital, Seoul, or American bases in Japan. Not long ago, President Moon Jae-in of South Korea said he had a veto on American attacks on North Korea, and promised “there will be no war” on the Korean Peninsula. (The Americans have a different view, saying that when it comes to defending American territory, no other country has veto rights.) But destroying one missile would do nothing to the North’s many others. And the United States might have a difficult time proving that the missile was truly threatening without proof of where it was aimed. American officials could argue, though, that Kim offered an unsubtle hint when he was photographed recently by state-run media examining maps of targets in Guam, including an American air base that houses bombers that can reach North Korea. Never has there been a bigger moment for American missile defenses — or greater reluctance to use them. In the vision the Pentagon has sold to Congress for decades, the warhead of an adversary’s missile could be tracked and destroyed in mid-flight or closer to landing, known as the terminal phase. That’s the event for which the United States often trains, with decidedly mixed results. If the North Korean missile’s target was Guam or the waters near it, shooting it down would be an iffy proposition. The first shots would be taken, most likely, by Aegis destroyers armed with what are called Standard missiles, the most successful antimissile
system in the American arsenal. But to make it work, the destroyers would have to be in the right place, former senior officials say. A THAAD missile defense system, like the ones the United States has placed in South Korea, could also be employed. If the missile were headed toward the continental United States, it could be taken out by one of the antimissile systems in Alaska and California. In tests, they hit the target about half the time, under perfect conditions. “That’s the approach I’d take,” former Secretary of Defense William J. Perry said during a visit to Washington a few months ago, as tensions mounted. “Ten years ago I would advocated destroying it on the pad, but today that’s too risky. Intercepting it looks far more like a purely defensive measure.” But American officials are haunted by one question: What if they miss? It would be obvious to all. That could leave Mr. Trump humiliated and call into question the wisdom of antimissile defenses, which the United States has spent $300 billion to develop. This has been the approach thus far: Track the missile, determine quickly whether it is a threat to a populated area and let it fall into the sea. That is the most cautious response, and Trump could use it to press China and Russia to drop their objections to more United Nations sanctions. But it is not cost-free. In each test, the North Koreans get more information to perfect their future launches. And after Trump warned that any threat to the United States would be met with “fire and fury,” he is acutely aware that making no active response might make it look as if he had ignored his own red line, exactly what he accused President Barack Obama of doing with Syria. In the cyber age, perhaps the most tempting solution for presidents is to reach for America’s most stealthy weapon. That is what Obama did in 2014, when he ordered an acceleration of cyberattacks aimed at preventing launches. But there is debate over the effectiveness of that operation and little visible evidence that the cyberattacks, if continuing, are working now. Perhaps the United States is waiting for the right moment, but as one former senior cyber operator said, no target is harder than North Korea. And the North Koreans know it. (David E. Sanger, “Options for the U.S. If North Korea Tries Another Missile Launch,” New York Times, September 8, 2017, p. A-8)

Hecker: “**BAS:** To the general public, there has been so much nuclear news out of North Korea lately that this one might sound like “just another test.” So please put it in context for us: What was different about North Korea’s September 3rd nuclear test? How did it differ in magnitude from previous tests, and what does that tell us? **SH:** The destructive power of North Korea’s previous five nuclear tests had progressed to about 25 kilotons, roughly the same as the bomb dropped on Nagasaki in 1945. This test was greater than 100 kilotons; that’s a big deal. It indicates they have progressed considerably beyond primitive fission-bomb technologies. **BAS:** Was this one really a hydrogen bomb, and how would we know? **SH:** The size of the blast was consistent with a hydrogen bomb—that is, a fusion-based bomb. However, it could also have been a large “boosted” fission bomb, in which the hydrogen isotopes deuterium and tritium were used to enhance the fission yield. If any telltale radioactive debris leaked from the underground test site, that could help us differentiate, but so far none has been found. So we can’t be certain. **BAS:** What would it mean if it was a hydrogen bomb? Would that be a game changer? **SH:** No, I don’t see a hydrogen bomb as a game changer. The North has been steadily enhancing its nuclear weapons in that direction. It was only a matter of time before it got there—although, if this one was a small, modern, two-stage hydrogen bomb, then I am surprised it got there so quickly. For years, I have followed the country’s steady progress on producing plutonium and highly enriched uranium, the fuels for fission bombs. And I concluded some time ago that it also has the ability to produce tritium, which is necessary for a boosted fission bomb or a hydrogen bomb. **BAS:** But hydrogen bombs are a thousand times more powerful than fission bombs. Doesn’t that change the military threat? **SH:** True, hydrogen bombs can be a thousand times more powerful. In fact, there is no theoretical limit to their destructive power. However, what is much more important is whether any nuclear bomb—fission or a fusion—can be made sufficiently small and light to mount on a missile, as well as robust enough to survive the missile’s launch, flight and atmospheric re-entry. Even a fission bomb of 25 kilotons delivered to Seoul or Los Angeles would cause horrific damage. So sure, a hydrogen bomb with very high destructive power would be worse, and have the advantage of being deliverable on a much-less-accurate missile, but the damage from a fission bomb would already be unacceptable. **BAS:** Does the latest test change the political dynamics? **SH:** Yes, it does. Washington was already suffering from its preoccupation with keeping North Korea from developing intercontinental ballistic missiles.
(ICBMs) instead of dealing with the nuclear crisis that already threatened Northeast Asia. President Trump seemed to have made ICBMs his red line, but North Korean leader Kim Jong-un blasted right past that in July and August. If you add the specter of a hydrogen bomb, that creates an enormous dilemma for the Trump administration in terms of how to assure the American public it will be protected. In Pyongyang, meanwhile, they surely must see being able to field hydrogen bombs as leveling the playing field. A hydrogen bomb would put them in the elite company of the so-called P-5 states, the United States, Russia, China, Great Britain, and France. It would increase Pyongyang’s leverage should it ever come back to the negotiating table. BAS: When we spoke in August, you said that Pyongyang’s ability to reach the continental United States with a nuclear-tipped missile was still some years away. Has last Sunday’s nuclear test changed your view? SH: Well, they got closer with this test, as they do with each missile and nuclear test. They may still be a few years away, but they are very competent at climbing a learning curve and making rapid progress. Besides, they are determined. Continued progress with either boosted fission bombs or hydrogen bombs—through more nuclear testing—will make it possible to fit the bombs on an ICBM. However, they still need to do a lot of work to get their weapons to survive the extreme launch, flight, and re-entry conditions. …BAS: Several hours before the test, the North Korean official news agency KCNA posted photos of Kim Jong-un inspecting what it called a two-stage thermonuclear bomb. Do you believe that is what was tested? SH: The images undoubtedly showed a model rather than the real device, but it had features generally consistent with a two-stage thermonuclear device, that is, a modern hydrogen bomb. The photos showed Kim inspecting the model in front of a schematic of the Hwasong-14 ICBM re-entry vehicle, and next to a mockup of its nose cone. The model appeared to have dimensions that would allow it to be mounted inside the ICBM. Clearly, that’s what the North Koreans would like us to believe, that they have mastered the ability to deliver a thermonuclear-tipped missile to the US mainland. However, we have no way of knowing if the device tested was of this design. The model could quite easily be constructed based on drawings of two-stage thermonuclear bombs available on the Internet. Nevertheless, I have learned not to underestimate the North Korean nuclear specialists. BAS: Does the time interval between this nuclear test and North Korea’s last nuclear test tell us anything about technological progress they may be making? SH: North Korea has been very methodical and deliberate about nuclear testing. The fact that it conducted six tests over such an extended period, beginning in October 2006, gave its nuclear scientists a chance to learn a lot between tests. I believe North Korea learned much more from its tests than did India or Pakistan, which conducted almost all of their six respective tests over a short time period with little chance to learn from one to the next. However, there was another reason for the slow, deliberate pace: North Korea lacked sufficient fissile materials, either plutonium or highly enriched uranium, until quite recently. The regime must also have weighed the likelihood of adverse actions from China, but as this last test shows, it was determined to proceed regardless of Chinese and international reaction. BAS: The news coverage sometimes implies that Kim Jong-un, who took power in 2011 after his father and grandfather before him, is especially impatient and determined to develop a threatening nuclear arsenal. Do you see it that way? SH: Not necessarily. North Korea has been making deliberate, steady progress on nuclear and missile advances since at least 2009, when all serious dialogue with Pyongyang ended. Progress, particularly on the missile front, has accelerated since Kim Jong-un took the reins at the end of 2011, but the foundations for the nuclear and missile programs were already built. It does appear that Kim Jong-un has brought a more effective, hands-on management style to move the programs forward. BAS: In photos the KCNA released last weekend, one of the men alongside Kim Jong-un appears to be Ri Hong-sop, head of North Korea’s Nuclear Weapons Institute. A Reuters news report, which identifies Ri in an earlier photo, says you met with him during your visits to Yongbyon. Is that so, and what can you tell us about him? SH: Dr. Ri Hong-sop was director of the Yongbyon Nuclear Research Center during my first visit in January 2004. I was impressed with his technical competency as well as his honest and direct answers to my technical questions during the tour, in which he gave our Stanford team remarkable access to the Yongbyon plutonium facilities. In a fascinating exchange about the intricacies of plutonium metallurgy, he even allowed me to hold a sample of recently produced plutonium—in a sealed glass jar—to convince me it really was plutonium. BAS: Was that the only time you met with Ri? SH: No, we met during several of my seven visits to North Korea, although by the fourth visit in 2007, he was no longer director of the Yongbyon Nuclear Center. I was told
he had moved to Pyongyang to advise the General Department of Atomic Energy. When I asked about him during my last visit in November 2010, my host told me somewhat sarcastically that my government wouldn′t let me meet him because the latest UN sanctions had put him on a blacklist.

Much of what we know about the North Korean nuclear complex comes from discussions we had with technical professionals in Yongbyon. So much for the benefits of sanctions: They didn′t slow down the North′s progress on its nuclear program, but eliminated one of the few windows we had into it. **BAS:** An official KCNA statement quoted Kim Jong-un as saying, “all components of the H-bomb were homemade … thus enabling the country to produce powerful nuclear weapons as many as it wants.” You have previously said that North Korea has only limited inventories of fissile materials, the fuel required for bomb making. Do you still consider that to be the case? How many bombs could it make now? **SH:** North Korea cannot produce “as many as it wants,” although it is making progress on both fusion and fission fuels. **It appears to have produced lithium deuteride, which can be used to produce the tritium fuel for hydrogen bombs, but likely has only small inventories of tritium for boosted fission devices. And it still has relatively small inventories of fissile materials for the fission bombs that are required to trigger the fusion device.** Although they do involve great uncertainty, I believe my previous estimates still hold: **By the end of 2016, North Korea had enough bomb fuel—roughly 20 to 40 kilograms of plutonium and 200 to 450 kilograms of highly enriched uranium—to make 20 to 25 nuclear weapons, with an annual production capacity of six to seven bombs′ worth.** If they continue to test and develop more sophisticated hydrogen bombs that could use less fissile material, we′ll have to revise that upwards. However, I don′t concur with the leaked intelligence estimate that they have up to 60 nuclear weapons now. **BAS:** The KCNA statement also touted North Korea′s ability to launch a “super-powerful EMP attack” against the United States. EMP is short for electromagnetic pulse. Could you explain what an EMP attack is, and whether this is a credible threat? **SH:** The idea of an EMP attack would be to detonate a nuclear weapon tens of miles above Earth′s surface with the goal of knocking out the US power grid and causing other electrical disruptions. I don′t see this as something the United States needs to worry about now. **First, North Korea has a lot of work to do to develop the right nuclear device for an intense EMP weapon. Second, how would an EMP attack help Pyongyang achieve its objective of deterring the United States?** If Pyongyang used such a weapon against the United States, Washington would consider that an act of war, which would likely lead to the end of the Kim Jong-un regime. **What the EMP comment does show, however, is how closely the North Koreans follow the American press, which has published reports by some American alarmists wringing their hands about this threat. The North Koreans were even clever enough to have researchers from Pyongyang′s Kim Chaek University of Technology write a short brief about EMP, with the conclusion that it represents an important “strike” method. **BAS:** Could the comment by American UN Ambassador Nikki Haley that North Korea is “begging for war” hold any truth—that is, might Kim Jong-un see some benefit in getting to the point of actual military conflict? I know he′s probably a pretty rational actor, but leaders have been known to think they might benefit from war. **SH:** I don′t think so. Kim Jong-un′s only hope of survival is to avoid war. He apparently believes that in order to survive, he has to be able to threaten the United States not only with ICBMs, but with ICBMs tipped with hydrogen bombs. **BAS:** You′ve previously argued that the Trump administration must talk directly to North Korea as the next step in resolving the nuclear crisis. But both Haley and Trump have said the “time for talking is over.” So now what? **SH:** I′m afraid the Trump administration is compounding the mistakes of past US administrations with such comments, along with threats of “fire and fury.” This rhetoric will make it all the more difficult for Washington to take the necessary steps to avoid a nuclear confrontation with North Korea. We need to face reality—the way we got into this situation is that we haven′t talked seriously since 2009. **BAS:** “Talks” can mean different things to different people. Should the US negotiate? Or accept a nuclear-armed North Korea? Does talking constitute “appeasement,” as Trump accused South Korean President Moon Jae-in of pursuing? **SH:** The US administration should **dispatch a small team to talk to Kim Jong-un to establish mechanisms to avoid misunderstandings, miscalculations, or misinterpretations that could quickly send us over the cliff into nuclear war.** The talks would not be a reward or a concession to Pyongyang, nor should they be construed as signaling acceptance of a nuclear-armed North Korea. Such talks are not meant to appease Pyongyang as they would not offer
any rewards. They could, however, deliver the message that while Washington fully intends to defend itself and its allies from any attack with a devastating retaliatory response, it does not otherwise intend to attack the North or pursue regime change. I realize that talking so soon after North Korea made such a major nuclear weapons advance may make it look like the US administration blinked first. But I consider that much less dangerous than stumbling into a nuclear war, which could happen if we pursue other actions being considered by the administration. These talks would not be negotiations—not yet. Rather, they are a necessary step toward re-establishing critical lines of communication to avoid a nuclear catastrophe. Negotiations on denuclearization might follow, but that would require a much longer time frame and coordination with China, Russia, and US allies.” (Elisabeth Eaves, “North Korean Test Shows Steady Advances: Interview with Siegfried Hecker,” Bulletin of the Atomic Scientists, September 7, 2017)

DPRK FoMin statement: “The sanctions and pressure racket of the U.S. to completely obliterate the DPRK's sovereignty and right to existence is reaching an extremely reckless phase. The U.S. is going frantic to fabricate the harshest ever "sanctions resolution" by manipulating the United Nations Security Council (UNSC) over the DPRK's ICBM-ready H-bomb test. The DPRK has developed and perfected the super-powerful thermo-nuclear weapon as a means to deter the ever-increasing hostile moves and nuclear threat of the U.S. and defuse the danger of nuclear war looming over the Korean peninsula and the region. However, instead of making a right choice based on rational analysis of the overall situation, the U.S. is trying to use the DPRK's legitimate self-defensive measures as an excuse to strangle and completely suffocate it. Since the U.S. is revealing its nature as a blood-thirsty beast obsessed with the wild dream of reversing the DPRK's development of the state nuclear force which has already reached the completion phase, there is no way that the DPRK is going to wait and let the U.S. feast on it. The DPRK is closely following the moves of the U.S. with vigilance. In case the U.S. eventually does rig up the illegal and unlawful "resolution" on harsher sanctions, the DPRK shall make absolutely sure that the U.S. pays due price. The DPRK is ready and willing to use any form of ultimate means. The forthcoming measures to be taken by the DPRK will cause the U.S. the greatest pain and suffering it had ever gone through in its entire history. The world will witness how the DPRK tames the U.S. gangsters by taking series of action tougher than they have ever envisaged. The U.S. should be fully aware that as long as it persists with intense political, economic and military confrontation with the DPRK in defiance of its repeated stern warning, the former will never be able to avoid its permanent extinction.” (KCNA, “DPRK FM Warns U.S. Frantic to Fabricate Harshest Ever ‘Sanctions Resolution,’” September 11, 2017)

The United Nations Security Council ratcheted up sanctions yet again against North Korea, but they fell significantly short of the far-reaching penalties that the Trump administration had demanded just days ago. While the sanctions were described in Washington and other capitals as the most extensive yet, in the end they amounted to another incremental increase of pressure on the country, even after it detonated its sixth and most powerful nuclear device. It was far from clear that the additional penalties would accomplish what the Trump administration said was its goal: To force North Korea to halt its nuclear and ballistic missile tests and reopen some kind of negotiation toward eventual nuclear disarmament. Although the resolution won backing from all 15 council members, the weakened penalties reflected the power of Russia and China. Both had objected to the original language calling for an oil embargo and other severe penalties — with President Vladimir V. Putin of Russia declaring last week that such additional sanctions would be counterproductive and possibly destabilizing. The original demands from the United States for a new resolution, made by the American ambassador, Nikki R. Haley, were toned down in negotiations that followed with her Russian and Chinese counterparts. Late last night, after a series of closed-door meetings, a revised draft emerged, setting a cap on oil exports to North Korea, but not blocking them altogether. The resolution asks countries around the world to inspect ships going in and out of North Korea’s ports (a provision put in place by the Security Council in 2009) but does not authorize the use of force for ships that do not comply, as the Trump administration had originally proposed. The resolution also requires those inspections to be done with the consent
of the countries where the ships are registered, which opens the door to violations. Under the latest resolution, those ships could face penalties, but the original language proposed by the United States had gone much further, empowering countries to interdict ships suspected of carrying weapons material or fuel into North Korea and to use “all necessary measures” — code for military force — to enforce compliance. The resolution also does not impose a travel ban or asset freeze on Kim, as the original American draft had set out. And the new measure adds a caveat to the original language that would have banned the import of North Korean laborers altogether, saying that countries should not provide work authorization papers unless necessary for humanitarian assistance or denuclearization. The resolution does ban textile exports from North Korea, prohibits the sale of natural gas to North Korea and sets a cap on refined petroleum sales to the country of two million barrels per year. That would shave off roughly 10 percent of what North Korea currently gets from China, according to the U.S. Energy Information Agency. Even so, American officials asserted that the resolution would reduce oil imports to North Korea by 30 percent. China had long worried that an oil cutoff altogether would lead to North Korea’s collapse. And even some British officials warned, in private, that if the original American proposal went forward, this winter the North Koreans would be showing photographs of freezing children, and portraying the West as architects of a genocide. A recent analysis by the London-based International Institute for Strategic Studies suggested that an oil embargo would not have much impact in the long run anyway; Pyongyang, the analysis said, could replace oil with liquefied coal. In contrast to her assertion last week that the North was “begging for war,” U.S. Ambassador Nikki Haley said today that Pyongyang still has room to change course. “If it agrees to stop its nuclear program it can reclaim its future,” she said. “If it proves it can live in peace, the world will live in peace with it.” Ultimately, analysts said, diplomatic success would be measured not by the strictness of sanctions, but by the ability of world powers to persuade Pyongyang to halt its nuclear and ballistic missile tests. “There’s no only-sanctions strategy that will bring the North Koreans to heel,” said Daryl G. Kimball, executive director of the Arms Control Association, a disarmament advocacy group based in Washington. “It has to be paired with a pragmatic strategy of engagement. But those talks are not yet happening.” In a nod to Chinese and Russian arguments, the resolution also calls for resolving the crisis “through peaceful, diplomatic and political means.” That is diplomatic code to engage in negotiations. In his remarks, the Chinese envoy, Liu Jieyi, warned the United States against efforts at “regime change” and the use of military force. “China will continue to advance dialogue,” he said. China and Russia have jointly proposed a freeze on Pyongyang’s missile and nuclear tests in exchange for a freeze in joint military drills by South Korea and the United States. The Americans have rejected that proposal. Russia’s envoy, Vassily A. Nebenzia, said it would be “a big mistake” to ignore the China-Russia proposal. “We will insist on it being considered,” he said. The French ambassador François Delattre, told reporters that a unified Security Council position was “the best antidote to the risk of war.” “By definition, this is a compromise in order to get everyone on board,” he said before the vote. “Everyone should be able to live with the resolution as it now stands,” said the Swedish ambassador, Olof Skoog. American intelligence agencies say they are expecting North Korea to test another intercontinental ballistic missile, building on two tests in July. But the new test, they speculate, will not be into a high launch into space, but will be flattened out to demonstrate how far the missile can fly. In reality, the Trump administration has relatively low expectations for the new sanctions, American officials say. But it is discussing how to use them, the officials say, with a mix of overt military pressure, covert action, and steps to punish any Chinese banks that do business with North Korea, by banning them from also doing business with the United States. That is exactly the combination of actions that was used by the Obama administration to drive Iran into negotiations over its nuclear activities for what became the 2015 deal that Trump has often denounced as a giveaway. (Somini Sengupta, “U.N. Compromise Tightens Clamp on North Korea,” New York Times, September 12, 2017, p. A-1)

UN Security Council resolution 2375:
PP1: Recalling its previous relevant resolutions, including resolution 825 (1993), resolution 1540 (2004), resolution 1695 (2006), resolution 1718 (2006), resolution 1874 (2009), resolution 1887 (2009), resolution 2087 (2013), resolution 2094 (2013), resolution 2270 (2016), resolution 2321 (2016), resolution 2356 (2017), resolution 2371 (2017) as well as the statements of its President of
6 October 2006 (S/PRST/2006/41), 13 April 2009 (S/PRST/2009/7), 16 April 2012 (S/PRST/2012/13), and 29 August 2017 (S/PRST/2017/16),

PP2: Reaffirming that proliferation of nuclear, chemical and biological weapons, as well as their means of delivery, constitutes a threat to international peace and security,

PP3: Expressing its gravest concern at the nuclear test by the Democratic People’s Republic of Korea (“the DPRK”) on September 2, 2017 in violation of resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016) 2321 (2016), 2356 (2017), and 2371 (2017) and at the challenge such a test constitutes to the Treaty on Non-Proliferation of Nuclear Weapons (“the NPT”) and to international efforts aimed at strengthening the global regime of non-proliferation of nuclear weapons, and the danger it poses to peace and stability in the region and beyond,

PP4: Underlining once again the importance that the DPRK respond to other security and humanitarian concerns of the international community and expressing great concern that the DPRK continues to develop nuclear weapons and ballistic missiles by diverting critically needed resources away from the people in the DPRK who have great unmet needs,

PP5: Expressing its gravest concern that the DPRK’s ongoing nuclear- and ballistic missile-related activities have destabilized the region and beyond, and determining that there continues to exist a clear threat to international peace and security,

PP6: Underscoring its concern that developments on the Korean Peninsula could have dangerous, large-scale regional security implications, (New)

PP7: Underscoring its commitment to the sovereignty, territorial integrity, and political independence of all States in accordance with the Charter, and recalling the purposes and principles of the Charter of the United Nations, (New)

PP8: Expressing also its desire for a peaceful and diplomatic solution to the situation, and reiterating its welcoming of efforts by Council members as well as other Member States to facilitate a peaceful and comprehensive solution through dialogue, (New)

PP9: Underlining the need to ensure international peace and security, and ensure lasting stability in north-east Asia at large and to resolve the situation through peaceful, diplomatic and political means, (New)

PP10: Acting under Chapter VII of the Charter of the United Nations, and taking measures under its Article 41,

1. Condemns in the strongest terms the nuclear test conducted by the DPRK on September 2 of 2017 in violation and flagrant disregard of the Security Council’s resolutions;

2. Reaffirms its decisions that the DPRK shall not conduct any further launches that use ballistic missile technology, nuclear tests, or any other provocation; shall immediately suspend all activities related to its ballistic missile program and in this context re-establish its pre-existing commitments to a moratorium on all missile launches; shall immediately abandon all nuclear weapons and existing nuclear programs in a complete, verifiable and irreversible manner, and immediately cease all related activities; and shall abandon all other existing weapons of mass destruction and ballistic missile programs in a complete, verifiable and irreversible manner;

3. Decides that the measures specified in paragraph 8(d) of resolution 1718 (2006) shall apply also to the individual and entities listed in Annex I and II of this resolution and to any individuals or entities acting on their behalf or at their direction, and to entities owned or controlled by them, including through illicit means, and decides further that the measures specified in paragraph 8(e) of resolution 1718 (2006) shall also apply to the individual listed in Annex I of this resolution and to individuals acting on their behalf or at their direction;

4. Decides to adjust the measures imposed by paragraph 8 of resolution 1718 (2006) through the designation of additional WMD-related dual-use items, materials, equipment, goods, and technology, directs the Committee to undertake its tasks to this effect and to report to the Security Council within fifteen days of adoption of this resolution, and further decides that, if the Committee has not acted, then the Security Council will complete action to adjust the measures within seven days of receiving that report, and directs the Committee to regularly update this list every twelve months;

5. Decides that the measures imposed in paragraphs 8(a), 8(b) and 8(c) of resolution 1718 (2006) shall also apply to the conventional arms-related items, materials, equipment, goods, and technology listed in document S/2017/XXXX;
6. Decides to apply the measure imposed by paragraph 6 of resolution 2371 (2016) on vessels transporting prohibited items from the DPRK, directs the Committee to designate these vessels and to report to the Security Council within fifteen days of adoption of this resolution, further decides that, if the Committee has not acted, then the Security Council will complete action to adjust the measures within seven days of receiving that report, and directs the Committee to regularly update this list when it is informed of additional violations;

[NOTE: The below provisions would update the high seas inspection provisions in UN Security Council resolution 1874 (2009) to cover all items, including coal, whose transfer is prohibited by the relevant Security Council resolutions. This provision would not authorize the use of force. This provision would also ask the Committee to consider imposing an asset freeze on any vessel for which a flag State both refuses a high seas inspection and also refuses to divert to a port for inspection; it would also require de-registering by the flag State. Finally, it would prohibit ship-to-ship transfers of items to or from DPRK-flagged vessels (a method of sanctions evasion).]

7. Calls upon all Member States to inspect vessels with the consent of the flag State, on the high seas, if they have information that provides reasonable grounds to believe that the cargo of such vessels contains items the supply, sale, transfer or export of which is prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017) or this resolution, for the purpose of ensuring strict implementation of those provisions; (New)

8. Calls upon all Member States to inspect vessels with the consent of the flag State, on the high seas, if they have information that provides reasonable grounds to believe that the cargo of such vessels contains items the supply, sale, transfer or export of which is prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017) or this resolution, for the purpose of ensuring strict implementation of those provisions; (New)

9. Requires any Member State, when it does not receive the cooperation of a flag State of a vessel pursuant to paragraph 7 above, and, if the flag State does not consent to inspection on the high seas, decides that the flag State shall direct the vessel to proceed to an appropriate and convenient port for the required inspection by the local authorities pursuant to paragraph 18 of resolution 2270 (2016), and decides further that, if a flag State neither consents to inspection on the high seas nor directs the vessel to proceed to an appropriate and convenient port for the required inspection, or if the vessel refuses to comply with flag State direction to permit inspection on the high seas or to proceed to such a port, then the Committee shall consider designating the vessel for the measures imposed in paragraph 8(d) of resolution 1718 (2006) and paragraph 12 of resolution 2321 (2016) and the flag State shall immediately deregister that vessel; (New)

10. Affirms that paragraph 7 contemplates only inspections carried out by warships and other ships or aircraft clearly marked and identifiable as being on government service and authorized to that effect, and underscores that it does not apply with respect to inspection of vessels entitled to sovereign immunity under international law; (New; text based on Ops 6-7 of UNSCR 2292)

11. Decides that all Member State shall prohibit their nationals, persons subject to their jurisdiction, entities incorporated in their territory or subject to their jurisdiction, and vessels flying their flag, from facilitating or engaging in ship-to-ship transfers to or from DPRK-flagged vessels of any goods or items that are being supplied, sold, or transferred to or from the DPRK; (New)

[NOTE: These proposals: a) bans all condensates and natural gas liquids, b) impose a cap of 2 million barrels/year on refined petroleum products, and c) cap crude oil exports at their current level.]

12. Decides that all Member States shall prohibit the direct or indirect supply, sale or transfer to the DPRK, through their territories or by their nationals, or using their flag vessels or aircraft, and whether or not originating in their territories, of all condensates and natural gas liquids, and decides that the DPRK shall not procure such materials; (New)

13. Decides that all Member States shall prohibit the direct or indirect supply, sale or transfer to the DPRK, through their territories or by their nationals, or using their flag vessels or aircraft, and whether or not originating in their territories, of all refined petroleum products, decides that the DPRK shall not procure such products, decides that this provision shall not apply with respect to procurement by the DPRK or the direct or indirect supply, sale or transfer to the
DPRK, through their territories or by their nationals, or using their flag vessels or aircraft, and whether or not originating in their territories, of refined petroleum products in the amount of up to 500,000 barrels during an initial period of three months beginning on 1 October 2017 and ending on 31 December 2017, and refined petroleum products in the amount of up to 2,000,000 barrels per year during a period of twelve months beginning on 1 January 2018 and annually thereafter, provided that (a) the Member State notifies the Committee every thirty days of the amount of such supply, sale, or transfer to the DPRK of refined petroleum products along with information about all the parties to the transaction, (b) the supply, sale, or transfer of refined petroleum products involve no individuals or entities that are associated with the DPRK’s nuclear or ballistic missile programmes or other activities prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017) or this resolution, and (c) the supply, sale, or transfer of refined petroleum products are exclusively for livelihood purposes of DPRK nationals and unrelated to generating revenue for the DPRK’s nuclear or ballistic missile programmes or other activities prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017) or this resolution, directs the Committee Secretary to notify all Member States when an aggregate amount of refined petroleum products sold, supplied, or transferred to the DPRK of 75 per cent of the aggregate amount for the period between 1 October 2017 and 31 December 2017 has been reached, and again notify all Member States when 90 percent and 95 percent of such aggregate amount has been reached, directs the Committee Secretary beginning on 1 January 2018 to notify all Member States when an aggregate amount of refined petroleum products sold, supplied, or transferred to the DPRK of 90 per cent of the aggregate yearly amounts have been reached, also directs the Committee Secretary beginning on 1 January 2018 to notify all Member States when an aggregate amount of refined petroleum products sold, supplied, or transferred to the DPRK of 95 per cent of the aggregate yearly amounts have been reached, and further directs the Committee Secretary beginning on 1 January 2018 to notify all Member States when an aggregate amount of refined petroleum products sold, supplied, or transferred to the DPRK of 95 per cent of the aggregate yearly amounts have been reached and to inform them that they must immediately cease selling, supplying, or transferring refined petroleum products to the DPRK for the remainder of the year, directs the Committee to make publicly available on its website the total amount of refined petroleum products sold, supplied, or transferred to the DPRK by month and by source country, directs the Committee to update this information on a real-time basis as it receives notifications from Member States, calls upon all Member States to regularly review this website to comply with the annual limits for refined petroleum products established by this provision, directs the Panel of Experts to closely monitor the implementation efforts of all Member States to provide assistance and ensure full and global compliance, and requests the Secretary General to make the necessary arrangements to this effect and provide additional resources in this regard; (New)

Decides that all Member State shall not supply, sell, or transfer to the DPRK in any period of twelve months after the date of adoption of this resolution an amount of crude oil that is in excess of the amount that the Member State supplied, sold or transferred in the period of twelve months prior to adoption of this resolution, unless the Committee approves in advance on a case-by-case basis a shipment of crude oil is exclusively for livelihood purposes of DPRK nationals and unrelated to the DPRK’s nuclear or ballistic missile programmes or other activities prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017) or this resolution; (New)

Decides that the DPRK shall not supply, sell or transfer, directly or indirectly, from its territory or by its nationals or using its flag vessels or aircraft, textiles (including but not limited to fabrics and partially or fully completed apparel products), and that all States shall prohibit the procurement of such items from the DPRK by their nationals, or using their flag vessels or aircraft, whether or not originating in the territory of the DPRK, unless the Committee approves on a case-by-case basis in advance, and further decides that for such
sales, supplies, and transfers of textiles (including but not limited to fabrics and partially or fully completed apparel products) for which written contracts have been finalized prior to the adoption of this resolution, all States may allow those shipments to be imported into their territories up to 90 days from the date of adoption of this resolution with notification provided to the Committee containing details on those imports by no later than 135 days after the date of adoption of this resolution; (New)

15. Expresses concern that DPRK nationals frequently work in other States for the purpose of generating foreign export earnings that the DPRK uses to support its prohibited nuclear and ballistic missile programs, decides that all Member States shall not provide work authorizations for DPRK nationals in their jurisdictions in connection with admission to their territories unless the Committee determines on a case-by-case basis in advance that employment of DPRK nationals in a member state’s jurisdiction is required for the delivery of humanitarian assistance, denuclearization or any other purpose consistent with the objectives of resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), or this resolution, and decides that this provision shall not apply with respect to work authorizations for which written contracts have been finalized prior to the adoption of this resolution, provided that the Member State notifies the Committee by 15 December 2017 of the number of DPRK nationals subject to these contracts and the anticipated date of termination of these contracts; (Expansion of OP11 of UNSCR 2371)

16. Decides that States shall prohibit, by their nationals or in their territories, the opening, maintenance, and operation of all joint ventures or cooperative entities, new and existing, with DPRK entities or individuals, whether or not acting for or on behalf of the government of the DPRK, unless such joint ventures or cooperative entities, in particular those that are non-commercial, public utility infrastructure projects not generating profit, have been approved by the Committee in advance on a case-by-case basis, further decides that States shall close any such existing joint venture or cooperative entity within 120 days of the adoption of this resolution if such joint venture or cooperative entity has not been approved by the Committee on a case-by-case basis, and States shall close any such existing joint venture or cooperative entity within 120 days after the Committee has denied a request for approval, and decides that this provision shall not apply with respect to existing China-DPRK hydroelectric power infrastructure projects; (Expansion of OP12 of UNSCR 2371)

17. Decides that Member States shall report to the Security Council within ninety days of the adoption of this resolution, and thereafter upon request by the Committee, on concrete measures they have taken in order to implement effectively the provisions of this resolution, requests the Panel of Experts, in cooperation with other UN sanctions monitoring groups, to continue its efforts to assist Member States in preparing and submitting such reports in a timely manner; (OP18 of UNSCR 2371)

18. Calls upon all Member States to redouble efforts to implement in full the measures in resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013) 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), and this resolution and to cooperate with each other in doing so, particularly with respect to inspecting, detecting and seizing items the transfer of which is prohibited by these resolutions; (OP19 of UNSCR 2371)

19. Decides that the mandate of the Committee, as set out in paragraph 12 of resolution 1718 (2006), shall apply with respect to the measures imposed in this resolution and further decides that the mandate of the Panel of Experts, as specified in paragraph 26 of resolution 1874 (2009) and modified in paragraph 1 of resolution 2345 (2017), shall also apply with respect to the measures imposed in this resolution; (OP20 of UNSCR 2371)

20. Decides to authorize all Member States to, and that all Member States shall, seize and dispose (such as through destruction, rendering inoperable or unusable, storage, or transferring to a State other than the originating or destination States for disposal) of items the supply, sale, transfer, or export of which is prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), or this resolution that are identified in inspections, in a manner that is not inconsistent with their obligations under applicable Security Council resolutions, including resolution 1540 (2004), as well as any obligations of parties to the NPT, the Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on Their Development of 29
April 1997, and the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction of 10 April 1972; (OP21 of UNSCR 2371)

21. Emphasizes the importance of all States, including the DPRK, taking the necessary measures to ensure that no claim shall lie at the instance of the DPRK, or of any person or entity in the DPRK, or of persons or entities designated for measures set forth in resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), or this resolution, or any person claiming through or for the benefit of any such person or entity, in connection with any contract or other transaction where its performance was prevented by reason of the measures imposed by this resolution or previous resolutions; (OP22 of UNSCR 2371)

22. Reiterates its deep concern at the grave hardship that the people in the DPRK are subjected to, condemns the DPRK for pursuing nuclear weapons and ballistic missiles instead of the welfare of its people while people in the DPRK have great unmet needs, and emphasizes the necessity of the DPRK respecting and ensuring the welfare and inherent dignity of people in the DPRK; (OP25 of UNSCR 2371)

23. Regrets the DPRK’s massive diversion of its scarce resources toward its development of nuclear weapons and a number of expensive ballistic missile programs, notes the findings of the United Nations Office for the Coordination of Humanitarian Assistance that well over half of the people in the DPRK suffer from major insecurities in food and medical care, including a very large number of pregnant and lactating women and under-five children who are at risk of malnutrition and nearly a quarter of its total population suffering from chronic malnutrition, and, in this context, expresses deep concern at the grave hardship to which the people in the DPRK are subjected; (OP17 of UNSCR 2371)

24. Reaffirms that the measures imposed by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017) and this resolution are not intended to have adverse humanitarian consequences for the civilian population of the DPRK or to affect negatively or restrict those activities, including economic activities and cooperation, food aid and humanitarian assistance, that are not prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017) and this resolution, and the work of international and non-governmental organizations carrying out assistance and relief activities in the DPRK for the benefit of the civilian population of the DPRK and decides that the Committee may, on a case-by-case basis, exempt any activity from the measures imposed by these resolutions if the committee determines that such an exemption is necessary to facilitate the work of such organizations in the DPRK or for any other purpose consistent with the objectives of these resolutions; (Based on OP26 of UNSCR 2371)

25. Emphasizes that all Member States should comply with the provisions of paragraphs 8 (a) (iii) and 8 (d) of resolution 1718 (2006) without prejudice to the activities of the diplomatic missions in the DPRK pursuant to the Vienna Convention on Diplomatic Relations; (OP21 of UNSCR 1874)

26. Reaffirms its support for the Six Party Talks, calls for their resumption, and reiterates its support for the commitments set forth in the Joint Statement of 19 September 2005 issued by China, the DPRK, Japan, the Republic of Korea, the Russian Federation, and the United States, including that the goal of the Six-Party Talks is the verifiable denuclearization of the Korean Peninsula in a peaceful manner, that the United States and the DPRK undertook to respect each other’s sovereignty and exist peacefully together, that the Six Parties undertook to promote economic cooperation, and all other relevant commitments; (OP27 of UNSCR 2371)

27. Reiterates the importance of maintaining peace and stability on the Korean Peninsula and in north-east Asia at large, expresses its commitment to a peaceful, diplomatic, and political solution to the situation, and welcomes efforts by the Council members as well as other States to facilitate a peaceful and comprehensive solution through dialogue and stresses the importance of working to reduce tensions in the Korean Peninsula and beyond; (OP28 of UNSCR 2371)
28. *Urges* further work to reduce tensions so as to advance the prospects for a comprehensive settlement; *(New)*

29. *Underscores* the imperative of achieving the goal of complete, verifiable and irreversible denuclearization of the Korean Peninsula in a peaceful manner; *(New)*

30. *Affirms* that it shall keep the DPRK’s actions under continuous review and is prepared to strengthen, modify, suspend or lift the measures as may be needed in light of the DPRK’s compliance, and, in this regard, *expresses its determination* to take further significant measures in the event of a further DPRK nuclear test or launch; *(OP29 of UNSCR 2371)*

31. *Decides* to remain seized of the matter.

---

9/11/17

Von Hippel and Hayes: “On September 11, 2017, the United Nations Security Council (UNSC) passed Resolution 2375 (2017), which strengthens sanctions on the Democratic Peoples’ Republic of Korea (DPRK) in the wake of the latter’s sixth nuclear weapons test on September 2, 2017. As of time of writing, the approved text of the resolution and any explanatory annexes it may contain are not on-line and press reports have varying and sometimes contradictory accounts of what it says. However, the US Mission to the UN stated that: “This resolution reduces about 30% of oil provided to North Korea by cutting off over 55% of refined petroleum products going to North Korea.”[1] This outcome will be achieved, US Mission to the UN continued, by “imposing an annual cap of 2 million barrels per year of [imports of] all refined petroleum products (gasoline, diesel, heavy fuel oil, etc.).” The US Mission to UN Factsheet added that North Korea “currently receives about 8.5 million barrels of oil/petroleum: 4.5 million in refined form and 4 million in crude form.” The Factsheet also notes: “The resolution freezes the current amount of crude oil provided to North Korea by banning countries from providing additional crude oil beyond what China provides through the Dandong-Sinuiju pipeline.” The Dandong-Sinuiju pipeline has historically, for most of the last two decades, been the major source of crude oil imports to the DPRK. Crude oil passing through the pipeline is refined in the DPRK’s refinery at Sinuiju. This clause pertaining to imports of oil to the DPRK through the pipeline is the key to interpreting the sanctions. The resolution also bans importation outright of all natural gas and condensates to prevent North Korea from obtaining substitutes for oil imports. There are some ambiguities in this which cannot be readily resolved without additional information, though the overall meaning seems relatively clear. First among the ambiguities, there is no such thing as a “barrel of refined product” as each type of refined product has a different energy content and density. For example, gasoline, being lower in density (though higher in energy content per unit mass) than diesel oil or heavy fuel oil, has a lower energy content per barrel than those fuels. Thus, there is no simple and precise way to interpret a cap on such as “2 million barrels per year of all refined petroleum products”. As stated, it means North Korea could import any mix of these fuel types provided that the volumetric sum is no greater than 2 million barrels. In practice, this may not be too much of an issue, as the DPRK may not be able to quickly change the relative proportion of the fuels it would use for its existing equipment and vehicles, but there may be some difficulties arising from it when it comes time to enforce this clause. The accounting methodology related to implementation may be stated in an annex to the resolution; but if not, this phrasing presents problems for monitoring and tracking energy flows and determining compliance. Second, although we *assume* that the resolution should be interpreted as limiting imports to the DPRK (or exports from other nations to the DPRK) of refined product to no more than 2 million barrels, the text of the Factsheet is somewhat ambiguous in its phrasing. If it refers to the DPRK having no more than 2 million barrels of refined product overall, whether imported as refined product, or produced in the DPRK from imported crude, then the sanctions are far more stringent than appears at first glance. However, this is unlikely to be the case because the approval of current Chinese crude exports untouched by sanctions would give the DPRK more than 2 million barrels of refined product overall in any case—which would be contradictory. So we assume that the cap of 2 million barrels of refined product refers only to imports of refined product, not to overall use from imported oil, whether it is refined product or crude oil from which refined product is derived. Finally, the figures given for total oil use in the DPRK of 8.5 million barrels, of which 4.5 million is refined product, and 4 million is in crude oil form, comes from an unstated source, though it is plausible based on our crude estimates of 2017 DPRK oil use. …Crude oil exports from China to the DPRK, as recorded in Chinese customs statistics, were in the range between about 470 and
580,000 tonnes in each year between 2001 and 2013, which was the last year that China reported crude oil exports. We estimate (based on end use analysis) that crude oil exports have continued at about 500,000 tonnes per year. Different crude oils have slightly different energy contents per unit volume, but using a conversion of 7.33 barrels or bbl/tonne yields about 3.7 million barrels per year. Our estimate for 2010 was that the DPRK imported about 570,000 tonnes of crude oil which converts to 4.2 million bbl. So the US Mission to the UN estimate of 4 million barrels per year is plausible. And the total crude oil and oil products imports to the DPRK in 2017 really might be in the range of 8.5 million bbl, as the Factsheet indicates, especially if China provided the UNSC with current export information. …In short, the sanctions would cut refined product imports by about 56% (whereas our estimates suggest more like 60 percent if imports are limited to 200,000 barrels because we suggest imports were higher at 494,000 barrels to begin with. The difference is impossible to resolve without access to the energy accounting methodology used by the UNSC to aggregate refined products into “barrels.” Overall, the US Mission to the UN estimated that the DPRK would forego about 29% of total imported oil from crude and refined product; whereas our estimate is lower at 25%, because we believe that the total import figure used by the UN may be low). But overall, these figures generally align. If the sanctions work as intended (that is, are not circumvented in some many possible ways by smuggling etc.), then sanctions significantly reduce the DPRK’s future oil products imports and use, relative to current levels (putting them back to where they were in about 2010); but will have no significant effect on crude oil imports, relative to recent levels. The levels of reduction outlined above for refined product are unlikely, for the reasons we outlined in our September 5 report, to have a significant impact on the DPRK military or nuclear weapons/missile programs. These military sectors will have priority access to refined fuels, including likely fuel caches of significant volume that have already been stockpiled and provide a substantial buffer against the sanctions. Primarily these sanctions will affect the civilian population whose oil product uses are of lower priority to the DPRK state. The DPRK will quickly effect a combination of additional energy end use efficiency, outright cuts, and substitution of non-oil energy forms to manage the cuts. We estimated in our September 5 report that six measures along these lines could cut the equivalent of 3.7 million barrels of crude oil use per year—more than enough to offset the cuts imposed by this sanctions resolution. Moreover, the more that the DPRK invests now in these workarounds, the more resilient it becomes against future sanctions-driven cuts. The cost of imposing these sanctions now when they will have little effect on the desired goal—reversing the DPRK’s missile and nuclear programs—is that the UNSC members will have even less leverage in the future when it is most needed—which is when the DPRK needs some “suasion” to meet the United States in talks over freezing, dismantling, and disarming its nuclear weapons over the coming years—or decades. It is also noteworthy that the new sanctions also ban exports to the DPRK of natural gas and natural gas liquids. These fuels are not widely used in the DPRK, and the DPRK largely lacks the infrastructure to use, especially, natural gas. As a consequence, this ban will have no immediate effect on DPRK energy use, though it might cut off some options for fuel switching in the medium term (many months to years) that the DPRK might have implemented. Finally, we note that the resolution added a ban on textile exports from the DPRK to cut off a source of foreign exchange earnings. The US Mission to the UN suggested that textile exports “earned North Korea an average of $760 million in the past three years.” Speakers to the UN Security Council deliberations suggested that this figure was $800 million. Although that may indeed be true, it is only part of the story. Textile exports from the DPRK are value added goods for which components were imported from China (that is, cut cloth is exported to the DPRK, it is sown into clothing in the DPRK, then re-exported back to China). The value of those components imported to the DPRK for textile processing and then re-export appear in China’s customs statistics. The net income to the DPRK—assuming that the labor used to finish the garments and other goods was paid relatively little by those running the factories in the DPRK—may have been in the range of few hundred million dollars annually. Thus, the net effect on income, if the sanctions are enforced and effective, will be much less than the $760 million annually implied in the Factsheet. (David Von Hippel and Peter Hayes, “Impact of UNSC Resolution 2375 on North Korean Oil Imports,” NAPSnet, September 12, 2017)
North Korea rejected a U.N. Security Council resolution imposing tougher sanctions and said the United States would soon face the “greatest pain” it had ever experienced. “My delegation condemns in the strongest terms and categorically rejects the latest illegal and unlawful U.N. Security Council resolution,” Pyongyang’s ambassador, Han Tae Song, told the U.N.-sponsored Conference on Disarmament in Geneva. Han accused the U.S. administration of being “fired up for political, economic, and military confrontation,” and of being “obsessed with the wild game of reversing the DPRK’s development of nuclear force which has already reached the completion phase.” The DPRK is “ready to use a form of ultimate means,” Han said without elaborating.

“The forthcoming measures by DPRK will make the U.S. suffer the greatest pain it ever experienced in its history,” he said. U.S. disarmament ambassador Robert Wood took the floor to say that the Security Council resolution “frankly sent a very clear and unambiguous message to the regime that the international community is tired, is no longer willing to put up provocative behavior from this regime.” “My hope is the regime will hear the message loud and clear and it will choose a different path,” Wood said. “We call on all countries to vigorously implement these new sanctions and all other existing sanctions,” he added. (Stephanie Nebehay, “North Korea Warns U.S. of ‘Greatest Pain,’ Rejects U.N. Sanctions,” Reuters, September 12, 2017)

The latest UN Security Council sanctions on North Korea are a small part of the process and "nothing compared to what ultimately will have to happen," President Donald Trump said. "We think it’s just another very small step — not a big deal,” said Trump in a joint statement with Malaysian Prime Minister Najib Abdul Razak at the White House, following the 15-member Security Council’s unanimous adoption of the latest resolution on North Korea the previous day. Trump appeared to be downplaying the impact of UNSC Resolution 2375, which is considered a watered-down version of the original U.S. draft in response to the North’s sixth nuclear test, which called for a complete oil embargo. “I don’t know if it has any impact, but certainly it was nice to get a 15-to-nothing vote,” said Trump on the resolution, which also drew in the support of veto-wielding council members China and Russia. Trump said he and Secretary of State Rex Tillerson discussed the sanctions, which he described as “not big” compared to what ultimately will have to happen, though he did not elaborate further. The president lauded the Malaysian prime minister, remarking, “He does not do business with North Korea any longer, and we find that to be very important.” When asked by a reporter what Trump meant went calling the UN sanctions “not a big deal,” Sarah Huckabee Sanders, the White House press secretary, elaborated later in the day, "I think he actually said this is a small step and part of the process.” She said that the “ultimate goal here is a denuclearized Korean Peninsula,” and that is “what we have to push towards.” Sanders added, “We’re going to continue taking those small steps, but at the same time we know that those very parties that voted to do this all have to do more.” Her response appears to be directed at China, the North’s main trading partner and primary oil supplier. When asked if Trump is considering cutting off Chinese banks from the U.S. financial system when he warned of the UN action being “nothing compared to what ultimately will have to happen,” Sanders replied that all options are on the table. “This was a small step in that process, and we're hoping that they'll take a greater role and a more active role in putting pressure on North Korea,” said Sanders. Despite the latest UN Security Council passing with the support of China and Russia, U.S. Treasury Secretary Steve Mnuchin similarly indicated today that Washington may impose further secondary sanctions on China should it not fully implement existing ones. “These sanctions work,” said Mnuchin at the CNBC Institutional Investor Delivering Alpha conference, adding that “they worked with Iran,” though he said Washington could have ultimately “cut a better deal.” “And in North Korea, economic warfare works,” added Mnuchin. “We sent a message that anybody that wanted to trade with North Korea, we would consider them not trading with us. We can put on economic sanctions.” His remarks echoed the president’s tweet earlier this month saying he is considering stopping trade with any country doing business with North Korea. Mnuchin said he is “pleased” with the latest Security Council resolution, adding, “This is some of the strongest items. We now have more tools in our toolbox, and we will continue to use them and put additional sanctions on North Korea until they stop this behavior.” He added, “I think we have absolutely moved the needle on China,” describing what Beijing agreed to in the latest resolution as “historic.” He also recalled the U.S. Treasury’s sanctioning of a Chinese bank. “And if China doesn't follow these sanctions, we will put additional sanctions on them and prevent them from accessing the U.S. and
international dollar system,” he added. “And that's quite meaningful.” While so-called secondary sanctions on Chinese banks and entities, which the Trump administration has been forecasting ahead of the Security Council vote, appear to be on hold to give China time to enforce the latest round of sanctions, the United States is also warning that they are still an option. Experts and officials have noted that sanctions were effective in bringing Iran to a nuclear deal, though the case for North Korea is different because they are further along in their nuclear program. South Korean Ambassador to the United Nations Cho Tae-yul told reporters in New York that the expected result of the latest UNSC resolution goes beyond simply reducing oil provided to North Korea by around 30 percent. “The effectiveness of sanctions can be measured when the other side changes their position, so we will have to go to the end.” He continued, “While there are differences between Iran and North Korea, which is excluded from the international economy, ultimately Iran reached out for negotiating a nuclear deal because of the effectiveness of sanctions.” Cho added, “The United States is using the most pain-inducing card, secondary boycotts, in the process of negotiating the resolution and in its implementation,” referring to the possibilities of sanctions on third-country entities. “When the United States indicated it could move forward with secondary boycotts, there has been the cooling effect of Chinese financial institutes trying to avoid transactions with North Korea.” (Sarah Kim, “Trump Says Sanction ‘Not a Big Deal’ While Aides Say Iran Deal Worked,” JoongAng Ilbo, September 13, 2017) Trump's remarks came just hours after House lawmakers from both parties expressed frustration that the U.S. isn't exerting greater pressure on China to stop North Korea's march toward developing nuclear weapons capable of striking the continental United States. "We don't threaten China, even a little bit, with country sanctions because that would be difficult, politically," to do, said Rep. Brad Sherman, a California Democrat. China, North Korea's closest diplomatic ally and largest trading partner, is seen as key to solving the standoff with Pyongyang. The committee chairman, Republican Rep. Ed Royce of California, said he agreed with Sherman and urged more sanctions against Chinese banks that do business with North Korea. "It's been a long, long time of waiting for China to comply with the sanctions we pass and, frankly, the sanctions the United Nations passes." Meanwhile, Democrats charged that Trump is exacerbating the increasingly tense standoff with North Korea with his belligerent comments and tweets. "He talked about the response of the United States of 'fire and fury,'” said Democratic Rep. Gerald Connolly of Virginia. “Frankly, the policy looks more like fecklessness and failure." The lawmakers aired their frustration as US officials outlined ways in which China and Russia are failing to do everything they can to rein in North Korea, even as the nuclear threat from the rogue regime grows more intense. China's leaders are looking the other way as DPRK uses its banking system and front companies to do business, while Russian companies continue to provide support to Pyongyang, said Marshall Billingslea, assistant secretary in the Treasury Department's Office of Terrorism and Financial Intelligence. "It is essential that the international community work together to increase economic pressure on North Korea," Billingslea told the committee. But "DPRK bankers operate in Russia in flagrant disregard of the very resolutions adopted by Russia at the UN," he said in prepared remarks. And while China accounts for 90% of North Korean exports, Billingslea said he "cannot assure the committee today that we have seen sufficient evidence of China's willingness to truly shut down North Korean revenue flows, expunge the North Korean illicit actors from its banking system, and expel the North Korean middlemen and brokers who are establishing webs of front companies." Billingslea said the US is "capable of tracking North Korea's trade on banned goods... and we will act even if China does not." He said that the US has recently caught North Korea trying to disguise the origin of ships it's using — and added that cracking down on North Korean ship traffic will be crucial to enforcing sanctions. These vessels have been spotted entering North Korean ports with their transponders turned off in violation of international law, Billingslea said. They have then been seen loading cargo such as coal, sailing to a Russian port where the coal is offloaded and then put on a vessel bound for China. (Nicole Gaouette and Zachary Cohen, “Trump Says UN Sanction Are ‘Not a Big Deal,’” CNN, September 12, 2017)

The last time South Korea is known to have plotted to assassinate the North Korean leadership, nothing went as planned. In the late 1960s, after North Korean commandoes tried to ransack the presidential palace in Seoul, South Korea secretly trained misfits plucked from prison or off the
streets to sneak into North Korea and slit the throat of its leader, Kim Il-sung. When the mission was aborted, the men mutinied. They killed their trainers and fought their way into Seoul before blowing themselves up, an episode the government concealed for decades. Now, as Kim’s grandson, Kim Jong-un, accelerates his nuclear missile program, South Korea is again preparing to target the North’s leadership. A day after North Korea conducted its sixth — and by far most powerful — nuclear test this month, the South Korean defense minister, Song Young-moo, told lawmakers in Seoul that a special forces “decapitation unit” would be established by the end of the year. The brigade-size unit, unlike its earlier counterpart, would operate officially. The military has been retooling helicopters and transport planes to penetrate North Korea at night so that the forces, known as the Spartan 3000, can carry out raids. Rarely does a government announce a strategy to assassinate a head of state, but South Korea wants to keep the North on edge and nervous about the consequences of further developing its nuclear arsenal. At the same time, the South’s increasingly aggressive posture is meant to help push North Korea into accepting President Moon Jae-in’s offer of talks. It is a difficult balancing act, pitting Moon’s preference for a diplomatic solution against his nation’s need to answer an existential question: How can a country without nuclear weapons deter a dictator who has them? “The best deterrence we can have, next to having our own nukes, is to make Kim Jong-un fear for his life,” said Shin Won-sik, a three-star general who was South Korean military’s top operational strategist before he retired in 2015. The measures have also raised questions about whether South Korea and the United States, its most important ally, are laying the groundwork to kill or incapacitate Mr. Kim and his top aides before they can even order an attack. While Secretary of State Rex W. Tillerson has said the United States does not seek leadership change in North Korea, and the South Koreans say the new military tactics are meant to offset the North Korean threat, the capabilities they are building could be used pre-emptively. The tactics led to a breakthrough last week when President Trump agreed to lift payload limits under a decades-old treaty, allowing South Korea to build more powerful ballistic missiles. The United States helped South Korea build its first ballistic missiles in the 1970s, but in return, imposed restrictions to try to prevent a regional arms race. “We can now build ballistic missiles that can slam through deep underground bunkers where Kim Jong-un would be hiding,” Shin said. “The idea is how we can instill the kind of fear a nuclear weapon would — but do so without a nuke. In the medieval system like North Korea, Kim Jong-un’s life is as valuable as hundreds of thousands of ordinary people whose lives would be threatened in a nuclear attack.” Although a majority of South Koreans, especially conservative politicians and commentators, call for arming their country with nuclear weapons of its own, Moon has repeatedly vowed to rid the Korean Peninsula of such weapons. In June, Trump reiterated Washington’s nuclear-umbrella doctrine, promising to protect the South with “the full range of United States military capabilities, both conventional and nuclear.” But after North Korea tested two intercontinental ballistic missiles in July, including one that appeared capable of hitting the mainland United States, South Koreans are not so sure the Americans would follow through. “Would the Americans intervene in a war on the peninsula if their own Seattle were threatened with a North Korean nuclear ICBM?” said Park Hwee-rhak, a military analyst at Kookmin University in Seoul. South Korea has now introduced three arms-buildup programs — Kill Chain; the Korea Air and Missile Defense program; and the Korea Massive Punishment and Retaliation initiative, which includes the decapitation unit. Moon has vowed to expand the defense budget to 2.9 percent of South Korea’s gross domestic product during his term, from 2.4 percent, or $35.4 billion, as of this year. For next year, his government has proposed a budget of $38.1 billion, nearly $12 billion of it for weapons to defend against North Korea. In a Twitter post September 5, Trump said, “I am allowing Japan & South Korea to buy a substantially increased amount of highly sophisticated military equipment from the United States.” Under the Kill Chain program, South Korea aims to detect impending missile attacks from North Korea and launch pre-emptive strikes. North Korea keeps artillery and rocket tubes near the border, and is capable of delivering 5,200 rounds on Seoul in the first 10 minutes of war, military planners in South Korea say. The North also operates hundreds of missiles designed to hit South Korea and United States bases in Japan and beyond to deter American intervention should war break out. The need to detect an impending strike has become more critical. North Korea has made its nuclear bombs small and light enough — weighing under 500 kilograms, or about 1,100 pounds — to be fitted onto its missiles, though it is still unclear whether they are fully weaponized, Mr. Song, the defense...
Joseph Yun, the State Department’s special representative for North Korea policy, made a quiet trip to Moscow yesterday to urge Russia to support new United Nations sanctions on North Korea. The Russian government had invited Yun as part of President Vladimir Putin’s larger effort to elevate Russia’s role in the ongoing North Korea crisis, which involves resistance by Moscow to further sanctions and a push for a return to the negotiating table with Pyongyang. As of last week, Yun’s trip was on hold, administration officials said. But after the Kim regime’s latest nuclear test, the drive for another Security Council resolution created new urgency and Yun was dispatched to Moscow. “This visit is an example of our ongoing discussions with the international community to increase pressure on [North Korea],” said State Department spokesman Justin Higgins. “The United States seeks stability and the peaceful denuclearization of the Korean Peninsula. We remain open to negotiations towards that goal.” The Russia foreign ministry issued a statement today with a very different take on Yun’s meeting with Russian Deputy Foreign Minister Igor Morgulov. According to Moscow, the meeting was about dialogue, not pressure. “The Russian side stressed that there is no other way to settle the problems of the Korean Peninsula, including the nuclear problem, other than by political and diplomatic means,” the ministry said. “The sides noted readiness for joint efforts in the interests of finding comprehensive approaches to ensuring security [in] Northeastern Asia, including in the context of the implementation of the Russian-
Chinese roadmap for the Korean settlement.” nuclear tests. President Trump played down the new Security Council resolution and promised further sanctions today at the White House, speaking to the press after his meeting with Malaysian Prime Minister Najib Razak. “We think it’s just another very small step — not a big deal,” Trump said about the latest U.N. resolution. “[Secretary of State] Rex [Tillerson] and I were just discussing not knowing if it has any impact, but it’s nice to get a 15-to-nothing vote. Those sanctions are nothing compared to ultimately what will have to happen.” A senior administration official brief reporters last week and also said that the Trump administration has no intention of sitting down with the Kim regime under current conditions and that the plan is to continue to increase pressure on Pyongyang. “The amount of pressure North Korea has been put under economically is still far short of what we applied to Iran or even Iraq,” the official said. “There is a long way to go before North Korea is going to feel the pressure they would need to feel to change their calculus.” (Josh Rogin, “State Department Official Quietly Visits Moscow to Discuss North Korea,” Washington Post, September 12, 2017)

Yun last visited Moscow in April. He has also kept open a channel to the North Korean regime through its U.N. representatives in New York. Working with the Russian government is a part of his diplomatic responsibilities, and he often travels to other countries involved in the North Korea issue as well. Some experts hold out hope that Yun’s efforts will produce an opening for direct dialogue with the Kim regime that the Trump White House might take advantage of. “The smart strategy is to keep pushing the sanctions ball forward with the [Russians and Chinese], but at the same time showing them we are serious about their interests, which is starting a dialogue,” said former nuclear negotiator Joel Wit. “It takes away their opportunity to blame us, and probably makes them willing to be more cooperative with us.” Others are skeptical there is enough common ground between the United States on one side and Russia and China on the other to build on. On Capitol Hill on Tuesday, lawmakers from both parties grilled Trump administration officials to move forward with tougher sanctions on North Korea, even without China’s or Russia’s permission. “Unfortunately, years have been wasted as sanctions have been weak, allowing North Korea to have the financial access to build its nuclear and missile programs,” said House Foreign Affairs Committee Chairman Edward R. Royce (R-Calif.). “The time for that pressure is now.”

DPRK FoMin “report: The U.S. and its vassal forces have rigged up yet another "resolution on sanctions" harsher than ever against the DPRK at the United Nations Security Council (UNSC) on September 12, condemning its ICBM-ready H-bomb test as a "threat" to international peace and security. The "resolution" was cooked by the U.S. employing all sorts of despicable and vicious means and methods. The DPRK condemns in the strongest terms and categorically rejects the UNSC "resolution 2375" on sanctions as a product of heinous provocation aimed at depriving the DPRK of its legitimate right to self-defense and completely suffocating its state and people through full-scale economic blockade. The adoption of another illegal and evil "resolution on sanctions" piloted by the U.S. served as an occasion for the DPRK to verify that the road it chose to go down was absolutely right and to strengthen its resolve to follow this road at a faster pace without the slightest diversion until this fight to the finish is over. Since the scheme of the U.S. to impede the DPRK's development, disarm it through the unprecedented sanctions and pressure and conquer it with the help of nuclear weapons has become clearly evident, the DPRK will redouble the efforts to increase its strength to safeguard the country's sovereignty and right to existence and to preserve peace and security of the region by establishing the practical equilibrium with the U.S. (KCNA, “DPRK Foreign Ministry Rejects Fresh UNSC 'Resolution,'” September 13, 2017)

South Korea has successfully conducted its first live-fire exercise for an advanced long-range cruise missile capable of striking North Korea’s underground military facilities and command centers, Seoul’s Air Force said. According to the military, the Taurus missile fired from a F-15K fighter jet traveled about 400 kilometers before hitting a target on Jikdo in the West Sea on Tuesday. It flew through obstacles at a low altitude of 500 meters and rose up to 3 kilometers before hitting the target, the Air Force said. “Through the exercise, (South Korea) showcased its capability to conduct a strong response to the enemy’s provocations and demonstrated the ability to carry out a precision strike at a long distance,” the Air Force said in a statement. Deployed here
in 2016 for the first time, the Taurus missiles will boost South Korea’s capability to conduct its own pre-emptive strikes and military operations in taking out North Korea’s underground missile and nuclear facilities, analysts said. Boasting a maximum range of 500 kilometers, the Taurus is equipped with stealth technology and GPS, allowing the missile to strike a long-distance target precisely without being disturbed by North Korea’s radar system and jamming attacks. With the ability to carry a 480-kilogram warhead thought to be able to penetrate reinforced concrete, the missile is expected to play a vital role in conducting the “decapitation plan” against North Korea’s leader Kim Jong-un by destroying his underground wartime command. “Through the live-fire exercise, we managed to confirm Taurus’ operational capability,” said Air Force Maj. Lee Hyeon-woo, who piloted the F-15k that launched the missile. “We are ready to retaliate against the enemy’s provocations with precision strike capability.” Due to safety concerns, the missile fired Tuesday was adjusted to fly only 400 kilometers and carry an inert ordnance without explosives. The military had planned to conduct the drill in April, but delayed it to avoid the migration season for birds. South Korea is seeking to adopt a total of 260 Taurus missiles by 2018 and mount them onto fighter jets such as the F-15K. Currently, about 80 units are thought to be fielded after the military received 40 in 2016 from Taurus Systems, a German-Swedish arms developer. The Air Force had initially planned to acquire 170 Taurus missiles, but decided to increase the amount last October after North Korea conducted its fifth nuclear test. The missile costs about 2 billion won ($1.8 million) each. “Considering the current security situation, we will do our utmost to adopt the [additional] Taurus as soon as possible and help the Air Force boost its capability,” said Lee Sang-moon, who oversees Taurus acquisition at the Defense Acquisition Program Administration. (Yeo Jun-suk, “Seoul Carries out Missile Drill Targeting N.K.’s Missile Sites,” Korea Herald, September 13, 2017)

UN SecGen: “The nuclear and missile tests by the DPRK have created great instability and tension on the Korean peninsula, throughout the region and beyond. Unity in the Security Council is critical. This week’s unanimous adoption of a new resolution sends a clear message that the DPRK must comply fully with its international obligations. I call on all Member States to ensure the full implementation of this and other relevant Security Council resolutions. But Security Council unity also creates an opportunity for diplomatic engagement – an opportunity that must be seized. The solution can only be political. Military action could cause devastation on a scale that would take generations to overcome.” (UN Secretary-General’s Press Conference Prior to the Opening of the 72nd General Assembly, New York, September 11, 2017)

Funabashi: “Pyongyang’s recent missile launch over Hokkaido and its underground nuclear test have laid bare Japan’s Achilles’ heel: Our country’s national security policy is still woefully ill equipped for this mounting danger. The new sanctions adopted by the United Nations Security Council on Monday will hardly limit Japan’s exposure. North Korea’s latest provocations pose an unprecedented threat. Even during the Korean War in the early 1950s, Japan, as a rear support base for United States forces, was somewhat insulated; today, it is in the same theater as South Korea, also on the front lines. Any American military strike against North Korea would likely trigger retaliatory measures against Japan. Japan is in a terrible predicament: Highly exposed but with very few options, military or diplomatic, to help itself. Its defense ministry plans to double, to eight, the number of ships equipped with the Aegis missile-defense system. But the new fleet won’t be operational before 2021. Even if Japan also acquires the land-based Aegis Ashore system, as it is contemplating doing, none of this additional capacity could offer it enough protection against North Korea’s increasingly lethal missiles — much less deter North Korea from further developing its own arsenal. This is one reason Onodera Itsunori, the new defense minister, has been making a case for developing Japan’s offensive capabilities, so that it could strike military bases in North Korea, perhaps even preemptively. But such a move faces numerous obstacles — financial, tactical and strategic. No budget decision for such capabilities is expected to even be made until at least late 2018. Acquiring offensive weaponry would require redefining the terms of Japan’s existing security agreement with the United States, which relegates Japan to a purely defensive role and places all responsibility for any offensive action solely with America. In the face of these constraints, some pundits and officials in Washington are arguing that Japan, as well as South Korea, might, and perhaps should, consider
acquiring nuclear weapons themselves. The idea is a nonstarter. According to an opinion poll conducted in June and July, only 9 percent of Japanese respondents think Japan should acquire nuclear weapons. (About 67 percent of South Koreans polled said that South Korea should get such weapons.) The nuclearization of Japan — or South Korea — would undermine nonproliferation efforts, as well as validate North Korea’s nuclear brinkmanship to date. Given the difficulties of developing an independent military capability, Tokyo has no choice but to pursue a diplomatic solution with the help of other states — even though several multilateral efforts have failed in the past and bilateral relations between some of the main players today arguably are more fraught than ever. Tensions are mounting between the United States and China, for example, over dominance in the South China Sea. South Korea’s decision to deploy the missile-defense system known as Thaad to protect itself from North Korea has riled Beijing, which says the system is in fact designed to track missiles from China. Relations between Tokyo and Seoul have long been uneasy, largely because of unresolved issues from Japan’s occupation of the Korean Peninsula in the 1930s and 1940s, including about so-called comfort women, Korean women who were coerced or compelled into having sex with Japanese soldiers. And the new South Korean president, Moon Jae-in, appears to be taking a firmer stand on that question than his predecessor, who signed an agreement with Japan in 2015 hoping to finally settle the matter. It is now very difficult to imagine, for example, that Japan’s Self-Defense Forces could ever operate on South Korean soil, even to assist with, say, an evacuation after an attack by North Korea. At the same time, however, as the threat from Pyongyang becomes more ominous, the pressing need for an effective response may suggest, even create, new diplomatic opportunities. Prime Minister Abe Shinzo of Japan and President Trump seem to have quickly developed an intimate working relationship, and that — along with South Korea’s moves to strengthen its security ties with the United States — may allow for more effective cooperation among the three countries, despite difficulties between Japan and South Korea. This trilateralism, in turn, could form the basis for five-party talks including China and Russia, and eventually lead to the resumption of negotiations with Pyongyang as well. The U.N. Security Council’s decision to cap North Korea’s oil imports, though a watered-down version of the penalties sought by the United States government, was significant nonetheless. For one thing, it was a reminder that coordinated action with China and Russia, which have been wary of imposing more sanctions against Pyongyang, is possible. On this front, too, North Korea’s recent brinkmanship may have unexpectedly paved the way for new (if slim) possibilities for cooperation. Abe and President Vladimir V. Putin of Russia seem to have developed an effective line of communication, including on intractable-seeming issues, like the status of contested islands in the Pacific. And the chances for at least some measure of rapprochement between Japan and China may be growing. Building bridges with Beijing remains a loaded notion for many Japanese people, but Mr. Abe now has more clout and political capital to try, in the name of protecting Japan against the more immediate threat posed by North Korea. The recent escalation of the North Korea crisis seems to have validated Abe’s controversial efforts to strengthen Japan’s defense posture. The Japanese public is now more open to adopting a tougher stance. The new leader of the opposition Democratic Party, Maehara Seiji, is a hawk, and under his leadership the party, traditionally an advocate of pacifism, is likely to support, if perhaps reluctantly, the Abe Administration’s hard-nosed approach to security. There is no viable military solution to the North Korea crisis. Japan, like the other main parties, must make the most of the slivers of opportunity created by the escalating threat to renew efforts at finding a multilateral diplomatic solution.” (Funabashi Yoichi, “North Korea’s Nuclear Weapons, Japan’s Bind,” New York Times, September 13, 2017)
"seriously considered." A recent Gallup Korea poll found 60% of respondents were in favor of South Korea having its own nuclear weapons, with 35% opposed. “To respond to North Korea by having our own nuclear weapons will not maintain peace on the Korean Peninsula and could lead to a nuclear arms race in northeast Asia,” Moon said. (Paula Hancocks and James Griffiths, “No Nuclear Weapons in South Korea, Says President Moon,” CNN, September 14, 2017)

South Korea said that it is considering providing US$8 million in aid to North Korea via international organizations as it seeks to spur inter-Korean exchanges regardless of political considerations. The government plans to hold a meeting on inter-Korean cooperation September 21 to finalize whether to offer humanitarian assistance to those who are vulnerable in North Korea, according to Seoul's unification ministry. Seoul suspended its aid to North Korea through U.N. agencies after the North's nuclear and missile tests in 2016. If approved, the South would provide $4.5 million for a project to help infants and pregnant women by the World Food Program, and $3.5 million for the U.N. International Children's Emergency Fund (UNICEF). The two agencies have asked Seoul to resume its financial support. "The government's basic stance is that humanitarian assistance to those who are vulnerable in North Korea should be continued regardless of political considerations," a ministry official said. "Seoul plans to decide the details of the aid and its timing after taking into account the inter-Korean situation," he added. If agreed, it would mark the resumption of aid via U.N. organizations after a hiatus of nearly two years.

President Moon said at the Group of 20 summit in July that assistance in the welfare and medical sectors should not be linked to political situations, citing the issue of malnutrition among North Korean infants. South Korea offered humanitarian assistance to the North even under conservative administrations, but Moon's predecessor under an ousted President Park Geun-hye held off the aid after the North's fourth nuclear test in January 2016. The ministry official said he believes that Seoul's move would not hamper the sanctions regime. The government said that it has explained its aid plan to the United States in order not to give a wrong message to the international community focusing on pressure and sanctions on the wayward regime. In May, the South announced that it will permit civic groups to seek inter-Korean exchanges to an extent that such a move would not compromise the international sanctions regime. But North Korea has rejected it in protest at Seoul's support for U.N. sanctions against it. It claimed that sanctions and dialogue cannot go together. The ministry also added that it is "positively" considering chipping in $6 million for the U.N. agency's census on North Korea. North Korea earlier said that it plans to conduct a preliminary survey of its population in October with technical support from the United Nations Population Fund (UNFPA). The census is slated for next year. "Seoul is mulling over the support," the official noted. "It will be a good chance to get an idea of the current state of the North Korean population with reliable international methods and the ministry feels the need (for supporting) such project." It would mark the North's first census since 2008, when the South provided Pyongyang with $4 million by tapping its inter-Korean cooperation fund. (Yonhap “S. Korea Mulling over US$8 Million in Aid to N.K. via Int'l Organs,” September 14, 2017)

China’s biggest banks have banned North Koreans from opening new accounts. Multiple bank branches, including those of the big five – Bank of China, China Cionstruction Bank, Agricultural Bank of China, IIndustrial and Commercial Bank of China, and the Bank of Communications – said they had imposed a freeze on new accounts by individuals and companies. Three are going further, saying they are cleaning out” existing accounts held by North Koreans by vetoing new deposits. (Yuan Yang and Xinning Liu, “China Banks Freeze New Accounts for N. Koreans,” Financial Times, September 14, 2017, p. 5)

North Korea fired another ballistic missile over Japan this morning, a direct challenge to the United States and China just days after a new sanctions resolution adopted by the United Nations Security Council that was intended to force the country to halt its accelerating nuclear and missile tests. The missile was not aimed at the Pacific island of Guam, which President Trump had warned could prompt a military response after North Korea threatened to fire missiles into the sea near the island last month. Instead, it blasted off from near the Sunan International Airport north of Pyongyang, the North Korean capital, and flew about 2,300 miles directly east, flying over
northern Japan and falling into the Pacific Ocean, according to the South Korean military. That is a slightly greater distance than between the North Korean capital and the American air base in Guam, and American officials, scrambling to assess both the symbolism and importance of the test, said it was clearly intended to make the point that the North could reach the base with ease.

One senior American military official called it a test shot that was also meant as a warning that the primary American bomber base in the Pacific, which would be central to any military action on the Korean Peninsula, was within easy reach of the North’s intermediate-range missiles. At the White House, the launching came at the end of the working day, and senior officials gathered in the Situation Room to weigh a response. But the Trump administration chose not to take out the missile on the launching pad, even though they saw it being fueled up a day ago. Vice President Mike Pence, officials said, was even shown images of the missile during a visit to one of the nation’s intelligence agencies. Neither the United States nor Japan tried to shoot down the missile, perhaps because it was clear moments after the launching that it was not aimed at land.

“The North American Aerospace Defense Command determined this ballistic missile did not pose a threat to North America,” Cmdr. Dave Benham, a spokesman for United States Pacific Command, said in a statement. It also concluded that the missile “did not pose a threat to Guam.” Nonetheless, in Japan, an alert was issued on television and via cellphones, warning people to take shelter inside a building or underground. Japan said the missile landed in waters about 1,370 miles east of the northern Japanese island of Hokkaido. Intelligence officials have said in recent days that they believe that if Kim is willing to enter talks over a freeze of his nuclear and missile testing — and they are uncertain that he is — he will only do so after he has established that he can launch a nuclear weapon capable of hitting American territory. Today’s flight, with a long arc that peaked at an altitude a little less than 500 miles, took him close to demonstrating that he can accomplish just that. Trump is scheduled to meet with South Korea’s president, Moon Jae-in, and Japan’s prime minister, Abe Shinzo, in New York next week. Trump’s aides say that they have not ruled out using pre-emptive strikes to stop North Korea’s tests. But they also acknowledge that such strikes could result in retaliation and escalation, putting tens of millions of South Koreans, Americans and Japanese at risk. Abe, after returning to Tokyo from a visit to India, said, “We need to let North Korea realize that if they keep taking this path, they will have no bright future.” In a statement, Secretary of State Rex W. Tillerson used a line that many of his predecessors have used, to no effect, in the past: “These continued provocations only deepen North Korea’s diplomatic and economic isolation.” But Tillerson turned the issue back to China and Russia.

“China supplies North Korea with most of its oil. Russia is the largest employer of North Korean forced labor,” he said. “China and Russia must indicate their intolerance for these reckless missile launches by taking direct actions of their own.” The Security Council will hold “urgent consultations” today at the request of the United States and Japan, the office of Ethiopia’s ambassador said. Ethiopia holds the Council’s rotating presidency for September. South Korean officials said they were still analyzing the flight data to determine what type of missile was launched. In any event, it flew farther than any other missile North Korea has fired. As the missile blasted off at 6:57 a.m., South Korea almost simultaneously launched its Hyunmoo-2 ballistic missile off its east coast in a simulated pre-emptive strike, South Korean defense officials said. Moon approved the South Korean launching and ordered his national security council to meet to discuss the North’s missile test. A proponent of dialogue with North Korea, he has joined Washington in campaigning for tougher sanctions and pressure against the North after its nuclear test. It was the 15th missile test by North Korea this year and the first since North Korea detonated its most powerful nuclear bomb to date on September 3. On the eve of the latest missile test, a North Korean government organization said that the United States should be “beaten to death” like a “rabid dog” for spearheading new United Nations sanctions and that its ally Japan should be “sunken into the sea.” “Now is the time to annihilate the U.S. imperialist aggressors,” a spokesman for the North’s Korea Asia-Pacific Peace Committee said yesterday, according to KCNA. “Let’s reduce the U.S. mainland into ashes and darkness.” The spokesman accused Japan of “dancing to the tune of the U.S.” and warned of a “telling blow” against Japan. “The four islands of the archipelago should be sunken into the sea by the nuclear bomb of juche,” he said, referring to the North’s ruling philosophy of juche, or self-reliance. (Choe Sang-Hun and David E. Sanger, “North Korea Launches New Missile, Defying U.N. Security Council,” New York Times, September 15, 2017, p. A-9) David Wright: “The missile reportedly flew 3,700 kilometers (km)
(2,300 miles) and reached a maximum altitude of 770 km (480 miles). It was at an altitude of 650 to 700 km (400 to 430 miles) when it passed over Hokkaido. … The range of this test was significant since North Korea demonstrated that it could reach Guam with this missile, although the payload the missile was carrying is not known. Guam lies 3,400 km from North Korea, and Pyongyang has talked about it as a target because of the presence of US forces at Anderson Air Force Base. This missile very likely has low enough accuracy that it could be difficult for North Korea to use it to destroy this base, even if the missile was carrying a high-yield warhead. Two significant sources of inaccuracy of an early generation missile like the Hwasong-12 are guidance and control errors early in flight during boost phase, and reentry errors due to the warhead passing through the atmosphere late in flight. I estimate the inaccuracy of the Hwasong-12 flown to this range to be likely 5 to 10 km, although possibly larger. Even assuming the missile carried a 150 kiloton warhead, which may be the yield of North Korea’s recent nuclear test, a missile of this inaccuracy would still have well under a 10% chance of destroying the air base. (For experts: This estimate assumes the air base would have to fall within the warhead’s 5 psi air blast radius, which is 3.7 km, and that the CEP is 5 to 10 km.) As I’ve done with some previous tests, I looked at how the heating experienced by the reentry vehicle (RV) on this test compares to what would be experienced by the same RV on a 10,000 km-range missile on a standard trajectory (MET). My previous calculations were done on North Korea’s highly lofted trajectories, which tended to give high heating rates but relatively short heating times. …In this case the duration of heating (τ) would be roughly the same in the two cases. However, not surprisingly because of the difference in ranges and therefore of reentry speeds, the maximum heating rate (q) and the total heat absorbed (Q) by the RV on this trajectory is only about half that of the 10,000 km trajectory. A comparison of RV heating on the September 15 missile test and on a 10,000 km-range trajectory, assuming both missiles have the same RV and payload. A discussion of these quantities can be found in the earlier post. So while it seems likely that North Korea can develop a heat shield that would be sufficient for a 10,000 km range missile, this test does not demonstrate that. (David Wright, “North Korea’s Sept. 15 Missile Launch over Japan, Union of Concerned Scientists Blog, All Things Nuclear, September 14, 2017)

KCNA: “Kim Jong Un, chairman of the Workers' Party of Korea, chairman of the State Affairs Commission of the DPRK and supreme commander of the Korean People's Army, guided once again a launching drill of the medium-and-long range strategic ballistic rocket Hwasong-12 on the spot. He was greeted by Ri Pyong Chol, Kim Jong Sik, Jo Yong Won, Yu Jin and other leading officials of the C.C., WPK, General of the Strategic Force Kim Rak Gyom, commander of the KPA Strategic Force, and Jang Chang Ha, Jon Il Ho and other officials in the field of defense scientific research. Participating in the drill were scientists and technicians in the field of rocket research and the Hwasong-12 rocket operation unit of the KPA Strategic Force. The launching drill was conducted with the aim at calming down the belligerence of the U.S. which has recently cried out for using military muscle against the DPRK, and at bolstering up operation capability for attack and counterattack to counter it with swift and powerful military counteraction, examining the order to deal with nuclear warheads and confirming action procedures of actual war. The Hwasong artillerymen were rapidly deployed to the launching ground at early morning under a sudden order of respected Supreme Leader Kim Jong Un. They were waiting for the moment to launch ballistic rocket after launching preparation under skillful organization and command. He arrived at the launching ground, learned about the launch plan and preparation and issued an order to launch the medium-and-long range strategic ballistic rocket Hwasong-12. At the moment, Hwasong-12 zoomed to the sky with dazzling flash and big explosion. The fired ballistic rocket crossed the sky above Hokkaido of Japan along the preset flight track and accurately hit the preset target waters in the Pacific. Highly appreciating that the current launching drill of very great meaning in increasing combat power of the nuclear force attained its aim, Kim Jong Un expressed great satisfaction over the successful launching drill. Praising the Hwasong artillerymen for handling the rocket well with skillful firepower service, he said with pride that the combat efficiency and reliability of Hwasong-12 were thoroughly verified, operation members' capacity for actual war is also very perfect and the work for increasing combat power of Hwasong-12 has been realized. He noted that all drills should become meaningful and practical ones for increasing combat power of the nuclear force like the current drill in the future, and the...
order to deal with nuclear warheads should be strictly established suited to their deployment for actual war. He underlined the need for the scientists and technicians in the field of rocket research and Hwasong artillerymen to put rockets on a modern and ultra modern basis and develop the operation level onto a higher stage with their close combination. He told leading officials of the Department of Munitions Industry of the Party Central Committee and the field of defense scientific research accompanying him that our final goal is to establish the equilibrium of real force with the U.S., and make the U.S. rulers dare not talk about military option for the DPRK. And he stressed the need to run at full speed and straight, continuing to qualitatively consolidate the military attack capacity for nuclear counterattack the U.S. cannot cope with.

North Korea said it aims to reach an “equilibrium” of military force with the United States, which earlier signaled its patience for diplomacy is wearing thin after Pyongyang fired a missile over Japan for the second time in under a month. “Our final goal is to establish the equilibrium of real force with the U.S. and make the U.S. rulers dare not talk about military option,” North Korean leader Kim Jong Un was quoted as saying by KCNA. Kim was shown beaming as he watched the missile fly from a moving launcher in photos released by the agency, surrounded by several officials. “The combat efficiency and reliability of Hwasong-12 were thoroughly verified,” said Kim as quoted by KCNA. Kim added the North’s goal of completing its nuclear force had “nearly reached the terminal.” After the latest missile launch yesterday, White House National Security Adviser H.R. McMaster said the United States was fast running out of patience with North Korea’s missile and nuclear programs. “We’ve been kicking the can down the road, and we’re out of road,” McMaster told reporters, referring to Pyongyang’s repeated missile tests in defiance of international pressure. “For those ... who have been commenting on a lack of a military option, there is a military option,” he said, adding that it would not be the Trump administration’s preferred choice. Also yesterday, the U.N. Security Council condemned the “highly provocative” missile launch by North Korea. The U.S. ambassador to the United Nations, Nikki Haley, echoed McMaster’s strong rhetoric, even as she said Washington’s preferred resolution to the crisis is through diplomacy and sanctions. “What we are seeing is, they are continuing to be provocative, they are continuing to be reckless and at that point there’s not a whole lot the Security Council is going to be able to do from here, when you’ve cut 90 percent of the trade and 30 percent of the oil,” Haley said. President Donald Trump said that he is “more confident than ever that our options in addressing this threat are both effective and overwhelming.” He said at Joint Base Andrews near Washington that North Korea “has once again shown its utter contempt for its neighbors and for the entire world community.” Yesterday, Secretary of State Tillerson called on China, Pyongyang’s only ally, and Russia to apply more pressure on North Korea by “taking direct actions of their own.” Beijing has pushed back, urging Washington to do more to rein in North Korea. “Honestly, I think the United States should be doing ... much more than now, so that there’s real effective international cooperation on this issue,” China’s ambassador to the United States, Cui Tiankai, said today. “They should refrain from issuing more threats. They should do more to find effective ways to resume dialogue and negotiation,” he said, while adding that China would never accept North Korea as a nuclear weapons state. Russia’s U.N. ambassador, Vassily Nebenzia, said the United States needed to begin talks with North Korea, something that Washington has so far ruled out. “We called on our U.S. partners and others to implement political and diplomatic solutions that are provided for in the resolution,” Nebenzia told reporters after the Security Council meeting. “Without implementing this, we also will consider it as a non-compliance with the resolution.” Asked about the prospect for direct talks, a White House spokesman said, “As the president and his national security team have repeatedly said, now is not the time to talk to North Korea.” South Korean President Moon Jae-in also said dialogue with the
North was impossible at this point. He ordered officials to analyze and prepare for possible new North Korean threats, including electromagnetic pulse and biochemical attacks. (Jeff Mason and Michelle Nichols, “North Korea Says Seeking ‘Military Equilibrium’ with U.S.,” Reuters, September 15, 2017)

A majority of Americans support military action against North Korea if economic and diplomatic efforts fail, according to a Gallup poll released today amid rising tension over Pyongyang’s nuclear weapons program and recent missile launches. The survey of 1,022 U.S. adults last week found that 58 percent said they would favor military action against North Korea if the United States cannot accomplish its goals by more peaceful means first. Such support, however, was largely split along political party lines. Among Republicans, 82 percent would back military action compared with 37 percent among Democrats. Among political independents, 56 backed such action. “Half still think the situation can be resolved with sanctions and diplomacy,” and the majority of Americans doubt any U.S. military attack is imminent in the next six months, Gallup said. “A majority of Americans appear ready to support military action against that country, at least as a last resort,” Gallup wrote in its report. But, it added “Americans still think North Korea is bluffing.” The findings were a shift from 2003, when it last asked about U.S. support for military action against Pyongyang and 47 percent said they backed it, according to Gallup. Most of the shift was seen among Republicans and independents, it added. “A sharp increase in support among Republicans - possibly mirroring President Donald Trump’s promise to respond with “fire and fury” to North Korean leader Kim Jong Un’s threats - explains much of this,” Gallup said. In August, Trump warned North Korea it would face “fire and fury” if it threatened the United States. The survey, conducted by telephone interviews September 6-10, has a sampling error of plus or minus 4 percentage points. (Reuters, “U.S. Majority Backs Military Action vs. North Korea: Gallup Poll,” September 15, 2017)

When North Korea launched a missile that flew over Japan yesterday morning, prompting the authorities to broadcast an alert on cellphones and television, many people wondered: Why didn’t the Japanese military shoot it down? The government quickly judged that the missile was not targeting Japan, and it landed in the Pacific Ocean, about 1,370 miles east of Hokkaido, Japan’s northernmost island. But officials in Japan who may have considered intercepting the missile faced two immediate constraints: The country’s missile defenses are limited, and the Constitution limits military action only to instances of self-defense. Those same constraints have weighed heavily on the debate in recent weeks over how Japan should be responding to the North’s rapidly advancing nuclear program, including what role it should play as an American ally and to what extent it should upgrade its armed forces. Though Japan provided rear support for the United States during the Vietnam and Korean Wars, this alliance has never been tested as it would be in a conflict with North Korea. Any military action by the Trump administration against the North risks a retaliatory missile attack on Japan, where 54,000 American troops are based. Yesterday, North Korea threatened to “sink” Japanese islands with nuclear weapons, adding that “Japan is no longer needed to exist near us.” Japan’s position east of North Korea also means that missiles fired by the North toward the United States, including Guam, almost certainly would have to fly over Japanese territory. But the missile defense systems stationed across Japan on mobile launchers are designed only to intercept missiles as they are descending, not in midflight as they are headed to the United States. Other defense systems on four naval destroyers can target missiles midflight, but they have to be in the right place at the right time. It is also unclear whether the pacifist Constitution allows Japan to shoot down a missile headed for the United States, much less initiate a pre-emptive attack on a missile on a launchpad in North Korea, as some in Japan believe it should be prepared to do. In recent months, the government of Prime Minister Abe Shinzo has revived a long-simmering discussion over whether to acquire cruise missiles — which can be fired from land, air or sea — that would allow it to strike a launch site in North Korea if it detected signs of an imminent attack. The Japanese government ruled in 1956 that such a pre-emptive strike fell under its right of self-defense, but some lawmakers say deploying cruise missiles could cross a line and break with longstanding policy established after World War II to eschew offensive weapons. While the Japanese public is anxious about North Korea, it is torn about developing the
nation’s military capabilities. “The Japanese public is still not so sure about this,” said Richard Samuels, a Japan specialist and the director of the Center for International Studies at the Massachusetts Institute of Technology. President Trump signaled this month that he wanted Japan, along with South Korea, to bolster arms spending. In a Twitter post two days after North Korea conducted its sixth nuclear test, Trump said he would allow the two countries to “buy a substantially increased amount of highly sophisticated military equipment from the United States.” It is unclear whether Trump had specific equipment in mind, or whether that included cruise missiles. In Japan, part of the political calculation is how China or South Korea might react to such a purchase. “It will be an excuse to China for further military buildup,” said Murata Koji, a professor of international relations at Doshisha University in Kyoto. “And even in South Korea, some kind of anti-Japanese sentiment will be further facilitated.” Onodera Itsunori, Japan’s defense minister, has avoided discussing a pre-emptive strike on North Korea. Instead, he speaks of counterstrikes, suggesting a more passive interpretation of the country’s legal rights under the Constitution. “In Japan’s case, I don’t think we can shoot before we are shot,” said Yamaguchi Noboru, a professor of international relations at the International University of Japan in Niigata and a retired lieutenant general in Japan’s army, known as the Ground Self-Defense Force. “Most likely, once we are shot and the second or third missiles are coming and they are on the ground, we can shoot back.” Some analysts say that officials in Abe’s administration have been careful to use language that will not alarm the public. In polls, about half those surveyed say they would oppose Japan’s acquiring missiles to be used in pre-emptive strikes. But as North Korea steps up missile launches and nuclear tests, Abe and his cabinet can make a stronger argument for such missiles. “They can say, ‘Look at what North Korea is doing. Yes, we have to protect ourselves,’” said Jeffrey W. Hornung, a political scientist at the RAND Corporation. An upgrade of the country’s ballistic missile defenses would be a much easier sell politically. To best protect itself from a missile attack, some experts say, Japan should buy a Terminal High Altitude Area Defense system, or THAAD, which intercepts enemy rockets at higher altitudes than its current land-based systems. Instead, Japan has said it plans to equip and deploy more destroyers with the Aegis missile defense system. The Defense Ministry has also indicated it wants to acquire a land-based system, known as Aegis Ashore, which can intercept missiles above the atmosphere and above THAAD’s range. Still, most experts say that missile defense is hardly foolproof. “Missile defense is still limited and very expensive, so you have to be somewhat lucky at this point,” said Patrick M. Cronin, senior director of the Asia-Pacific Security Program at the Center for a New American Security in Washington. “To have the political will to fire, you are taking a big gamble. Because if you miss, how does that look?” Two years ago, Abe helped push through security legislation that authorized overseas combat missions by the Japanese military alongside allied troops in the name of “collective self-defense.” For Japan to participate in such collective action, the new laws say, its own security must also be under threat. Some analysts question whether, under that definition, lawmakers would authorize an effort to shoot down missiles en route to the United States. “Japan’s security and legal restrictions are absurdly complex,” said Watanabe Tsuneo, a senior research fellow at the Sasakawa Peace Foundation in Tokyo. Others contend that an attack on Japan’s most important ally surely should be interpreted as a threat to Japan itself, given that the United States is essentially Japan’s protector. “If Japan sees U.S. bases almost being hit, that may be regarded as a situation where, if we don’t save them, Japan’s existence is in danger,” said Professor Yamaguchi of the International University of Japan. “In such a case we could legally engage.” Although the Defense Ministry recently increased its annual budget request to a record high of 5.26 trillion yen, or about $48 billion, its military spending relative to gross domestic product is minimal compared with those of other countries. And Japan may have other military equipment on its wish list, including amphibious vehicles or more fighter jets. “If the resources are limited, we have to prioritize,” Professor Yamaguchi said. “North Korea is not the only problem. We have to deal with global terrorism, and we need to deal constructively with China,” he added, referring to Beijing’s territorial incursions in the East and South China Seas. Looming in the background is the question of whether Japan should develop nuclear weapons to counteract North Korea’s threat. During the presidential campaign last year, Trump suggested Japan might be “better off” with its own nuclear arsenal. But public opinion in Japan is firmly against it. The White House now opposes Japan — and others in Asia — acquiring nuclear weapons, a senior administration official said, but it has also warned China and Russia that such proliferation may be
inevitable if North Korea does not abandon its program. Jimbo Ken, an associate professor of policy management at Keio University in Tokyo, noted Japan’s status as the only country to have ever suffered nuclear attacks, the bombings of Hiroshima and Nagasaki by the United States. “So our own nuclear option will be our last resort, always,” he said. (Motoko Rich, “Korean Threat Pushes Japanese to Reassess Military Constraints,” New York Times, September 16, 2017, p. A-1)

North Korea’s final goal is achieving an “equilibrium” of military force with the United States and efforts to complete the development of nuclear arms have entered the final phase, leader Kim Jong Un was quoted by his country’s official media as saying Saturday, a day after its latest ballistic missile test. North Korea’s fast-paced development of weapons and flurry of tests, as well as its bellicose rhetoric, are seen by some experts as ultimately aimed at drawing the United States to the negotiating table. North Korea has suggested it will continue arms development as long as Washington provides no security assurances to Pyongyang. (Karube Takuya, “N. Korea Say ‘Equilibrium’ of Force with U.S. Nearly Complete,” Kyodo, September 16, 2017)

South Korea and Japan, the United States’ two main East Asian allies, differed today over providing humanitarian aid to North Korea’s malnourished children and pregnant women, hours after that country launched a ballistic missile over Japan. President Moon Jae-in of South Korea and the Japanese prime minister, Abe Shinzo, talked on the phone today, sharing their condemnation of North Korea’s latest missile test and vowing to work together to bring about more sanctions against the country, Moon’s office said. But Abe took issue with South Korea’s plan to donate $8 million to two United Nations humanitarian programs in North Korea. He asked Moon to reconsider the timing of the aid, Moon’s office said. Yessterday, South Korea announced plans to donate $4.5 million to help the World Food Program provide nutrition-rich supplies to North Korean hospitals and day care centers. It also plans to donate $3.5 million to United Nations Children’s Fund projects that supply vaccines, medicine and malnutrition treatment to children and pregnant women. Suga Yoshihide, Japan’s chief cabinet secretary, said yesterday that providing aid for North Korea could undermine international efforts to pressure Pyongyang. But hours after the North’s missile launch on Friday, South Korea reconfirmed its humanitarian aid plans. “We began considering humanitarian aid upon requests from the World Food Program and Unicef,” Moon was quoted in a statement from his office as saying to Abe. “In principle, giving support for infants and small children and pregnant women should be handled separately from politics.” When Moon took office in May, promising to push for dialogue with the North, there were concerns about clashes with Abe, who is widely considered a hawk on North Korea. As North Korea accelerated its nuclear and missile programs with a spate of tests in recent months, Moon joined President Trump and Abe in advocating tougher sanctions. But he also insists that the crisis must be resolved through negotiations. Trump has often cast doubt on Moon’s approach. On August 30, he said that “talking is not the answer” in dealing with North Korea. Hours after the North conducted its sixth and most powerful nuclear test, on Sept. 3, he criticized South Korea’s “talk of appeasement with North Korea.” Japan has been particularly alarmed by the last two missile tests because the projectiles flew over northern Japan before landing in the Pacific Ocean. The Japanese were told to take cover indoors or underground in case the missiles malfunctioned and crashed. Trump administration officials suggested today that their patience had worn thin over the North’s repeated defiance of Security Council resolutions on missile and bomb testing. “What we’re seeing is, they are continuing to be provocative, they are continuing to be reckless and at that point there’s not a whole lot the Security Council is going to be able to do from there, when you’ve cut 90 percent of the trade and 30 percent of the oil,” Nikki R. Haley, the United States ambassador to the United Nations, told reporters at a White House briefing. Later today at the United Nations Security Council, the 15 members held consultations on yesterday’s missile launch and issued a statement that denounced it as “highly provocative,” but they took no further action. The latest sanctions would further isolate North Korea’s economy, making more vulnerable its malnourished classes, including children, nursing mothers and older people, said Lee Eugene, a spokeswoman for South Korea’s Ministry of Unification. South Korea plans to complete the timing and details of its humanitarian aid package next week. “They are for providing cereals and vaccines for these vulnerable classes,” Ms. Lee said, referring to the United Nations aid programs. “I don’t think this violates the spirit of the United Nations.” Such an attitude differs sharply from that of South Korea’s previous conservative governments, which
drastically curtailed humanitarian aid for North Korea, accusing its government of squandering on nuclear weapons programs the resources it should spend on its impoverished people. But supporters of humanitarian aid say that United Nations’ and other penalties were hurting poor North Koreans more than the country’s leaders. North Korea’s economy has improved under its leader, Kim Jong-un, but United Nations relief agencies have appealed annually for donations, reporting widespread malnourishment among children and nursing mothers. Amid tensions over North Korea’s nuclear and missile programs, international donors have become increasingly reluctant to chip in. (Choe Sang-hun, “Aid for Poor in North Korea Divides Two Neighbors,” New York Times, September 16, 2017, p. A-9)

As North Korea continues to launch test missiles and issue provocative threats against the U.S. and its allies in the region, a majority of Americans appear ready to support military action against that country, at least as a last resort. More specifically, 58% say they would favor taking military action against North Korea if economic and diplomatic efforts fail to achieve the United States’ goals. This is significantly higher than the 47% in favor the last time Gallup asked this, in 2003. If the United States does not accomplish its goals regarding North Korea with economic and diplomatic efforts, would you favor or oppose using military action against North Korea? U.S. attitudes about striking North Korea are partisan, as they were in 2003. Eighty-two percent of Republicans in the Sept. 6-10 Gallup poll say they would favor military action if peaceful means fail, compared with 37% of Democrats. The percentage of Democrats who favor military action has hardly changed since 2003: 37% now vs. 41% then. The major shift has been among Republicans, whose support for military action is up 23 percentage points, while independents’ support is up 15 points. (Lydia Saad, “More Back U.S. Military Action vs. North Korea Than in 2003,” Gallop, September 15, 2017)

There are few areas in the North Korean economy, outside its nuclear weapons program, that could be called booming. But the garment industry has been one of them. Over the past few years, North Korea has been sending increasing numbers of seamstresses to China to sew clothes for international buyers, and it also has been encouraging the expansion of the garment industry at home. There are factories around the country producing suits, dresses and children’s clothes — almost all of which are labeled “Made in China.” That should all theoretically come to an end now, after the United Nations Security Council unanimously decided this week to prohibit North Korea from exporting labor and textiles, adding to existing sanctions on coal, iron ore and seafood. “Today’s resolution bans all textile exports,” Nikki Haley, the United States’ ambassador to the United Nations, said Monday when the resolution passed. “That’s an almost $800 million hit to its revenue.” North Korea exported about $725 million worth of clothing last year, according to South Korea’s trade-promotion agency, making it a significant source of income for the cash-strapped country. Adding textiles to the sanctions list means that more than 90 percent of North Korea’s publicly reported exports last year are now banned, Haley said. Coal, iron ore and seafood exports were prohibited in a previous resolution. While diplomats have been describing this week’s ban as being on “textiles,” economists say it should more accurately be called a “garment” ban. North Korea does not export bolts of fabric but instead produces labor-intensive articles of clothing. “When you make simple clothes like T-shirts, the machinery is important. The labor is not so important. So it makes no sense to do things like this in North Korea,” said Paul Tjia, a Dutch consultant who helps businesses operate in North Korea, especially in the garment industry. “But for garments that require a lot of manual work, like bras or winter sports clothes, it makes a lot of sense to make those in North Korea because the price-to-quality ratio is very attractive,” said Tjia, who most recently went to Pyongyang in May. Tjia helps mainly European companies outsource sewing to North Korea and espouses the selling points of North Korean labor. At one conference in Seoul, he showed photos of intricately made dresses that he said North Korean workers had made for a major European fashion label — although he declined to say which one. He also declined to say who his current clients are, for fear of attracting unwanted attention to the provenance of their clothes. The Australian surfing label Rip Curl found itself in hot water last year when it was revealed that some of its clothes had been made not in China, as the company thought, but in North Korea. With almost all of the North Korean-made clothes leaving through
China, the effectiveness — or otherwise — of this crackdown will depend on Beijing’s willingness to enforce it. “If a container coming from North Korea says it contains sweet potatoes, is the Chinese customs department going to crack it open to check that it does not contain underpants?” asked Andray Abrahamian, a visiting scholar at University of California at Berkeley’s Center for Korean Studies. Although China supported the new U.N. resolution, its implementation of previous sanctions has been spotty at best, analysts say. But if Beijing is serious about stopping North Korea’s exports of apparel and workers to sew garments in Chinese factories, it would have a significant impact on the North’s economy, said Marcus Noland of the Peterson Institute for International Economics. “The reason that this is important is not only because apparel exports are a significant number but because it’s the one non-resource area that’s really growing,” Noland said, differentiating it from mineral exports such as coal and iron ore. “So it’s not just the static number that’s important. It’s the fact that this sector was emerging as an area of comparative advantage.” There is another thing that makes the crackdown on clothing exports different from previous actions against North Korea. Previously, governments had stressed that the sanctions were targeting the regime and were aimed at cutting off its access to the money or equipment it needed for its nuclear weapons program. This effort to shut down North Korea’s garment industry is one that will have wide-reaching ramifications across North Korea. “Assuming the ban is enforced, it will have a huge impact,” said Abrahamian, who visited North Korean garment factories several times while working for Choson Exchange, an NGO focused on business training for North Koreans. “Tens of thousands, possibly even hundreds of thousands, of North Koreans are employed in this industry, and 98 percent of them are women. That’s the demographic that’s clearly going to suffer as a result of this,” he said. Noland agreed with the assessment that the sanctions would hurt ordinary people and especially women, but he said this was a toll that the United Nations should be prepared to inflict to punish the regime. It is not known how much the women working in garment factories are paid. In North Korea, wages paid by the state are paltry. But as joint ventures have developed, the regime has been allowing workers to keep a share of earnings — while taking the majority for itself. While Tjia does not know how much the workers in these factories are paid, he said that workers in factories that export products and have contracts with foreign clients are much better off. He reported seeing an increasing number of seamstresses with cellphones. For that reason, outsourcing to North Korea should be seen in a wider context, he said. “If you want to see a change or an improvement in North Korea, the only way is to see economic development in the country, like we have seen in China over the last 40 years,” Tjia said. “Only when an economy grows and a middle class emerges — that’s when we will see change.” (Anna Fifield, “Ban on North Korean Clothing Exports Will Hurt Women the Most, Experts Say,” Washington Post, September 18, 2017, p. A-10)

The Pentagon deployed a formation of 14 bombers and fighters over the Korean Peninsula that also included South Korean and Japanese aircraft, the latest show of force in response to North Korea’s missile launches and nuclear tests. The warplanes were dispatched after North Korea launched a ballistic missile over northern Japan on Thursday, triggering a widespread emergency alert for those who call the region home. Two Air Force B-1B bombers from Andersen Air Force Base in Guam and four Marine Corps F-35B fighters from Iwakuni, Japan, combined with four South Korean F-15K fighters and four F-2 Japanese fighters, U.S. defense officials said. The aircraft carried out a simulated attack on the Pilsung training range in South Korea, a few dozen miles from the demilitarized zone separating the North and South, while using live bombs. The U.S. and Japanese jets also flew in formation over waters near Kyushu, Japan, a southern portion of the country that is the closest major island to the Korean Peninsula. (Dan Lamothe, “U.S. Warplanes Drop Live Bombs in a New, Massive Show of Force Aimed at North Korea,” Washington Post, September 18, 2017)

The Trump administration escalated its rhetoric against North Korea, warning that time is running out for a peaceful solution between Kim Jong Un’s regime and the United States and its allies. Administration officials said the risk from North Korea’s nuclear weapons program is rising, and they underscored that President Trump will confront the looming crisis at the U.N. General Assembly this week. Trump, who spoke by phone with South Korean President Moon Jae-in
yesterday, referred to Kim on Twitter as "Rocket Man" and asserted that "long gas lines" are forming in the North because of recent U.N. sanctions on oil imports. "If North Korea keeps on with this reckless behavior, if the United States has to defend itself or defend its allies in any way, North Korea will be destroyed," Nikki Haley, the U.S. ambassador to the United Nations, said on CNN's "State of the Union." "None of us want that. None of us want war. But we also have to look at the fact that you are dealing with someone [in Kim] who is being reckless, irresponsible and is continuing to give threats not only to the United States, but to all of its allies. So something is going to have to be done." The question remains, however, how realistic the Trump administration's threats are as the North quickly advances its nuclear and ballistic missile capabilities. "He's going to have to give up his nuclear weapons, because the president has said that he is not going to tolerate this regime threatening the United States and our citizens with a nuclear weapon," national security adviser H.R. McMaster said on ABC's "This Week." Trump, McMaster added, has "been very clear about that, that all options are on the table." Tillerson said North Korea does not appear to be interested in denuclearization talks. "I'm waiting for the regime in North Korea to give us some indication that they're prepared to have constructive, productive talks," he said on CBS's "Face the Nation." "We have tried a couple of times to signal to them that we're ready when they're ready," Tillerson added, "and they responded with more missile launches and a nuclear test. All they need to do to let us know they're ready to talk is to just stop these tests, stop these provocative actions, and let's lower the threat level and the rhetoric." McMaster said Washington isn't assuming the sanctions will work or buy time. "We all have our doubts about whether or not that's going to be enough," he said, "and so we have to prepare all options. We have to make sure all options are under development to ensure that this regime cannot threaten the world with a nuclear weapon." Asked on CNN whether the Trump administration should continue to deny the North diplomatic talks until it ends its nuclear program, Sen. Dianne Feinstein (D-Calif.), a member of the Senate Intelligence Committee, said no. "I think that North Korea is not going to give up its program with nothing on the table," she said. "I think that what could happen is that we could have reliable verification of a freeze of both the nuclear program and the missile arsenal, and that we could conceivably talk China into supporting that kind of a freeze, because it would carry with it no regime change and no war." (David Nakamura and Anne Gearan, “Fresh Warning Sent to N. Korea,” Washington Post, September 18, 2017, p. A-1)

When North Korea launched long-range missiles this summer, and again on September 15, demonstrating its ability to strike Guam and perhaps the United States mainland, it powered the weapons with a rare, potent rocket fuel that American intelligence agencies believe initially came from China and Russia. The United States government is scrambling to determine whether those two countries are still providing the ingredients for the highly volatile fuel and, if so, whether North Korea's supply can be interrupted, either through sanctions or sabotage. Among those who study the issue, there is a growing belief that the United States should focus on the fuel, either to halt it, if possible, or to take advantage of its volatile properties to slow the North's program. But it may well be too late. Intelligence officials believe that the North's program has advanced to the point where it is no longer as reliant on outside suppliers, and that it may itself be making the potent fuel, known as UDMH. Despite a long record of intelligence warnings that the North was acquiring both forceful missile engines and the fuel to power them, there is no evidence that Washington has ever moved with urgency to cut off Pyongyang's access to the rare propellant. Classified memos from both the George W. Bush and Obama administrations laid out, with what turned out to be prescient clarity, how the North's pursuit of the highly potent fuel would enable it to develop missiles that could strike almost anywhere in the continental United States. In response to inquiries from The New York Times, Timothy Barrett, a spokesman for the director of national intelligence, said that “based on North Korea's demonstrated science and technological capabilities — coupled with the priority Pyongyang places on missile programs — North Korea probably is capable of producing UDMH domestically.” UDMH is short for unsymmetrical dimethyl hydrazine. Some experts are skeptical that the North has succeeded in domestic production, given the great difficulty of making and using the highly poisonous fuel, which in far more technically advanced nations has led to giant explosions of missiles and factories. In public, at least, the Trump administration has been far more focused on ordinary fuels — the oil and gas used to heat homes and power vehicles. The United States has pushed to cut off those supplies to
the North, but it settled last week for modest cutbacks under a United Nations resolution. Nonetheless, on Sunday the president made a case that those sanctions were having an effect. He wrote on Twitter that he had spoken with South Korea’s president, Moon Jae-in, and tossed out a new nickname for the North’s leader, Kim Jong-un. “Asked him how Rocket Man is doing,” President Trump wrote. “Long gas lines forming in North Korea. Too bad!” But inside the intelligence agencies and among a few on Capitol Hill who have studied the matter, UDMH is a source of fascination and seen as a natural target for the American effort to halt Mr. Kim’s missile program. “If North Korea does not have UDMH, it cannot threaten the United States, it’s as simple as that,” said Senator Edward J. Markey, Democrat of Massachusetts, who sits on the Senate Foreign Relations Committee. “These are the issues that the U.S. intelligence community has to answer: from which countries they receive the fuel — it’s probably China — and whether North Korea has a stockpile and how big it is.” Today, the chemical is made primarily by China, a few European nations and Russia, which calls it the devil’s venom. Russia only recently resumed production of the fuel, after Western supplies were cut off over its annexation of Crimea. But the Russians are leery of the propellant: It triggered the worst disaster of the space age, in 1960, when scores of Soviet workers and spectators died during a test firing of one of Moscow’s early intercontinental ballistic missiles. The United States no longer produces the fuel — NASA warned of its toxic and explosive dangers as early as 1966, producing a video that opens with a spectacular explosion. Long ago, the American nuclear fleet turned to more stable solid fuels, a move the North Koreans are now trying to replicate. But it may be a decade, experts say, before the North masters that technology to power intercontinental missiles. The White House and American intelligence agencies declined to answer questions about what, if anything, they were doing to cut off North Korea’s supplies, citing the highly classified nature of their effort to disrupt the North Korean missile program. Those efforts have included cyberattacks authorized by President Barack Obama in 2014. But in interviews with four senior American officials who served as the North advanced its program, none could recall any specific discussion of how to disrupt North Korea’s access to the one fuel that now powers its long-range missiles. All four said that while there were wide-ranging discussions about how to penalize the North, they could not remember any that focused specifically on the propellant. Twice — in 2012 and 2014 — the fuel was included in United Nations Security Council lists of prohibited export items. Experts say few paid attention to that fine print. “All sorts of things banned for export to North Korea find their way in,” said Vann H. Van Diepen, a former State Department official who was at the center of many American efforts to control the spread of weapons of mass destruction. But the public and involuntarily public record of American efforts to track North Korea’s progress shows a growing concern dating back a decade that the North was obtaining Russian-designed engines to power its missiles, and the fuel to pour into them. A memo designated “secret” and signed in October 2008 by Condoleezza Rice, then the secretary of state, warned allies that the North had obtained an engine powered by UDMH that “represents a substantial advance in North Korea’s liquid propellant technology,” adding that it “allows North Korea to build even longer-range missiles.” The memo, which was included in documents later released by WikiLeaks, was evidence of early efforts to get countries that had signed the Missile Technology Control Regime to keep such technologies out of the hands of North Korea, Iran and other nations. When Hillary Clinton succeeded Rice in 2009, she issued a similar warning. “North Korea’s next goal may be to develop a mobile ICBM that would be capable of threatening targets around the world,” she wrote to member states in the missile control group. The missile launch that took place on the 15th, in which the projectile was lofted over northern Japan, was from one of those mobile launchers, fueled by UDMH, spy satellites showed. The North’s growing dependency on the fuel was reinforced after a military parade in late 2010, when Pyongyang unveiled an intermediate-range missile known as the Musudan. Most of its flight tests failed, some in enormous fireballs. Federal officials, congressional aides and rocket scientists say emerging clues suggest that, over the years, Pyongyang obtained the fuel, its precursors, its secret formula and its manufacturing gear from China, the North’s main trading partner. Beijing still uses UDMH to loft satellites and warheads and has long exported the toxic substance around the globe. China has always denied aiding North Korea’s missile program, and the fuel is included on a 15-year-old list of missile-related materials that Beijing has put on an export control list. But a secret report from 2008 that was included in the WikiLeaks disclosures found evidence of an “uneven track record in enforcing its missile-
related export controls.” One senior administration official acknowledged that, as a matter of politics, winning a specific ban on the fuel should not be difficult. While cutting off access to oil would raise fears of a humanitarian disaster as 25 million North Koreans freeze through the winter, the missile fuel is not a petroleum product, instead being made from a family of chemicals used in high explosives. The question now is whether the North Koreans have developed their own capabilities to produce the fuel. Given the country’s determination — and success — in proving it could launch a nuclear attack on the United States, experts believe it is just another hurdle to be surmounted. Eckhart W. Schmidt, who has written a two-volume textbook on fuels like UDMH and toured fuel plants around the globe, said his own judgment was that North Korea could learn how to achieve industrial production “if the supply from China or Russia is cut off.”

Van Diepen, the former State Department official, said that in the quarter-century that the North Koreans have worked on increasingly sophisticated missiles, they have gone through many stages of foreign assistance in obtaining the fuel, the precursors, the formula and the manufacturing gear. He said the North was likely to have achieved some ability to make the volatile fuel — even if that resulted in occasional tragedies. “My guess,” Van Diepen said, “is that the North Korean tolerance for casualties is probably pretty high.” (William J. Broad and David E. Sanger, Nuclear Boasts of North Korea Hinge on a Fuel,” New York Times, September 18, 2017, p. A-1)

The United States and its allies have not shot down any North Korean missiles because Pyongyang has yet to launch one that directly threatens American or Japanese territory, Defense Secretary Jim Mattis said. But he said that could change. North Korean missiles have been falling “in the middle of the ocean,” Mattis said. “Were they to be aimed at Guam, or U.S. territory,” he added, “that would elicit a different response.” The defense secretary also said he believed that the United States had found military options to handle the nuclear crisis on the Korean Peninsula that would not put the South Korean capital, Seoul, at grave risk, though he refused to elaborate on what those might be. Most military experts believe that because Seoul is only 35 miles from the demilitarized zone along the border between North and South Korea, the city and its more than 10 million inhabitants would be put in Pyongyang’s immediate cross hairs for retaliation if the United States made a pre-emptive strike on the North. As a first strike would be unlikely to eliminate all of North Korea’s conventional and nuclear weapons — not to mention its chemical or biological ones — American policy makers have traditionally held the view that a pre-emptive strike would likely put an untenable number of civilians at risk. American officials also do not have high confidence that the military could find and destroy North Korea’s entire arsenal of long-range missiles and nuclear warheads. It would then be up to American missile defenses to knock out any that survived and that North Korea might use to attack the United States or its allies. Even a limited strike — on, say, a North Korean missile on its launching pad or a missile in midair — would pose risks that the North’s leader, Kim Jong-un, might retaliate, setting off a spiral of escalation that could plunge the Korean Peninsula into war. Mattis would not say how the United States might bypass that risk while exercising military options. “I won’t go into detail,” he told reporters at the Pentagon during an unannounced news conference. He also declined to say specifically whether those options would be “kinetic” — military-speak for lethal force like bombings, airstrikes or ground combat. Military experts said options that might not prompt immediate retaliation against Seoul could include cyberwarfare or even an assassination attempt on Kim — though such an attempt would have to be successful. Other potential options are a naval blockade of North Korea, or a deployment of additional troops to the region. But signs that the United States is actually preparing a military option in North Korea — like a repositioning of military assets or an evacuation of American citizens in the region — have not appeared so far.

Mattis also said that he believed that North Korea, which most recently launched two missiles that flew over Japan, was deliberately carrying out tests that came as close as possible to provoking the United States, without eliciting a military response. His comments come as the Trump administration has struck increasingly bellicose tone toward Pyongyang in the face of a sharply accelerated pace of missile tests from North Korea. But today, Mattis said he believed that diplomacy and sanctions were managing to put pressure on Pyongyang, which he said was finding itself increasingly isolated. Mattis cited as proof a recent decision by the Mexican government to declare the North Korea ambassador there “persona non grata” — a move which essentially
Mattis: “Q: Well, sir, while you were up in — visiting the ICBM units, you got news that North Korea had fired another missile. … And a lot of people are wondering why you don't shoot them down. Q: Could you say on the record, by chance? A lot of people asking that question. MATTIS: Yes. Okay, we'll be on the record here for a minute, you know, why we don't shoot down the missiles. Number one, those missiles are not directly threatening any of us. Obviously, Japan's missile defenses are up, and their radars are operating. Ours are. And they are intentionally doing provocations that seem to press against the envelope for just how far can they push without going over some kind of a line in their minds that would make them vulnerable. So they aim for the middle of the Pacific Ocean, as you know, where at least we hope no ships are around, right? And the bottom line is that, when the missiles — were they to be a threat, whether it be to U.S. territory, Guam, obviously Japan — Japan's territory, that would elicit a different response from us. Q: And Ambassador Haley said today that there are many military options for North Korea — at the U.N., she says this. Is that your perspective? And is that the message that you want to be out there? MATTIS: Ambassador Haley is correct. There are many military options, in concert with our allies that we will take to defend our allies and our own interests. … On the record. Q: Do you think the sanctions are actually working now? Or do you think they have a prospect for working? Or are we reaching kind of a deadend moment? MATTIS: What we've done with the sanctions is we are putting the leader in North Korea in a position to be aware that the international community, voting unanimously twice now in the United Nations Security Council, seeing the increasing diplomatic isolation that comes with it, comes with the economic sanction that there's a penalty to be paid for ignoring international concerns and norms. I noticed while I was in Mexico, that Mexico had declared the DPRK ambassador persona non grata and he was dispatched home. That's an example of what is working. It's a pressurization effort to raise the cost. You notice Peru has done the same. Other nations have ordered their workers home. So yes, it's working. Q: Sir, is there any military option the U.S. can take with North Korea that would not put Seoul at grave risk? MATTIS: Yes, there are, but I will not go into details. Q: Do you think the increased rhetoric could lead to miscalculation on the North Korean site and lead to sort of an intentional conflict? MATTIS: I believe there is always the potential for miscalculation by the DPRK leader. Q: On the question about shooting down their missiles when they're testing them; would that not be a further strengthening of deterrence if you were to do that? Do you think along those lines? SEC. MATTIS: I cannot make that calculation as far as the DPRK leader. But we will defend ourselves, our interests, our allies. And we work together very transparently and openly with our allies for the very reason that we just mentioned. Q: And, secretary, just to clarify; you said that there were possible military options that would not create a grave risk to Seoul. Are we talking kinetic options as well? MATTIS: Yes, I don't want to go into that. Q: When Defense Minister Song was here, he went back and told his parliament that you two at least discussed the possibility of small tactical nukes. Is that one of the many wide options under consideration? MATTIS: We have open dialogue with our allies on any issue that they want to bring up. We're not only friends, we're trusted allies. And we bring up all issues with one another. Q: Sir, there's a chance that small tactical nukes might be redeployed to the Korean peninsula? MATTIS: No, I said that we discussed the option. But that's all the further I want to say.” (DoD, Media Availability with Secretary of Defense Jim Mattis, September 18, 2017)
exterminate the people of the DPRK, let alone its system and government. What is more deplorable is that the U.S. is misleading public opinion by disseminating the fraudulent claim that the sanctions and pressure are geared to the so-called peaceful solution. The U.S. is strangling and suffocating a country and breaking its will to impose U.S. intention upon it. Is it a peaceful and diplomatic solution? The U.S. blustered that it would not rule out "military option" while making absurd assertion that the sanctions are a peaceful solution. This constitutes an open extortion against the international community as it implies that if they do not join the U.S.-led sanctions campaign against the DPRK, the U.S. will start a nuclear war on the Korean peninsula. The true intention of the U.S. is to appease the opposition from several countries against the escalation of tension and the outbreak of war in the Korean peninsula and the region and involve them in the sanctions and pressure campaign against the DPRK by all means. Although the U.S. is acting so shameless and devious to justify the sanctions and pressure against the DPRK, it will not be able to delude even a single country. It is a foolish dream to hope that the sanctions could work with the DPRK while the sanctions have failed to stop it from becoming a full-fledged nuclear weapons state and making rapid progress in the building of an economic power for more than half a century. The increased moves of the U.S. and its vassal forces to impose sanctions and pressure on the DPRK will only increase our pace towards the ultimate completion of the state nuclear force. The countries joining the U.S. in imposing sanctions on the DPRK should start working on a good explanation for the day when an actual balance of power is established between the DPRK and the U.S."

China’s central bank has told banks to strictly implement United Nations sanctions against North Korea, four sources told Reuters, amid U.S. concerns that Beijing has not been tough enough over Pyongyang’s repeated nuclear tests. Chinese banks have come under scrutiny for their role as a conduit for funds flowing to and from China’s increasingly isolated neighbor. The sources said banks were told to stop providing financial services to new North Korean customers and to wind down loans with existing customers, following tighter sanctions against Pyongyang by the United Nations. The sources said lenders were asked to fully implement United Nations sanctions against North Korea and were warned of the economic losses and reputational risks if they did not do so. Chinese banks received the document today, the sources said. China’s central bank did not immediately respond to a request for comment. “At present, management of North Korea-related business has become an issue of national-level politics and national security,” according to the document seen by the sources. The document directed banks to explain to any North Korean customers that “our bank is fulfilling our international obligations and implementing United Nations sanctions against North Korea. As such, we refuse to handle any individual loans connected to North Korea.” The document did not specify whether existing North Korean account holders could still deposit or remove money from their accounts. (Reuters, “China’s Central Bank Tells Banks Not to Do Business with North Korea: Sources,” September 21, 2017)

Abe: “The whole world confronts an unprecedented, grave and imminent threat from North Korea. On September 3, the regime carried out a reprehensible nuclear test. Late last week, it launched a ballistic missile over my country, Japan, only two weeks after a similar missile launch. By repeatedly testing missiles — in violation of United Nations Security Council resolutions — Pyongyang has shown its reach now extends to the United States and Europe. North Korea’s actions are an outright challenge to the international community. On September 11, the United Nations Security Council unanimously adopted a resolution on a new round of strict sanctions that restrict member states from selling oil to the North, ban North Korean textile exports and ban member states from authorizing North Koreans to work abroad. They are an important step, but the leadership in Pyongyang has consistently ignored previous resolutions. The international community must stay united and enforce the sanctions. Here in northeast Asia, the North Korean threat has been real for more than a quarter-century. We face the threat of missiles — short and medium range — together with the possibility of chemical weapons attacks. North Korea has targeted Japan in particular by abducting many innocent Japanese citizens, including a 13-year-old girl who was abducted in 1977. Most of them have been held in North Korea since the 1970s and
Everyone aspires to a peaceful solution to these challenges. And global solidarity is of utmost importance. Still, **prioritizing diplomacy and emphasizing the importance of dialogue will not work with North Korea. History shows that concerted pressure by the entire international community is essential.** In the early 1990s, North Korea’s announcement to withdraw from the Nuclear Nonproliferation Treaty and the International Atomic Energy Agency was a wake-up call. In response, Japan, the United States and South Korea engaged in dialogue with North Korea and agreed to construct two light-water reactors and to provide heavy fuel oil in exchange for freezing and ultimately dismantling its nuclear program. Japan, the United States and South Korea shouldered most of the financial burden, with the cooperation of Europe and other Asian countries. We know what happened next: Several years after the heavy fuel oil was delivered and construction started on the light-water reactors, North Korea admitted to having a uranium enrichment program in violation of the agreement. [23] By the end of 2002, North Korea expelled I.A.E.A. inspectors, followed by an official withdrawal from the NPT in 2003. China and Russia then joined Japan, the United States and South Korea to create the six-party talks with the North. Pyongyang again agreed to the verifiable denuclearization of the Korean Peninsula. But instead, it declared itself a nuclear power in 2005 and carried out a nuclear test in 2006. The five countries’ attempt to solve the problem through dialogue failed. In short, while the international community provided North Korea with sanctions relief and support as “compensation” for its pledges, the regime ignored most of its commitments. Considering this history and its continuing missile launches and nuclear tests, **more dialogue with North Korea would be a dead end.**

**Pyongyang would see more talks as proof that other countries succumbed to the success of its missile launches and nuclear tests. Now is the time to exert the utmost pressure on the North. There should be no more delays.** How could North Korea relentlessly pursue missile development and nuclear tests over almost half a century? How could North Korea, under successive United Nations sanctions for a decade, acquire enormous resources to obtain crude materials, components and powerful engines? Statistics show that there are countries, mainly in Asia, that continue trading with North Korea; and for some, as recently as in 2016, their trade even exceeded that of the previous year. According to the United Nations, foreign-made parts have been used in North Korea’s ballistic missiles. There are countries buying products and services from North Korea or accepting its workers. Front companies established in Asia enable North Korea access to foreign currencies. Japan has responded by reaffirming the ironclad Japan-United States alliance, and Japan has coordinated in lock step with the United States and South Korea. I firmly support the United States position that all options are on the table. As a response to the latest nuclear test, I value the swift and unanimous adoption of Security Council Resolution 2375 on September 11, which puts significantly tougher sanctions on North Korea. But I stress that we must not be simply complacent with the adoption of these sanctions. We must thoroughly enforce the successive resolutions in order to prevent North Korea from obtaining the goods, technologies, funds and people to further develop its missiles and nuclear program. North Korea poses a serious threat and challenge to our world, and its actions flout the international nonproliferation regime. As swiftly as possible, we must make North Korea end its provocations, abandon its nuclear and ballistic missile development, and return the abductees in North Korea to their homes. Solidarity and concerted effort among the international community, together with the effective role of the United Nations, are more vital than ever.” (Abe Shinzo, “Solidarity against North Korea,” *New York Times*, September 18, 2017, p. A-23)

Ruediger Frank: “...The latest tests have once again intensified the international debate on how to respond to such provocations. Knowing military actions could have devastating results, discussion of response options quickly falls back on finding a stronger formula for economic sanctions to stop the funding stream to North Korea’s WMD programs. When considering new sanctions measures, it is important to understand three main issues: Where does North Korea get the money for its weapons program? Why have sanctions been unable to stop them? And will more sanctions, for example a ban on the export of oil to North Korea, be effective in curbing the North’s nuclear WMD development? The budget reports imply that the North Korean state has for many years run a surplus, to which revenue from “local” sources—including markets—has contributed. This could help finance part of the trade deficit shown below. It is difficult to estimate the actual size of this factor since we neither have absolute budget numbers nor do we know how far the state is able to
convert North Korean won into hard currency for imports. We also do not know whether the latter is necessary—for example, in case some of the state’s budgetary revenue is coming directly in the form of hard currency. Nevertheless, it is important not to see the trade reports below without some domestic context. In the latter half of 2016, the South Korean Trade-Investment Promotion Agency (KOTRA) unveiled its report on North Korean trade for the year 2015. The data showed that the phase of 16 years of continuous growth of North Korea’s trade since the dramatic low in 1998 had ended. In 2015, North Korea’s overall trade volume declined from 7.61 billion to 6.25 billion USD. Were the sanctions finally biting? But which sanctions, in 2015? UNSC resolutions 1718, 1874, 2087 and 2094 were all passed either before or during 2013, the year of the third North Korean nuclear test. But in 2014 and 2015 no tests happened, and no new UN resolutions leading to new sanctions on North Korea were passed. The reasons for the drop in North Korea’s trade volume in 2015 were rather profane. Referring to the work of Lee Jong-Kyu, Li Tingting suggests that the reasons for this decline were reduced demand by the Chinese steel industry for North Korean coal and growing environmental concerns, combined with a decline of world market prices for anthracite. Simply speaking, North Korea has witnessed the fate of any country with a trading structure that is disproportionately dependent on only one or two major export items. This example shows how careful we need to be with interpreting trade data, especially if they are strongly aggregated. The most recent KOTRA report was released in July 2017, covering North Korea’s trade during 2016. This time, common sense would indeed tell us to expect a drop in North Korea’s trade volume. Responding to two North Korean nuclear tests in January and in September, along with a few missile launches, the UN Security Council passed Resolution 2270, further tightening its sanctions. In March, South Korea closed the Kaesong Industrial Zone which has been accused of providing over 100 million USD annually for the regime’s imports. Even China, with great fanfare, made a point of reducing its coal imports from North Korea since March 2016. An informed discussion of these questions requires knowledge of hard facts. Unfortunately, these are particularly difficult to acquire in the case of North Korea. Among the only regular sources of information are the annual reports of Pyongyang’s state media on the state budget and the annual KOTRA reports on North Korean trade. Needless to say, both documents should be taken with a good grain of salt; we are in the middle of a propaganda war, and truth is a quick and easy victim in such cases. But in particular, the trade data do not only suggest that sanctions have not worked so far; more importantly, they show that sanctions are unlikely to produce the desired results in the future even if they are tightened further. If this analysis is true, it is time to find a new strategy. The country has made progress but is still far away from achieving its often ambitious economic goals. In his speech at the Parliamentary session in April 2017, the North Korean Prime Minister admitted that his country was experiencing difficulties in the field of electric energy, and that the dependency on imports of oil was a major strategic problem. Despite Chinese announcements of a drastic reduction of the import of coal, the North Koreans declared their determination to increase the production of anthracite, which points at more domestic use of this resource. In the same report, the Prime Minister hinted at the support of the North Korean state for the production of consumer goods, which is an indicator of moderately growing wealth among at least a part of the population. People who fight for survival are not primarily concerned with shoes, household appliances or electronic gadgets. The Prime Minister’s remarks on agriculture supported the impression of an economy that is still poor, but not in crisis anymore. Rather than stressing the need to increase the production of staple food, he promised an increase in the production of higher-quality products such as meat, milk, fruits, mushrooms and vegetables. A look at the state’s data on the budget reveals a moderate but steady growth in the range of 4 to 6 percent in 2016. Considering the dominant state ownership in the North Korean economy, these numbers are at least correlated, if not equivalent to, what we would call GDP growth. But against all expectations, the updated graph shows that the trade volume has actually recovered, although it still remains below the level of 2012. It is obviously premature to speak about a crisis or a collapse of foreign trade that would be comparable to the catastrophe of the mid-1990s. The question remains, however, how it is possible that the North Korean trade data show such a more or less continuous upward trend despite the international sanctions. To start, we need to be aware that the KOTRA reports offer ample room for interpretation and speculation. They typically do not include inner-Korean trade. About 90 percent of the overall recorded volume is based on bilateral exchanges between North Korea and
China; Boydston argues that not much else matters, especially for sanctions. Indeed, trade with other nations is so small that a single successful or failed deal, no matter how profane and non-political the reasons, can have a significant impact. In other words, most of the time, when we talk about North Korea’s foreign trade, we actually talk about trade with China. Moreover, aggregate trade data hide the fact that North Korean exports had reached their peak already in 2013, and have been lower ever since. The drop after 2013 does correspond with known facts. Li (op. cit.) points at the case of Jang Song Thaek and convincingly argues that his execution in late 2013 seems to be responsible for the absence of a successful major initiative that would have made up for the reduced world market value of North Korea’s coal. The destiny of the various ill-fated Special Economic Zones in or near the Northwestern border town of Sinuiju is a case in point. They were said to be closely related to Jang and have seen little progress since his death. On the other hand, many other bilateral trade initiatives remained intact and operating. This includes tourism, business via Dandong, the export of North Korean labor force to sunset industries such as textile factories in China, and the operation of the Rason Special Economic Zone in the Northeast. Noland notes that the drop in global commodity prices might have affected North Korean exports, but it also made its imports cheaper, thus at least partly offsetting the loss in revenue through lower expenditures. Considering that most of North Korea’s exports are in natural resources, this could indeed explain the shrinking value. Another hypothesis—that North Korea would try to substitute sanctioned export items by other products—seems to have been confirmed, at least in principle. Noland, referring to the work of Choi and Im, argues that North Korea would try to substitute minerals textiles. Numbers of HS 61 and 62 are indeed high, see Table 1. But this is not the whole story; substitution could also take place within the minerals section. In 2016, the exports of metals such as iron and steel have increased by over 42 percent compared to the previous year. So far, and despite this impressive growth rate, their export value (HS 72-83) still stands at relatively modest 143 million USD, which is still far below the 245 million in 2013. It is thus too early to identify a real change of strategy here. But if North Korea’s revenue through the export of coal is dropping, should this not have an impact on its imports and on its trade deficit? The logic is, again, quite simple: if you earn less money, and if nobody is giving you a loan, then you can spend less money. In fact, such considerations are behind sanctions that try to curb North Korean exports. However, a look at the latest KOTRA report reveals that the North Korean trade deficit declined from 1.28 billion USD in 2014 to 0.86 billion USD in 2015 and remained at about that level at around 0.9 billion USD in 2016. It is now way below the trade deficit average of 1.1 billion USD for the years 2005-2012. This is an interesting observation considering the closure of the Kaesong Industrial Zone in early 2016 by the South Korean side. Supporters of the measure argued that cutting off this rare source of hard currency revenue would hit the North Korean economy hard. However, the KOTRA data neither reveal a reduction in North Korean imports nor in its trade deficit. In fact, North Korean imports in 2016 increased by 170 million USD over the previous year. One way for North Korea could be the revenue generated from transfers, including remittances from workers employed abroad. Their number is in the range of 50,000 people. If their annual income is around 10,000 USD, then they earn their country 500 million USD in hard currency income. This alone would cover two-thirds of the annual trade deficit. Considering the current debate about cutting off North Korea’s oil supply, it is interesting to note that the import value of mineral oil and oil products from China in 2016 was only less than half of such imports in 2012, when they stood at 773 million USD. Measured in tons, the amount in 2016 was 799,000 while it was 705,000 in 2012. The imported amount of oil from China has remained more or less stable, but it now costs only half as much as it did a few years ago. A hike in world market prices for oil would thus have a much more serious effect on North Korean oil imports than most sanctions. We also find that at current prices, with cash reserves of, for example, 2 billion USD, the North Korean government could easily cover their oil imports for the next five years without exporting a single item. North Korea’s nuclear and missile programs are a means towards an end, not an end in and of themselves. A case in point was the announcement of the byungjin policy in 2013—of simultaneously developing the economy and nuclear weapons—which replaced the military-first policy of the Kim Jong Il era. Kim Jong Un made his order of priorities very clear: He does not just want to develop the economy so that the military would be financed properly. Rather, he repeatedly stressed that he regards a reliable nuclear deterrent as the safety guarantee that would allow him to focus on economic development. At the 7th Party Congress in May 2016,
Kim pronounced, albeit in somewhat nebulous terms, a five year plan for economic development. If the above is true, then Kim Jong Un is indeed more vulnerable to economic sanctions than his predecessors. So do more sanctions have a chance to stop the North Korean WMD program? My answer is a plain “No.” I am not even asking whether China would ever let a collapse of North Korea happen, or whether an immediate collapse would trigger a desperate last-ditch military adventure that would result in North Korea’s annihilation but would cost hundreds of thousands of lives. A sober reality check is sufficient. Both North Korean programs—nuclear and missile—have a history of decades. This means that critical knowledge and hardware have been acquired long before the current sanctions have been put in place. We cannot prevent them from acquiring what they already have. Furthermore, North Korea has been pursuing self-reliance since the early 1960s even though they have actively exploited international economic cooperation from aid to trade. Nevertheless, this long-standing focus on autonomy helps explain the resilience of the North Korean national economy against measures that would have brought most other economies to their knees. Worse even, North Korea now seems able to manufacture many if not all components of its WMD program by itself. If the North Korean military is mainly or exclusively purchasing from the North Korean state, then even the availability of hard currency is not an issue. All this helps explain the so far low effectiveness of any sanctions, even including those that try to curb North Korea’s overall trade. Those who believe that a drastic reduction in trade will lead to an immediate change of mind in Pyongyang should consider this: Only ten years ago, North Korea was able to exist comfortably with just one third of its current trade. The only ray of hope for supporters of total sanctions is offered by the new middle class. Their emergence is closely connected to foreign trade, which is a source of items to sell and to buy, but also a source of cash and, most importantly, domestic demand. North Koreans will only buy more, and thus provide more growth opportunities for existing or new businesses, if they have more income. My impression is that the fast growth of market activities in North Korea of the past years has recently started to slow down. Some ventures I know have already been forced out of the market due to declining sales. North Korea needs to open its economy to provide enough demand for further growth, but this requires cooperation, not sanctions. The problem with this situation is that it assumes North Koreans are only driven by greed, and that the state has no means to put the genie back in the bottle. Both are true, but only to some extent: let’s not forget the massive repression apparatus. But more importantly, North Koreans are nationalists. If their government can make them believe that the country is really on the brink of a war, then they will postpone their desire for profit and rally ‘round the flag and the leader. Admittedly, North Koreans are used to a high dose of tension and bellicose rhetoric, but the utterances of Donald Trump (“fire and fury”) and people around him, like Nikki Haley (Kim is “begging for war”) constitute a new level of verbal threat. Combine this with the annual joint US-ROK military maneuvers, the stationing of THAAD in Seongju and China’s open criticism to it, Japan’s push for remilitarization, and new UNSC Resolutions and sanctions, and you might see exactly what Kim Jong Un needs to keep his system stable.

with worldwide threats such as climate change and terrorism, Macron said. “We can only address those challenges through multilateralism,” he said, “not through survival of the fittest.” Macron, in an interview with CNN, also said the rhetoric toward North Korea should be toned down and warned against abandoning the nuclear deal with Iran. “Look at the map — if we talk of a military solution, we speak about a lot of victims,” he told the network about the tensions on the Korean Peninsula. “Building peace is what we have to do in this region.” If Trump was eager to use his U.N. address to set the terms for his engagement with an international organization that he derided as ineffectual during his presidential campaign, his rhetoric also set up a potentially dangerous test of his administration’s credibility to carry out the promises and threats he issued. The president said the United States has “great strength and patience,” but he emphasized that if forced to defend America or its allies, “we will have no choice but to totally destroy North Korea.” He said that Kim “is on a suicide mission for himself and for his regime.” Kim, the leader of a nation of 25 million, has responded to past threats from Trump by highlighting his government’s nuclear weapons program and conducting ballistic missile tests. He also called repeatedly for all nations to embrace sovereignty and self-reliance at a body founded after World War II on the idea that all countries are stronger when they work together. “As president of the United States, I will always put America first, just like you, as the leaders of your countries, will always, and should always, put your countries first,” Trump said, returning to a campaign theme and the “America first” phrase, which has been criticized as isolationist and nationalistic. At the same time, however, he took care today to send signals to the mostly white, middle-class voters who form the core of his political support. He took a swipe at “mammoth multinational trade deals” and “powerful global bureaucracies,” and he emphasized that “uncontrolled migration is deeply unfair.” “The substantial costs . . . are borne overwhelmingly by low-income citizens whose concerns are often ignored by both media and government,” Trump said. But it was Trump’s strong criticism of authoritarian regimes that drew the most reaction in the U.N. assembly hall and on Capitol Hill. “The goals of the United Nations are to foster peace and promote global cooperation,” Sen. Dianne Feinstein (D-Calif.) said. “Today, the president used it as a stage to threaten war.” After the president’s address, White House press secretary Sarah Huckabee Sanders sought to temper the idea that Trump’s remarks on North Korea represented a break from long-standing U.S. policy. In a tweet, she cited President Barack Obama’s U.N. address last year when he said that the United States “could, obviously, destroy North Korea with our arsenals” — though Obama appeared to be stating a fact rather than a step that his administration was considering. On Iran, Trump called the U.N.-backed nuclear deal “one of the worst and most one-sided” agreements ever. His administration has said that Tehran is violating the spirit if not the letter of the landmark 2015 accord through its alleged support for terrorism and other activities. Iran, the U.N. nuclear watchdog agency and other parties to the deal disagree. “We cannot let a murderous regime continue these destabilizing activities while building dangerous missiles, and we cannot abide by an agreement if it provides cover for the eventual construction of a nuclear program,” Trump said Tuesday. His voice rising, Trump strongly hinted that his administration could soon declare Tehran out of compliance, which could unravel the accord. “I don’t think you’ve heard the last of it — believe me,” he said. Israeli Prime Minister Benjamin Netanyahu, a vehement opponent of the deal, looked pleased as he and his wife, Sara, listened to Trump’s address. “In more than 30 years of my acquaintance with the U.N., I have not heard a more courageous and sharp speech,” Netanyahu said of Trump in his own speech Tuesday. Iranian leaders sharply rebuked the U.S. president. In a meeting with American media executives ahead of the speech, Iranian President Hassan Rouhani said Iran has complied fully and predicted that the United States will be the loser if it “tramples upon” the agreement. “Everyone will clearly see that Iran has lived up to its agreements and that the United States is therefore a country that cannot be trusted,” Rouhani said. On Twitter, Iranian Foreign Minister Mohammad Javad Zarif said that Trump’s threats amount to “ignorant hate speech” that “belongs in medieval times.” Aides have rejected the notion that Trump’s rhetoric and name-calling fall outside the bounds of international norms, suggesting that the president is merely employing language his rivals understand. (David Nakamura and Anne Gearan, “Trump Defends ‘America First’ Foreign Policy at U.N., Threatens to ‘Totally Destroy’ North Korea,” Washington Post, September 19, 2017)
Trump at UNGA: “To overcome the perils of the present and to achieve the promise of the future, we must begin with the wisdom of the past. Our success depends on a coalition of strong and independent nations that embrace their sovereignty to promote security, prosperity, and peace for themselves and for the world. We do not expect diverse countries to share the same cultures, traditions, or even systems of government. But we do expect all nations to uphold these two core sovereign duties: to respect the interests of their own people and the rights of every other sovereign nation. This is the beautiful vision of this institution, and this is foundation for cooperation and success. Strong, sovereign nations let diverse countries with different values, different cultures, and different dreams not just coexist, but work side by side on the basis of mutual respect. Strong, sovereign nations let their people take ownership of the future and control their own destiny. And strong, sovereign nations allow individuals to flourish in the fullness of the life intended by God. In America, we do not seek to impose our way of life on anyone, but rather to let it shine as an example for everyone to watch. This week gives our country a special reason to take pride in that example. We are celebrating the 230th anniversary of our beloved Constitution — the oldest constitution still in use in the world today. This timeless document has been the foundation of peace, prosperity, and freedom for the Americans and for countless millions around the globe whose own countries have found inspiration in its respect for human nature, human dignity, and the rule of law. …In foreign affairs, we are renewing this founding principle of sovereignty. Our government’s first duty is to its people, to our citizens — to serve their needs, to ensure their safety, to preserve their rights, and to defend their values. As President of the United States, I will always put America first, just like you, as the leaders of your countries will always, and should always, put your countries first. (Applause.) All responsible leaders have an obligation to serve their own citizens, and the nation-state remains the best vehicle for elevating the human condition. But making a better life for our people also requires us to work together in close harmony and unity to create a more safe and peaceful future for all people. The United States will forever be a great friend to the world, and especially to its allies. But we can no longer be taken advantage of, or enter into a one-sided deal where the United States gets nothing in return. As long as I hold this office, I will defend America’s interests above all else. But in fulfilling our obligations to our own nations, we also realize that it’s in everyone’s interest to seek a future where all nations can be sovereign, prosperous, and secure. …America does more than speak for the values expressed in the United Nations Charter. Our citizens have paid the ultimate price to defend our freedom and the freedom of many nations represented in this great hall. America’s devotion is measured on the battlefields where our young men and women have fought and sacrificed alongside of our allies, from the beaches of Europe to the deserts of the Middle East to the jungles of Asia. It is an eternal credit to the American character that even after we and our allies emerged victorious from the bloodiest war in history, we did not seek territorial expansion, or attempt to oppose and impose our way of life on others. Instead, we helped build institutions such as this one to defend the sovereignty, security, and prosperity for all. For the diverse nations of the world, this is our hope. We want harmony and friendship, not conflict and strife. We are guided by outcomes, not ideology. We have a policy of principled realism, rooted in shared goals, interests, and values. That realism forces us to confront a question facing every leader and nation in this room. It is a question we cannot escape or avoid. We will slide down the path of complacency, numb to the challenges, threats, and even wars that we face. Or do we have enough strength and pride to confront those dangers today, so that our citizens can enjoy peace and prosperity tomorrow? If we desire to lift up our citizens, if we aspire to the approval of history, then we must fulfill our sovereign duties to the people we faithfully represent. We must protect our nations, their interests, and their futures. We must reject threats to sovereignty, from the Ukraine to the South China Sea. We must uphold respect for law, respect for borders, and respect for culture, and the peaceful engagement these allow. And just as the founders of this body intended, we must work together and confront together those who threaten us with chaos, turmoil, and terror. The scourge of our planet today is a small group of rogue regimes that violate every principle on which the United Nations is based. They respect neither their own citizens nor the sovereign rights of their countries. If the righteous many do not confront the wicked few, then evil will triumph. When decent people and nations become bystanders to history, the forces of destruction only gather power and strength. No one has shown more contempt for other nations and for the wellbeing of their own people than the depraved regime in North
Korea. It is responsible for the starvation deaths of millions of North Koreans, and for the imprisonment, torture, killing, and oppression of countless more. We were all witness to the regime's deadly abuse when an innocent American college student, Otto Warmbier, was returned to America only to die a few days later. We saw it in the assassination of the dictator's brother using banned nerve agents in an international airport. We know it kidnapped a sweet 13-year-old Japanese girl from a beach in her own country to enslave her as a language tutor for North Korea's spies. If this is not twisted enough, now North Korea's reckless pursuit of nuclear weapons and ballistic missiles threatens the entire world with unthinkable loss of human life. It is an outrage that some nations would not only trade with such a regime, but would arm, supply, and financially support a country that imperils the world with nuclear conflict. No nation on earth has an interest in seeing this band of criminals arm itself with nuclear weapons and missiles. The United States has great strength and patience, but if it is forced to defend itself or its allies, we will have no choice but to totally destroy North Korea. Rocket Man is on a suicide mission for himself and for his regime. The United States is ready, willing and able, but hopefully this will not be necessary. That’s what the United Nations is all about; that’s what the United Nations is for. Let’s see how they do. It is time for North Korea to realize that the denuclearization is its only acceptable future. The United Nations Security Council recently held two unanimous 15-0 votes adopting hard-hitting resolutions against North Korea, and I want to thank China and Russia for joining the vote to impose sanctions, along with all of the other members of the Security Council. Thank you to all involved. But we must do much more. It is time for all nations to work together to isolate the Kim regime until it ceases its hostile behavior.” (White House Office of the Press Secretary, Remarks by President Trump to the 72nd Session of the U.N. General Assembly, September 19, 2017)

Mattis: “Q: Mr. Secretary, just briefly. What message was President Trump trying to send by calling Kim Jong-un "Rocket Man" at the UN today? MATTIS: We are dealing with the North Korean situation through the international processes, and we will continue to do so with Secretary Tillerson leading the effort. And we will hopefully get this resolved through diplomatic means.” (DoD, Remarks by Secretary Mattis at an Enhanced Honor Cordon Welcoming Mihal-Viorel Fifor, Minister of Defense of Romania, to the Pentagon,” September 19, 2017)

The Blue House has moved to censure Defense Minister Song Young-moo for his provocative statements with a ‘stern warning’. The warning appears to be a hasty attempt to deflect criticism that Korea’s top diplomacy and security officials are fighting amongst themselves amidst a tense security crisis. Song later ‘apologized’ for his statements in a National Assembly standing committee meeting. In a press conference on September 19, Blue House Senior Secretary for Public Relations Yoon Young-chan stated, “Regarding Minister Song’s statement in a National Assembly National Defense Committee (NDC) meeting, we believe that the language used was inappropriate and lacked refinement. Considering that it could lead to policy confusion, Minister Song has been given a stern warning.” In a Blue House Action Agenda Meeting held that morning, Chief of Staff Lim Jong-seok and director of the Blue House National Security Office Chung Eui-yong agreed that a stern warning should be issued to Song, with Lim making the phone call to pass on the warning and express concern over the minister’s remarks. During a National Assembly NDC meeting the previous day, Song had described Yonsei University professor and special presidential advisor Moon Chung-in as “deplorable” for making remarks as an academic that were “not fit for a special presidential advisor.” Regarding eight million dollars in humanitarian aid that was to be provided to North Korea through an international organization under the government, Song said he would “significantly postpone the aid provision date.” The Defense Minister has already been embroiled in controversy many times before for openly making statements that conflict with official Blue House guidelines, including comments that “the deployment of tactical US nuclear weapons on the Korean Peninsula is an option we should consider.” Until now, there have been complaints within the Blue House about Song’s outspoken comments, but this sentiment had been conveyed to the minister in more subtle ways or through Prime Minister Lee Nak-yeon as a sign of respect. This was because if the government was seen
making public reference to the problem or speaking out against Song’s remarks, it could cause unwanted speculation about conflict amongst top diplomacy and security officials. However, the issuance of a strong public warning to Song demonstrates that the Blue House has decided it can no longer remain silent or ignore his statements, possibly concerned about the reoccurrence of future ‘mishaps.’ “Song has been making too many provocative statements,” said a high level official from the Blue House. “He has been given a stern warning for his statements, including comments about the deployment of tactical nuclear weapons.” The official went on to say, “Any change to the schedule of humanitarian aid provision to North Korea is not within the Ministry of National Defense’s jurisdiction,” criticizing Song for overstepping his ministerial boundaries and making unrefined remarks. After publicly announcing the warning issued to Song, the Blue House official went to the Press Center and stated, “There is no chance that this will lead to a personnel change, and it is incorrect to talk about disarray amongst diplomacy and security officials. Issuing statements about government ministers or cabinet members falls within the realm of Blue House affairs. The comments made by the Defense Minister, who is a cabinet member unlike Moon Chung-in, can appear to be official statements of the government’s position. This is why Minister Song was asked to be more careful. But it is plain wrong to talk about confusion among diplomatic and security officials.” On the same day, Song later apologized for his criticism of Professor Moon in a plenary session of the National Assembly Legislation and Judiciary Committee, stating that his remarks “went too far.” In response to a question by Liberty Korea Party lawmaker Kim Jin-tae about whether it was unfair for the Blue House National Security Office Director to reprimand the Defense Minister for having a different opinion from a presidential advisor, Song once again bowed his head and stated, “I don’t think it’s unfair, and I apologized for my unrefined comments.” (Jung Yu-gyung and Kim Kyu-nam, “Blue House Censures Defense Minister for Critical Comments,” Hankyore, September 20, 2017)

North Korea’s foreign minister likened President Trump to a "dog barking," ridiculing him for threatening to "totally destroy" his country if it persists in its nuclear and missile threats. "Back home, we have a saying: The dog barks, but the caravan continues," Foreign Minister Ri Yong-ho told reporters in New York when he was asked about Trump's comment. "If he thought he could scare us with the noise of a dog barking, well, he should be daydreaming." Ri arrived in New York today to attend the United Nations General Assembly. When asked about Trump's Rocket Man comment, Ri said: "I am sorry for his aides." (Choe Sang-hun, “Trump Likened to ‘a Dog Barking’ by North Korea’s Top Envoy,” New York Times, September 20, 2017)

“President Trump has handed the North Koreans the sound bite of the century,” said Marcus Noland of the Peterson Institute for International Economics and one of the authors of its “North Korea: Witness to Transformation” blog. “That footage will be used time and time again on North Korea’s state television channel.” Since the Korean War ended in an armistice in 1953, the Kim regime has portrayed the United States as an ‘imperialist aggressor’ pursuing “hostile policy” to crush North Korea — again. To keep control of and unify the populace, the regime has kept alive the memories of the Korean War, when the U.S. destroyed 80 percent of all the buildings in the North and killed as many as 20 percent of its people. The “threat” from the United States is the whole reason why North Korea needs nuclear weapons, the regime tells the people, while denying them access to the Internet or any other outside information. “The Kim regime argues that only it is capable of protecting the country from the existential threat North Korea faces from ‘hostile foreign forces’ led by the United States,” Noland said. “All of the depravity and the denial of rights is all justified by this.” Trump’s words feed right into that narrative, analysts say. “This will reinforce the leadership’s position that the United States is hostile to North Korea,” said Jung H. Pak, chair of Korea studies at the Brookings Institution. “This is exactly what North Korea is talking about, and [Trump] said it right there on TV in front of the whole world.” Furthermore, Trump’s “demonizing” of Kim personally would inflame the situation, she said. Previous attacks on Kim Jong Un personally have elicited an outsized response from North Korea’s apparatchiks. “This slander against the supreme leader in front of an international audience that is going to cause the Foreign Ministry to have to leap to the defense of Kim, whether or not Kim orders it,” said Robert Carlin, a former CIA analyst on North Korea who remains a close reader of its statements. If Trump’s words are aimed at calling Kim’s bluff and forcing him
President Moon Jae-in’s ambition to build nuclear-powered submarines gained momentum today, despite the Blue House denying that there was an agreement with the United States on the issue. Quoting multiple senior government officials, JoongAng Ilbo published an exclusive report earlier in the morning saying Seoul and Washington have agreed in principle that South Korea will build nuclear-powered submarines. Moon would bring the news home from his New York trip this week, one of the sources said. “Until now, the two countries had close consultations on the issue,” another senior official was quoted as saying. “The discussion was already over among the officials working on the issue. The agreement can be made public at an appropriate time after Moon meets with U.S. President Donald Trump during the UN trip.” “South Korea’s procurement of nuclear-powered submarines is a key mission of Moon’s New York trip,” he continued. “None of his predecessors accomplished it, but Moon has been able to persuade the U.S. government.” The Blue House said today that the report is not entirely true. “Some media reports about an agreement between Seoul and Washington on the South Korea’s procurement of nuclear-submarines are different from facts,” Yoon Young-chan, senior presidential press secretary, said. “Until now, no agreement has been reached between the two countries.” The statement, however, did not say whether there were discussions or not. Moon is scheduled to have a bilateral summit with Trump tomorrow. A presidential aide was quoted by local media saying there is no plan to address the submarine issue at the summit. Chung Ui-yong, head of the National Security Office of the Blue House, left for the United States today to set the agenda for the summit. Moon left for New York on Monday, but Chung stayed behind. Moon has long promoted the need to bolster the country’s military capabilities against growing asymmetrical threats from the North. In a phone call with Trump on August 7, Moon specifically mentioned the need for South Korea to own nuclear-powered submarines and build more powerful ballistic missiles. It appeared that Moon wants to deter the North’s submarine-launched ballistic missiles with nuclear submarines while countering the North’s intercontinental ballistic missile technology with more powerful South Korean missiles. Moon and Trump already agreed to lift payload limits on South Korean missiles to counter the North’s escalating threats. The Roh Moo-hyun administration, which Moon served as a senior presidential aide, planned to build and deploy three 4,000-ton nuclear submarines by 2020. The plan was secretly initiated in 2003 and later canceled after media reports. Current Defense Minister Song Young-moo participated in the project while serving in the Navy. Seoul was reluctant to develop nuclear-powered submarines due to Washington’s disapproval. Sources, however, told JoongAng Ilbo that the latest provocations by the North led Washington to allow Seoul’s plan. Uranium enrichment technology is a key to building nuclear-powered submarines. JoongAng Ilbo reported that a vice foreign minister from the Moon government and a deputy head of the U.S. Department of Energy will hold a high-level committee meeting to discuss U.S. supplies of enriched uranium for nuclear submarines. Under the current Korea-U.S. agreement for peaceful nuclear cooperation, South Korea is prohibited from enriching uranium or
using enriched uranium for military purposes but allowed to purchase low-enriched reactor-grade uranium for power generation. In contrast, highly-enriched uranium is the source of nuclear weapons. “The United States banned Korea from building nuclear arms, but it didn’t prohibit Korea from nuclear power generation and nuclear-powered military vessels,” said Shin Beom-chul, professor of the Korea National Diplomatic Academy. Even before he took office, Moon stressed the country’s need to build nuclear-powered submarines. During a presidential debate in April, Moon said he would seek revision of the nuclear agreement with the United States, if he won the election, to push the submarine project. Defense Minister Song has also advocated the need to build nuclear-powered submarines since July. Experts said nuclear-powered submarines are particularly crucial to counter the North’s submarine-launched ballistic missile technology. The North successfully launched a ballistic missile from a 2,200-ton submarine on April 23, 2016. The North currently operates about 70 submarines and is expanding their sizes to carry more missiles. “Because they fire ballistic missiles secretly from underwater, it is hard to detect the signs of launch or their locations,” said Kwon Yong-soo, a former professor at the Korea National Defense University. “As of now, we don’t have means to intercept them.” Moon Geun-sik, a former South Korean Navy captain who led the Roh administration’s nuclear submarine project, said nuclear-powered submarines are perhaps the only effective deterrence of submarine-launched missiles. “Our submarines should track down enemy submarines from the moment they start sailing and sink them when there is a sign of missile launch,” he said. “That is probably the best option.” According to Moon, nuclear submarines can operate underwater as long as they have food supplies. The South Korean Navy’s diesel-electric submarines, however, need to surface to recharge. A 1,200-ton Chang Bogo-class submarine needs to surface at least once a day. The larger 1,800-ton submarines can stay underwater for up to two weeks. The Roh administration completed the basic designs for nuclear submarines, Moon said. It even planned to purchase uranium from Russia or France if the United States opposed. Moon said it will take no more than five years for the country to build nuclear subs. “The small-sized SMART [System-integrated Modular Advanced Reactor], developed by the Korea Atomic Energy Research Institute, can be downsized further to power a submarine,” said Moon. “If this is pushed forward as a state project, we can sail a nuclear submarine within five years.” As of now, only six countries — the United States, Russia, England, France, China and India — operate nuclear-powered submarines. They are all nuclear-armed states. China is destined to protest South Korea’s plan to build nuclear submarines. “The Navy will likely arm the nuclear submarines with ballistic missiles,” said Kim Jin-hyung, who formerly headed the Joint Chief of Staff’s strategic and planning department. “China will hate them operating in the Yellow Sea.” (Wie Moon-hee and Ser Myo-ja, “Korea, U.S. Agree on Nuclear Subs,” JoongAng Ilbo, September 20, 2017)

President Trump said that his administration will enact additional sanctions on North Korea, but he declined to elaborate in brief remarks to reporters during a meeting on the sidelines of the United Nations General Assembly. “We will put more sanctions on North Korea,” Trump said, responding to a question. The announcement came hours before the president was set to meet with the leaders of South Korea and Japan to discuss strategy to confront Pyongyang over its nuclear and ballistic missile tests. The Security Council had also applied tough new export penalties in August, and Secretary of State Rex Tillerson said yesterday that there are signs those restrictions are having an economic effect. “We have some indications that there are beginning to appear evidence of fuel shortages,” Tillerson said in a briefing for reporters. “And look, we knew that these sanctions were going to take some time to be felt because we knew the North Koreans, based on information that the Chinese had shared with us and others had shared with us, had basically stockpiled a lot of inventory early in the year when they saw the new administration coming in, in anticipation of things perhaps changing. So I think what we’re seeing is a combined effect of these inventories are now being exhausted, and the supply coming in has been reduced.” (David Nakamura and Abby Phillip, “Trump Says the United States Will Impose More Sanctions on North Korea,” Washington Post, September 21, 2017)

North Korea’s foreign minister has delivered a scornful response to US President Donald Trump’s threat to destroy the hermit kingdom, likening it to the sound of “a dog barking.” Ri Yong Ho,
who is in the US for the United Nations General Assembly, in his country's first response to Trump's speech, was derisive. "If he was thinking he could scare us with the sound of a dog barking, that's really a dog dream," Ri told reporters outside his hotel in New York. In Korean, a dog dream is one that is absurd and makes little sense. When asked about Trump's use of the "rocket man" nickname, Ri said: "I feel sorry for his aides." Secretary of State Rex Tillerson is also in New York, but played down the possibility of a meeting his North Korean counterpart. Tillerson told reporters he did not believe he could have a "matter-of-fact discussion with North Korea because we don't know how their means of communication and behavior will be." Tillerson claimed there were signs that increased international pressure on North Korea was starting to bear fruit. He said there was evidence of fuel shortages in the country after the passage of recent UN sanctions, which targeted oil imports among other things. However, analysts pointed out that fuel shortages did not necessarily prove that sanctions were having an effect, as most North Koreans don't own cars or use fuel at anywhere near the rate of the rest of the world. Anthony Ruggiero, an expert in the use of targeted financial measures at the Foundation for the Defense of Democracies, said sanctions rarely hit fast. Any lines for gas were "probably more due to the regime stockpiling fuel in anticipation that China would implement the restriction," Ruggiero, who worked at both the State Department and Treasury Department, told CNN. Trump is scheduled to meet with Japanese Prime Minister Shinzo Abe and South Korean President Moon Jae-in Thursday, two important US allies on North Korea's doorstep. Top of the agenda is likely to be South Korea's surprise decision to send an $8 million aid package to North Korea. The move, which runs contrary to the US and Japan's calls for an increase in economic and diplomatic pressure, marks a resumption in South Korean aid after a break of almost two years. In statement today, the South's Unification Ministry said the decision to resume aid was in line with "the government's stance that it separates the provision of humanitarian aid from politics and it continues to provide aid to improve the humanitarian situation of North Korean residents and the quality of their lives." The South said it planned to send $4.5 million worth of medical treatments, nursery facilities and nutritional products for children and pregnant women through the World Food Programme, and $3.5 million worth of medicinal treatments and nutritional products through UNICEF. The precise timing and actual provision would be dependent on various factors, including "inter-Korean relations," the ministry said in a statement. (Joshua Berlinger, "North Korea: Trump’s UN Speech Amounted to ‘The Sound of a Dog Barking.’" CNN, September 21, 2017)

President Trump ordered a widening of American sanctions on North Korea to further choke off its trade with the outside world, in what some experts described as perhaps the most sweeping set of punitive economic measures enacted by the United States in many years. A new executive order signed by Trump aimed to cut North Korea out of the international banking system while targeting its major industries and shipping. The move suggested that for now, at least, the president was still committed to applying economic pressure rather than military action, despite his vow this week to “totally destroy North Korea” if the United States were forced to defend itself or its allies. “North Korea’s nuclear weapons and nuclear development is a grave threat to peace and security in our world, and it is unacceptable that others financially support this criminal, rogue regime,” Trump said as he hosted President Moon Jae-in of South Korea and Prime Minister Abe Shinzo of Japan for lunch in New York. “The brutal North Korean regime does not respect its own citizens or the sovereignty of other nations.” The action came amid news reports that China’s central bank had instructed the country’s banks not to do new business with North Korea and to wind down old loans, in keeping with United Nations sanctions. As North Korea’s dominant economic partner, China holds the most sway with Pyongyang, but it remained unclear if its latest action would be enforced enough to have any real impact. For all of the headline-grabbing pugnacity of Trump’s United Nations speech earlier this week, in which he mocked North Korea’s leader, Kim Jong-un, as “Rocket Man” on a “suicide mission,” the president made it clear on Thursday that he was still open to negotiations. Asked by a reporter whether dialogue was still possible, he said, “Why not?” This action sounds good in theory, but in the case of WWII Japan, it is wise to remember that it was the blockade and sanctions that angered...But it has withstood an array of American and international sanctions for years, and it remains unclear whether the latest round will have any greater effect. Just last week, the United Nations Security Council approved an American-drafted resolution tightening limits on North Korean trade, although it did not go as far as the Trump
administration wanted. Some critics of Trump praised him for focusing on diplomatic pressure rather than saber rattling. R. Nicholas Burns, a former undersecretary of state under President George W. Bush, said the new American sanctions were “a smart move” because the latest United Nations resolution was insufficient. “The U.S. sanctions will help to raise the cost to North Korea of its nuclear weapons buildup,” said Burns, who now teaches at Harvard. Referring to the United Nations Security Council, he added: “The Bush and Obama administrations pursued a similar path on Iran sanctions — both U.N.S.C. and American unilateral sanctions — which proved effective.”

David S. Cohen, who directed sanctions for President Barack Obama at the Treasury Department, was impressed. “I think it is reasonably significant,” said Cohen, who now works on sanctions issues at the law firm of Wilmer Hale. “These sanctions combine the sectoral sanctions we used against Russia with the effort to shut down banking relationships we used with Iran.” Trump’s order in some ways went even beyond the sanctions that ultimately brought Iran to the bargaining table during Obama’s administration. It bars international banks from the American market if they facilitate transactions with North Korea, targeting not just what are called correspondent accounts as the Iran measures did but blocking all assets in the United States held by such a bank. It also punished those doing business with major North Korean industries including textiles, fishing, information technology and manufacturing and imposed a 180-day ban on foreign-owned aircraft and ships entering the United States after leaving North Korea. But while in some ways they went beyond the Iran sanctions, they may not have as much impact since North Korea is less reliant on the international banking system. The North has proved adept at evading sanctions and Pyongyang may have already moved more of its transactions to cash or barter. Nikki R. Haley, the American ambassador to the United Nations, acknowledged that even ratcheted-up measures were unlikely to change Kim’s behavior. “We always knew that the sanctions may not work,” she said. “What the goal of the sanctions was always intended to be is to cut the revenue so they could do less of their reckless behavior.” For the Trump administration, though, even failed sanctions will help make the case to China and others that at least it tried. The new sanctions came as Trump, Moon and Abe presented a show of solidarity. The most important regional player, however, was not in New York: President Xi Jinping of China. He skipped this year’s United Nations session. But Trump spent an hour on the telephone with him earlier in the week. Treasury Secretary Steven Mnuchin called China’s central banker in advance of today’s executive order and later told reporters that the American measures were not targeted in particular at Beijing. China’s top diplomat, Wang Yi, sought today to cast Beijing as a mediator, calling on Pyongyang to abandon its nuclear weapons program and on Washington to compromise. “Negotiation is the only way out, which deserves every effort,” he said. “Parties should meet each other halfway by addressing each other’s legitimate concerns.” The meetings with Abe and Moon came on the fourth and final day of Trump’s visit to New York for the annual session of the United Nations General Assembly. Abe, who has been largely aligned with Trump’s approach, offered words of support. “Dialogue for the sake of dialogue would not produce anything,” Abe said after meeting with the president. “The key at this moment is to exercise an apply pressure against North Korea in a robust manner. And together with Donald, we’ve been successfully demonstrating our strong will to exercise pressure against North Korea.” Moon has been the odd man out of the three, arguing for more engagement and opposing any military action. Mr. Trump has derided this approach, calling it “appeasement,” but no mention was made of that today. “North Korea has continued to make provocations, and this is extremely deplorable and this has angered both me and our people,” Moon said. “But the United States has responded firmly and in a very good way.” He told Trump: “You made a very strong speech, and I believe the strength of your speech will also help to change North Korea.” Still, earlier in the day, Moon used his own address to the General Assembly to urge world leaders to “peacefully solve the North Korea nuclear issue,” step up diplomatic pressure and do everything possible to prevent war on the Korean Peninsula. (Peter Baker and Somini Sengupta, “Trump Moves to Widen U.S. Trade Sanctions against North Korea,” New York Times, September 22, 2017, p. A-11)

EXECUTIVE ORDER IMPOSING ADDITIONAL SANCTIONS WITH RESPECT TO NORTH KOREA: By the authority vested in me as President by the Constitution and the laws of the United States of America, including the International Emergency Economic Powers Act (50 U.S.C. 1701 et seq.) (IEEPA), the National Emergencies Act (50 U.S.C. 1601 et seq.), the
The provocative, destabilizing, and repressive actions and policies of the Government of North Korea, including its intercontinental ballistic missile launches of July 3 and July 28, 2017, and its nuclear test of September 2, 2017, each of which violated its obligations under numerous UNSCRs and contravened its commitments under the September 19, 2005, Joint Statement of the Six-Party Talks; its commission of serious human rights abuses; and its use of funds generated through international trade to support its nuclear and missile programs and weapons proliferation, constitute a continuing threat to the national security, foreign policy, and economy of the United States, and a disturbance of the international relations of the United States. In order to take further steps with respect to the national emergency declared in Executive Order 13466 of June 26, 2008, as modified in scope by and relied upon for additional steps in subsequent Executive Orders, I hereby find, determine, and order:

Section 1. (a) All property and interests in property that are in the United States, that hereafter come within the United States, or that are or hereafter come within the possession or control of any United States person of the following persons are blocked and may not be transferred, paid, exported, withdrawn, or otherwise dealt in: Any person determined by the Secretary of the Treasury, in consultation with the Secretary of State: (i) to operate in the construction, energy, financial services, fishing, information technology, manufacturing, medical, mining, textiles, or transportation industries in North Korea; (ii) to own, control, or operate any port in North Korea, including any seaport, airport, or land port of entry; (iii) to have engaged in at least one significant importation from or exportation to North Korea of any goods, services, or technology; (iv) to be a North Korean person, including a North Korean person that has engaged in commercial activity that generates revenue for the Government of North Korea or the Workers’ Party of Korea; (v) to have materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services to or in support of, any person whose property and interests in property are blocked pursuant to this order; or (vi) to be owned or controlled by, or to have acted or purported to act for or on behalf of, directly or indirectly, any person whose property and interests in property are blocked pursuant to this order.

(b) The prohibitions in subsection (a) of this section apply except to the extent provided by statutes, or in regulations, orders, directives, or licenses that may be issued pursuant to this order, and notwithstanding any contract entered into or any license or permit granted before the effective date of this order. The prohibitions in subsection (a) of this section are in addition to export control authorities implemented by the Department of Commerce.

(c) I hereby determine that the making of donations of the types of articles specified in section 203(b)(2) of IEEPA (50 U.S.C. 1702(b)(2)) by, to, or for the benefit of any person whose property and interests in property are blocked pursuant to subsection (a) of this section would seriously impair my ability to deal with the national emergency declared in Executive Order 13466, and I hereby prohibit such donations as provided by subsection (a) of this section.

(d) The prohibitions in subsection (a) of this section include: (i) the making of any contribution or provision of funds, goods, or services by, to, or for the benefit of any person whose property and interests in property are blocked pursuant to subsection (a) of this section; and (ii) the receipt of any contribution or provision of funds, goods, or services from any such person.

Sec. 2. (a) No aircraft in which a foreign person has an interest that has landed at a place in North Korea may land at a place in the United States within 180 days after departure from North Korea.
(b) No vessel in which a foreign person has an interest that has called at a port in North Korea within the previous 180 days, and no vessel in which a foreign person has an interest that has engaged in a ship-to-ship transfer with such a vessel within the previous 180 days, may call at a port in the United States. (c) The prohibitions in subsections (a) and (b) of this section apply except to the extent provided by statutes, or in regulations, orders, directives, or licenses that may
be issued pursuant to this order, and notwithstanding any contract entered into or any license or permit granted before the effective date of this order.

Sec. 3. (a) All funds that are in the United States, that hereafter come within the United States, or that are or hereafter come within the possession or control of any United States person and that originate from, are destined for, or pass through a foreign bank account that has been determined by the Secretary of the Treasury to be owned or controlled by a North Korean person, or to have been used to transfer funds in which any North Korean person has an interest, are blocked and may not be transferred, paid, exported, withdrawn, or otherwise dealt in. (b) No United States person, wherever located, may approve, finance, facilitate, or guarantee a transaction by a foreign person where the transaction by that foreign person would be prohibited by subsection (a) of this section if performed by a United States person or within the United States. (c) The prohibitions in subsections (a) and (b) of this section apply except to the extent provided by statutes, or in regulations, orders, directives, or licenses that may be issued pursuant to this order, and notwithstanding any contract entered into or any license or permit granted before the effective date of this order.

Sec. 4. (a) The Secretary of the Treasury, in consultation with the Secretary of State, is hereby authorized to impose on a foreign financial institution the sanctions described in subsection (b) of this section upon determining that the foreign financial institution has, on or after the effective date of this order: (i) knowingly conducted or facilitated any significant transaction on behalf of any person whose property and interests in property are blocked pursuant to Executive Order 13551 of August 30, 2010, Executive Order 13687 of January 2, 2015, Executive Order 13722 of March 15, 2016, or this order, or of any person whose property and interests in property are blocked pursuant to Executive Order 13382 in connection with North Korea-related activities; or (ii) knowingly conducted or facilitated any significant transaction in connection with trade with North Korea.

(b) With respect to any foreign financial institution determined by the Secretary of the Treasury, in consultation with the Secretary of State, in accordance with this section to meet the criteria set forth in subsection (a)(i) or (a)(ii) of this section, the Secretary of the Treasury may: (i) prohibit the opening and prohibit or impose strict conditions on the maintenance of correspondent accounts or payable-through accounts in the United States; or (ii) block all property and interests in property that are in the United States, that hereafter come within the United States, or that are or hereafter come within the possession or control of any United States person of such foreign financial institution, and provide that such property and interests in property may not be transferred, paid, exported, withdrawn, or otherwise dealt in.

(c) The prohibitions in subsection (b) of this section apply except to the extent provided by statutes, or in regulations, orders, directives, or licenses that may be issued pursuant to this order, and notwithstanding any contract entered into or any license or permit granted before the effective date of this order.

(d) I hereby determine that the making of donations of the types of articles specified in section 203(b)(2) of IEEPA (50 U.S.C. 1702(b)(2)) by, to, or for the benefit of any person whose property and interests in property are blocked pursuant to subsection (b)(ii) of this section would seriously impair my ability to deal with the national emergency declared in Executive Order 13466, and I hereby prohibit such donations as provided by subsection (b)(ii) of this section.

(e) The prohibitions in subsection (b)(ii) of this section include: (i) the making of any contribution or provision of funds, goods, or services by, to, or for the benefit of any person whose property and interests in property are blocked pursuant to subsection (b)(ii) of this section; and (ii) the receipt of any contribution or provision of funds, goods, or services from any such person.

Sec. 5. The unrestricted immigrant and nonimmigrant entry into the United States of aliens determined to meet one or more of the criteria in section 1(a) of this order would be detrimental to the interests of the United States, and the entry of such persons into the United States, as immigrants or nonimmigrants, is therefore hereby suspended. Such persons shall be treated as persons covered by section 1 of Proclamation 8693 of July 24, 2011 (Suspension of Entry of Aliens Subject to United Nations Security Council Travel Bans and International Emergency Economic Powers Act Sanctions).

Sec. 6. (a) Any transaction that evades or avoids, has the purpose of evading or avoiding, causes a violation of, or attempts to violate any of the prohibitions set forth in this order is prohibited.
imposing new sanctions on North Korea, the author’s initial reaction was that they are, in part, a unilateral declaration of economic warfare designed to bring the North to its knees through the aggressive use of secondary sanctions against any country that trades with or finances trade with North Korea. Rather than bring North Korea closer to the negotiating table for a peaceful resolution of the conflict, they are likely to hasten war and even the collapse of the regime if effectively enforced. It is unlikely, however, that this severe tightening of the sanctions screw will be successful. ...When reading President Trump’s comments on the new Executive Order (EO) imposing new sanctions on North Korea, the author’s initial reaction was that they are, in part, a
logical, intelligent next step after the passage of the recent UN Security Council Resolution (2375), which named additional North Korean economic sectors to the international sanctions campaign. Many of the industries targeted such as seafood and textiles have been flagged in recent UN resolutions. To this extent, the new Executive Order appeared to be adding the threat of US asset seizures and denial of access to the US financial system for any entity that violates the caps and bans on trade in those industries. This is an excellent and sensible way to deter sanctions evasion at least by firms with a significant stake in international commerce. …But upon reading the text of the Executive Order, this view is 180 degrees at variance with the truth. The EO includes within it provisions that will allow the US to impose a full trade and financial embargo on North Korea unilaterally through the use of secondary sanctions. Section 1 (a) (iii) of the order permits the Secretary of Treasury to seize the assets or property of any entity who “engages in one successful importation from or exportation to of any goods, services or technology.” Section 4 of the EO brings the full power of the US Treasury to bear against any bank that facilitates any trade with North Korea. Financial dealings with essentially any element of the government of North Korea are sanctionable (Section 4 (a) (i)). Facilitating any trade with North Korea is equally sanctionable (Section 4 (a) (ii)). The penalties prescribed are fatal to any bank using the dollar. They can have their assets seized and can be banned from the US financial system (Section 4 (b) (i) and (ii)). In short, the United States is asserting the intention and right to ban from the US financial system and the dollar any entity from any country that trades with or finances trade with North Korea. In combination with the President’s UN speech, we are witnessing the final phases of an effort to use sanctions against North Korea. **Sanctions are no longer to be international instruments to coerce North Korea to the negotiating table. They are now unilateral instruments of a US economic war against North Korea in which states and firms will all have to comply or be US targets.** This is consistent with the President’s UN speech in which he slammed the door on any hope of a negotiated settlement of this crisis (the subject of a separate article). They are, of course, not in the least consistent with his hymns to national sovereignty in that speech. Based on this EO, sanctions are no longer to bring North Korea to the negotiating table. Their only purpose can be to force the regime to capitulate under crushing economic pain or to create the conditions for regime collapse if it does not capitulate. It is not impossible for this approach to work. It is possible that the Trump administration has managed to work things out behind the scenes with China to prevent a US-China trade and financial war from emerging from America’s attempt to enforce this EO against key Chinese entities. It is also possible that North Korea might eventually be willing to pursue some diplomatic option, such as trying to negotiate some limit on long-range missile and nuclear testing in return for suspension of some sanctions in the EO. But this latter possibility seems highly unlikely given the recent statement by Kim Jong Un. We are in new and dangerous territory. **Sanctions are no longer the alternative to war. They may well be its prelude:** First, the US will have to make its unilateral embargo stick globally. To do so, it will have to enforce its will and it is not certain it can do so only with secondary sanctions. (China is a master of finding small-scale banks and other entities with no stake in the US financial system to trade where it needs to trade in the face of US secondary sanctions.) There will be a temptation if things get frustrating either to expand the reach of secondary sanctions to whole countries or to enforce an embargo with military means such as a naval “quarantine” or blockade. Second, the effort may fail at a high humanitarian cost. While this effort may severely reduce the North’s access to foreign exchange and goods through legal means, the North Korean government has funded a great deal of its operations through illegal means such as smuggling, illicit drug dealing, counterfeiting and large scale cyber-crime. It has also shown an annoying capability to adapt to and defeat past sanctions. Black money alone may be enough to keep the regime elites and the nuclear weapons program funded while letting the general population suffer all the shortages, unemployment, hunger and disease that will come from a successful cutoff of global commerce. We could inflict a great deal of suffering on voiceless every day North Koreans before Kim Jong Un and his cronies feel a pinch. Third, there isn’t enough time to be sure this strategy will work. Crushing even a poor country like North Korea economically is not the work of a couple of weeks; it takes years. The US does not have years. It has months or maybe a year before North Korea reaches its goal of being able to target US cities in the lower 48 states with a thermonuclear weapon. This is very likely the point at which the inner councils of the Trump administration have already decided informally that war is inevitable. Their
words increasingly reflect a view that preventive war is a preferable and feasible end state compared to the North Korean acquisition of a nuclear-armed ICBM capability of any size. And, of course, Kim Jong Un will respond somewhere and somehow—whether through cyber-attacks on the US or terrorism directed at Japan or the ROK or with some military action designed to create economic costs that cannot be predicted, but could spark conflict as well. In sum, the new EO is probably the last word on sanctions as a mechanism to resolve the North Korean crisis. It is unlikely to be successful largely because the US does not have the time, the patience or the diplomatic possibilities to make it work. The author concluded after hearing the President’s UN speech that the probability that the North Korean crisis would end in a large war in East Asia is growing by the day. While intended to be an alternative to military conflict, this set of sanctions takes us another step down the road to that war.” (Joseph DeThomas, “The New U.S. Sanctions: Moving from Sanctions to Economic War,” 38North, September 22, 2017)

North Korea may conduct the most powerful test of a hydrogen bomb in the Pacific Ocean in its possible "highest-level" actions against the United States, Foreign Minister Ri Yong Ho said yesterday after North Korean leader Kim Jong-un said that he is considering the strongest actions in response to US President Donald Trump's threat to "totally destroy" the country. It could be the most powerful detonation of an H-bomb in the Pacific," Ri told reporters. "We have no idea about what actions could be taken as it will be ordered by leader Kim Jong-un." (Yonhap, “N.K. FM Says ‘Highest-Level’ Actions in Kim’s Remarks May Be H-Bomb Test in Pacific,” September 21, 2017)

An artillery unit from the U.S. mainland practiced firing precision-guided munitions in South Korea today. The 18th Field Artillery Brigade based at Fort Bragg in North Carolina staged the live-fire drill in Daecheon, South Chungcheong Province, according to the eighth U.S. Army. On being flown in by transport plane, the unit fired long-range munitions. The weapons they came with were two HIMARS light multiple rocket launchers. Each HIMARS launcher carries six 227 mm rockets with a range of more than 70 km or an ATACMS missile with a range of 300 km. HIMARS provides a counterweight to North Korea's long-range artillery pieces and is so light that it can be deployed rapidly anywhere by C-130 transport aircraft. Guided rockets fired from the HIMARS launchers hit the target some 60 km away. The launchers had been deployed for live-fire drills here several times before. Today's drill was a show of force after North Korea's latest nuclear test and launch of Hwasong-12 ballistic missiles over Japan. (Yu Yong-weon, “U.S. Artillery Unit Stages Live-Fire Drill in Korea,” Chosun Ilbo, September 22, 2017)

Presidents Moon Jae-in and Donald Trump agreed to expand the deployment of U.S. strategic assets to South Korea and surrounding areas. During their summit on the sidelines of the U.N. General Assembly in New York, they underscored the need to maintain overwhelming deterrence against North Korea, presidential spokesman Park Soo-hyun said at a press briefing. To this end, they agreed to strengthen their countries' joint defense capabilities, partly through Seoul's acquisition and development of "the most advanced military assets," Park said. The two leaders strongly condemned North Korea's latest nuclear provocation as a serious and escalating threat. "The two leaders shared a view on the need for the strongest pressure and sanctions against North Korea to deter North Korea's provocative activities and make it start taking steps toward denuclearization," he said. The Blue House spokesman refused to confirm whether Seoul's acquisition of the most advanced military assets would include nuclear-propelled submarines. Moon expressed satisfaction with what he called the United States' "firm" reaction to the North's latest nuclear provocation. "North Korea's latest provocation is very deplorable, and it greatly outraged us, but the U.S. firmly and greatly responded and I am very satisfied that cooperation between South Korea-U.S. was realized without any gap," he said while meeting with Trump, according to pool reports. "President Trump has also delivered a very powerful speech at the U.N. General Assembly and I am confident such power will certainly change North Korea," he added. Immediately following their bilateral summit, Moon and Trump were joined by Japanese Prime Minister Abe Shinzo for a three-way summit over lunch. The three leaders vowed to put maximum pressure on North Korea. "The three leaders noted North Korea's nuclear and missile
development posed a grave threat to peace in Northeast Asia and the world and that they cannot
accept this,” South Korean Foreign Minister Kang Kyung-wha told a press briefing. “Under such
understanding, the leaders of the three countries agreed on the need for the international
community to put maximum pressure and sanctions to the level that North Korea cannot withstand
and voluntarily come to the dialogue table,” she added. (Yonhap, “Moon Trump Agree to Boost
Military Deterrence, Put Maximum Pressure on N. Korea,” JoongAng Ilbo, September 22, 2017)

KCNA: “Respected Supreme Leader Kim Jong Un, chairman of the State Affairs Commission of
the DPRK, released a statement on Thursday. The full text of the statement reads: The speech
made by the U.S. president in his maiden address on the UN arena in the prevailing serious
circumstances, in which the situation on the Korean peninsula has been rendered tense as never
before and is inching closer to a touch-and-go state, is arousing worldwide concern. Shaping the
general idea of what he would say, I expected he would make stereotyped, prepared remarks a
little different from what he used to utter in his office on the spur of the moment as he had to
speak on the world's biggest official diplomatic stage. But, far from making remarks of any
persuasive power that can be viewed to be helpful to defusing tension, he made
unprecedented rude nonsense one has never heard from any of his predecessors. A frightened
dog barks louder. I'd like to advise Trump to exercise prudence in selecting words and to be
considerate of whom he speaks to when making a speech in front of the world. The mentally
deranged behavior of the U.S. president openly expressing on the UN arena the unethical
will to "totally destroy" a sovereign state, beyond the boundary of threats of regime change
or overturn of social system, makes even those with normal thinking faculty think about
discretion and composure. His remarks remind me of such words as "political layman" and
"political heretic" which were in vogue in reference to Trump during his presidential election
campaign. After taking office Trump has rendered the world restless through threats and blackmail
against all countries in the world. He is unfit to hold the prerogative of supreme command of a
country, and he is surely a rogue and a gangster fond of playing with fire, rather than a politician.
His remarks which described the U.S. option through straightforward expression of his will
have convinced me, rather than frightening or stopping me, that the path I chose is correct
and that it is the one I have to follow to the last. Now that Trump has denied the existence of
and insulted me and my country in front of the eyes of the world and made the most
ferocious declaration of a war in history that he would destroy the DPRK, we will consider
with seriousness exercising of a corresponding, highest level of hard-line countermeasure in
history. Action is the best option in treating the dotard who, hard of hearing, is uttering only what
he wants to say. As a man representing the DPRK and on behalf of the dignity and honor of my
state and people and on my own, I will make the man holding the prerogative of the supreme
command in the U.S. pay dearly for his speech calling for totally destroying the DPRK. This
is not a rhetorical expression loved by Trump. I am now thinking hard about what response he
could have expected when he allowed such eccentric words to trip off his tongue. Whatever
Trump might have expected, he will face results beyond his expectation. I will surely and
definitely tame the mentally deranged U. S. dotard with fire.” (KCNA, “Statement of
Chairman of State Affairs Commission of DPRK,” September 22, 2017)

North Korea has long cultivated an image of defiant belligerence, punctuating its propaganda and
diplomacy with colorful threats, insults and bluster. But by addressing President Trump in a
personal statement today, the nation’s leader, Kim Jong-un, has pushed his government’s
brinkmanship to a new, potentially more perilous level. In a statement written in the first person,
published on the front pages of state newspapers and read on national television, Mr. Kim called
Trump a “mentally deranged U.S. dotard” who had “denied the existence of and insulted me and
my country in front of the eyes of the world.” Kim vowed to take the “highest level of hard-line
countermeasure in history.” Kim’s father and grandfather, who ruled North Korea before him,
ever made such a statement, South Korean officials said. In effect, Kim, whose cultlike
leadership rests upon his perceived daring toward North Korea’s external enemies, has turned the
nation’s standoff with the United States into a personal duel with Trump, analysts said. The North
Korean news media carried photographs of Kim sitting in his office and reading his statement, but
his voice was not broadcast. On the country’s state-run Central TV, a female announcer read his statement. “This is totally unprecedented,” said Paik Hak-soon, a longtime North Korea analyst at the Sejong Institute, a think tank outside Seoul, referring to Kim’s statement. “The way North Korea’s supreme leadership works, Kim Jong-un has to respond more assertively as its enemy gets more confrontational, like Trump has. “There is no backing down in the North Korean rule book,” Paik said. “It’s the very core of their leadership identity and motive.” In a country where the leader is essentially portrayed as a god, Kim’s decision to respond personally to Trump’s speech to the United Nations General Assembly and pledge reprisals escalated the standoff over the North’s nuclear program in a way that neither he nor his predecessors had done before. Shortly after Kim’s statement was released, his foreign minister, Ri Yong-ho, delivered prepared remarks to reporters outside his hotel in New York, saying it was up to Kim to decide what to do, but that North Korea might conduct the “biggest ever hydrogen bomb test in the Pacific.” Ri could not have made such an alarming comment without approval from Kim, although some analysts questioned whether North Korea had the technology or political daring to conduct an atmospheric nuclear test, something the world has not seen for decades.

Trump responded today by further personalizing the dispute. On Twitter, the president pronounced Mr. Kim to be “obviously a madman.” Koh Yu-hwan, a professor of North Korean studies at Dongguk University in Seoul, said that Kim, faced with Trump’s threat of annihilation, could respond only with equal force. “When Trump stood before the United Nations General Assembly and threatened to totally destroy his country, Kim Jong-un had to take that as the United States telling the world of its intention for possible military action,” Koh said. “He had to respond in kind, launching the same kind of verbal bombs.” Analysts said that by putting his reputation on the line with his statement, Kim was now far more unlikely to stand down. Instead, his government was likely to conduct more nuclear and missile tests, they said. “Trump shot himself in the foot with his unabashedly undiplomatic United Nations General Assembly speech,” said Lee Sung-yoon, a Korea expert at the Fletcher School of Law and Diplomacy at Tufts University. “By threatening to totally destroy North Korea, he created the impression around the world that it is actually the United States — instead of North Korea — that’s motivated by aggression. In effect, Trump gave Kim Jong-un a freebie for another major provocation. Kim will oblige, and claim that it was in ‘self-defense’ against Trump’s unnerving threats.” Daryl G. Kimball, executive director of the Arms Control Association, compared the Korean standoff to the October 1962 crisis over Soviet missiles in Cuba, urging the United Nations secretary general, António Guterres, to convene the six parties that were previously involved in talks on denuclearizing the Korean Peninsula — China, Japan, North Korea, Russia, South Korea and the United States — to discuss reducing fever-pitch tensions. “We are in a cycle of escalation that leads to a very bad end,” Mr. Kimball said. North Korea has conducted all of its six nuclear tests within deep underground tunnels to diminish the spread of radioactive materials, and has stepped up the pace of its missile tests. Some analysts fear that the next step might be for North Korea to try to prove that it can deliver a nuclear warhead on a long-range missile, no matter how dangerous and provocative that might be. It has been 37 years since any nation tested a nuclear weapon in the planet’s atmosphere, reflecting the nearly universal opposition to such tests over fears of the effects of radioactive fallout on human health and the environment. The last atmospheric test took place in 1980, when China fired what experts believed to be a nuclear-tipped ballistic missile into a desert salt flat more than 1,300 miles west of Beijing. Shin Beom-chul, a security expert at the government-run Korea National Diplomatic Academy in Seoul, said that even if North Korea wanted to conduct an atmospheric nuclear test in the Pacific, it did not have the ability to dispatch test-monitoring ships to the open ocean while the United States military was on the prowl. Mr. Shin said North Korea probably would not risk the radioactive fallout and other grave dangers involved in a nuclear missile test. The country has yet to master the technologies needed to prevent the warhead at the tip of its long-range ballistic missile from burning up while re-entering Earth’s atmosphere, South Korean officials said. “What if the nuclear missile goes wrong midflight and detonates over Japan? It would mean a nuclear war,” Shin said. “More likely, North Korea will graduate its provocations, as if moving on steppingstones.” Analysts said North Korea had been escalating tensions in stages in what they called a “salami tactic,” as in slice by slice. Kim Dong-yub, a defense analyst at the Seoul-based Institute for Far Eastern Studies of Kyungnam University, said that North Korea would probably try to disprove skeptics in the West over its ability to strike long-range targets by firing its Hwasong-14 intercontinental ballistic
North Korea’s foreign minister warned that a strike against the U.S. mainland is “inevitable” because President Trump mocked leader Kim Jong Un with the belittling nickname “little rocketman.” U.S. bombers, escorted by fighter jets, flew off the North Korean coast in a show of force shortly before Foreign Minister Ri Yong Ho strode to the podium to address the United Nations General Assembly in New York, capping an extraordinary week of militaristic threats from both nations before an organization founded to maintain international peace and security. Ri said that Trump’s bombast had made “our rockets’ visit to the entire U.S. mainland inevitable” and linked it to Trump’s insulting shorthand references to Kim. Harsh sanctions placed on North Korea’s trade with the outside world will have no impact on its ability to complete building a nuclear bomb capable of reaching the United States, Ri said, suggesting that stage is imminent. “Through such a prolonged and arduous struggle, now we are finally only a few steps away from the final gate of completion of the state nuclear force,” he said. “It is only a forlorn hope to consider any chance that the DPRK would be shaken an inch or change its stance due to the harsher sanctions by the hostile forces,” he said, using the acronym for North Korea’s official name, the Democratic People’s Republic of Korea. In response to Ri’s threats at the U.N., Trump tweeted Saturday night: “If he echoes thoughts of Little Rocket Man, they won’t be around much longer!” A mass rally was also held Saturday in central Pyongyang to express support for “final victory” over the United States, the regime’s KCNA news agency reported. The rally in Kim Il Sung square was attended by over 100,000 people, KCNA reported, “full of the spirit of annihilating the enemies.” Speaking at the rally, a Pyongyang official said the people of the capital...
were “aflame” with the desire to wipe their sworn enemy, the U.S. imperialists, off the globe. The rhetoric between Trump and Kim has grown exceptionally personal. At a rally Friday night in Alabama, Trump called Kim “little rocketman,” magnifying the disparaging label he slung at Kim in his U.N. speech Tuesday in which he threatened that the United States would “totally destroy” North Korea in defense of itself or its allies. He said Kim was on a “suicide mission.” Kim, in turn, called Trump a “frightened dog” and a “mentally deranged U.S. dotard.” Ri echoed those sentiments Saturday, calling the president a “mentally deranged person full of megalomania” and at one point referring to him as “President Evil.” Ri emphasized that North Korea has the know-how to carry out its threat. He said Pyongyang has a hydrogen bomb that can fit on an intercontinental ballistic missile capable of reaching the United States. (Carol Morello, “Pyongyang Keeps up Military Threats While Washington Suggests Restraint,” Washington Post, September 24, 2017 p. A-14)

Ri Yong Ho: “Before going into the main points in my debate, I feel forced to make comments on the speech uttered 4 days ago by someone called the U.S. president that rendered this sacred UN arena tainted. Since Trump uttered such reckless and violent words provoking the supreme dignity of the Democratic People's Republic of Korea (DPRK) at this very platform, I think it is fair enough for me to make a response in the corresponding tone. During his 8 months in power, he has turned the White House into a noisy marketing place full of crackling sounds of abacus beads and now he has tried to turn the UN arena into a gangsters' nest where money is respected and bloodshed is the order of the day. The absurd reality that the person like Trump, a mentally deranged person full of megalomania and complacency, the person who is chastised even by American people as ‘Commander in Grief,’ ‘Lyin King,’ ‘President Evil’ is holding the seat of the U.S. President, and the dangerous reality that the gambler who grew old using threats, frauds and all other schemes to acquire a patch of land holds the nuclear button; these are what constitute the gravest threat to the international peace and security today. Due to his lacking of basic common knowledge and proper sentiment, he tried to insult the supreme dignity of my country by referring it to a rocket. By doing so, however, he committed an irreversible mistake of making our rockets' visit to the entire U.S. mainland inevitable all the more. None other than Trump himself is on a suicide mission. In case innocent lives of the U.S. are lost because of this suicide attack. Trump will be held totally responsible. The respected supreme leader Comrade Kim Jong Un stated: as a man representing the DPRK and on behalf of the dignity and honor of my state and people and on my own, I will make the man holding the prerogative of the supreme command in the U.S. pay dearly for his speech calling for totally destroying the DPRK. Trump might not have been aware what is uttered from his mouth but we will make sure that he bears consequences far beyond his words, far beyond the scope of what he can handle even if he is ready to do so. …Our national nuclear force is, to all intents and purposes, a war deterrent for putting an end to nuclear threat of the U.S. and for preventing its military invasion; and our ultimate goal is to establish a balance of power with the U.S. Distinguished delegates of all countries attending this session are aware of the fact that the DPRK, unlike other nuclear weapon states, made public every time to the world the test process and its results at all stages of the development and advancement of the nuclear force. …We do not need anyone recognition of our status as a nuclear weapons state and our capability of nuclear strike. …Although our decision to possess nuclear weapons was an inevitable option forced by the United States, it resulted in our country achieving the status of a nuclear weapons state and rocket power, and this prestige has now become an immortal destiny of the DPRK. …We will take preventive measures by merciless preemptive action in case the U.S. and its vassal forces show any signs of conducting a kind of ‘decapitating’ operation on our headquarters or military attack against our country. However, we do not have any intention at all to use or threaten to use nuclear weapons against the countries that do not join the U.S. military actions against the DPRK.” (DPRK Permanent Mission to the United Nations, Statement by Ri Yong Ho, Minister for Foreign Affairs, to the 72nd Session of the UN General Assembly, September 23, 2017)

A 3.5-magnitude earthquake was detected in northern North Korea this afternoon, near the nation’s known nuclear test site, according to the U.S. Geological Survey. But experts said seismic data suggested that it was probably not caused by a new nuclear test, although it could have been a
The Pentagon flew its Air Force B-1B Lancer strategic bombers today east of North Korea, near the demilitarized zone, demonstrating President Donald Trump’s resolve. The Department of Defense announced later that day that the bombers flew from Guam, escorted by F-15C Eagle fighters from Kadena Air Base in Okinawa, Japan, to international airspace over waters east of North Korea. “This is the farthest north of the demilitarized zone (DMZ) any U.S. fighter or bomber aircraft have flown off North Korea’s coast in the 21st century,” said Pentagon Spokesperson Dana White, “underscoring the seriousness with which we take reckless behavior.” The B-1B is able to deliver a heavier payload than the B-52 and B-2 bombers, and is also quicker than the other two, capable of reaching the Korean Peninsula from Guam in two hours. “This mission is a demonstration of U.S. resolve and a clear message that the President has many military options to defeat any threat,” White said, underscoring the “grave threat” that the North’s weapons program poses to the Asia-Pacific region and the international community. She continued, “We are prepared to use the full range of military capabilities to defend the U.S. homeland and our allies.” South Korea’s Blue House said today in a statement that the flyover of the B-1B bombers near the military demarcation line “came with close cooperation between South Korea and the United States.” The South Korean Air Force did not accompany the B-1Bs this time around, according to the Blue House, because the U.S. bombers flew over international airspace. President Moon Jae-in and Trump agreed in their bilateral summit September 21, on the sidelines of the UN General Assembly in New York, that the U.S military will expand rotational deployments of strategic assets to the South and neighboring areas, which could include B-1B bombers, F-35B stealth fighter, nuclear-powered aircraft carriers and nuclear-powered submarines. Late today, Trump tweeted, “Just heard Foreign Minister of North Korea speak at U.N. If he echoes thoughts of Little Rocket Man, they won’t be around much longer!” This came after he threatened to “totally destroy” North Korea in his address to the UN General Assembly. “We can't have mad men out there shooting rockets all over the place,” said Trump in a rally in Arizona September 22. “Rocket Man should have been handled a long time ago.” He added, “I'm going to handle it because we have to handle it,” warning of North Korea’s threats of “a massive weapon exploding over... the Pacific Ocean, which causes tremendous, tremendous calamity.” In another tweet that day, Trump called Kim Jong-un “a madman who doesn't mind starving or killing his people,” and added that he “will be tested like never before!” But military action on North Korea would “ultimately” be Trump's decision, according to U.S. State Secretary Rex Tillerson. “We will continue our efforts in the diplomatic arena but all of our military options – as the president has said – are on the table,” Tillerson told ABC News’ “Good Morning America” today. “Once we can assess the nature of this threat, the president will make a decision regarding the appropriate actions.” When asked how the United States would respond if North Korea drops a hydrogen bomb on the Pacific, Tillerson said, “That will be the president's decision,” adding “there is delayed geological reaction to the last test nearly three weeks ago. There were no reports of radiation around the site. “This event occurred in the area of the previous North Korean Nuclear tests,” the USGS said on its website. “We cannot conclusively confirm at this time the nature (natural or human-made) of the event.” The earthquake-monitoring agency in neighboring China initially said it suspected that the North Korean quake, which occurred at 3:59 p.m. local time, was caused by an explosion, but South Korea’s meteorological agency said the incident appeared to be a natural quake. Nuclear proliferation watchdog CTBTO said the quake was unlikely to have been man-made. CTBTO Executive Secretary Lassina Zerbo tweeted seismographic graphs from Saturday’s quake alongside those from the second quake on September 3, with both data patterns looking broadly similar. “Indication event natural and same epicentral distance,” he tweeted. He also said there had been a smaller quake nearly four hours earlier Saturday. “Two #Seismic Events! 0829UTC & much smaller @ 0443UTC unlikely Man-made! Similar to “collapse” event 8.5 mins after DPRK6!,” he tweeted. Daryl G. Kimball, executive director of the Arms Control Association, said he had spoken to Zerbo. “While the data analysis is preliminary, the early indications strongly suggest that the smaller events today (which are in a seismically inactive area) are likely further geologic disturbances created by the Sept. 3 nuclear test explosion,” he said. (Simon Denyer, “Earthquake Strikes North Korea near Nuclear Test Site but No Radiation Reported,” Washington Post, September 23, 2017)
North Korea's nuclear ambitions are etched into the landscape of Pyongyang, its showcase capital city. A giant sculpture of the atom sits on top of a new apartment tower built for nuclear scientists. Atom designs adorn road overpasses, lampposts and building facades. Bomb imagery colors daily life. At an orphanage, children play with plastic mobile rocket launchers instead of toy trucks. Shops sell commemorative intercontinental ballistic missile stamps, while a bakery sells cakes featuring an upright rocket, ready for launch. During a recent visit, the first by The Wall Street Journal since 2008, the city's atomic aesthetics reinforced the message government officials conveyed repeatedly to the Journal reporters: North Korea won't part with its nuclear weapons under any circumstances and is resolved to suffer economic sanctions and risk war with the U.S. to keep them. "It is too late, we have grown up," said Ri Yong Pil, the vice president of the Institute for American Studies, a division of North Korea's Ministry of Foreign Affairs. "We are not interested in dialogue to undermine our newly built strategic status." The North Korean officials expressed curiosity about difficult-to-answer questions such as: Who is Mr. Trump's chief adviser? And will Secretary of State Rex Tillerson keep his job? One official had followed the heated U.S. debate over transgender soldiers, and wondered if the U.S. had many. Several people, including some government officials, expressed wariness of China, a longtime friend of Pyongyang that historically has opposed any talk of regime change. China supported recent steps to tighten sanctions against North Korea, and some residents said they question the quality and safety of Chinese foods and other products. Elites appear to be living well. A sushi restaurant run by deceased leader Kim Jong Il's former sushi chef serves $100 platters of raw fish. A supermarket in Kwangbok Street had products ranging from locally made tea to $70 imported Japanese whisky. People are playing videogames on locally made smartphones that are becoming more common yet remain disconnected from the global internet. One of the Journal's handlers said some parents worry about how much screen time their children get, much like Americans. Solar panels have sprung up across Pyongyang, appearing on apartment balconies, providing an alternate power source for individuals and insulating them from power outages while also easing their reliance on government-supplied power. Although the Journal's team didn't leave Pyongyang, foreign aid workers who have access to other parts of the country describe a strikingly different scene in the provinces. Even on the city's outskirts, the drop-off in living standards is stark. Journal reporters saw farmers relying on ox carts in fields just a short drive from the new dolphin-show facility and science complexes. North Korea's economy grew 3.9% last year to around $32 billion, according to South Korea's central bank, which makes estimates about the economy of its northern neighbor in the absence of reliable figures from Pyongyang. That is the fastest growth since 1999, according to South Korea, and may have been helped by government spending on weapons manufacturing. The U.S. strategy is to squeeze Kim by snuffing out North Korean growth with sanctions, including limits on purchases of oil. The supervised nature of the Journal's trip made it impossible to draw conclusions about whether Pyongyang can outlast the sanctions. During the trip, Trump...
suggested in a tweet that new sanctions were causing long lines at Pyongyang gas stations. A European aid worker in Pyongyang told the *Journal* gas prices had risen significantly since November. But there were no lines at four gas stations that reporters saw while touring the city. At one station where reporters waited for 20 minutes seeking permission to take a photograph, two cars came in to fill up. Ri Gi Song, an economist at North Korea's Academy of Social Sciences, said North Korea was well positioned to weather sanctions after enduring them since the end of the Korean War. Cryptically, he said the country could rely on oil-producing North Korean allies to get around the sanctions. "I'll let you guess which," he said. When the Journal suggested a few possible countries, including Iran and Venezuela, he smiled and repeated his answer. What's more, he said, the nuclear-weapons program was already allowing the country to reduce spending on conventional weapons and channel that money to economic development. (John Lyons and Jonathan Cheng, “Letter from North Korea: As the Nuclear Crisis Mounts, Reporters from the Journal Were Able to Visit Pyongyang and See Life There in a Tightly Controlled Government Tour,” *Wall Street Journal*, September 23, 2017, p. C-1)

Two-thirds of Americans oppose launching a preemptive military strike against North Korea, with a majority trusting the U.S. military to handle the escalating nuclear crisis responsibly but not President Trump, a new Washington Post-ABC News poll conducted September 18-21 finds. Roughly three-quarters of the public supports tougher economic sanctions on North Korea in an attempt to persuade it to give up its nuclear weapons, while just about one-third think the United States should offer the isolated country foreign aid or other incentives. The Post-ABC poll finds 37 percent of adults trust Trump either “a great deal” or “a good amount” to responsibly handle the situation with North Korea, while 42 percent trust the commander in chief “not at all.” By comparison, 72 percent trust U.S. military leaders, including 43 percent saying they trust them “a great deal.” A scant 8 percent of Americans surveyed think North Korean leader Kim Jong Un can act responsibly. Overall, Trump’s image continues to be negative, with 39 percent of Americans approving and 57 percent disapproving of the president’s job performance. Faith in Trump’s handling of the biggest foreign policy crisis of his presidency is colored sharply by partisanship. While 11 percent of Democrats and 36 percent of independents say they trust Trump to act responsibly in dealing with North Korea, more than three-quarters of Republicans say they trust the president, although just over half trust him “a great deal.” Partisans are relatively united, however, in their concern about nuclear-armed North Korea. A record high 70 percent of Americans say North Korea poses a “serious threat” to the United States, including roughly 7 in 10 Democrats and independents and about 8 in 10 Republicans. Trump’s overall job approval rating has stabilized at 39 percent in the new poll after slipping to 36 percent in July. The shift is within the poll’s margin of sampling error but is mirrored in the small rise in other recent national polls. Still, more Americans “strongly” disapprove of his job performance, 48 percent, than approve of it either “strongly” or “somewhat.” On North Korea specifically, most Americans are hesitant to support preemptive military action. Fewer than a quarter — 23 percent — of Americans say the United States should strike North Korea first, while 67 percent say there should be U.S. military action only if North Korea attacks the United States or its allies. Over 6 in 10 Republicans and independents along with more than 7 in 10 Democrats say the United States should not launch a preemptive strike. Even among those who “strongly approve” of Trump’s job performance, a majority, almost 6 in 10, oppose preemptive military action. If the United States did first launch a military strike on North Korea, 82 percent of Americans say it would risk starting a larger war in East Asia, including 69 percent citing a “major risk.” Despite resistance to preemption, however, Americans are much more supportive of military intervention generally than they have been in the past. In a question that did not contrast preemption and retaliation, the new poll finds roughly 4 in 10 Americans support bombing North Korean military targets, up from 2 in 10 in 2005, when North Korea declared itself a nuclear power. Republican support for bombings has more than doubled, from 29 percent in 2005 to 63 percent today. Most Democrats and independents still are opposed. Beyond military strikes, toughening sanctions on North Korea garners widespread support across party lines, with 76 percent of Americans overall approving. Other nonmilitary options aimed at pushing North Korea to give up its nuclear weapons are less popular. About one-third of Americans support offering the country financial incentives, such as aid money or more trade, down from about half supporting this approach in 2005. And while Russia and China have
called on the United States to reduce its military exercises with South Korea, a key U.S. ally. American public opinion is roughly divided. Forty-three percent think the United States should agree to stop conducting the exercises, while 47 percent oppose doing so. (Scott Clement and Philip Rucker, “Military Trusted on N. Korea,” Washington Post September 25, 2017, p.A-1)

When President Trump gave a fiery campaign speech in Huntsville, Ala., on the evening of September 22, he drew a rapturous roar for his warlike language, cheering as he renewed his threats and added a dig at Kim’s stature. “He should have been handled a long time ago,” Trump said, “but I’m going to handle it because we have to handle it: Little Rocket Man.” “I’m sure he’s listening, because he watches every word,” Trump said. “He’s watching us like he never watched anybody before — that I can tell you.” We’re dealing with somebody that we’ll figure out,” Trump said at the rally. “He may be smart, he may be strategic — and he may be totally crazy.” Among diplomats and national security specialists, the reaction was decidedly different. After Trump repeated his taunt in a tweet late the next day and threatened that Kim and his foreign minister “won’t be around much longer” if they continue their invective against the United States, reactions ranged from nervous disbelief to sheer terror. His strengths as a politician — the ability to appeal in a visceral way to the impulses of ordinary citizens — are a difficult fit for the meticulous calculations that his own advisers concede are crucial in dealing with Pyongyang. The disconnect has led to a deep uncertainty about whether Trump is all talk or actually intends to act. The ambiguity could be strategic, part of an effort to intimidate Kim and keep him guessing. Or it could reflect a rash impulse by a leader with little foreign policy experience to vent his anger and stoke his supporters’ enthusiasm. His new chief of staff and his national security team have drawn a line at trying to rein in his more incendiary provocations, fearing that their efforts could backfire with a president who bristles at any effort to control him. What remains unclear — and the source of much of the anxiety in and out of the government and on both sides of the Pacific — is whether they would step in to prevent the president from taking the kind of drastic action that matches his words, if they believed it was imminent. “It does matter, because you don’t want to get to a situation where North Korea fundamentally miscalculates that an attack is coming,” said Sue Mi Terry, a former intelligence and National Security Council specialist who is now a senior adviser for Korea at Bower Group Asia. “It could lead us to stumble into a war that nobody wants.” Some senior administration officials acknowledge privately that Trump’s rhetoric on North Korea is not helpful, although they question whether it will alter the discussion, given how far Kim has come in his quest to develop a nuclear weapon that could reach the United States. The three current and retired generals advising Trump — Jim Mattis, the defense secretary; Lt. Gen. H. R. McMaster, his national security adviser; and John F. Kelly, his chief of staff — as well as Rex W. Tillerson, the secretary of state, have all chosen their words on North Korea more carefully, emphasizing the role of diplomacy and the grave stakes of any military confrontation. “All three of the generals fully realize the carnage that would result from a war on the Korean Peninsula,” James G. Stavridis, the former NATO commander and current dean of the Fletcher School of Law and Diplomacy at Tufts University, said today. “Knowing each of them personally, I am certain they are counseling operational caution, measured public commentary and building a coalition approach to dealing with Kim Jong-un,” Stavridis, a retired admiral, said in an email. “But controlling President Trump seems incredibly difficult. Let’s hope they are not engaged in mission impossible, because the stakes are so high.” Christopher R. Hill, a former ambassador to South Korea who served Republican and Democratic presidents, argued that the comments could badly undercut Trump’s ability to find a peaceful solution to the dispute, playing into Kim’s characterization of the United States as an evil nation bent on North Korea’s destruction and relieving pressure on the Chinese to do more to curb Pyongyang. “The comments give the world the sense that he is increasingly unhinged and unreliable,” said Hill, the dean of the Josef Korbel School of International Studies at the University of Denver. Hill, who as envoy to South Korea under George W. Bush was the last American to hold formal talks with the government in Pyongyang, said he and Condoleezza Rice, then the secretary of state, routinely advised Bush to “avoid the personal invectives,” because “they never help.” “My sense from four years of those talks is that getting personal is not helpful,” Hill said. “Who could be telling Trump otherwise?” Yet current and former senior officials said it was clear that Trump would continue his brinkmanship, particularly his belligerent tweets, no matter what his advisers do or say. One
former administration official said nobody, including Kelly, could control the president’s social media utterances, despite what his military advisers thought about them. His maiden speech to the United Nations General Assembly drew audible gasps from the diplomats and national security officials in the hall. Some of Trump’s allies argue that his behavior is strategic, a way of telegraphing to North Korea — and to its primary patron, China — that the United States is taking a tougher line under this administration. There may be wisdom, they argue, in spurring fear and confusion in the mind of a leader who frequently relies on both. (Julie Hirschfeld Davis, “In Risky Game, Trump Taunts a Touchy Dictator,” New York Times, September 25, 2017, p. A-1)

President Trump issued a new order indefinitely banning almost all travel to the United States from seven countries, including most of the nations covered by his original travel ban, citing threats to national security posed by letting their citizens into the country. The new order is more far-reaching than the president’s original travel ban, imposing permanent restrictions on travel, rather than the 90-day suspension that Trump authorized soon after taking office. But officials said his new action was the result of a deliberative, rigorous examination of security risks that was designed to avoid the chaotic rollout of his first ban. And the addition of non-Muslim countries could address the legal attacks on earlier travel restrictions as discrimination based on religion.

Starting next month, most citizens of Iran, Libya, Syria, Yemen, Somalia, Chad and North Korea will be banned from entering the United States, Trump said in a proclamation released this evening. Citizens of Iraq and some groups of people in Venezuela who seek to visit the United States will face restrictions or heightened scrutiny. Trump’s original travel ban was followed in March by a revised ban, which expired on today even as the Supreme Court is set to hear arguments about its constitutionality on October 10. The new order — Chad, North Korea and Venezuela are new to the list of affected countries and Sudan has been dropped — will take effect October 18. “As president, I must act to protect the security and interests of the United States and its people,” Trump said in the proclamation, which White House officials said had the same force as an executive order. He added that the restrictions will remain in effect until the governments of the affected nations “satisfactorily address the identified inadequacies.” Officials described the new order as a much more targeted effort than the president’s earlier one. Each of the countries will be under its own set of travel restrictions, though in most cases citizens of the countries will be unable to emigrate to the United States permanently and most will be barred from coming to work, study or vacation in America. “Six of President Trump’s targeted countries are Muslim. The fact that Trump has added North Korea — with few visitors to the U.S. — and a few government officials from Venezuela doesn’t obfuscate the real fact that the administration’s order is still a Muslim ban,” said Anthony D. Romero, the executive director of the American Civil Liberties Union. “President Trump’s original sin of targeting Muslims cannot be cured by throwing other countries onto his enemies list,” Romero said. The proclamation imposes the most severe restrictions on Syria and North Korea, which Trump says fail to cooperate with the United States in any respect. All citizens from those countries will be denied visas to enter the United States once the proclamation goes into effect. (Michael D. Shear, “Trump Imposes New Travel Ban on 7 Countries,” New York Times, September 25, 2017, p. A-1)

Lt. Gen. H. R. McMaster, Trump’s national security adviser, said he saw no prospect of talks with North Korea that would allow its “de facto nuclear capability.” Kim Jong-un has already ruled out giving up nuclear weapons. McMaster said the administration does not want to negotiate in a way that “locks in the status quo as the new normal.” Asked about the option of a maritime blockade, he said it would probably provoke retaliation by North Korea. He also said many people seem to think — incorrectly — that there is an easy military option. “What we’re not assuming is that anything we do will go without some kind of response to the situation,” he said. McMaster would not comment on the North Korean threat to shoot down American warplanes. (Rick Gladstone, “North Koreans Issue a Threat to U.S. Planes,” New York Times, September 26, 2017, p. A-1)

President Trump’s extension of his travel ban to North Korea is mostly symbolic and will have little to no effect on Kim Jong Un’s regime, experts said September 25. Trump issued an executive order indefinitely banning travel to the United States by citizens of seven countries and the ruling
class of an eighth. The list includes all but one of the countries covered by the original ban plus three more: Chad, Venezuela and North Korea. The restrictions on Venezuela apply to that country’s leaders and their families. In the context of this escalating conflict, the North Korea travel ban may appear to be part of a U.S. push to isolate the regime. But experts said the provisions are unlikely to do so — or, in fact, accomplish anything concrete at all. Trump pitched the new order as a measure designed to keep Americans safe. “Making America Safe is my number one priority. We will not admit those into our country we cannot safely vet,” he tweeted. The problem with punishing Pyongyang by stopping North Koreans from traveling to the United States is that very few — almost none — make the trip. The new executive order suspends “immigrant and nonimmigrant” travel from North Korea to the United States. But people cannot emigrate from North Korea to the United States to begin with. “They should have checked if there is North Korean immigration before they banned it,” said John Delury, an associate professor at Seoul’s Yonsei University. “Why are you banning something that doesn’t exist?” North Korean defectors who end up in the United States usually arrive via South Korea and are typically traveling on South Korean, not North Korean, passports. Although North Korean diplomats do travel to the United States, mostly to United Nations headquarters in New York, the order notes that diplomatic visits are exempt from the ban. That only leaves the handful of officials or academics who attend conferences in the United States each year, a group that is already closely vetted by the State Department. Given all this, Cheng Xiaohao, a North Korea expert at Renmin University of China in Beijing, predicted that the impact of the ban on North Korea would be “very limited.” Lu Chao, a Korea specialist at the Liaoning Academy of Social Sciences in Shenyang, China, said there would be no practical impact at all. “It’s propaganda,” he said. Yet, if this is a message, nobody seems certain what message Trump is trying send — or to whom. Delury said the move may be aimed at a domestic audience, not an international one. The original travel ban was widely criticized for targeting Muslims — adding North Korea and Venezuela changes the conversation. “There’s no logic in the North Korea context, so we can conclude this is not really about North Korea,” Delury said. “This is not part of real North Korea policy at all.” (Emily Rauhala, “Almost No North Koreans Travel to the U.S., So Why Ban Them?” Washington Post, September 25, 2017)

9/25/17

North Korea’s foreign minister said President Donald Trump had declared war on North Korea and that Pyongyang reserved the right to take countermeasures, including shooting down U.S. bombers even if they are not in its air space. Ri Yong Ho said a Twitter message by Trump on September 23 in which the president warned that the minister and North Korean leader Kim Jong Un “won’t be around much longer” if they acted on their threats amounted to a declaration of war. Earlier in New York, where he had been attending the annual U.N. General Assembly, Ri told reporters today: “The whole world should clearly remember it was the U.S. who first declared war on our country.” “Since the United States declared war on our country, we will have every right to make countermeasures, including the right to shoot down United States strategic bombers even when they are not inside the airspace border of our country. The question of who won’t be around much longer will be answered then,” Ri added. White House spokeswoman Sarah Saunders denied the United States had declared war and called the suggestion “absurd.” (Michelle Nichols and Christine Kim, “North Korea Says U.S. ‘Declared War,’ Warns It Could Shoot down U.S. Bombers,” Reuters, September 25, 2017)

Lt. Gen. HR McMaster made a rare public appearance at the Institute of the Study of War’s invite-only, off-camera security conference. On North Korea, McMaster said they know there is no military quick hit to stop Kim’s nuclear progress: “There's not a precision strike that solves the problem.” The White House would start talks with Pyongyang — but not like before, he said, and not if they continue to advance missile and nuclear bombs at the same time. (Kevin Baron, “McMaster: I’m Here to Serve, Not ‘Control the President,’” Defense One Newsletter, September 26, 2017) President Donald Trump’s national security adviser said North Korea should consider accepting inspections of its nuclear facilities and declare it’s willing to give up its atomic weapons, moves that could lead to the U.S. negotiating with its government. H.R. McMaster said he wouldn’t lay out preconditions for talks with North Korea but described confidence-building
steps the country could take. He also said the Trump administration has gamed out “four to five” scenarios in which the North Korea nuclear threat is resolved. “Some are uglier than others,” he said in a speech on Monday hosted by the Institute for the Study of War. “What we hope to do is avoid war, but we cannot discount that possibility,” McMaster said. He said it would be “unacceptable” for North Korea to achieve a ballistic missile tipped with a nuclear warhead, technology the country has not yet demonstrated. (Margaret Taley, “McMaster Says North Korea Should Accept inspections before Talks,” Bloomberg, September 25, 2017) Asked September 25 about whether there were any contacts with the North, General McMaster said no, then quickly left the door open to doing exactly that. “When we do,” he said, “hopefully it will not make it into The New York Times.” (David E. Sanger, “On Tillerson’s Stop in China, Questions on North Korea,” New York Times, September 30, 2017, p. A-9)

Prime Minister Abe Shinzo called an election a year ahead of schedule, saying that Japan was facing a “national crisis” that must be dealt with now. Citing the rapid pace at which Japan was facing a graying population and falling birthrate, he said a national crisis loomed that must be addressed immediately to bring about a brighter future. Abe also touched on North Korea’s repeated nuclear and ballistic missile tests as another threat facing the nation. He promised to make every effort to protect the lives and peace of the people. “I am determined to resolve what can be called a national crisis together with the public by concentrating my entire being and soul into this issue,” he said. After lashing out at Pyongyang over its repeated provocations, Abe stated: “Elections that are the starting point of democracies should not be affected by any threats that may emerge from North Korea. Because of the situation that we currently face, I want to hold an election in order to ask the public to make a decision on how the North Korean issue should be dealt with.” Abe vowed to implement a strong foreign policy if he wins the election. While the government and ruling coalition will now coordinate the timing of the Lower House election, indications are that it will likely be held on October 22. (Asahi Shimbun, “Abe Cites ‘National Crisis’ in Calling an Early Election,” September 25, 2017)

9/26/17

President Trump thanked China for helping rein in North Korea and claimed that international pressure on the nuclear-armed outlaw nation is beginning to work, marking a change in tone amid concerns that tensions with Pyongyang are escalating dangerously. Trump made a point of praising Chinese President Xi Jinping for his efforts to squeeze “I applaud China for breaking off all banking relationships with North Korea, something that people would have thought unthinkable even two months ago,” Trump said. “I want to thank President Xi.” Although the president repeated a threat of military action, his language was mild by comparison to his branding of North Korean leader Kim Jong Un as “a madman” and his vow last week to “totally destroy” North Korea if necessary to protect the United States or its allies. Trump also expressed confidence he could solve a decades-long impasse that has bedeviled his predecessors. “North Korea is a situation that should have been handled 25 years ago, 20 years ago, 15 years ago, 10 years ago, and five years ago, and it could have been handled much more easily,” Trump said. “Yet various administrations, many administrations — which left me a mess. But I’ll fix the mess.” The president’s remarks appear to reflect an attempt at lowering the temperature after days of heated rhetoric and threats from both sides. Just before Trump spoke in the Rose Garden, the Treasury Department announced new sanctions on eight North Korean banks, 26 people in China and three other countries that the Trump administration says are linked to North Korean financial networks. The penalties come on top of unilateral U.S. sanctions announced last week that are meant to close off the U.S. financial system to Pyongyang and anyone doing business with it, as well as the international import and export restrictions approved since early August. The Trump administration says there are signs that North Korea is starting to feel the pinch from international pressure, especially with the addition of restrictions on fuel oil and other forms of energy that will affect the ruling elite. The penalties have not yet worked to deter Kim, who says the United States is bent on war. “Reversing strategic patience was the first foreign policy decision the Trump administration made,” State Department adviser R.C. Hammond said, referring to the prior policy of waiting Kim out. “There’s no more time to wait while North Korea develops its nuclear capabilities.” The international pressure campaign involving China was born out of that decision.
and Trump’s successful summit with Xi at his Mar-a-Lago resort in Florida this year, according to Hammond. “Strategies work when we stick to them,” he said. The State Department announced that Secretary of State Rex Tillerson will travel to Beijing this week for talks on North Korea, trade and other issues, including Trump’s visit to China later this year. State Department spokeswoman Heather Nauert stepped around the question of whether Trump’s name-calling or threats issued via Twitter are a helpful part of the U.S. strategy. “The president is an effective communicator. I think people know exactly where he stands. We have had a good deal of success in pushing forward with our diplomacy campaign,” Nauert said. “The president has done a strong job” of leading that diplomacy, she said. “Some may not want to give him credit for that.” Trump said Kim is the aggressor and instigator. “He’s acting very badly. He’s saying things that should never, ever be said,” the president said. “And we’re replying to those things, but it’s a reply. It’s not an original statement, it’s a reply.” (Anne Gearan, “Trump Tones Down Rhetoric on North Korea, Says Pressure Works,” Washington Post, September 27, 2017, p. A-14)

Trump: “We thank Spain for its recent decision to expel its North Korean ambassador and for standing with us in our efforts to isolate the brutal North Korean regime. It is time for all responsible nations to join forces to isolate the North Korean menace. North Korean nuclear weapons and missile development threaten the entire world with unthinkable loss of life. All nations must act now to ensure the regime’s complete denuclearization. I appreciate the United Nations Security Council voting twice, unanimously — 15 to nothing, twice — to adopt hard-hitting resolutions against North Korea. I have recently issued tough new sanctions against those who do business with this outlaw regime, and I applaud China’s latest action to restrict its trade with North Korea. And, in particular, I applaud China for breaking off all banking relationships with North Korea — something that people would have thought unthinkable even two months ago. I want to thank President Xi. … TRUMP: Major Garrett, CBS. Q. … And on North Korea, very quickly, the Foreign Minister said you have declared, effectively, war on North Korea. And the North Korean government has threatened to shoot down or aim at American planes flying in international airspace. I would like your reaction to that. TRUMP: … We’re totally prepared for the second option; not a preferred option. But if we take that option, it will be devastating — I can tell you that — devastating for North Korea. That’s called the military option. If we have to take it, we will. He’s acting very badly. He’s saying things that should never, ever be said. And we’re replying to those things, but it’s a reply. It’s not an original statement; it’s a reply. But the things that he said over the last year — and if you look back, the things that he said to past administrations — North Korea is a situation that should have been handled 25 years ago, 20 years ago, 15 years ago, 10 years ago, and five years ago, and it could have been handled much more easily. You had various administrations — many administrations which left me a mess. But I’ll fix the mess. So we’ll see what happens with North Korea.” (The White House, Office of the Press Secretary, Remarks by President Trump and President Rajoy of Spain in Joint Press Conference, September 26, 2017)

The United States added eight North Korean banks and 26 individuals operating in four countries to its sanctions blacklist, part of an intensified effort to starve North Korea financially in response to the country’s nuclear weapons and missile testing. The action by the Treasury Department came less than a week after President Trump announced an executive order that broadly expanded the punitive economic measures he can apply against North Korea’s leader, Kim Jong-un, and his subordinates. A Treasury statement said the sanctions singled out North Koreans working in China, Russia, Libya and the United Arab Emirates. Nineteen of the 26 North Koreans under sanctions are in China, underscoring the dependence of North Korea on its Chinese economic connections. “We are targeting North Korean banks and financial facilitators acting as representatives for North Korean banks across the globe,” Treasury Secretary Steven Mnuchin said in announcing the sanctions. He said the sanctions were imposed to complement a Security Council resolution on September 11 that represented the strongest penalties yet imposed by the world body on North Korea for its repeated nuclear and missile tests over the past decade. The eight banks, which the Treasury statement described as operators in North Korea’s financial services industry, were identified as: Agricultural Development Bank; Cheil Credit Bank; Hana Banking Corporation Ltd.; International Industrial Development Bank; Jinmyong Joint Bank;
President Donald Trump accused North Korea of brutally abusing an American student who had been held captive in North Korea, saying the young man had been “tortured beyond belief.” Trump had previously blamed Pyongyang’s “brutal regime” for Otto Warmbier’s plight but it was the first time the president publicly accused North Korea of torture in the case. U.S. officials have said Trump was personally taken aback by Warmbier’s death and his comment Tuesday ratchets up the pressure on Kim Jong-Un’s regime. “Otto was tortured beyond belief by North Korea,” Trump said on Twitter. His post followed the airing of an interview with Warmbier’s parents. “They kidnapped Otto, they tortured him, they intentionally injured him. They are not victims, they are terrorists,” Fred Warmbier said today on “Fox and Friends.” (Rumy Doo, “Trump Says U.S. Captive in North Korea Was ‘Tortured beyond Belief,’” Korea Herald, September 26, 2017) A U.S. coroner has concluded that Otto Warmbier’s death shortly after he was released by North Korea in June was the result of oxygen deprivation but it remains unclear how that occurred. Local media in Cincinnati, Ohio, reported that the coroner also said there were no indications that Warmbier had been subjected to torture, contradicting claims by his parents that he had been mistreated in captivity. Dr. Lakshmi Sammarco said 22-year-old Warmbier suffered brain damage about six months after he was arrested in January 2016 for allegedly stealing a propaganda poster from a hotel in Pyongyang where he was staying. Dr. Sammarco said Warmbier suffered brain damage that had been caused by oxygen deprivation, but the medical examination had been unable to determine why he had suffocated. In a report dated September 11, Dr Sammarco’s office concluded that the victim had been starved of oxygen as a result of “an unknown insult more than a year prior to death”, the Associated Press reported. (Julian Ryall, “Coroner Says She Cannot Find Clear Evidence That North Korea Detainee Otto Warmbier Was Tortured Before He Did, Daily Telegraph, September 28, 2017)

In the dead of night on September 23, American B-1B long-range bombers, escorted by F-15 fighter jets, prowled along North Korea’s east coast, in one of the United States military’s most daring maneuvers on the peninsula in decades. Two days later, North Korea’s foreign minister, Ri Yong-ho, declared that Pyongyang had the right to shoot down American bombers even if they were outside its airspace — another escalation in the war of words between the North and President Trump. But when those planes were near its shores, North Korea did nothing. South Korean intelligence officials told lawmakers on Tuesday that the North’s air-defense radar may have failed to detect their presence. Or, they said, Pyongyang may have simply chosen to avoid a confrontation. Either possibility would seem to contradict the image North Korea has sought to project: that of a nuclear power eager and able to take on the United States. Behind the North’s belligerent rhetoric, some analysts see a leadership anxious to avoid a war it can’t win, and careful to leave itself a rhetorical way out even as it makes threats. “I hear fear in their voice,” said Shin Won-sik, a three-star general who was the South Korean military’s top operational strategist before he retired in 2015. “They can’t fight a war with the Americans when their fighter jets don’t even fly far because of lack of fuel and fear of crashing.” Even as the North has matched Mr. Trump’s recent bellicose rhetoric, its military has warned units on the border with South Korea against rash decisions and reminded them to report up the chain of command before taking any action, according to South Korean intelligence officials who briefed lawmakers on today. “They are careful to avoid an accidental provocation or clash,” Lee Cheol-woo, chairman of the South Korean Parliament’s intelligence committee, quoted officials as saying during the closed-door session. “They may have the will but not the means to fight the Americans,” said Shin In-kyun, a military expert who runs the Korea Defense Network, a civic group. The threat to shoot down a
United States bomber is a case in point. North Korea last shot down an American warplane in 1969, killing all 31 members of the crew of a spy plane that was flying off its coast. In 1994, it shot down a United States Army helicopter that accidentally crossed into its airspace. But today, military analysts said, it would be all but impossible for North Korea to shoot down American warplanes like B-1B strategic bombers, F-15 fighter jets or F-35 stealth fighters, especially if they were flying in international airspace well off the North’s coasts. North Korea’s SA-5 land-to-air missiles have a range of only 155 miles, they said. American warplanes operate under the protection of radar-jamming technology, and North Korea’s aging MiG fighter jets, which are often grounded for lack of fuel and parts, are no match for them, Shin and other analysts said. Much as Trump’s aggressive rhetoric — like his threat to “totally destroy” the country — appeals to his core supporters, Kim needs to demonstrate to his people that he is not backing down from foreign threats, analysts said. But they noted that the North tends to couch its threats, however lurid, with carefully worded conditions. When North Korea threatened in August to create an “enveloping fire” around the American territory of Guam with ballistic missiles, its original statement said only that it was “seriously examining” a plan. Responding on September 22 to Trump’s United Nations speech, Kim did not commit to a course of action, saying only that he would “consider” the “highest level of hard-line countermeasure in history.” Ri Yong Ho, the foreign minister, did not say yesterday that North Korea would shoot down American bombers, only that it had “the right” to do so. “The North Koreans know how to choose their words,” said Cheon Seong-whun, a visiting research fellow at the Asan Institute for Policy Studies in Seoul, who served as a presidential secretary for security strategy in South Korea until early this year. “They know how to calculate their stakes. They are not reckless.” With its threats, North Korea is trying to make the United States think twice about further shows of force, even as it seeks to portray itself as playing defense against an American bully, said Lee Sung-yoon, a Korea expert at the Fletcher School of Law and Diplomacy at Tufts University. At the same time, Pyongyang probably hopes China and South Korea will call for calm and restraint, while using Mr. Trump’s threats as justification to conduct another missile or nuclear test, Lee said. “North Korea has to sound tough because it fears that if it is pushed back under American pressure now, it will never regain its ground,” said Kim Yong-hyun, a professor of North Korean studies at Dongguk University in Seoul. “It fears that if it backs down, China and Russia won’t come to its aid.” Analysts said the lack of a regular, high-level diplomatic contact between Pyongyang and Washington made it likelier that one side would misread the other, rendering the recent bombastic rhetoric all the more dangerous. “The level of mutual understanding between the United States and North Korea is low, while the chances of miscalculation are high,” Cheon said. (Choe Sang-hun, “Through the Bluster, Some See Caution,” New York Times, September 27, 2017, p. A-4)

North Korean government officials have been quietly trying to arrange talks with Republican-linked analysts in Washington, in an apparent attempt to make sense of President Trump and his confusing messages to Kim Jong Un’s regime. The outreach began before the current eruption of threats between the two leaders but will probably become only more urgent as Trump and Kim have descended into name-calling that, many analysts worry, sharply increases the chances of potentially catastrophic misunderstandings. “Their number one concern is Trump. They can’t figure him out,” said one person with direct knowledge of North Korea’s approach to Asia experts with Republican connections. To get a better understanding of American intentions, in the absence of official diplomatic talks with the U.S. government, North Korea’s mission to the United Nations invited Bruce Klingner, a former CIA analyst who is now the Heritage Foundation’s top expert on North Korea, to visit Pyongyang for meetings. Trump has close ties to Heritage, a conservative think tank that has influenced the president on everything from travel restrictions to defense spending, but no personal connection to Klingner. “They’re on a new binge of reaching out to American scholars and ex-officials,” said Klingner, who declined the North Korean invitation. “While such meetings are useful, if the regime wants to send a clear message, it should reach out directly to the U.S. government.” North Korean intermediaries have also approached Douglas Paal, who served as an Asia expert on the National Security Council under presidents Ronald Reagan and George H.W. Bush and is now vice president for studies at the Carnegie Endowment for International Peace. They wanted Paal to arrange talks between North Korean officials and American experts with Republican ties in a neutral location such as
Switzerland. He also declined the North Korean request. “The North Koreans are clearly eager to deliver a message. But I think they’re only interested in getting some travel, in getting out of the country for a bit,” Paal said. North Korea currently has about seven such invitations out to organizations that have hosted previous talks — a surprising number of requests for a country that is threatening to launch a nuclear strike on the United States. Over the past two years in particular, Pyongyang has sent officials from its Foreign Ministry to hold meetings with Americans — usually former diplomats and think-tankers — in neutral places such as Geneva, Singapore and Kuala Lumpur. They are referred to as “Track 1.5” talks because they are official (Track 1) on the North Korean side but unofficial (Track 2) on the American side, although the U.S. government is kept informed of the talks. But since Trump’s election in November, the North Korean representatives have been predominantly interested in figuring out the unconventional president’s strategy, according to almost a dozen people involved in the discussions. All asked for anonymity to talk about the sensitive meetings. Early in Trump’s term, the North Koreans asked broad questions: Is President Trump serious about closing American military bases in South Korea and Japan, as he said on the campaign trail? Might he really send American nuclear weapons back to the southern half of the Korean Peninsula? But the questions have since become more specific. Why, for instance, are Trump’s top officials, notably Defense Secretary Jim Mattis and Secretary of State Rex Tillerson, directly contradicting the president so often? “The North Koreans are reaching out through various channels and through various counterparts,” said Evans Revere, a former State Department official who dealt with North Korea and is a frequent participant in such talks. There are a number of theories about why North Korea is doing this. “My own guess is that they are somewhat puzzled as to the direction in which the U.S. is going, so they’re trying to open up channels to take the pulse in Washington,” Revere said. “They haven’t seen the U.S. act like this before.” Revere attended a multilateral meeting with North Korean officials in the picturesque Swiss village of Glion earlier this month, together with Ralph Cossa, chairman of the Pacific Forum of the Center for Strategic and International Studies and another frequent interlocutor with Pyongyang’s representatives. The meeting is an annual event organized by the Geneva Centre for Security Policy, a government-linked think tank. But it took on extra significance this year due to the sudden rise in tensions between North Korea and the United States. All the countries involved in the now-defunct six-party denuclearization talks — the United States, China, Japan, Russia, and the two Koreas — were represented, as were Mongolia, the Swiss government and the European Union. The Swiss invited the U.S. government to send an official, but it did not. The North Koreans at the meeting displayed an “encyclopedic” knowledge of Trump’s tweets, to the extent that they were able to quote them back to the Americans present. Pyongyang’s delegation was headed by Choe Kang Il, deputy director of the Americas division in the Foreign Ministry, and he was accompanied by three officials in their late 20s who wowed the other participants with their intellectual analysis and their perfect American-accented English. One even explained to the other delegates how the U.S. Congress works. “They were as self-confident as I’ve ever seen them,” said Cossa. Revere added: “They may be puzzled about our intentions, but they have a very clear set of intentions of their own.” The participants declined to divulge the contents of the discussions, as they were off the record. But others familiar with the talks said the North Koreans completely ruled out the “freeze-for-freeze” idea being promoted by China and Russia, in which Pyongyang would freeze its nuclear and missile activities if the United States stopped conducting military exercises in South Korea. The United States, Japan and South Korea also outright reject the idea. Participants left the day-and-a-half-long meeting with little hope for any improvement anytime soon. “I’m very pessimistic,” said Shin Beom-chul, a North Korea expert at the South’s Institute of Foreign Affairs and National Security, after participating in the meeting in Glion. “They want to keep their nuclear weapons, and they will only return to dialogue after the United States nullifies its ‘hostile policy.’ They want the U.S. to stop all military exercises and lift all sanctions on them.” Ken Jimbo, who teaches at Keio University in Japan and was also at the meeting, said that North Korea may still be interested in dialogue, but on terms that are unacceptable to the other side. “North Korea wants to be recognized as a nuclear-weapons state,” Jimbo said. “But when is North Korea ready for talks? This is what I kept asking the North Koreans: How much is enough?” (Anna Fifield, “N. Korea Seeks GOP Help on Trump,” Washington Post, September 26, 2017, p. A-14)
The United States was “very unpleasant” toward South Korea’s decision to propose military talks with North Korea to ease tension on the Korean Peninsula in July, President Moon Jae-in’s adviser, professor Moon Chung-in, said. “U.S. Secretary of State Rex Tillerson used a strong tone to protest against the decision when he met (South Korean) Foreign Minister Kang Kyung-wha.” Moon Chung-in’s statement, which came during an event marking the 10-year anniversary of the October 4 inter-Korean joint peace declaration, contradicts the Foreign Ministry’s earlier announcement that it had provided the U.S. with sufficient explanation on the proposal. In July, the Moon Jae-in administration proposed military talks and a separate Red Cross meeting with North Korea at the truce village of Panmunjom. The invitation was aimed at reviving inter-Korean dialogue channels and a fresh round of reunions for families separated during the Korean War. But North Korea had remained silent toward both proposals, which many government officials and experts here interpreted as a sign of refusal. Shortly after, Washington expressed “veiled discomfort” over Seoul’s decision. Then-White House press secretary Sean Spicer said that the U.S. believed the conditions “that would have to be met” to initiate dialogue with the North “are clearly far away from where we are now.” Moon Jung-in also underlined the need for an inter-Korean dialogue channel to prevent a full-scale war. “With the escalating tension on the Korean Peninsula, an accidental clash near the armistice line or the western sea border could lead to a full-scale war,” he said. “Both Koreas must talk with each other to prevent (a war). Inter-Korean talks must be revived. … So Pyongyang can talk with Washington through us when the dialogue channel between the two is closed.” (Jung Min-kyung, “U.S. ‘Very Unpleasant’ toward Seoul’s Push for Military Talks with N.K.: Report,” Korea Herald, September 27, 2017) The situation on the Korean Peninsula “is graver than at the time of the axe murder incident at Panmunjom in 1976. The deployment patterns [of US military assets] are being carefully coordinated,” The most critical prerequisite, he said, is “dialogue between the U.S. and North Korea.” “The ideal option is for the US to send a secret envoy to reach a dramatic agreement,” he added. “What is also necessary is inter-Korean dialogue,” Moon went on to say. “North Korea’s behavior serves as a decisive opportunity for overcoming the peace crisis on the Korean Peninsula and turning the situation around. I hope that North Korea will adopt a forward-looking attitude,” he said. One noteworthy remark that Moon made during the lecture was that “the US was extremely uncomfortable” about the overture for military talks that Seoul made to North Korea in July. “U.S. Secretary of State Rex Tillerson protested this to South Korean Foreign Minister Kang Kyung-hwa in strong language,” Moon said as he explained that the government had pushed for the talks out of concern about the possibility of an unplanned military clash in the West Sea. (Kim Ji-eun, “Chung Moon-in Pushes for U.S.-North Korean Dialogue as Way to Resolving Crisis,” Hankyore, September 27, 2017)

It's hard to imagine rhetoric more stark-and dangerous-than the words now flying back and forth between the leaders of the United States and North Korea. President Donald Trump over the weekend called North Korean leader Kim Jong Un a "madman," after declaring a few days earlier the U.S. might have to "destroy" his country if forced to act. Mr. Kim called the American president "mentally deranged," while his foreign minister said Monday the U.S. had essentially declared war on North Korea and his country felt free to shoot down American bombers in international air space. As a result, it may appear that the options facing the U.S. now are just as stark: all-out military conflict or simple acceptance of North Korea's nuclear advances. In fact, there are other, more creative options in America's tool kit. None is a silver bullet, and ultimately they may be more useful in freezing and containing North Korea's nuclear program than reversing it. Still, conversations with experts suggest a series of such options to increase pressure: Economic strangulation: This is the path the Trump administration already is traveling, particularly after announcing last week sanctions to cut off banks and companies that do business with Pyongyang. But there are further steps- provocative, to be sure-that could be taken to back up financial sanctions. The U.S. Navy could begin patrolling more intensively the waters around North Korea to interdict ships believed to be taking goods to North Korean ports. That would further discourage commerce and military technology trade with North Korea. A full blockade of North Korean ports is possible, though it would be "extremely intensive to execute," says Kathleen Hicks, a former Pentagon official now at the Center for Strategic and International Studies. Unconventional warfare: In defense circles, this approach is called "nonkinetic" warfare,
meaning tactics that aren't designed to kill or destroy. Cyberattacks, if successful, could hamper North Korea’s ability to continue its nuclear and missile research or to use its weapons. Electromagnetic attacks could cripple communications. "I know there are things that can be done that could suppress information systems, communications systems and military systems that would send a clear signal to Kim Jong Un about his own vulnerability," says Patrick Cronin, an Asian analyst at the Center for a New American Security. Subversion and psychological warfare: A proliferation of modern communications technology-cellphones, DVDs and flash drives-in long-closed North Korea has made it possible to crack through official propaganda with messages from the outside, seeking to sow internal unrest with the regime. In a paper written last fall for a Korea study group, Navy Commander Fredrick "Skip" Vincenzo explored using such technology to launch an "influence campaign" to reach top Korean officials. He concluded that such a campaign is unlikely to spark an antiregime uprising because "the regime's harsh, pervasive security apparatus is too well entrenched." But it's possible, he wrote, to deliver a message to North Korean military and civilian leaders that, in the event of a crisis, they will be protected by the U.S. if they peel away from the regime. Vincenzo called it a strategy for "convincing regime elites that their best options in these circumstances would be to support" the U.S. and South Korea. Downing a missile: The U.S. could choose to try to shoot down one of the ballistic missiles North Korea has been firing. The Pentagon has space-based systems and powerful radars in Japan that can detect a missile launch, and the Aegis missile-defense system based on ships near North Korea could target a missile launch. The U.S. and its allies have more work to do to build a truly reliable missile-defense system, though. If the U.S. tries to down a missile, it had better succeed; failure might only further embolden Kim. Intensified diplomacy: Michele Flournoy, a former undersecretary of defense in the Obama administration, says "the missing piece" in American strategy is a high-level diplomatic push. Whatever options the administration chooses for increasing pressure on North Korea, she notes, that pressure needs to lead somewhere. That somewhere likely is diplomacy designed, in the first instance, to freeze North Korea's weapons programs. To make that more likely, she suggests appointment of a high-profile presidential envoy to China, North Korea's key ally, to deal specifically with the North Korean problem. "We are reaching a fork in the road with China," where there will either be a plan to freeze North Korea's nuclear program or the U.S. will prepare further to deal with the problem militarily. Using high-level envoys to open the diplomatic track "is a method we have used successfully in the past." And if North Korea proves, as it has before, to be dishonest or insincere about negotiated agreements? In that case, Ms. Flournoy says, a negotiating track at least "buys us time to get other things to work." (Gerald Seib, “U.S. Has Options As Tension with North Korea Escalates,” Wall Street Journal, September 26, 2017)

Person: “...A review of North Korea’s perspective on Sino-Korean relations reveals a profound sense of mistrust that goes back decades and a long-term effort to resist China’s influence. This ultimately limits Beijing’s ability to exercise, at will, political influence over Pyongyang. This mistrust, one could argue, pre-dates the establishment of the DPRK and the People’s Republic of China in 1948 and 1949 respectively. For Kim Il Sung, the founding leader of North Korea (and grandfather of current leader Kim Jong Un), the mistrust likely went back to the 1930s when Chinese communists nearly executed him on suspicion of being a member of a pro-Japanese Korean group called the “People’s Livelihood Corp” or Minsaengdan. Up to 1,000 Koreans, who like Kim were members of the Chinese Communist Party, were caught up in an atmosphere of extreme paranoia and were persecuted by reason of their ethnicity. Nearly half were executed. One can only imagine how this incident sowed a seed of mistrust toward the Chinese Communist Party (CCP) not just for Kim Il Sung, but for many of the Korean members of the CCP who survived the affair. While we can only speculate about the psychological impact of the so-called Minsaengdan incident on Kim Il Sung, declassified Cold War-era records from the archives of the former Soviet Union, East Germany, Bulgaria, Mongolia and others—all former allies of North Korea—provide tangible proof that from North Korea’s perspective, the relationship with China has been fraught with tension and mistrust since at least the 1950-1953 Korean War. Thus, the very event that many point to as the origins of the Sino-DPRK alliance was actually a source of tension and conflict. In the late fall of 1950, the so-called Chinese People’s Volunteers, who had taken command of field operations in Korea, vetoed North Korean proposals to continue offensive operations against US
and South Korean troops in 1951. Consequently, North Korean leaders blamed Chinese military officials for failing to reunify the Korean peninsula, even though Chinese forces had, in fact, rescued the DPRK from certain defeat. During the war, disagreements also arose over control of North Korea’s railroad system. Chinese forces prohibited their use for anything other than military operations, including reconstruction after battle lines stabilized, a decision North Korean officials disputed, especially as many trains, standing still, fell prey to US bombs. Soviet records reveal that the relationship between North Korean and Chinese officials remained strained years after the 1953 Korean War armistice. In December 1955, Kim Il Sung utilized the concept “Juche,” a term typically translated as “self-reliance,” to minimize Chinese and Soviet influence on political, economic and cultural developments in North Korea. In August 1956, he purged pro-Chinese and pro-Soviet party officials for challenging his autarkic economic development strategies and personality cult at a plenary meeting of the Korean Workers’ Party (KWP). Three of Kim’s victims fled to China, where they briefed Mao Zedong on recent developments in the DPRK. Soviet Vice Premier Anastas Mikoyan, in Beijing at the time to attend the Eighth Congress of the Chinese Communist Party, also learned of the situation in Pyongyang. Mao and Mikoyan dispatched a joint Sino-Soviet party delegation to investigate the incident. The joint delegation, headed by Chinese Defense Minister Peng Dehuai, the former commander of the Chinese People’s Volunteers during the Korean War, and by Mikoyan, forced Kim Il Sung to convene a new meeting of the KWP, reappoint purged officials, and release others from prison. While there was no direct challenge to Kim’s authority, he clearly perceived the intervention as a violation of Korean sovereignty. Within months of the visit, Kim began to take steps to register his displeasure with China and the Soviet Union. He resumed the purge of those with close ties to Beijing and Moscow. According to Polish reports, up to 3,000 officials suffered as a result. Mao Zedong was so frustrated by Kim Il Sung’s actions that in a November 1956 conversation with the Soviet Ambassador to Beijing, Pavel Yudin, the Chairman equated Kim with Imre Nagy, the Hungarian “traitor,” and to Joseph Broz Tito, the overly independent Yugoslav leader. Mao even suggested that Kim could be acting in collusion with his South Korean nemesis, President Syngman Rhee. Mao’s remarks would later come back to hurt him. In 1960, as Sino-Soviet relations soured, Moscow sought to drive a wedge between Pyongyang and Beijing, and Khrushchev ordered that the Soviet record of the discussion be shared with Kim. Soviet reports describe Kim being visibly shaken after reading the cable. Kim’s learning of the conversation likely had a lasting impact on the North Korean leader’s perception of Mao and of China. In later decades, Kim harshly criticized the Chinese for interfering in an internal party matter in 1956. Relations between Pyongyang and Beijing briefly improved in the early 1960s when, in the wake of the Cuban Missile Crisis, the North Korean leadership split with Moscow over Soviet leader Nikita Khrushchev’s “revisionist” policies toward the United States. This period of Sino-DPRK accommodation was short lived however. As soon as Khrushchev was forced from office in the fall of 1964, Kim took steps to put space between himself and the Chinese leadership. By the mid-1960s, relations between Pyongyang and Beijing rapidly deteriorated. Throughout China’s Great Proletariat Cultural Revolution, Kim II Sung was a direct target of criticism by China’s Red Guards for allegedly “sitting on the fence” in the ongoing Sino-Soviet split. China’s leadership, which was in disarray, tolerated and even abetted these attacks. Relations deteriorated to the point where the Chinese and North Korean militaries clashed in the vicinity of Mt. Paekdu in 1969. According to a 1973 conversation between Kim and Bulgaria’s Todor Zhivkov, on another occasion Chinese troops crossed into North Korean territory and occupied a town. Kim ordered an attack, but the Chinese slipped back across the border. The damage to the Sino-DPRK relationship was irreparable. Faith would never be fully restored, even though—on the surface—the relationship seemed to get back on track from the early 1970s. There were other episodes in the Sino-DPRK relationship that reinforced Pyongyang’s belief that China was overly interventionist and not respectful of Korean sovereignty. For example, in 1980, when Kim Jong Il was declared successor at the sixth congress of the Korean Workers’ Party Central Committee, China openly denounced hereditary succession as a vestige of feudalism. For the North Koreans, this was unconscionable. Until China’s defeat at the hands of Japan in the 1894-1895 first Sino-Japanese War “de-centered” the Middle Kingdom, the Chinese emperor did enjoy the privilege of conferring legitimacy on Korean monarchs. However, by 1980, the North Koreans were likely appalled by the Chinese declaration, revealing a belief that Beijing still had the authority to voice
an opinion on leadership succession in the DPRK. Kim Il Sung, an anti-colonial revolutionary nationalist who was hard wired to the post-Westphalian notion of sovereign equality, resented such remnants of the suzerain-vassal relationship that characterized Sino-Korean relations until the late nineteenth century. Despite a shared history, border, and, at least ostensibly, ideology, from the 1980s, China and North Korea grew further apart when Deng Xiaoping emphasized the modernization of the Chinese economy. In the eyes of the North Koreans, China had abandoned revolution for a place in the existing international system. In the ultimate act of betrayal, Beijing recognized Seoul in 1992. As a result of this tortured history, pressuring China to exercise political influence over North Korea means the United States is asking Beijing to do precisely what Pyongyang has most resented over the years. This will only antagonize North Korea even more. This does not mean that the United States should abandon efforts to encourage China to exert pressure on North Korea. While China does not have the ability to exercise political influence over the DPRK, it enjoys greater material leverage over, and access to, Pyongyang than any other country. Indeed, some 80 to 90 percent of the DPRK’s foreign trade is with China. Surely that has to account for something. Without greater participation from China, the US policy of relying on sanctions to force North Korea to abandon its nuclear and ballistic missile programs is doomed to fail. Yet, there are also limits to a policy of relying on China to utilize its material leverage over North Korea. In any unequal alliance relationship, there exist clear limits to the ability of the patron ally to utilize its material leverage over its protégé to influence, at will, the latter’s policies. Protégé allies on both sides of the Cold War conflict often exhibited a far greater degree of autonomy than had been previously assumed. One only need think of the US relationship with South Korea’s Syngman Rhee or Taiwan’s Chiang Kai-shek. Despite being wholly dependent on the United States for economic support and security, both Rhee and Chiang were obstreperous allies. China’s ability to utilize its support to North Korea to influence Pyongyang’s policies for most of the past half-century was similarly limited. There is no reason to believe that this fundamental dynamic will change no matter how much the United States expresses its disappointment with China or imposes sanctions on it for Beijing’s failure to rein in North Korea’s nuclear and missile programs. Moreover, carrying Washington’s water is also not in Beijing’s interests. To be sure, China’s interests on the Korean peninsula and in East Asia do not align with those of the United States, and no amount of arm twisting will get Beijing to do the US’ bidding. While China prefers a nuclear-free and more compliant North Korea, it is not willing to bring the DPRK to its knees to achieve this goal. China’s enormous material leverage over North Korea is a double-edged sword. Cutting off the lifeline could lead to state and societal collapse in North Korea. This is the last thing Beijing wants. It would invite instability on China’s borders, precipitate a refugee crisis, or worse. The collapse of North Korea would be a national security nightmare for China, bringing a US treaty ally to its doorstep at a time when Beijing aspires to reassert its regional hegemony in East Asia. Moreover, China’s support to the DPRK in “The War to Resist America and Aid Korea” is central to the legitimacy narrative of the Chinese Communist Party. Following a “century of humiliation,” a brutal invasion by Japan, and a fierce civil war, the PRC—just one year after coming to power—fought the greatest power in the world to a standoff in a war to help its smaller communist ally.” (James Person, “Chinese-North Korean Relations: Drawing the Right Historical Lessons,” 38North, September 26, 2017)
near the border with the North, on a regular basis, many experts are worried about the possibility for miscalculation or misunderstanding. North Korea has continued churning out propaganda with its trademark braggadocio. “U.S. imperialist warmongers are bluffing,” being buoyed by war fever, after proposing ‘military counteraction’ against the DPRK again,” KCNA reported yesterday, using the country’s official abbreviation. “Literally, the whole country is permeated with the spirit to annihilate war maniac and old lunatic Trump on the earth.” These threats have gone the North Korean version of viral. More than 100,000 people took part in a regime-organized rally in Pyongyang on Saturday, to show they were ready to “remove the U.S. imperialists, the sworn enemy, from the globe.” KCNA reported. Photos from the rally showed orderly columns of men in workers’ suits and students in white shirts and red ties, some holding signs declaring “The U.S. is the headquarters of evil.” KCNA quoted one participant as saying that Trump’s recent comments were the “most ignorant remarks ever known in history,” while another said they were “insane.” But Gabroussenko said these kinds of demonstrations are not new in North Korea. The change has been in the attention being paid to the rhetoric, not in the rhetoric itself. “You can go back to North Korean rhetoric from the 1950s and find this kind of anti-Americanism,” she said. “Anti-Americanism is the basis of North Korean culture and history.” Shen Dingli, deputy dean of the Institute of International Affairs at Fudan University in Shanghai, agreed the rhetoric was overblown. “All these provocations are verbal,” Shen said, adding that Pyongyang does not want war. “North Korea already threatened to attack Guam, but they didn’t. Its artillery can blast Seoul and any of its nuclear weapons could turn northeast Asia upside down. But would they start a war first?” he said. “No, their nuclear weapons are for self-defense, and they are aware the United States will wipe them off from the Earth if they hit it.” At the same time as North Korea has been making these incendiary statements about the United States, there has also been a remarkable — and almost entirely overlooked — outburst directed at China. A commentary published September 22 on KCNA and signed by “Jong Phil” ostensibly attacked China’s “rude” and “shameless” media for saying North Korea deserved to be sanctioned by the United Nations over its nuclear weapons program. But this was a veiled criticism of Chinese President Xi Jinping just three weeks before he opened the Congress of the Communist Party, which is held every five years. Adam Cathcart, a China scholar at Leeds University who reads North Korea’s propaganda closely, believes that “Jong Phil” is a pen-name for Kim Jong Un himself, just as Mao and Stalin used aliases to write signed editorials. This is the third such editorial by “Jong Phil” — which means “Righteous Pen” — this year, and the most pointed. The week after China backed tough new sanctions on North Korea through the U.N., it accused Chinese state media of “kowtowing to the ignorant acts of the Trump administration.” North Korea was wondering how a fellow “socialist” country could “maliciously” collude with “the imperialists,” the editorial said. “This leaves us thinking whether they should be entitled to enter the coming party conference hall only when they register the dirty reptile records of betraying the peoples of the two countries,” the editorial said, alluding to the upcoming Congress. Cathcart said the statement was extraordinary, given that China is North Korea’s biggest trading partner and protector. “They’re basically accusing China of being revisionists who have no idea how happy the people of North Korea are,” he said. Nor was it clear why North Korea would risk making such a statement at such an important time for the Chinese Communist Party. “They’re basically telling China to go back to their socialist roots. What’s the long-term tactical thinking here?” But Cathcart was encouraged by recent efforts to forge new links with the Trump administration. Shen added that all of this rhetoric is designed to increase the temperature and bring about a return to talks, albeit on North Korea’s terms of being recognized as a nuclear weapons state. That means the United States now has two options, he said: reject talks with North Korea and watch it build more and more nuclear weapons, or hold talks with North Korea so Pyongyang will suspend its nuclear development. “The United States needs to choose the less harmful option of the two,” Shen said. (Anna Fifield and Emily Rauhala, “North Korea’s Rhetoric Hasn’t Changed – Only the U.S. Response to It Has,” Washington Post, September 28, 2017, p. A-14)

Lankov: “The involvement of state institutions in the market commercial activities is one such feature of North Korean life. The experience of my contact Ms. Roh [not her real name] is a great example of how the commercial spirit infiltrates even institutions which are decisively anti-commercial in nature. In the late 1990s and early 2000s, she, then a young woman and a daughter
of a naval officer, was involved with the commercial fishing activities of the North Korean navy. At first glance, this does not sound too unusual. It is widely known that from the late 1970s (and especially since the late 1990s), the North Korean military began to establish foreign trade companies whose official goal was to earn foreign currency income for their units, while in practice such companies often enriched commanding officers and their families. Many of such companies indeed deal with fishing, since seafood is one of few North Korean exports which sells well. Many North Korean military units have a fishing boat, often bought by private entrepreneurs, but are registered with foreign trade companies owned by the military. Instead of chasing Chinese intruders, the boat crew was busily catching and processing seafood. However, the case of Ms. Roh was different. Neither her father nor his superiors established a separate foreign trade company – even though he thought about it in the later stages of his military career, once he had enough capital to buy a fishing boat or two. For most of the time, he used the naval ships under his command for commercial shipping. The relatively large seagoing patrol boats whose official task was to protect the North Korean waters and, especially, prevent Chinese fishermen from fishing illegally there, began being used as part-time fishing boats by entrepreneurial commanders. Every patrol boat, apart from cannons and machine-guns, carried large nets and other fishing equipment. When on patrol, instead of chasing Chinese intruders, the boat crew was busily catching and processing seafood. The crew was unusual in its composition as well. Each boat had a standard crew of seven sailors and one or two commissioned officers. However, in most cases, a patrol boat also carried five to ten non-military passengers: wives and older children of the naval officers who boarded the ship to conduct fishing and trade. In the naval base on the coast of the Yellow Sea, where Ms. Roh’s father served, most of the officers’ wives went to sea regularly, acting as a sort of supplementary crew. The patrol boats left the base to spend a few days at sea, and those days were filled with frantic activity. The women fished and processed the catch, assisted by the sailors when the situation permitted (they were rewarded for their assistance). Being a naval ship, designed and built in the Soviet Union, the patrol boat had no refrigeration equipment, so the only way to preserve the catch was to apply salt. This seafood was to be sold at the coast upon arrival to the base and was less valuable as a result of its storage. But the really valuable and delicious items were not normally transported to the port. While at sea, the North Korean naval boat approached the boats of Chinese fishermen, and then sold them the best part of their catch. Wireless communication with the Chinese, while possible, was discouraged. In most cases, the commander told his Chinese partner where and when they should meet, and which items the Chinese ought to bring to pay for the catch. There were a few cases when the patrol boat traded with Russians, but Russian fishing boats are rare in the Yellow Sea, so such encounters were rare and largely incidental. The Chinese fishermen did not usually pay currency to their North Korean suppliers – it made more sense for both sides to pay in kind, with items which could be smuggled to land and then profitably resold at North Korean markets. Technically, the Koreans could accept currency – Chinese yuan widely circulated at the markets around the naval base where the patrol boats were stationed. However, officers’ families made more money by selling consumer goods and food. Chinese tobacco and strong liquor were potentially the most profitable merchandise, but pretty much everything, from socks to rice cookers, would be welcomed by the entrepreneurial naval wives. Re-sale allowed them to make good money, so most were rich by the standards of North Korea in the early 2000s. As Ms. Roh said: “we heard about the ‘Arduous March’, but felt little of hardship. The world changed after Kim Il Sung’s death, to be sure, and everybody began to trade, but our lives hardly became more difficult.” Sailors who were quite ready to assist the fishermen (or rather fisherwomen) with handling heavy nets and other duties were rewarded for this assistance. Sometimes a boat would stop near a remote island, and the entire crew – sailors and officers’ families together – would use low tide as an opportunity to collect shellfish, much prized by the Chinese customers. However, women seldom if ever paid the sailors: their reward was delivered as Chinese tobacco or good food. Whenever possible, women cooked not only for themselves but for the sailors as well. Nonetheless, the sailors, who were overwhelmingly draftees, got little monetary income from the unorthodox use of their ships. Out of the official crew, only two officers made money from the operations, while the rank-and-file had to be content with a good diet (far better than in other units) and easy access to Chinese tobacco and other manly luxuries. On the other hand, after each trip the commander had to handle a certain amount of money to his superior, just to ensure that they would turn a blind eye to the unusual use of naval
force. And what about the main job of the patrol, catching the foreign ships which would enter the waters of the DPRK? This job was done, from time to time, and occasionally could be quite profitable: to ensure prompt release, the crews of intercepted Chinese boats were willing to pay hefty bribes, often not in money, but in consumption items. Most were rich by the standards of North Korea in the early 2000s. Nonetheless, it was a sideshow: as most officers were concerned, the main task of their ships, with all guns and other naval equipment, was not to catch border intruders but to catch fish.” (Andrei Lankov, “How North Korea’s Navy Was Appropriated by the Market Economy,” NKNews, September 25, 2017)

The United States will send “strategic” military assets to South Korea on a more regular basis to better deter North Korea, the South’s national security adviser said. The decision, which has not yet been confirmed by the Pentagon, comes at a time of escalating tensions between the United States and North Korea, with many analysts concerned that incendiary rhetoric, combined with more frequent flyovers by American bombers, could lead to a catastrophic miscalculation. Chung Eui-young, national security adviser to President Moon Jae-in, told lawmakers in Seoul that American “strategic assets” could be deployed to South Korea on a “rotational” basis before the end of the year. “This will help us expand our defense capabilities,” he told the lawmakers, according to Park Wan-joo, spokesman of the ruling Democratic Party. He did not define “strategic assets,” but South Korean officials usually use the term to refer to B-52 bombers, stealth warplanes, nuclear-powered submarines and aircraft carriers. South Korean lawmakers were told that Washington had put its pledge on the deployment in writing, Park confirmed. A spokesman for the U.S. Pacific Command, based in Hawaii, did not immediately respond to a request for confirmation or comment. To celebrate its Armed Forces Day, which falls on October 1, South Korea’s military showed off some of its new weapons during a parade today. For the first time, the military displayed its Hyunmoo ballistic missiles, which can reach all of North Korea and are a key element of its “Kill Chain” preemptive-strike system. “Our government’s determination to protect peace requires strong defense capabilities, and we will stand up against reckless provocations with strong punishment,” Moon said after inspecting the weapons. “Securing counter capabilities against North Korean nuclear and missile threats is the most urgent task. We must further strengthen our Kill Chain and Korean missile defense system,” the president said. South Korean Defense Minister Song Young-moo last month asked his American counterpart, Jim Mattis, to send such military hardware to the southern half of the peninsula on a regular basis. A poll that YTN, a cable news channel, commissioned in August found that 68 percent of respondents said they supported bringing tactical nuclear weapons back to South Korea. North Korea has enough conventional artillery trained on the greater Seoul area, home to 25 million people as well as several large U.S. military bases, to cause widespread devastation before the American and South Korean militaries can respond. If North Korea were to start unleashing its artillery on the South, it would be able to fire about 4,000 rounds an hour, Roger Cavazos of the Nautilus Institute estimated in a 2012 study. There would be 2,811 fatalities in the initial volley and 64,000 people could be killed that first day, the majority of them in the first three hours, he wrote. As North Korea has continued to show off its growing arsenal — detonating a hydrogen bomb and firing increasingly long-range missiles — the U.S. and South Korean militaries have been conducting drills as a “show of strength.” But South Korean officials have been pushing for more than just flyovers from warplanes based in Japan or Guam: They want them to land in South Korea to show greater commitment to the military alliance. But there are logistical reasons that cannot happen, Jon Wolfsthal, a nuclear expert who served on President Barack Obama’s National Security Council, has said. Military airstrips in South Korea are not long enough for big, heavy B-52s, and the United States does not want its high-tech fighter jets sitting within North Korean artillery range, he said. The United States regularly sends aircraft carriers, as well as Los Angeles-class submarines, to South Korea during annual joint military exercises. But the South Koreans are seeking a more consistent and higher-power show of American military commitment. (Anna Fifield, “U.S. to Send ‘Strategic’ Military Assets to South Korea,” Washington Post, September 28, 2017)
“It’s only when we regain wartime operational control of our military that North Korea will fear us more and the South Korean public will trust the military more. The goal of this administration is to accelerate the transfer of wartime operational control,” South Korean President Moon Jae-in said today. “As the commander-in-chief of the military, I will do everything in my power to ensure the success of the reform of the national defense,” Moon said, as he called for the military to do its best to speed up the construction of South Korea’s three-axis weapons program, which consists of a preemptive defense system known as the “kill chain,” the Korean Air and Missile Defense (KAMD) and the Korean Massive Punishment and Retaliation (KMPR). Moon’s remarks are thought to emphasize his determination to take the initiative in resolving the security crisis on the Korean Peninsula based on South Korean military capabilities. Moon made the remarks during a commemorative address at the Second Fleet Command of the South Korean Navy in Pyeongtaek, Gyeonggi Province, just before Armed Forces Day on Oct. 1, which marks the 69th anniversary of the establishment of the Republic of Korea Armed Forces. “What we are seeking is clear — peace and prosperity on the Korean Peninsula. Our government’s commitment to defend peace is based on a strong national defense,” he said. Achieving that requires “an army that wins,” Moon said, declaring this to be the top priority of defense reform. Moon reiterated his strong commitment to peace as he emphasized keeping tensions in check. “The current security crisis on the Korean peninsula is graver than ever before, which is very trying and painful for us, but it cannot shake our commitment to peace. As the government further bolsters its military readiness based on the firm joint defense stance of the South Korea-US alliance, we are focusing all our capabilities on maintaining stability so that heightened tensions do not lead to a military clash,” he said. (Lee Jung-ae, “President Moon Reiterates Need for OPCON Transfer,” Hankyore, September 29, 2017) The president of South Korea vowed to accelerate efforts to strengthen its pre-emptive strike, missile defense and retaliatory capabilities against North Korea, and he renewed his call for the armed forces to become more independent from the United States. In a speech to mark South Korea’s Armed Forces Day, the president, Moon Jae-in, said he would push for the South to move more quickly to retake wartime operational control of its military from its American ally. Since the Korean War in the early 1950s, the terms of the countries’ alliance have called for an American general to command the South’s 650,000-member military should war break out. Moon and other liberals have campaigned for South Korea to play a greater role in the alliance, and they have long called for the country to resume responsibility for wartime command as soon as it can feasibly do so. But the idea has gotten more public support as remarks by President Trump have led many South Koreans to doubt his commitment to defend their country. . Moon said today that a more self-reliant military could make itself stronger and more feared by North Korea. But he also said the South should strengthen its alliance with Washington. An aide to Moon said this week that the allies were working on ways to move strategic American military assets into the region more frequently, to help deter North Korea. “The top priority is to secure abilities to counter the North Korean nuclear and missile threats,” Moon said. Moon has been more aggressive than his conservative predecessors about building up the South Korean military. After he met with Trump in New York during the United Nations General Assembly last week, Washington agreed to sell more sophisticated weapons to South Korea. During that meeting, the United States and South Korea also agreed to expand the deployment of American strategic military assets to South Korea on a rotating basis, possibly by the end of the year, Moon’s national security adviser, Chung Eui-yong, told South Korean political leaders on yesterday. Chung did not identify those assets, but in recent years the United States has often sent long-range strategic bombers and nuclear-powered submarines to South Korea for military drills. In his speech today, Moon said his government was accelerating work on three military programs: a pre-emptive strike system known as Kill Chain that would target North Korean missile sites; an air and missile defense system; and a program devised to launch devastating strikes against North Korea’s military and political leadership should it start a war. He said the South Korean military should become strong enough to retake its wartime control from the Americans and to “play a leading role in establishing a stronger and more stable combined defense system” together with the United States. Washington agreed in 2007 to return wartime command to Seoul by 2012. But the date was pushed back to 2015, then to the mid-2020s, as North Korea’s nuclear and missile programs advanced and doubt surfaced over whether the South’s military could build capabilities quickly enough to take the lead in its defense. In a new sign of China’s exasperation with Kim, the
Ministry of Commerce today published a formal notification of intent to close Chinese-North Korean joint venture businesses, in accordance with a provision of the latest United Nations Security Council resolution penalizing North Korea adopted on September 11. With some notable exceptions, including nonprofit enterprises and Chinese-North Korean hydropower projects, the provision specifies that foreign joint ventures with North Korea must be closed within 120 days of the resolution’s adoption, which places the deadline in early January. Political analysts said it was premature to judge the effect of the Chinese announcement, partly because the true extent of China’s joint ventures with North Korea is vague. It is also unclear how seriously China intends to enforce the provision. Still, the announcement appeared to threaten the most visible joint ventures — about 100 North Korean restaurants in China, staffed by North Koreans, that provide a stream of cash for Kim’s government. “At a minimum, it is a signal of displeasure to the North Koreans and a nod to the United Nations Security Council,” said Marcus Noland, executive vice president and director of studies at the Peterson Institute for International Economics in Washington. “And check back in 120 days and see what happens.” Jonathan D. Pollack, senior fellow at the Brookings Institution, said if China was serious about enforcement, “I have little doubt that this is going to hurt the North Koreans.” But he also was cautious about the potential impact. “The North Koreans are remarkably adept at circumventing sanctions,” he said. “They do a lot of activities in China that I don’t think the Chinese would count as North Korean entities.” In a further sign of North Korea’s isolation, Malaysia on Thursday barred its citizens from traveling to North Korea. Relations between Malaysia and North Korea have deteriorated since the assassination of Kim Jong-nam, the estranged half-brother of Kim Jong-un, at Kuala Lumpur International Airport in February. Malaysia is scheduled to face North Korea in an Asian Cup match in Pyongyang, the North Korean capital, on Oct. 5, already delayed twice over security concerns. It was not clear if the Malaysian team would be exempted from the new travel ban. (Choe Sang-Hun and Rick Gladstone, “South Korea Seeks Military Buildup and a Greater Wartime Role,” New York Times, September 29, 2017, p. A-7)

KCNA: “Bilateral talks between the DPRK and Russia took place in Moscow, capital of the Russian Federation, [today]. Choe Son Hui, director general of the North American Department of the DPRK Foreign Ministry, had a talk with Burmistrov, roving ambassador of the Russian Foreign Ministry, and met with Vice Foreign Minister Morgulov. At the talks and meeting there were in-depth exchanges of views on mutual concerns such as the situation of the Korean Peninsula and bilateral relations. Choe stressed that it is necessary for the U.S. to stop its hostile policy toward the DPRK in order to defuse tension and ensure peace and security in the Korean Peninsula and the Northeast Asian region. Expressing its understanding of the DPRK’s stand, the Russian side said that it had intent to make joint efforts for detente on the Korean Peninsula.” (KCNA, “DPRK-Russia Talks Held in Moscow,” September 30, 2017)

Otto F. Warmbier, the college student imprisoned in North Korea and returned to the United States in a vegetative state, suffered extensive brain damage following interrupted blood flow and a lack of oxygen, according to the coroner who examined his body. But an external examination and “virtual autopsy” conducted by the coroner’s office in Hamilton County, Ohio, could not determine how his circulation had been cut off. “All we can do is theorize, and we hate to theorize without science backing us up,” Dr. Lakshmi Sammarco, the county coroner, said in an interview today. His parents requested that a full autopsy not be performed. Today, North Korea’s Foreign Ministry issued a statement denying again that Warmbier had been tortured and accusing the United States of “employing even a dead person” in a “conspiracy campaign” against North Korea. Dr. Sammarco’s examination, which was concluded earlier this month, did not find signs of torture but could not rule out the possibility. “There are a lot of horrible things you can do to a human body that don’t leave external signs behind,” Dr. Sammarco said. “One of the frustrating things is the lack of information about what happened to him in North Korea,” she added. In a virtual autopsy, pathologists rely on an examination of the body and on scans to determine what has happened to it. Warmbier was returned with brain scans done in North Korea in April 2016 and again in July 2016. M.R.I. scans were done at the medical center after he arrived, which also performed a whole-body CT scan after Warmbier’s death. The images clearly showed that his
brain had been starved of oxygen and that large tracts of cells had died, Dr. Sammarco said. The medical diagnosis is anoxic-ischemic encephalopathy. That condition differs from the damage that occurs during a stroke, when a single blood vessel is blocked, said Dr. Lee H. Schwamm, executive vice chairman of neurology at Massachusetts General Hospital. With an injury like Warmbier’s, “blood flow is reduced everywhere — the pump is turned off,” said Dr. Schwamm, who reviewed the coroner’s report at The Times’s request. In the United States, the most common cause is a cardiac arrest, often precipitated by a heart attack. While cardiac arrests are unlikely in healthy young men, they can happen if the victim is malnourished and suffers an imbalance of blood electrolytes, such as potassium, calcium, or magnesium, Dr. Schwamm said. The damage is quick: It takes just four minutes without blood for brain cells to start to die. Blood flow to the brain can be interrupted for any number of reasons. The whole-body CT scan did not find injuries associated with hanging, for example, but Dr. Schwamm said the evidence might not be visible if a bedsheets were used and the spine were not dislocated. Warmbier had a scar at the base of his neck that was probably caused by the insertion of a tube into his trachea as he was hooked up to a ventilator. This may indicate that he was not breathing on his own for a long period of time, Dr. Sammarco said. He was weaned from the ventilator in North Korea, though; he was not using it when he was returned. There were few other signs of injury on Warmbier’s body. There were no bedsores, and his skin condition was excellent, Dr. Sammarco said. “His muscle volume was pretty good for someone who was bedridden for over a year,” she said. “If there were national or international implications, we would be happy to relinquish jurisdiction and cooperate in any way necessary,” she said. Federal officials declined, she added. (Gina Kolata, “Ohio Coroner Issues Report On Captive of North Korea,” New York Times, September 29, 2017, p. A-7)

In the remote North Korean city of Hamhung, separated from the capital by vast, jagged mountains, an inconspicuous chemical plant may be secretly fueling the growing missile array that threatens the United States. Researchers think that the plant is producing a specialized rocket fuel known as UDMH, which is used in the long-range missile launches that have escalated tensions between North Korea and the United States. This would settle an esoteric but crucial debate among North Korea watchers, and not to Washington’s favor. Some have argued that North Korea cannot produce the fuel, implying that the country imported it from Russia or China. Those countries could then be pressured to cut off exports, grounding North Korea’s missiles without firing a shot. But the new finding, produced by the James Martin Center for Nonproliferation Studies at Middlebury College, suggests that North Korea has mastered UDMH production, closing off one of the last avenues for outside curbs on the country’s increasingly sophisticated weapons programs. Though North Korea may have previously relied on foreign assistance in obtaining or making the fuel, as some analysts believe, it no longer appears to need the help. Vipin Narang, a Massachusetts Institute of Technology professor who studies nuclear issues, called the discovery “very important.” “If they are not dependent on foreign suppliers,” he said, then “even the most targeted sanctions on, and monitoring of,” countries that might assist North Korea “will be mostly futile.” Short of war or the country’s collapse, he added, “there’s nothing to stop this program from becoming a monster.” The finding is based on satellite imagery, a technical analysis of UDMH production methods, information from a North Korean official who defected, and a set of obscure North Korean technical documents. Jeffrey Lewis, the director of the Middlebury center’s East Asia Nonproliferation Program, had been hunting for weeks for hints of UDMH production. “There are no real, obvious signatures for it,” he said, because it can be made with common chemicals like chlorine and ammonia using a variation of a process developed in 1906. India, while quietly developing its missile program in the 1970s, had produced UDMH in an old sugar factory. The breakthrough came when his team found and translated a set of highly technical articles in an official North Korean science journal, Chemistry and Chemical Engineering, that referred to the fuel. The articles, which ran between 2013 and 2016, discussed mundane matters like managing highly toxic wastewater, a notorious problem in UDMH production. But they betrayed suspiciously sophisticated knowledge. One explored methods for improving purity, crucial in advanced missiles. “They don’t read like this is a speculative or nascent endeavor,” Lewis said. “They read like this is a problem they’ve been working on for a while,” describing problems a country would encounter only after producing large quantities of the fuel. But the documents betrayed something else: conspicuous secrecy. Unlike others in the journal, these three
to talk about rockets. Apparently eager to counter a widespread belief that North Korea had made successful launches, Ri, who has a
execute prisoners. Asked in an interview whether he felt pride at North Korea’s recent string of holes left by Stalin’s secret police, the NKVD, later renamed the KGB, which used the spot to
yard below offers a grim reminder of less accommodating times: it is pockmarked with bullet holes left by Stalin’s secret police, the NKVD, later renamed the KGB, which used the spot to execute prisoners. Asked in an interview whether he felt pride at North Korea’s recent string of successful launches, Ri, who has a family back in Pyongyang, blanched and said he did not want to talk about rockets. Apparently eager to counter a widespread belief that North Korea had made
such fast progress by stealing foreign technology, he said that his country “has had good rockets for more than 20 years” and also very good engineers. Denys Chernyshov, Ukraine’s deputy minister of justice, described Ri and Ryu as “very well trained. They are tough guys, real spies,” he said. He noted that, despite six years of detention, they had never written or received letters from family or friends. “They live in a total vacuum,” he said. After a string of failed tests with an intermediate range missile, Musudan, that had been the target of American sabotage, North Korea last year suddenly and mysteriously found success. It began with the rollout of a new missile in September that not only worked but also demonstrated a capability to travel ever further distances in a series of tests since then. In July, Pyongyang launched a missile capable of reaching the United States. Seeking to explain North Korea’s mysterious success, some experts have pointed a finger at Ukraine, particularly the Yuzhmash rocket factory and its Yuzhnoye design bureau in Dnipro, the town where Ri and Ryu were arrested. Ukraine has adamantly denied allowing leaks of missile technology, pointing to the arrest and conviction of the two spies as proof that the country is capable of combating North Koreans hunting for missile secrets. Ukrainian rockets mostly date to Soviet times but are still far more advanced than anything Pyongyang had until recently been able to produce. Oleksandr Turchynov, the head of Ukraine’s security and defense council, said it was “completely impossible” that North Korea obtained either missile engines or their design documents from Ukraine. The RD-250, a Soviet-era rocket engine that some experts say resembles engines used in recent North Korean launches, used to be produced in Dnipro, Mr. Turchynov said, but production stopped in 1991. The entire production line, he said, was dismantled in 1994. Moreover, he added, Ukraine never made whole engines but only supplied parts to the RD-250’s main manufacturer, Energomash, in Russia. When The New York Times requested permission to visit the Dnipro complex, however, the Yuzhmash factory declined to receive a reporter and the factory to “meet Ukrainian partners who have been wrongfully blamed.” Ukraine is particularly sensitive to allegations that it has undermined nonproliferation efforts because it voluntarily gave up a nuclear arsenal it inherited from the Soviet Union. That surrender of power left it highly vulnerable to nuclear-armed Russia when Moscow annexed Crimea in March 2014. Ukraine’s domestic intelligence agency, known as the S.B.U., says it has been tracking North Korean efforts to steal missile technology for years. In addition to arresting Ri and Ryu, Ukraine expelled two North Korean diplomats accredited in Moscow who were accused of trying to obtain Ukrainian secrets. Ri and Ryu were caught red-handed taking photographs of what had been presented to them as a classified dissertation by a rocket scientist, S.A. Davidov, titled “Forecast methods of the performance capability of capillary intake devices in the fuel tanks of space vehicles.” Mastery of such intake devices would have helped North Korean engineers ensure the steady, uninterrupted flow of fuel, a hurdle that can impede the construction of reliable rocket engines. The dissertation the North Korean pair were given to photograph, however, had been gutted of secret information and filled with useless technical details. Ri received the fake secrets from V.A. Plekhanov, an employee at Dnipro’s Yuzhnoye design bureau, whom the North Korean had first tried to suborn by appealing to him on ideological grounds as a Communist before offering him about $1,000, the Ukrainian authorities said. Unbeknown to the North Koreans, Plekhanov alerted the S.B.U. and a trap was set in a cluttered back street garage where he had agreed to hand over the missile secrets. The North Koreans were both seized, along with the camera they used to take photos of the documents. With Ri and Ryu now approaching the end of their prison terms — they are scheduled for release next September because their sentences were reduced by two days for every day served in pretrial detention — Ukraine is wondering what will happen to them next. Neither man, according to their cellmates and prison officials, has expressed any eagerness to go back to North Korea, fearing what awaits them and their families. Ukrainian officials believe they may request political asylum in Ukraine or another country after their release, though neither has so far made a request to stay. When Ryu, who is held in a correctional facility next door to Ri’s prison in Zhytomyr, was led into a visiting room for an interview he quickly covered his face and tried to run away. “I have nothing to say. Get away from me,” he shouted. “I want to live safely.” Ri, in a separate meeting, was less abrupt but also declined to answer all but a few preliminary questions. Anatoli Gabitov, the deputy warden, described Ri as a “super inmate” who never causes trouble. “I wish all our
prisoners were like him,” he said. The North Korean spy, however, may not be quite what he seems: On a bookshelf next to his bed is a Russian-language translation of “The Count of Monte Cristo,” the French novel whose protagonist considers himself wrongly imprisoned and, after a spectacular escape, sets about taking revenge on all those responsible for his incarceration. (Andrew Higgins, “North Korean Spies, a Ukrainian Jail and a Murky Tale,” New York Times, September 29, 2017, p. A-4)

The trucks still rumble across the Sino-Korean Friendship Bridge, and a nearby pipeline still pumps crude oil to keep the regime alive in Pyongyang. But here in the Chinese city of Dandong, at the center of this country’s trade with North Korea, pain and frustration are mounting. Sanctions approved by the U.N. Security Council to punish North Korea for its nuclear and missile tests and bring it to the negotiating table are starting to bite. “Personally, the sanctions are hurting me a tremendous amount,” one Chinese trader said, explaining that almost 80 percent of the goods he used to move back and forth across the border — ranging from textiles to chemicals — are now forbidden. “Both Chinese and North Korean business executives have the same thought — whatever happens, let it happen quickly,” he said. “If we have to have war, at least let it happen soon. We have to settle this quickly. Things can’t go on like this.” Successive rounds of U.N. sanctions have cut off more than 90 percent of North Korea’s publicly reported exports — including coal, iron ore, seafood and, most recently, textiles — and have restricted the regime’s ability to earn foreign currency income by sending workers abroad. The trader, of ethnic Korean descent, said he had not seen a worse climate in nearly two decades of doing business across the border. Nor had he seen the Chinese government so determined to impose its will — despite a lobbying effort from the local business community. Customs checks have become more stringent at the border, traders said, causing delays in addition to making it harder to smuggle banned items. In August, protests erupted near the northern end of the border, in the Chinese city of Hunchun, after Beijing moved to ban seafood imports from North Korea. Lu Chao, a Korea expert at the Liaoning Academy of Social Sciences, said Chinese cold-storage plants and seafood processing workshops across the border have fallen idle, while companies involved in textiles, coal and iron ore are also suffering. Travel agents sending Chinese tourists to North Korea have seen their revenue affected. “Sanctions bring a huge loss to Chinese traders,” Lu said. “Many companies doing border trade have gone bankrupt, and their owners run away, leaving people unemployed.” Outside the customs depot on the edge of town — where trucks are loaded and inspected before rolling across the border — two packers said traffic was falling. So far, though, sanctions have had a relatively modest effect on the overall trade numbers. In August, China’s imports from North Korea fell a modest 1 percent from a year ago, while exports were down 6.2 percent. On a cumulative basis, total trade was actually up 7.5 percent in the first eight months of the year. That may partly reflect North Korea’s ability to adapt to sanctions, as well as stockpiling by the regime and an attempt by traders to move goods across the border before sanctions hit, experts said. Chinese exports of corn, bananas and rice rose sharply, and there was even a shipment of 1.8 million tons of coal in August — six months after a ban was supposedly implemented. Commerce Ministry spokesman Gao Feng told reporters in Beijing that U.N. sanctions allowed a “cushioning” period after a ban is imposed, Reuters reported. Experts said China normally allowed shipments to go through if they had been agreed on before sanctions were announced. But a bigger question perhaps is whether smugglers can bypass the sanctions. In the seafood markets of Dandong, there are signs that they can — to some extent. Water-filled tanks of crabs and clams dominate the offerings. With Chinese waters overfished, most would have come from North Korean waters in the Yellow Sea, one trader said. Another man, delivering crabs to the market from the back of his truck, complained that the ban had pushed up the price of the North Korean crustaceans by roughly 50 percent, which in turn had depressed demand. “The formal trade from North Korea has stopped,” a third trader said, “but there are still ways of getting it for people who are brave and willing to take the risk.” Fishing boats from Dandong used to cross to North Korea to pick up seafood, bringing it back to China to pass off as their own catch, bypassing customs. Until recently, many did so openly during the day, but now the boats travel only at night, traders and fishermen said. At the small but usually thriving Yicuomao port on a small channel of the Yalu River, scores of blue-painted wooden and steel fishing boats lay idle. Some fishermen said they were losing money, but not everyone was. “If you have connections, you can still go
out,” said one fisherman, unhappy at the unfairness of the situation. “On the surface, China is implementing sanctions, but it isn’t really. If it really wanted to, it could just put a warship here to close off the estuary.” Experts said China can’t be expected to completely shut down smuggling across the 880-mile border, any more than the United States can easily end illegal immigration from Mexico. But there are also reasons to doubt whether local officials are trying as hard as they might, said Christopher Green, senior adviser for the Korean Peninsula at the International Crisis Group. While Chinese President Xi Jinping is reported to have disdain for his North Korean counterpart, Kim Jong Un, relationships at provincial and municipal levels, especially in security services, have always been very good. A little leakage serves to defuse domestic tensions and maintain that cross-border network, Green says. Within North Korea, the economy is almost designed to withstand sanctions. When times are tough, trade will be even more strictly cornered by the military and security apparatus. The ban on textiles, meanwhile, will have a disproportionate effect on women in North Korea who assemble garments. “The pain is felt at lower levels,” Green said. “That is not to say sanctions are bad, but invariably the effects flow downhill at the end of the day.” Near the village of Xingguang on the outskirts of Dandong, paramilitary troops and a fire company guard 10 large oil storage tanks, the start of an underground pipeline that supplies North Korea with the crude it needs to keep its military and industry running. It is a symbol of Beijing’s bottom line: keeping the Pyongyang regime alive. North Korea has apparently been stockpiling fuel, experts said, one reason that civilian fuel prices there have risen significantly this year. It also means that the North could probably withstand a temporary cut in oil supplies. But Beijing will never completely cut the regime’s jugular vein, experts said. It fears that a cut in oil supplies could leave China facing a nightmare scenario: either a hostile and desperate nuclear-armed enemy or, if the regime collapsed, a refugee crisis followed by an American puppet state right on its border. “Why do we sanction?” asked Lu at the Liaoning Academy of Social Sciences. “We believe that wrongdoings deserve punishment, but punishment should not be seizing them by the throat and trying to choke them to death.” (Simon Denyer, “On the N. Korea-China Border, a Constricted Lifeline Is Still a Lifeline,” Washington Post, October 1, 2017, p. A-20)

Schiller: “On the morning of its Independence Day on July 4 this year, the United States was greeted with a special present: North Korea had just launched a rocket that met every defined specification of a road-mobile intercontinental ballistic missile (ICBM). Seemingly out of the blue, the reclusive state passed a threshold that very few nations have managed before. Just six months earlier, US President Donald Trump had tweeted of this level of threat that “it won’t happen.” But it has. Some analysts had warned of this for years, and North Korea led up to the launch with a long series of publicity events that were communicated as serious milestones of ICBM development. Two different types of ICBM mock-ups were paraded through Pyongyang in 2012 and 2015; a long-range nuclear warhead design was presented in March 2016; and a week later, a spectacular “heat-shield test” had a warhead tip being burned by a rocket engine. There were also static rocket-motor tests in April 2016, September 2016 and March 2017 of large engines and engine clusters that seemed powerful enough to propel an ICBM. On top of that, North Korea was presenting one new missile after another at an ever-increasing pace. While only five different guided ballistic-missile types (plus two different space launchers) were known to have lifted off in North Korea before Kim Jong Un took over, the total range of functional ballistic missiles and large rockets rose to 15 with the Hwasong-14 ICBM launch in July this year; an additional five missiles that have not left the ground yet were hinted at in parades or other occasions. This pace is nearly unheard of. To give an example, Russia’s most recent submarine-launched ballistic missile (SLBM), the Bulava, took almost 20 years to develop, and failed again and again, while North Korea’s very first SLBM, the KN-11 or Pukguksong-1, was apparently developed in a tenth of that time (some experts even claim that North Korea initially developed a liquid-fueled version, and switched to solid fuel after the first tests, within less than a year — something that has never been done anywhere before). Granted, the Bulava is a lot bigger, more complex and powerful than the KN-11, but Russia already had decades of experience with solid-fueled missiles, while North Korea basically started from scratch. This should raise questions about how North Korea could achieve these feats. However, many experts just shrug that off, stating that Kim just decided to focus all his resources on missiles. This may be true. But can a
state under almost total international sanctions with little known high-tech industry really pull off something like this? If yes, why did North Korea choose ballistic missiles as its showcase? Why not aircraft, or surface-to-air missiles? Why not push an indigenous automotive industry and earn some hard currency abroad instead of getting additional sanctions for every missile launched? Is it really the fear of forced regime change initiated by the US and its allies that drives the missile program to unprecedented achievements? Other countries, from the US to Russia, China, France or India, required many more years and resources for comparable achievements. These questions can be answered two ways: One is quick and easy, the other requires a very comprehensive look at various parts of a huge puzzle. Let’s try both. The quick and easy answer is best done by referring to what could be called “public knowledge” about North Korea. And the easiest place to look is Wikipedia, which is a democratic instrument of agreement on issues of public interest due to its open editing structure. The various articles about North Korea’s missiles all paint a picture that can be summarized as this: North Korea obtained Soviet Scud missiles from Egypt sometime in the 1980s and quickly reverse-engineered these to build indigenous copies, building more advanced versions of these missiles over the years. Having mastered Scud technology, North Korea switched to more capable technologies that are also mostly based on other old Soviet designs. Next was the so-called SS-N-6 technology, and, most recently, the engines that were observed in the Hwasong-14 ICBM (even though they have been referenced simply as “Ukrainian” in many news outlets, the whole family of engines was developed in Soviet times at an institute in Moscow). As proof for this narrative, it is common to hint at papers that tell the same story, referencing back to other papers that tell the same story, until the trace is lost, or ends at some “secret government source.” The other approach is painful and challenges the “known truths.” It is based on rules that apply everywhere else in the world, and for every other technological field, and it requires accepting “Murphy’s Law,” the old saw that states that where something can go wrong, it will go wrong. You know how this goes: The new IKEA wardrobe usually is harder to assemble than expected and in the end, one or two screws are missing. The new piece of software that “quickly” reorganizes all your favorite photos and music will do a lot of things, but not organize your files in the way you intended. The picture you just wanted to hang on the wall is now lying on the floor, broken, while you stare at the hole where the nail should have been. Things just go wrong because plans never play out as originally intended. This has two very important consequences: • Things must be tested, again and again and again. • If something doesn’t work, it has to be changed. In terms of a rocket system, this not only applies to its complete form, but filters down to every single component, element and part of a rocket. Indeed, virtually every known attempt at reverse-engineering leads to a similar product, but never to an identical product. This is because the details of a complex piece of hardware get changed along the way not only because they did not work the intended way, but also for other possible reasons. Maybe the original materials are not available and have to be substituted, requiring a redesign of the part; perhaps misunderstood design solutions are “improved” on the go, leading to different details being changed. It could be that the manufacturing process is unknown, so a different approach is selected — in chemical engineering, this can be compared to trying to cook a meal by only seeing the finished food on the plate. As a result, simple parts of the original hardware that apparently do not serve any special purpose may be substituted with different parts, materials or looks. Therefore, a reverse-engineered Swiss watch will be different from the original just as a reverse-engineered rocket engine or missile will be different — and the higher the number of parts and elements, the more the differences will be visible. What does this have to do with North Korea? The thing is: North Korea did not really test its missiles back in the 1980s and 1990s. Nonetheless, it seems they worked very well. And the Scuds looked exactly like the Soviet originals — they even sported Cyrillic letters. Oh, and they came with all the required support systems for a Scud B, a weapons system that included more than a dozen specialized vehicles, and the vehicles seen so far in North Korea look exactly like the Soviet originals, too. Did they quickly reverse-engineer these, too? Didn’t they receive just three missiles from Egypt, without any support equipment? The fact is that North Korea exported at least 100 (some sources say more) of these Scud clones to Iran in the late 1980s, where they were fired against Iraq with a very low failure rate. It might have been a coincidence, but at that time, the Soviets were just phasing out the Scud B system. Today, no one knows what became of these systems, comprised of hundreds of missiles and support vehicles. It therefore seems likely that North Korea did not quickly reverse-
engineer its first ballistic missile, the Scud B, but simply received the system from the Soviets. But this was three decades ago, why is this relevant now? This can only be explained by following North Korea’s missile program step by step. If North Korea did not reverse-engineer the Scud B in the late 1980s, it therefore did not have any experience in building missiles in the early 1990s. So, it should have been hard for it to design and produce the Scud C, a more advanced Scud version that appeared in 1990. But it was not. Only two launches of the Scud C are known in North Korea, in 1990 and 1991, and both were successful. This is not what you would expect from the very first indigenous missile development in any country. The same happened with the next missile, the Nodong, which looks like an enlarged Scud. It flew once in 1993 (successfully), and from 1998 on, the missile system was transferred to Pakistan and Iran in noteworthy numbers. Interestingly enough, there are also Soviet counterparts of both the Scud C and the Nodong. To drive home the point, we briefly have to delve into engineering details to point out another mystery: The Scud C featured many smart design solutions that increased its range compared to its predecessor, from 300 kilometers to 500 kilometers. But not a single one of these design solutions was incorporated into the Nodong missile, not even at later stages — while Iran slowly evolved the Nodong design into something far more capable (the Ghadr missile), North Korea still sticks to the original version. Why design the Nodong as a large Scud B, and not as a large Scud C? The story goes on. In 1998, a large space launcher, the Taepodong I, appeared, and in its first and only flight it almost succeeded in putting a satellite into orbit. Remember, this was done by the same people who had gained no experience through Scud B, Scud C or Nodong development. There must have been massive help from outside to explain that success. However, North Korea apparently scrapped the promising Taepodong I design and went for a very different, and much bigger, rocket, what was later known as the Taepodong II, or the Unha space launcher. The first rumors of this go back to the early 1990s, and a mock-up was observed in 1994. However, the first launch only occurred in 2006 (a failure), and later in 2009 and April 2012 (both failures). Only in December 2012 did the rocket successfully complete its first mission, about 20 years into development. This time, the pace and failure record made sense — orbital launch success at fourth launch after two decades is still an impressive feat. South Korea recovered the first stage of this rocket from the ocean, and what they found does not fit well into the “indigenous reverse-engineering” theory. The United Nations identified many parts as being imported from abroad, and the ball bearings inside the engines (which were clustered Nodong engines) clearly were of Soviet production. Judging by published photos of the wreckage, the manufacturing quality of these engines looked very good, while the airframe production quality was rather poor, which would imply that the engines were produced somewhere else than the rest of the rocket. If North Korea could produce complete Scuds, why use foreign parts in their flagship space launcher? In parallel, however, North Korea watchers had already identified another new missile development. The old but highly advanced Soviet SS-N-6 submarine missile technology was allegedly used to build a road-mobile missile, the Musudan. This technology was far more capable than the Scud technology used for the Unha, but for some reason, North Korea decided not to use it for the space launcher. The Musudan missile was declared operational in the 2000s without a single test launch. No launch was known until 2016, and when North Korea finally started to launch this missile in 2016, reportedly eight out of nine test launches failed. All these issues — missing test launches, overly reliable missiles and clear links to old Soviet technology — were summarized in a late 2012 public report. Then, all of a sudden, starting in early 2014, the North Korean program went into overdrive. It seemed that Kim wanted the world to know that he could build rockets on his own. But he overdid it. All the “new” rockets flown since then showed some dubious characteristics: • The “improved” KN-02 looks exactly like the old Soviet SS-21, as does its predecessor, the KN-02. It also boasts unrealistic performance claims. • The KN-11 SLBM came out of nowhere, and shows some disturbingly familiar characteristics with Chinese/Pakistani solid rocket motors. • The Musudan uses an engine that looks a lot like that of the Soviet SS-N-6. • The Scud ER, which is not new, was rumored to exist in North Korea around 2000, after it had already received other Soviet Scud versions. • The KN-15 is a land-based version of the KN-11 SLBM, with the same, familiar solid rocket motors. • The Hwasong-12 uses a completely different engine than any previous North Korean rocket. The engine looks like it is from the Soviet/Ukrainian RD-250 family. • The KN-18 is just a Scud C with a different warhead and unrealistic accuracy claims. • The Hwasong-14 uses the same Soviet/Ukrainian design engine as the Hwasong-12. Even though North Korea now
launches rockets frequently, including some failures, the track record of success is still unusually high. Especially considering that there had been no prior experience from Scud reverse-engineering, so they actually had to start from zero. There also remains the question of why North Korea seems to start over again and again, using completely new (but nonetheless familiar) technology for its various missiles — almost as if they get access to new proliferation sources time and again. All this can only be explained by some sort of external help, combined with the insight that the North Korean program still is not exactly what they want the world to believe it is. This, however, also means that there might be more surprises coming. So there are at least two ways to explain North Korea’s missile program. The quick and simple “reverse-engineering” explanation is favored not only by Wikipedia, but also by a broad community of experts and institutions that focus their research on North Korea and other problematic states. Interestingly enough, these institutions usually cover technical questions about both missiles (meaning rocket technologies) and weapons of mass destruction (meaning chemical, biological, and nuclear weapons), while being rooted in political science. The other way around rarely happens: There is not a single department of engineering that has an audible voice in the North Korean threat assessment community. Perhaps people that actually build rockets are not interested in political assessments, or they are not allowed to join public conversations for security reasons (which is certainly true for people building nuclear weapons). However, in the few times that real rocket people — meaning those with hands-on rocket program experience — are asked about their thoughts on North Korean successes, they answer with statements that could be summarized as this: “They easily succeed where we keep failing. Our rockets always explode.” This sounds a lot like they would tend toward the second way of explaining the North Korean rocket mystery. (Markus Schiller, “North Korea’s Missile Progress: Spectacular Success — with No Easy Explanation for It,” Global Asia, 12, 3 (Fall 2017), pp. 16-23)

 DeVore: “China responded to the South Korean government’s July 2016 agreement to allow the United States to deploy an anti-missile system, the Terminal High Altitude Area Defense (THAAD), with a harshness that surprised observers. China punished South Korea economically by preventing Chinese tourists from vacationing in South Korea and by shutting down Korean department stores in China, among other moves. Quasi-official sources, more ominously, suggested that China would expand its nuclear arsenal and target South Korea should hostilities erupt between China and the U.S. These actions were all the more dramatic considering that China had enjoyed better relations with South Korea than most other neighboring states and that Beijing therefore risked alienating a key regional partner. China’s hostility towards the US deployment of THAAD is puzzling at first glance. Although states occasionally react with similar animus to foreign weapons deployments, it is offensive systems rather than defensive ones that generally spark controversy. It was the deployment of offensive ballistic missiles that triggered the 1962 Cuban Missile Crisis and the 1977-87 Euromissile dispute. Lesser crises, such as that sparked by the Soviet construction in 1970 of a nuclear submarine base at Cienfuegos, Cuba, likewise centered on offensive weapons. The question must therefore be asked as to why China is expending significant political capital to halt the deployment of a defensive weapon. Chinese rhetoric suggests that the answer lies in either China’s belief that missile defenses are intrinsically destabilizing or that THAAD’s radar will undermine China’s nuclear deterrent. I argue, however, that neither explanation holds up under scrutiny despite their superficial plausibility. Chinese strategists do not regard missile defenses as especially destabilizing and are actively developing a gamut of missile defenses equivalent to those of the US. Arguments about THAAD’s radar, despite their veneer of technical believability, also cannot account for China’s behavior. Although the range of THAAD’s radar indeed reaches into China from South Korea, it cannot provide the tracking data that would help the US intercept Chinese strategic missiles. If China’s public critiques of THAAD lack credibility, then what other factors account for its policy response? I answer this question by demonstrating that China’s behavior is, first and foremost, driven by its government’s fears that US missile-defense deployments will bolster and multilateralize U.S. alliances in Asia. Chinese leaders have long expressed their fear that the U.S. will transform its fragile “hub-and-spoke” Asian alliance architecture into a solid multilateral alliance more akin to the North Atlantic Treaty Organization (NATO). Missile defenses, by virtue of their technical characteristics, generate technical imperatives and opportunities for precisely this form of alliance
transformation. The Chinese government is therefore willing to risk political capital to oppose THAAD because it fears that deployment of it and other similar systems will enable the US to consolidate and strengthen its Asian alliances. Recent Chinese rhetoric suggests that its opposition to the THAAD deployment is part and parcel of a principled opposition to missile defense per se. China’s use of this argument resonates so widely because it taps into an intellectual commonplace that has evolved since the 1960s. Missile defenses are, within this context, decried because they are allegedly inherently incapable of protecting a country, yet will aggravate arms races and the likelihood of nuclear war. This principled critique was originally developed by American scientists in the 1960s and later gained traction in Europe before being adopted in the rhetoric of Chinese diplomats in the late-1990s. Missile defenses are, according to this critique, uniquely pernicious because successful defense against ballistic missiles is technologically unfeasible, yet the existence of missile defenses aggravates arms races and creates incentives for a nuclear first strike because states cannot accurately assess exactly how (in)effective enemy anti-missile systems will be. According to this critique, penetrating missile defenses will always be technologically simpler and economically cheaper than building defenses impervious to penetration. Missile designers can equip strategic missiles with cheap penetration aids, such as chaff and decoys, since for most of their trajectory longer-range missiles travel in orbit, where penetration aids possess the same flight characteristics as missile warheads. Within the atmosphere, at terminal ranges, missile designers can build warheads that are both stealthy, because they are constructed out of radar-absorbent materials, and maneuverable, because gravity grants them greater aerodynamic potential than anti-missile interceptors. Scholars of international relations argue that the uncertainties that missile defenses generate are even worse than the defenses’ intrinsic shortcomings. Since attackers can conceal their penetration aids from defenders until they use them in combat, defenders must design defenses to defeat an attack whose precise characteristics they ignore. Neither attackers nor defenders can therefore accurately anticipate what proportion of missiles will penetrate defenses. The resultant uncertainty arguably increases war’s likelihood because it drives states to develop doctrines based on worst-case scenarios, such as destroying much of an opponent’s missile force in a surprise attack and then intercepting the remainder with its anti-missile systems. States are driven by fear of “disarming” first strikes to engage in arms racing and adopting “launch on warning” doctrines, which raise the likelihood of nuclear war. Missile defenses are, thus, intrinsically destabilizing according to the principled critique. Although American, European and Russian critics first popularized this argument, Chinese diplomats have evoked it since 1999. China’s government, however, employs the principled critique in an instrumental fashion. It was Russia, in fact, that convinced China to adopt its rhetoric beginning in January 1999, when both countries protested against the missile defense plans that US President Bill Clinton was then adopting under pressure from a Republican Congress. China’s embrace of this argument only tightened once President George W. Bush’s administration accelerated the US’s missile-defense programs and openly questioned the Anti-Ballistic Missile Treaty’s relevance. The director of the Chinese Foreign Ministry’s Arms Control Department, Ambassador Sha Zukang, used this principled critique in communiqués and UN resolutions that China co-sponsored in opposition to US missile defenses. The sincerity of Chinese leaders’ adherence to the principled critique is, however, belied by China’s own vigorous missile defense efforts. Mao Zedong authorized China’s first missile-defense program in 1964, the same year that the country detonated its first atomic bomb. The resultant Project 640 enjoyed considerable support and was pursued until 1983, but failed because China’s technology was inadequate at that time. Although Deng Xiaoping cancelled Project 640, he authorized new anti-missile research programs three years later under Project 863. Chinese missile-defense research has been continuous ever since then, and political leaders reaffirmed their commitment to missile defenses with Project 998. China began purchasing mature Russian anti-missile systems to supplement its indigenous efforts in the 1990s. It first acquired Russia’s S-300PMU missile and its accompanying radars in 1991 and followed up by buying improved S-300PMU-1s (1994), upgraded S-300PMU-2s (2003) and the naval variant S-300F (2002). China’s defense industry then developed the HQ-9 based on the S-300PMU. Altogether, China has amassed at least 192 land-based missile launchers and 12 warships equipped to fire S-300 or HQ-9 variants. More recently, China in 2014 concluded a US$3 billion deal to import 48 units of Russia’s latest anti-missile system, the S-400 Triumf. This system, which Russia only introduced in 2007, fulfills the
same functions as THAAD and possesses a missile, the 48N6, which exceeds THAAD’s in range (250 km) and velocity (4.8 km/s). China’s indigenous anti-missile systems are today approaching maturity even as it continues amassing Russian-designed systems. China’s first major accomplishment was the successful testing in 1999 of a kinetic kill vehicle (KKV) designed to destroy opposing missiles through impact. China, meanwhile, developed three distinctive anti-missile systems — the HQ-19, HQ-26 and HQ-29 — that employ KKV’s. The first system, the HQ-19, is designed as a Chinese equivalent to THAAD and will reportedly be deployed in 2018. The other two, the HQ-26 and HQ-29, entered development somewhat later, but reportedly entered flight testing in 2016 and 2011, respectively.Taken as an ensemble, China’s missile defense investments place it as one of the world’s most enthusiastic proponents of this technology. China, indeed, lagged behind only the US and the Soviet Union in establishing missile-defense research programs and led Asia’s other great powers by decades in this process. Whereas China initiated anti-missile research in 1964 and fielded its first missile defenses in 1991, Japan did not tentatively initiate research until 1989 and refrained from purchasing an operational system until 2003. South Korea, for its part, did not even pursue missile defenses until 2006. China’s own longstanding commitment to missile defenses suggests, in sum, that the principled arguments of its leaders against US anti-missile deployments must be regarded as an opportunistic tactic. The other major argument that China advances to oppose the THAAD deployment is that this system will undermine China’s nuclear deterrent. Proponents of this argument insinuate that THAAD’s true purpose is to intercept Chinese, rather than North Korean, missiles. Although the range of THAAD’s radar’s lends superficial verisimilitude to this argument, it is nonetheless technically flawed. Any argument about THAAD’s utility against China’s intercontinental ballistic missiles (ICBMs) and submarine-launched ballistic missiles (SLBMs) is undermined by the inability of THAAD’s interceptors to reach such missiles. THAAD interceptors can hit targets at a maximum altitude of 150 km, which pales in comparison to the altitudes of 1,200 km that strategic missiles attain. To make matters worse, the velocity of THAAD’s interceptors of 2.6-2.8 km/s renders it all but impossible for them to destroy Chinese ICBMs travelling at 7 km/s. It is, in sum, all but impossible for THAAD missiles to intercept Chinese strategic missiles travelling over South Korea. Chinese claims, however, focus mainly on THAAD’s AN/TPY-2 radar. The most valuable function that radars provide for missile defenses is to provide tracking data on an incoming missile, which is necessary to calculate an intercept flight path to enable the missile interceptor to destroy the missile. Chinese statements about THAAD imply that the AN/TPY-2 radar can provide such data on Chinese missiles, which will then be used to calculate intercept trajectories for the United States’ longest-range missile defenses, which are based in California and Alaska. Tracking data requires, however, that multiple radar pulses from the same radar observe the missile at close intervals and identify the missile’s precise location at each interval. Radars can only scan a very narrow segment of the sky and must do so at very high frequencies to produce tracking data. This, in turn, means that complex phased-array radars like the AN/TPY-2 have much shorter tracking than identification ranges. The best available data on the AN/TPY-2 suggests a tracking range of 1,000 km. While such a range enables the radar to track targets within China, it cannot track Chinese strategic missiles along their predicted flight paths. China’s static ICBMs are, within this context, deployed westwards of the radar’s tracking range and its ballistic-missile submarines reportedly patrol in the South China Sea. Launched from these positions, the flight paths of China’s ICBMs and SLBMs would circumvent the THAAD radar’s coverage. While the AN/TPY-2 cannot track Chinese strategic missiles, it can identify them. The missile’s identification range, which involves collecting less precise information, covers China’s ICBM launch zones. This capability contributes nothing new to American anti-missile capabilities since the US already possesses three means of detecting Chinese missiles. The US’s premier detection system is its infrared DSP satellites, which can detect a missile’s hot exhaust plumes as soon as it is launched. The United States has also already deployed two AN/TPY-2 radars in Japan and built a massive PAVE PAWS radar complex in Taiwan. These radars collectively cover much of China and already provide identification data on the zones that a South Korean-based AN/TPY-2 would cover. THAAD, in sum, offers the US no additional anti-missile capabilities that it does not already possess vis-à-vis China. THAAD interceptors cannot reach Chinese missiles bound for the US and the AN/TPY-2 cannot provide any relevant data from intercepting Chinese strategic missiles that the US does not already possess. So, what motivates China’s opposition to THAAD
if it can’t be explained by either a principled rejection of missile defenses or by fears for its own nuclear deterrent? The answer to this conundrum lies in China’s fear of encirclement by a US-led alliance system. Although many of China’s neighbors have formal alliances or security relationships with the US, America’s Asian alliances do not as yet constitute a robust multilateral alliance equivalent to NATO. Chinese leaders fear, however, that the US is using missile defenses to transform its loose hub-and-spoke alliance system into a more robust multilateral alliance. Anti-missile systems, by their nature, enable such an evolution. Missile defenses must operate at short notice after long periods dormant. Since they are designed to counter surprise attacks and first strikes, they must also be fully integrated and operational in peacetime. This implies that allies collaborating on missile defense need to network their radars in peacetime and establish common battle management centers. Allies must, in sum, pursue a higher degree of peacetime command-and-control integration for collaborative missile defense than other forms of combined warfare. Chinese decision-makers have consistently evinced this fear: that anti-missile co-operation will lead to structurally tighter relationships between the US and its Asian allies. Chinese leaders first raised this concern in the late 1990s with regard to Taiwan by arguing that American anti-missile assistance could result in a level of military-to-military integration tantamount to an alliance. Chinese Ambassador Sha explicitly warned that US missile defense transfers to Taiwan would constitute “a serious infringement of China’s sovereignty and territorial integrity,” even though he tacitly accepted America supplying Taiwan with other forms of defensive weaponry. Anti-missile co-operation between the U.S. and Japan, meanwhile, generated precisely the type of integration that China fears. The Japanese government’s 2003 decision to procure Patriot PAC-3 and SM-3 IA anti-missile systems incentivized Japan and the US to integrate their armed forces more fully. The two governments established a Bilateral Joint Operations Co-ordination Center at Yokota Air Base in 2005 to fuse data collected by each country’s radars and sensors into a common operational picture. The two countries then set up a joint operations room in the Japan Air Self-Defense Forces’ basement to divvy up incoming missiles for destruction, and Japan approved the deployment of two American AN/TPY-2 X-Band radars to Japan. Many regard these measures as reinforcing the two countries’ bilateral anti-missile integration to the point that they “have essentially created a joint command relationship ... from the perspective of any potential adversary.” South Korea long appeared the exception to the process of ballistic-missile defense driving the US and its Asian allies closer together. Under former President Lee Myung-bak, South Korea’s government committed itself to developing a Korean Air Missile Defense architecture independent of the US. Even if this system received data from American early warning (DSP) satellites, it would not share data from its own Israeli-built Green Pine radars and would not establish a common battle-management center with the US. Later, in 2012, South Korea aborted a general sharing of military information agreement that would have facilitated trilateral anti-missile co-operation with Japan and the U.S. South Korean President Park Gyu-hye’s July 2016 decision to welcome the deployment of THAAD altered this state of affairs. The US deployment of a THAAD battery and AN/TPY-2 radar to Seongju will generate strong incentives for the US and South Korea to integrate their missile defenses. For one thing, the two countries can only obtain the significant advantages associated with launching sequential interceptors against incoming missiles — termed “shoot-look-shoot” tactics — by networking the United States’ upper-tier THAAD system with South Korea’s lower-tier Patriot, M-SAM and L-SAM systems. Furthermore, integrating data from America’s AN/TPY-2 X-band radar with South Korea’s Green Pine L-band radars would greatly increase their collective efficiency. The threat of a North Korean surprise attack, or one with minimal warning, necessitates that the US and South Korea integrate their missile defenses in peacetime, not wait for a crisis. Once U.S. and South Korean radar data are integrated within a single ballistic-missile acquisition-and-tracking center, which would also receive cuing data from American DSP satellites, little would hinder the US from sharing data trilaterally with Japan. Once Japan and South Korea are benefitting from one another’s early warning assets, it would only take a small, yet logical, step for them to begin preparing for how they would co-operatively engage enemy missiles, divvying up targets between Japanese cruisers with SM-3 missiles, America’s THAAD and South Korea’s L-SAM. Thus, the deployment of THAAD to South Korea, in China’s eyes, opens the door for functional spillovers that will reinforce America’s Asian alliances and possibly multilateralize them. It is therefore hardly surprising that Chinese leaders view South Korea’s decision to deploy
The Trump administration acknowledged for the first time that it was in direct communication with the government of North Korea over its missile and nuclear tests, opening a possible way forward beyond the escalating threats of a military confrontation from both sides. “We are probing, so stay tuned,” Secretary of State Rex W. Tillerson said, when pressed about how he might begin a conversation with Kim Jong-un that could avert what many government officials fear is a significant chance of open conflict between the two countries. “We ask, ‘Would you like to talk?’ We have lines of communications to Pyongyang — we’re not in a dark situation, a blackout,” he added. “We have a couple, three channels open to Pyongyang,” a reference to North Korea’s capital. Tillerson gave no indication of what the administration might be willing to give up in any negotiations, and Trump has made clear he would make no concessions. Speaking at the residence of the United States ambassador to Beijing after a meeting with China’s top leadership, Tillerson, the former chief executive of Exxon Mobil and a newcomer to diplomacy, was cagey about whether the inquiries yielded anything, or seem likely to. He would not say if the North Koreans had responded. “We can talk to them,” Tillerson said at the end of a long day of engaging China’s leadership. “We do talk to them,” he added, without elaborating or saying whether serious conversations are actually taking place. When asked whether those channels ran through China, he shook his head. “Directly,” he said. “We have our own channels.” Tillerson seemed to suggest that the urgency of the problem, with Kim “launching 84 missiles” in his brief few years as the country’s leader, and its efforts to develop a hydrogen bomb, called for direct talks. And while he said the ultimate goal of those talks had to be denuclearization of the Korean Peninsula — something the two Koreas agreed on in 1992 — progress toward that goal would be “incremental.” Tillerson said it was important to lower the temperature of threats being exchanged between the United States and North Korea. His comments marked the first sign that the Trump administration has been trying its own version of what the Obama administration did with Iran: using a series of backchannel, largely secret communications that, after years of negotiation, resulted in a nuclear accord. But Tillerson was quick to distinguish the very different circumstances of North Korea and Iran — Pyongyang has nuclear weapons, Tehran just a program that could have led to them — and then added: “We are not going to put together a nuclear deal in North Korea that is as flimsy as the one in Iran.” Tillerson’s comments came as the administration was nearing major decision points about North Korea. While he argued that economic sanctions were finally beginning to bite — “the Chinese are saying it is having an effect,” he argued — he did not claim they would change the North’s behavior. His visit to China came as the Pentagon was considering a variety of far more aggressive military moves, including whether to strike North Korea’s missile launching sites if it sees preparations for an atmospheric test — which would spew radioactivity into the skies — or use missile defenses to try to shoot down missiles. But all those approaches risk public failure, and if they did not stop Kim he would appear able to absorb, and ignore, an American effort to strip North Korea of its nuclear arms. American intelligence agencies are looking for ways to step up sabotage of the program, beyond the intensification of cyberattacks launched against some of its missile sites, secretly ordered by President Barack Obama in 2014. Speaking less than an hour after he left a meeting with President Xi Jinping of China, Tillerson said the most important thing was to lower the temperature of the threats being exchanged in recent days between Kim and President Trump. “The whole situation is a bit
overheated right now,” he said. “If North Korea would stop firing its missiles, that would calm things down a lot.” When asked whether that caution applied as well to Trump, who tweeted last weekend that if the North were to keep issuing threats, “they won’t be around much longer,” he skirted any direct criticism of the president. “I think everyone would like for it to calm down,” he said. A study conducted by the Center for Strategic and International Studies, a Washington think tank, and released in recent days, suggests that at times of diplomatic engagement with the United States, North Korean provocations usually decline. But it is unclear that the trend applies to Kim, who at 33 has invested dramatically in the nuclear capability, seeing it as critical to his hold on power. But there are risks in the talks, too. American intelligence officials believe Mr. Kim is racing ahead to complete his ability to strike the United States with a weapon, figuring that at a minimum that would give him huge negotiating leverage. Some former officials, like Michael J. Morell, who served as acting director and deputy director of the C.I.A., have written in recent weeks that Washington should give up on the hopeless goal of denuclearization, and work on how to deter the North from ever using its weapons. In Japan, where Prime Minister Abe Shinzo recently dissolved the lower house of Parliament and called a snap election, the news that the United States was already in direct contact with North Korea could give ammunition to Mr. Abe’s opponents. The Japanese leader has steadfastly maintained that it is not the time for dialogue with North Korea, arguing in a recent Op-Ed article in The New York Times, that “emphasizing the importance of dialogue will not work with North Korea.” “Now,” Michishita added, “the opposition party members can say, ‘Look, you have been talking about pressure, but the U.S. is just leaving you behind.’” Tillerson’s comments came after three back-to-back meetings in Beijing’s Great Hall of the People. Tillerson had just six hours or so to meet with Beijing’s leadership before most of the country shut down for Golden Week, a holiday that starts with China’s national day. That will be followed by the 19th Communist Party Congress, a meeting that occurs once every five years. In the period leading up to the Congress, Beijing has sought to preserve the status quo. That was reflected in the public comments of Tillerson and his Chinese interlocutors, none of whom mentioned the words “North Korea” in public. Xi told Tillerson earlier that he wanted to ensure that a planned visit by Mr. Trump to China in November would be a success, according to a summary of their meeting issued by the Chinese Ministry of Foreign Affairs. The Chinese Foreign Ministry noted that China’s foreign minister, Wang Yi, and state councilor, Yang Jiechi, who also oversees foreign policy, did discuss the North Korean crisis with Tillerson. Those accounts did not give any details. But at the end of the day, settling into a couch at the residence of Ambassador Terry Branstad, Tillerson tried to sound optimistic that traditional diplomacy would help resolve the North Korean issue, even though it has failed past presidents. He insisted that the ultimate goal of the negotiations would be complete denuclearization, a goal many experts believe is foolhardy to attempt, because the North has made clear that its nuclear arsenal is a pillar of the state. That is acknowledged in the North Korean Constitution. “They can change their Constitution,” Tillerson said. “Especially the people running North Korea — it’s pretty easy for them to change it.” (David E. Sanger, “U.S. Reaching out to North Korea on Nuclear Tests,” New York Times, October 1, 2017, p. A-1)

TILLERSON: … “We now have four, and we — and they’re at a much higher level now. So we have a Security and Diplomatic Dialogue that Secretary Mattis and I chair from our own side; we have an Economic and Trade Dialogue that Secretary Ross and Secretary Mnuchin chair; we have a Social, People-to-People Dialogue which I’m facilitating along with Secretaries Chao and Secretary DeVos that met — that dialogue met last week; and then we have a Law Enforcement and Cyber Dialogue that’s upcoming, and Attorney General Sessions will be involved in that one. So those are the four major dialogues that are really driving the agenda for U.S.-China relations and the discussions between the leaders. So this trip was to get some agreement around the details for the upcoming visit, and then, obviously, an opportunity to have some discussion around issues that are current, like North Korea. So we did have discussions about North Korea as well. So that’s really — it was kind of a real quick trip. We wanted to get it in before they got too busy with their party congress. And so that was — and also well enough in advance that we could get the preparations ready for the President’s visit. So I’ll stop right there and —

MODERATOR: Nick Wadhams. Q: …There’s certain widespread belief that sanctions alone will not change North Korea’s behavior. And if you look at Iran, it was a combination of
sanctions, military buildup, and then cyber sabotage in Natanz plant. So that’s what brought them to the table. Do you think that all three of these in some sort of combination would be required to bring North Korea to the table? TILLERSON: Well, I do think the broad-based sanctions are beginning to have an effect. We’re seeing it from some of what we can observe, and the Chinese are also telling us that it’s having an effect, and they have a pretty close-up view of it. But I think it’s also the uniform voice coming from the international community, and there’s almost no one aligning with North Korea on this nuclear program of theirs. And they clearly – they are seeing a military response in the region with a greater defense posture on the part of the Republic of Korea, Japan taking steps to beef up its defense posture. And so there is in that respect a regional military response. But I think it’s – it is also gaining – we’re gaining the support of the Chinese. They are actively engaged in putting pressure on the regime in Pyongyang. And so we’re hopeful that, as you’ve heard me refer to the peaceful pressure campaign is going to cause the leadership in North Korea to want to engage, and engage in the right conversation. And we’ve made it clear that we hope to resolve this through talks as well. That’s our principal objective, is a peaceful resolution. Q: …Mr. Secretary, as you have thought about and described your strategic objectives with the North Koreans, you have said repeatedly that you’re moving toward – ultimately toward denuclearization. But maybe in the intelligence community, many of your own colleagues, have said you’re not going to see that for years. So can you talk us through a little bit of what your medium-term objective here is? We’ve heard General McMaster say the other day it’s not just a freeze, because that would enshrine the current level of nuclear capability. So you might have been able to do that 10 years ago; not now. So what is it that you need to see the North Koreans do that would resolve the current crisis or that would actually get you engaged in conversation with them? TILLERSON: Well, look, the objective of denuclearization is not just ours. That’s the objective of the Chinese as well. They’ve been very clear in their policy. And it’s the objective of the Russians, it’s the objective of everybody in the neighborhood, is a denuclearized peninsula. So that’s not a policy that only the U.S. holds. I think in terms of how you realize that, it’s going to be an incremental process to get there. I don’t think anyone – you’d be foolish to think you’re going to sit down and say, “Okay, done, nuclear weapons are gone.” This is going to be a process of engagement with North Korea that will be stepwise. I think the most immediate action that we need is to calm things down. They’re a little overheated right now, and I think we need to calm them down first. And then first conversation is around: What are we going to talk about? Because we’ve not even had that conversation. And so the first time I would have the opportunity to sit with the North Koreans, it would be to say: What do you want to talk about? We haven’t even gotten that far yet. But the objective is clear. We’ve been clear publicly, the region’s been clear publicly, that we’re not going to accept a nuclear-armed North Korea. That is never going to be acceptable. Q: It’s in their constitution. They’ve also made it clear they’re not going to get into a conversation that involves their denuclearizing. TILLERSON: They could change their constitution. I think they created it, they can change it. Especially the guys who are running North Korea – it’s pretty easy for them to change it. Q: …Emily Rauhala, Washington Post. I wanted to talk about the idea of regime change. … Your objective is not regime change in North Korea. Why not? TILLERSON: Well, I think if you – everyone who has studied the situation and – to try to understand what is motivating North Korea, and more particularly what is motivating Kim Jong-un to step up the pace of this weapons development program, I think – and all of you are aware I think he has conducted some 84, 85 missile tests; he’s conducted, I think, four nuclear tests, in the short of, time of his regime. His father conducted, I think, only 10 missile tests over 20 years. So this is clearly someone that’s different. Why is he doing that? And obviously, the stated reason is for his own security and his own regime’s survival. So I think it was important to say, to us, “Look, our objective is denuclearization. Our objective is not to get rid of you. Our objective is not to collapse your regime. That’s not our objective. Our objective is denuclearization. So if you’d like to meet with us on a way to do that, that’s what we prefer to do.” So I said that because that is the case. Q: Hi. If North Korea conducts an atmospheric test, if it flies an ICBM over Japanese air space to do so, would that require an immediate military response? TILLERSON: That would be the Commander-in-Chief’s decision. Q: But that – is that a red line for the United States? TILLERSON: As far as I know, the Commander-in-Chief has issued no redlines. Q: Matt Rivers with CNN. Over the last couple days, we’ve been up in the
northeastern part of China, and we’ve seen at least on a small scale some evidence that sanctions against North Korea have been violated, at least in terms of what’s being sold up in the northeastern part of China. Not sure about the scale, but how comfortable are you – a knock against the Chinese for a long time is that they’ve not been willing to really enforce the sanctions that they’ve signed onto. Are you confident that they’re really enforcing at this time?

BRANSTAD: I was in Jilin Province, which borders on North Korea, I think three days after the nuclear test. I met with the party secretary of that province; I also went to the border at Tumen. The party secretary assured me that they are indeed enforcing the sanctions, and I saw very little activity on the border. So I have every reason to believe – and I’ve talked to a lot of people here as well. And obviously, that – it is a significant economic impact on Jilin Province, because that’s their neighbor, and they have a significant number of North Koreans employed there. But – and we’re trying to do everything we can to verify that they’re doing that, but I think the situation has changed a lot in the last few months. And frankly, they felt the impact of that nuclear test, and they’re testing their water and their air. So they’re very concerned about the situation, and I feel that they’re conscientiously trying to do what they can to enforce the sanctions. Q: Would you call that a significant shift in what you’ve seen from the Chinese in the last couple years?

BRANSTAD: Yeah. Obviously, I’ve only been here three months, but I think we’ve seen significant change. I want to give the President, the Secretary of State, and Haley – our ambassador to the United Nations – I think the two resolutions that have been approved recently are much stronger than a lot of people thought could be approved. They were approved unanimously with the cooperation of China, and I think China probably played a role in getting Russia’s support as well. Q: Chris Bodeen from Associated Press. When you talk about the rhetoric being a little overheated, does that apply also to President Trump? And should President Trump maybe tone down some of his comments as well? TILLERSON: I think the whole situation’s a bit overheated right now. I think everyone would like for it to calm down. Obviously, it would help if North Korea would stop firing off missiles. That would calm things down a lot. Q: …You just were talking about the actions that China has taken recently. And what’s behind that shift that the ambassador talked about what – China’s concerns, and how that might be playing into the shift. But what about the threats of trade actions from the United States? Do you think that that’s playing a role here — that China’s feeling pressure on the trade side, and that’s having some impact on their actions? TILLERSON: Well, I think you’d have to ask the Chinese that question. I think we have not deliberately linked those two actions. Trade is a – obviously, it’s an extremely important issue to the President, because it’s an important issue to the American people. We have a very significant trade imbalance, as you’re well aware. The President knows that’s important to the American people. It’s important to the American economy and jobs, and he intends to address it. We’ve never directly connected those two. I think the reason we’re seeing a very different posture on the part of China and the uptake on enforcing sanctions and their support for sanctions is because they too see how advanced this program now has become in North Korea. And I think they also have a sense that we’re beginning to run out of time, and that we really have to change the dynamic. Perhaps in years past when this was attempted – and we’ve said this before – unfortunately, our predecessors burned up a lot of runway, and I think even the Chinese realize that there’s not a lot of runway left now to solve this. And so that – I think perhaps that is what motivates them, because I do know that they are – they’re very committed to that policy of a denuclearized Korean Peninsula, because they understand the implications of just allowing North Korea to become a nuclear state. If North Korea becomes a nuclear state, they want it to become the last country to become a nuclear state in this region. Q: I’m Anthony Kuhn with NPR. Secretary Tillerson, I’m very curious about a statement you made in a speech at the State Department about the difference between values and policy. And it seems to me that implies very much in China. So what does that mean in terms of our policy towards China? Does that mean we adjust our expectations? Does it serve as a justification for dealing with people or actors that we wouldn’t otherwise? What does it mean, in terms of policy? TILLERSON: Well, what I said is that policies can and do change based upon conditions, based upon circumstances with a particular country, based upon the issues. Your values never change. And so those values that the American people hold dear around human rights, treatment of people, of freedom – all of that is constant. And my point is if you try to shape policy around those values, in my view, what are you saying? Because policy can change. And so
my view is the values are with us everywhere. They’re – you could say they’re embedded in everything we do. Policies, though, have to be crafted to deal with the circumstances at hand. And that’s – and when you – if you try to condition everything, one on the other, then you may not be able to create conditions on the ground to achieve your values. I think people are getting killed because of conflict and wars – the most important thing to them is to not get killed anymore. Not the most important – the most important thing to them may not be women’s empowerment or other issues. And that’s not to diminish those, but it’s to say that policies to deconflict need to be focused on deconfliction. And if we can create the conditions on the ground that allow us to advocate our values, we have a better chance of those values becoming more widespread. So I just – maybe it’s the way I tend to think about things, but I craft the policies, and the values are always embedded in those policies. The policies don’t – are going to have to fit the circumstance; the values are constant. Q: You’re not by any means saying – de-emphasizing human rights — TILLERSON: Not at all. Not at all. BRANSTAD: I would say – I’ve had an opportunity now to respond and meet with the Chinese on some of these issues involving human rights, and I’ve tried to – it’s part of our DNA. It’s part of what we – values that we have. And yet we need to recognize that they have a different system, and they may not share some of the values we have, but we still need to articulate those values and stand for those values that we think are universally human rights. Q: … Ben Tracy from CBS News. You mention that we’re not even at a point yet where we’re sitting down with the North Koreans to ask them what they want to talk about. Has the U.S. Government or the Chinese Government or the South Korean Government, for that matter, have any indication that they actually want to talk? Or do you think they want to complete their program first? TILLERSON: We are probing. So stay tuned. Q: How do we probe? TILLERSON: We ask, “Would you like to talk?” … We have lines of communications to Pyongyang. We’re not in a dark situation, a blackout. We have a couple, three channels open to Pyongyang. We can talk to them. We do talk to them. Q: Through China? TILLERSON: Directly, through our own channels. Q: Given the current debate from the administration over whether or not to withdraw from UN-endorsed multilateral deal with Iran over their nuclear program, does that – do you have concern over what effect that might have on North Korea’s willingness to come to the table to discuss a possibility of their own denuclearization or drawdown? TILLERSON: Well, we’re dealing with two very, very different situations in Iran, which does not have a nuclear weapons program and was not nearly as far advanced as North Korea is. We’re also – in Iran you’re also dealing with a very large nation, 60 million people, largely participating in the global economy, participating in global affairs. North Korea is a small, isolated country; they don’t participate in global affairs. Very limited participation in the global economy. So it’s – you have to use very different approaches with the two of them. I think in terms of how they – I don’t know if they’re watching what we do on the Iranian situation or not. And I don’t want to suggest to you that we’re not going to stick with the Iranian deal. The President will have to make that decision; ultimately, it’s what he wants to do. Having said that, we’re not going to put a nuclear deal in place in North Korea that’s as flimsy as the one we have in Iran. I can tell you that.” (DoS, Secretary of State Rex Tillerson and Ambassador Terry Branstad, Remarks, Beijing, September 30, 2017)

Early in his administration, President Trump signed a directive outlining a strategy of pressure against North Korea that involved actions across a broad spectrum of government agencies and led to the use of military cyber-capabilities, according to U.S. officials. As part of the campaign, U.S. Cyber Command targeted hackers in North Korea’s military spy agency, the Reconnaissance General Bureau, by barraging their computer servers with traffic that choked off Internet access. Trump’s directive, a senior administration official said, also included instructions to diplomats and officials to bring up North Korea in virtually every conversation with foreign interlocutors and urge them to sever all ties with Pyongyang. Those conversations have had significant success, particularly in recent weeks as North Korea has tested another nuclear weapon and ballistic missiles, officials said. So pervasive is the diplomatic campaign that some governments have found themselves scrambling to find any ties with North Korea. When Vice President Pence called on one country to break relations during a recent overseas visit, officials there reminded him that they never had relations with Pyongyang. Pence then told them, to their own surprise, that they had $2 million in trade with North Korea. Foreign officials, who asked that their country not be
President Trump undercut his own secretary of state, calling his effort to open lines of communication with North Korea a waste of time, and seeming to rule out a diplomatic resolution to the nuclear-edged confrontation with Pyongyang. Trump was privately described by advisers as furious at Tillerson for contradicting the president’s public position that now is not the time for

identified, described the exchange. The directive also instructed the Treasury Department to outline an escalating set of sanctions against North Korean entities and individuals, and foreigners who dealt with them. Those instructions are reflected in a steady stream of U.S. and international sanctions in recent months. The directive was not made public at the time it was signed, following a policy review in March, because “we were providing every opportunity as a new administration to North Korea to sit down and talk, to take a different approach,” said the official, who spoke on the condition of anonymity to discuss closed-door policy decisions. “We made clear the door was open for talks before the president had even signed off on this strategy, but North Korea continued to launch missiles, continued to kidnap Americans to keep as hostages . . . all the things they did when we were early in the administration and sending signals that the door was open to talks.” That door remains open, Secretary of State Rex Tillerson said today in Beijing. Speaking to reporters following talks with Chinese officials, Tillerson for the first time acknowledged that the United States was in direct communication with North Korea. “We are probing, so stay tuned,” he said. “We ask, ‘Would you like to talk?’ We have lines of communications to Pyongyang. We’re not in a dark situation, a blackout. We have a couple, three, channels open. . . . We can talk to them; we do talk to them.” In Washington, however, officials quickly played down any idea that negotiations were underway or that anything had yet come of the talks. State Department spokeswoman Heather Nauert issued a statement saying that “North Korean officials have shown no indication that they are interested in or are ready for talks regarding denuclearization.” The senior administration official said it would be wrong to “read too much into” Tillerson’s remarks. “The U.S. has always maintained some kind of channel, kept some channel open even in the darkest days of previous administrations.” Those channels include conversations between the State Department’s special representative for North Korea, Joseph Yun, and Pak Song Il, a senior member of Pyongyang’s delegation to the United Nations. They have met several times this year to discuss American prisoners being held by North Korea, among other matters. Other contacts have taken place through the “track two” process, which regularly brings together nongovernmental U.S. experts — and occasionally U.S. officials — and North Korean officials.

The Cyber Command operation, which was due to end today, was part of the overall campaign set in motion many months ago. The effects were temporary and not destructive, officials said. Nonetheless, some North Korean hackers griped that lack of access to the Internet was interfering with their work, according to another U.S. official, who also spoke on the condition of anonymity to discuss a secret operation. Cyber Command and the White House had no comment. But the senior administration official said, “What I can tell you is that North Korea has itself been guilty of cyberattacks, and we are going to take appropriate measures to defend our networks and systems.” Eric Rosenbach, who led the Pentagon’s cyber-efforts as assistant secretary of defense in the Obama administration, said the operation “could have the advantage of signaling to the North Koreans a more aggressive posture. However, there’s accompanying risk of an escalation and a North Korean cyber-counterattack.” Rosenbach, now co-director of the Belfer Center at the Harvard Kennedy School, said that he was not aware of the actual operation but that if it is “truly a military operation,” he sees no reason to hide it. “The Department of Defense should probably own it,” he said. Aaron Hughes, a former senior cyber-official in the Obama administration, said he, too, was not aware of the actual operation. But “if I was still in my [Pentagon] seat, I would actively be advocating we do these types of things. . . . We should be using all elements of national power to deter and message the North Koreans, to include our military, including cyber,” Hughes said. Others said they would be cautious about using even minor cyber-capabilities against North Korea and doing it openly because of the risk of retaliation. “I wonder what the disruptive payoff is that we’re getting that’s worth even a marginal extra chance of nuclear war?” said Jason Healey, a former military cyber-operator and now a senior research scholar at Columbia University’s School of International and Public Affairs. unknown cargo shrouded by heavy tarps. Armed with this tip, customs agents were waiting when the vessel steaming toward the Suez Canal. The bulk freighter named Last August, a secret message was passed from Washington to Cairo warning about a mysterious North Korea could result in an atmospheric nuclear test or an artillery barrage against Seoul, the South Korean capital. Kim likes to play madman as well. Yet he has little inc

November 13, 2017, p. A

Last August, a secret message was passed from Washington to Cairo warning about a mysterious vessel steaming toward the Suez Canal. The bulk freighter named Jie Shun was flying Cambodian colors but had sailed from North Korea, the warning said, with a North Korean crew and an unknown cargo shrouded by heavy tarps. Armed with this tip, customs agents were waiting when...
the ship entered Egyptian waters. They swarmed the vessel and discovered, concealed under bins of iron ore, a cache of more than 30,000 rocket-propelled grenades. It was, as a United Nations report later concluded, the “largest seizure of ammunition in the history of sanctions against the Democratic People’s Republic of Korea.” But who were the rockets for? The Jie Shun’s final secret would take months to resolve and would yield perhaps the biggest surprise of all: The buyers were the Egyptians themselves. A U.N. investigation uncovered a complex arrangement in which Egyptian business executives ordered millions of dollars’ worth of North Korean rockets for the country’s military while also taking pains to keep the transaction hidden, according to U.S. officials and Western diplomats familiar with the findings. The incident, many details of which were never publicly revealed, prompted the latest in a series of intense, if private, U.S. complaints over Egyptian efforts to obtain banned military hardware from Pyongyang, the officials said. It also shed light on a little-understood global arms trade that has become an increasingly vital financial lifeline for North Korean leader Kim Jong Un in the wake of unprecedented economic sanctions. A statement from the Egyptian Embassy in Washington pointed to Egypt’s “transparency” and cooperation with U.N. officials in finding and destroying the contraband. “Egypt will continue to abide by all Security Council resolutions and will always be in conformity with these resolutions as they restrain military purchases from North Korea,” the statement said. But U.S. officials confirmed that delivery of the rockets was foiled only when U.S. intelligence agencies spotted the vessel and alerted Egyptian authorities through diplomatic channels — essentially forcing them to take action — said current and former U.S. officials and diplomats briefed on the events. The officials, who spoke on the condition of anonymity to discuss U.S. and U.N. findings, said the Jie Shun episode was one of a series of clandestine deals that led the Trump administration to freeze or delay nearly $300 million in military aid to Egypt over the summer. Whether North Korea was ever paid for the estimated $23 million rocket shipment is unclear. But the episode illustrates one of the key challenges faced by world leaders in seeking to change North Korea’s behavior through economic pressure. Even as the United States and its allies pile on the sanctions, Kim continues to quietly reap profits from selling cheap conventional weapons and military hardware to a list of customers and beneficiaries that has at times included Iran, Burma, Cuba, Syria, Eritrea and at least two terrorist groups, as well as key U.S. allies such as Egypt, analysts said. Some customers have long-standing military ties with Pyongyang, while others have sought to take advantage of the unique market niche created by North Korea: a kind of global eBay for vintage and refurbished Cold War-era weapons, often at prices far lower than the prevailing rates. Over time, the small-arms trade has emerged as a reliable source of cash for a regime with considerable expertise in the tactics of running contraband, including the use of “false flag” shipping and the clever concealment of illegal cargo in bulk shipments of legitimate goods such as sugar or — as in the case of the Jie Shun — a giant mound of loose iron ore. “These cover materials not only act to obfuscate shipments, but really highlights the way that licit North Korean businesses are being used to facilitate North Korean illicit activity,” said David Thompson, a senior analyst and investigator of North Korean financial schemes for the Center for Advanced Defense Studies, a nonprofit research organization based in Washington. “It is this nesting which makes this illicit activity so hard to identify.” With North Korea’s other profitable enterprises being hurt by international sanctions, Thompson said, such exports are now “likely more important than ever.” Even by North Korean standards, the Jie Shun was a veritable rust bucket. The freighter’s steel frame was corroded from bow to stern, and its fixtures caked with coal dust from previous voyages, U.N. investigators would later report. The desalination system had stopped working, judging from crates of water bottles officials would find strewn around the crew compartments. Whether its weapons were discovered or not, the ship’s 8,000-mile voyage last summer was probably destined to be its last. “The ship was in terrible shape,” said a Western diplomat familiar with confidential reports from the official U.N. inquest. “This was a one-shot voyage, and the boat was probably intended for the scrap yard afterward.” Seaworthy or not, the ship set sail from the port city of Haeju, North Korea, on July 23, 2016, with a 23-member North Korean crew that included a captain and a political officer to ensure Communist Party discipline on board. Although North Korean-owned, the vessel had been registered in Cambodia, allowing it to fly a Cambodian flag and claim Phnom Penh as its home port. Using a “flag of convenience,” as the tactic is called, allows North Korean ships to avoid drawing unwanted attention in international waters. So does the practice of routinely shutting off a vessel’s transponder, behavior
documented in a February U.N. report that described the Jie Shun’s voyage. “The vessel’s automatic identification system was off for the majority of the voyage,” the report said, “except in busy sea lanes where such behavior could be noticed and assessed as a safety threat.” Still, a 300-foot-long freighter big enough to hold 2,400 passenger cars is not easily concealed. U.S. intelligence agencies tracked the ship as it left North Korea, and then monitored it as it steamed around the Malay Peninsula and sailed westward across the Arabian Sea and the Gulf of Aden. The vessel was heading northward through the Red Sea in early August when the warning was passed to Egyptian authorities about a suspicious North Korean vessel that appeared bound for the Suez Canal. “They were notified by our side,” said a former senior U.S. official with direct knowledge of the events. “I give their foreign ministry credit for taking it seriously.” The Jie Shun had not yet reached the canal when an Egyptian naval vessel ordered the crew to halt for an inspection. At first, the cargo hold appeared to match the description on the manifest: 2,300 tons of loose yellow rocks called limonite, a kind of iron ore. But digging beneath stone and tarp, the inspectors found wooden crates — stacks of them. Asked about the boxes, the crew produced a bill of lading listing the contents, in awkward English, as “assembly parts of the underwater pump.” But after the last of the 79 crates was unloaded and opened at Egypt’s al-Adabiyah port, it was clear that this was a weapons shipment like none other: more than 24,000 rocket-propelled grenades, and completed components for 6,000 more. All were North Korean copies of a rocket warhead known as the PG-7, a variant of a Soviet munition first built in the 1960s. A closer examination by U.N. experts would reveal yet another deception, this one apparently intended to fool the weapons’ Egyptian recipients: Each of the rockets bore a stamp with a manufacturing date of March 2016, just a few months before the Jie Shun sailed. But the label, like the manifest, was false. “On-site analysis revealed that they were not of recent production,” the U.N. report said, “but rather had been stockpiled for some time.” North Korea’s booming illicit arms trade is an outgrowth of a legitimate business that began decades ago. In the 1960s and ’70s, the Soviet Union gave away conventional weapons — and, in some cases, entire factories for producing them — to developing countries as a way of winning allies and creating markets for Soviet military technology. Many of these client states would standardize the use of communist-bloc munitions and weapons systems in their armies, thus ensuring a steady demand for replacement parts and ammunition that would continue well into the future. Sensing an opportunity, North Korea obtained licenses to manufacture replicas of Soviet and Chinese weapons, ranging from assault rifles and artillery rockets to naval frigates and battle tanks. Arms factories sprouted in the 1960s that soon produced enough weapons to supply North Korea’s vast military, as well as a surplus that could be sold for cash. By the end of the Cold War, North Korea’s customer base spanned four continents and included dozens of countries, as well as armed insurgencies. The demand for discount North Korean weapons would continue long after the Soviet Union collapsed, and even after North Korea came under international censure and economic isolation because of its nuclear weapons program, said Andrea Berger, a North Korea specialist and senior research associate at the Middlebury Institute of International Studies at Monterey, Calif. “North Korea’s assistance created a legacy of dependency,” said Berger, author of “Target Markets,” a 2015 monograph on the history of Pyongyang’s arms exports. “The type of weaponry that these [client] countries still have in service is largely based on communist-bloc designs from the Cold War era. North Korea has started to innovate and move beyond those designs, but it is still willing to provide spare parts and maintenance. As the Russians and Chinese have moved away from this market, the North Koreans have stuck around.” As a succession of harsh U.N. sanctions threatened to chase away customers, North Korea simply changed tactics. Ships that ferried artillery rockets and tank parts to distant ports changed their names and registry papers so they could sail under a foreign flag. New front companies sprang up in China and Malaysia to handle transactions free of any visible connection to Pyongyang. A mysterious online weapons vendor called Glocom — jokingly dubbed the “Samsung of North Korean proliferators” by some Western investigators — began posting slick videos hawking a variety of wares ranging from military radios to guidance systems for drones, never mentioning North Korea as the source. The sanctions stigma inevitably scared away some potential buyers, but the trading in the shadows remains brisk, intelligence officials and Western diplomats say. Some remaining clients are fellow pariah states such as Syria, whose recent purchases have included chemical-weapons protective gear. Other long-term customers are nonstate actors such as the militant group Hezbollah, which has acquired North Korean rockets.
and missiles from arms smugglers and sympathetic regimes. North Korean-made rifles have even been recovered from the bodies of Islamic State fighters in Iraq and Syria, although U.S. officials believe the guns were probably looted from stocks sold to the late Libyan leader Moammar Gaddafi years earlier. Still other customers look to North Korea as one of the last suppliers of low-cost parts and ammunition for older weapons systems that are scarcely found in commercial markets. The list includes sub-Saharan African countries such as Uganda and Congo, which for decades relied on North Korea to train and equip their armies. The list also includes Egypt, a major U.S. aid recipient that still maintains diplomatic ties and has a history of military-to-military ties dating back to the 1970s with Pyongyang, said Berger, the Middlebury researcher. Although Cairo has publicly sworn off dealing with North Korea, she said, incidents such as the Jie Shun show how hard it is to break old habits, especially for military managers seeking to extend the life of costly weapons systems. Egypt’s army today still has dozens of weapons systems that were originally of Soviet design. Among them are at least six types of antitank weapons, including the RPG-7, the 1960s-era grenade-launcher that uses the same PG-7 warhead as those discovered on the Jie Shun. The number of Egyptian RPG-7 tubes in active service has been estimated at nearly 180,000. “Egypt was a consistent North Korean customer in the past,” Berger said. “I would call them a ‘resilient’ customer today.” When Egyptian officials were first confronted about their country’s possible ties to the Jie Shun’s rockets, the response was denial, followed by obfuscation, Western diplomats said. At the time of the discovery, Egypt was a newly elected nonpermanent member of the U.N. Security Council, and its delegation resisted including information in official reports linking Egyptian officials or businesses to illicit North Korean weapons, said U.S. officials and diplomats familiar with the discussions. The embassy statement said Egyptian officials sought only minor delays to ensure that their views on the events were properly reflected. It noted that Security Council officials had “recognized and praised Egypt’s role” in assisting the investigation. In any case, the February U.N. report on the incident sidesteps the question of who was meant to receive the rockets, saying only that the munitions were destroyed by Egypt under U.N. supervision, and that “the destination and end user of the equipment was investigated by the Egyptian general prosecutor.” But evidence gathered by U.N. investigators and later shared with diplomats left little doubt about where the rockets were bound. An early clue was the nature of the rockets themselves: All were practice rounds — fitted with removable, nonlethal warheads of the type used in military training — and the large quantity suggested that the purchaser had a sizable army with many thousands of recruits. Egypt’s active-duty military is 438,000 strong, with another 479,000 reservists. The most damning evidence was discovered on the crates. Each had been stenciled with the name of an Egyptian company, but someone had taken the trouble of covering the lettering with a canvas patch. Diplomats familiar with the investigation confirmed the involvement of the Egyptian company, but declined to name it and it is identified nowhere in the U.N. report. A single footnote states, cryptically: “National authorities closed the private company and revoked its license.” While U.S. officials have declined to publicly criticize Egypt, the Jie Shun incident — coming on top of other reported weapons deals with North Korea in recent years — contributed to the diplomatic turbulence that defined relations between Cairo and the Obama and Trump administrations. U.S. officials confirmed that the rockets were among the factors leading to the Trump administration’s decision in July to freeze or delay $290 million in military aid to Egypt. During Egyptian President Abdel Fatah al-Sissi’s visit to Washington that month, President Trump praised the military strongman before TV cameras for “doing a fantastic job.” But a White House statement released afterward made clear that a warning had been delivered in private. “President Trump stressed the need for all countries to fully implement U.N. Security Council resolutions on North Korea,” said the official statement, including the need to “stop providing economic or military benefits to North Korea.” (Joby Warrick, “Illicit Cargo Exposes N. Korea’s Arms Trade,” Washington Post, October 2, 2017, p. A-1)

Italy has become the fifth country to expel a North Korean ambassador, saying that isolation was “inevitable” if Pyongyang continued to push ahead with its nuclear weapons program. The decision comes as the United States urges countries that have diplomatic relations with North Korea to sever or at least scale them back. Angelino Alfano, Italy’s foreign minister, said the North Korean ambassador in Rome, Mun Jong Nam, had been ordered to leave. “We want to make Pyongyang realize that their isolation is inevitable if they don’t change tack,” Alfano told
Italian newspaper *la Repubblica* in an interview published today. Mun had been in Rome barely a month, with his appointment announced by the North’s Korean Central News Agency on August 28. Italy follows in the footsteps of Spain, Mexico, Peru and Kuwait. A United Nations Security Council resolution passed late last year required member states to reduce the number of staff at North Korean diplomatic missions and consular posts, and to limit the number of bank accounts to one per diplomatic mission and one per diplomat. The Trump administration has been vigorously lobbying governments that have diplomatic relations with North Korea to curtail them as punishment for North Korea’s continued defiance of the international community’s calls to stop missile launches and nuclear tests. In the interview with *la Repubblica*, Alfano also said that he was “comforted” by Secretary of State Rex Tillerson’s remarks that the United States had a direct channel to North Korea, signaling that diplomacy remained on the table for dealing with a defiant Pyongyang. The Italian government would not completely sever all diplomatic relations with North Korea, the minister said, because it was useful to have a line of communication to Pyongyang. Italy, which chairs the sanctions committee of the Security Council, has also been calling on the international community to apply strong pressure on the Pyongyang regime, Alfano said. Italy’s Foreign Ministry convened a meeting on North Korea in Rome last week, it said in a statement. Members of the Group of Seven countries, together with the European Union, South Korea and Australia, met to discuss how sanctions are being applied, the ministry said in a separate statement. (Anna Fifield, “Italy Becomes Fifth Country to Expel North Korean Ambassador,” *Washington Post*, October 1, 2017)

10/3/17

"The Defense Department supports fully Secretary Tillerson’s efforts to find a diplomatic solution, but remains focused on defense of the United States and our allies,” Mattis told a Senate Armed Services Committee hearing. He added that Trump's guidance to both Tillerson and himself has been "very clearly" to pursue the diplomatic effort. "I do not see the divergence as strongly as some have interpreted it," Mattis said, recalling that Tillerson had said the US is "probing" for opportunities for dialogue with the North, not looking to talk immediately. Mattis argued Trump demonstrated his intent to work diplomatically with other nations on the North Korea issue by dispatching Tillerson to China last week. But the recalcitrance of Kim's regime may call for still tougher sanctions, said the chairman of the Joint Chiefs of Staff. "If there was one area that has been identified by many people as maybe being the one that would most profoundly change his behavior, it would be the loss of oil," Marine Gen. Joe Dunford said at the same hearing. "We've seen in the past, when he's had a cut — when the oil has been cut off, there's been a change in Kim Jong-un's behavior." (Yonhap, “Mattis: Pentagon 'Supports Fully' Diplomatic Solution to N.K.” *Korea Herald*, October 4, 2017)

Ignatius: “Consider what is, for the moment, an entirely hypothetical question: What might Defense Secretary Jim Mattis do if he received an order from President Trump to launch a nuclear attack on North Korea in retaliation, say, for a hydrogen bomb test that had gone awry? Certainly, Mattis could try to talk the president out of the attack, if he thought the action was unwise. He could request delays to prepare for contingencies or gather intelligence. He could even, perhaps, argue that the action raised legal questions, because it might cause disproportionate civilian casualties in North and South Korea and thereby violate the laws of war. Yet, in the end, legal experts argue that Mattis would have to follow the orders of his commander in chief. That’s the way our system works. If Mattis’s efforts at persuasion failed, he could resign. But if he stayed on the job and refused a lawful presidential order, he could be fired. “The president’s view, and whatever orders stem from that view, carry the day,” wrote Jack Goldsmith, a Harvard University professor and a widely respected authority on national security law, in a recent post on the Lawfare blog. (Harvard law student Sarah Grant co-wrote the post.) But take a closer look if you worry that Trump’s impulsive decisions could crash the ship of state against the rocks. Research reveals some fascinating instances when another erratic president, Richard Nixon, was checked by his subordinates. Let’s start with a little-known confrontation that involves, yes, North Korea. On April 14, 1969, North Korean fighters shot down a Navy EC-121 reconnaissance plane over international waters, killing all 31 crew members. Nixon wanted to retaliate militarily, as did his
national security adviser, Henry Kissinger. But Defense Secretary Melvin Laird was wary, fearing that the United States wasn’t ready for the consequences that might follow. So Laird slow-rolled the process. He delayed action. He presented studies. He halted the additional surveillance flights needed to gather intelligence before a strike. Citing a Pentagon logistics study, he told Nixon that he doubted “we have the capability now to handle a major confrontation in Korea.” And Laird prevailed. The retaliatory strike Nixon wanted never happened. Reading the account by Richard Hunt published by the Historical Office of the Secretary of Defense, it seems that Laird accomplished a classic case of bureaucratic obstruction. Nixon could make mercurial, intemperate statements, much like Trump.

In August 1969, terrorists hijacked a TWA flight and flew the plane to Damascus, Syria. According to Evan Thomas in “Being Nixon,” the president received the news as he was having cocktails in San Clemente, Calif. “Bomb the airport,” Nixon ordered. This time, Kissinger was cautious. Thomas quotes him as deciding “to give the president the opportunity to have second thoughts.” Kissinger slowed movement of aircraft carriers to the eastern Mediterranean. Laird was also wary. He planned to cite “weather delays” to tarry the carriers even more. The next morning, while being briefed on carrier movement, Nixon asked Kissinger if “anything else” had happened. Kissinger said, “No,” and Nixon answered, “Good.” Kissinger wrote later that he “never heard another word about bombing Damascus.” A final example of sand in the presidential gears comes from Jeffrey H. Smith, a former CIA general counsel who during the Nixon era was a young Army lawyer. Smith recalled in a recent post on Just Security that in 1974, a few days before Nixon’s resignation, he was shown a message from the chairman of the Joint Chiefs of Staff to subordinate commanders, advising that if they received any White House “execute orders” to use force, they should confirm them first with the chairman or the secretary of defense. Thomas explains in his book: “Worried that the president might do something desperate, Defense Secretary James Schlesinger passed the word that all commands to the troops from the White House must pass through him.” Schlesinger later claimed that he just wanted to reinforce the chain of command. This episode has also been explored by Garrett Graff in Politico. What could our imaginary Mattis do if he tried similar methods of caution but the president still wanted to launch what Mattis and his commanders viewed as an unwise attack? Well, there’s a remedy for that in our Constitution. The 25th Amendment provides that the vice president and a majority of the Cabinet officers can inform Congress that the president is unable “to discharge the powers and duties” of his office. The vice president would take over, unless more than a third of the House and Senate backed the president. But mind you, this is all hypothetical. As the Nixon stories show, even the most willful presidents usually end up listening to Pentagon advice. (David Ignatius, “Our Best Hope against Nuclear War,” Washington Post, October 3, 2017)

For the first time in Chicago Council Survey history, a majority of the U.S. public are willing to commit US troops to defend South Korea if it comes under attack. Six in 10 Americans (62%) support defending South Korea from North Korean invasion, up from 47 percent in 2015. In both scenarios, cross-partisan majorities of Democrats (59%), Independents (61%), and Republicans (70%)—and a majority of core Trump supporters (71%)—favor using U.S. troops to defend these allied nations. While Americans clearly value their ties to Japan, they remain more hesitant about intervening in a hypothetical confrontation between Japan and China. Although they are more likely now (40%) than they were in 2015 (33%) to support using US troops in a confrontation between Japan and China over disputed islands, a majority still oppose US military involvement (58%). (Dina Smeltz, Ivo Daalder, Karl Friedhoff, and Craig Kafura, What American Thinks of America First, Chicago Council on Global Affairs, October 2017)

Secretary of State Rex Tillerson was on the verge of resigning this past summer amid mounting policy disputes and clashes with the White House, according to multiple senior administration officials who were aware of the situation at the time. The tensions came to a head around the time President Donald Trump delivered a politicized speech in late July to the Boy Scouts of America, an organization Tillerson once led, the officials said. Just days earlier, Tillerson had openly disparaged the president, referring to him as a “moron,” after a July 20 meeting at the Pentagon with members of Trump’s national security team and Cabinet officials, according to three officials familiar with the incident. While it’s unclear if he was aware of the incident, Vice President Mike
Pence counseled Tillerson, who is fourth in line to the presidency, on ways to ease tensions with Trump, and other top administration officials urged him to remain in the job at least until the end of the year, officials said. Officials said that the administration, beset by a series of high-level firings and resignations, would have struggled to manage the fallout from a Cabinet secretary of his stature departing within the first year of Trump’s presidency. Pence has since spoken to Tillerson about being respectful of the president in meetings and in public, urging that any disagreements be sorted out privately, a White House official said. The official said progress has since been made. Yet the disputes have not abated. This weekend, tensions spilled out into the open once again when the president seemed to publicly chide Tillerson on his handling of the crisis with North Korea. NBC News spoke with a dozen current and former senior administration officials for this article, as well as others who are close to the president. Tillerson, who was in Texas for his son’s wedding in late July when Trump addressed the Boy Scouts, had threatened not to return to Washington, according to three people with direct knowledge of the threats. His discussions with retired Gen. John Kelly, who would soon be named Trump’s second chief of staff, and Defense Secretary James Mattis, helped initially to reassure him, four people with direct knowledge of the exchanges said. After Tillerson’s return to Washington, Pence arranged a meeting with him, according to three officials. During the meeting, Pence gave Tillerson a “pep talk,” one of these officials said, but also had a message: the secretary needed to figure out how to move forward within Trump’s policy framework. Kelly and Mattis have been Tillerson’s strongest allies in the cabinet. In late July, “they did beg him to stay,” a senior administration official said. “They just wanted stability.” At that time, however, State Department spokesman Heather Nauert responded to speculation that Tillerson was thinking about resigning by saying he was “committed to staying” and was “just taking a little time off” in Texas. Tillerson’s top State Department spokesman, R.C. Hammond, said Tillerson did not consider quitting this past summer. He denied that Tillerson called Trump a “moron.” Hammond said he was unaware of the details of Tillerson’s meetings with Pence. Hammond said he knew of only one time when the two men discussed topics other than policy: A meeting where Pence asked Tillerson if he thought Nikki Haley, the U.S. ambassador to the United Nations, was helpful to the administration, or if he was worried about the role she was playing. He added that whenever the vice president gives advice on how processes could run more smoothly, the advice is a good thing. Hammond also said that he wouldn’t characterize the secretary’s conversations with Mattis or Kelly as attempts to convince Tillerson to stay in his position. A Pentagon official close to Mattis denied any awareness of a specific conversation about Tillerson’s future in the administration. But the official said the two men speak all the time and have a regular breakfast together. The White House declined to comment on the record for this story. Tillerson and Trump clashed over a series of key foreign policy issues over the summer, including Iran and Qatar. Trump chafed at Tillerson’s attempts to push him — privately and publicly — toward decisions that were at odds with his policy positions, according to officials. Hammond said Tillerson has had no policy differences with Trump. “The president’s policy is his policy,” Hammond said. In August, Trump was furious with Tillerson over his response to a question about the president’s handling of the racially charged and deadly violence in Charlottesville, Virginia, administration officials said. Trump had said publicly that white nationalists and neo-Nazi sympathizers shared blame for violence with those who came out to protest them. “The president speaks for himself,” Tillerson said at the time, when asked on “Fox News Sunday” about Trump’s comments. Hammond said Trump addressed the issue with Tillerson in a meeting the next day. He said that during the meeting, Trump congratulated another White House official, Homeland Security Adviser Tom Bossert, for his performance on the Sunday news talk shows. Bossert had defended Trump’s controversial pardon of former Arizona sheriff Joe Arpaio. The president, according to Hammond, told Tillerson he was upset with his comments when he saw them the first time. But, Hammond said Trump told Tillerson, after watching the interview a second and third time, the president understood that Tillerson was trying to say Trump is the best person to convey what his values are. Still, the message was clear that Trump wanted Tillerson to defend him more, Hammond said. The frustrations run both ways. Tillerson stunned a handful of senior administration officials when he called the president a “moron” after a tense two-hour long meeting in a secure room at the Pentagon called “The Tank,” according to three officials who were present or briefed on the incident. The July 20 meeting came a day after a meeting in the White House Situation Room on Afghanistan policy where Trump
rattled his national security advisers by suggesting he might fire the top U.S. commander of the war and comparing the decision-making process on troop levels to the renovation of a high-end New York restaurant, according to participants in the meeting. It is unclear whether Trump was told of Tillerson’s outburst after the Pentagon meeting or to what extent the president was briefed on Tillerson’s plan to resign earlier in the year. Tillerson also has complained about being publicly undermined by the president on the administration’s foreign policy agenda, officials said. Those strains were on display this past weekend when Tillerson said, to the White House’s surprise, that the U.S. is attempting diplomatic talks with North Korea. Trump quickly took the opposite position, writing on Twitter “I told Rex Tillerson, our wonderful Secretary of State, that he is wasting his time trying to negotiate with Little Rocket Man...” using his latest epithet for North Korean leader Kim Jong Un. “...Save your energy Rex, we'll do what has to be done!” Trump added in a second tweet. Asked whether the president still has confidence in Tillerson, White House spokeswoman Sarah Sanders said yesterday that he does. Trump has already seen an unusually high level of turnover in his administration, with the departures of his national security adviser, deputy national security adviser, his chief of staff, press secretary, communications director — twice — his chief strategist, the director of the Federal Bureau of Investigation and the acting head of the Justice Department. On September 30 Trump accepted the resignation of Tom Price, the Health and Human Services secretary. One senior administration official described late July as “a tough period of time” for Tillerson. His frustrations appeared to mount in the preceding weeks. Trump publicly undermined Tillerson in June over a dispute between Qatar and other Persian Gulf states, including Saudi Arabia and the United Arab Emirates. Tillerson had called on the countries to ease their blockade of Qatar, yet just hours later Trump said the Saudi-led effort was necessary. Tillerson also pushed Trump to certify in July that Iran was complying with the 2015 nuclear deal. Tillerson has been at odds with Trump on other issues as well, arguing against sanctions on Venezuela and reportedly suggesting Israel return to the U.S. $75 million in aid. Tillerson also is seeking to use the implementation of arms deals Trump struck with Saudi Arabia and the UAE as leverage to prod the two countries to resolve the dispute with Qatar, according to U.S. and Arab officials. Administration officials speculate that Tillerson would be succeeded by Haley if Tillerson were to depart. Tillerson’s tenure has been rocky from the start. He was confirmed by a Republican-led Senate on 56-to-43 vote. That represents the most votes against a secretary of state in Senate history. Since then, Tillerson, the former chief executive of ExxonMobil, has been slow to fill jobs within his department and appears to have alienated officials in the White House, the Cabinet and Congress. He has become known for being difficult to reach and tends to take his time returning phone calls, administration and congressional officials said. Congressional Republicans balked at his proposed cuts to the State Department budget. “It’s hard to get him to return phone calls,” a senior Republican congressional aide said of Tillerson. “It’s hard to get him to answer letters,” Hammond said Tillerson is quick to return calls and respond to lawmakers. Tillerson has clashed with the president’s son-in-law and senior adviser Jared Kushner, who has a broad portfolio that includes policies in the Middle East, officials said. A second White House official downplayed any tensions between Tillerson and Kushner, noting that Kushner’s efforts on an Israeli-Palestinian peace agreement are run through the relevant agencies and that a State Department representative went on his most recent trip to the region. A third White House official disputed the notion that Tillerson has alienated people in the White House, Cabinet and Congress. Trump’s July 24 speech at the Boy Scouts gathering struck a political tone unusual for the event, with the president talking about his electoral victory and the “cesspool” of Washington. He also joked about firing his Health and Human Services secretary if congressional Republicans didn’t pass a health care bill. The head of the Boy Scouts later apologized for the political tone of the speech. Tillerson is an Eagle Scout and a former president of the Boy Scouts. He had appeared at the gathering just three days before Trump. Hammond, his spokesman, said Tillerson was not upset with Trump’s speech. He said Tillerson told him that at the end of the day the scouts are going to remember that the president came to speak at their event, and their parents can answer any questions they might have about the message he delivered. It’s unclear if the latest disagreement between the White House and Tillerson on North Korea spells an end to the late-July reset. Nicholas Burns, former undersecretary of state for political affairs under President George W. Bush, said Trump “completely undercut Tillerson” with his tweets. “This was a direct public, I thought, repudiation of what Tillerson said,” Burns said. “It feeds the
given voice to millions who felt completely abandoned by the political status quo and who felt
I accepted his offer to serve as Secretary of State. President Trump's "America first"
First, my commitment to the success of our President and our country is as strong as it was the day
Department, despite the constant nastiness and occasional humiliation, because he's trying to serve
executive doesn't need this job; he's a wealthy man who obviously dislikes Washington. He
avoid comments that seem to question the president's personality or policies. Tiller
sense, Tillerson faces a p
president through the Beijing meeting in November, but not long
administration's foreign-policy accomplishments, including working with China to pressure North
Korea, traveling to the Riyadh summit in May and strengthening the commitment of Saudi Arabia
its neighbors to fight terrorism, pushing NATO to spend more on defense, recommitting to
remain in Afghanistan and being on the brink of extinguishing the Islamic State. That’s probably
the same list that the White House would draw to assert Trump’s “wins.” “What we have
accomplished, we have done as a team,” Tillerson said. He invoked other key players, including
Defense Secretary Jim Mattis, with whom Tillerson said he communicated almost daily.
Tillerson’s reference to Mattis is especially important, because the bond between these two has
been something of an anchor in the storm of the Trump presidency. Mattis has never swayed from
his commitment, expressed during his first weeks as defense secretary, to coordinate all major
policy positions with Tillerson. Mattis’s camp has been steadfast in supporting Tillerson,
seemingly unaware of any White House unhappiness and standing by the secretary of state. But
presidential pique has been growing in recent weeks. It’s said that the president felt undercut by
Tillerson’s separate positions on the Qatar-Saudi dispute, by his public statement that Trump
“speaks for himself” after the Charlottesville unrest, and by his lean toward keeping the Iran
nuclear deal intact. Tillerson’s public discussion of diplomatic channels with North Korea last
weekend in Beijing also angered the White House, since it came at a time when Trump was
advertising his confrontation with “Little Rocket Man,” his mocking description of North Korean
leader Kim Jong Un. Trump was upset that Tillerson hadn’t cleared his comments with the White
House. Whether Tillerson’s recommitment to the job is temporary — sufficient to get the
president through the Beijing meeting in November, but not long-term — remains to be seen. In a
sense, Tillerson faces a paradox: To be effective as secretary of state, he must communicate better
with the country and the world; but to maintain the confidence of this prickly president, he must
avoid comments that seem to question the president’s personality or policies. Tillerson, like
everyone else in Trump’s world, is living under a volcano. The former ExxonMobil chief
executive doesn’t need this job; he’s a wealthy man who obviously dislikes Washington. He
probably should be be taken at his word when he says that he remains in his post at the State
Department, despite the constant nastiness and occasional humiliation, because he’s trying to serve
his country.” (David Ignatius, “Why Tillerson Kissed Trump’s Ring Today,” Washington Post,
October 4, 2017)

Tillerson: “Good morning. There were some news reports this morning that I want to address.
First, my commitment to the success of our President and our country is as strong as it was the day
I accepted his offer to serve as Secretary of State. President Trump's "America first" agenda has
given voice to millions who felt completely abandoned by the political status quo and who felt
their interests came second to those of other countries. President Trump's foreign policy goals break the mold of what people traditionally think is achievable on behalf of our country. We're finding new ways to govern that deliver new victories. Our job is now to achieve results on behalf of America, and we are doing that. We've created international unity around our peaceful pressure campaign against North Korea, including influencing China to exert unprecedented economic influence on North Korea. At the Riyadh summit, the President rallied Muslim-majority nations to assume new responsibilities for stopping terrorism. NATO members are now contributing more to shared security. And our approach to South Asia, and specifically Afghanistan, means building upon our relationships with India and Pakistan to stamp out terrorism and support the Afghan Government in providing security for their own people. And ISIS's fraudulent caliphate in Iraq and Syria is on the brink of being completely extinguished thanks to an aggressive new strategy led by the President. What we have accomplished, we have done as a team. Similarly, Secretary Mnuchin has levied economic sanctions on North Korea and related entities. Countries must increasingly decide whether they will do business with North Korea or with the community of peace-loving nations. Ambassador Haley has spearheaded and achieved enormous success, passing the toughest UN sanctions to date on North Korea. General Mattis and I communicate virtually every day, and we agree that there must be the highest level of coordination between our diplomatic efforts and our military efforts. You can't have a stronger partner than a secretary of defense who embraces diplomacy, and I hope he feels he has the partner he needs at the State Department. And this is just the beginning of the list of partners and friends across the government who are all working for the American people. There is much to be done, and we're just getting started. To address a few specifics that have been erroneously reported this morning, the Vice President has never had to persuade me to remain the Secretary of State because I have never considered leaving this post. I value the friendship and the counsel of the Vice President and I admire his leadership within President Trump's administration to address the many important agendas of President Trump, both from a foreign policy perspective and a diplomatic - I'm sorry, a domestic objective. Let me tell you what I've learned about this President, whom I did not know before taking this office. He loves his country. He puts Americans and America first. He's smart. He demands results wherever he goes, and he holds those around him accountable for whether they've done the job he's asked them to do. Accountability is one of the bedrock values the President and I share. While I'm new to Washington, I have learned that there are some who try to sow dissension to advance their own agenda by tearing others apart in an effort to undermine President Trump's own agenda. I do not and I will not operate that way, and the same applies to everyone on my team here at the State Department. When I wake up in the morning, my first thoughts are about the safety of our citizens at home and abroad. There is no more important responsibility I carry with me than ensuring that Americans are safe. Providing for the security of the United States must be the number-one goal of our American foreign policy. President Trump and his administration will keep moving forward as one team with one mission: doing great things for the United States of America to make America great again. Thank you

Q: Is that the only thing that you consider to be erroneous in that article? TILLERSON: I think it's the most important element of the article, is to reaffirm my commitment to this role that President Trump's asked me to serve, and to dispel with this notion that I have ever considered leaving. I have answered that question repeatedly; for some reason, it continues to be misreported. There has never been a consideration in my mind to leave. I serve at the appointment of the President and I am here for as long as the President feels I can be useful to achieving his objectives. Q: Mr. Secretary, do you agree with Secretary Mattis that the United States should stay in the JCPOA? TILLERSON: We'll have a recommendation for the President. We're going to give him a couple of options of how to move forward to advance the important policy towards Iran. As you've heard us say many times, the JCPOA represents only a small part of the many issues that we need to deal with when it comes to the Iranian relationship. So it is an important part of that, but is not the only part. And I've said many times we cannot let the Iranian relationship be defined solely by that nuclear agreement. …Q: Could you address the main headline of the story, that you called the President a moron? And if not, where do you think these reports — TILLERSON: I'm just - I'm not going to deal with petty stuff like that. I mean, this is what I don't understand about Washington. Again, I'm not from this place, but the places I come
from, we don't deal with that kind of petty nonsense. And it is intended to do nothing but divide people. And I'm just not going to be part of this effort to divide this administration. Q: Mr. Secretary, did you speak with the President about the report and did he ask you to make a statement, or is — SECRETARY TILLERSON: I have not spoken to the President this morning. I think he's on his way to Las Vegas, is my understanding.” (DoS, “Secretary of State Rex W. Tillerson, Remarks, Treaty Room, Washington, October 4, 2017)

Q  Mr. President, any response to Rex Tillerson's comments — THE PRESIDENT: Yeah. I'm very honored by his comments. It was fake news. It was a totally phony story. Thank you very much. It was made up. It was made up by NBC. They just made it up. Thank you all.

Q  Do you have confidence in him? THE PRESIDENT: Total confidence in Rex. I have total confidence.

While European powers France and Britain are lobbying Washington to cool tensions since North Korea’s most powerful nuclear test a month ago, a group of seven European Union countries with embassies in Pyongyang — the Czech Republic, Sweden, Poland, Romania, Bulgaria, Britain and Germany — held at least two formal meetings with North Korean officials in Pyongyang in September, three EU diplomats said. But they felt frustrated because the higher-level access that they had obtained in Pyongyang last year had fallen away, with only medium-ranking foreign ministry officials now attending the meetings. “There was a sense that we weren’t really getting anywhere because they sent these department heads,” said a Brussels-based diplomat who had been briefed on the meetings, which were described as “very serious” in atmosphere and tone. “They want to talk to the United States.” In contrast to recent meetings, when North Korean officials met EU envoys in the Czech Republic’s embassy in 2016 to discuss issues including cultural programs and regional security, a deputy foreign minister would attend, one EU diplomat said. For the small club of European Union governments with embassies in North Korea, that reflects Pyongyang’s anger at the EU’s gradually expanding sanctions that go beyond those agreed on by the United Nations Security Council. It could have repercussions for broader EU efforts to help mediate in the nuclear crisis, according to the EU diplomats briefed by their colleagues in Pyongyang, as the bloc prepares more measures against North Korea. EU foreign policy chief Federica Mogherini, who chaired talks on the historic 2015 nuclear deal with Iran, says the bloc is ready to mediate in any talks aimed at freezing North Korea’s missile and nuclear weapons programs. But at the same time, the European Union wants an oil embargo on Pyongyang that it hopes other countries will follow. Some EU governments are pushing to cancel North Korean work permits in Poland and other Eastern European countries because EU officials believe workers’ salaries are deposited in bank accounts controlled by the regime in Pyongyang. “The North Koreans are starting to see the EU as a U.S. puppet, but we stress that we are an honest broker,” said a second EU diplomat. The EU’s status as a potential broker relies, in part, on Sweden, which in 1973 was the first Western European nation to establish diplomatic relations with the North. Sweden is a member of the Neutral Nations Supervisory Commission, which was set up to oversee the 1953 armistice between North and South Korea, undertake inspections, observe military exercises and promote trust between the two sides. Czechoslovakia was also a member of the Neutral Nations Supervisory Commission until the early 1990s. Sweden played a key role in the release of Canadian pastor Hyeon Soo Lim and of U.S. student Otto Warmbier earlier this year. But Sweden has strongly backed the EU sanctions. The seven European embassies are limited in what they can say because North Korean staffers — whom Pyongyang requires the EU embassies to use — are expected to double as informants, the diplomats said. “Sanctions and pressure. … Sadly, we don’t have anything else,” said an EU diplomat in Brussels. The joint meetings with the North Koreans, usually held at a single European mission, have been focused on the release of imprisoned Westerners, not big diplomatic initiatives. But as efforts intensify to calm U.S. and North Korean threats of war, they could still prove an important channel to pass messages between Pyongyang and Washington. “In the best case, we could perhaps facilitate an opening of a diplomatic track between the North Koreans and the United States,” said Carl Bildt, a former Swedish prime minister and foreign minister from 2006 to 2014. Bildt said anything the EU does must be kept secret. “If the EU does something along these lines, the first thing the EU should do is not to talk about it. Talking about it is a pretty good way to
ensure that one can’t do it,” he said. Mathieu Duchatel, a North Korea expert at the European Council on Foreign Relations, a think tank that Bildt also now helps oversee, said the European Union could chair talks between China and the United States. Washington and Pyongyang have no hot-lines to prevent crises from spinning out of control, and it is not clear what Beijing’s reaction would be if the United States intercepted a North Korean missile test, Duchatel said. For now, Paris is in contact with White House National Security Adviser H.R. McMaster and White House chief of staff John Kelly, diplomats said, noting French President Emmanuel Macron’s budding relationship with U.S. President Donald Trump. Lt. Gen. McMaster and Kelly, a retired four-star Marine Corps general, have a soft spot for France born of their admiration for the French military, the diplomats said. It is unclear if that translates into a direct impact on Trump’s thinking on North Korea, European diplomats said. “They are trying to normalize Trump, but I don’t think Trump can be normalized,” said a senior French diplomat. “To get him to listen, heads of state need to speak to him directly.” (Reuters, “North Korea Seen Seeking Direct U.S. Talks as EU Diplomatic Back Channel with Pyongyang Goes Cold,” October 4, 2017)

Japan will not seek to shoot down North Korean missile tests unless they threaten its territory, the country’s defense minister has signalled in an interview with the Financial Times. Some US analysts have suggested intercepting ballistic missile tests as a way of stepping up pressure on Pyongyang, but Onodera Itsunori said Japan had not shot at two recent missiles passing through its airspace because they were projected to land safely in the Pacific. “Whether it is Japan or any other country, I think that shooting down a ballistic missile could be construed as a military action,” said Onodera. “Unless you judge it is an attack on your own country, I think it is difficult to shoot down such missiles.” North Korea fired Hwasong-12 intermediate-range ballistic missiles over Japan’s northern island of Hokkaido on August 29 and September 15, prompting thousands of residents to evacuate, but Japan did not try to intercept them using the destroyers it keeps constantly at sea. “The recent missile tests by North Korea passed at high altitude and there was no fear of them falling in our territorial waters so we did not shoot them down,” Onodera said. Were a missile targeted at US territory in Hawaii or Guam, then Japan could intercept them under its new national security legislation, he said. Intercepting a ballistic missile test would require a destroyer equipped with the Aegis defense system to be in the right place at the right time. Security analysts who oppose shooting down test missiles say a failed interception could embolden Pyongyang. Japan is planning to acquire a land-based Aegis missile defense system to supplement its destroyers and its short-range Patriot missiles. “To be at sea around the clock, 365 days a year, is tough in terms of equipment and personnel. Therefore I think it is important to strengthen our deployment of ground assets, including Aegis Ashore,” he said. Despite the unpredictability of President Donald Trump, Onodera said he had “no doubts whatsoever” about US commitment to defending Japan. He welcomed Trump’s tough rhetoric, including calling the North Korean leader “Rocket Man” in a recent speech at the UN. “As part of putting pressure on North Korea, we welcome President Trump’s strong language,” Onodera said. He said America’s security commitment in the region was crucial. “If a conflict breaks out in east Asia, even temporarily, then Asian economic growth will halt. That will have a direct effect on the US economy. I think regional stability is very important not just for the United States and Japan, but for China and South Korea as well.” Onodera said Japan was strengthening its cyber defenses but had not detected a particularly large volume of hacking attacks from North Korea. He said Japan’s current stance on cyber warfare was defensive, indicating Tokyo was not seeking to launch its own hacking attacks against Pyongyang, which was a possible option for the US. “Whether as a nation Japan is permitted to conduct a cyber offensive attack — I don’t think that discussion is settled,” he said. “It would help if society, especially in the United States, could define what constitutes a cyber attack and what form a counterattack can take.” (Robin Harding, “Japan Rules out Intercepting Missile Tests,” Financial Times, October 4, 2017)

Despite Kim Jong Un's repeated provocations and willingness to engage in heated rhetoric, top U.S. intelligence officials say the North Korean leader is not crazy. "Kim Jong Un is a very rational actor," the deputy assistant director of the Central Intelligence Agency's Korea Mission Center said Wednesday."Bluster and rhetoric aside, Kim Jong Un has no desire to go toe to toe with [U.S. and South Korea's] combined forces command," Yong Suk Lee said at a CIA-
sponsored intelligence conference in Washington. "Kim Jong Un wants what all authoritarian rulers want ... to rule for a long time and die peacefully in his own bed," Lee said. The intelligence assessment would appear to run counter to the rhetoric being used by President Donald Trump.

Lee and other CIA officials believe there has been a "clarity of purpose" to the way the North Korean ruler is acting on the world stage. Pyongyang's goal, they say, is to gain recognition as a major nuclear power and eventually negotiate a deal with the United States that sees American forces leave the Korean peninsula. Intelligence officials see North Korea's repeated nuclear and missile tests as a way to create some space and give Pyongyang room to maneuver as it pursues its goals on the peninsula. "He wants to keep us out of his sandbox," Lee said, predicting another test or provocation could be coming as soon as October 9, which marks the founding of the country's ruling political party, as well as the Columbus Day holiday in the U.S. But current and former officials worry about the risk of miscalculation by Pyongyang. "They're not suicidal," according to the former U.S. special envoy for Six-Party Talks with North Korea, Joseph DeTrani, who warned that Pyongyang was playing a risky game, especially as the White House has ruled out any meaningful talks with the North Korean regime. "We could stumble into conflict," DeTrani said. "They're hearing from the president of the United States unfiltered [via Twitter], so this has to have significant impact." There are also questions about what role China is willing to play. "China itself is wrestling with concerns about instability on its border, but at the same time is also trying to establish a stable relationship with the United States," said CIA Deputy Assistant Director Michael Collins. "There is more China could do," Collins said. "What effect that will have on Kim Jong Un's calculus is a different matter." Officials also say U.S. efforts to work with China have been hampered by Beijing's own global strategy, which is aimed at frustrating the United States and limiting Washington's influence in areas when the two countries do not see eye to eye. There are some indications Beijing's influence over North Korea's Kim Jong Un is limited. "He's not afraid of China's abandonment. He's not afraid of a U.S. strike," said the CIA Korea Mission Center's Lee. (Jeff Seldin, "U.S. Intelligence Officials Call North Korean Leader 'Very Rational,'" VOA, October 04, 2017)

The United States has decided to sell 56 advanced medium-range missiles to Japan for an estimated $113 million, the State Department said as the two allies face the growing missile and nuclear threat posed by North Korea. The planned sale of the AIM-120C-7 Advanced Medium-Range Air-to-Air Missiles "will provide Japan a critical air defense capability to assist in defending the Japanese homeland and U.S. personnel stationed there," the department said in a statement. The arms deal, pending approval by Congress, comes at the request of the Japanese government, and the Defense Security Cooperation Agency delivered the required certification notifying Congress of the matter earlier today, it said. Aside from the missiles, the deal includes containers, weapon support and support equipment, spare and repair parts, U.S. government and contractor engineering, as well as technical and logistical support services, according to the department. "Japan will have no difficulty absorbing these additional munitions into the Japan Air Self-Defense Force," it said. (Kyodo, “U.S. Oks Missile Sales to Japan amid N. Korea Threat,” October 4, 2017)

President Donald Trump delivered a foreboding message tonight, telling reporters as he posed for photos with his senior military leaders that this might be "the calm before the storm." White House reporters were summoned suddenly this evening and told the president had decided he wanted the press to document a dinner he was holding with the military leaders and their wives. Reporters were led hastily to the grand State Dining Room, where they walked into a scene of the president, his highest-ranking military aides and their wives posing for a group photo. The cameras clicked and they smiled. A joke was made about someone's face being tired. Live classical music played. Then, Trump gestured to the reporters in the room. "You guys know what this represents?" Trump asked. "Maybe it's the calm before the storm. Could be the calm, the calm before the storm." "What storm Mr. President?" one reporter shouted. ISIS? North Korea? Iran? "You'll find out," the president said. He also praised those assembled for the photo, saying: "We have the world's great military people in this room, I will tell you that." Earlier in the evening, the president had lauded the group, including his defense secretary and chairman of the Joint Chiefs of Staff, and said they
would be discussing the most pressing military issues facing the country, including North Korea and Iran. He also denounced Iran, saying the country should not be allowed to obtain nuclear weapons, and offered another stark warning to North Korea's Kim Jong-un. "We cannot allow this dictatorship to threaten our nation or allies with unimaginable loss of life," he said, vowing to "do what we must do to prevent that from happening and it will be done, if necessary. Believe me." He also said that, moving forward, he expects those in the room to provide him with "a broad range of military options, when needed, at a much faster pace." (Associated Press, “Trump Talks of ‘Calm before the Storm,’” Korea Herald, October 6, 2017)

President Donald Trump is expected to revoke longstanding sanctions on Sudan ahead of an October 12 deadline after the North African country ended ties with North Korea, according to three people briefed on the matter. The Trump administration had delayed a decision in July but senior officials from Sudan and the U.S. have ironed out their differences in a series of bilateral meetings, including over cutting support for North Korea. (Katrina Hanson, “U.S. to Lift Sudan Sanctions after Deal on North Korea,” Financial Times, October 5, 2017)

U.S. Customs and Border Protection says it is ready to block US imports of seafood – as well as any other goods – produced by North Korean laborers who work in China. An Associated Press investigation tracked salmon, squid and cod processed by North Koreans working at Chinese factories and shipped to American stores, including Walmart and ALDI. The North Korean workers found in Chinese factories aren't allowed to leave, and receive only a fraction of their pay – most goes straight to the North Korean state. This means that American consumers buying seafood labeled "Caught in the USA, Processed in China" may inadvertently be subsidizing the government of Kim Jong Un as it builds nuclear weapons, and also supporting forced labor. US Customs and Border Protection said in a statement today it is reviewing the allegations and if warranted, would "pursue all enforcement actions and prohibit goods from importation as appropriate." The companies that responded also vowed to investigate ties with suppliers. GOP Congressman Chris Smith from New Jersey, who has repeatedly called for tougher enforcement, said the Labor Department has already identified trafficking in 12 sectors of goods exported by China. "CBP should be stopping every shipment from those sectors and now trafficking-tainted salmon too," he said. A White House National Security Council spokesman said the North Korean government's scheme to outsource its labor underscores why the United States has pushed for restrictions on North Korean foreign workers. The spokesman said all countries should, at a minimum, ban companies from bringing in North Korean crews, as pledged in recent United Nations sanctions. China is among the countries that have promised to comply, already banning imports of North Korean seafood, and saying no more North Korean workers will be allowed starting next year. "But all nations must go further and reject what is clearly a despicable practice that only serves the regime's nuclear ambitions," said the NSC spokesman, who spoke on condition of anonymity because he wasn't authorized to comment. Walmart said its supplier has addressed the problem, although it did not specify how. Walmart and ALDI said they are committed to human rights and fair labor practices, and expect the same from their business partners. At a time when North Korea faces sanctions on many exports, the government is sending tens of thousands of workers worldwide, bringing in revenue estimated at anywhere from $200 million to $500 million a year. That could account for a sizable portion of North Korea's nuclear weapons and missile programs, which South Korea says have cost more than $1 billion. North Koreans overseas work in construction in the Gulf states, shipbuilding in Poland, logging in Russia. In Uruguay, authorities told AP, about 90 North Koreans crewed fishing boats last year. "I am not surprised at all," said Anthony Talbott, who directs the University of Dayton's Human Rights Center. "North Korea has probably the single highest level of state-sanctioned slavery in the world, it's a major source of income for them." Among those North Korean laborers in China, roughly 3,000 are believed to work in the northeast industrial hub of Hunchun, just a few miles from the borders of both North Korea and Russia. AP documented North Koreans in several Hunchun seafood processing plants, and tracked their supply chains to importers, including Sea-Trek Enterprises in Rhode Island, where managers said they are being inundated with phone calls from customers and suppliers since the AP story. Sea-Trek's owners said that they hadn't visited China and were unaware of the makeup of the workers, but would immediately cease dealings
with the plant until the situation is resolved. "Sea-Trek will not purchase product from any company using forced labor," said vice president Mitch Sarnoff. Mark Liszt, owner of Lawrence Wholesale, a national food distributor in Southern California, said it would investigate its suppliers as well. "We're middlemen," said Liszt. "We do make a practice of trying to go and visit the plants that we buy from in person, but it's not a perfect world that we can see into every single one." Some US brands and companies had indirect ties to the North Korean laborers in Hunchun, including Chicken of the Sea, owned by Thai Union. Trade records show shipments came from a sister company of the Hunchun factory in another part of China, where Thai Union spokeswoman Whitney Small says labor standards are being met and the employees are all Chinese. Small said the sister company should not be penalized. AP observed North Korean workers in Chinese factories building hardwood flooring, sewing garments and manufacturing electronics. Fordham University economics professor Giacomo Santangelo said he doubts it's just fish processed by North Korean workers that reaches the US markets. "Now we need to ask, how many other products imported from China are made with North Korean labor?" he said. Top Senate Democrat Chuck Schumer of New York said US officials must keep products made by North Koreans out of the United States. "The administration needs to ramp up the pressure on China to crack down on trade with North Korea across the board," he said. Ohio's Democratic Sen. Sherrod Brown, who helped pass North Korea, Iran and Russia sanctions this summer, said corporations also have a responsibility to make sure they are abiding by UN sanctions and US laws. However, Bucknell University political science professor Zhiqun Zhu said a sanction-based approach that cracks down on imports isn't going to solve the problem. "It has so many loopholes," he said. "All sticks and no carrots will not make the North Korea problem disappear." (Associated Press, "U.S. Customs Vows to Block Imports Made by North Korean Workers," Korea Herald, October 5, 2017)

To fly into North Korea on an old Russian aircraft is to step into an alternate universe, one in which "the Supreme Leader" defeats craven American imperialists, in which triplets are taken from parents to be raised by the state, in which nuclear war is imminent but survivable — and in which there is zero sympathy for American detainees like Otto Warmbier. "He broke the law in our country," said Ri Yong-pil, a senior Foreign Ministry official, adding that Warmbier was returned (a week before his death) as a "humanitarian" act. Another senior ministry official, Choe Kang-il, insisted that North Korea had provided excellent care and spent "all the money for nursing" him. Something in me snapped. I asked how North Koreans could possibly boast about their spending on a young man when he was in a coma only because of them. Choe replied just as hotly that Warmbier had not been mistreated and was in fine condition when he was sent back home. "The U.S. administration, or some people with a certain intention, let him die," Choe said. "This must be intended to foster and spread anti-Communist hatred within America." Officials offered no apology and gave no ground, reflecting a hard line toward the United States that I found everywhere on this visit; Choe derided President Trump as "a crazy man," "a thug" and "a pathetic man with a big mouth." I've been covering North Korea on and off since the 1980s, and this five-day trip has left me more alarmed than ever about the risks of a catastrophic confrontation. I was given a visa to North Korea, as were three other New York Times journalists. The U.S. State Department promptly gave us an exemption from the travel ban to North Korea and issued special passports good for a single trip here. Far more than when I previously visited, North Korea is galvanizing its people to expect a nuclear war with the United States. On past trips (my last was in 2005), we journalists stayed at hotels in the capital and were free to walk around on our own, but this time the Foreign Ministry housed us at its own guarded Kobangsan Guest House east of the capital. At first I thought this was simply to restrict us, but increasingly I saw signs of something more interesting and menacing: The Foreign Ministry was also protecting us from hard-liners in the military or in the security services. "Someone might hear you are from America," and there could be trouble, one official explained. Hard-liners seem to have gained greater power this year, especially after Trump’s threat to “totally destroy” North Korea, and we were told that military officers sometimes mock their own country’s diplomats for being wimpish “Americancronies.” Foreign Ministry officials escorted us every time we left the compound, probably both to keep us out of mischief and to protect us from the security agencies. Yes, all this has been a little discomfiting. The upshot is that I have felt more constraint than on past visits to North Korea, and considerably more tension. Before, I had been able to see senior generals, but this time the military
flatly refused to consider my interview requests. The security forces also refused my request to meet the three Americans whom they still detain, one for two years now, without consular access. A basic problem is that hard-liners seem ascendant in both Washington and Pyongyang. Trump’s policy toward North Korea is founded on false assumptions that the Supreme Leader, Kim Jong-un, will give up his nuclear weapons, that China can save the day and that military options are real. In Pyongyang, North Korea’s capital, which is full of wide streets and monumental buildings, officials also express little interest in the kind of tough compromises that would be necessary to resolve the crisis. “The situation on the Korean Peninsula is on the eve of the breakout of nuclear war,” Choe, the Foreign Ministry official, told me. “We can survive” such a war, he added, and he and other officials said that it was not the right time for talks with the U.S. The North Koreans insist that the U.S. make the first move and drop its sanctions and “hostile attitude” — which won’t happen. And the U.S. is equally unrealistic in insisting that North Korea give up its entire nuclear program. I told Choe that my visit gave me a sense of déjà vu, reminding me of a trip to Saddam Hussein’s Iraq on the eve of the American invasion. The difference is that a war here would be not just a regional disaster but a nuclear cataclysm. Choe was unimpressed by my warning. He said that Iraq and Libya had made the mistake of giving up their nuclear programs; in each case, America then ousted the regime. He added that the lesson was obvious, so North Korea will never negotiate away its nuclear warheads. Still, for all the shadow of possible war, North Korea has had some positive changes. The famine is over (although malnutrition still leaves one in four children stunted), the economy has developed and government officials are far more open and savvy than a generation ago. Officials used to deny that there was ever any crime in North Korea — but now they freely concede that this country has thieves, that young women sometimes become pregnant before marriage, that inevitably there’s a measure of corruption. (They do deny that North Korea has any gay people.) North Korea is no longer hermetically sealed, and South Korean pop music and soap operas are smuggled in on flash drives and DVDs from China (watching them is a serious criminal offense). There is also an intranet — a rigidly controlled version of the internet — and students learn English from about the third grade. Yet this is still North Korea. Radios or televisions that might get foreign broadcasts are illegal, and there is no access to the internet except for foreigners and senior officials. When I arrived at the airport, my luggage was closely searched for pernicious publications, and even my phone was examined. Each home or village has a speaker, a link from Big Brother, that drums in propaganda each morning. Religion and civil society are not allowed. Government controls frayed during the terrible famine of the 1990s, when perhaps 10 percent of the population died, but the controls have returned with the economic recovery. This is the most totalitarian state in the history of the world, because it has computers, closed-circuit cameras, mobile phones and other monitoring technologies that Stalin or Mao could only have dreamed of. North Korea is also sometimes simply weird. Every year, people die trying to rescue the Kim portraits from house fires (whether because of genuine loyalty to win credit with the authorities), and now this Confucian-style reverence is directed to Kim Jong-un, 33, the scion of the dynasty. His name means “just and merciful,” and the state media are worshipful about his “brilliant intelligence, military acumen, matchless courage and outstanding art of command,” as one publication put it. Do people really believe this stuff? I’ve interviewed countless defectors over the years, and they say that there’s more disenchantment among the youth and in the China border area, where Koreans realize that their country has been left behind. But the defectors add that many North Koreans, especially older ones and those distant from the China border, genuinely believe in the system and worship the Kim family — because they know nothing else. “Much of the older generation still remains loyal to the regime,” agreed Jieun Baek, author of a recent book on how information reaches North Koreans. Attitudes are changing among younger people and those involved in the market economy, she said, but she doesn’t foresee a grass-roots uprising any time soon. What makes this moment so perilous is that North Koreans are steeped in the idea that they have repeatedly defeated the U.S. — and can do so again. I suspect North Korea is rational and cares about self-preservation, and I don’t believe that it would fire off a nuclear missile at Guam or Los Angeles just for the thrill. But a dogfight between a North Korean and an American plane could cause a crisis that escalates. Or Trump could order an airstrike on a North Korean missile during fueling on the launchpad — and that, every North Korean official said, would lead to war. Both sides are on a hair trigger. That’s why in war games, conflicts quickly escalate — and why the American
military estimated back in 1994 that another Korean war would cause one million casualties and $1 trillion in damage. Today, with the possibility of an exchange of nuclear weapons, the toll could be far greater: One recent study suggested that if North Korea detonated nuclear weapons over Tokyo and Seoul, deaths in those two cities alone could exceed two million. My sense is that both sides are fearful of appearing weak and are trying to intimidate the other with military bluster, but that each would prefer a peaceful resolution — yet doesn’t know how to get there politically. So how do we get out of this mess? First, Trump should stop personalizing and escalating the conflict. Second, we need talks without conditions, if only talks about talks: I’d suggest a secret visit to Pyongyang by a senior administration official, as well as discussions with North Korea’s ambassador to the United Nations. Third, human rights have to be part of the agenda, backed by the threat of suspending North Korea’s credentials at the United Nations. Fourth, we should support organizations that smuggle information on USB drives into North Korea; this would be cheap and might contribute to change in the long term. Fifth, increase cyberwarfare, which the U.S. has already used effectively against North Korea. Sixth, let’s enforce tighter sanctions, but only if harnessed to a plausible outcome. Ultimately, the best hope that is realistic may be a variant of what’s called a “freeze for a freeze,” with North Korea halting its nuclear and missile tests in exchange for a reduction in sanctions and in U.S.-South Korean military exercises — as an interim step, preserving the long-term goal of denuclearization. Unfortunately, both sides resist this approach; I was disappointed in the lack of North Korean interest. So if we can’t work out a freeze for a freeze, realistically the next best option is to settle into long-term mutual deterrence. But that would be risky, not least because we have an American president and a North Korean leader who both seem impetuous, overconfident and temperamentally inclined to escalate any dispute — and the American mainland increasingly will be in the cross hairs of North Korean nuclear warheads. I leave North Korea with the same sense of foreboding that I felt after leaving Saddam’s Iraq in 2002. War is preventable, but I’m not sure it will be prevented. (Nicholas Kristoff, “War Drums Inside the North,” New York Times, October 8, 2017, p. E-1)

North Korea indirectly acknowledged that it had reopened part of the Kaesong Industrial Complex, claiming it has the right to run the complex in its territory. The previous Park Geun-hye government closed the joint industrial complex in February 2016 in protest of the North's fourth nuclear test. "What we do in an industrial complex, where our nation's sovereignty is exercised, is nobody else's business," said a post on Uriminzokkiri. "They will clearly see how our workers are proudly working now unless their eyes are blind." The announcement came a few days after news reports that North Korea was operating factories owned by South Korean companies without reporting to the Seoul government. Quoting unnamed sources, U.S.-funded Radio Free Asia reported on October 2 that the North had been running 19 clothing factories over six months to produce garments for domestic consumption as well as exports to China. The source said the clothing factories were using electricity diverted from munitions plants, with the clothing production kept secret with curtains hiding the light. The unification ministry called for the factories to be closed immediately because operating the complex without the South's approval is clearly illegal. "North Korea must not infringe on the South Korean companies' property rights within the joint complex," a unification official said. But besides such condemnation and protest, there is nothing practical the South can do because all communication channels between the two Koreas have been cut. The government seems to have no particular measures to halt North Korea's unilateral operation of the inter-Korean joint industrial complex. The ministry had a similar response in August following news reports that North Korea had used vehicles belonging to South Korean companies in the Kaesong complex. Following the reports, South Korean companies formerly operating in the industrial park said they would have an emergency meeting on October 11. They responded cautiously to the reports, saying they would wait for the government's official explanation. Opposition parties demanded the government take swift countermeasures, criticizing it for being idle against the North's illegal conduct. "The government should come up with stronger measures against the North this time in close cooperation with the international community," the main opposition Liberty Korea Party said in a statement. The party said the operation of the complex was a violation of the inter-Korean agreement and U.N. Security Council resolutions. "If the news reports are true, the North's actions must not be overlooked," the minor
opposition Bareun Party said in a statement. "We cannot help but ask what the government is doing. It has only replied it is checking the facts. When the Korean Peninsula is at risk due to the North's provocations, the government needs to make utmost efforts to overcome the crisis in every aspect. We urge its swift response." (Kim Hyo-jin, “N. Korea Secretly Reopens Some Kaesong Factories,” Korea Times, October 8, 2017)

10/7/17

President Trump continued to make vague threats toward North Korea today, saying that diplomatic negotiations and agreements over the years have not worked and that “only one thing will work,” without elaborating on what that one thing would be. “Presidents and their administrations have been talking to North Korea for 25 years, agreements made and massive amounts of money paid . . . hasn't worked, agreements violated before the ink was dry, making fools of U.S. negotiators. Sorry, but only one thing will work!” Trump tweeted in two messages on this afternoon. (Jenna Johnson, “Trump on North Korea: ‘Sorry, but Only One Thing Will Work!’” Washington Post, October 7, 2017)

10/8/17

KCNA: “The Second Plenum of the 7th Central Committee of the Workers' Party of Korea took place in the capital city of Pyongyang on Oct. 7, Juche 106 (2017). Kim Jong Un, chairman of the Workers' Party of Korea (WPK), guided the meeting. Attending the meeting were members and alternate members of the WPK Central Committee and members of the Central Auditing Commission of the WPK. Present as observers were leading officials of the WPK Central Committee and ministries, national institutions and provinces, cities and counties and officials of major industrial establishments. The plenary meeting dealt with the following agenda items: 1. On some immediate tasks to cope with the prevailing situation 2. Organizational matter The first agenda was discussed. Chairman Kim Jong Un made a report on the first agenda. In his report he made an analysis of the complicated international situation prevailing around the DPRK and the important matters arising therefrom and mentioned the orientation of our Party's immediate activities and economic development to cope with the prevailing situation and set forth the strategic tasks and ways for its materialization. He referred to the fact that the U.S. imperialists are making last-ditch efforts to completely stifle the sovereignty and the rights to existence and development of the DPRK by cooking up UNSC "sanctions resolutions" one after another with mobilization of their vassal forces. He solemnly declared: The nuclear weapons of the DPRK are a precious fruition borne by its people's bloody struggle for defending the destiny and sovereignty of the country from the protracted nuclear threats of the U.S. imperialists. And they are powerful deterrent firmly safeguarding the peace and security in the Korean peninsula and Northeast Asia and reliably guaranteeing the Korean nation's sovereignty and rights to existence and development and a treasured sword of justice to remove the nuclear clouds of tyranny bringing a horrible disaster to mankind and make it possible for the people to lead an independent and happy life under the clear and blue sky. He noted with appreciation that the country's science and technology have developed by leaps and bounds and the national economy has grown on their strength this year, despite the escalating sanctions of the U.S. imperialists and their vassal forces. This year's struggle for implementing the decision of the Seventh WPK Congress gave valuable experience that we can readily blaze our path as long as there are perfect independent economic structure of the country and its solid foundations no matter what sanctions the enemies may impose, he said. The Chairman affirmed that the prevailing situation and the reality show that our Party was absolutely right when it dynamically advanced along the socialist road of Juche, holding fast to the line of simultaneously pushing forward the economic construction and the building of nuclear force and that our Party should invariably keep to this road in the future, too. Clarifying the Party's principled stand and revolutionary strategy to put an end to the U.S. imperialists' nuclear blackmail and threat and pave a broad avenue to the building of a socialist economic power by further enhancing the might of the self-supporting national economy, he stressed the need to further strengthen the power of the country under the unfurled banner of independence and self-reliance and thus decisively frustrate the reckless nuclear war provocation and sinister sanctions and pressure of the enemies. Stating that the WPK will victoriously conclude the standoff with the U.S., which has lasted century after century, and bring earlier the victory in the socialist cause by giving full play to its correct leadership ability, the Chairman set forth the orientation and tasks for bringing the
But that approach could leave the United States isolated, and it will be up to Corker to balance negotiating table Republicans could hold off on sanctions but use th the issue of whether to restore sanctions on Tehran and effectively scuttle the pact. key role if Trump follows through on his threat to “decertify” the Iran nuclear deal, kicking to perhaps last, hope of producing a major legislative achievement this year. Corker cou has little margin for error as he tries to pass a landmark overhaul of the tax code on Corker’s remarks. Trump partner, and wished him “no harm.” The White House did not respond to a request for comment stinging accusations, Corker repeatedly said that he liked Trump, until now an occasional golf of the few genuine relationships Trump had developed on C rupture what had been a friendship with a fellow real estate developer turned elected official, one Corker said in a telephone interview. The deeply personal back for a fact that every single day at the White House, it's a situation of trying to contain him that a coterie of senior administration officials must protect him from his own instincts. “I know Corker’s feud with Corker is particularly perilous given that the president on tax reform and the fate of the Iran nuclear deal. It began this morning when Trump, posting on Twitter, accused Corker of deciding not to run for re-election because he “didn’t have the guts.” Corker shot back in his own tweet: “It’s a shame the White House has become an adult day care center. Someone obviously missed their shift this morning.” The senator, Trump said, had “begged” for his endorsement. “I said ‘NO’ and he dropped out (said he could not win without my endorsement),” the president wrote. He also said that Mr. Corker had asked to be secretary of state. “I said ‘NO THANKS,’” he wrote. Corker flatly disputed that account, saying Trump had urged him to run again, and promised to endorse him if he did. But the exchange laid bare a deeper rift: The senator views Trump as given to irresponsible outbursts — a political novice who has failed to make the transition from show business. Trump poses such an acute risk, the senator said, that a coterie of senior administration officials must protect him from his own instincts. “I know for a fact that every single day at the White House, it’s a situation of trying to contain him,” Corker said in a telephone interview. The deeply personal back-and-forth will almost certainly rupture what had been a friendship with a fellow real estate developer turned elected official, one of the few genuine relationships Trump had developed on Capitol Hill. Still, even as he leveled his stinging accusations, Corker repeatedly said that he liked Trump, until now an occasional golf partner, and wished him “no harm.” The White House did not respond to a request for comment on Corker’s remarks. Trump’s feud with Corker is particularly perilous given that the president has little margin for error as he tries to pass a landmark overhaul of the tax code — his best, and perhaps last, hope of producing a major legislative achievement this year. Corker could also play a key role if Trump follows through on his threat to “decertify” the Iran nuclear deal, kicking to Congress the issue of whether to restore sanctions on Tehran and effectively scuttle the pact. Republicans could hold off on sanctions but use the threat of them to force Iran back to the negotiating table — a strategy being advocated by Senator Tom Cotton, the Arkansas Republican. But that approach could leave the United States isolated, and it will be up to Corker to balance
opposition to the deal with the wishes of those, including some of Trump’s own aides, who want to change the accord but not blow it up. If the president were to oust Rex W. Tillerson as secretary of state, as some expect, Corker would lead the hearings on Trump’s nominee for the post. In a 25-minute conversation, Corker, speaking carefully and purposefully, seemed to almost find cathartic satisfaction by portraying Trump in terms that most senior Republicans use only in private. The senator, who is close to Tillerson, invoked comments that the president made on Twitter last weekend in which he appeared to undercut Tillerson’s negotiations with North Korea. “A lot of people think that there is some kind of ‘good cop, bad cop’ act underway, but that’s just not true,” Corker said. Without offering specifics, he said Trump had repeatedly undermined diplomacy with his Twitter fingers. “I know he has hurt, in several instances, he’s hurt us as it relates to negotiations that were underway by tweeting things out,” Corker said. All but inviting his colleagues to join him in speaking out about the president, Corker said his concerns about Trump were shared by nearly every Senate Republican. “Look, except for a few people, the vast majority of our caucus understands what we’re dealing with here,” he said, adding that “of course they understand the volatility that we’re dealing with and the tremendous amount of work that it takes by people around him to keep him in the middle of the road.” As for the tweets that set off the feud on Sunday morning, Corker expressed a measure of powerlessness. “I don’t know why the president tweets out things that are not true,” he said. “You know he does it, everyone knows he does it, but he does.” The senator recalled four conversations this year, a mix of in-person meetings and phone calls, in which he said the president had encouraged him to run for reelection. Trump, he said, repeatedly indicated he wanted to come to Tennessee for an early rally on Corker’s behalf and even telephoned him last Monday to try to get him to reconsider his decision to retire. “When I told him that that just wasn’t in the cards, he said, ‘You know, if you run, I’ll endorse you.’ I said, ‘Mr. President, it’s just not in the cards; I’ve already made a decision.’ So then we began talking about other candidates that were running.” One of the most prominent establishment-aligned Republicans to develop a relationship with Trump, the senator said he did not regret standing with him during the campaign last year. “I would compliment him on things that he did well, and I’d criticize things that were inappropriate,” he said. “So it’s been really the same all the way through.” While he opposed President Barack Obama’s divisive nuclear deal with Iran, he did not prevent it from coming to a vote on the Senate floor, which exposed him to fierce fire from conservatives, who blamed him for its passage. Trump picked up on that theme hours after his initial tweets, writing that “Bob Corker gave us the Iran Deal, & that’s about it. We need HealthCare, we need Tax Cuts/Reform, we need people that can get the job done!” Corker was briefly a candidate to be Trump’s running mate in 2016, but he withdrew his name from consideration and later expressed ambivalence about Trump’s campaign, in part because he said he found it frustrating to discuss foreign policy with him. To some extent, the rift between the two men had been building for months, as Corker repeatedly pointed out to argue that his criticism was not merely that of a man liberated from facing the voters again. After a report last week that Tillerson had once referred to Trump as a “moron,” Corker told reporters that Tillerson was one of three officials helping to “separate our country from chaos.” Those remarks were repeated on “Fox News Sunday,” which may have prompted Trump’s outburst. In August, after Trump’s equivocal response to the deadly clashes in Charlottesville, Corker told reporters the president “has not yet been able to demonstrate the stability nor some of the competence that he needs to demonstrate in order to be successful.” He said that he had made all those comments deliberately, aiming them at “an audience of one, plus those people who are closely working around with him, what I would call the good guys.” He was referring to Tillerson, Defense Secretary Jim Mattis and White House chief of staff, John F. Kelly. “As long as there are people like that around him who are able to talk him down when he gets spun up, you know, calm him down and continue to work with him before a decision gets made, I think we’ll be fine,” he said. Corker would not directly answer when asked whether he thought Trump was fit to be president. But he did say that the commander in chief was not fully aware of the power of his office. “I don’t think he appreciates that when the president of the United States speaks and says the things that he does, the impact that it has around the world, especially in the region that he’s addressing,” he said. “And so, yeah, it’s concerning to me.” (Jonathan Martin and Mark Landler, “G.O.P. Senator Rebukes Trump over ‘Reality Show’ Behavior,” New York Times, October 9, 2017)
While the embassies of most countries promote the interests of companies back home, North Korea’s are in business for themselves. A series of tough sanctions by the United Nations and an executive order recently signed by President Trump have sought to economically isolate the nuclear-armed regime of Kim Jong-un. But Pyongyang has held on to an array of profit-making ventures, some of which operate in the roughly 40 embassies of the hermit kingdom. Many of these enterprises are hard to trace, but at least one is impossible to miss. For years, neighbors have complained about the noise coming from a large, fenced-in building here in a southern section of Bulgaria’s capital city. It hosts parties a few times a week, many of them capped off with a late-night flurry of fireworks, shot from the roof. The building, filled with gilded halls that can be rented for events, enjoys a kind of diplomatic immunity courtesy of its owner: the government of North Korea. North Korean embassies have spent decades running cash-raising schemes, nearly all of them illicit under current international law. Diplomats and their underlings have brokered deals for weapons and drugs, and more mundane products like machine tools and cows. They have also smuggled liquor, cigarettes, luxury cars and anything else that can be imported duty free and then sold at a gain. “My late father-in-law was an ambassador,” said Marcus Noland, who studies North Korea and is executive vice president of the Peterson Institute for International Economics, “and he told me that in India, years ago, it was known within the diplomatic corps that if you wanted to buy beef, you could knock on the backdoor of the North Korean embassy in Delhi. They ran an abattoir in the basement.”

Despite the sanctions it is under, North Korea did $6.5 billion in trade last year. Analysts estimate that embassy revenues represent a small sum compared with the country’s other low-profile foreign ventures. Those included cadres of bodyguards leased to dictators who don’t trust their own citizens, laborers dispatched to work sites around the world who must remit their wages and state-owned companies that export ballistic missiles and other arms to countries like Syria. In some cases, diplomats get involved with weapons deals. The third private secretary of the North Korean embassy in Beijing doubled as an employee of the Haegeumgang Trading Company. The company, according to a United Nations report, supplied surface-to-air missiles and radar systems to Mozambique. Haegeumgang also sold machine tools, and an ad in 2014 for those products on a Chinese website listed the company headquarters at the same address as the North Korean embassy in Beijing. China’s Ministry of Foreign Affairs did not respond to faxed questions.

Diplomats for the country have been ad hoc entrepreneurs since at least 1976. That year, Norway’s police found through surveillance that every member of the North Korean embassy in Oslo was involved in the import and sale of as many as 10,000 bottles of spirits and 100,000 cigarettes. Today, sanctions have forced many embassies to curb their ambitions, with some intent on keeping the lowest possible profile. The North Korean embassy in London sits unobtrusively in Ealing, a suburb-like section of London, just another brick house in a row of them. The difference is a small sign, barely visible from outside the wrought iron fence: “Residence and office, embassy of D.P.R. Korea.”

Aside from black luxury sedans in the driveway, there are rarely signs of life in the building, even to neighbors. The way that the London embassy sustains itself is a mystery. One theory comes from Kim Joo-il, a former member of the North Korean military who defected and moved to London in 2007. He said he often saw embassy employees at a type of Sunday flea market called a car-boot sale. “They are always there buying secondhand electronics, toys, dolls, kitchen goods,” Kim said through an interpreter, seated at a restaurant he owns in a London suburb. “Some of these things they are cleaning up and fixing to resell, others they are sending home to North Korea.”

North Korean embassies in the former eastern bloc, where the missions were long ago granted generous square footage, have a more lucrative stratagem. In Poland, 40 businesses are listed at the address of the North Korean embassy in Warsaw, including a pharmaceutical company, several advertising agencies and a yacht club. How many of these businesses are actually staffed there is unclear. In Sofia, the embassy owns a number of buildings on two separate properties. One is a complex that includes the embassy itself. Passers-by can pause at a glass display case — standard issue for embassies in the city — filled with photographs. One captures the Supreme Leader beaming at a crowd, others were of missiles that had just been launched. The event space, known as Terra Residence, is a 15-minute walk east. It’s the former home of the North Korean ambassador, built in the 1980s with dazzle instead of comfort in mind. Photos on Terra’s promotional website show an interior that is essentially a communist take on...
Versailles — a series of huge and austere halls with chandeliers, gold curtains and paintings of ballerinas. Terra rents out the space for magazine photo sessions, music videos and television ads, including a handful for national banks and one for Bulgaria’s version of “Celebrity Apprentice.” Its main business is weddings, proms and corporate events. Few attendees, it seems, realize they are spending the evening on North Korean property. A spokeswoman for Terra, Anelia Baklova, wrote in an email that the company has had a long-term lease with the embassy of North Korea that predates the imposition of economic sanctions. When the U.N. approved stricter sanctions, this year and last, Terra “froze” its payments, she said. The company has not been evicted, she wrote, because of the “considerable amount of money” it had spent on renovations and upkeep. Emails to the embassy were not returned. Some countries have succeeded in shutting down businesses that rent from North Korea. In May, Germany closed a youth hostel that was operating in what was originally North Korean diplomatic quarters. The governments of Poland and Bulgaria have so far been unable to end the ancillary activities. A spokesman for the Bulgarian Ministry of Foreign Affairs said it had repeatedly raised the issue of renting out space with North Korean officials here, urging them to “use properties in Sofia solely for diplomatic and consular activities.” Terra, unlike its landlord, has tried to become a more agreeable neighbor. People who live across the street say that notices are now taped on the doors of their apartment building a day before there will be fireworks, giving a heads up and promising that the show will end by 10 p.m. Surprisingly, residents didn’t seem particularly vexed about living near an enterprise that has pumped money into the world’s most repressive and notorious regime. “When you live in a place where it’s so difficult to get even trivial stuff done,” said Nikolova, “it’s hard to worry about World War III.” (David Segal, “North Korean Embassies Host Proms and Sell Cows for Cash,” New York Times, October 8, 2017, p. A-1)

Trump tweet: “Our country has been unsuccessfully dealing with North Korea for 25 years, giving billions of dollars & getting nothing. Policy didn't work!”

America’s relationship with North Korea remains a diplomatic one, Secretary of Defense Jim Mattis said, but he urged members of the military to be prepared in case the situation breaks down. Mattis also used his keynote speech at the annual AUSA conference in Washington. “It is right now a diplomatically, economic-sanctions-buttressed effort to try and turn North Korea off of this path,” Mattis told the audience. “What does the future hold? Neither you nor I can say.” In contrast to some of the president’s tweets, Mattis’ comments represent a fairly regular baseline of the North Korea situation — that diplomacy has the lead, with the military ready to back it up. (Aaron Mehta, “Mattis to Army: ‘Stand Ready’ If Diplomacy Fails,” Defense News, October 9, 2017) Army Chief of Staff Gen. Mark Milley made clear what a bind the US is in when it comes to solving the challenge of North Korea's nuclear and missile programs, stating there are "no risk-free options" but said there is also not an "indefinite amount of time" to solve the crisis. "A full-blown war on the Korean Peninsula will be horrific by any stretch of the imagination. No one has any doubts about that," Milley told reporters during a news conference on the sidelines of the Association of the United States Army's annual meeting in Washington. And while Milley said that a full-scale military conflict on the Korean Peninsula would be "horrible," he also suggested that North Korea gaining possession of an intercontinental ballistic missile capable of striking the US would be similarly unacceptable. "It would be horrible, there's no question about it, but so would an intercontinental ballistic missile striking Los Angeles or New York City. That would be equally horrible," he said. And while the Army chief made it clear that the military is ready to act, he said there are no "risk-free options." "There are no good, easy, you know, risk-free options here. This is extraordinarily difficult, extraordinarily dangerous. No one should underestimate it," he said, underscoring that the final decisions on which course of action would be made by elected policymakers and not the military. "That decision will be made by the duly elected representatives of the United States of America," Milley said, adding "there is a timeline on this" given the development of North Korea's missile program. "It's not an indefinite amount of time. And there will be decisions made, there's no question about it." (Ryan Brown, “U.S. Army Chief: ‘No Risk Free Options’ on North Korea,” CNN, October 9, 2017)
President Donald Trump met with his top defense officials for a briefing and discussion on options to respond to any North Korean aggression or if necessary to prevent Pyongyang from threatening the United States and its allies with nuclear weapons, the White House said in a statement. Trump was briefed by Secretary of Defense James Mattis and Chairman of the Joint Chiefs of Staff General Joseph Dunford at a meeting of members of his national security team, the statement said. (Eric Beech, “Trump, Top Officials Discuss North Korea Options: White House,” October 10, 2017)

The Army's top officer said that Defense Secretary Jim Mattis has clearly tasked the service with being prepared for war with North Korea. Gen. Mark Milley, the chief of staff, said the U.S. is still seeking a peaceful diplomatic solution to the crisis over the North's nuclear missile program, but he told the Association of the U.S. Army conference that Mattis had meant what he said when he warned soldiers "you have got to be ready" during a keynote at the same event yesterday. "Secretary Mattis just yesterday very clearly tasked the United States Army to be ready. His words were carefully chosen," Milley said. "So our No. 1 task, bar none, remains readiness. Readiness for what? It's readiness for war." "There's one thing the U.S. Army can do, and that is, you have got to be ready to ensure that we have military options that our president can employ, if needed," he said. "No one in this room knows with certainty how this situation will play out and someone in this room will be making the critical decisions," Milley said. "But you can be sure that decisions will be made one way or the other because of the rapid pace of North Korea's ICBM and nuclear weapons development." Milley said "no one wants a war" and detailed the grave consequences if the United States and North Korea do fall into conflict. "All recognize that a war on the Korean Peninsula would be a tragedy on a huge scale with intense levels of violence in dense urban areas, enormous damage to infrastructure, and economic effects felt worldwide," he said. "Most importantly there would be significant loss of human life, a level of war on a scale that few in the world today have ever seen." (Travis J. Tritten, “Army Chief: Jim Mattis Very Clearly Tasked Army to Be Ready for War with North Korea,” Washington Examiner, October 10, 2017)

The United Nations has slapped a global port ban on four ships for their dealings with North Korea, including one that was caught smuggling 30,000 North Korean-made rocket-propelled grenades in 2016. Hugh Griffiths, the coordinator for the UN Panel of Experts on North Korea, called the move "swift and decisive." The port bans were enacted under UN Security Council Resolution 2375 passed last month after North Korea test-fired a missile that overflew Japan. It is the first time the United Nations Security Council 1718 Committee, which oversees sanctions imposed by the Security Council on North Korea, has designated ships for port bans, according to Griffiths. The UN said the four ships were the Jie Shun, the ship caught smuggling grenades; the Hao Fan 6, the Petrel 8 and and the Tong San 2. The Hao Fan 6 is registered in St. Kitts and Nevis, tiny islands in the Caribbean, while the Petrel 8 is a cargo ship registered in the Comoros islands, off the coast of East Africa; according to MarineTraffic.com. The Jie Shun is registered in Cambodia, while the Tong San 2 is under the North Korean flag. (Joshua Berlinger and Richard Roth, “UN Bans 4 Ships from All Ports for North Korea Ties,” CNN, October 10, 2017)

North Korean hackers stole a huge trove of classified U.S. and South Korean military documents last year, including a plan to "decapitate" the leadership in Pyongyang in the event of war, a lawmaker in Seoul said. The purported revelations come at a time of heightened tensions over North Korea. President Trump recently said that “only one thing will work” when it comes to Pyongyang, hinting that he thinks diplomatic efforts are proving futile and military action may be necessary. The defense minister in Japan, a close military ally of the United States, said today that Trump might take such action against North Korea as soon as next month. “I think President Trump will judge in the middle of November how effective pressure and other efforts have been,” Onodera Itsunori told reporters in Tokyo. “If there have been no changes from North Korea, it’s possible that the U.S. will take severe measures.” In Seoul, Rhee Cheol-hee, a lawmaker in the ruling Democratic Party and a member of the parliamentary national defense committee, said North Korean hackers broke into the Defense Integrated Data Center in September last year to
North Korea has developed a new type of intercontinental ballistic missile, but quite what it can do is still not known, sources here said. They said Pyongyang in late September completed development of what is believed to be the Hwasong-13, an upgraded version of the Hwasong-14 that Pyongyang test fired twice in July. The Hwasong-14 is a two-stage rocket with a range of 13,000 kilometers or so. The latest development caused Japan, the United States and South Korea to raise their level of alert after satellite images indicated that new ICBMs were being transported by train from an arms factory near Pyongyang in late September, according to the sources who are familiar with North Korean military affairs. Defense experts in Seoul had assumed that Pyongyang would move to develop a three-stage ICBM, which is a norm around the world. The arms factory in Sanum-dong is known for having manufactured long-range Taepodong and other missiles. Experts analyzing the satellite intelligence said the missiles in question were larger in scale than the Hwasong-14. It was not known where the train was heading, the sources said. Rodong Sinmun, mouthpiece of the North Korean regime, reported on its online edition Aug. 23 that Kim inspected
strengthen global sanctions that limit North Korea's coal exports, oil imports and overseas

out. So I told (the North Koreans,) ‘Can we discuss getting the prisoners out and maybe from there
Korea policy review.’ And in the review, we came up very
clearly that we’re going to increase pressure on North Korea to denuclearize. But at the same time,
would leave room for engagement.” To be clear, when Yun says “denuclearize,” he means
North Korea must rid itself of all nuclear capabilities. Personally, I hadn’t realized that was the
starting point for talks. The policy, called “maximum pressure and engagement,” grew from North Korea’s failure to stop testing its missiles and nuclear devices. “In fact, in six years under the
current leader, Kim Jong Un, they tested 80 times — over 80 times. Compare that with the
previous six years, under his father, (Kim Jong Il,) who tested less than 20 times. So this was
going very much accelerated.” To begin a dialogue, Yun invited his North Korean counterparts to
New York in late February. But in early February, the North Koreans killed Kim Jong Nam, their
leader’s half-brother, in Kuala Lumpur, Malaysia’s capital. “Not only did they kill him, they killed
him using VX nerve agent, which is classified as WMD by the United Nations. There was such an
outrage that it was not possible for me to see them and of course we had to say, ‘Now is not the
time for talks.’ At the same time, we had three American prisoners in North Korea. So both
President Trump and Secretary Tillerson, it’s their very high priority to get American prisoners out. So I told (the North Koreans,) ‘Can we discuss getting the prisoners out and maybe from there
we can build a dialogue?’ So that’s when I went to Pyongyang.” Among the prisoners was Otto
Warmbier, an Ohio college student held for more than a year for allegedly trying to steal a
propaganda poster from a North Korean hotel. Yun saw that Warmbier was not well. His parents
later told Fox & Friends that when their unconscious son arrived home, he was blind and deaf, had
a nasal feeding tube, was jerking violently and howling involuntarily, and that it looked like
someone had taken a pair of pliers and rearranged his bottom teeth. “So what could have been a
very positive story turned out quite negative because not only was he unconscious, he came back
home and he died in less than a week. As you can see, the public opinion in the U.S. was very
much against that. And then, of course, North Koreans, as they rightly should, got the blame. And
as a result, we have now restricted travel of all Americans to North Korea.” Meanwhile, North Korea continued to violate world norms and test its missiles and nuclear bombs. In early
September, it tested a device that “was probably 150 kilotons, which is, I think, about ten times
bigger than the bomb that went off in Nagasaki. And of course they also tested intercontinental ballistic missiles that are capable of hitting Hawaii, hitting Guam and possibly the West Coast.
So this is why you’re seeing the tensions heightened. There is a realization among the American
public that there is a genuine homeland security threat. … And this is why you’re seeing open
debate on: do we pressure them, do we seek a diplomatic path or do we seek a pressure path? And
that, I think, is the really big issue of the day. “I’m a diplomat. I work in the State Department. We have always said we should pursue pressure as well as a diplomatic path. And that is not an easy
ting to suggest — to pressure someone at the same time to coax them to dialogue and diplomatic
path. That is the challenge we face.” On diplomacy, Yun highlights the Trump administration’s recent success at the United Nations Security Council in securing unanimous resolutions to
strengthen global sanctions that limit North Korea’s coal exports, oil imports and overseas
workers forced to send “loyalty payments” home. “These guest workers are essentially slave labor,” spokeswoman Nauert later added. “They don’t get to keep their own money. That money goes back to the Kim Jong Un regime … That doesn’t go to feed his own people, to provide medical care to his own people. He uses it to fund extremely expensive weapons programs. We believe that with the sanctions, we could remove money going to those programs.” China remains the biggest holdout. And since China accounts for over 90 percent of trade with North Korea, “it’s crucial that China does its part in sanctions,” Yun says. On the other end of the spectrum, South Korea and Japan, our close allies, “have been very solid in being with us in all aspects of sanction policy as well as diplomatic policy,” he added. “So that’s where we are. And obviously this thing hasn’t yet run its course. I would pose to you that this is a difficult problem that’s been with us for many decades. Their nuclear program probably started in the ’60s. The first nuclear agreement we reached with them was in ’94. … The second nuclear agreement we reached with them was in six-party talks that went from about 2003 to 2008. So we’ve seen many generations of this and this is a serious problem that’s become even more serious because of the homeland threat.” With that, Yun took questions. What about former President Jimmy Carter’s call to send a high-level delegation to Pyongyang for peace talks or to convene an international conference that includes North and South Korea, the United States and China? “Clearly we’re open to any approach, but let me be frank with you. … The North Koreans have made it clear to me, as well as to the world, that they want to talk to the U.S. They’re not that interested in talking to anyone else, that this is a problem between North Korea and the United States. So I’m not sure internationalizing it, that they would accept that. … North Korea has said they don’t want six-party talks. What they want to do is talk to us.” Do we want to talk to them? “I think we are very much open to talking to them. You’ve seen Secretary Tillerson say that. We want to talk to them. But we also do believe at the same time, they have got to come to talks with some degree of credibility and seriousness. They have agreed many times in the past that denuclearization is also their goal. But they have recently removed that. They said they would not denuclearize. And so that’s a problem for us. If you come to talks and say you’re not going to denuclearize, I’m not sure really what the future of those talks are.” Steve Bannon, former White House chief strategist, recently said that as long as North Korea has thousands of rockets trained on Seoul, there’s no credible military option that doesn’t result in the deaths of millions of South Koreans as well as thousands of U.S. troops stationed there. Is he correct? “You’ll have to ask my colleagues in (Department of Defense.) My main job is diplomacy. It’s not to pull triggers. This is outside, really, my lane.” Why do we expect sanctions to change North Korea’s behavior when they haven’t for decades? And if North Korea doesn’t commit to denuclearization, are we saying we won’t go to the table to talk? “I would say sanctions can be effective if implemented fully and properly. As I have alluded, China has about 90 percent of trade, so the burden does fall on China. It’s very different, by the way, than Iran, where there were many trading partners. In this case, it is China. So really, when you say sanctions have not worked, I think it is because sanctions have not been fully implemented by China. Why? That is a question we’re always trying to come to grips with. I think the common view among the analysts is that China fears the collapse of North Korea more than it fears a nuclear North Korea. They fear if North Korea were to collapse, then U.S. troops might move in along with South Koreans … And if you remember from the Korean War, that is also when the Chinese got into it, when it looked like (Gen. Douglas) MacArthur was driving U.S. troops and South Korea troops up there. So that’s their principle concern. This is why we’ve said to them, to reassure them, Secretary Tillerson has said our policy has four no’s. Number one, it is not about regime change. Number two, it is not about bringing on regime collapse. Number three, it is not about forcing reunification of the Korean Peninsula. And number four, it’s not about stationing American troops north of the DMZ. That was to reassure not just the North Koreans, but the Chinese that this is not about us pushing up beyond DMZ, but rather, it’s about denuclearization in the Korean Peninsula. “Denuclearization is the end goal of U.S. government policy, and it has been for the past three decades. You can ask questions about why it failed, but you’d have to give me another two hours.” There it was. A small chuckle, in a conversation that had grown tense. North Korea has looked at what happened in a denuclearized Libya, and America’s doubtful adherence to the Iran nuclear agreement. Is it realistic to expect Kim to follow a similar path? If he doesn’t, are we looking at South Korea and Japan getting nuclear weapons, or is that threat simply a way to
get China’s attention? “This is, of course, what China fears. But if this situation continues, I can predict to you that South Korea and Japan will want stronger and stronger weapons, defensive weapons, or even offensive weapons to counter North Korea’s nuclear weapons ... So you are staring at what looks like an arms race. And what is the logical conclusion to that? Already, we are seeing South Koreans, conservative South Koreans, wanting indigenous nuclear weapons. And if we have that, if we have South Korea go nuclear, and Japan go nuclear, that will be practically the end of NPT (the landmark 1970 Non-Proliferation Treaty on nuclear weapons.) And NPT, in my view, certainly has been one of the most successful, post-Second World War treaties we’ve had, limiting the number of countries with nuclear weapons. The P-5 — Russia, U.S., United Kingdom, France and China — and there’s only a handful of others, Pakistan, Israel and India. So really, if you imagined in the ‘60s that nuclear weapons would be limited to these few countries, people would have thought you were dreaming. South Korea actually gave up nuclear weapons in the ‘70s because we asked them. So you can imagine if this goes down the path, the logical conclusion. ... It will be a nuclear Northeast Asia.”  

Why do you think South Korea is less concerned by recent events? And what do you think when you hear the trash talking — the “Rocket Man.” Does that make your job more difficult? That’s also outside my lane. (Crowd chuckles.) What was that first question? Are we facing World War III tomorrow or more years of diplomacy? South Koreans in general have become inured to threats from North Korea. Remember, they are facing all these thousands of artillery just across the DMZ, which is about 35 to 40 miles away from Seoul, the center of population. So they have become fairly inured to threats from Pyongyang. In my view, I think for Americans, this is a threat that was somewhat unexpected, even though those who have followed North Korea issues have been predicting it for a while. I do think this is a serious issue. I do welcome the public joining the debate on how to deal with this. What is the right strategy? What does it mean to sanction a country and why are we doing it? Why do we have such a difficult partner or are we being difficult? These are all questions that are worth asking. In the end, I am again from diplomacy school and I would like to think there is a path out there. I would like to think there’s a path that could deliver: number one, lower tensions; number two, try to meet minimum requirements of each other; and number three, build some kind of relationship, build a little bit more trust in each other. I would like to think that is possible, but again it remains to be seen. Meanwhile, since this poses such a threat, we also have to believe we have to put all options on the table and that would have to include a military option. This is not an empty threat. If your homeland is under such a scrutiny and threat, I do believe you have to put all options on the table.”  

What about those other American prisoners? What can you tell us about your conversations with them? “We raise this at every opportunity. Protection of our prisoners overseas is an incredibly important mission for the State Department, so that really takes priority over anything else. I don’t want to go into too much detail about what kind of conversation we had. They were rather restricted because we were not just the two of us. We had a representative from their government there as well. There are actually three remaining detainees in North Korea. I did see them when I was there in June, but nobody has seen them since then. I assume they are still alive. We have an arrangement with the Swedish Embassy, where the Swedes look after our consular cases. And the Swedes have not seen them, either, since June.” As to the policy of making North Korea give up its nuclear capabilities altogether, spokeswoman Nauert said there’s no other choice. “If North Korea were to become a fully nuclear-capable country with weapons that are able to hit folks around the world, we know that North Korea would not contain itself,” she said. “We know that North Korea would sell those weapons and sell its technology. So the idea of containment may sound nice and rosy, but in reality, there’s no one out there who believes that North Korea could be contained.” (Rosemary O’Hara, “What America’s Key Diplomat Says about ‘Rocket Man,’” Florida Sun Sentinel, October 16, 2017)

Pyongyang would never agree to any sort of nuclear deal with Washington, North Korean Foreign Minister Ri Yong-ho told Tass so long as the United States keeps applying pressure. He also told I Tass that U.S. President Donald Trump has “lit the fuse of war” with his “belligerent and insane statement” at the United Nations General Assembly, referring to Trump’s address on Sept. 19, threatening to “totally destroy North Korea.” Ri also told Tass. “Our nuclear weapons will never be a subject matter of negotiations as long as the United States’ policy of pressure on the DPRK has not been uprooted once and for all.” The top North Korea diplomat met with a
delegation that was led by Sergey Mikhailov, director general of Tass, in Pyongyang at the invitation of KCNA. Ri emphasized North Korean leader Kim Jong-un’s warning for the United States to “act sensibly and stop troubling us” if it does not want to face a strike by the regime, adding that the United States will not “go unpunished.” Ri said that it is Washington’s “turn to pay” and that the North Korean military servicemen and people “insistently demand that final scores be settled with the Americans only with a hail of fire, and not with words.” China and Russia have called for a “double freeze,” whereby the North suspends its nuclear and missile tests in exchange for South Korea and the United States halting their joint military exercises, to get Pyongyang back to the negotiating table. This has been rejected by Washington. He added that North Korea sees “no prospect for improving the inter-Korean relations” as long as Seoul continues to resort to sanctions and a pressure campaign in line with the United States. Trump said that he feels “stronger and tougher” than others on North Korea. When asked if he and Tillerson are on the same page on how to deal with North Korea, Trump said he has “a little bit of a different attitude on North Korea than other people might have.” He told reporters as he met with Canadian Prime Minister Justin Trudeau at the White House, “I listen to everybody, but ultimately my attitude is the one that matters, isn’t it?” (Sarah Kim, “North Won’t Agree to Nuclear Deal: Ri,” JoongAng Ilbo, October 13, 2017)

South Korea plans to drastically shift its defense strategy to allow for pre-emptive strikes against North Korea and the transfer of military command from the United States as soon as possible. The proposed changes were listed in the National Defense Ministry’s report submitted today to the National Assembly. The report outlines the ministry’s plans to compile new defense guidelines in December. Ministry officials said the new guidelines would be based on the concept of conducting offensive tactics that would lead to military victory with the minimum sacrifice. This aggressive stance comes after repeated military provocations by Pyongyang in the form of ballistic missile launches and nuclear tests. The gist of the past strategy was to go on the counter-offensive after North Korea’s first attack had abated. In the latest report, the ministry said the new system would enable South Korea to pre-emptively strike enemy bases when there are signs of a possible missile launch. The report added that to gain the military initiative in the shortest amount of time possible, an attack on North Korean territory would be conducted as soon as Pyongyang made its first move. The new strategy would also allow Seoul to take a more independent posture in relation to its main ally, the United States, an objective of the administration of South Korean President Moon Jae-in. The U.S.-South Korea mutual defense treaty calls for U.S. command over the South Korean military during a military encounter. “The new guidelines are meant to improve the South Korean military’s capabilities so that it would be possible to seek the early transfer of the command function,” a South Korean defense expert said. (Makino Yoshihiro, “South Korea Plans First Strike Capability in Defense Strategy,” Asahi Shimbun, October 13, 2017)

South Korea said it detected an earthquake near North Korea's main nuclear test site, the fourth since the country's sixth and most powerful nuclear test explosion last month. Some experts suggested the area is now too unstable to conduct more bomb tests. The magnitude 2.7 quake occurred about 54 kilometers (34 miles) northwest of Kilju, the town where the test site is located in northeastern North Korea, according to officials at South Korea's Meteorological Administration. They said it wasn't man-made and didn't appear to cause any damage in the area. The officials said they believe the four quakes probably happened because the underground nuclear test on September 3 weakened or affected the tectonic plate structures in the area. The region isn't one where earthquakes naturally occur and no quakes were detected after the five smaller nuclear tests North Korea has conducted since 2006. The officials declined to say how the recent quakes might have affected the area and the test site, where all of North Korea's nuclear bomb tests have taken place. But some civilian experts said North Korea may stop using the site. North Korea, which is accelerating its efforts to develop more powerful nuclear weapons and missiles, is unlikely to waste its limited nuclear materials by conducting tests that are weaker than its sixth. But a more powerful underground detonation at the current site could be "potentially suicidal," not only because of the weakened ground, but also because of the threat of a volcanic eruption at Mount Paektu, which is about 100 kilometers (60 miles) away, according to Kune Yull
Suh, a professor of nuclear engineering at Seoul National University. Du Hyeogn Cha, a visiting scholar at Seoul’s Asan Institute for Policy Studies, previously expressed similar worries, saying he wondered whether North Korea would be able to carry out another nuclear test in the area. Other experts said the quakes might have been caused by landslides or the collapsing of test structures such as tunnels. At the height of the standoff between the countries last month, North Korean Foreign Minister Ri Yong Ho told reporters the country could conduct a hydrogen bomb test over the Pacific Ocean. Suh said Ri’s comments might indicate the North is unable to carry out new explosions at its test site. "It’s likely that North Korea will conduct its next nuclear test in the stratosphere, or about 100 to 300 kilometers (60 to 185 miles) from the ground, where it will be able to conduct more powerful detonations," Suh said. (Hyung-jin Kim, “4th Small Quake Detected since North Korea’s Nuclear Test,” Associated Press, October 13, 2017)

The South Korean and U.S. navies will kick off high-profile joint drills off the coast of the peninsula next week, the allies announced. The two sides plan to conduct the Maritime Counter Special Operations exercise (MCSOFEX) from Oct. 16-26, in the East Sea and the Yellow Sea, also known as the West Sea. The training is aimed at promoting "communications, interoperability, and partnership in the (U.S.) 7th Fleet area of operations," the fleet said. U.S. Navy units participating in the exercise include the aircraft carrier USS Ronald Reagan (CVN-76) and two Arleigh Burke-class destroyers — USS Stethem (DDG-63) and USS Mustin (DDG-89). The Reagan is expected to operate in the East Sea, while the destroyers will likely be sent to the Yellow Sea during the training period. South Korea will field the Sejong the Great Aegis ship, P-3 Orion anti-submarine aircraft, F-15k, FA-18 and A-10 fighter jets, as well as Lynx and AW-159 Wild Cat naval choppers. (Yonhap, “S. Korea, U.S. to Hold Maritime Drills against N. Korea,” October 13, 2017)

KCNA: “Kim Kwang Hak, researcher at the Institute for American Studies of the DPRK Foreign Ministry, released the following commentary titled "The U.S. reckless military moves compel the DPRK to take action" [today]: Recently the Trump group is making military bluffing against the DPRK, while introducing nuclear strategic equipment into areas around it one after another. According to foreign reports, Trump met top military officers at White House on October 10 to have a confab over military counteraction against the DPRK. Meanwhile, the U.S. staged nocturnal flight exercises with Japan Air "Self-Defense Force" and the south Korean puppet airforce fighters after introducing two B-1B nuclear strategic bombers into the sky above the East Sea of Korea at night on the same day. The Trump group is also inciting military pressure on the DPRK while introducing nuclear submarine Michigan into the Pusan Port of south Korea and planning to dispatch nuclear carrier Ronald Reagan into the waters around south Korea in mid-October to hold "high-intensity" joint exercises with the puppet forces. What should not be overlooked is that such military moves have been conducted at a time when the Trump group posted on twitter such letters reading that the U.S. failed to handle north Korea for the past 25 years and only one thing will prove effective, while frequently hinting at "military option" backed by such rubbish as "a calm before a storm" and "total destruction." The Trump team is trying to provoke the DPRK through such reckless military provocations as dispatch of B-1B, nuclear submarine and nuclear carrier into the waters around the Korean peninsula. Such military acts compel the DPRK to take military counteraction. Its senseless military provocations make us keenly realize once again that we were quite right when we decided to bolster the nuclear deterrence for self-defense in every way, and harden our conviction that we have to keep to this path forever. We have already warned several times that we will take counteractions for self-defense including a salvo of missiles into waters near the U.S. territory of Guam, an advance base for invading the DPRK, where key U.S. bases are located, as the U.S. has resorted to military actions in sensitive regions, making the waters off the Korean peninsula and in the Pacific restless. The U.S. military action hardens our determination that the U.S. should be tamed with fire and lets us take our hand closer to "trigger" for taking the toughest countermeasure. In case any shocking case occurs on the Korean peninsula, the U.S. will be made to hold responsibility as it is pushing the situation on the peninsula to the point of explosion while going reckless, being carried away by ill-advised bravery.” (KCNA, “U.S. Reckless Military Moves Compels DPRK to
"Those diplomatic efforts will continue until the first bomb drops," Secretary of State Rex Tillerson said on CNN's "State of the Union." Tillerson's comments came a day before the latest US-South Korea military exercises off the Korean Peninsula, which Pyongyang claims are rehearsals for a US-led invasion. Despite a statement on Twitter that suggested diplomacy won't work, the President wants to avoid violence, Tillerson said. "The President has also made clear to me that he wants this solved diplomatically," Tillerson said. "He is not seeking to go to war." (Eli Watkins, “Tillerson on North Korea: Diplomacy Will Continue ‘Until the First Bomb Drops,'” CNN, October 16, 2017)

The United States has been constantly refining military options to use in the event of a war with North Korea, President Donald Trump's top security adviser said. National Security Adviser Gen. H.R. McMaster made the remark on Fox News as tensions have heightened over North Korea's nuclear weapons and ballistic missile programs. "The president's been really clear about this. He is not going to permit this rogue regime, Kim Jong-un, to threaten the United States with a nuclear weapon," he said, referring to the North Korean leader. "So he is going to do anything necessary to prevent that from happening." McMaster added that military options for North Korea are "under constant refinement." "Our military's getting stronger and stronger and our military leaders are refining, improving plans every day," he said. "Plans we hope we don't have to use, but we must be ready." "All of our armed forces," McMaster said, "are getting to a high, high degree of readiness for this mission if it's necessary." (Yonhap, “Military Options for N. Korea ‘under Constant Refinement’: McMaster,” Korea Times, October 16, 2017)

A North Korean official reaffirmed Pyongyang's commitment to developing a long-range intercontinental ballistic missile capable of reaching "all the way to the East coast of the mainland US," telling CNN that the rogue nation is currently not interested in diplomacy with the US until it achieves that goal. North Korea is not ruling out diplomacy, but "before we can engage in diplomacy with the Trump administration, we want to send a clear message that the DPRK has a reliable defensive and offensive capability to counter any aggression from the United States," the official said. The comments offer a sobering challenge to the US and the Trump administration which has offered mixed messages regarding diplomatic efforts with North Korea. White House chief of staff John Kelly said last week that Americans should be concerned about North Korea's ability to reach the United States with an intercontinental ballistic missile, cryptically telling reporters that if the threat grows "beyond where it is today, well, let's hope that diplomacy works." Significantly, Kelly noted that Pyongyang "is developing a pretty good nuclear re-entry vehicle." (Will Ripley, Zachary Cohen and Richard Roth, “North Korea Rejects Diplomacy with U.S. for Now: Source,” CNN, October 17, 2017)

A North Korean diplomat publicly expressed anger over reports that hackers gained access to a US-South Korean plan to "decapitate" the regime's leadership. North Korea's deputy UN Ambassador Kim In Ryong warned that the plan is "dangerous" and an insult to the nation. Kim told a UN committee meeting on nuclear issues that "what is more dangerous is that the US dared to formulate a plan and stage the exercise of decapitation operation and secret operation aimed at the removal of our supreme leadership." "This is an unbearable insult to the supreme dignity of the DPRK and it arouses extreme anger from our people and service personnel," Ryong said. The North Korean UN diplomat also fiercely defended Pyongyang's nuclear and missile tests. "Unless the hostile policy and the nuclear threat of the US is thoroughly eradicated, we will never put our nuclear weapons and ballistic missiles on the negotiation table under any circumstance and will never flinch even an inch from the road we have chosen, upholding the line of simultaneously developing the two fronts, the everlasting banner in safeguarding the peace," Ryong said. "This year, we have passed the final gate of completing the state nuclear force and thus became the full-fledged nuclear power which possesses the delivery means of various ranges, including the atomic bomb, H-bomb and intercontinental ballistic rockets," he said. "The entire US mainland is within our firing range and if the US dares to invade our sacred territory even an inch it will not escape..."
When North Korean hackers tried to steal $1 billion from the New York Federal Reserve last year, only a spelling error stopped them. They were digitally looting an account of the Bangladesh Central Bank, when bankers grew suspicious about a withdrawal request that had misspelled “foundation” as “fandation.” Even so, Kim Jong-un’s minions still got away with $81 million in that heist. Then only sheer luck enabled a 22-year-old British hacker to defuse the biggest North Korean cyberattack to date, a ransomware attack last May that failed to generate much cash but brought down hundreds of thousands of computers across dozens of countries — and briefly crippled Britain’s National Health Service. Their track record is mixed, but North Korea’s army of more than 6,000 hackers is undeniably persistent, and undeniably improving, according to American and British security officials who have traced these attacks and others back to the North. Amid all the attention on Pyongyang’s progress in developing a nuclear weapon capable of striking the continental United States, the North Koreans have also quietly developed a cyberprogram that is stealing hundreds of millions of dollars and proving capable of unleashing global havoc. Unlike its weapons tests, which have led to international sanctions, the North’s cyberstrikes have faced almost no pushback or punishment, even as the regime is already using its hacking capabilities for actual attacks against its adversaries in the West. And just as Western analysts once scoffed at the potential of the North’s nuclear program, so did experts dismiss its cyberpotential — only to now acknowledge that hacking is an almost perfect weapon for a Pyongyang that is isolated and has little to lose. The country’s primitive infrastructure is far less vulnerable to cyberretaliation, and North Korean hackers operate outside the country, anyway. Sanctions offer no useful response, since a raft of sanctions are already imposed. And Kim’s advisers are betting that no one will respond to a cyberattack with a military attack, for fear of a catastrophic escalation between North and South Korea. “Cyber is a tailor-made instrument of power for them,” said Chris Inglis, a former deputy director of the National Security Agency, who now teaches about security at the United States Naval Academy. “There’s a low cost of entry, it’s largely asymmetrical, there’s some degree of anonymity and stealth in its use. It can hold large swathes of nation state infrastructure and private-sector infrastructure at risk. It’s a source of income.” Inglis, speaking at the Cambridge Cyber Summit this month, added: “You could argue that they have one of the most successful cyberprograms on the planet, not because it’s technically sophisticated, but because it has achieved all of their aims at very low cost.” It is hardly a one-way conflict: By some measures the United States and North Korea have been engaged in an active cyberconflict for years. Both the United States and South Korea have also placed digital “implants” in the Reconnaissance General Bureau, the North Korean equivalent of the Central Intelligence Agency, according to documents that Edward J. Snowden released several years ago. American-created cyber- and electronic warfare weapons were deployed to disable North Korean missiles, an attack that was, at best, only partially successful. Indeed, both sides see cyber as the way to gain tactical advantage in their nuclear and missile standoff. A South Korean lawmaker last week revealed that the North had successfully broken into the South’s military networks to steal war plans, including for the “decapitation” of the North Korean leadership in the opening hours of a new Korean war. There is evidence Pyongyang has planted so-called digital sleeper cells in the South’s critical infrastructure, and its Defense Ministry, that could be activated to paralyze power supplies and military command and control networks. What has not been disclosed, until now, is that North Korea had also hacked into a British television network a few weeks earlier to stop it from broadcasting a drama about a nuclear scientist kidnapped in Pyongyang. Once North Korea counterfeited crude $100 bills to try to generate hard cash. Now intelligence officials estimate that North Korea reaps hundreds of millions of dollars a year from ransomware, digital bank heists, online video game cracking, and more recently, hacks of South Korean Bitcoin exchanges. One former British intelligence chief estimates the take from its cyberheists may bring the North as much as $1 billion a year, or a third of the value of the nation’s exports. The North Korean cyberthreat “crept up on us,” said Robert Hannigan, the former director of Britain’s Government Communications Headquarters, which handles electronic surveillance and cybersecurity. “Because they are such a mix of the weird and absurd and medieval and highly sophisticated, people didn’t take it seriously,” he said. “How can such an isolated, backward country have this capability?
Well, how can such an isolated backward country have this nuclear ability?” Kim Jong-il, like the Chinese, initially saw the internet as a threat to his regime’s ironclad control over information. But his attitude began to change in the early 1990s, after a group of North Korean computer scientists returned from travel abroad proposing to use the web to spy on and attack enemies like the United States and South Korea, according to defectors. North Korea began identifying promising students at an early age for special training, sending many to China’s top computer science programs. In the late 1990s, the Federal Bureau of Investigation’s counterintelligence division noticed that North Koreans assigned to work at the United Nations were also quietly enrolling in university computer programming courses in New York. “The F.B.I. called me and said, ‘What should we do?’” recalled James A. Lewis, at the time in charge of cybersecurity at the Commerce Department. “I told them, ‘Don’t do anything. Follow them and see what they are up to.’” The North’s cyberwarfare unit gained priority after the 2003 invasion of Iraq by the United States. After watching the American “shock and awe” campaign on CNN, Kim Jong-il issued a warning to his military: “If warfare was about bullets and oil until now,” he told top commanders, according to a prominent defector, Kim Heung-kwang, “warfare in the 21st century is about information.” The unit was marked initially by mishaps and bluster. “There was an enormous growth in capability from 2009 or so, when they were a joke,” said Ben Buchanan, the author of “The Cybersecurity Dilemma” and a fellow at the Cyber Security Project at Harvard. “They would execute a very basic attack against a minor web page put up by the White House or an American intelligence agency, and then their sympathizers would claim they’d hacked the U.S. government. But since then, their hackers have gotten a lot better.” A National Intelligence Estimate in 2009 wrote off the North’s hacking prowess, much as it underestimated its long-range missile program. It would be years before it could mount a meaningful threat, it claimed. But the regime was building that threat. When Kim Jong-un succeeded his father, in 2011, he expanded the cybermission beyond serving as just a weapon of war, focusing also on theft, harassment and political-score settling. “Cyberwarfare, along with nuclear weapons and missiles, is an ‘all-purpose sword’ that guarantees our military’s capability to strike relentlessly,” Kim Jong-un reportedly declared, according to the testimony of a South Korean intelligence chief. By 2012, government officials and private researchers say North Korea had dispersed its hacking teams abroad, relying principally on China’s internet infrastructure. This allowed the North to exploit largely nonsecure internet connections and maintain a degree of plausible deniability. A recent analysis by the cybersecurity firm Recorded Future found heavy North Korean internet activity in India, Malaysia, New Zealand, Nepal, Kenya, Mozambique, and Indonesia. In some cases, like that of New Zealand, North Korean hackers were simply routing their attacks through the country’s computers from abroad. In others, researchers believe they are now physically stationed in countries like India, where nearly one-fifth of Pyongyang’s cyberattacks now originate.

Intelligence agencies are now trying to track the North Korean hackers in these countries the way they have previously tracked terrorist sleeper cells or nuclear proliferators: looking for their favorite hotels, lurking in online forums they may inhabit, attempting to feed them bad computer code and counterattacking their own servers. For decades Iran and North Korea have shared missile technology, and American intelligence agencies have long sought evidence of secret cooperation in the nuclear arena. In cyber, the Iranians taught the North Koreans something important: When confronting an enemy that has internet-connected banks, trading systems, oil and water pipelines, dams, hospitals, and entire cities, the opportunities to wreak havoc are endless. By midsummer 2012, Iran’s hackers, still recovering from an American and Israeli-led cyberattack on Iran’s nuclear enrichment operations, found an easy target in Saudi Aramco, Saudi Arabia’s state-owned oil company and the world’s most valuable company. That August, Iranian hackers flipped a kill switch at precisely 11:08 a.m., unleashing a simple wiper virus onto 30,000 Aramco computers and 10,000 servers that would destroy data, and replace it with a partial image of a burning American flag. The damage was tremendous. Seven months later, during joint military exercises between American and South Korean forces, North Korean hackers, operating from computers inside China, deployed a very similar cyberweapon against computer networks at three major South Korean banks and South Korea’s two largest broadcasters. Like Iran’s Aramco attacks, the North Korean attacks on South Korean targets used wiping malware to eradicate data and paralyze their business operations. It may have been a copycat operation, but, Hannigan, the former British official, said recently: “We have to assume they are getting help from the Iranians.”
And inside the National Security Agency, just a few years after analysts had written off Pyongyang as a low grade threat, there was suddenly a new appreciation that the country was figuring out cyber just as it had figured out nuclear weapons: test by test. “North Korea showed that to achieve its political objectives, it will take down any company — period,” Silvers said. A chief political objective of the cyberprogram is to preserve the image of the North’s 33-year-old leader, Kim Jong-un. In August 2014, North Korean hackers went after a British broadcaster, Channel Four, which had announced plans for a television series about a British nuclear scientist kidnapped in Pyongyang. First, the North Koreans protested to the British government. “A scandalous farce,” North Korea called the series. When that was ignored, British authorities found that the North had hacked into the television network’s computer system. The attack was stopped before inflicting any damage, and David Abraham, the chief executive of Channel Four, initially vowed to continue the production. That attack, however, was just a prelude. When Sony Pictures Entertainment released a trailer for “The Interview,” a comedy about two journalists dispatched to Pyongyang to assassinate North Korea’s young new dictator, Pyongyang wrote a letter of complaint to the secretary general of the United Nations to stop the production. Then came threats to Sony. Beyond respect, and retribution, the North wanted hard currency from its cyberprogram. So soon the digital bank heists began — an attack in the Philippines in October 2015; then the Tien Phong Bank in Vietnam at the end of the same year; and then the Bangladesh Central Bank. Researchers at Symantec said it was the first time a state had used a cyberattack not for espionage or war, but to finance the country’s operations. Now, the attacks are increasingly cunning. Security experts noticed in February that the website of Poland’s financial regulator was unintentionally infecting visitors with malware. It turned out that visitors to the Polish regulator’s website — employees from Polish banks, from the central banks of Brazil, Chile, Estonia, Mexico, Venezuela, and even from prominent Western banks like Bank of America — had been targeted with a so-called watering hole attack, in which North Korean hackers waited for their victims to visit the site, then installed malware in their machines. Forensics showed that the hackers had put together a list of internet addresses from 103 organizations, most of them banks, and designed their malware to specifically infect visitors from those banks, in what researchers said appeared to be an effort to move around stolen currency. More recently, North Koreans seemed to have changed tack once again. North Korean hackers’ fingerprints showed up in a series of attempted attacks on so-called cryptocurrency exchanges in South Korea, and were successful in at least one case, according to researchers at FireEye. The attacks on Bitcoin exchanges, which see hundreds of millions of dollars worth of Bitcoin exchanged a day, offered Pyongyang a potentially very lucrative source of new funds. And, researchers say, there is evidence they have been exchanging Bitcoin gathered from their heists for Monero, a highly anonymous version of cryptocurrency that is far harder for global authorities to trace. The most widespread hack was WannaCry, a global ransomware attack that used a program that cripples a computer and demands a ransom payment in exchange for unlocking the computer, or its data. In a twist the North Koreans surely enjoyed, their hackers based the attack on a secret tool, called “Eternal Blue,” stolen from the National Security Agency. In the late afternoon of May 12, panicked phone calls flooded in from around Britain and the world. The computer systems of several major British hospital systems were shut down, forcing diversions of ambulances and the deferral of nonemergency surgeries. Banks and transportation systems across dozens of countries were affected. Britain’s National Cyber Security Center had picked up no warning of the attack, said Paul Chichester, its director of operations. Investigators now think the WannaCry attack may have been an early misfire of a weapon that was still under development — or a test of tactics and vulnerabilities. “This was part of an evolving effort to find ways to disable key industries,” said Brian Lord, a former deputy director for intelligence and cyber operations at the Government Communications Headquarters in Britain. “All I have to do is create a moderately disabling attack on a key part of the social infrastructure, and then watch the media sensationalize it and panic the public.” It ended thanks to Marcus Hutchins, a college dropout and self-taught hacker living with his parents in the southwest of England. He spotted a web address somewhere in the software and, on a lark, paid $10.69 to register it as a domain name. The activation of the domain name turned out to act as a kill switch causing the malware to stop spreading. British officials privately acknowledge that they know North Korea perpetrated the attack, but the government has taken no retaliatory action, uncertain what they can do. While American and South Korean officials often express outrage about North
Korea’s cyberactivities, they rarely talk about their own — and whether that helps fuel the cyber arms race. Yet both Seoul and Washington target the North’s Reconnaissance General Bureau, its nuclear program and its missile program. Hundreds, if not thousands, of American cyberwarriors spend each day mapping the North’s few networks, looking for vulnerabilities that could be activated in time of crisis. At a recent meeting of American strategists to evaluate North Korea’s capabilities, some participants expressed concerns that the escalating cyberwar could actually tempt the North to use its weapons — both nuclear and cyber — very quickly in any conflict, for fear that the United States has secret ways to shut the country down. The director of the Central Intelligence Agency, Mike Pompeo, said last week that the United States is trying to compile a better picture of the leadership around Kim Jong-un, for a report to President Trump. Figuring out who oversees cyber and special operations is a central mystery. The Japanese press recently speculated it could be an official named Jang Kil-su. Others are curious about Gen. No Kwang-chol, who was elevated to the Central Committee of the North’s ruling party in May 2016, and is one of the only members whose portfolio is undisclosed. The big question is whether Mr. Kim, fearful that his nuclear program is becoming too large and obvious a target, is focusing instead on how to shut down the United States without ever lighting off a missile. “Everyone is focused on mushroom clouds,” Silvers said, “but there is far more potential for another kind of disastrous escalation.” (David E. Sanger, David D. Kirkpatrick, and Nicole Perlroth, “North Korea Deploys Corps of Hackers Bent on Chaos,” New York Times, October 16, 2017, p. A-1)
warheads. Some uncertainty still exists about whether North Korea can successfully mount those weapons on a missile capable of hitting the continental United States, but history cautions against wishful thinking. The window of opportunity for a successful U.S. attack to stop the North Korean nuclear program has closed. At the time of the Cuban missile crisis, both the American and the Soviet nuclear war plans were heavily geared toward preemption. Each country’s system featured a built-in option to launch nuclear weapons if officials believed that an enemy attack was imminent and unavoidable. This produced a danger that the strategist Thomas Schelling called “the reciprocal fear of surprise attack.” That fear was why Khrushchev was so alarmed when a U.S. U-2 spy plane accidentally flew into Soviet airspace during the crisis. As he wrote to U.S. President John F. Kennedy on the final day of the crisis: “Is it not a fact that an intruding American plane could be easily taken for a nuclear bomber, which might push us to a fateful step?” Today, the world faces an even more complex and dangerous problem: a three-way fear of surprise attack. North Korea, South Korea, and the United States are all poised to launch preemptive strikes. In such an unstable situation, the risk that an accident, a false warning, or a mismeasured military exercise could lead to a war is alarmingly high. The same approach that prevented nuclear catastrophe during the Cold War can deter Pyongyang. Another factor that makes today’s situation more dangerous than the Cuban missile crisis is the leaders involved. In 1962, the standoff included one volatile leader, Castro, who held radical mismeperceptions of the consequences of a nuclear war and surrounded himself with yes men. Today, there are two such unpredictable and ill-informed leaders: Kim and Trump. Both men are rational and ruthless. Yet both are also prone to lash out impulsively at perceived enemies, a tendency that can lead to reckless rhetoric and behavior. This danger is compounded because their senior advisers are in a poor position to speak truth to power. Kim clearly tolerates no dissent; he has reportedly executed family members and rivals for offering insufficiently enthusiastic praise. For his part, Trump often ignores, ridicules, or fires those who disagree with him. In May, The New York Times reported that Trump had described his national security adviser, Lieutenant General H. R. McMaster, as “a pain” for subtly correcting him when he made inaccurate points in meetings. And in June, the spectacle of U.S. department secretaries falling over themselves to declare their deep devotion to Trump and flatter him on live television during the administration’s first full cabinet meeting brought to mind the dysfunctional decision-making in dictatorships. Any leader who disdains expertise and demands submission and total loyalty from his advisers, whether in a democracy or in a dictatorship, will not receive candid assessments of alternative courses of action during a crisis. Trump’s poor decision-making process highlights another disturbing contrast with the Cuban missile crisis. In 1962, strong civilian leaders countered the U.S. military’s dangerously hawkish instincts. When the Joint Chiefs of Staff recommended an immediate air strike and an invasion of Cuba, Kennedy insisted on the more prudent option of a naval blockade. Together with his subsequent refusal to retaliate with an air strike after an American U-2 spy plane was shot down over Cuba, Kennedy’s approach reflected the best kind of cautious crisis management. Now, however, it is the senior political leadership in the United States that has made reckless threats, and it has fallen to Secretary of Defense James Mattis (a former general) and senior military officers to serve as the voices of prudence. In early August, Trump warned: “North Korea best not make any more threats to the United States. They will be met with fire and fury like the world has never seen.” By appearing to commit to using nuclear force in response to North Korean threats, he broke sharply with U.S. deterrence policy, which had previously warned of military responses only to acts of aggression. Vice President Mike Pence, Secretary of State Rex Tillerson, and un Ambassador Nikki Haley have not echoed Trump’s “fire and fury” rhetoric, but they have repeated the worrying mantra that “all options are on the table.” That phrase may sound less threatening than Trump’s comments, but it still leaves itself open to misinterpretation. To some listeners, it just suggests that Washington is considering limited military options. But from a North Korean perspective, the statement implies that the United States is contemplating launching a nuclear first strike. This would not be an altogether unreasonable conclusion for Pyongyang to draw. In 2008, U.S. President George W. Bush stated that all options were on the table when it came to U.S. tensions with Iran, and when a reporter explicitly asked Bush whether that included “nuclear options,” Bush simply repeated himself: “All options are on the table.” The Obama administration made a commitment, in its 2009 Nuclear Posture Review, not to use nuclear weapons against any non-nuclearweapons state that was in compliance with its nonproliferation
commitments. But then Secretary of Defense Robert Gates quickly added that “because North Korea and Iran are not in compliance with the Nuclear Nonproliferation Treaty, for them, all bets are off. All options are on the table.” Such rhetoric is dangerous. The U.S. government must convince Kim that an attack on the United States or its allies would spell the end of his regime. But it is equally important that U.S. leaders acknowledge loudly and often that it would be a disaster for the United States to start a war. If those in the White House do not do so, the civilian and military leadership in the Pentagon should more forcefully and publicly make this point. To back this rhetoric up, the United States should take some military options off the table, starting with a preventive nuclear war. A preemptive strike, the use of force when a country considers an adversary’s first strike imminent and unavoidable, can sometimes be justified strategically and legally as “anticipatory self-defense.” But preventive war—starting a war to prevent another country from taking future action or acquiring a dangerous capability—is rarely justified and arguably contrary to the UN Charter. U.S. military officers are trained to follow orders from political authorities, unless they are clearly unconstitutional. The Constitution, however, says nothing about what to do if a president’s orders are legal but also crazy. This leads to bizarre situations, such as the response that Admiral Scott Swift, the commander of the U.S. Pacific Fleet, gave when he was asked at a seminar at the Australian National University in July if he would launch a nuclear strike against China “next week” if Trump ordered him to do so. The admiral should have said that the hypothetical scenario was ridiculous and left it at that. Instead, he answered, “Yes.” Trump’s volatility has produced a hidden crisis in U.S. civil-military relations. In 1974, during the final days of Richard Nixon’s presidency, when Nixon had become morose and possibly unstable, Secretary of Defense James Schlesinger told the chairman of the Joint Chiefs of Staff, General George Brown, that if Nixon gave military orders, Brown should contact Schlesinger before carrying them out. Schlesinger’s action was extraconstitutional but nonetheless wise, given the extraordinary circumstances. The U.S. government faces similar dangers every day under Trump. Mattis and senior military leaders should be prepared to ignore belligerent tweets, push back against imprudent policies, and resist any orders that they believe reflect impetuous or irrational decision-making by the president. Their oath, after all, is not to an individual president; it is to “support and defend the Constitution of the United States.” The Constitution’s 25th Amendment lays out procedures on how to relieve an impaired president of his responsibilities. If senior military leaders believe at any time that Trump is impaired, they have a duty to contact Mattis, who should then call for an emergency cabinet meeting to determine whether Trump is “unable to discharge the powers and duties of his office” and thus whether to invoke the 25th Amendment. One similarity with the Cuban missile crisis is that those Americans who think the United States should attack North Korea exaggerate the prospects that U.S. military action would succeed and underestimate the costs of a war. In 1962, the CIA and the military assumed that there were no nuclear weapons in Cuba and, on that basis, recommended air strikes and an invasion. But the intelligence assessment was wrong. Well over 60 nuclear warheads, gravity bombs, and tactical nuclear weapons had already arrived in Cuba, and one missile regiment was already operational by the time the Joint Chiefs were advising military action. Any attack on Cuba would almost certainly have led to nuclear strikes on the United States and against invading U.S. forces. Today, U.S. intelligence finds itself once again in the dark. It does not know the status of North Korea’s warheads or the locations of its missiles. For example, when the North Koreans successfully tested an intercontinental ballistic missile in late July, it came as a complete surprise to the United States and demonstrated that North Korea can now build such missiles, store them, take them out of storage, and launch them, all before the United States could react. Yet U.S. military leaders have failed to pour cold water on the idea of a U.S. first strike. Instead, they have added fuel to the fire. Consider the complaint expressed by General Joseph Dunford, the chairman of the Joint Chiefs of Staff, at the Aspen Security Forum in July that “many people have talked about the military options with words such as ‘unimaginable.’” Dunford insisted that, to the contrary, “it is not unimaginable to have military options to respond to North Korean nuclear capability. What’s unimaginable to me is allowing a capability that would allow a nuclear weapon to land in Denver, Colorado.... And so my job will be to develop military options to make sure that doesn’t happen.” Dunford should have reinforced deterrence. Instead, he created a red line that Kim may have already crossed. The military’s job is to come up with options. That involves thinking the unthinkable. But it is also military leaders’ responsibility to offer brutal honesty to
political leaders and the public. When it comes to the current conflict with North Korea, that means admitting that there are no military options that do not risk starting the most destructive war since 1945. Some Trump supporters, including former un Ambassador John Bolton and Trump’s evangelical adviser Robert Jeffress, have argued that a U.S. strike to assassinate Kim is the best solution. Any attempt to “decapitate” the regime, however, would be a gamble of epic proportions. The history of unsuccessful U.S. decapitation attempts, including those launched against the Libyan leader Muammar al-Qaddafi in 1986 and the Iraqi leader Saddam Hussein in 1991 and again in 2003, warns against such thinking. Moreover, Kim may well have ordered his generals to launch all available weapons of mass destruction at the enemy if he is killed in a first strike—as did Saddam before the 1990–91 Gulf War. There is no reason to think that the North Korean military would fail to carry out such an order. U.S. leaders should also resist the temptation to hope that limited, or “surgical,” conventional attacks on North Korean missile test sites or storage facilities would end the nuclear threat. Proponents of this course believe that the threat of further escalation by the United States would deter North Korea from responding militarily to a limited first strike. But as the political scientist Barry Posen has explained, this argument is logically inconsistent: Kim cannot be both so irrational that he cannot be deterred in general and so rational that he could be deterred after having been attacked by the United States. Moreover, even a limited attack by the United States would appear to North Korea as the beginning of an invasion. And because no first strike could destroy every North Korean missile and nuclear weapon, the United States and its allies would always face the prospect of nuclear retaliation. Nor can missile defense systems solve the problem. The United States should continue to develop and deploy missile defenses because they complicate North Korean military planning, and any missiles that Pyongyang aims at U.S. or allied military targets are missiles not aimed at American, Japanese, or South Korean cities. But military leaders should be candid about the limits of U.S. ballistic missile defenses. Most such systems have failed numerous tests, and even the most effective ones, such as the Terminal High Altitude Area Defense, or THAAD, system, could be overwhelmed if North Korea fired multiple missiles—even dummy missiles—in a salvo at one target. That is why North Korea has been practicing launching several missiles simultaneously. Any prudent U.S. planner should therefore assume that in the event of an attack, some North Korean nuclear-armed missiles would reach their targets. Even in the best-case scenario, in which only a few North Korean nuclear weapons penetrated U.S. defenses, the consequences would prove catastrophic. Estimating the potential fatalities in a limited nuclear strike is difficult, but the nuclear weapons scholar Alex Wellerstein has designed a useful modeling tool called NUKEMAP, which uses data from the Hiroshima and Nagasaki bombings to provide rough estimates of how many people would die in a nuclear strike. After North Korea conducted its sixth nuclear test, in early September, Japanese, South Korean, and U.S. intelligence agencies reportedly provided a range of estimates of the weapon’s explosive yield, with an average estimate of around 100 kilotons. According to NUKEMAP, a single 100-kiloton nuclear weapon detonated above the port city of Busan, in South Korea (which was shown as a target in a recent North Korean press release), would kill 440,000 people in seconds. A weapon of that size detonated over Seoul would kill 362,000; over San Francisco, the number would be 323,000. These estimates, moreover, include only immediate blast fatalities, not the deaths from fires after a nuclear detonation or the longer-term deaths that would result from radioactive fallout. Those secondary effects could easily cause the number of dead to double. Even if a war were limited to the Korean Peninsula, the costs would still be unacceptable. According to a detailed study published in 2012 by the Nautilus Institute, a think tank based in California, North Korea has thousands of conventional artillery pieces along the demilitarized zone that by themselves could inflict some 64,000 fatalities in Seoul on the first day of a war. A major attack on South Korea could also kill many of the roughly 154,000 American civilians and 28,000 U.S. service members living there. If the North Korean regime used its large arsenal of chemical and biological weapons, the fatalities would be even higher. Finally, there are a number of nuclear power plants near Busan that could be damaged, spreading radioactive materials, in an attack. All told, one million people could die on the first day of a second Korean war. Even if the United States forswore preventive conventional or nuclear strikes, the danger of an accidental war caused by the mutual fear of a surprise attack would remain. South Korea increasingly (and quite openly) relies on a strategy of preemption and decapitation. In 2013, General Jeong Seung-jo, the chairman of the South Korean Joint Chiefs of Staff, announced that
“if there is a clear intent that North Korea is about to use a nuclear weapon, we will eliminate it first even at the risk of a war,” adding that “a preemptive attack against the North trying to use nuclear weapons does not require consultation with the United States and it is the right of self-defense.” A white paper published by the South Korean Ministry of National Defense in 2016 featured an illustration of several missiles being fired at and a group of South Korean commandos attacking the “war command” building in Pyongyang. (Unsurprisingly, the North Koreans have similar ideas about preemption: in April 2016, in response to U.S. and South Korean military exercises, North Korean state media reported that “the revolutionary armed forces of [North Korea] decided to take preemptive attack as the mode of its military counteraction.... The right to nuclear preemptive attack is by no means the U.S. monopoly.”) In such a tense environment, one government’s preemptive-war plan can look a lot like a first-strike plan to its enemies. Would Seoul see the movement of Pyongyang’s nuclear missiles out of the caves in which they are stored as a drill, a defensive precaution, or the start of an attack? Would Pyongyang mistake a joint U.S.—South Korean exercise simulating a decapitation attack for the real thing? Could an ill-timed inflammatory tweet by Trump provoke a military response from Kim? What if a radar technician accidentally put a training tape of a missile launch into a radar warning system—which actually happened, creating a brief moment of panic, during the Cuban missile crisis? Add in the possibility of an American or a South Korean military aircraft accidentally entering North Korean airspace, or a North Korean nuclear weapon accidentally detonating during transport, and the situation resembles less a Cuban missile crisis in slow motion than an August 1914 crisis at the speed of Twitter. The fear of a U.S. attack explains why Kim believes he needs a nuclear arsenal. Pyongyang’s nuclear weapons development undoubtedly appeals to Kim’s domestic audience’s desire for self-sufficiency. But that is not its primary purpose. Kim’s spokespeople have stressed that he will not suffer the fate of Saddam or Qaddafi, both of whom gave up their nuclear programs only to be attacked later by the United States. The North Korean nuclear arsenal is not a bargaining chip. It is a potent deterrent designed to prevent a U.S. attack or disrupt one that does occur by destroying U.S. air bases and ports through preemption, if possible, but in retaliation if necessary. And if all else fails, it is a means for exacting revenge by destroying Kim’s enemies’ cities. That may sound implausible, but keep in mind that Castro recommended just such an attack in 1962. Living with a nuclear North Korea does not, in Dr. Strangelove’s terms, mean learning “to stop worrying and love the bomb.” On the contrary, it means constantly worrying and addressing every risk. U.S. policy should aim to convince Kim that starting a war would lead to an unmitigated disaster for North Korea, especially as his own ministers and military advisers may be too frightened of his wrath to make that argument themselves. The United States should state clearly and calmly that any attack by North Korea would lead to the swift and violent end of the Kim regime. Kim may be under the illusion that if North Korea were to destroy U.S. air bases and kill hundreds of thousands of Americans, Japanese, and South Koreans, the American public would seek peace. In fact, it would likely demand vengeance and an end to Kim’s regime, regardless of the costs. Such a war would be bloody, but there is no doubt which side would prevail. There are few, if any, military targets in North Korea that the United States could not destroy with advanced conventional weapons in a long war. And the Kim regime cannot ignore the possibility of U.S. nuclear retaliation. The more difficult challenge will be convincing Kim that the United States will not attack him first. Reducing the risk of war will therefore require an end to U.S. threats of first-strike regime change. In August, Tillerson told reporters that the United States did not seek to overthrow Kim unless he were to begin a war. Other American leaders should consistently echo Tillerson’s comments. Unfortunately, the Trump administration’s rhetoric has been anything but consistent. Should the United States succeed in bringing North Korea back to the negotiating table, it should be prepared to offer changes to U.S. and South Korean military exercises in exchange for limits on—and notifications of—North Korean missile tests and the restoration of the hotline between North and South Korea. The United States should also continue to extend its nuclear umbrella to South Korea to reduce the incentive for Seoul to acquire its own nuclear arsenal. Some have argued for a return of U.S. tactical nuclear weapons to air bases in South Korea, but such weapons would be vulnerable to a North Korean first strike. A better option would be to keep nuclear capable bombers at Guam on ground alert. Or the United States could borrow a tactic it used in the wake of the Cuban missile crisis. To assuage Moscow, Washington promised to remove its Jupiter ballistic missiles from Turkey after the crisis. But to reassure
Ankara, it also assigned some submarine-based missiles to cover the same retaliatory targets in the Soviet Union that the Jupiter missiles had and arranged for a U.S. submarine to visit a Turkish port. Today, occasional U.S. submarine calls at South Korean harbors could enhance deterrence without provoking North Korea. In 1947, the American diplomat George Kennan outlined a strategy for the “patient but firm and vigilant containment” of the Soviet Union. Writing in this magazine, he predicted that such a policy would eventually lead to “either the breakup or the gradual mellowing of Soviet power.” He was right. In the same way, the United States has deterred North Korea from invading South Korea or attacking Japan for over 60 years. Despite all the bluster and tension today, there is no reason why Kennan’s strategy of containment and deterrence cannot continue to work on North Korea, as it did on the Soviet Union. The United States must wait with patience and vigilance until the Kim regime collapses under the weight of its own economic and political weakness.” (Scott D. Sagan, “The Korean Missile Crisis,” Foreign Affairs, November/December 2017)
guest workers. North Korea, meanwhile, has said it won't be willing to talk to the U.S. until it ensures it has missile and nuclear capabilities. (Nicole Gaouette, “U.S. Prepares for North Korea’s “Final Step,”” CNN, October 20, 2017)

10/20/17

Have North Korea’s nuclear tests become so big that they have altered the geological structure of the land? Some analysts now see signs that Mount Mantap, the 7,200-foot-high peak under which North Korea detonates its nuclear bombs, is suffering from “tired mountain syndrome.” The mountain visibly shifted during the last nuclear test, an enormous detonation that was recorded as a 6.3-magnitude earthquake in North Korea’s northeast. Since then, the area, which is not known for natural seismic activity, has had three more quakes. “What we are seeing from North Korea looks like some kind of stress in the ground,” said Paul G. Richards, a seismologist at Columbia University’s Lamont-Doherty Earth Observatory. “In that part of the world, there were stresses in the ground, but the explosions have shaken them up.” Chinese scientists already have warned that further nuclear tests could cause the mountain to collapse and release the radiation from the blast. Images captured by Airbus, a space technology company that makes Earth-observation satellites, showed the mountain literally moving during the test. An 85-acre area on the peak of Mount Mantap visibly subsided during the explosion, an indication of both the size of the blast and the weakness of the mountain. Since that day, there have been three much smaller quakes at the site, in the 2- to 3-magnitude range, each of them prompting fears that North Korea had conducted another nuclear test that perhaps had gone wrong. But they all turned out to be natural. That has analysts Frank V. Pabian and Jack Liu wondering if Mount Mantap is suffering from “tired mountain syndrome,” a diagnosis previously applied to the Soviet Union’s atomic test sites. “The underground detonation of nuclear explosions considerably alters the properties of the rock mass,” Vitaly V. Adushkin and William Leith wrote in a report on the Soviet tests for the United States Geological Survey in 2001. This leads to fracturing and rocks breaking, as well as changes along tectonic faults. Earthquakes also occurred at the United States’ nuclear test site in Nevada after detonations there. “The experience we had from the Nevada test site and decades of monitoring the Soviet Union’s major test sites in Kazakhstan showed that after a very large nuclear explosion, several other significant things can happen,” said Richards, the seismologist. This included cavities collapsing hours or even months later, he said. Pabian and Liu said that the North Korean test site also seemed to be suffering. “Based on the severity of the initial blast, the post-test tremors, and the extent of observable surface disturbances, we have to assume that there must have been substantial damage to the existing tunnel network under Mount Mantap,” they wrote in a report for 38 North. (Anna Fifield, “After Six Tests, the Mountain Hosting North Korea’s Nuclear Tests May Be Exhausted,” Washington Post, October 20, 2017)

10/22/17

Prime Minister Shinzo Abe's ruling coalition retained a two-thirds majority in today's general election, gaining a further mandate after five years in power and offering the bloc the impetus to pursue a first-ever amendment to the Constitution. A divided opposition and low turnout partially due to a typhoon contributed to the outcome of the election, which followed a rough year for Abe amid allegations of cronyism. Abe's Liberal Democratic Party won 281 seats and the Komeito party 29, securing the two-thirds majority of 310 in the 465-member House of Representatives. The victory could reinforce Abe's chances of succeeding in the LDP leadership contest in September next year and eventually becoming Japan's longest-serving prime minister. The two-thirds majority enjoyed by the coalition of the LDP and the smaller Komeito party is significant because it is required in both Diet houses to formally propose a constitutional revision, which must then gain a majority of votes in a national referendum. The coalition already has such a majority in the upper house. "The matter should be debated in the Diet, and at the same time I expect discussions to deepen among the public," Abe told a television program as results came in. On its own, the LDP has secured a stable majority, defined as at least 261 of the powerful chamber, with which it can control all the house's legislative committees. The election saw the opposition vote split between the Constitutional Democratic Party of Japan and the Party of Hope, new parties formed shortly before the start of campaigning out of the respective liberal and conservative wings of the collapsing Democratic Party. The CDPJ came out on top among the opposition parties, having rapidly built support over the course of the campaign. Led by former
Chief Cabinet Secretary Yukio Edano, the CDPJ absorbed the Democratic Party's liberals who could not or would not join the Party of Hope led by Tokyo Gov. Yuriko Koike. The Party of Hope failed to maintain the excitement that greeted its formation late last month. It did poorly in single-seat districts in Tokyo — thought to be its stronghold — losing in 22 of the 23 districts in which it fielded candidates. Koike, who broke from the LDP to run for Tokyo governor last year, had refused to resign as governor to run for the lower house with her new party. This meant voters were unsure who the party would back as prime minister in the event it formed a government. Both opposition parties promised to freeze the consumption tax hike planned for October 2019 and abandon nuclear power. Neither had the time or resources to put up candidates in all of the 289 single-seat electoral districts. Final voter turnout stood at 53.68 percent, which was slightly higher than the record-low 52.66 percent in the previous lower house election in 2014 but the second-lowest in the postwar, according to the internal affairs ministry. Rain and wind from Typhoon Lan battered much of the country on Sunday, discouraging voters and likely working in the ruling coalition's favor. With local authorities encouraging early voting in light of the typhoon, a record high of 21 million people, or around 20.1 percent of the eligible population, cast their ballots early. The number of early votes leaped 62.5 percent from the figure in the last election. (Sarah Jackman, “Abe Wins Big in Japan’s Election, Gets Impetus for Constitutional Reform,” Kyodo, October 23, 2017)

President Donald Trump renewed the possibility of military action against North Korea. Trump said he is “totally prepared” to use military force against the rogue regime if necessary, in an interview with Fox News. In line with Trump’s statement, the US Air Force has ordered its fleet of nuclear-armed B-52 bombers stationed at a base in Louisiana on 24-hour alert, US Air Force chief of staff Gen. David Goldfein told Defense One. The 24-hour alert status for the bombers ended in 1991, as the Cold War faded into history. “The world is a dangerous place and we’ve got folks that are talking openly about the use of nuclear weapons,” Goldfein said while explaining the US Air Force is trying to find ways of using nuclear weapons as a deterrence. The B-52, which can fly up to about 50,000 feet and at supersonic speeds, was designed to carry an array of weapons, including 70,000lbs of nuclear and conventional weapons. Marc Knapper, acting US ambassador to South Korea, said the US is currently focused on imposing diplomatic and economic pressure to denuclearize North Korea by working closely with allies, in a speech at a forum in Seoul on October 23. (Jung Min-kyung, “Trump Says ‘Totally Prepared’ for Military Action; North Nixes Six-Party Talks,” Korea Herald, October 23, 2017) The U.S. Air Force is preparing to put nuclear-armed bombers back on 24-hour ready alert, a status not seen since the Cold War ended in 1991. “This is yet one more step in ensuring that we’re prepared,” Gen. David Goldfein, Air Force chief of staff, said in an interview during his six-day tour of Barksdale and other U.S. Air Force bases that support the nuclear mission. “I look at it more as not planning for any specific event, but more for the reality of the global situation we find ourselves in and how we ensure we’re prepared going forward.” Goldfein and other senior defense officials stressed that the alert order had not been given, but that preparations were under way in anticipation that it might come. That decision would be made by Gen. John Hyten, the commander of U.S. Strategic Command, or Gen. Lori Robinson, the head of U.S. Northern Command. STRATCOM is in charge of the military’s nuclear forces and NORTHCOM is in charge of defending North America. “The world is a dangerous place and we’ve got folks that are talking openly about use of nuclear weapons,” he said. “It’s no longer a bipolar world where it’s just us and the Soviet Union. We’ve got other players out there who have nuclear capability. It’s never been more important to make sure that we get this mission right.” During his trip across the country last week, Goldfein encouraged airmen to think beyond Cold War uses for ICBMs, bombers and nuclear cruise missiles. “I’ve challenged…Air Force Global Strike Command to help lead the dialog, help with this discussion about ‘What does conventional conflict look like with a nuclear element?’ and ‘Do we respond as a global force if that were to occur?’ and ‘What are the options?’” he said. “How do we think about it — how do we think about deterrence in that environment?” Asked if placing B-52s back on alert — as they were for decades — would help with deterrence, Goldfein said it’s hard to say. “Really it depends on who, what kind of behavior are we talking about, and whether they’re paying attention to our readiness status,” he said. Already, various improvements have been made to prepare Barksdale — home to the 2d Bomb Wing and Air Force Global Strike Command,
which oversees the service’s nuclear forces — to return B-52s to an alert posture. Near the alert pads, an old concrete building — where B-52 crews during the Cold War would sleep, ready to run to their aircraft and take off at a moment’s notice — is being renovated. Inside, beds are being installed for more than 100 crew members, more than enough room for the crews that would man bombers positioned on the nine alert pads outside. There’s a recreation room, with a pool table, TVs and a shuffleboard table. Large paintings of the patches for each squadron at Barksdale adorn the walls of a large stairway. Those long-empty B-52 parking spaces will soon get visits by two nuclear command planes, the E-4B Nightwatch and E-6B Mercury, both which will occasionally sit alert there. During a nuclear war, the planes would become the flying command posts of the defense secretary and STRATCOM commander, respectively. If a strike order is given by the president, the planes would be used to transmit launch codes to bombers, ICBMs and submarines. At least one of the four nuclear-hardened E-4Bs — formally called the National Airborne Operations Center, but commonly known as the Doomsday Plane — is always on 24-hour alert. Barksdale and other bases with nuclear bombers are preparing to build storage facilities for a new nuclear cruise missile that is under development. During his trip, Goldfein received updates on the preliminary work for a proposed replacement for the 400-plus Minuteman III intercontinental ballistic missiles, and the new long-range cruise missile. “Our job is options,” Goldfein said. “We provide best military advice and options for the commander in chief and the secretary of defense. Should the STRATCOM commander require or the NORTHCOM commander require us to [be on] a higher state of readiness to defend the homeland, then we have to have a place to put those forces.” (Marcus Weisgerber, “U.S. Preparing to Put B-52 Bombers back on Alert,” Defense One, October 22, 2017)

10/24/17

Choe Son-hui called for the United States to drop its hostile policy, saying that it would lead to a "way out" from the current stalemate, a foreign ministry source here said. Choe, director-general of the North American department of North Korea's foreign ministry, made the remarks during a closed-door session of the two-day conference held last week in Moscow, the official told reporters. 'The North will never give up its nuclear weapons as long as the U.S.' hostile policy, including military activities, sanctions and pressure, continue," he quoted Choe as saying. "If the U.S. makes the right choice, such as abandoning its hostile policy and moving to coexist with a nuclear DPRK, there will be a way out," she said, according to the official. Choe reiterated that the North made the "strategic decision" to possess nuclear weapons to deter the military threat from the U.S., saying that it is the only way to maintain its security and peace both on the Korean Peninsula and the Northeast Asian region, he added. Asked what steps the U.S. should take to give up its hostile policy, Choe cited U.S. President Donald Trump's recent threatening tweets against the North, saying that it is the reason why the North cannot come to the negotiating table. Choe also said that the North is "not committed" to the September 19 joint statement under which the North promised to give up its nuclear programs in exchange for diplomatic and economic concessions, and that it will not be going back to the long-suspended six-party denuclearization talks, the official said. "For a diplomatic and peaceful resolution, the correct atmosphere should be created, but at a time when there are daily threatening tweets from President Trump, the North cannot sit down for talks," she was quoted as saying. Choe didn't dismiss the importance of multilateral efforts altogether, but as the U.S. is leading efforts to crush the North to death, she said that the North doesn't see how other countries could play any role, according to the official. “North Korea will not be moving an inch,” she said, if the U.S. keeps up its push to lead the North toward collapse. (Yonhap, “N.K. Diplomats Urged U.S. to Make ‘Right Choice’ for ‘Way out’: Seoul Diplomat,” October 24, 2017)

10/25/17

Diplomatic efforts between the United States and North Korea are in peril with Pyongyang defying talks in response to President Donald Trump’s increased public attacks on Kim Jong Un, according to multiple U.S. government and congressional officials. Joseph Yun, a top American diplomat to North Korea, has been warning of the breakdown in meetings on Capitol Hill and seeking help to persuade the administration to prioritize diplomacy over the heated rhetoric that appears to be pushing the two nuclear powers closer toward conflict, sources familiar with the discussions told NBC News. Officials throughout government worry that a lack of diplomacy increases the risks of military action in the region. They also explain some of the alarmist

President Donald Trump’s visit to South Korea on November 7 deployments are aimed at deterring the North from carrying out fresh provocations ahead of U.S. President Donald Trump’s visit to South Korea on November 7-8, part of his first Asian tour. (Yu Yong-weon, “Another U.S. Carrier Fleet Deployed to Pacific,” Chosun Ilbo, October 26, 2017)
The United States imposed sanctions on seven officials and three entities of North Korea over what Washington described as Pyongyang's "ongoing and serious human rights abuses." "Today's sanctions target the North Korean military and regime officials engaged in flagrant abuses of human rights," Treasury Secretary Steven Mnuchin said in a statement. The Treasury Department is also targeting North Korean financial facilitators who attempt to keep the leadership in Pyongyang afloat with foreign currency earned through forced labor operations. The sanctions, which freeze assets within U.S. jurisdiction and prohibit transactions involving U.S. citizens, are the latest in a series of measures the United States has taken to pressure North Korea into ridding itself of nuclear weapons. Among those subject to the latest sanctions are Jo Kyong Chol, director of the Military Security Command, Ri Thae Chol, first vice minister of people's security, and Labor Minister Jong Yong Su, as well as the consul general in Shenyang, China, and a diplomat at the North Korean Embassy in Vietnam, according to the Treasury. Mnuchin said the United States is particularly concerned with North Korea's military, which operates as a secret police force in "punishing all forms of dissent." "Further, the military operates outside of North Korea to hunt down asylum seekers, and brutally detains and forcibly returns North Korean citizens," he said. (Kyodo, “U.S. Imposes Sanctions on N. Koreans, Entities over Human Rights Abuses,” October 26, 2017)

A senior North Korean official has issued a stern warning to the world that it should take "literally" his country's threat to test a nuclear weapon above ground. Ri Yong Pil, who serves as vice president of the Foreign Ministry’s Institute for American Studies, told CNN in an exclusive conversation in Pyongyang that the threat made by North Korea's foreign minister last month should not be dismissed. North Korea "has always brought its words into action," Ri said, visibly angry. Speaking on a visit to New York for the U.N. General Assembly last month, Ri Yong Ho, the foreign minister, raised the possibility that North Korea could test a powerful hydrogen bomb over the Pacific Ocean. The threat came hours after President Donald Trump threatened to "totally destroy" North Korea in a speech to the UN. "The foreign minister is very well aware of the intentions of our supreme leader, so I think you should take his words literally," Ri told CNN in Pyongyang. (Will Ripley, “North Korean Official: Take Hydrogen Bomb Threat ‘Literally,’” CNN, October 26, 2017)

Defense Secretary Jim Mattis’s visit to the Korean Peninsula’s extremely militarized demilitarized zone was meant to show American solidarity with South Korea against a muscular North, which Mattis accused of building nuclear weapons to “threaten others with catastrophe.” But the trip also highlighted the central contradiction in the Trump administration’s rhetoric on North Korea: that for all the talk of military options, there really aren’t any — at least, none that wouldn’t put the sprawling city of Seoul, with its population of 10 million, in the cross hairs of thousands of Pyongyang’s artillery installations. Standing side by side with Mattis atop an observation post to gaze at the North, South Korea’s defense minister, Song Young-moo, seemed at times to be giving his American counterpart a guided tour of how a strike against North Korea’s nuclear facilities would quickly trigger retaliation. “There are 21 battalions” stationed over the border, Song told Mattis, gesturing toward the hills of North Korea in the distance. “Defending against this many L.R.A.s is unfeasible, in my opinion,” he said, alluding to the bristling array of long-range artillery pointed at his country. Song said that the United States and South Korea would have to destroy the North Korean artillery “the moment the war starts.” But even if the United States and South Korea were able to do so, American defense officials acknowledge that North Korea would still have a significant retaliatory capability, including chemical, biological and nuclear weapons as well as conventional forces. It would be virtually impossible, the officials said, to destroy all of North Korea’s offensive capabilities before it could strike Seoul. Mattis’s very helicopter ride to the DMZ illustrated Seoul’s vulnerability. The defense secretary took 30 minutes, by Black Hawk helicopter, to get to the border, though the trip could easily have easily been done in 10, so short is the distance. Mattis’s copter circled the hills and flatlands that dot the densely packed region. He flew over a succession of high-rise residential complexes and surveyed armored tank positions.
But even by road, the trip from Seoul to the DMZ would have taken under an hour with no traffic. Both Mattis and Song appeared in somber dark suits despite reports in the South Korean media that Song had wanted them to wear their old military uniforms. Mattis “wouldn’t do that,” said Capt. Jeff Davis, a Pentagon press spokesman accompanying the defense secretary. Captain Davis said he could not confirm whether Mr. Song actually made the suggestion, but he added that Mattis, a retired Marine general, was aware that defense secretary was a civilian post. The last thing that Seoul wants is for the United States to make good on all of President Trump’s threats about military options — South Koreans know that they would be the first to feel the repercussions. But at the same time, both South Korea and the United States want Pyongyang to think that Washington might launch a strike, in the hope that fears of such action might force North Korea to the bargaining table over its weapons programs. “Our goal is not war,” Mattis said, “but rather the complete, verifiable and irreversible denuclearization of the Korean Peninsula.” He called North Korea an “oppressive regime that shackles its people, denying their freedom, their welfare and their human dignity,” and said that Pyongyang’s “provocations continue to threaten regional and global security.” As he spoke, patriotic North Korean music wafted through the air from speakers over the border. For the Trump administration, the Korea situation has been complex, in no small part because it now seems as if every time Trump threatens the North, Pyongyang carries out another nuclear or ballistic missile test. North Korea carried out its sixth nuclear test last month. Separately, the Pentagon said it was planning military exercises next month involving three of the Navy’s aircraft carrier strike groups in the Asia-Pacific region. The exercise, scheduled while Trump is traveling through the region, will undoubtedly be interpreted as another warning toward Pyongyang. Defense officials said that the show of military might was intended to demonstrate American capabilities in the region. But they cautioned that any American military strike against North Korea would come at a huge cost — one that neither Washington or Seoul may be prepared to pay. During a brief session with American troops in Seoul, Mattis said that American military might in the region was meant to back up its diplomacy. “We’re doing everything we can to solve this diplomatically, everything we can,” Mr. Mattis said. “But ultimately our diplomats have to be backed up by strong soldiers, sailors, airmen and Marines. So they speak from a position of strength.” (Helene Gordon, “Defense Chief’s Korea Visit Highlights U.S. Strength and Seoul’s Vulnerability,” New York Times, October 28, 2017, p. A-8) Ahead of Trump’s visit to Asia, Mattis has emphasized diplomatic efforts to find a peaceful solution to the crisis during his week-long trip to the region. “That’s really what it was all about – to keep the (North Korea) effort firmly in the diplomatic lane for resolution,” Mattis said earlier this week after three days of meetings with Asian defense chiefs in the Philippines. At the same time, the U.S. and South Korean militaries are looking for ways to deter Pyongyang and bolster the South’s defenses. Washington’s top military officer, Marine General Joseph Dunford, chairman of the Joint Chiefs of Staff, met with his South Korean counterpart, General Kyeong Doo Jeong, a U.S. military statement said. Dunford renewed U.S. warnings of retaliation to further provocations. “(Dunford) reaffirmed that any attack by North Korea would be met with a response that will be overwhelming and effective, using the full range of U.S. military capabilities,” the statement said. Despite the rhetoric, White House officials say Trump is looking for a peaceful resolution. But all options, including military ones, are on the table. “Do we have military options in defense for attack, if our allies are attacked? Of course we do. But everyone is out for a peaceful resolution,” Mattis told reporters traveling with him this week. “No one’s rushing for war.” Separately, North Korea released a South Korean fishing boat which had been found to be in North Korean waters illegally, state media said. The crew of 10 - seven South Koreans and three Vietnamese - were released on Friday evening, a spokesman for South Korea’s coastguard told Reuters. The return of the boat, which had been reported as missing from Saturday, may have eased already strained relations between North and South. The two sides are technically still at war because their 1950-53 conflict ended in a truce, not a peace treaty. The North regularly threatens to destroy the South and the United States. (Phil Stewart, “Mattis Talks Diplomacy on North Korea ahead of Trump’s Asia Tour,” Reuters, October 27, 2017) “We’re doing everything we can to solve this diplomatically — everything we can,” he told the troops after alighting from a Black Hawk helicopter that had ferried him to and from the border some 40 kilometers north of central Seoul. “Ultimately, our diplomats have to be backed up by strong soldiers and sailors, airmen and marines,” he added, “so they speak from a position of strength, of combined strength, of alliance strength, shoulder to

The United States, South Korea and Japan should establish a “freedom nuclear alliance,” with atomic weapons deployed in all three countries to counter the rising North Korea threat, according to the leader of South Korea’s main opposition party. Hong Joon-pyo, chairman of the Liberty Korea Party, said North Korea is not going to give up its nuclear weapons any time soon and has effectively formed a “socialist nuclear alliance” with China and Russia. So the United States should abandon its policy of pressure and engagement with the regime of Kim Jong Un and move toward a new buildup of nuclear weapons in South Korea, he said. If Washington won’t oblige, South Korea and Japan should develop their own nuclear weapons to even the playing field, he told a group of Post journalists during a visit to Washington this week. Despite criticizing U.S. policy, Hong said he likes President Trump’s brash rhetoric, including his threat to “totally destroy” North Korea in his recent United Nations speech. “One way of dealing with gangsters is to act like a gangster yourself,” said Hong, a former prosecutor. “Mr. Trump’s approach is very appropriate. If you want to deal with a tough guy, you need to be even tougher.” For months, Hong and his party have been pushing the Trump administration to return tactical nuclear weapons to South Korea. “For the U.S. or others to accept or acknowledge that North Korea is a nuclear state or not does not change the fact that they have the capabilities,” he said. “By having a balance of nuclear threats, we will be able to prevent the war we’ve been trying to prevent from the very beginning. And after preventing the war, we can talk about nuclear disarmament.” Just threatening a nuclear escalation could be helpful in scaring North Korea or China into responding to international concerns about Kim’s nuclear arsenal, Hong argued. Trump should tell the Chinese government when he gets to Beijing that if Chinese officials don’t do more, the United States can’t stop South Korea from going nuclear, he said. “We need to put fear in the mind of the dictator of North Korea,” he said. “This is something that [Chinese President Xi Jinping] really wants to avoid at all costs.” (Josh Rogin, “South Korean Opposition Leader Calls for ‘Freedom Nuclear Alliance,’” Washington Post, October 27, 2017)

CRS: “Since 2010, the United States has engaged its allies in the Asia-Pacific, specifically Japan, South Korea, and Australia, to develop and implement an integrated regional BMD capability to deter and counter North Korea ballistic missile threats. Over the past 15 years, the United States has learned how its own BMD capabilities are significantly enhanced by integrating them into a much larger global BMD System (BMDS). The U.S. contribution to NATO’s territorial defense against possible ballistic missile threats from Iran, for example, has led to a phased capability to deploy THAAD radar, sea-based Aegis BMD, and Aegis Ashore capabilities in Europe, and to fully integrate those with the current and prospective range of NATO European BMD capabilities. The concerted effort to develop a similar capability in Northeast Asia has not been as successful, primarily because of outstanding historical and political issues between South Korea and Japan. The inability to fully integrate regional BMD systems amongst U.S., Korean, and Japanese BMD systems results in an unrealized potential that could prove significant if conflict erupts. Aegis Ballistic Missile Defense (BMD). The South Korean Navy has three Aegis destroyers that are similar to U.S. Navy Arleigh Burke (DDG-51)-class Aegis destroyers. The ships, which entered service in 2008, 2010, and 2012, are known as the Sejon Daewang (KDX-3) class. Three additional KDX-3 ships are planned and may enter service in 2023-2027, according to the 2016-2017 edition of IHS Jane’s Fighting Ships. The three additional ships, according to this source, may be built with a BMD-capable version of the Aegis system. The three existing ships are equipped with a version of the Aegis system that is not BMD capable. The Aegis system on the three existing ships can be modified to become BMD sensor-capable, and South Korea reportedly
has plans to do this, but that modification is to be done in the future. The three existing Aegis destroyers have participated in U.S.-South Korean-Japanese military exercises. **Given their current lack of BMD capability, their potential contribution to any near-term BMD mission would be an indirect one—they could help defend U.S. and Japanese BMD-capable ships from North Korean submarines, surface ships, aircraft, and anti-ship cruise missiles.** Terminal High Altitude Air Defense (THAAD). South Korea agreed to host a U.S. THAAD battery in 2016. That battery was deployed earlier this year in south central South Korea with four of the eight intended launchers. Until recently, the remaining four launchers had been held up due to outstanding political and environmental challenges. The operational status of the battery is classified, but observers believe the battery is already fully operational, with its eight launchers and its 48 interceptors. THAAD is widely considered to be highly effective against short range ballistic missiles (SRBM) and medium-range ballistic missile (MRBM) threats based on its operational test performance over the past many years. THAAD has not been used in conflict, so its wartime performance is untested. THAAD is designed to protect larger areas, such as parts of South Korea including Camp Humphreys and other military assets, for example. It is unclear, however, whether THAAD could counter ballistic missiles targeted against Seoul, because that city lies just outside the unclassified operational effectiveness range from where this THAAD battery is located. Patriot. South Korea currently has a Patriot Advanced Capability-2 missile defense system at the Osan military base in Seoul. South Korea is in the process of receiving upgrades to Patriot Advanced Capability-3, which then-U.S. Army Secretary Eric Fanning said in 2016 would be completed by 2018. The Patriot PAC-2 has demonstrated limited wartime capability against SRBM threats, and while the PAC-3 system has performed well in operational tests according to DOD, it has not been used in conflict. South Korea has been developing an indigenous BMD capability against SRBMs called Korean Air and Missile Defense (KAMD). In 2016, Korea Defense Minister Han Min-Koo stated that the PAC-3 capability would be deployed in 2020 and 2022 as a part of the KAMD system. In April 2017, the Ministry of National Defense released the 2018-2022 Mid-Term National Defense Plan. This plan includes KAMD as part of a “three-axis system,” which also includes a “kill chain” for a preemptive strike in response to signs of an imminent North Korean missile attack and a Korean Massive Punishment and Retaliation (KMPR) system for retaliating directly against the North Korean leadership in the event of a nuclear attack. As a part of efforts to move up development of these capabilities, the South Korean military is working to hasten performance improvements in its medium-range surface-to-air missile (M-SAM) system. **These capabilities are currently not available in the near-term.** Terminal High Altitude Air Defense (THAAD). South Korea agreed to host a U.S. THAAD battery in 2016. That battery was deployed earlier this year in south central South Korea with four of the eight intended launchers. As a part of efforts to move up development of these capabilities, the South Korean military is working to hasten performance improvements in its medium-range surface-to-air missile (M-SAM) system. These capabilities are currently not available in the near-term.” (Kathleen J. McInnis, Andrew Fieckert, Mark E. Manyin, Steven A. Hildreth, Mary Beth Nikitin, and Emma Chanlett-Avery, The North Korean Nuclear Challenge: Military Options and Issues for Congress (Congressional Research Service Report R44994, October 27, 2017), pp. 48-49)

President Trump last month agreed to send more of the Pentagon’s “strategic assets” — typically defined as submarines, aircraft carriers, nuclear weapons, or bombers — to South Korea on a rotational basis to deter North Korean provocations, but what exactly that means remains something of a mystery. Trump and South Korean President Moon Jae-in agreed to bolster the U.S. presence in the region. The Pentagon describes these forthcoming moves as the “enhanced deployment of U.S. strategic assets in and around South Korea on a rotational basis,” but it has provided few additional details. It appears they are still in the works. Marine Gen. Joseph F. Dunford Jr., the chairman of the Joint Chiefs of Staff, said in an interview today he had just discussed the deployment of strategic assets with South Korean counterparts during two days of meetings in Seoul. “Is it different things? No,” Dunford said. “Is it doing different things at different times? Yes. And is it incorporating other capabilities on occasion? Yes.” Dunford declined to detail what might be used, but said the discussion centered on combining the 28,500 U.S. troops based in South Korea full-time along with annual exercises and “our occasional rotation of forces” to bolster deterrence against North Korea. The point, he said, is to demonstrate the strength in the alliance between South Korea and the United States and the capability to respond militarily if necessary. “It wasn’t a specific, ‘We want this or that,’ ” Dunford said of the message the South Koreans conveyed. “It was more of a conversation about exercise cycles, patterns of deployments and so forth that would most enhance.” Defense Secretary Jim Mattis has been even vaguer. Asked today at a news conference in Seoul if strategic assets will stay on the South Korean Peninsula for a fixed amount of time, he declined to answer. “Regarding our strategic assets, they are global in their positioning,” he said. “They are global in their reach, and we are quite assured that they are in a position to be responsive … So, that’s all I’ve got to say about that.” Mattis’s South Korean counterpart, Defense Minister Song Young-moo, said the two countries have agreed to expand “relevant cooperation” involving strategic assets, including studies to improve deterrence against North Korea. Song also asked last month for the United States to consider reintroducing tactical nuclear weapons in South Korea, but the move is considered unlikely among many U.S. military officials. In addition to it potentially putting tensions with North Korea at a new high, Moon has said he is against the idea. Dunford spent the weekend here in Hawaii following his meetings in Seoul for a three-party gathering that again included his South Korean counterpart, Gen. Jeong Kyeong-Doo, along with their Japanese equivalent, Adm. Kawno Katsutoshi. South Korea and Japan have had strained relations for years, dating back at least to the Empire of Japan’s occupation of the Korean Peninsula during World War II and its use of so-called “comfort women,” who were forced into sexual slavery for Japanese soldiers. The three nations have participated together in operations meant to be a unified message for North Korean leader Kim Jong Un. In one example, Air Force B-1B bombers from Andersen Air Force base in Guam flew in formation September 17 with fighters from all three nations before dropping live bombs on a range few dozen miles from the demilitarized zone separating the two Koreas. The Japanese F-2 fighters broke off from the formation and did not fly over the peninsula, but were depicted in photographs released by the Pentagon in a show of force. The U.S. Navy typically keeps the movements of its submarines secret, but also has periodically sent them to port in South Korea. The USS Michigan, an Ohio-class nuclear-powered ballistic missile submarine, has appeared at Busan Naval Base in South Korea at least twice this year. It is capable of carrying nuclear missiles, as well as elite Navy SEALs. More recently, the Navy announced last week it has plans for a massive exercise involving three aircraft carriers — the USS Nimitz, the USS Theodore Roosevelt and the USS Ronald Reagan — and their associated strike groups, each of which include dozens of aircraft and thousands of sailors and Marines. The
As North Korea races to build a weapon that for the first time could threaten American cities, its neighbors are debating whether they need their own nuclear arsenals. Doubts are growing the United States will be able to keep the atomic genie in the bottle. For the first time in recent memory, there is a daily argument raging in both South Korea and Japan — sometimes in public, more often in private — about the nuclear option, driven by worry that the United States might hesitate to defend the countries if doing so might provoke a missile launched from the North at Los Angeles or Washington. In South Korea, polls show 60 percent of the population favors building nuclear weapons. And nearly 70 percent want the United States to reintroduce tactical nuclear weapons for battlefield use, which were withdrawn a quarter-century ago. There is very little public support for nuclear arms in Japan, the only nation ever to suffer a nuclear attack, but many experts believe that could reverse quickly if North and South Korea both had arsenals. Prime Minister Abe Shinzo has campaigned for a military buildup against the threat from the North, and Japan sits on a stockpile of nuclear material that could power an arsenal of 6,000 weapons. A week ago, he won a commanding majority in parliamentary elections, fueling his hopes of revising the nation’s pacifist Constitution. Beyond South Korea and Japan, there is already talk in Australia, Myanmar, Taiwan and Vietnam about whether it makes sense to remain nuclear-free if others arm themselves — heightening fears that North Korea could set off a chain reaction in which one nation after another feels threatened and builds the bomb. In a recent interview, Henry A. Kissinger, one of the few nuclear strategists from the early days of the Cold War still living, said he had little doubt where things were headed. “If they continue to have nuclear weapons,” he said of North Korea, “nuclear weapons must spread in the rest of Asia.” “It cannot be that North Korea is the only Korean country in the world that has nuclear weapons, without the South Koreans trying to match it. Nor can it be that Japan will sit there,” he added. “So therefore we’re talking about nuclear proliferation.” Such fears have been raised before, in Asia and elsewhere, without materializing, and the global consensus against the spread of nuclear weapons is arguably stronger than ever. But North Korea is testing America’s nuclear umbrella — its commitment to defend its allies with nuclear weapons if necessary — in a way no nation has in decades. Similar fears of abandonment in the face of the Soviet Union’s growing arsenal helped lead Britain and France to go nuclear in the 1950s. President Trump, who leaves November 3 for a visit to Asia, has intensified these insecurities in the region. During his presidential campaign, he spoke openly of letting Japan and South Korea build nuclear arms even as he argued they should pay more to support the American military bases there. “There is going to be a point at which we just can’t do this anymore,” he told the New York Times in March 2016. Events, he insisted, were pushing both nations toward their own nuclear arsenals anyway. Trump has not raised that possibility in public since taking office. But he has rattled the region by engaging in bellicose rhetoric against North Korea and dismissing talks as a “waste of time.” In Seoul and Tokyo, many have already concluded that North Korea will keep its nuclear arsenal, because the cost of stopping it will be too great — and they are weighing their options. Japan briefly considered building a “defensive” nuclear arsenal in the 1960s despite its pacifist Constitution. South Korea twice pursued the bomb in the 1970s and 1980s, and twice backed down under American pressure. Even Taiwan ran a covert nuclear program before the United States shut it down. Today, there is no question that both South Korea and Japan have the material and expertise to build a weapon. All that is stopping them is political sentiment and the risk of international sanctions. Both nations signed the Nuclear Nonproliferation Treaty, but it is unclear how severely other countries would punish two of the world’s largest economies for violating the agreement. South Korea has 24
nuclear reactors and a huge stockpile of spent fuel from which it can extract plutonium — enough for more than 4,300 bombs, according to a 2015 paper by Charles D. Ferguson, president of the Federation of American Scientists. Japan once pledged never to stockpile more nuclear fuel than it can burn off. But it has never completed the necessary recycling and has 10 tons of plutonium stored domestically and another 37 tons overseas. “We keep reminding the Japanese of their pledge,” said Ernest J. Moniz, chief executive of the Nuclear Threat Initiative and an energy secretary in the Obama administration, noting that it would take years if not decades for Japan to consume its fissile material because almost all its nuclear plants have remained offline since the 2011 Fukushima accident. Analysts often describe Japan as a “de facto” nuclear state, capable of building a weapon within a year or two. “Building a physical device is not that difficult anymore,” said Suzuki Tatsujiro, former deputy chairman of the Japan Atomic Energy Commission. Japan already possesses long-range missile technology, he added, but would need some time to develop more sophisticated communications and control systems. South Korea may be even further along, with a fleet of advanced missiles that carry conventional warheads. In 2004, the government disclosed that its scientists had dabbled in reprocessing and enriching nuclear material without first informing the International Atomic Energy Agency as required by treaty. “If we decide to stand on our own feet and put our resources together, we can build nuclear weapons in six months,” said Suh Kune-yull, a professor of nuclear engineering at Seoul National University. “The question is whether the president has the political will.” President Moon Jae-in has been firm in his opposition to nuclear weapons. He insists that building them or reintroducing American ones to South Korea would make it even more difficult to persuade North Korea to scrap its own. Though Moon has received high approval ratings since his election in May, his view is increasingly a minority one. Calls for nuclear armament used to be dismissed as chatter from South Korea’s nationalist fringe. Not anymore. Now people often complain that South Korea cannot depend on the United States, its protector of seven decades. The opposition Liberty Korea party called on the United States to reintroduce tactical nuclear weapons to South Korea in August after the North tested an intercontinental ballistic missile that appeared capable of reaching the mainland United States. “If the U.N. Security Council can’t rein in North Korea with its sanctions, we will have no option but to withdraw from the Nonproliferation Treaty,” Won Yoo-chul, a party leader, said in September. Given the failure of sanctions, threats and negotiations to stop North Korea, South Koreans are increasingly convinced the North will never give up its nuclear weapons. But they also oppose risking a war with a military solution. Most believe the Trump administration, despite its tough talk, will ultimately acquiesce, perhaps settling for a freeze that allows the North to keep a small arsenal. And many fear that would mean giving the North the ultimate blackmail tool — and a way to keep the United States at bay. “The reason North Korea is developing a hydrogen bomb and intercontinental ballistic missiles is not to go to war with the United States,” said Cheong Seong-chang, an analyst at the Sejong Institute near Seoul. “It’s to stop the Americans from intervening in armed skirmishes or full-scale war on the Korean Peninsula.” The closer the North gets to showing it can strike the United States, the more nervous South Koreans become about being abandoned. Some have asked whether Washington will risk the destruction of an American city by intervening, for example, if the North attempts to occupy a border island, as its soldiers have practiced. For many in South Korea, the solution is a homegrown nuclear deterrent. “If we don’t respond with our own nuclear deterrence of some kind, our people will live like nuclear hostages of North Korea,” said Cheon Seong-whun, a former presidential secretary for security strategy. With nuclear weapons of its own, the South would gain leverage and could force North Korea back to the bargaining table, where the two sides could whittle down their arsenals through negotiations, some hawks argue. But given the risks of going nuclear, others say Seoul should focus on persuading Washington to redeploy tactical nuclear weapons. “The redeployment of American tactical nuclear weapons would be the surest way” to deter North Korea, Defense Minister Song Young-moo said last month, but he added that it would be difficult to get Washington to agree to that. The discussion in Japan has been more subdued than in South Korea, no surprise after 70 years of public education about the horrors of Hiroshima and Nagasaki. But Japan has periodically considered developing nuclear weapons every decade since the 1960s. In 2002, a top aide to Junichiro Koizumi, the prime minister then, caused a furor by suggesting Japan might one day break with its policy of never building, possessing or allowing nuclear arms on its territory. North Korea has reopened that question. Ishiba Shigeru, a former
The U.S. military sent a nuclear-capable B-2 stealth bomber from Whiteman Air Force Base in Missouri on a long-range mission to the Pacific area of operations over the weekend, it said October 29. U.S. Strategic Command said in a statement that the type of long-range mission conducted was to “familiarize aircrew with air bases and operations in different geographic combatant commands, enabling them to maintain a high state of readiness and proficiency.” In a message likely intended to reassure Japan and South Korea ahead of President Donald Trump’s visit to Asia, which kicks off later this week, the statement also referred to the B-2 mission as “a visible demonstration of commitment to our allies and enhancing regional security.” The flight path of the B-2 was unclear, and Strategic Command did not respond to a request for comment, but the last time one of the stealth bombers flew near the Koreans was during a rare show of force over the peninsula in 2013. Military experts say that any U.S. strike on North Korea would almost certainly involve the powerful bombers. Yonhap reported today that Seoul had signaled its intent to offer maintenance support for U.S. strategic military assets to be deployed there on a rotational basis in time of need, citing an anonymous government source. The source was quoted as saying that the plan conveyed Seoul’s “hope that the U.S. will expand its missions on the Korean Peninsula without any concerns over issues of maintenance, fuel supplies and so forth.” (Jesse Johnson, “Nuclear-Capable B-2 Spirit Stealth Bomber Heads to Pacific As Matthis Blasts ‘Outlaw’ North Korea,” Japan Times, October 29, 2017)
missile defense, and the possibility of a South Korea/US/Japan military alliance.” Kang explained that the three sides’ security cooperation was “intended to enhance deterrence capabilities and effectively respond to the North Korean nuclear and missile threat.” “I would like to make it clear that this cooperation will not develop into a trilateral military alliance,” she continued. The comments were a response to the mention of Japanese Prime Minister Abe Shinzo’s name and the inclusion of language about “further ways to enhance cooperation” with Japan in a statement from [Moon’s] first U.S. summit in late June, as well as a pledge to “continue developing trilateral security cooperation” in a joint statement from a dinner by the three sides’ leaders at the G20 summit in Germany that took place in July. Along similar lines, Beijing has raised concerns that South Korea’s THAAD deployment means it is being incorporated into the U.S. missile defense system. In her response, Kang reiterated that the Moon administration “is unchanged in its position that we are not taking part in the US missile defense system.” “Our administration is not considering additional THAAD deployments. I want to make that clear,” she added. Her remarks amounted to a pledge, with the Moon administration publicly drawing a line in answer to Beijing’s concerns that the THAAD deployment and a trilateral alliance would turn South Korea into a US forward base against China. Kang also responded to speculation about Seoul and Beijing restoring ties. “I expect I may be able to announce some related news shortly for the development of the two sides’ future-oriented relationship,” she said. “I believe these measures will allow us to overcome difficulties in our relationship and quickly enter a normalization track,” she added. Kang’s remarks gave the appearance of having been coordinated beforehand in working-level discussions between Seoul and Beijing. There has been speculation that China may have demanded that South Korea clarify its positions on the three issues ahead of their summit. The Chinese Foreign Ministry immediately voiced its approval of Kang’s statements. In a regular briefing the same day, ministry spokesperson Hua Chunying said Beijing “value[s] these three aspects of the remarks by the ROK.” “The Chinese side has always been opposed to the deployment of the THAAD system in the ROK by the US. We hope the ROK will faithfully follow through on its above-mentioned commitments, properly handle the relevant issue and bring the China-ROK relations back to the track of steady and sound development at an early date,” she added. “For a Chinese Foreign Ministry spokesperson to express hopes for South Korea’s implementation [of its position] is an indication that China plans to accept things at this level and bring the situation to a conclusion,” said Peking University professor Jin Jingyi in a telephone interview. “There was also probably a feeling that it benefits neither side to continue dragging things out conflict without resolving the,” he added. Jin also predicted the two sides were “likely to work quickly now that they have entered relationship-mending mode,” adding that a “schedule for a bilateral summit or China visit by President Moon Jae-in could emerge shortly.” If a summit does happen in the near future, it could prove decisive in smoothing over the THAAD conflict and getting relations back on track. Observers in and around the Blue House had predicted relations with Beijing might improve after the CCP National Congress. The first signs of warmth in the two sides’ relationship for some time were also recently seen in the October 13 extension of their current swap deal deadline and their first defense ministers’ summit in two years on October 24. Kang said that preparations were “under way for a bilateral summit at APEC.” Regarding the possibility of Moon visiting China before mid-December, she replied, “We are working to enable it to happen within the year.” Sungkyun University of China Studies director Lee Hee-ok said South Korea and China “seem to have found the momentum” to improve ties. “The next stage after keeping the status quo without additional THAAD deployments is to explain South Korea’s strategic intentions,” he suggested. Professor Moon Heung-ho of the Hanyang University Graduate School of International Studies said Seoul and Beijing “agreed that they need to find a way out on the THAAD issue with Xi Jinping beginning his second term and [US President Donald] Trump’s visit coming up.” The Ministry of Foreign Affairs announced that Special Representative for Korean Peninsula Peace and Security Affairs Lee Do-hoon “is scheduled to hold a meeting of Six-Party Talks chief negotiators on October 31 with Chinese Assistant Foreign Minister and Special Representative on Korean Peninsula Affairs Kou Xuanyou.” “The two sides will be holding in-depth discussions on ideas for cooperation to peacefully and diplomatically resolve the North Korean nuclear issue,” the ministry said. (Kim Ji-eun, Kim Bo-hyep, and Noh Ji-won, “S.K. Foreign Minister Rules out Additional THAAD Deployments, Joining U.S. MD System,” Hankyore, October 31, 2017)
President Trump does not have authority to use military force in North Korea outside of an imminent threat, Defense Secretary James Mattis and Secretary of State Rex Tillerson told lawmakers Monday. But they declined to define what they consider an imminent threat to be. Mattis and Tillerson were testifying before the Senate Foreign Relations Committee on the issue of authorization for the use of military force (AUMF). Committee ranking member Sen. Ben Cardin (D-Md.) asked the pair if they agree there is no congressional authorization for the use of force in North Korea. “I understand the president's authorities under Article II. There's an imminent threat against the United States, he has certain powers. But as far as congressional authorization, there is no authorization. Is that correct?” Cardin asked. Tillerson replied: “That's my understanding, yes.” “I believe the president has Article II, you know, authority only,” Mattis added. Later in the hearing, Sen. Chris Murphy (D-Conn.) pressed them further on whether they believe the president needs congressional authorization to strike North Korea. “I think it would depend again on all circumstances. It's a fact-based decision,” Tillerson said. “It is a question of the threat, the imminent threat, the nature of the threat as to whether the president would then exercise his authorities without the need for congressional authorizations.” Mattis added he could see a scenario in which there is not enough time to notify Congress before striking. “I believe under Article II, he has a responsibility to protect the country and if there was not time, I could imagine him not consulting or consulting as he’s doing something along the lines of for example of what we did at Shayrat air field in Syria where we struck that and Congress was notified immediately,” Mattis said. “In this case of North Korea, it would be a direct imminent or actual attack on the United States I think Article II would apply.” But asked by Murphy whether possessing a nuclear weapon would be considered an imminent threat, Tillerson and Mattis said that was too hypothetical. “I’m always reluctant to get into too many hypotheticals because the possession could be sitting in an underground, not-ready-to-be-used condition or the possession could be sitting upright on the tail about to be launched,” Tillerson said. “So again, I think it would have to be fact based and given consideration as to the circumstances around an imminent threat.” Mattis added that he agrees. “I think this is an area where a number of facts would have to bear on the problem in order to give you a complete answer,” Mattis said. (Rebecca Kheel, “Mattis, Tillerson: No Authority for Military Action outside ‘Imminent Threat,’” The Hill, October 30, 2017) “There is no authorization for the use of military force against North Korea absent an imminent attack against the United States or against U.S. forces in this region,” Sen. Benjamin L. Cardin (Md.), the ranking Democrat on the committee, said at the beginning of the session. He asked Tillerson and Mattis if they agreed. Tillerson said yes. Mattis said the president has only “Article 2” authority, referring to Trump’s constitutionally mandated duty to protect the nation. Several senators reminded Tillerson and Mattis such authority is interpreted as authorizing the president to use military force only in response to an attack on American citizens or interests, or in the case an attack is “imminent.” The definition of “imminent” is crucial because top Trump administration officials constantly say that Kim Jong Un cannot be allowed to possess the capability to strike the United States homeland with an intercontinental ballistic missile topped with a nuclear warhead. That red line seems to suggest that Trump might attack when North Korea acquires that capability, not when the regime of Kim Jong Un is actually set to use it. “We all understand that ‘imminent’ has some subjectivity,” Sen. Tim Kaine (D-Va.) told me after the hearing. “But you can’t stretch it to mean to prevent them from the ability to attack us sometime in the future.” Pressed by Sen. Chris Murphy (D-Conn.) on whether the Trump team would see North Korea’s mere possession of such a capability as an “imminent” threat, Tillerson said it would have to be a “fact based” analysis at the time. “The possession could be sitting in an underground, not ready to be used position. Or possession could be sitting upright … about to be launched,” Tillerson said. (Josh Roin, “Can Anyone Stop Trump from Attacking North Korea,” Washington Post, November 1, 2017)
scenes communications have improved a relationship vexed by North Korea’s nuclear and missile tests, the death of U.S. university student Otto Warmbier days after his release by Pyongyang in June and the detention of three other Americans. Word of quiet engagement with Pyongyang comes despite Trump’s comments, North Korea’s weapons advances and suggestions by some U.S. and South Korean officials that Yun’s interactions with North Koreans had been reined in. “It has not been limited at all, both (in) frequency and substance,” said the senior State Department official. Among the points that Yun has made to his North Korean interlocutors is to “stop testing” nuclear bombs and missiles, the official said. The New York channel is one of the few conduits the United States has for communicating with North Korea, which has itself made clear it has little interest in serious talks before it develops a nuclear-tipped missile capable of hitting the continental United States. The high-level contact between Yun and the North Koreans was when he traveled to North Korea in June to secure the release of Warmbier, who died shortly after he returned home in a coma, the State Department official said. At the start of Trump’s presidency, Yun’s instructions were limited to seeking the release of U.S. prisoners. “It is (now) a broader mandate than that,” said the State Department official, declining, however, to address whether authority had been given to discuss North Korea’s nuclear and missile program. The Trump administration has demanded North Korea release three other U.S. citizens: missionary Kim Dong Chul and academics Tony Kim and Kim Hak Song. The official said, however, that “the preferred endpoint is not a war but some kind of diplomatic settlement” and suggestions that Washington is setting up a binary choice for Pyongyang to capitulate diplomatically or military action were “misleading.” Diplomacy, the official said, “has a lot more room to go.” In Beijing, Foreign Ministry spokeswoman Hua Chunying said China welcomed any dialogue between the United States and North Korea. “We encourage North Korea and the United States to carry out engagement and dialogue,” Hua told reporters, adding that she hoped talks could help return the issue to a diplomatic track for resolution. Democratic U.S. senators introduced a bill today they said would prevent Trump from launching a nuclear first strike on North Korea on his own, highlighting the issue days before the Republican’s first presidential trip to Asia. A high-ranking North Korean defector said in Washington that he backed the Trump administration’s policy of pressuring Pyongyang through sanctions, coupled with “maximum engagement” with the leadership and increased efforts to get information into North Korea to educate its people. “I strongly believe in the use of soft power before taking any military actions,” Thae Yong Ho, chief of mission at Pyongyang’s embassy in London until he defected in 2016, told the Center for Strategic and International Studies. (Arshad Mohammed and Matt Spetalnick, “U.S. Pursues Direct Diplomacy with North Korea despite Trump’s Rejection,” Reuters, October 31, 2017)

South Korea and China agreed to end a dispute over the deployment of an advanced American missile defense system in the South and to restore their economic and other ties. The agreement, unveiled following low-key negotiations involving Chinese and South Korean officials, removed a major obstacle in relations between Seoul and Beijing, one that has complicated international efforts to tame North Korea’s nuclear weapons ambitions. For years, China has vehemently protested the United States’ plan to deploy the Terminal High Altitude Area Defense, or THAAD, system in South Korea, fearing it would undercut its own national security. After the United States and South Korea pressed ahead with the deployment in Seongju, 135 miles southeast of Seoul, the capital, in April, Chinese customers boycotted South Korean cars, movies and television dramas, as well as South Korean-run supermarkets. “Both sides shared the view that the strengthening of exchange and cooperation between Korea and China serves their common interests and agreed to expeditiously bring exchange and cooperation in all areas back on a normal development track,” said a statement from the South Korean Foreign Ministry. The Chinese Foreign Ministry also issued a similar statement announcing the agreement. The breakthrough came only days after President Xi Jinping of China emerged triumphant from the Communist Party congress this month, more confident than ever in his hold on power and in the pursuit of his foreign policy. The inauguration of Moon Jae-in, a liberal president of South Korea who has stressed the importance of relations with China, his country’s biggest trading partner, in May has also helped thaw relations. In a separate statement, Moon’s office said he would hold a summit meeting with Xi on the sidelines of a summit of Asia-Pacific Economic Cooperation countries in Vietnam on November 10-11. Foreign Minister Kang Kyung-wha of South Korea first hinted at a possible
breakthrough yesterday, when she said that despite the THAAD deployment, South Korea had no intention of joining the United States’ efforts to build a region-wide missile-defense system aimed at countering China’s expansion of its military capabilities. Ms. Kang also said South Korea would not accept any additional THAAD batteries. She also reiterated that South Korea would not enter any trilateral military alliance with the United States and Japan, something that Xi raised concerns about when they met Moon in July. The United States remains South Korea’s most important military ally. At Washington’s urging, South Korea and Japan have been expanding their military cooperation to better deal with North Korea’s missile threats. But South Korea has repeatedly stressed that it had no intention of entering a military alliance with Japan, its former colonial master, and has been wary of Japan’s ambitions, under its nationalist prime minister, Shinzo Abe, to increase its military profile in the region. Underscoring the continuing threat from North Korea’s nuclear program, the head of South Korea’s weather agency said on Monday that another powerful blast at the North’s underground test site could destabilize the area and send radioactive material into the atmosphere. “Should another nuclear test take place, there is that possibility,” Nam Jae-cheol, director of the Korea Meteorological Administration, told lawmakers inquiring about the potential for radioactive fallout. North Korea has conducted six nuclear tests since 2006, all of them in tunnels buried deep under Mount Mantap in Punggye-ri, in North Hamgyong Province. (Choe Sang-hun, “South Korea and China Reconcile amid Threat,” New York Times, October 31, 2017, p. A-7) “South Korea and China agreed that President Moon Jae-in and Chinese President Xi Jinping will have a summit next week on the sidelines of the Asia-Pacific Economic Cooperation [APEC] meeting in Da Nang, Vietnam,” said Nam Gwan-pyo, second deputy director of the National Security Office of the Blue House. Nam said the summit will be the first step in implementing an agreement between Seoul and Beijing, announced by the two countries’ foreign ministries earlier in the morning. “Both sides shared the view that the strengthening of exchanges and cooperation between Korea and China serves their common interests and agreed to expeditiously bring exchanges and cooperation in all areas back on a normal development track,” the agreement said. The summit between Moon and Xi will, in fact, be the second since Moon took office in May. They had their first meeting in July on the sidelines of the Group of 20 summit. Nam also said a meeting between Moon and Chinese Premier Li Keqiang is being arranged on the sidelines of the Association of Southeast Asian Nations meetings in the Philippines on November 13 and 14. Ahead of Nam’s announcement, the Ministry of Foreign Affairs made public the outcome of negotiations between Seoul and Beijing to find a breakthrough in improving relations. Nam and Kong Xuanyou, China’s assistant foreign minister, were the head negotiators. “Senior officials of the two governments agreed that resolving the Thaad [Terminal High Altitude Area Defense] issue is the precondition to restore bilateral relations,” a senior Blue House official said. “They also agreed that the Thaad issue must be dealt with politically, not through conventional diplomatic means. A political settlement required negotiators who were capable of communicating with the highest decision-makers and speedily adjusting stances.” The press statement on the negotiations to restore Korea-China relations addressed the THAAD issue in length. “Korea took note of China’s position and concern regarding the Thaad issue,” the statement said. “Korea made it clear that the system is, pursuant to the original purpose of its deployment, not directed at a third party and thus does not undermine China’s strategic security interests.” While Seoul and Washington said the system is meant to deter North Korean threats, Beijing said its powerful radar can spy on Chinese territory. “China reiterated that it opposes the Thaad deployment in Korea to protect its national security,” the statement said. “At the same time, China took note of the position stated by Korea, and hoped that Korea would deal with related issues appropriately. The two sides agreed to engage in communication on Thaad-related issues about which China is concerned through communication between their military authorities.” A Blue House official said Seoul and Beijing agreed to drop the issue. “This is the end of the Thaad controversy,” a Blue House official said. “It won’t be addressed as part of the agenda at next month’s summit.” The press statement also noted that China addressed three other security issues: the establishment of a U.S.-led missile defense regime, additional deployment of Thaad equipment and military cooperation among Korea, the United States and Japan. China has suspected that the THAAD deployment was the first step in Korea’s participation in the U.S. missile defense regime, which would lead to the eventual formation of a regional military alliance similar to that of NATO. The Moon administration
assuaged China about those three concerns. Defense Minister Song Young-moo and U.S. Defense Secretary James Mattis made clear October 28 in a joint communique after security consultation that the THAAD deployment is “provisional” and the system “would not be directed toward any third party nations.” Secondly, Foreign Minister Kang Kyung-wha told the National Assembly yesterday that Korea has no intention to participate in a U.S.-led missile defense regime and is focusing on building its own missile shield. She also said Seoul is not considering additional THAAD deployment and pledged that security cooperation among Korea, Japan and the United States will not evolve into a trilateral military alliance. (Ser Myo-ja, “Seoul and Beijing ASgree to Mend Frayed Relations,” JoongAng Ilbo, October 31, 2017)

South Korea will neither develop nor possess nuclear arms, President Moon Jae-in said, amid conservative opposition parties’ call to redeploy U.S. tactical nuclear weapons. Moon also renewed his call on North Korea to give up its nuclear ambitions. “In accordance with the declaration of denuclearization jointly announced by the South and the North, a nuclear-armed North Korea cannot be tolerated nor accepted. We too will not develop or possess nukes,” the president said in his second state of the nation address at the National Assembly. President Moon said the government’s foremost goal was to establish peace. “What we want to realize is peace on the Korean Peninsula. Therefore, there can never be any armed conflict on the Korean Peninsula under any circumstances. There cannot be any military action on the Korean Peninsula without a prior consent of the Republic of Korea,” he said, referring to his country by its official name. However, the president vowed maximum retaliation against any military provocation from the North. “To this end, we must secure overwhelming power. We will also closely work with the international community, based on the strong Korea-U.S. alliance,” Moon said. He also stressed the importance of maintaining what he has called maximum pressure and sanctions on the North, calling them a way to bring North Korea to the dialogue table. “We must decide the fate of our own nation,” the president said. “We will not repeat the unfortunate history of having our fate decided regardless of our wishes, such as the (Japanese) colonial rule (of Korea) and the division (of the two Koreas).” (Byun Duk-kun, “Moon Says S. Korea Will Neither Develop Nor Possess Nuclear Arms,” Yonhap, October 31, 2017) During his address proposing next year’s budget plan at the National Assembly on Nov. 1, South Korean President Moon Jae-in unveiled five principles for achieving peace on the Korean Peninsula. “The new Administration was launched amidst the gravest security environment we have seen in a long time. The Government is working to stabilize the management of the current situation and, at the same time, ultimately ensure peace on the Korean Peninsula,” he said, as he laid out his five principles. The first principle is “establishing peace on the Korean Peninsula.” “Our top priority is to maintain peace on the Korean Peninsula. Thus, armed conflict must be avoided under any circumstance. No military action on the Korean Peninsula shall be taken without prior consent of the Republic of Korea,” he asserted. This appears to be aimed at the US, which continues to toy with the possibility of using the “military option” against North Korea. Significantly, Moon delivered this message on the very podium in the National Assembly where US President Donald Trump will deliver his own address on Nov. 8, exactly one week later. Along with reflecting the fact that concerns remain about a military clash between North Korea and the US, Moon appears to have set the tone for his administration’s Korean Peninsula policy by placing this first among his five principles. Next, Moon reaffirmed the principle of the “denuclearization of the Korean Peninsula.” “The Joint Declaration on the Denuclearization of the Korean Peninsula, signed by both South and North Korea, makes it impossible to accept or acknowledge North Korea as a nuclear power. South Korea will not develop or possess nuclear arms, either,” he added. This was a blunt dismissal of the arguments advanced by South Korea’s conservative establishment following North Korea’s sixth nuclear test to have the US redeploy tactical nuclear weapons or develop South Korea’s own nuclear arsenal. The third principle elucidated by Moon was for South Korea to “take [a] primary role in resolving the inter-Korean issue.” This is a position that Moon has underlined since he became a candidate for president. “The destiny of the Korean nation must be determined by Koreans. The unfortunate past in which our destiny was determined against our will, such as colonial rule and national division, must never be allowed to recur,” he stressed. After this, Moon proposed the principle of “a peaceful resolution of the North Korean nuclear issue.” He reconfirmed that the sanctions and pressure against North Korea imposed by the international community (including the UN Security
Donald Trump warned China a day before departing on his first Asia tour as president that it must do more to rein in North Korea's nuclear ambitions or face "a big problem" with "warrior nation" Japan. "Japan is a warrior nation, and I tell China and I tell everyone else that listens, I mean, you're gonna have yourself a big problem with Japan pretty soon if you allow this to continue with North Korea," Trump said in an interview on the Fox News program "The Ingraham Angle." It was unclear what the U.S. leader was referring to, in terms of a "big problem," but Trump had suggested during his successful campaign for president that he would be open to Japan acquiring its own nuclear weapons. (Jesse Johnson, "Trump Warns China It Could Face 'Big Problem' with 'Warrior Nation' Japan over North Korea," Japan Times, November 3, 2017)

President Donald Trump's national security adviser says North Korea could be returned to the list of countries the U.S. believes sponsor terrorism, as part of Trump's strategy to counter the North's growing nuclear threat. "You'll hear more about that soon, I think," the adviser, H.R. McMaster, said at a briefing on the eve of Trump's five-nation tour of Asia. McMaster cited the killing in a Malaysian airport earlier this year of the estranged half-brother of North Korea's leader as an act of terrorism that could lead to the North's being added back to a list that includes only Iran, Sudan and Syria. While Malaysia has not directly accused North Korea, South Korea's spy agency has claimed the attack was part of a plot by North Korean leader Kim Jong Un to kill his brother, Kim Jong Nam. "A regime who murders someone in a public airport using nerve agent, and a despotic leader who murders his brother in that manner, I mean, that's clearly an act of terrorism that fits in with a range of other actions," McMaster said. He said returning North Korea to the state sponsors of terrorism list "is something that's under consideration." Under legislation enacted August 2, the State Department was required to determine within 90 days — or around now — whether North Korea meets the criteria for being designated as a state sponsor of terrorism. Secretary of State Rex Tillerson "continues to evaluate whether or not to designate DPRK as a state sponsor of terror," an official said Thursday. "The Department has informed Members of Congress that he expects to conclude his review and announce a decision within the month." McMaster said the president would not temper his rhetoric against North Korea while on tour. "The president will use whatever language he wants to use," he said. "That's been of great reassurance to our allies, partners and others in the region who are literally under the gun of this regime." McMaster said a denuclearized Korean peninsula "is the only plausible outcome" and he called on other nations, including China — North Korea's chief benefactor in the region — to do more to help make that a reality. The national security adviser said Trump would address North Korea's human rights record during the trip. Re-designating North Korea as a state sponsor of terrorism would be largely of symbolic significance. North Korea is heavily and increasingly sanctioned for its nuclear and missile activity in defiance of United Nations Security Council resolutions. Sanctions from a terror designation are unlikely to inflict significant, additional economic punishment. (Darlene Superville, “U.S. Considering Return of N. Korea to List of Terror Sponsors,” Associated Press, November 3, 2017) Military options against North Korea will be on the table when the U.S. and
South Korean leaders meet next week, McMaster said. "It would be irresponsible not to talk about the potential for military efforts within the alliance," he said. "The reason why that topic must be on the agenda is because of the behavior of this rogue regime and the threat that Kim Jong-un poses," he said in a roundtable interview with news outlets from the five Asian nations Trump will be visiting. Trump and South Korean President Moon Jae-in are to meet in Seoul on November 14. "The discussion will also be about what more can we do, what more can all countries do to resolve this short of war," McMaster added. "What we think is essential is to continue the diplomatic and economic isolation of the North Korean regime so that leaders within that regime recognize that this weapon, this pursuit of this destructive capability, is not making them more secure, it's making them less secure, and to conclude that it is in their interest to begin denuclearization." But he also made clear that the U.S. has not given up on diplomacy. "Diplomacy is our main effort now," he said, "but it's diplomacy with other countries who recognize the grave threat and who are working together." McMaster said Trump has instructed officials to ask other countries to do more to isolate the North until the regime realizes it has no option but to denuclearize. McMaster said he welcomes this week's announcement that Seoul and Beijing have agreed to move forward despite a dispute over South Korea's hosting of the THAAD U.S. missile defense system on its soil. "What's important is that China is no longer punishing South Korea for defending itself, which I always thought didn't make any sense," he said, referring to Beijing's economic retaliation against Seoul. "What China may be realizing as well is that it makes more sense, at least from our perspective, to prioritize its relationship with South Korea over its relationship with North Korea, which is not only a dangerous state but a failing state at the same time." If North Korea continues to pursue nuclear weapons, McMaster said there could be a breakdown of the nonproliferation regime in Northeast Asia. "And that's not in anybody's interest, right?" he said, apparently addressing growing calls in South Korea and Japan for their own nuclear armament. (Yonhap, "Moon, Trump to Discuss Military Options against North Korea: McMaster," Korea Times, November 3, 2017)

11/3/17

Credible military capabilities should be in place to back up diplomatic and economic sanctions to rein in North Korea's nuclear and missile threats, the chief of the United States Forces Korea said. "The military is in support of these diplomatic and economic actions that are intended to create sufficient pressure to cause (North Korean leader) Kim Jong-un to stop and reverse what it is he is doing so far," Gen. Vincent Brooks said in his lecture to a group of retired and sitting South Korean military commanders. "As you can see more pressure is needed, but so is more diplomacy and more economic actions," the commander of 28,500 American forces stationed in South Korea said. "And it has to be done on the foundation of credible and ready military capabilities, and that's what we are focused on every day in the Republic of Korea-U.S. alliance." "We know it's not the only answer to solve the problem by itself," he said of the military capabilities. "But without it, it's very difficult for diplomacy and economic actions to gain any kind of leverage or traction," according to the commander. He also called for defense buildup in Seoul and areas surrounding the capital, highlighting that the recent deployment of the U.S. Terminal High Altitude Area Defense (THAAD) system dispelled security threats in the southern portion of South Korea. "On the Korean Peninsula, several things can be held at risk by North Korea. But with the deployment of things like THAAD, that changed what it is Kim Jong-un can hold at risk, especially the southern portion of the peninsula," Brooks noted. "This is how it should be viewed." "We need to make sure we are adding to the defense that already exists to protect the population in Seoul and the metropolitan area ... so that Kim Jong-un cannot hold this population at risk." (Yonhap, “Credible Military Capabilities Should Back up Diplomatic Actions to Rein in N. Korea: USFK Commander,” November 3, 2017)

11/4/17

The only way to locate and secure all of North Korea’s nuclear weapons sites “with complete certainty” is through an invasion of ground forces, and in the event of conflict, Pyongyang could use biological and chemical weapons, the Pentagon told lawmakers in a new, blunt assessment of what war on the Korean Peninsula might look like. The Pentagon, in a letter to lawmakers, said that a full discussion of U.S. capabilities to “counter North Korea’s ability to respond with a nuclear weapon and to eliminate North Korea’s nuclear weapons located in deeply buried,
underground facilities” is best suited for a classified briefing. The letter also said that Pentagon leaders “assess that North Korea may consider the use of biological weapons” and that the country “has a long-standing chemical weapons program with the capability to produce nerve, blister, blood and choking agents.” The Pentagon repeated that a detailed discussion of how the United States would respond to the threat could not be discussed in public. The letter was written by Rear Adm. Michael J. Dumont, the vice director of the Pentagon’s Joint Staff, in response to a request for information from two House members about “expected casualty assessments in a conflict with North Korea,” including for civilians and U.S. and allied forces in South Korea, Japan and Guam.

“A decision to attack or invoke another country will have ramifications for our troops and taxpayers, as well as the region, for decades,” Ted Lieu (D-Calif.) and Ruben Gallego (D-Ariz.) wrote to the Pentagon. “We have not heard detailed analysis of expected U.S. or allied force casualties, expected civilian casualties, what plans exist for the aftermath of a strike — including continuity of the South Korean Government.” The Pentagon said that calculating “best- or worst-case casualty scenarios” was challenging and would depend on the “nature, intensity and duration” of a North Korean attack; how much warning civilians would have to get to the thousands of shelters in South Korea; and the ability of U.S. and South Korean forces to respond to North Korean artillery, rockets and ballistic missiles with their own retaliatory barrage and airstrikes. The letter noted that Seoul, the South Korean capital, is a densely populated area with 25 million residents. Any operation to pursue North Korean nuclear weapons would likely be spearheaded by U.S. Special Operations troops. Last year, President Barack Obama and then-Defense Secretary Ashton B. Carter gave U.S. Special Operations Command a new, leading role coordinating the Pentagon’s effort to counter weapons of mass destruction. SOCOM did not receive any new legal authorities for the mission but gained influence in how the military responds to such threats. Elite U.S. forces have long trained to respond in the case of a so-called “loose nuke” in the hands of terrorists. But senior officials said SOCOM is increasingly focused on North Korea. A senior U.S. military official in South Korea, speaking on the condition of anonymity to discuss ongoing operations, said that while the 28,500 U.S. troops in South Korea maintain a high degree of readiness, he “has to believe” that North Korea does not want a war, given all of the nations aligned against it. “If you open the history books, this is not the first time that we’ve been in a heavy provocation cycle,” the official said. On the side of South Korea and the United States, he said, “there is no action taken without extreme consideration of not putting this in a position where a fight is going to happen.” Dumont’s letter also notes that “we have not seen any change in the offensive posture of North Korea’s forces.”

A statement by 16 lawmakers, released simultaneously with the Pentagon letter, urged Trump to stop making “provocative statements” that impede diplomatic efforts and risk the lives of U.S. troops. The Pentagon’s “assessment underscores what we’ve known all along: There are no good military options for North Korea,” said the statement, organized by Lieu and Gallego and signed by 14 other members of Congress who are veterans, all but one of them Democrats. In a telephone interview, Lieu said that the intent of asking the Pentagon for information was to spell out the catastrophic consequences of war with North Korea and the aftermath. “It’s important for people to understand what a war with a nuclear power would look like,” said Lieu, citing estimates of 300,000 dead in the first few days alone. More than 100,000 Americans are potentially at risk. Lieu, who spent part of his time in the Air Force on Guam preparing for military action against North Korea, called the letter a confirmation that a conflict would result in a “bloody, protracted ground war.” The Joint Chiefs, he believes, are “trying to send a message to the American public,” he said. “This is grim,” Lieu said. “We need to understand what war means. And it hasn’t been articulated very well. I think they’re trying to articulate some of that.” Gallego said that he wanted information because of what he sees as a cavalier attitude in the White House about military action in North Korea. The idea that a ground invasion would be needed to secure nuclear weapons is eye-opening, he said, and raises the possibility of the U.S. military losing thousands of troops. “I think that you’re dealing with career professionals at the Pentagon who realize that the drumbeats of war could actually end up leading us to war,” he said. “They want to make sure that there is full transparency and information out there about what can occur if our civilian leaders make wrong calculations.” The Pentagon letter also notes the possibility of “opposition from China or Russia.” “The Department of Defense maintains a set of up-to-date contingency plans to secure our vital national security interests,” Dumont wrote. “These plans account for a wide range of possibilities, including third-party
intervention, and address how best to ‘contain escalation.’ ” The letter says that both “Russia or China may prefer to avoid conflict with the United States, or possibly cooperate with us.” (Dan Lamothe and Carol Morello, “Scenario of War on N. Korea: Invasion,” Washington Post, November 5, 2017, p. A-1)

President Trump donned a military-style bomber jacket shortly after arriving today in Japan and projected confidence that the United States will confront threats in Asia, telling hundreds of U.S. troops that they will have his administration’s support “to fight, to overpower and to always, always, always win.” Trump’s tough talk in a speech to U.S. and Japanese military personnel at Yokota Air Base, shortly after Air Force One touched down here, aimed to set a tone for his five-nation tour, during which the president said he is likely to meet with Russian President Vladimir Putin. The president told reporters during his flight here that he wants “Putin's help on North Korea,” as his administration attempts to consolidate support for its strategy to pressure Pyongyang over its nuclear weapons program. “History has proven over and over that the road of the tyrant is a steady march towards poverty, suffering and servitude,” Trump told the troops, perhaps referring obliquely to North Korean dictator Kim Jong Un, whose name he did not mention. Noting that he has proposed a bigger military budget, Trump surveyed the troops in an air base hangar and declared: “We've got a lot of stuff coming; use it well.” The boisterous scene, during which the troops cheered and chanted “U.S.A.!” was closely watched in capitals across northeast Asia, where governments from Seoul to Beijing are looking for signals of how Trump will address the threat on his first trip to the region. On the plane, Trump told reporters that he plans to decide “very soon” whether to relabel North Korea a state sponsor of terror. The North spent 10 years on that list before being removed in 2008 by the George W. Bush administration for meeting nuclear inspection requirements. Pyongyang later violated the agreement. But Trump also offered encouragement for North Korean citizens, calling them “great people.” “They’re industrious, they’re warm, much warmer than the world really knows and understands,” he told reporters on the plane. “They’re great people and I hope it all works out for everybody. And it would be a wonderful thing if it could work for those great people, and for everybody.” And he seemed unconcerned about the prospect that North Korea might use his trip to the region to demonstrate its military might by firing a missile. “We’ll soon find out,” he said. “Good luck!” (David Nakamura and Ashley Parker, “Arriving in Japan, Trump Projects Confidence, Says He’ll Probably Meet Putin during Asian Trip,” Washington Post, November 5, 2017)

Trump: “Together with our allies, America’s warriors are prepared to defend our nation using the full range of our unmatched capabilities. No one — no dictator, no regime, and no nation — should underestimate, ever, American resolve. Every once in a while, in the past, they underestimated us. It was not pleasant for them, was it? (Applause.) It was not pleasant. We will never yield, never waver, and never falter in defense of our people, our freedom, and our great American flag. (Applause.) That flag stands for the values of our Republic, the history of our people, the sacrifice of our heroes, and our loyalty to the nation we love. As long as I am President, the servicemen and women who defend our nation will have the equipment, the resources, and the funding they need to secure our homeland, to respond to our enemies quickly and decisively, and, when necessary, to fight, to overpower, and to always, always, always win. Right? (Applause.) This is the heritage of the American Armed Forces — the greatest force for peace and justice the world has ever known.” (White House Office of the Press Secretary, Remarks of President Trump to Servicemembers at Yokota Air Base, November 5, 2017)

The South Korean government issued its own sanctions against North Korea on Sunday over its nuclear and missile provocations ahead of U.S. President Donald Trump's visit to the country. The Ministry of Foreign Affairs unveiled a list of 18 North Korean individuals subject to the unilateral sanctions, saying they will take effect Monday. It marks Seoul's first unilateral sanctions against the nuclear weapon-seeking country since President Moon Jae-in took power in May. However, the sanctions could only remain ineffective and symbolic because the two Koreas have already cut almost all exchanges. The ministry singled out the figures who had been blacklisted by the U.N. Security Council (UNSC) for being linked to North Korea's financial networks. The selection
came in line with sanctions by the international community, according to the ministry. “They are the executives of North Korean banks overseas suspected of funneling money for the development of weapons of mass destruction for their government,” the ministry said. “The measure is expected to help cut the North's illegal financial resource and raise awareness of the dangers of transactions with the blacklisted individuals at home and abroad.” The sanctions will freeze property of the sanctioned individuals within South Korean jurisdiction and ban any of their transactions with South Korean banks. The ministry added the government will continue working on resolving the North's nuclear issue peacefully by making the North come to the dialogue table through sanctions and pressure. The move is interpreted as a show of tightened coordination between Seoul and Washington on the North Korea policy. A senior Cheong Wa Dae official hinted Friday that the move was facilitated at the request of Washington. "The U.S. called on our government to impose additional sanctions as they will carry a symbolic significance regardless of their effectiveness," the official said. (Kim Hyo-jin, “Seoul Unveils Own Sanctions against N.K.,” Korea Times, November 5, 2017)

Donald Trump has indicated that he would be prepared to meet the North Korean leader Kim Jong-un at some point, though he said it was still “far too early” for a one-to-one conversation with his adversary. Speaking at the outset of a five-nation Asia tour set to be dominated by the standoff over North Korea’s nuclear program, Trump declared himself happy to “sit down with anybody.” “I don’t think it’s strength or weakness, I think sitting down with people is not a bad thing,” he told the journalist Sharyl Attkisson, host of the Full Measure TV show. “So I would certainly be open to doing that [sitting down with Kim] but we’ll see where it goes. I think we’re far too early.” The rare conciliatory tone contrasted with more familiar Trump bluster earlier in the weekend, when he told U.S. troops in Japan that “no dictator” should underestimate America, in a thinly veiled reference to Kim. “No one, no dictator, no regime … should underestimate American resolve,” Trump told cheering servicemen and women after he landed at Yokota airbase near Tokyo today on the first leg of his trip. “You are the greatest threat to tyrants and dictators who seek to prey on the innocent,” he said, adding that authoritarian regimes could also take the route “towards prosperity and peace.” “No nation should ever underestimate American resolve,” said Trump, who did not refer to North Korea by name. “Every once a while in the past they underestimated us. It was not pleasant for them, was it? We will never yield, never waver and never falter in defense of our people, our freedom and our great American flag.” (Justin McCurry, “Donald Trump: I Would Sit Down for Talks with Kim Jong Un,” The Guardian, November 5, 2017) “Together with our allies, America’s warriors are prepared to defend our nation using the full range of our unmatched capabilities,” Trump told American troops at Yokota air force base outside Tokyo. “No one – no dictator, no regime, and no nation – should underestimate, ever, American resolve. Every once in a while, in the past, they underestimated us. It was not pleasant for them.” (Demetri Sevatopulo and Robin Harding, “U.S. Allies Hope for Reassurance on North Korea,” Financial Times, November 6, 2017, p. 2)
equipment, as he should. And we make the best military equipment by far.” (Ashley Parker, “Trump, in Japan, Talks Tough on the ‘Menace’ of North Korea, Trade,” (Washington Post, November 6, 2017) Trump, at a press conference in Tokyo with Japan’s prime minister Abe, said Japan should have shot down the missiles, and that buying missile defenses would boost both the U.S. economy and Japanese security. “[Abe] will shoot missiles out of the sky when he completes the purchase of lots of equipment from the United States,” Trump said. “One very important thing is that Prime Minister Abe is going to be purchasing massive amounts of military equipment, as he should. We make the best by far … it’s a lot of jobs for us, and a lot of safety for Japan.” Trump said the U.S would consider all options, including military force, to counter North Korea’s nuclear and ballistic missile programmes, and defended his occasionally provocative choice of words to describe its leader, Kim Jong-un. “Some people say my rhetoric is very strong, but look what has happened with very weak rhetoric in the last 25 years,” Trump said. Abe, who has been unwavering in his support of Trump’s line on the nuclear crisis, noted that previous efforts to strike deals with the regime in Pyongyang had failed. “Each time, North Korea broke its promises and bought itself time to continue developing nuclear weapons,” he said. “There should be no talks for talks’ sake. Now is the time for Japan and the US to exert maximum pressure on North Korea, using all possible means.” Abe said he welcomed the stronger pressure being applied by China after sanctions were agreed by the UN security council, adding: “It is incumbent on China to play a greater role in getting North Korea to end its development of nuclear weapons.” “Japan supports President Trump when he says that all options are on the table. I reaffirmed [to Trump] that the US and Japan are 100% together.” (Justin McCurry and Patrick Wintour, “U.S.-Japan Arms Deals Will Help Counter North Korea Threat, Says Trump,” The Guardian, November 6, 2017)

On the eve of President Donald Trump's first visit to South Korea, tensions remain critical because secret back channels with North Korea have collapsed, says South Korea's First Deputy Chief of National Security Strategies, Sang-chui Lee. He said until recently effective back channels existed between the two armed forces. "I served for 20 years as the [South Korean] representative whenever there were set military talks between the north and south," he said during an interview with Fairfax Media at the Blue House. "Whenever the two countries' relations were in difficult straits, in secret our two militaries would meet and would use channels to mitigate and resolve these crises, however currently there is no such mechanism in place. However currently all the communication channels have been cut off and with the heightened tensions on the peninsula there is always the possibility of clashes, and with the lack of communication those accidental clashes may escalate into armed conflict ... so I believe the situation is very serious." Trump has been criticised for his bellicose Tweets threatening North Korea and for his administration’s failure to appoint an ambassador to South Korea. But Lee said cooperation and coordination between the two nations had not been disturbed. "We should not simply look at President Trump's wording in itself," he said. "We should take into consideration also the messaging by diplomatic staff, represented by Secretary of State [Rex] Tillerson and [that of] Secretary of Defense [Jim] Mattis as well, so we need to have a comprehensive view of the entire US government's policy." Lee dismissed the assertion by some analysts that the North Korean dictator Kim Jong-un could never be induced to relinquish his nuclear weapons. "Many state with finality that Kim Jong-un will never give up nuclear weapons, but I believe strategy is imposing my will upon the other when they do not want to act. So I believe Kim Jong-un will not want to give up nuclear weapons but we have to create a situation where he has no choice but to renounce nuclear weapons, that is the definition of strategy." For the strategy to work Lee said the international community led by the United States with China, Russia and Japan had to maintain sanctions and pressure upon the North Korean regime to induce it to engage in negotiations. Once in negotiations the international community had to reassure the regime of its own security. He said the North and South Korea needed to begin parallel bilateral talks with a view to finally ending the stand-off with a peace treaty rather than an armistice. All this, he said, would take time, diplomatic delicacy and patience. (Nick O'Malley, “South Korean Adviser Warns Secret Back Channels with North Korea Have COLLapsed,” The Age, November 6, 2017)
PRIME MINISTER ABE: (As interpreted.): “For the last two days, I was able to have an in-depth discussion with Donald on a plethora of issues that the international community is faced with. In the discussion, overwhelming importance was occupied by the North Korean issue. We were in complete agreement as to the measures to be taken upon the analysis of the latest situation of North Korea giving a good amount of time. Japan consistently supports the position of President Trump when he says that all options are on the table. Through the talks over two days, I once again strongly reaffirmed that Japan and U.S. are 100 percent together. For more than 20-some years, the international community attempted dialogue with North Korea. At the time of framework agreement of 1994 and at the Six-Party Agreement of 2006, North Korea committed in abandoning their nuclear program. But each time, the promise was broken, which resulted in North Korea buying time for their nuclear and missile development while we were making efforts for dialogue. There is no point in the dialogue for the sake of dialogue with North Korea. Now is the time not for dialogue but for applying maximum level of pressure on North Korea. We completely agreed that, in order to make North Korea change their policy, Japan and U.S. must take leadership in closely collaborating with the international community so that we can enhance the pressure to the maximum level over North Korea through all possible means. I agree with President Trump that we welcome China strengthening her pressure over North Korea, and it is incumbent upon China to play even greater roles to let North Korea relinquish their nuclear and missile development. We reaffirmed once again the importance of further advancing trilateral cooperation among Japan, U.S., and the Republic of Korea — a country President Trump will visit tomorrow. Before this press conference, President and Mrs. Trump were good enough to meet with the members of the families of abductees. I would like to render my heartfelt gratitude for their listening so intently to what the family members had to tell them. Until the day when all the families of the abductees embrace their loved ones in their own arms — until that day, my mission is not complete. I'm sure that the families — I have renewed my resolve to work in full force to seek the resolution of this issue. I have decided to take our own additional sanction measures in our effort to seek the solution of the nuclear missile and the most important abduction issues of North Korea. Tomorrow, there will be a decision of freezing assets of 35 North Korean entities and individuals. Going forward, Japan and U.S. will continue to cooperation closely for the early resolution of the North Korean issue. …PRESIDENT TRUMP: Our nations share an enduring bond. America and Japan face many challenges, many opportunities. There are many things we face, but we will be facing them together, in friendship and as allies. Most importantly, we're working to counter the dangerous aggressions of the regime in North Korea. The regime-continued development of its unlawful weapons programs, including its illegal nuclear test and outrageous launches of ballistic missiles directly over Japanese territory, are a threat to the civilized world and international peace and stability. We will not stand for that. The era of strategic patience is over. Some people said that my rhetoric is very strong, but look what's happened with very weak rhetoric over the last 25 years. Look where we are right now. Prime Minister Abe has also shared with me the tragic stories of Japanese young people who North Korea has abducted over the years. Together, we met with the parents of Megumi Yokota who was abducted as a young girl in 1977. No child should ever be subjected to such cruelty. No parent should ever have to endure 40 years of heartbreak. We also had a young wonderful man in our country, Otto Warmbier. We all know the story of Otto; it's a horrible story, a sad story. And we can't let that happen. Cannot let that happen. The United States of America stands in solidarity with the people of Japan against the North Korean menace. History has proven over and over that strong and free nations will always prevail over tyrants who oppress their people. … ABE: (As interpreted.) While Japan-U.S. alliance being the foundation of the regional peace and prosperity, precisely when Japan-U.S. partners strongly, the peace of this region becomes unshakable. From that perspective, I consider that this time we were able to reaffirm strong bonds and ties between Japan and the United States on this opportunity of the visit of President Trump. This was quite significant for the regional peace. On the North Korean situation, between President Trump and myself, we confirmed that we are together 100 percent. We will enhance the pressure that the entire international community exercises over North Korea to the maximum extent by both Japan and the United States collaborating and working toward China and Russia. No one likes conflicts. I don’t like it; Mr. Trump neither. But North Korea continues its provocation against the international community, so we need to collaborate in the international community so that they change their policy. We must
exercise our pressure. And from the North Korea, we will change our policy, so please come to talk to us. I think this is what is most important that we expect. And we have a complete agreement with President Trump. And together with many countries, I'm sure that we share in the same thinking. … MS. SANDERS: For the United States' first question, we'll go to Steve Holland, from Reuters. Q Thank you, sir. In response to the Texas shooting, what policies would you support to reduce these violent actions? Is gun control the answer? And secondly, you spoke yesterday about the warmth of the North Korean people. What's your message to their leader, Kim Jong-un, as you prepare to head to South Korea tomorrow? And if I could ask the Prime Minister a question as well: Could you respond to what the President said this morning — that trade is not free and reciprocal with the United States? Thank you. TRUMP: Well, as far as the North Korean people are concerned, Steve, I think that these are great people. They're under a very repressive regime, and I really think that, ultimately — I can tell you this — that I hope it all works out. It would be better for everybody. Certainly would be better for North Korea, but it would be better for everybody. So we hope that's going to take place. … MS. SANDERS: Thank you. The second question from the United States — Mark Landler, New York Times. Q Thank you very much. My first question is to President Trump. Mr. President, you've spent the last two days reaffirming the U.S.-Japan alliance, and you've begun sketching out this vision of a free and open Indo-Pacific. But in two days, you're going to travel to China, a country that is neither free nor open. So my question is, how can the U.S. be a force for freedom and openness in this region without inevitably coming into conflict with China? And then, to the Prime Minister. Mr. Prime Minister, the President has spoken on many occasions in the past about hoping to see the Japanese take a strong role in their own defense. He'd like to sell Japan military equipment, and there have been press reports that the President was disappointed that the Japanese didn't shoot the North Korean missile out of the sky — the one that was shot over Hokkaido. I'm wondering, did this subject come up? And what message did you have for the President about the role you'd like to see Japan take in its defense? TRUMP: Thank you, Mark. I will say, if I could just take a piece of the Prime Minister's answer — he will shoot them out of the sky when he completes the purchase of lots of additional military equipment from the United States. He will easily shoot them out of the sky, just like we shot something out of the sky the other day in Saudi Arabia, as you saw. And that was a very rapidly moving missile shot out of the sky. That was a needle in the sky, and it was hit immediately and exploded without damage. So one of the things, I think, that's very important is that the Prime Minister of Japan is going to be purchasing massive amounts of military equipment, as he should. And we make the best military equipment, by far. He'll be purchasing it from the United States. Whether it's the F-35 fighter, which is the greatest in the world — total stealth — or whether it's missiles of many different kinds, it's a lot of jobs for us and a lot of safety for Japan and other countries that are likewise purchasing a lot of military equipment from us that, frankly, a year ago and two years ago were not. … ABE: (As interpreted.) Regarding Japan defense equipment, a lot of them we purchase from the United States. The North Korean situation becoming very tough; the Asia Pacific security situation becoming very tough. We qualitatively and quantitatively, we have to enhance our defense capability. As the President mentioned, F-35A is a case in point. SM-3 Block IIA is another plan for purchase from the United States. Aegis vessels — the quality and the quantity must be enhanced. In that process, we will be buying more from the United States. That is what I'm thinking. Now, North Korea: North Korea launched missiles. Immediately after that, we traced them; we were able to grasp and trace where they were going. Missile defense is something which is based upon the cooperation between Japan and the United States. Missile defense system is a cooperation between the two countries for the intercepting and shooting down. If it is necessary, of course, we will do that — if it is necessary. But in doing so, U.S. and Japan will closely coordinate our actions.” (White House Office of the Press Secretary, Remarks of President Trump and Prime Minister Abe in Joint Press Conference, Tokyo, November 6, 2017)

President Trump asserted that his administration is making “a lot of progress” on North Korea, and he urged dictator Kim Jong Un to “make a deal” at the negotiating table on the rogue nation’s nuclear weapons and ballistic missile programs. “I believe it makes sense for North Korea to do the right thing, not only for North Korea but for humanity all over the world,” Trump said during a joint news conference with South Korean President Moon Jae-in after a bilateral meeting at the

The presidents of South Korea and the United States agreed to completely remove the limit on the payload of South Korean ballistic missiles and discuss Seoul's introduction of nuclear-powered submarines and other advanced weapons, Seoul officials said. The agreement aimed at building up their joint deterrence against a provocative North Korea was made at a bilateral summit between President Moon Jae-in and President Donald Trump at the South Korean presidential office Cheong Wa Dae. "The heads of South Korea and the United States reached a final agreement on removing the limit on missile payloads," Moon said in a joint press conference with the U.S. president. Trump arrived here earlier today on a state visit, becoming the first U.S. president to do so in 25 years. The leaders also agreed to expand the rotational deployment of U.S. strategic assets to South Korea and its surrounding areas, Moon said at the nationally televised press conference.
"We agreed to immediately begin negotiations on South Korea's development and acquisition of the most advanced military surveillance assets," he added. A Cheong Wa Dae official later explained the discussion included Seoul's development or acquisition of nuclear-powered submarines. Nuclear-powered submarines are considered asymmetrical assets that can intercept North Korea's submarine-launched ballistic missiles, but are currently prohibited under a nuclear pact between Seoul and Washington. (Byun Duk-kun, “Moon, Trump Agree to Build up Deterrence, Urge N. Korea to Give up Nukes,” Yonhap, November 7, 2017)

PRESIDENT MOON: (As interpreted.): …“Today we had candid discussions about steadfastness of ROK-U.S. alliance. Moreover, we agreed to work towards resolving North Korean nuclear issue in a peaceful manner and bringing permanent peace to the Korean Peninsula. Against escalating nuclear and missile threats from North Korea, we reaffirmed our principle that we must maintain a strong stance toward North Korean threats based on overwhelming superiority of power. President Trump has reaffirmed his ironclad commitment to defend Korea, and President Trump and I agreed to further strengthen the robust combined defense posture of our two countries. In this regard, President Trump and I agreed to expend rotational deployment of U.S. strategic assets in and around Korean Peninsula. We will step up our collaboration to enhance Korea's self-defense capability to unprecedented levels. To this end, we reached a conclusion today to lift the payload limit on Korean missiles completely, with a final agreement. We also agreed to begin consultation for Korea's acquisitions and development of Korea's state-of-art military reconnaissance assets. Once again, we strongly urge North Korea to halt its nuclear and missile provocation, and to come to a dialogue table for denuclearization as soon as possible. President Trump and I reaffirmed our current strategy, which is to maximize pressure and sanctions on North Korea until it gives up nuclear weapons and to come to the table for dialogue on its own. At the same time, should North Korea choose to make the right choice, we also reaffirmed our view that we are willing to offer North Korea a bright future. Based on such common approach between our two countries, we will continue to lead efforts to bring peaceful and fundamental solutions to North Korean nuclear issues. We will maintain close collaboration with the international community, including the neighboring countries. I sincerely hope that President Trump's visit at this time will be a turning point for the situation on the Korean Peninsula in a stable manner. …TRUMP: As we work together to resolve this problem using all available tools short of military action, the United States stands prepared to defend itself and its allies using the full range of our unmatched military capabilities if need be. … MS. SANDERS: The first question from the United States will go to Margaret Breman from CBS. Q Thank you, sir. Mr. President — TRUMP: Which one? (Laughter.) Q President Trump — I will have questions from both of you gentlemen. But, President Trump, you spoke here in South Korea saying that you do believe that the crisis with North Korea will be worked out. So, specifically, have you seen any success in your diplomatic strategy so far? And do you still believe that direct talks are a waste of time? TRUMP: Well, I think you know me well enough to know that I don't like talking about whether I see success or not in a case such as this. We like to play our cards a little bit close to the vest. I will say this — that I believe it makes sense for North Korea to do the right thing, not only for North Korea, but for humanity all over the world. So there is a lot of reason, a lot of good reason behind it. With that, yes, I think we're making a lot of progress. I think we're showing great strength. I think they understand we have unparalleled strength. There has never been strength like it. You know we sent three of the largest aircraft carriers in the world, and they're right now positioned. We have a nuclear submarine also positioned. We have many things happening that we hope, we hope — in fact, I'll go a step further, we hope to God we never have to use. With that being said, I really believe that it makes sense for North Korea to come to the table and to make a deal that's good for the people of North Korea and the people of the world. I do see certain movement, yes. But let's see what happens. Q And on direct talks, sir? TRUMP: I don't want to say that. Q Okay. TRUMP: I just don't want to say that. You can understand that. Q. I do sir. Q And, President Moon, you, in your meeting earlier with President Trump, were spoken about by President Trump when he gestured to the military purchases that your country will be making. And I'm wondering, as you look towards that military build-up, if that signals something — perhaps a change in your view — where you believe a more aggressive stance towards North Korea is more appropriate. … MOON: (As
interpreted.) I’m not entirely sure which direction your question was, but I can say one thing: When it comes to the state of our reconnaissance assets and the strategy assets — on acquisition of this U.S. strategy assets, we have agreed to begin the consultations for Korea's acquisition of such assets. And that is to enhance Korea's defense capabilities and also the combined defense posture of Korea and the United States. I think it is essential. TRUMP: Margaret, if I may add to that, that the President and I have agreed they'll be buying a tremendous — which they want, and which they need, and everybody thinks it makes a lot of sense. We make the greatest military equipment in the world, whether it's planes, whether it's missiles. No matter what it is, we have the greatest military equipment in the world. And South Korea will be ordering billions of dollars of that equipment, which, frankly, for them makes a lot of sense. And for us, it means jobs; it means reducing our trade deficit with South Korea. But they'll be ordering billions of dollars' worth of equipment, and we've already approved some of those orders. Okay? Q I have a question for President Moon: Between Korea and the United States, I think one of the most important diplomacy challenges will be to work on — resolve the nuclear problem of the DPRK. And you gave a foreign press interview — you talked about bringing balance and diplomacy, and you talked about resolving nuclear problem and the close cooperation between Korea and the United States, and you talked about China's role. Are you referring to the balance between the U.S. — balance of Korea between U.S. and China, or are you referring to something else? And you have had a third summit meeting at the summit meeting you just had. You said that you have agreed to bring permanent peace to (inaudible) on the Korean Peninsula. And what kind of role are you expecting the United States and President Trump to play with regards to settling peace on the Korean Peninsula? MOON: (As interpreted.) So on bringing balance in our diplomatic approaches, this is not about our stance vis-à-vis the United States and China. We are trying to bring a solution to the DPRK nuclear problem and to bring permanent peace on the Korean Peninsula. And, moreover, we would like to promote peace, stability and prosperity of the Northeast Asian region. So we would like to expand our diplomatic efforts in this regard. And that should include our efforts for China as well as (inaudible) and Russia and the EU. I believe that we should diversify efforts — diplomatic efforts — so that we can pursue a more balanced approach. So that was the intention of making such comment. And to establish permanent peace on the Korean Peninsula and to resolve the nuclear problem, I think there's role to be played by the United States and China. And when it comes to the United States, a very strong sanctions and pressure is being put by the United States. The U.S. is leading efforts, and I am very sure that substantive results will be realized through such efforts. And China has also faithfully implemented the U.N. resolution to impose sanctions on DPRK. So we have heightened the pressure and sanctions on DPRK, and I think this will also contribute to resolving the nuclear problem. And if our international society's efforts bear fruits and if we can really make a turnaround, then I'm sure that we will be able to bring North Korea to the table of dialogue. And through such dialogue, I am very confident that we can freeze a nuclear program and ultimately dismantle the weapons of the DPRK entirely. And in this, I believe that cooperation from the U.S. and China is essential. And on establishing a permanent peace on the Korean Peninsula, I don't think it's the right timing that we talk about this issue. Now we should focus on bringing an end to the DPRK provocations, and bringing DPRK to the table for dialogue. This is a pending challenge we must address now. So we must focus on sanctions and pressure. And there is a time — the time finally comes that we should certainly make efforts to further consult each other — Korea and the U.S. — for settling peace on the Korean Peninsula. TRUMP: I want to just say that President Xi — here we will be tomorrow, China — has been very helpful. We'll find out how helpful soon. But he really has been very, very helpful. So China is out trying very hard to solve the problem with North Korea. We hope that Russia, likewise, will be helpful. We also hope that other countries — and we know for a fact that other countries have already started. And we've had great dialogue with many other countries, as you know, and they're really helping a lot. So if we get China, if we get Russia — and we have some other countries, but we want to get most of them — we think that things will happen, and they could happen very quickly. This is a problem, by the way, that should have been done over the last 25 years, not now. This is not the right time to be doing it, but that's what I got. That's what I got. This is a problem that should have been taken care of a long time ago.” (White House Office of the Press Secretary,
Remarks by President Trump and President Moon of the Republic of Korea in Joint Press Conference, Blue House Seoul, November 7, 2017)

The Japanese government approved at a Cabinet meeting additional sanction measures it will impose on its own against North Korea, freezing the assets of 35 organizations and individuals linked to the country. Under the new sanctions, Japan will freeze the assets of nine North Korean organizations and 26 individuals. “It includes North Korean groups and individuals with addresses registered in China, Russia, the United Arab Emirates and Libya,” Chief Cabinet Secretary Suga Yoshihide told a press conference. In total, 84 organizations and 108 individuals are now subject to the asset freeze by Japan. The fresh sanctions will be imposed “from the viewpoint of further boosting pressure on North Korea on the basis of Japan-U.S. unity,” Suga said, citing as reasons North Korea’s nuclear tests and ballistic missile launches over Japan, as well as the lack of progress in efforts to resolve the issue of Pyongyang’s abductions of Japanese nationals. “We strongly demand that North Korea take concrete actions,” Suga said. (Jiji, “Japan Adopts Additional Sanctions on N. Korea,” Yomiuri Shimbun, November 7, 2017)

Singapore suspended trade relations with North Korea, a customs notice obtained today showed. "Singapore will prohibit all commercially traded goods from, or to, the Democratic People's Republic of Korea (DPRK)," the city-state's customs said in the notice sent to traders and declaring agents. The suspension would take effect from November 8, Fauziah A. Sani, head of trade strategy and security for the director-general of customs, said in the notice. The move comes about two months after the United States imposed North Korea-related sanctions on a number of firms and individuals, including two entities based in Singapore. Repeated breach of the new prohibitions is punishable by a fine of up to S$200,000 ($147,340.50) or four times the value of the goods traded, imprisonment of up to three years, or both, it added. Singapore is North Korea's seventh largest trading partner. The Philippines, Pyongyang's fifth biggest trading partner, suspended trade with North Korea in September to comply with a U.N. resolution. (Reuters, “Singapore Suspends Trader Relations with North Korea,” November 16, 2017)

Carlin: “Last March, I worried aloud that the gods of war were pleased by the arc of the North Korean issue, and could see a clash not far off, on the near horizon. How much more pleased they must be today as they patiently wait, armor gleaming in the autumn sunlight, their swords whetted, the plumed horses hitched to war chariots ready to leap into the bloody fray. Over the past six months, several opportunities to explore something other than open conflict emerged but then faded once again. Especially in the early months of the current administration, there seems to have been a golden moment when the two sides might have changed course. That disappeared when Washington decided on “maximum pressure and engagement,” while Pyongyang chose to resume, at a breakneck pace, developing what it terms its “state nuclear force.” Is there similar opportunity now? Can we draw a doorway on the rock face of the mountain and then open it at the last moment before disaster, as if in a Road Runner cartoon? It seems unlikely. The situation has become significantly more complicated from where it was in January 2017 when the outgoing US president handed his successor the dangerous mess created under his watch. In recent weeks, the gathering storm has been described by countless observers on an almost daily basis. Anyone who reads a newspaper of whatever political stripe knows the dangers and the potential catastrophic losses in blood and treasure if current trends continue. Perhaps what has been lacking has been a closer look at the clockwork mechanisms driving the dangers to higher and higher levels. One problem not well understood is that the North Koreans believe recent developments in their nuclear weapons program have boosted them to a level of invulnerability, and that as a result, Washington—whatever it might say—is without options to counter them. In fact, Pyongyang is so convinced that its strategic position has fundamentally changed for the better that it has recently suggested there may be no need for it to continue building up its program. Since two successful ICBM launches last July, the North’s position is that it has reached the “final stage” in bolstering the nuclear force. It has even explicitly laid out a final goal, a “practical equilibrium” with the United States. What that means exactly we do not know, though presumably Pyongyang has something specific in mind. In my view, the North is carefully laying the foundation for
declaring a victory on the first half (the nuclear buildup) of Kim Jong Un’s March 2013 two-line policy (byungjin) and then turning the focus to the other half—the economy. We don’t have to believe or disbelieve that this is Kim’s real line of march. All we need do is watch to see how he proceeds in the next few months, and judge whether developments provide an opportunity for both sides to step back long enough to explore how to stabilize the situation, that is, take a first step toward entering into longer-term negotiations that wrestle with the core issues. The problem at the moment is that of trapeze artists seeking to perfect their timing. Pyongyang cannot afford to misjudge the moment of a leap from the nuclear to the economic sectors. I do not know the exact right instant for Kim Jong Un to move, but much more important, neither does the North. This sort of timing is art, not science. Waiting a beat too long could be fatal, but it would not be the first time the North was off in its timing. If it is Kim’s intent to leap from one trapeze to another, there are a number of crucially important questions he may have already considered, and we might as well do so, too. When will Pyongyang believe it has achieved the goal of a “practical equilibrium” with the US? Why doesn’t the North deem its current arsenal and delivery capacity developed enough to pause and explore what else is possible? If the nuclear arsenal and delivery systems the North currently possesses are not a credible deterrent, what in the world is? Most important, does Pyongyang understand that “demonstrating” to the outside world the final level of its nuclear capability, taking one more fatal step, is liable to be the straw that breaks the camel’s back? Having succeeded in getting this far with nothing more than sanctions, Pyongyang could easily believe that one more step will not elicit anything worse, and that there is no sense sitting down with the Americans until the final “demonstration” step is taken. Watching events in Washington, it would not be surprising if the North has concluded that the President is too weak and embattled to take decisive action in response. On the US side, the President may well believe that his personal style has thus far proved successful on any number of policy fronts. That’s up to him. But on the North Korean issue, I can only say, no, it is not working here. I know it is not, and with all humility, I’d tell him so if he asked. Whether he subsequently adjusted his approach would obviously be his choice. Up to now, the North Korean issue is one on which he is apparently listening to his advisers. They are failing him. The President’s senior White House advisers may well believe—and believe fervently—that history shows diplomacy with North Korea always fails because each time the North takes what it wants and then breaks the agreements. On this, they are—plain and simple—wrong. This wouldn’t matter on some arcane problem (people misread history all the time), but there is the mistaken notion that using this interpretation is a solid platform for a “new” policy on North Korea. Actually, it is a rotten plank. A misinterpretation of the facts here will not support anything but still more failed policy, repeating the same failure that has marked US policy on the Korean issue since January 2001. On the Korean issue, windows open and close, when A is ready, B is not. Several times over the past nine months, one side or the other has backed away from a chance to talk. Each of these episodes may seem only a hiccup, and individually they would not be serious if nothing else were going on. Yet in this dynamic situation, every opportunity missed has made the next one more important, yet harder to achieve. After the verbal slugfest between the two leaders in September, there have been only the wispiest of contacts between the sides. The result is like trying to stop a charging elephant with a blade of grass. Meanwhile, “progress” as defined by each side has been in all the wrong places. US pressure—masquerading as diplomacy—has increased, while Washington has bound itself in a tangle of sanctions—multilateral and unilateral—in response to rapid-fire growth in what the North terms its “deterrence.” The gods of war are pleased when mortals stumble over their own misperceptions, when they are overwhelmed by myths about themselves and their opponents, when no one is talking anymore, when options narrow, when momentum dictates decisions, when doors slam and are bolted, when sacrifice is glorified and slaughter becomes acceptable. The dawn when the swords are unsheathed is coming; the gods of war can feel it in their bones.” (Robert Carlin, “Death’s Dusty Measure,” 38North, November 7, 2017)
We will defend our common spirit, our shared prosperity and our sacred liberty.” He emphasized that the United States is not seeking conflict, but he added, “We will never run from it. History is filled with discarded regimes that have foolishly tested America’s resolve.” “We will not be intimidated,” Trump said. This morning, Trump attempted to make a surprise visit to the demilitarized zone, but his helicopter was forced to turn back because of bad weather. Moon had been expected to join him at the dangerous border, in what White House press secretary Sarah Huckabee Sanders had billed as a “historic moment” — the first time leaders of both the United States and South Korea would have visited the DMZ together. Sanders had alerted reporters traveling with the president to the surprise trip by holding up a piece of paper on which “DMZ” had been scrawled and announcing, “This is where we’re going.” White House officials, at least publicly, had scrapped the idea of a trip to the DMZ before Trump left Washington — with one even describing it as “a little bit of a cliche” — but the president had repeatedly hinted at “a surprise” while in South Korea, and many aides privately said they didn’t think Trump would be able to resist a visit — and the ensuing photo opportunity. (Ashley Parker and David Nakamura, “Trump to N. Korea: ‘Do Not Underestimate Us and Do Not Try Us,’” Washington Post, November 8, 2017, p. A-12) President Trump has said on several occasions that he’s willing to talk to North Korean leader Kim Jong Un. Well, today, Trump did — after a fashion. The American president directly addressed his 33-year-old nemesis during his speech to South Korea’s National Assembly. This time, Trump didn’t call Kim “Little Rocket Man” or use the kinds of rhetorical flourishes that play so well on Twitter. But the words that Trump used will have cut deeper because they strike at the very heart of the Kim regime. If there is one thing that Kim Jong Un has shown that he cannot tolerate, it’s personal criticism. “North Korea is not the paradise your grandfather envisioned,” Trump said to Kim, who, if he was in Pyongyang, was just 120 miles away. “It is a hell that no person deserves.” Trump devoted a large part of his address to detailing the human rights abuses that the Kims have committed in North Korea, filling his speech with words like “twisted,” “sinister,” “tyrant,” “fascism” and “cult.” Trump noted the slave-like conditions that North Korean workers endure, the malnutrition among children, the suppression of religion, and the forced-labor prison camps where North Koreans endure “torture, starvation, rape, and murder on a constant basis.” “President Trump spoke about human rights in North Korea more than any other previous U.S. president,” said Jeong Kwang-il, who was held as a political prisoner in North Korea and now runs the “No Chain for North Korea” human rights group in Seoul. “I’m hopeful that American policy toward North Korea will focus more on improving human rights there.” The president did not mince his words about the way the Kim regime has managed to retain its grip on the populace. “North Korea is a country ruled as a cult. At the center of this military cult is a deranged belief in the leader’s destiny to rule as parent protector over a conquered Korean Peninsula and an enslaved Korean people,” he said. The success of South Korea discredited “the dark fantasy at the heart of the Kim regime,” Trump said. n a “fantasy” and that the country is something other than a socialist paradise amounts to heresy in North Korea. “This speech made the ‘axis of evil’ speech look friendly,” said John Delury, a professor of international relations at Yonsei University in Seoul, referring to President George W. Bush’s 2002 State of the Union speech, in which he included North Korea as a country seeking weapons of mass destruction. “That sent a signal to Pyongyang that the Americans are not open to changing their relationship with North Korea and that the president was deeply hostile and ideologically hostile to them.” But others saw an opening from Trump, with his suggestion there was a way out of the current quagmire. “Despite every crime you have committed against God and man . . . we will offer a path to a much better future,” Trump said, saying that this would require total denuclearization. The president publicly offered a “diplomacy exit ramp” to the Kim regime, Victor Cha, tipped to be Trump’s nominee for ambassador to South Korea, wrote on Twitter. At a news conference with South Korean President Moon Jae-in the previous day, Trump urged North Korea “to come to the table” and “do the right thing, not only for North Korea but for humanity all over the world.” At recent meetings near Geneva and in Moscow, Pyongyang’s representatives have signaled an interest in talks with the United States — as long as those talks are not about denuclearization, a non-starter for Washington. The regime in Pyongyang is likely to react angrily to Trump’s speech. “North Korea tends to react sensitively to criticism in human rights,” said Cheong Seong-chang, director of the unification strategy program at the Sejong Institute, a private think tank in South Korea. He predicted that the response would be especially sharp
because of the time that Trump spent talking about North Korea and the detail he went into, plus the president’s repeated calls for the world to isolate the country. “North Korea is highly likely to take Trump’s address as a declaration of war and call for a holy war of its own against the U.S.,” Cheong said. (Anna Fifield, “Trump Strikes at the Heart of North Korean Regime with Speech,” Washington Post, November 8, 2017)

Trump: “The regime has made numerous lethal incursions in South Korea, attempted to assassinate senior leaders, attacked South Korean ships, and tortured Otto Warmbier, ultimately leading to that fine young man’s death. All the while, the regime has pursued nuclear weapons with the deluded hope that it could blackmail its way to the ultimate objective. And that objective we are not going to let it have. We are not going to let it have. All of Korea is under that spell, divided in half. South Korea will never allow what's going on in North Korea to continue to happen. The North Korean regime has pursued its nuclear and ballistic missile programs in defiance of every assurance, agreement, and commitment it has made to the United States and its allies. It’s broken all of those commitments. After promising to freeze its plutonium program in 1994, it repeated [reaped] the benefits of the deal and then — and then immediately continued its illicit nuclear activities. In 2005, after years of diplomacy, the dictatorship agreed to ultimately abandon its nuclear programs and return to the Treaty on Non-Proliferation. But it never did. And worse, it tested the very weapons it said it was going to give up. In 2009, the United States gave negotiations yet another chance, and offered North Korea the open hand of engagement. The regime responded by sinking a South Korean Navy ship, killing 46 Korean sailors. To this day, it continues to launch missiles over the sovereign territory of Japan and all other neighbors, test nuclear devices, and develop ICBMs to threaten the United States itself. The regime has interpreted America’s past restraint as weakness. This would be a fatal miscalculation. This is a very different administration than the United States has had in the past. Today, I hope I speak not only for our countries, but for all civilized nations, when I say to the North: Do not underestimate us, and do not try us. We will defend our common security, our shared prosperity, and our sacred liberty. We did not choose to draw here, on this peninsula — (applause) — this magnificent peninsula — the thin line of civilization that runs around the world and down through time. But here it was drawn, and here it remains to this day. It is the line between peace and war, between decency and depravity, between law and tyranny, between hope and total despair. It is a line that has been drawn many times, in many places, throughout history. To hold that line is a choice free nations have always had to make. We have learned together the high cost of weakness and the high stakes of its defense. America’s men and women in uniform have given their lives in the fight against Nazism, imperialism, Communism and terrorism. America does not seek conflict or confrontation, but we will never run from it. History is filled with discarded regimes that have foolishly tested America’s resolve. Anyone who doubts the strength or determination of the United States should look to our past, and you will doubt it no longer. We will not permit America or our allies to be blackmailed or attacked. We will not allow American cities to be threatened with destruction. We will not be intimidated. And we will not let the worst atrocities in history be repeated here, on this ground, we fought and died so hard to secure. (Applause.) That is why I have come here, to the heart of a free and flourishing Korea, with a message for the peace-loving nations of the world: The time for excuses is over. Now is the time for strength. If you want peace, you must stand strong at all times. (Applause.) The world cannot tolerate the menace of a rogue regime that threatens with nuclear devastation. All responsible nations must join forces to isolate the brutal regime of North Korea — to deny it and any form — any form of it. You cannot support, you cannot supply, you cannot accept. We call on every nation, including China and Russia, to fully implement U.N. Security Council resolutions, downgrade diplomatic relations with the regime, and sever all ties of trade and technology. It is our responsibility and our duty to confront this danger together — because the longer we wait, the greater the danger grows, and the fewer the options become. (Applause.) And to those nations that choose to ignore this threat, or, worse still, to enable it, the weight of this crisis is on your conscience. I also have come here to this peninsula to deliver a message directly to the leader of the North Korean dictatorship: The weapons you are acquiring are not making you safer. They are putting your regime in grave danger. Every step you take down this dark path increases the peril you face. North Korea is not the paradise your grandfather envisioned. It is a hell that no person deserves. Yet, despite every
crime you have committed against God and man, you are ready to offer, and we will do that — we will offer a path to a much better future. It begins with an end to the aggression of your regime, a stop to your development of ballistic missiles, and complete, verifiable, and total denuclearization. (Applause.) A sky-top view of this peninsula shows a nation of dazzling light in the South and a mass of impenetrable darkness in the North. We seek a future of light, prosperity, and peace. But we are only prepared to discuss this brighter path for North Korea if its leaders cease their threats and dismantle their nuclear program. The sinister regime of North Korea is right about only one thing: The Korean people do have a glorious destiny, but they could not be more wrong about what that destiny looks like. The destiny of the Korean people is not to suffer in the bondage of oppression, but to thrive in the glory of freedom. (Applause.) What South Koreans have achieved on this peninsula is more than a victory for your nation. It is a victory for every nation that believes in the human spirit. And it is our hope that, someday soon, all of your brothers and sisters of the North will be able to enjoy the fullest of life intended by God. Your republic shows us all of what is possible. In just a few decades, with only the hard work, courage, and talents of your people, you turned this war-torn land into a nation blessed with wealth, rich in culture, and deep in spirit. You built a home where all families can flourish and where all children can shine and be happy. This Korea stands strong and tall among the great community of independent, confident, and peace-loving nations. We are nations that respect our citizens, cherish our liberty, treasure our sovereignty, and control our own destiny. We affirm the dignity of every person and embrace the full potential of every soul. And we are always prepared to defend the vital interests of our people against the cruel ambition of tyrants. Together, we dream of a Korea that is free, a peninsula that is safe, and families that are reunited once again. We dream of highways connecting North and South, of cousins embracing cousins, and this nuclear nightmare replaced with the beautiful promise of peace. Until that day comes, we stand strong and alert. Our eyes are fixed to the North, and our hearts praying for the day when all Koreans can live in freedom.” (White House Office of the Press Secretary, Remarks by President Trump to the National Assembly of the Republic of Korea, Seoul, November 7, 2017)

Newly declassified documents show that a quarter-century ago as worries were emerging over North Korea’s nuclear ambitions, then-Defense Secretary Dick Cheney told allies the U.S. should not consider military action as it could jeopardize diplomatic efforts. In 1991, when Cheney served as Pentagon chief for President George H. Bush, his outlook on how to deal with North Korea was very different from his later approach to Iraq. With the Cold War over, the elder Bush had enacted a major change in military policy by withdrawing from the field all U.S. tactical nuclear weapons, including from South Korea. That offered an opening to secure North Korea’s assent to agreements banning nuclear reprocessing and enrichment, and by extension nuclear weapons, from the peninsula. Documents obtained through the Freedom of Information Act and published today by the National Security Archive at George Washington University provide insight into the U.S. diplomatic “game-plan” to stop North Korea’s nuclear weapons program. Concerns had been growing in Washington over the North’s nuclear capabilities. A reactor built in the mid-1980s offered it the means to produce plutonium that could potentially be used for bombs. Among the documents is a briefing paper prepared for a December 1991 meeting of deputies in the National Security Council and other U.S. government agencies to discuss a U.S. strategy that offered progress toward dialogue and diplomatic normalization if the North allowed international safeguards and inspections. The paper mentions potentially seeking sanctions if North Korea stalled, but it took one potential stick off the table. The briefing paper says Cheney had told leaders in U.S.-allied South Korea and Japan that the U.S. “should not consider ‘military measures,’ since such discussion could jeopardize our initial diplomatic strategy.” (Matthew Pennington, “Dick Cheney Once Warned against Military Action on N. Korea,” Associated Press, November 8, 2017)
nuclear-armed North Korea. We're grateful for China's cooperation. President Trump has made clear the need to not just maintain the current peaceful pressure efforts, but to do even more. 

Q Mr. Secretary, on North Korea, the President was asking Xi Jinping to do more — to close down bank accounts, send North Korean workers back, cut out the oil supplies. Where did you get on that front? And will the President meet with Vladimir Putin in Danang? TILLERSON: The President and President Xi did have a very, very detailed exchange on what both sides are doing, and in particular what China is doing with respect to first fully implementing all the provisions and the intent of the U.N. Security Council resolutions that are imposing sanctions. President Xi shared very specific actions they've taken, including the bank accounts that you just mentioned and other areas to comply fully. We talked about foreign labor, as well. And a lot of businesses up along the China-North Korean border are shutting down as a result of the sanctions. President Xi took the views that the sanctions are going to take a little while, that he didn't expect immediate results, but that, clearly, from his perspective, the North Korean regime is feeling the full effects of the sanctions themselves. In terms of how much stress it will create on them, time will tell. Q (Inaudible.) They are complying with the U.N. Security Council resolution to not allow any increases in delivery of oil. And as you know, that resolution put a cap on fuel products — primarily fuel products, and then a capital no increase in oil exports. With respect to the potential meeting between President Trump and President Putin, that's still under consideration. 

Q Thank you, Mr. Secretary. In that vein, the conversation when the President was pressing China to ramp up the pressure on North Korea, if you could get into some detail on that for us. And also, is one of the areas of disagreement North Korea? TILLERSON: There is no disagreement on North Korea. In fact, we were quite pleased and gratified that President Xi himself and all the representatives that we deal with — our counterparts on the Chinese side — have been very clear and unequivocal they will not accept a North Korea with nuclear weapons. So there's no space between both of our objectives. There are — clearly, we have our own views of the tactics and the timing and how far to go with pressure, and that's what we spent a lot of timing exchanging views on. President Trump, our President, has been very clear with President Xi that he takes the view that you are a very powerful neighbor of theirs; you account for 90-plus percent of their economic activity; you're a strong man — you can, I'm sure, solve this for me. And so he was very clear with him and said he believes it can be solved. I think our task now is how to work jointly with our efforts. Our efforts are complementary, and not in any way contradictory, but complementary to bring the regime in North Korea to the negotiating table ready to start the long process of how they denuclearize their country. 

Q Mr. Secretary, one question about this agreement between China and the U.S. on North Korea. You said China will not accept a nuclear-armed North Korea. Well, clearly it has accepted a nuclear-armed North Korea. North Korea has nuclear weapons now. Are you telling us that China has agreed with the President that the era of strategic patience is over, and they've reached a new determination about this threat that they didn't have before President Trump took office? And when President Xi said sanctions will take a little while, did he give any clarity on what that length of time is? And is the President comfortable waiting however long President Xi thinks sanctions will take? TILLERSON: Well, I don't want to speak for President Xi or the Chinese government as to how they view the statement they've made to us now that they will not accept a nuclear-armed, nuclear-weaponized North Korea. I'll let them speak for themselves. But they're unequivocal in that statement. And so that puts us both on the same objective, policy-wise, to achieve that denuclearization. I think in terms of how long it will take, no one is making any predictions. I think there's just a recognition that it's taken us about the last four to five months, really, is when we finally got all of these sanctions provisions passed by the U.N. It takes a while for countries to then comply, and so I think — and I have the expectation we're going to have to wait and let this take its effect. There are clear signs, and the Chinese side has shared with us some of the signs they're seeing. We see certain signs of our own through intel and other sources we have that it is creating some stress within North Korea's economy and with some of their citizens, potentially even within some of their military. So it is something, though, that sanctions themselves always require some time for inventories to be used up, for alternatives to be closed off. And a lot of the sanctions compliance is us identifying places where they're re-shifting to try to maintain certain economic activity, but we try to close that off them. Q And you said the two nations have their own views on tactics and timing. Would you describe that as a
large gap in the two countries' views on timings and tactic? TILLERSON: I don't think it's a large gap. It's kind of back to your other question of do we have a prediction on when we think sanctions are going to really bite. I think the Chinese clearly have always taken a view that this needs to be solved through dialogue, it needs to solved through diplomatic efforts. The President, I think, made clear in his address in Seoul yesterday to the general assembly a similar view, and he invited North Korea to come to the table in those remarks — please come to the table and talk to us. But there's also — that's backed up, though, but the strong military posture that the President has been very unequivocal that if we deem the threat to be sufficient to require a military response, we will be ready with that response. That's not his first choice, it's not our first choice. We are going to work hard on the diplomatic effort as well. Q Another thing the President said today that they agreed on were the solutions when it comes to North Korea. Could you explain to us a little bit more about that? And then also on that note, on this trip, the President used very strong words for Kim Jong-un's government when he was in South Korea, but we didn't hear him use some of the same derogatory language for him that we've heard from him in the past, like at the United Nations, like "Little Rocket Man." I'm wondering if the Japanese government, or the South Korean government, or even the Chinese government asked him not to use that kind of language and to kind of tone it down while he was so close to North Korea. TILLERSON: We had no such request that I'm aware of. I think, if you really look at the entirety of the President's speech to the general assembly in Seoul yesterday — which I thought was a historic speech — it was a great contrast in what is possible — what is possible for North Korea. And it's a bright line of what democracy, democratic values, allowing the will of the people to advance their lives under their own aspirations against what life under an autocratic dictator looks like. I mean, I don't know of another place — you can search the globe — and I don't know where else on the world's surface you'll see such a contrast of the same peoples. And it's been, I think, an exhibit in the power of democracy and democratic values when people are allowed to govern their lives that way. And he was really, I think, creating that aspiration for North Korea. And that is part of the way forward. So when you said, "what is the way forward," I think the Chinese government feels the same is that the way forward is to enable North Korea to advance its economy — advance opportunity for its citizens, who, as you know, struggle — many of them struggle.” (White House Office of the Press Secretary, Press Briefing by Secretary of State Rex Tillerson, Beijing, November 9, 2017)

Trump-Xi: “XI: “On the Korean Peninsula nuclear issue, we reiterated the firm commitment to achieving denuclearization of the Peninsula and upholding international nonproliferation regime. The two sides will continue to fully and strictly implement U.N. Security Council resolutions. At the same time, the two sides commit to working toward a solution through dialogue and negotiation. And we are ready to discuss with relevant parties the pathway leading to enduring peace and stability in the Peninsula and the Northeast Asia. The two sides will maintain communication and cooperation on the Korean Peninsula issue. We believe that China and the United States are countries with important influence in the Asia Pacific. As I said to the President, the Pacific Ocean is big enough to accommodate both China and the United States. The two sides need to step up communication and cooperation on Asia Pacific affairs, foster common friends, build constructive interactions, and jointly maintain and promote peace and stability and prosperity in the region. …TRUMP: As I said in my address yesterday in Seoul, the entire civilized world must unite to confront the North Korean menace. And the entire world is watching us right now. Today, President Xi — we discussed our mutual commitment to the complete denuclearization of North Korea. We agreed not to replicate failed approaches of the past — and there were many. We agreed on the need to fully implement all U.N. Security Council resolutions on North Korea and to increase economic pressure until North Korea abandons its reckless and dangerous path. All responsible nations must join together to stop arming and financing — and even trading with — the murderous North Korean regime. Together, we have in our power to finally liberate this region and the world from this very serious nuclear menace. But it will require collective action, collective strength, and collective devotion to winning the peace.” (White House Office of the Press Secretary, Remarks by President Trump and President Xi Of China in Joint Press Statement, Beijing, November 9, 2017)
Rogin: “In South Korea, President Trump abruptly shifted position on negotiations with North Korea, saying he wanted to “make a deal” with the Kim Jong Un regime. If he means it, there may be an opening, because his State Department has been working on a new initiative to break the diplomatic stalemate with Pyongyang, starting with a proposed 60-day freeze in nuclear and missile tests. “I really believe that it makes sense for North Korea to come to the table and to make a deal that’s good for the people of North Korea and the people of the world,” Trump said in Seoul. “I do see certain movement, yes. But let’s see what happens.” Secretary of State Rex Tillerson and his top North Korea official, Joseph Yun, have a concrete idea of how to get from here to there. Yun told an audience at the Council on Foreign Relations on October 30 that if North Korea halted nuclear and missile testing for about 60 days, that would be the signal the United States needs to resume direct dialogue with Pyongyang. Yun’s remarks, which were off the record, were described by two attendees. Yun declined to comment. Administration sources said that Yun’s remarks were consistent with what Tillerson has been saying privately and publicly. “The best signal that North Korea could give us that they’re prepared to talk would be to stop these missile launches,” Tillerson told reporters in August. “We’ve not had an extended period of time where they have not taken some type of provocative action by launching ballistic missiles. So I think that would be the first and strongest signal they could send us is just stop, stop these missile launches.” The most recent North Korean provocation was the launch of an intermediate-range ballistic missile September 15, almost two months ago. But administration sources said Yun’s 60-day clock hasn’t started yet because the administration has no information on why the North Koreans haven’t conducted tests recently. The North Koreans must tell the United States that they are starting the freeze before the clock can start. While they are waiting for that signal, Tillerson and Yun have been enlisting others in support of their plan. Yun traveled to Moscow in September to discuss North Korea with top officials there. Tillerson has conferred with his Russian counterpart as well. Yun also keeps in touch with the North Korean government. He met with Choe Son Hui, the head of the North Korean Foreign Ministry’s North America bureau, in Oslo in the spring. He communicates regularly with North Korean officials at the United Nations through what’s known as the “New York channel.” There are other obstacles that must be overcome before direct dialogue with North Korea can start. In exchange for a testing moratorium, the North Koreans are sure to want a sign of good faith from Washington. China and Russia have proposed that the United States and South Korea halt joint military exercises, but that’s a non-starter. Pyongyang will have to come up with a more reasonable ask. Then, Tillerson and Yun will have to convince a skeptical White House that “talks about talks” with North Korea are a good move. Trump has often criticized the idea of dialogue with the Kim regime and promised not to get ensnared in what he views as a trap of bribing Pyongyang for deals it later violates. If talks ever begin, the two sides have little common ground on where they should end up. North Korea wants to be accepted as a nuclear state. The United States wants North Korea to give up its nukes altogether. The White House will have to be convinced that some middle ground, at least in the interim, is worth negotiating over. Regardless, Trump’s public endorsement of the idea of talks with North Korea does provide an opening for the diplomats under his charge who are looking to begin that process. “Nobody is against a diplomatic settlement, it’s just about how we get there,” an administration official said. “There are a lot of questions about this engagement that are still unanswered.” Trump’s shift in Asia from “fire and fury” to a mix of condemnation and outreach is in part due to his desire to speak to several audiences. Trump wants to express solidarity with South Korean President Moon Jae-in. He also needs to show flexibility and a willingness to embrace diplomacy to persuade China and Russia to apply more pressure on the Kim regime. For Trump, “progress” may mean that the U.S. campaign of pressure and isolation is advancing. But that is just a means to an end. The end goal of any sensible North Korea policy is to “make a deal” and avoid a war. (Josh Rogin, “Inside the Drive to ‘Make a Deal’ with North Korea,” Washington Post, November 9, 2017)

If a conflict between North Korea and the United States suddenly broke out, U.S. troops in South Korea would be "outnumbered" and undersupplied, warns Lt. Gen. Jan-Marc Jouas, former deputy commander of U.S. Forces in Korea. "The 28,500 U.S. Armed Forces personnel in South Korea are vastly outnumbered by North Korean forces, as well as [South Korean] forces that will conduct the overwhelming majority of the fighting. Unlike every conflict since the last Korean War, we
will not be able to build up our forces prior to the start of hostilities,” Jouas wrote in a November 7 letter obtained by Newsweek to several Democratic members of Congress. The letter is addressed to Representatives Ted Lieu and Ruben Gallego and Senator Tammy Duckworth, all veterans of the U.S. military who’ve recently expressed grave concern over President Donald Trump’s rhetoric and stance toward North Korea. From January 2012 to December 2014, Jouas was intimately involved in formulating plans to counter a North Korean attack on South Korea. “This threat was the most dangerous I’d faced since the end of the Cold War, and planning for it the most challenging problem I’d encountered in my 35-year career,” he said. According to Jouas, it would take days to months for the necessary U.S. reinforcements, supplies and equipment to reach the Korean Peninsula. Once the troops finally arrive, Jouas added, "they may well find their bases subject to attack by conventional or chemical weapons, which will further delay their entry into the war." Jouas also highlighted the risk a conflict would pose to both South Korean and American civilians living in the region. He said it would take "days" to eliminate North Korean artillery, rockets and missiles that threaten the South Korean capital of Seoul, which is home to 25 million people. Meanwhile, "an enormous casualty and evacuee crisis will develop and include over a hundred thousand non-combatant Americans, many of who will turn to U.S. forces to get them off the peninsula," Jouas added. He also warned that the protection of South Korean civilians and evacuation of U.S. civilians would be "significantly complicated" by the "expected use" of nuclear and chemical weapons by Kim Jong Un's regime. Finally, Jouas emphasized any military action against North Korea by the U.S., "no matter how limited," would likely spark a full-scale war and be unlikely to "completely eliminate North Korea’s nuclear capabilities." Lieu, who served in the U.S. Air Force and was at one point stationed in Guam, told Newsweek what really "jumped out" to him about the letter was how clear it outlines the logistical issues the U.S. military faces in terms of dealing with North Korea. Unlike conflicts in the Middle East, the U.S. "can't just send over troops and equipment right now because that would provoke a North Korean attack," Lieu said. "It would take many days to get rid of North Korea’s artillery and all their other weapons. In the meantime, a lot of people are going to die." The California congressman also noted that although the U.S. has an extremely advanced military and "the best air force in the world," its advantage in this regard would essentially be eliminated once "North Korea sends their massive army down to population centers in South Korea." (John Haltiwanger, “U.S. Could Lose in a War against North Korea’s Massive Army, Former Pentagon Commander Warns,” Newsweek, November 9, 2017)
highly inquisitive and eager to learn in meetings with foreign leaders. Trump asks lots of questions in these meetings, often challenging basic assumptions about foreign policy (such as whether Korean reunification is necessary) or seeking advice for what he should do. Moon, clearly well prepared for his Trump meeting, gave him a history lesson, made a plea for peace and then asked Trump for something small and specific. Trump’s education in South Korea didn’t stop at tea. When Trump told Moon he wanted to visit the demilitarized zone (DMZ) between North and South Korea, the most heavily fortified border in the world, Moon suggested he would tag along. The plan was foiled by foggy weather, but Choo said the helicopter ride alone gave Trump new and useful perspective. “While [Trump] was up in the air, he was able to view the DMZ and its vicinity and he could see with his own eyes how close the DMZ was to Seoul and how many people actually live so close to the DMZ,” she said. “I believe this gave President Trump an opportunity to realize that in land where so many people live, there should never be a war.” The South Korean government is cautiously optimistic that they got through to Trump about the dangers of war on the peninsula and the need for dialogue. In his news conference with Moon the same day, Trump said he wanted to “make a deal” with Kim. The next day, speaking to South Korea’s National Assembly, Trump again emphasized his offer for North Korea to come out of its isolation and join the world community. Choo said that the Trump team was making revisions to the speech up to the very last minute. She was nervous but then was relieved because Trump left the door open for a diplomatic solution. And although Trump’s tweet insulting Kim as “short and fat” a few days later seemed like a setback, the South Koreans are hoping Trump’s education in Asia will have a lasting effect. “After seeing the realities in Korea, I believe that he must have clearly understood why we are saying no war and why we are calling for peace,” she said.” (Josh Rogin, “Trump Asks South Korean President, ‘Do You Have to Reunify?’” Washington Post, November 15, 2017)

11/10/17

Secretary of State Rex Tillerson said he can envision the U.S. and North Korea agreeing to hold talks at some point as a precursor to formal negotiations. "Eventually we’re going to have one of those days where we’re both going to say OK, maybe it’s a good time to have that first conversation," Tillerson told reporters on board a flight from Beijing to Danang, Vietnam. "Not to start negotiations but to have that conversation." Tillerson said he didn’t want to over-interpret the gap of nearly two months since North Korea’s last missile launch. He said he’d look for a "relative period of quiet and an indication from Kim Jong Un himself that they would like to have some type of a meeting." The U.S. has “two or three channels” in which they can send messages to Kim and receive them back, Tillerson said. He said that the U.S. wouldn’t threaten Kim if he gave up his nuclear weapons. “If North Koreans want to live under his dictatorial regime, so be it, but when he picks up nuclear weapons he changes it for everyone,” Tillerson said. “We would ignore him otherwise, quite frankly.” North Korea’s last launch was on September 15. Joseph Yun, the U.S.’s top North Korean official, was reported by the Washington Post as saying on October 30 that if the regime halted nuclear and missile testing for about 60 days that would be the signal Washington needs to resume direct dialogue with Pyongyang. Tillerson denied the U.S. had a specific window. "That may be Joseph’s view that 60 days would be a pretty good run, and it would be a pretty good run," he said. Even so, he added: "Now Kim could surprise us tomorrow with another missile launch." U.S. officials have been burned in the past for interpreting lulls in North Korean weapon tests as olive branches. After a relatively long pause in August, President Donald Trump told a rally that Kim was “starting to respect” the U.S., speculating that “maybe, probably not, something positive will come out of it.” Days later, he was condemning the nation for firing a ballistic missile over Japan. (Nick Wadhams, “Tillerson Says He Envisions U.S.-North Korea Talks,” Bloomberg, November 10, 2017)

The United States is currently having an assortment of direct contact with North Korea, but little progress has been made toward any serious dialogue, a senior South Korean diplomat said. "Exchanges and contact are regularly ongoing between the U.S. and North Korea through a New York channel and there's also a variety of contact through the so-called 1.5 track or academic exchange, however there's no detailed progress to note," Vice Foreign Minister Lim Sung-nam told the National Assembly's Foreign Affairs and Unification Committee. He was responding to a
lawmaker's query on President Donald Trump's reference to talks with North Korea during his visit to South Korea earlier in the week. In his press conference on November 7, Trump said, "I do see certain movement, yes. But let's see what happens," after being asked about "direct talks" with North Korea. "I really believe that it makes sense for North Korea to come to the table and to make a deal that's good for the people of North Korea and the people of the world," Trump also said, offering talks with North Korea. "It could be assessed that U.S. efforts and approach toward North Korea are producing a degree of results," Lim said, adding that North Korea has not conducted any military provocations for nearly two months since Sept. 15, when North Korea last launched a ballistic missile. "I assume Trump may have hinted at some kind of progress, although it was not specific, based on this assessment," the vice minister said. (Yonhap, “Little Progress in U.S.-N. Korea Talks: Senior Envoy,” November 10, 2017)

South Korea’s military announced it will kick off a rare combined exercise with three U.S. aircraft carriers near the peninsula this weekend aimed at demonstrating the allies' firm defense posture against North Korean threats. Their navies plan to begin the four-day drill, which will involve the three flattops — USS Ronald Reagan, USS Nimitz and USS Theodore Roosevelt — in the East Sea tomorrow, according to the Joint Chiefs of Staff (JCS). The carriers, already operating in the Western Pacific, will sail one by one into the waters east of Korea for the event, it added. Also to be mobilized are 11 U.S. Aegis ships and seven South Korean warships, including two Aegis vessels. "The participating forces of the two nations plan to enhance combined operation capability and interoperability through aircraft carrier escort operation, aviation operation and aerial firing," said the JCS. The upcoming practice is aimed at bolstering the South Korea-U.S. alliance's policy of "extended deterrence" against the North's nuclear and missile provocations, it added. The allies will also show off their readiness to mount a strong retaliation with overwhelming firepower in the event of an emergency, the JCS stressed. The U.S. Navy's previous training operation involving three carriers was in the vicinity of Guam in the Western Pacific in 2007 during the Valiant Shield exercise. (Yonhap, “S. Korea to Train with Three U.S. Aircraft Carriers,” November 10, 2017)

11/11/17

DPRK FoMin spokesperson's statement: “Trump went on his first tour of Asia since he took office and is bustling about in the surrounding region of our country from the 5th day of this month. His current trip to our surrounding region is a warmonger's visit for confrontation to rid the DPRK of its self-defensive nuclear deterrence. It is also nothing but a business trip by a warmonger to enrich the monopolies of the U.S. defense industry by milking the moneybags from its subordinate "allies." Trump, during his visit, laid bare his true nature as destroyer of the world peace and stability and begged for a nuclear war on the Korean peninsula. What cannot be overlooked is the fact that Trump, not long after his lunatic remarks of totally destroying the DPRK at the United Nations General Assembly in September this year, made his conceived attempt yet again to alienate our people from the government and keep up rivalry between the DPRK and the international society by "demonizing" our country while making nonsensical remarks of completely denying our ideology and system. He boasted about the "overwhelming superiority of U.S. power" and "peace through strength". But, he needs to be well advised that it is the stand of the DPRK to defend our sovereignty and rights to existence and development by keeping a real balance of force with the U.S. The historical lessons in decades-long history of the DPRK-U.S. showdown such as the U.S. ignominious defeat in the 1950's Korean War, the incident of the U.S. armed spy-ship "Pueblo", the incident of "EC-121" reconnaissance plane and so on, give a clear answer to the question: Who is the one that should not underestimate or try its opponent. The DPRK's possession of nuclear weapons was a righteous and inevitable choice to defend our national sovereignty and dignity and our people's rights to existence and development from increased nuclear threats and blackmail by the U.S. and its hostile moves against the DPRK. Time is now gone forever when the U.S. used to threaten and blackmail us with nuclear weapons. The reckless remarks by a dotard like Trump can never frighten us or put a stop to our advance. This rather gives us an assured conviction that our choice to embark on the road of simultaneously promoting the economic construction and the up-building of the nuclear force was all the more righteous one, and it pushes us to speed up the efforts to accomplish the great cause of completing
the state nuclear force. The DPRK remains strong in courage and faith and it will surely win the final victory in the showdown with the U.S. as it is under the distinguished guidance of the great leader and has the single-minded unity of the army and people rallied closely around their leader as well as the invincible military strength.” (KCNA, “Trump’s Visit Is Business Trip: FM Spokesman,” November 11, 2017)

President Moon Jae-in and Chinese President Xi Jinping agreed to “normalize exchanges and cooperation in all areas” during their summit in Da Nang, Vietnam, signaling a thaw in bilateral relations following the row over the deployment of an American antimissile system. The two leaders held their second summit on the sidelines of the Asia-Pacific Economic Cooperation (APEC) leaders’ meeting, both expressing the need to manage the security situation on the Korean Peninsula and for the North Korean nuclear issue to ultimately be resolved through dialogue, according to the Blue House. The summit was initially scheduled for 30 minutes but lasted 43 minutes. Moon said to Xi during the meeting, “Korea-China relations briefly faced difficulty, but on the other hand, it was an opportunity to reconfirm how valuable we are to one another. Let us both work hard to recover lost time.” Xi replied that the two countries “hold extensive shared interests in regard to economic growth and global peace” and that he believes the meeting “will serve as an important opportunity for the two countries to show cooperation and leadership for the development of bilateral relations and cooperation on the Korean Peninsula issue.” The two leaders last met in July in Berlin, on the sidelines of the Group of 20, or G-20, summit. Moon agreed to make his first visit to China next month, said presidential chief press secretary Yoon Young-chan in a press briefing, which would mark his first visit to the country since he took office. Moon also invited Xi to visit Korea next February, during the 2018 PyeongChang Winter Olympics. Xi reportedly said he would try to visit, and that in case he is unable to attend he will send a high-level delegation instead. Restoring relations between Korea and China, getting North Korea to participate in the PyeongChang Olympics and creating an atmosphere conducive to talks with Pyongyang about denuclearization is a part of Moon’s comprehensive strategy toward the North, outlined in his Berlin address in July. By agreeing on Moon’s visit to Beijing in December, the first step is now seen as having been achieved. At the end of last month, the two countries put bilateral ties back on track after a yearlong standoff over the deployment of the U.S.-led Terminal High Altitude Area Defense (THAAD) battery in Korea, and the recent summit further cements the normalization of relations. The Blue House initially said the Thaad issue was not going to be raised during the summit, but Xi brought it up. Xi emphasized that the October 31 agreement between the two countries marked a “new start and a good beginning.” The Chinese Foreign Ministry said in a statement afterward that Xi reiterated China’s position on THAAD and that Moon said that he recognized China’s concerns and that Korea has no intention of harming its security interests. The Blue House statement on the results of the meeting did not go into detail regarding Thaad, but a Blue House official told JoongAng Ilbo, when asked whether Moon addressed Korean companies in China being affected by economic retaliation over THAAD, “There was confirmation that the economy has to be improved comprehensively and quickly, and I believe that was included in this.” The official added, “There was talk of improving relations in all areas, and there was already mutual understanding reached beforehand that this includes the companies and tourism [affected by China’s retaliation], and the two leader’s perception was in line with this.” (Sarah Kim and Kang Tae-wha, “Moon, Xi Agree to ‘Normalize’ Relations ‘in All Area,’” JoongAng Ilbo, November 13, 2017)
demand to meet to discuss ways to prevent future violations, the command said in Command, which oversees the armistice, notified the Korean People’s Army of its findings and violation of North Korean chasers briefly crossed the borderline before turning back in a hurry, another soldier defecting halted the 1950 tensions over the North’s nuclear weapons program. The fully armed troops violated the truce that heavily armed border dividing the countries, South Korean officials North Korean troops fired on a fellow soldier who was defecting to South Korea across the Times power in his country at a young age. But he has also ridiculed him as “Little Rocket Man” for his has floated the idea of a meeting with Kim and praised the North Korean leader for consolidating world.” Trump’s comments were in keeping with his hot for North Korea. But it would also be good for lots of other places, and it would be good for the possibility. “I can tell you — for North Korea. But it would also be good for lots of other places, and it would be good for the world.” Trump’s comments were in keeping with his hot-and-cold approach to Kim. At times, he has floated the idea of a meeting with Kim and praised the North Korean leader for consolidating power in his country at a young age. But he has also ridiculed him as “Little Rocket Man” for his ballistic missile tests. (Mark Landler, “After a Quiet Week, Trump Aims at Critics,” New York Times, November 13, 2017, p. A10)
China announced that it would send a high-level diplomat to North Korea for the first time in two years, in a move less than a week after President Trump’s visit that is likely to resume pressure on the North to curb its nuclear arms program. The head of the Communist Party’s external affairs department, Song Tao, is scheduled to leave for Pyongyang on November 17, Xinhua reported. The official announcement said that Song would inform North Korea of the results of the 19th Communist Party congress last month that reappointed President Xi Jinping to a second term. Xinhua also reported that Song would “visit” the north, a phrasing that Chinese specialists on international relations called an oblique way of saying that Song would carry a message from Xi. They said the message would most likely urge the North to join negotiations to halt its nuclear program, and convey the contents of Xi’s discussions with Trump about North Korea. Last week in Beijing, the talks between President Xi and Trump focused heavily on North Korea. After he

statement. The command also released closed-circuit television footage that illustrated the North Korean’s dramatic defection through the Joint Security Area north of Seoul. It was a close escape for the soldier, who bolted toward the border line just yards ahead of former comrades who had started to shoot. According to the footage, the defector sped a drab, olive-colored military jeep along a tree-lined road and into the Joint Security Area after crossing a North Korean landmark known as the 72-Hour Bridge. When the vehicle did not stop at a North Korean guard post and drove into the North Korean side of the Joint Security Area, Communist troops wearing helmets and carrying sidearms and rifles poured out of their buildings. The jeep got stuck near the border line, a white concrete marker barely taller than a brick, which bisects the two sides of the Joint Security Area. The defector got out and dashed for life across the line, while four North Korean soldiers, one of them lying on the ground, unleashed a hail of bullets to stop him. In the next segments of the footage, the North Korean defector lay motionless among leaves beside a wall 55 yards south of the border. Two South Korean Army sergeants crawled to him and dragged him to safety, while North Korean soldiers watched them from their guard post. A United States Army medical helicopter evacuated the defector to a South Korean hospital, where he has gone through a series of surgeries to treat at least five gunshot wounds. When doctors opened his abdomen to patch up the damaged digestive tract, they found it riddled with parasitic worms. Analysts considered the discovery evidence of the dire conditions in North Korea, including poor hygiene and nutrition. Yonhap reported on November 21 that the soldier had woken up and begun talking, and the next day Dr. Lee Cook-jong, a lead surgeon, confirmed that he was conscious and “is not going to die.” The soldier — whose name, rank and other information have not been released — is still too weak to undergo a debriefing, doctors and officials said. Gen. Vincent K. Brooks, an American who leads the United Nations Command, said his troops had acted “in a manner that is consistent with the armistice agreement, namely — to respect the demilitarized zone and to take actions that deter a resumption of hostilities.” He added, “The armistice agreement was challenged, but it remains in place.” A North Korean soldier last defected through the area in 2007. (Choe Sang-hun, “U.N. Says North Defied Pact to End Korean War,” New York Times, November 22, 2017, p. A-10) The Demilitarized Zone separating the two Koreas saw an unusual amount of action, with an American man unsuccessfully attempting to cross into the North and a North Korean soldier successfully defecting to the South. A 58-year-old man from Louisiana was arrested by South Korean forces for crossing the Civilian Control Line, just outside the DMZ, as part of an attempt to get into North Korea “for political purposes,” authorities said. A resident of the border county of Yeoncheon, 40 miles north of Seoul, saw the man and alerted police, Yonhap reported. The man, identified only as “A,” had arrived in South Korea only three days earlier. The American Embassy in Seoul was aware of the report and was looking into it, an official said. “If it is determined that a U.S. citizen has been detained, the U.S. Embassy will provide appropriate consular services,” he said. In a separate incident, a North Korean soldier manning a guard post on the northern side of the Joint Security Area — the area with the blue huts straddling the DMZ, where inter-Korean meetings are sometimes held — defected to the South. He was shot by North Korean soldiers while he was escaping across the line and is now being treated in a hospital, South Korea’s Joint Chiefs of Staff said. “The military has raised its alertness against the North Korean military’s possible provocations and is maintaining its full readiness posture,” a military official said, according to Yonhap. (Anna Fifield, “American Detained Trying to Enter North Korea While North Korean Soldier Escapes South,” Washington Post, November 13, 2017)
President Trump said he and Asian leaders have a new resolve to confront North Korea and its rogue nuclear weapons program, claiming credit for projecting a stronger and more confident United States unafraid to insist on sovereignty and respect. “Time is running out” on dealing with North Korea, Trump said at the White House. With China, North Korea’s most important ally, Trump said he reaffirmed that “all options are on the table.” Trump spoke on his first full day back in Washington after a 12-day, five-nation trip to Asia. “America’s renewed confidence and standing in the world has never been stronger than it is right now,” Trump said. In his remarks Wednesday, Trump gave a retrospective of what he called his forceful approach to U.S. foreign policy. Insisting on sovereignty and respect has led to stronger relationships, great NATO defense commitments, and U.S. arms sales and spending, Trump asserted. “America is back,” he said. The rising threat from North Korea was the main security issue for his discussions, and Trump claimed credit for greater unity in applying sanctions aimed at persuading Pyongyang to back off threats against the United States and its allies. “I called on every nation, including China and Russia, to unite in isolating the North Korean regime — cutting off all ties of trade and commerce — until it stops its dangerous provocation,” Trump said. An editorial in a North Korea state-run newspaper today called Trump a coward who deserved the death penalty. “The worst crime for which he can never be pardoned is that he dared [to] malignantly hurt the dignity of the supreme leadership,” the editorial in Rodong Sinmun said. “He should know that he is just a hideous criminal sentenced to death by the Korean people.” (Anne Gearan, “Trump Claims His Trip Forged New Unity against North Korea,” New York Times, November 16, 2017, p. A-10)
to stop Pyongyang’s missiles before they get far from Korean airspace. The new approach, hinted at in an emergency request to Congress last week for $4 billion to deal with North Korea, envisions the stepped-up use of cyberweapons to interfere with the North’s control systems before missiles are launched, as well as drones and fighter jets to shoot them down moments after liftoff. The missile defense network on the West Coast would be expanded for use if everything else fails. In interviews, defense officials, along with top scientists and senior members of Congress, described the accelerated effort as a response to the unexpected progress that North Korea has made in developing intercontinental ballistic missiles capable of delivering a nuclear bomb to the continental United States. “It is an all-out effort,” said Senator Jack Reed (D-RI), the top Democrat on the Senate Armed Services Committee, who returned from a lengthy visit to South Korea last month convinced that the United States needed to do far more to counter North Korea. “There is a fast-emerging threat, a diminishing window, and a recognition that we can’t be reliant on one solution.” For years, that single solution has been the missile batteries in Alaska and California that would target any long-range warheads fired toward the American mainland, trying to shoot them down as they re-enter the atmosphere. Such an approach, known as “hitting a bullet with a bullet,” remains of dubious effectiveness, even after more than $100 billion has been spent on the effort. Antimissile batteries on ships off the Korean coast and in South Korea protect against medium-range missiles, but not those aimed at American cities. Washington is responding to the North Korean nuclear threat with a rush of money to strengthen old antimissile systems and inaugurate new ones. The diagram shows a mix of current and proposed options for defeating the North’s long-range missiles. So the administration plans to pour hundreds of millions of dollars into the two other approaches, both of which are still in the experimental stage. The first involves stepped-up cyberattacks and other sabotage that would interfere with missile launches before they occur — what the Pentagon calls “left of launch.” The second is a new approach to blowing up the missiles in the “boost phase,” when they are slow-moving, highly visible targets. President Trump has praised the existing missile defense system, insisting last month that it “can knock out a missile in the air 97 percent of the time,” a claim that arms control experts call patently false. In trial runs, conducted under ideal conditions, the interceptors in Alaska and California have failed half of the time. And the Pentagon has warned administration officials that the North will soon have enough long-range missiles to launch volleys of them, including decoys, making the problem far more complex. That helps explain the rush for new protections. “They’re looking at everything,” said Thomas Karako, a senior fellow at the Center for Strategic and International Studies in Washington, who recently led two antimissile studies and closely monitors the administration’s planning. “What you’re seeing is a lot more options on the table.” The $4 billion emergency budget sought by the White House is on top of the $8 billion that the Missile Defense Agency has already been granted for this fiscal year, as well as what other military services and agencies are putting into missile defense. Another $440 million was moved from existing programs to antimissile work two months ago, as the North Korea threat became more serious. In the emergency request to Congress, and in documents made public by its committees, the precise use of the funds is cloaked in deliberately vague language. Hundreds of millions of dollars, for example, are allotted for what the documents called “disruption/defeat” efforts. Several officials confirmed that the “disruption” efforts include another, more sophisticated attempt at the kind of cyber and electronic strikes that President Barack Obama ordered in 2014 when he intensified his efforts to cripple North Korea’s missile testing. Using cyberweapons to disrupt launches is a radical innovation in missile defense in the past three decades. But in the case of North Korea, it is also the most difficult. It requires getting into the missile manufacturing, launch control and guidance systems of a country that makes very limited use of the internet and has few connections to the outside world — most of them through China, and to a lesser degree Russia. In the operation that began in 2014, a range of cyber and electronic-interference operations were used against the North’s Musudan intermediate-range missiles, in an effort to slow its testing. But that secret effort had mixed result. The failure rate for the Musudan missile soared to 88 percent, but it was never clear how much of that was due to the cyberattacks and how much to sabotage of the North’s supply chain and its own manufacturing errors. Then Kim Jong-un, the country’s president, ordered a change in design, and the test-launches have been far more successful. The experience has raised difficult questions about the effectiveness of cyberweapons, despite billions of dollars in investment. “We can dream of a lot of targets to hack,” said Michael Sulmeyer,
director of the Cyber Security Project at Harvard and formerly the director for cyberpolicy planning and operations in the office of the defense secretary. “But it can be hard to achieve the effects we want, when we want them.” Congressional documents also talk of making “additional investments” in “boost-phase missile defense.” The goal of that approach is to hit long-range missiles at their point of greatest vulnerability — while their engines are firing and the vehicles are stressed to the breaking point, and before their warheads are deployed. Defense Secretary Jim Mattis is also weighing, among other boost-phase plans, formulas that draw on existing technologies and could be deployed quickly. One idea is having stealth fighters such as the F-22 or the F-35 scramble from nearby bases in South Korea and Japan at the first sign of North Korean launch preparations. The jets would carry conventional air-to-air missiles, which are 12 feet long, and fire them at the North Korean long-range missiles after they are launched. But they would have to fly relatively close to North Korea to do that, increasing the chances of being shot down. A drawback of boost-phase defense is the short window to use it. Long-range missiles fire their engines for just five minutes or so, in contrast to warheads that zip through space for about 20 minutes before plunging back to earth. And there is the risk of inviting retaliation from North Korea. “You have to make a decision to fire a weapon into somebody’s territory,” Gen. John E. Hyten of the Air Force, commander of the United States Strategic Command, which controls the American nuclear missile fleet, recently told a Washington group. “And if you’re wrong, or if you miss?” A boost-phase idea getting much notice would be to have drones patrol high over the Sea of Japan, awaiting a North Korean launch. Remote operators would fire heat-sensing rockets that lock onto the rising missiles. “It’s a huge advance,” Gerold Yonas, chief scientist for President Ronald Reagan’s “Star Wars” program, said of the drone plan. “It’s one of those things where you hit yourself on the forehead and say, ‘Why didn’t I think of that?’” Leonard H. Caveny, a main planner of the rocket-firing drones and a former Navy officer who directed science and technology at the Pentagon’s antimissile program from 1985 to 1997, said an accelerated program could produce the weapons in a year or less. Dr. Caveny’s team is considering use of the Avenger, a drone made by General Atomics that has a wingspan of 76 feet. “This is going to be a game changer,” said Arthur L. Herman, a senior fellow at the Hudson Institute in Washington, who collaborates with Dr. Caveny. The Pentagon’s Missile Defense Agency is also developing a drone that would fire potent laser beams at rising missiles. But recent plans would have it make its debut no sooner than 2025 — too late to play a role in the current crisis or the Trump presidency. Even so, the effort has influential backers. In the recent talk, General Hyten of Strategic Command called lasers much better than interceptor rockets because they avoided questions over firing weapons into sovereign territories, especially to knock out missile test-flights. A potent beam of highly concentrated light, he said, “goes out into space,” avoiding the trespassing issue. In recent months, Congress has urged Pentagon officials to develop both varieties of drones. Theodore A. Postol, a professor emeritus of science and national security policy at M.I.T. who has drawn up plans for a missile-firing drone, argued that fleets of such weapons patrolling near the North, threatening to undo its strategic forces, would be extremely intimidating and create new diplomatic leverage. “We need it now,” he said. “My concern is that we get something out there quickly that will pressure North Korea to negotiate.” (David E. Sanger and William J. Broad, “To Counter North Korean Missiles, U.S. Is Racing for Plans B and C,” New York Times, p. A-1)

The top nuclear envoys of South Korea and the United States reaffirmed Friday that they are seeking a "peaceful" way to resolve North Korea's nuclear stalemate and vowed to keep their joint campaign of pressure to bring Pyongyang to talks on its denuclearization. The reaffirmation came after Lee Do-hoon, South Korea's special representative for Korean Peninsula peace and security affairs, and his U.S. counterpart, Joseph Yun, met on the southern resort island of Jeju to discuss their coordinated approach towards the North's nuclear and missile threats. "There is no doubt that both of the presidents want to find a peaceful way in regard to North Korea's nuclear issue. So we discussed them and we agreed the pressure campaign has to be a central element," Yun told reporters after completing a meeting that lasted for more than an hour. "We have been engaged with countries like China, Russia, as well as Japan and the EU, aimed at getting pressure on North Korea to have a meaningful and credible dialogue with us so that they can take steps towards the denuclearization," he said. "We very much agree on that, and again today we reaffirmed that goal." Answering a question seeking comments on a planned visit by Chinese President Xi
The commander of the U.S. nuclear arsenal says he would not blindly carry out an ordered strike by President Donald Trump. General John Hyten says he's well aware of the rules of engagement with nuclear weapons, telling an audience of senior political, military and diplomatic officials gathered in Halifax that he's thought about this a lot. "If you execute an unlawful order you will go to jail, you could go to jail for the rest of your life," he said during a panel discussion at the Halifax International Security Forum. "The way the process works is simple. I provide advice to the president and he will tell me what to do. And if it's illegal... I'm going to say 'Mr. President, it's illegal' and you know what he's going to do. He's going to say 'What would be legal?' and we'll come up with options, a mix of capabilities to respond to whatever the situation is," Hyten said. "And that's the way it works." Hyten says his role is to provide the room for diplomacy and sanctions to work. "We are ready every minute of every day to respond to any event that comes out of North Korea," he said. "That's the element that has to be clear. And it is clear. If he [Kim]...
President Donald Trump put North Korea back on a list of state sponsors of terrorism, a designation that allows the United States to impose more sanctions and risks inflaming tensions over Pyongyang’s nuclear weapons and missile programs. The Republican president, who has traded personal insults with North Korean leader Kim Jong Un but has not ruled out talks, said the Treasury Department will announce additional sanctions against North Korea tomorrow. “In addition to threatening the world by nuclear devastation, North Korea has repeatedly supported acts of international terrorism, including assassinations on foreign soil,” Trump told reporters at the White House. “This designation will impose further sanctions and penalties on North Korea and related persons and supports our maximum pressure campaign to isolate the murderous regime.” Trump, who has often criticized his predecessors’ policies toward Pyongyang, said the designation should have been made “a long time ago.” Experts say the designation will be largely symbolic as North Korea is already heavily sanctioned by the United States, a reality that U.S. Secretary of State Rex Tillerson seemed to acknowledge while saying it would help dissuade third parties from supporting Pyongyang. “The practical effects may be limited but hopefully we’re closing off a few loopholes with this,” he told reporters. The United States has designated only three other countries — Iran, Sudan and Syria — as state sponsors of terrorism. Some experts think North Korea does not meet the criteria for the designation, which requires evidence that a state has “repeatedly provided support for acts of international terrorism.” In his remarks, Trump remembered Otto Warmbier, the college student from Ohio who died in June shortly after his return from North Korea, where he was held for more than a year. His death caused outrage in the United States and further inflamed tensions with Pyongyang. A U.S. intelligence official who follows developments in North Korea expressed concern that Trump’s move could backfire, especially given that the basis for the designation is arguable. The official said Kim could respond in a number of ways, including renewing missile or nuclear tests in “a very volatile environment.” The move also could undercut Trump’s efforts to solicit greater Chinese cooperation in pressuring North Korea to halt its nuclear and ballistic missile tests, the official said. (Reuters, “Trump Declares N. Korea State Sponsor of Terrorism,” November 20, 2017) A bipartisan group of lawmakers had urged Trump to make the designation. “Such acts are not isolated events, but part of a consistent pattern by the Kim regime,” stated the letter, signed by Rep. Edward R. Royce (R-Calif.), chairman of the House Committee on Foreign Affairs, and Rep. Eliot L. Engel (N.Y.), the committee’s ranking Democrat, among others. “There’s no doubt the Kim regime thrives off spreading mayhem around the globe, and today’s decision is another step in the administration’s effort to bring the greatest pressure to bear on the Kim regime,” Sen. Tom Cotton (R-Ark.) said today. But Sen. Edward J. Markey (D-Mass.) said the move is largely for show. “Our diplomatic strategy should be consistent and coordinated, but President Trump’s symbolic designation only ratchets up rhetoric while failing to apply maximum pressure through targeted sanctions,” Markey said. “Only pressure combined with direct diplomacy can help us achieve the ultimate goal of peaceful and complete denuclearization of the Korean Peninsula.” Daniel Russel, former National Security Council senior Asia director under President Barack Obama, agreed that the move was symbolically potent because the lifting of the sanctions represented the “high-water mark of U.S.-North Korea efforts to reconcile their differences and negotiate and engage in 2008.” The relisting of the North is tantamount to “taking one of the trophies out of the glass case and shattering it.” Russel said the Obama administration had deliberated over the North’s behavior but had been
President Trump: “We just returned from a historic 12-day trip to Asia. Everywhere we went, the American delegation was greeted with tremendous hospitality and tremendous respect. People are respecting our country again, believe me. …One of the primary goals of our trip was to pursue the denuclearization of the Korean Peninsula. I want to begin this morning by meeting and by talking about the fact that we will be instituting a very critical step, and that will start right now. Today, the United States is designating North Korea as a state sponsor of terrorism. It should have happened a long time ago. It should have happened years ago. In addition to threatening the world by nuclear devastation, North Korea has repeatedly supported acts of international terrorism, including assassination by nuclear devastation, North Korea has repeatedly supported acts of international terrorism, including assassination by nuclear devastation, North Korea has repeatedly supported acts of international terrorism, and for his nuclear and missile programs. They have s

President Trump: “We just returned from a historic 12-day trip to Asia. Everywhere we went, the American delegation was greeted with tremendous hospitality and tremendous respect. People are respecting our country again, believe me. …One of the primary goals of our trip was to pursue the denuclearization of the Korean Peninsula. I want to begin this morning by meeting and by talking about the fact that we will be instituting a very critical step, and that will start right now. Today, the United States is designating North Korea as a state sponsor of terrorism. It should have happened a long time ago. It should have happened years ago. In addition to threatening the world by nuclear devastation, North Korea has repeatedly supported acts of international terrorism, including assassination by nuclear devastation, North Korea has repeatedly supported acts of international terrorism, including assassination by nuclear devastation, North Korea has repeatedly supported acts of international terrorism, and for his nuclear and missile programs. They have s
and related persons, and supports our maximum pressure campaign to isolate the murderous regime that you've all been reading about and, in some cases, writing about. Tomorrow, the Treasury Department will be announcing an additional sanction, and a very large one, on North Korea. This will be going on over the next two weeks. It will be the highest level of sanctions by the time it's finished over a two-week period. The North Korean regime must be lawful. It must end its unlawful nuclear and ballistic missile development, and cease all support for international terrorism — which it is not doing.” (White House Office of the Press Secretary, Remarks by President Trump before Cabinet Meeting, November 20, 2017)

Treasury Department officials announced a new round of sanctions aimed at disrupting the North’s nuclear and ballistic missile program. They were levied against Chinese trading companies and several North Korean shipping vessels and companies, freezing their assets and prohibiting Americans from engaging in transactions with them. Secretary of State Rex Tillerson had described the sanctions as extensions of existing prohibitions. “It may, though, disrupt and dissuade some third parties,” he said. “This will close a few additional loopholes off.” Analysts said they doubted that new sanctions would make any real difference on the already heavily penalized country. If anything, they said, the designation will make diplomacy more difficult without increasing Washington’s leverage, warning that Pyongyang will probably take the naming and shaming as another reason to stick to its hardline policy of developing and testing nuclear weapons and intercontinental ballistic missiles (ICBMs). “It’s hard to see any real impact on North Korea, which has lived through all manners of sanctions for seven decades,” said Paik Hak-soon, a senior analyst at the Sejong Institute, a South Korean research organization. “What it does instead is to send a clear message to North Korea that Trump is not interested in talks, another sign and reconfirmation that the Americans remain a hostile force.” President Xi Jinping of China, who has been under pressure from Trump to do more to rein in its Communist neighbor, sent a special envoy to Pyongyang over the weekend in what Trump called a “big move” to persuade the North to change course. The envoy, Song Tao, returned home yesterday, apparently empty-handed. Neither China nor North Korea has indicated that Song met Kim. (Choe Sang-hun, “Restoring North Korea to Terrorism Blacklist Dims Hopes for Diplomacy,” New York Times, November 22, 2017, p. A-6) The Treasury said it is sanctioning one Chinese individual, 13 entities in China and North Korea, and 20 vessels owned by North Korean shipping companies. They will be banned from accessing the US financial system. "As North Korea continues to threaten international peace and security, we are steadfast in our determination to maximize economic pressure to isolate it from outside sources of trade and revenue while exposing its evasive tactics," Treasury Secretary Steven Mnuchin said in a statement. The sanctioned entities include three trading companies based in Dandong, which are accused of exporting some $650 million in goods to the North and importing another $100 million between January 2013 and August 2017. A fourth Dandong-based company, Dandong Dongyuan Industrial, allegedly exported more than $28 million in goods to North Korea over several years and worked with front companies for North Korean organizations related to weapons of mass destruction, according to the Treasury. Dongyuan's owner, Sun Sidong, was also blacklisted. Mnuchin said the US is sanctioning shipping and transportation companies, as well as their vessels, for "(facilitating) North Korea's trade and its deceptive maneuvers." The statement pointed out that North Korea is banned under a UN Security Council resolution from using "deceptive" shipping practices, such as ship-to-ship transfers. One North Korean company was designated for its alleged role in exporting North Korean labor to generate income for the regime. Two government entities — the Maritime Administration Bureau and the Ministry of Land and Marine Transport — were also included on the list. (Yonhap, “U.S. Slaps New Sanctions on Chinese, NK Entities,” Korea Herald, November 22, 2017)

North Korean representatives and academics from various countries took part in discussions in Sweden hosted by the Stockholm International Peace Research Institute (SIPRI), multiple participants told NK News. “The group looked at the background, the current situation, the drivers, the risks and possible measures for reducing risk,” Dan Smith, Director of SIPRI, told NK News. “The aim of the meeting was for participants to learn more and see if we could generate some ideas about what to do,” he added. Smith described the event as “an experts roundtable, focusing
on European perspectives on Northeast Asia regional security and, in particular, obviously, on North Korea,” but said that it had not been a Track 2 dialogue. Suzanne DiMaggio, a director and senior fellow at New America, participated in the event and told NK News that the dialogue was formatted as an “expert roundtable” however, “with some elements of a ‘Track 2’ dialogue.”

Georgy Toloraya, a former Russian diplomat and Director of Korean Programs at the Institute of Economy of Russian Academy of Sciences, also participated in the discussions and described it as a Track 2 event. “There are hopes and the intention for dialogue based on the freeze idea,” he said, referring to a proposal tabled by China in which North Korea would freeze missile tests in exchange for the U.S. and South Korea freezing their joint military exercises. In addition to its North Korean participants, the event featured experts from Russia, China, the UK, Italy, Germany, the U.S., and Switzerland. While Smith and DiMaggio were not willing to discuss details about the North Koreans attending the event, Toloraya said that the four DPRK representatives were from the Korea-Europe Association, a de facto arm of the country’s Ministry of Foreign Affairs. While hopeful, participants appear less optimistic about positive outcomes amid the current crisis. “While I found the discussion to be constructive, it’s difficult to feel optimistic at this time,” DiMaggio told NK News. “The longer the current course of escalation persists and intensifies, the greater the chances for spiraling into military conflict either by design or by miscalculation.” None of the participants NK News spoke to indicated that they received any signal regarding the impending missile test that was to come one week after the event, nor any indication of the reasons behind the relative lull in testing that preceded it. Evans Revere, a senior director with the Albright Stonebridge Group, has previously taken part in such dialogues – including at the Track 2 level – and told NK News that the efficacy of such non-official events is limited in the absence of higher-level talks. “Having attended some Track 2 events recently, I am convinced they are only marginally useful at this moment,” he said. “What is required now is direct, quiet, authoritative, and urgent communication, especially between Pyongyang and Washington, in order to de-escalate tensions and explore whether there is any basis for a dialogue on the main issues of concern, including denuclearization.” “Unfortunately, too many Track 2 dialogues in recent years have provided venues for the North Koreans to be told what they want to hear, not what they need to hear,” he added. Revere said that this has encouraged the North Korean side to get a false sense of what is possible and “to receive a skewed interpretation” of the U.S. government’s bottom line. Echoing DiMaggio’s comments, Revere warned that the possibility of confrontation and miscalculation also remains very real. “Direct dialogue, in which each side raises the issues that are important to it, should be the top priority,” he said. (Hamish Macdonald, “North Korean Officials, Foreign Academics, Held Dialogue prior to ICBM Launch,” NKNews, December 6, 2017)
before the international society as a responsible nuclear power. **We have nothing to do with "terrorism" and we do not care whether the U.S. puts a cap of "terrorism" on us or not.**

This time, while re-listing the DPRK as a "state sponsor of terrorism", the U.S. announced additional sanctions against the DPRK under the pretext of blocking illegal funds for "prohibited nuclear and ballistic missile program of the DPRK." The nuclear weapons of the DPRK are the deterrence to safeguard our sovereignty and our rights to existence and development from the U.S. heinous hostile policy and nuclear threats that have lasted for over half a century, and as long as the U.S. continues with its anti-DPRK hostile policy, our deterrence will be further strengthened. By re-listing the DPRK as a "state sponsor of terrorism", the U.S. openly revealed to the whole world its intention to destroy our ideology and system by using all kinds of means and methods. Not content with its sanctions against our country, the U.S. is making a last-ditch attempt to suffocate our country by labeling it as a "state sponsor terrorism". However, no sanction or pressure can stand up to the great and limitless strength of self-reliance and self-development of our people who are closely rallied around their leader. Our army and people are full of rage and anger towards the heinous gangsters who dared to put the name of our sacred country in this wretched list of "terrorism" and are hardening their will to settle all accounts with those gangsters at any time in any way. The U.S. is talking about some kind of "peaceful solution" while making a provocation by labeling our dignified country as a "state sponsor of terrorism". Its pitiful lot reaffirms the philosophical truth that we were absolutely right to choose the path for simultaneously pushing forward the economic construction and the up-building of the nuclear force and we must continue to keep the treasured nuclear sword in our hands more tightly. The U.S. will be held entirely accountable for all the consequences to be entailed by its impudent provocation to the DPRK." (KCNA, “FM Spokesperson Blasts U.S. for Re-Listing DPRK as "Sponsor of Terrorism,"” November 22, 2017)

**KCNA:** “The U.S. has gone mischievous nowadays to stop the DPRK from making advance as the nuclear force of Juche Korea has almost reached the phase of completion. As the DPRK's action for completing its state nuclear force is becoming a fait accompli, the Trump group is floating the story of "nuclear attack" on the DPRK, trying to make it sound plausible. By putting forward those soldiers who retired from service of the nuclear force, the U.S. is opening to public every procedure for executing the nuclear attack. The group is getting vocal that "President Trump would choose a plan already existing on table when he see it as a moment to use a nuclear weapon against north Korea" and that "it is almost impossible to stop the decision." Meanwhile, the U.S. is setting afloat information that it is making actual preparations for a nuclear war with the DPRK as evidenced by the report about the August nuclear bombing drill targeting the DPRK which B-52 of its air force conducted with Japan Air "Self-Defense Force" in areas around the Korean peninsula. **Such movement of the Trump group is aimed to pressurize the DPRK from taking a measure for completing the building of a nuclear force at the final phase.** In conclusion, the U.S. had better clearly understand who its rival is. If the U.S. is finally going to inflict a nuclear war on the DPRK, by finding fault with the DPRK's self-defensive measure for completing the national nuclear force, the DPRK will not hesitate to respond to it with the nuclear attack to wipe out the U.S., empire of evil, from the earth. It seems that the U.S. has lingering attachment for the Caribbean crisis in the 1960s. It will be a grave miscalculation for the U.S. to think that it can revive the Caribbean crisis on the Korean peninsula and bring down the DPRK. The Korean peninsula is not the Caribbean region and the Korean People's Army is not such a weak one who would put down its nuclear weapon at the nuclear threat and blackmail of the U.S. The KPA is the invincible and ever-victorious powerful army full of the spirit of annihilating enemies. The KPA is a heroic army which wrested surrender documents from the U.S. without nuclear weapons in all forms of confrontation with the U.S. including the 1968 Pueblo incident and the 1976 Panmunjom case. No force on the earth can bring into submission the DPRK whose leader, army and people have formed a harmonious whole and it is truth proven by the history of the DPRK-U.S. stand-off that the DPRK will always emerge victorious. The DPRK is a dignified nuclear power and a world-level military power and gone are the days never to return when the U.S. used to threaten the DPRK with nuclear weapons. **Trump had better ponder over the saying that “Give measure for measure.”** (KCNA, KCNA Commentary Urges U.S. to Stop Nuclear Threat to DPRK,” November 24, 2017)
Russia’s deputy foreign minister said North Korea’s current pause in provocations — the longest since last winter — indicates a step toward denuclearization of the Korean peninsula. “I think North Korea’s restraint for the past two months is within the simultaneous freeze road map” suggested by China and Russia, Igor Morgulov told reporters in Seoul. Russian and Chinese foreign ministers proposed in July a “double freezing” initiative, under which North Korea refrains from missile and nuclear tests, and the U.S. and South Korea halt large-scale military exercises. North Korea’s last provocation was on September 15, when it fired its second missile over Japan in as many months. The 73-day pause is the longest since a 116-day break between October 2016 and February. Morgulov, Russia’s deputy minister responsible for relations with East and South Asia, said that following a “freeze for freeze” the next step would be to hold exchanges with Pyongyang. Once North Korea agrees to a moratorium on testing and talks are taking place, the process can move to discussion of denuclearization, he said. “We will have to see a certain change of attitude of the U.S., especially on freezing or reducing” its military drills, Morgulov said. “It’ll be difficult for us to play the role of persuading North Korea” not to provoke anymore without a change in the U.S. position. (Kanga Kong, “Russia Suggests North Korea Taking Step toward Denuclearization,” Bloomberg, November 27, 2017)

KCNA: “A test-fire of the inter-continental ballistic rocket Hwasong-15 was successfully conducted on November 29 under the guidance of Kim Jong Un, chairman of the Workers’ Party of Korea, chairman of the State Affairs Commission of the DPRK and supreme commander of the Korean People’s Army. Kim Jong Un personally supervised the whole course of the test-fire. He indicated the orientation of developing a new type rocket that can make the final victory of the country in the showdown with the U.S. imperialists and gave detailed instructions every day to the Academy of Defense Science for doing so and thus made sure that the Hwasong-15 weapon system was successfully completed. Upon receiving the report that it is ready to test-fire the new type ICBM on November 28, he came out to the place where technical preparations for the rocket was under way late at night to see the 9-axis self-propelled launching vehicle manufactured by workers of the munitions industry. He praised them for having successfully made the vehicle to be impeccable. He expressed great satisfaction over the fact that such vehicles can be manufactured as many as the country wants now that the munitions industry has made a breakthrough in putting the production of all parts of the vehicle on a domestic and Juche basis 100 percent. He went to the launching ground and meticulously guided the pre-launch processes one by one including the one for vertically standing the rocket. At an observation post for command he learned in detail about the launching plan and issued an order to launch the rocket. The rocket successfully blasted off and soared into the sky. The ICBM Hwasong-15 soared to the highest altitude of 4 475 km and made a flight over the distance of 950 km for 53 minutes before making an accurate landing in the preset waters in the open sea in the East Sea of Korea. The test-fire confirmed that all the integers of the weapon system have satisfactorily complied with the requirements of design and that it is capable of fully ensuring reliability in combat situation to serve its mission as strategic weaponry system. Particularly, the accuracy of hitting targets by posture control and speed correction in the mid-flight section, accuracy in operation of high-thrust engine to which propulsion vector control is applied and the engine of high specific thrust was confirmed, and the accuracy of design integers of subsequent guided and stabilization systems was verified. Also confirmed were mobile and hoisting capabilities and operational reliability of launching system of the nine-axis self-propelled launching vehicle newly developed and completed. The test-fire also re-confirmed the control and stabilization technology, phase-separation and start-up technology and the safety of warhead in the atmospheric reentry environment that had already been confirmed. The ICBM Hwasong-15 weapon system represents the weapon system peculiar to the Workers’ Party of Korea, which was developed with domestic efforts and technology 100 percent to suit the specific conditions of the country. With this system, the DPRK has become possessed of another new-type inter-continental ballistic rocket weaponry system capable of carrying super-heavy nuclear warhead and attacking the whole mainland of the U.S. Greatly satisfied with the at-a-go success in the test-fire of the newly developed ICBM Hwasong-15, respected Supreme Leader Kim Jong Un was so excited to express his great satisfaction and extend his heartfelt gratitude to all those who took part in the development of the new type rocket weapon system. He said that the day was a significant day when the historic
cause of completing the state nuclear force, the cause of building a rocket power was realized, adding that the day, on which the great might of putting the strategic position of the DPRK on a higher stage was given birth, should be specially recorded in the history of the country. The dazzling achievements made in all fields of the country recently including the field of national defense science are a great victory which can be won only by the heroic people of the DPRK who remain true to the cause of our Party without vacillation, weathering all tempests of history. He warmly congratulated scientists, technicians, workers and officials in the field of the defense science who demonstrated once again the dignity and might of Juche Korea by succeeding in the test-fire of the newly-developed ICBM Hwasong-15, and had a photo taken with them. He was accompanied by Jang Chang Ha, Jon Il Ho, Jo Yong Won and Yu Jin.” (KCNA, “Kim Jong Un Guides Test-Fire of ICBM Hwasong-15,” November 29, 2017)

Elleman: “The Hwasong-15 is considerably larger than the Hwasong-14, and initial calculations indicate the new missile could deliver a moderately-sized nuclear weapon to any city on the US mainland. The Hwasong-15 is also large and powerful enough to carry simple decoys or other countermeasures designed to challenge America’s existing national missile defense (NMD) system. A handful of additional flight tests are needed to validate the Hwasong-15’s performance and reliability, and likely establish the efficacy of a protection system needed to ensure the warhead survives the rigors of atmospheric re-entry. The Hwasong-15 is a two-stage, liquid-fueled ICBM. Photographs of the Hwasong-15 reveal that its first stage is powered by a pair of engines that share the same external features found on the single chamber engine used by the Hwasong-14. The two-chamber configuration found on the Hwasong-15 is very similar to the original design of the RD-251 engine block developed and produced in the former Soviet Union, suggesting that the total thrust generated at lift-off is about 80-tons force. This is reasonably consistent with the estimated mass of the new missile, which is between 40 and 50 metric tons. The configuration of the second stage is not known, though its overall size suggests it contains 50 percent more propellant than the Hwasong-14. Taken together, and applying conservative assumptions about the second-stage propulsion system, it now appears that the Hwasong-15 can deliver a 1,000-kg payload to any point on the US mainland. North Korea has almost certainly developed a nuclear warhead that weighs less than 700 kg, if not one considerably lighter. The missile also features a new steering mechanism that is more efficient and simpler than the methods used in North Korea’s other missiles. North Korea’s older, Scud-based missiles employed jet vanes for steering during the boost phase. The Hwasong-12 and -14 used four small engines mounted in parallel to the main thrust chamber for missile control during first stage operations. North Korean engineers have mounted each of the main engines of the Hwasong-15 on a slotted gimbal that allows each to be reoriented in one dimension to control the direction of the exhaust gases to provide control. Little is known about the construction of the second stage. Most likely it is powered by four small engines derived from the Soviet R-27 missile. Such an arrangement would mean the upper-stage is underpowered, when compared to ICBMs fielded by other nations, but it would not prevent the Hwasong-14 from being used to threaten the entire US. Less likely, but possible, North Korea has obtained a new engine for use on the second-stage. Its inclusion in the design would enhance the Hwasong-15’s capabilities. The Hwasong-15 also incorporates other important qualitative improvements. It could be fitted with a post-boost control system to make final adjustments to the payload’s velocity and position in space, a measure that could substantially improve the missile’s precision. It is also possible that the missile has been designed to carry simple decoys, or other countermeasures, to confuse the US missile defense system. The missile has the throw-weight capacity to carry the countermeasures along with the warhead, but it is far from certain these were included in this most recent flight test. The appearance of the Hwasong-15 marks a significant improvement in North Korea’s ability to target the US. How many more tests North Korea will undertake depends on the regime’s perceived needs. At least one or two more tests on a standard trajectory are needed to validate its performance as a ballistic missile. Additional flight tests should be performed to determine the missile’s reliability, establish its accuracy and verify the re-entry protection system. However, if low confidence in the missile’s reliability is acceptable, two or three test firings over the next four to six months may be all that is required before Kim Jong Un declares the Hwasong-15 combat ready.” (Michael Elleman, “The New Hwasong-15 ICBM: A Significant Improvement That Could Be Ready As Soon As 2018,” 38North, November 30, 2017)
North Korea fired an intercontinental ballistic missile that flew both higher and longer than previous such launches, a bold act of defiance against President Trump after he put the country back on a list of state sponsors of terrorism. The president reacted cautiously to news of the launch, stating, “It is a situation that we will handle.” But Defense Secretary Jim Mattis expressed greater concern, emphasizing what he said were technical advances on display in the 53-minute flight, which began when the missile was launched northeast of the capital, Pyongyang, and ended nearly 600 miles to the east, when it landed in the Sea of Japan. “It went higher, frankly, than any previous shot they’ve taken,” Mattis said in the White House, where he was taking part in a budget meeting with the president and Republican congressional leaders. “The bottom line is, it’s a continued effort to build a threat — a ballistic missile threat that endangers world peace, regional peace, and certainly, the United States,” the defense secretary said. North Korea said that it had successfully tested its “most powerful” ICBM, the Hwasong-15, saying it “meets the goal of the completion of the rocket weaponry system” North Korea has been developing for decades. North Korea’s leader, Kim Jong-un, watched the launch, a broadcaster said, reading a prepared statement on the North’s Central Television. Experts said this latest launch — which landed west of the northern end of Honshu, Japan’s largest island — exhibited characteristics that underscored the increasing sophistication of North Korea’s program. The missile flew higher and for a longer duration than two previous intercontinental ballistic missile launches, which flew for 37 minutes on July 4 and for 47 minutes on July 28. David Wright at the Union of Concerned Scientists said the missile performed better than the two fired in July, and exhibited a potential range of more than 8,000 miles, able to reach Washington or any other part of the continental United States. “It’s pretty impressive,” Dr. Wright said of the test flight. “This is building on what they’ve done before. It’s muscle-flexing to show the U.S. that they’re going to continue to make progress.” However, Dr. Wright noted that in an effort to increase the vehicle’s range, the North Koreans might have fitted it with a mock payload that weighed little or next to nothing. So the distance traveled, while impressive, does not necessarily translate into a working intercontinental ballistic missile that could deliver a thermonuclear warhead. For all the evidence of technical advancements, a senior White House official said the significance of the launch should not be overstated, given the number of missile tests North Korea has carried out this year. The White House had expected some form of retaliation after it put the North back on its list of state sponsors of terrorism last week. Trump, officials said, will stick to his policy of rallying nations to apply economic pressure on North Korea, backed up by the threat of military action. In a statement, Secretary of State Rex W. Tillerson condemned the launch. But he added, “Diplomatic options remain viable and open, for now.” The launch came in the middle of the night on the peninsula, with less advance warning, according to experts. Aerial photographs of North Korean launch sites did not show missiles waiting on launch pads to be fueled, although Japanese officials had reported that radio telemetry pointed to a possible launch. Some experts theorized that North Korea was now fueling missiles horizontally, before they are placed on the launch pad. In the past, it went through a lengthier process of rolling a missile onto a launch pad, filling it with liquid fuel and then launching it — steps that could take days. “This shortens the time from when they become visible to when they go in the air, and makes it less likely that the U.S. will be able to strike before it launches,” said Rodger Baker, a vice president of strategic analysis with Stratfor, a geopolitical risk analysis company. American officials offered no proof of the horizontal fueling theory, but they acknowledged that North Korea is searching for ways to get around the United States’ ability to mount a pre-emptive strike. Mattis noted that South Korea had fired several “pinpoint missiles” into the water after the launch “to make certain North Korea understands that they could be taken under fire by our ally.” Although it was the third time that the South had fired missiles in response to a North Korean missile test, this response was more muscular, officials said, with South Korea firing from a land-based missile battery, a Navy destroyer and an F-16 fighter jet. It was meant to show that the South had multiple ways of hitting a North Korean missile on the launch pad in a pre-emptive strike, according to South Korean military officials. After the launch, the United Nations Security Council scheduled an emergency meeting on the issue for tomorrow afternoon. Matthew Rycroft, Britain’s ambassador to the United Nations, told reporters that the launch appeared to be “yet again, a reckless act by a regime which is more intent on building up its ballistic missile nuclear capability than it is on looking after its own people.” President Moon Jae-in of South Korea and Prime Minister Shinzo Abe of Japan each called
meetings of their national security councils to discuss the North’s latest provocation. Mr. Trump called both leaders on Tuesday, at their request, according to the White House. Unlike the launches over the summer, when the missiles flew over Japan's northern island, Hokkaido, the government did not issue cellphone alerts to warn its citizens. In Washington, a spokesman for the Defense Department, Col. Robert Manning of the Army, said that the launch “did not pose a threat to North America, our territories or our allies,” and added that the American commitment to the defense of South Korea and Japan “remains ironclad.” Trump avoided threats of military retaliation against the North today. But he did not hesitate to use the specter of a military confrontation in Asia as leverage against the Democrats in the budget wars in Washington. The missile launch, he predicted, would “have a huge effect on Schumer and Pelosi,” referring to Senator Chuck Schumer of New York and Representative Nancy Pelosi of California, the chambers’ Democratic leaders, both of whom boycotted his budget meeting. “If you look at the military, we want strong funding for the military,” Trump said. “They don’t.” North Korea has persisted in its nuclear weapons and missile development despite nine rounds of sanctions that the Security Council has imposed since its first nuclear test in 2006. (Mark Landler, Choe Sang-Hun, and Helene Cooper “Missile’s 53-Minute Test Flight Is Longest Yet by North Korea,” New York Times, November 29, 2017, p. A-1) A commercial airline crew witnessed the flight of an enormous North Korean missile believed capable of reaching Washington, D.C., Cathay Pacific officials confirmed December 4. “Be advised, we witnessed the DPRK missile blow up and fall apart near our current location,” the crew of Cathay Pacific Flight 893 reported Wednesday [November 29], according to a company message obtained by the South China Morning Post. The missile crashed into the waters off Japan, 620 miles from the launch site in North Korea. That's when the crew of Cathay Pacific Flight 893 “reported a sighting of what is suspected to be the re-entry of the recent DPRK test missile,” the airline said in its statement. (Avi Selk, “Flight Crew Saw North Korean Missile ‘Blow up and Fall Apart’ near Japan,” Washington Post, December 4, 2017)

President Trump: “As you probably have heard, and some of you have reported, a missile was launched a little while ago from North Korea. I will only tell you that we will take care of it. We have General Mattis in the room with us, and we've had a long discussion on it. It is a situation that we will handle. With that being said, Chuck Schumer and Nancy Pelosi did not show up for our meeting today. I'm not really that surprised. We have a lot of differences. They're weak on crime, they're weak on illegal immigration. They want the illegal folks to come pouring into our border and a lot of problems are being caused, although we've stopped it to a large extent as much as you can without the law, which we're going to get. Before this meeting and before this missile launch, they've been weak on military. In terms of spending, they're very hard to get the military — they want it for a lot of other things, but the military is always secondary to them. The military, to me, is number one. We won't be here without our powerful military, and we're building it up stronger, bigger, better than ever before. And General Mattis can testify to that. And the other thing: They want tax increases, and we want major tax decreases. So they decided not to show up. They've been all talk and they've been no action, and now it's even worse. Now it's not even talk. So they're not showing up to the meeting. I will say this: In light of the missile launch, probably they'll be here fairly quickly, or at least discussions will start taking place fairly quickly. ... MATTIS: Mr. President, Senator, Speaker, a little over two and a half hours ago, North Korea launched an intercontinental ballistic missile. It went higher, frankly, than any previous shot they've taken. It's a research and development effort on their part to continue building ballistic missiles that could threaten everywhere in the world, basically. And in response, the South Koreans have fired some pinpoint missiles out into the water to make certain North Korea understands that they could be taken under fire by our ally. But the bottom line is, it's a continued effort to build a threat — a ballistic missile threat that endangers world peace, regional peace, and certainly, the United States. PRESIDENT: Thank you, General. And we will take care of that situation. Thank you all very much. I appreciate it. Thank you. Q. Does this change anything to your basic approach to North Korea, these missile launches today? Does it change anything about your basic approach to dealing with them? PRESIDENT: Nothing changed. Nothing changed. We have a very serious approach, but nothing changed. We take it very seriously.” (White House
Tillerson statement: “The United States strongly condemns North Korea’s launch of what is likely an intercontinental ballistic missile into the Sea of Japan, indiscriminately threatening its neighbors, the region and global stability. The D.P.R.K.’s relentless pursuit of nuclear weapons and the means to deliver them must be reversed. Together the international community must continue to send a unified message to North Korea that the D.P.R.K. must abandon its WMD programs. All nations must continue strong economic and diplomatic measures. In addition to implementing all existing UN sanctions, the international community must take additional measures to enhance maritime security, including the right to interdict maritime traffic transporting goods to and from the D.P.R.K. The United States, in partnership with Canada, will convene a meeting of the United Nations Command Sending States to include the Republic of Korea and Japan and other key affected countries to discuss how the global community can counter North Korea’s threat to international peace. Diplomatic options remain viable and open, for now. The United States remains committed to finding a peaceful path to denuclearization and to ending belligerent actions by North Korea.” (DoS, Statement by Secretary of State Rex W. Tillerson, November 28, 2017)

President Trump pledged yesterday that “additional major sanctions” would be imposed on North Korea after Pyongyang’s latest intercontinental missile test. Trump’s statement followed a telephone conversation with Chinese President Xi Jinping, whose country is an economic lifeline for North Korea. Beijing’s backing is needed for any additional economic pressures on the regime of Kim Jong Un, and it was unclear how far China could go in applying new sanctions. “Just spoke to President XI JINPING of China concerning the latest provocative actions of North Korea,” Trump tweeted. “Additional major sanctions will be imposed on North Korea today. This situation will be handled!” In a statement, the White House said Trump had “underscored the determination of the United States to defend ourselves and our allies from the growing threat posed by the North Korean regime” in his call with Xi. “President Trump emphasized the need for China to use all available levers to convince North Korea to end its provocations and return to the path of denuclearization,” said the statement. In a brief statement carried by China’s state news agency Xinhua, Xi was reported to have told Trump that denuclearization of the Korean Peninsula is “China’s unswerving goal and China is ready to join the U.S. in pushing the nuclear issue toward a peaceful settlement.” Earlier yesterday, China’s Foreign Ministry expressed its “grave concern and opposition” to the launch by North Korea, which it refers to by its official name, the Democratic People’s Republic of Korea, or DPRK. “We strongly urge the DPRK side to abide by the relevant U.N. Security Council resolutions and halt any moves that could aggravate the situation on the Korean Peninsula,” Foreign Ministry spokesman Geng Shuang told a regular news conference. But the question remains: How far is China prepared to push its neighbor and fellow Communist regime, at the behest of the United States and in the quest for a denuclearized Korean Peninsula? Before the phone call between Trump and Xi, Chinese experts were skeptical that Beijing would go much further. “If China imposes heavier sanctions, that would be symbolic at best I think,” said Song Xiaojun, who used to run a government-linked military magazine. “China has a bottom line: ‘Don’t affect the life of the North Korean people, on humanitarian principles.’ It gives them things like oil and food to allow people there to survive.” The latest missile test may not have come as a surprise in Beijing, since North Korea had already made it clear it was continuing with its missile test program, said Zhao Tong, a nuclear policy expert at the Carnegie-Tsinghua Center here. But it will still underline Beijing’s discomfort with its turbulent neighbor, and lead inevitably to further economic pressure, he said. “The degree of further economic sanctions depends on North Korea’s next step. For example will they launch a complete ICBM or take a more extreme step such as a nuclear test in the Pacific Ocean or atmosphere?” he said. “But the trend toward increasing the economic sanctions is going to continue.” Yet there are also signs that China may be tiring of the American approach of “maximum pressure.” In an editorial in its Chinese-language edition issued Wednesday, Global Times said the test was a sign that past U.S. policy toward North Korea had failed, and that the approach tried under Trump had also been
unsuccessful. The United States, it said, “despised Pyongyang” and as a result had ignored North Korea’s security concerns and missed an opportunity to negotiate an end to the nuclear program — instead increasing pressure, raising tensions and narrowing the space for diplomacy since Trump took office. China Daily also issued an editorial that tried to shift the blame onto Trump for last week declaring North Korea a state-sponsor of terrorism, at a time when Pyongyang had briefly paused its missile testing program. “It is vexed that a golden opportunity to build concerted momentum to encourage Pyongyang to engage in talks has been so casually wasted by the Trump administration’s recent action of renaming Pyongyang a state sponsor of terrorism, which may have prompted Pyongyang’s latest missile launch,” it wrote. “There is a severe trust deficit among the relevant parties that is being exacerbated by the actions of Washington and Pyongyang.” That attempt to blame Washington rather than Pyongyang doesn’t get much traction in the West, but does reveal a mind-set among sections of the Communist Party. “The United States has demanded that the Security Council hold an emergency meeting, but the leverage exerted by the international community on North Korea is almost exhausted,” it wrote. “Now Pyongyang is extremely confident, for condemnation by the U.N. Security Council and possible new sanction measures are equal to a few more grains of dust on its body, or a few more drops of rain.” Yet there is no doubt that patience with Pyongyang is also in short supply in China right now. Lu Chao, a Korea expert at the Liaoning Academy of Social Sciences in Shenyang, called the latest test a “a very dangerous provocation.” “It will almost certainly provoke a U.S. reaction which will further destabilize situation on the peninsula,” he said adding that North Korea was “going on its own.” “It’s certain that, on issues regarding nuclear and missile tests, China opposes them but doesn’t have much influence on North Korea,” he said. “On the situation in the Korean Peninsula, China and North Korea lack effective communication.” There was a hint of an opening between Beijing and Pyongyang last month, experts say. North Korea refrained from conducting any missile tests during an important Communist Party Congress meeting in November at which Xi was granted another five years in power. A few days later, Xi sent a senior envoy, Song Tao, to brief the regime in Pyongyang about the party congress — although the envoy didn’t get to meet North Korean leader Kim. Lu said the lack of a meeting might have been a sign that Kim was preparing to launch another missile. “If he met with Song Tao and then launched the missile, it would have infuriated China more,” he said. Since Trump’s visit, China’s Foreign Ministry announced the main road connection with North Korea, the bridge across the Yalu River at the Chinese city of Dandong, would be temporarily closed while North Korea repairs the approach road on its side. A few days before, state-owned Air China also suspended flights between Beijing and Pyongyang, citing a lack of demand. Those measures could be interpreted as signals to Pyongyang, but if they were, they were largely aimed at placating Washington rather than changing North Korea’s strategic calculations, said Euan Graham, director of the International Security Program at the Lowy Institute in Sydney. (Simon Denyer, “Trump Pledges New Wave of ‘Major Sanctions’ on North Korea after Call with China’s Xi,” Washington Post, November 29, 2017) President Donald Trump called on China to cut all oil supplies to North Korea, as the United States urged the international community to sever all diplomatic and trade ties with the regime. Trump threatened “major sanctions” on the regime, following Pyongyang’s launch of an ICBM that can strike the United States, tweeting that he had just spoken with Chinese President Xi Jinping “concerning the provocative actions of North Korea.” He added, “Additional major sanctions will be imposed on North Korea today. This situation will be handled!” Such measures could also include sanctions against financial institutions, maritime interdiction and the cutting off of energy supplies to the regime. “President Trump called Chinese President Xi this morning and told him we have come to the point that China must cut off the oil from North Korea,” said U.S. Ambassador to the United Nations Nikki Haley at an emergency meeting of the UN Security Council in New York this evening. “That would be a pivotal step in the world’s effort to stop this international pariah.” She called on Xi to “show leadership and follow through,” saying, “China can do this on its own, or we can take the oil situation into our own hands,” hinting at possible military action. Beijing has previously resisted attempts to cut off all oil supplies to Pyongyang, which would cripple the regime. “Today, we call on all nations to cut off all ties with North Korea,” said Haley. “In addition to fully implementing all UN sanctions, all countries should sever diplomatic relations with North Korea and limit military, scientific, technical or commercial cooperation. They must also cut off trade with the regime by stopping all imports and exports and
expel all North Korean workers.” She also noted that North Korea and its enablers are using deceptive tactics to smuggle coal, banned under UN sanctions, into the regime, and bring in refined petroleum through illegal ship-to-ship transfers. “The regime has shown time and again that it doesn’t want to talk,” said Haley, pointing out that North Korean leader Kim Jong-un “didn’t even speak with President Xi’s envoy when he was sent to talk with the regime.” Chinese senior diplomat Song Tao made a four-day trip to Pyongyang on Nov. 17, but returned without meeting with leader Kim. She also pointed out that while North Korea declared itself a nuclear power following its missile launch Wednesday that title “comes with certain standards.” Haley added, “The dictator of North Korea made a choice yesterday that brings the world closer to war, not farther from it. We have never sought war with North Korea, and still today we do not seek it. If war does come, it will be because of continued acts of aggression like we witnessed yesterday.” She went on to say, “And if war comes, make no mistake, the North Korean regime will be utterly destroyed.” Saying it was a “time of reckoning,” Haley advised that North Korea’s UN rights and privileges to be taken away, including its voting powers, and pointed out that member states “have it within their power to further isolate, diminish and god willing, reverse the dangerous course of the North Korean regime.” Through an emergency meeting, the 15-member UN Security Council has called on nations to prevent the escalation of tension after the recent launch of the regime’s Hwasong-15. Wu Haitao, China’s deputy ambassador to the United States, urged North Korea to stop escalating tension on the Korean Peninsula, expressing regret that the stable situation in the past two months failed to achieve dialogue. He continued to stress the need for diplomacy, while again raising China’s initiative with Russia for a double suspension of the North’s nuclear activities and the United States’ military exercises with South Korea. “We urge Pyongyang once again to seize the rapidly closing window of opportunity to resolve its nuclear problem peacefully,” said Cho Tae-yul, South Korean ambassador to the United Nations, who also attended the meeting upon the invitation of the council. The White House said in a statement on Trump’s call with Xi that Trump “underscored the determination of the United States to defend ourselves and our allies from the growing threat posed by the North Korean regime.” It added that Trump “emphasized the need for China to use all available levers to convince North Korea to end its provocations and return to the path of denuclearization.” (Sarah Kim, “Trump Asks China to Cut All Oil to North,” JoongAng Ilbo, December 1, 2017)

11/30/17

During a brief press availability at the Pentagon with Libyan Prime Minister Fayez Serraj, Defense Secretary Jim Mattis was asked whether the launch meant that a diplomatic approach with North Korea just hasn’t worked. “I am not willing to say that diplomacy has not worked,” Mattis said. “We will continue to work diplomatically, we will continue to work through the United Nations, the United Nations Security Council and we will be unrelenting in that.” “At the same time, our diplomats will speak from a position of strength because we do have military options.” (Tara Kopp, “Mattis: Diplomacy Hasn’t Failed with North Korea,” Army Times, November 30, 2017)

12/2/17

White House national security adviser H.R. McMaster said that North Korea represents “the greatest immediate threat to the United States” and that the potential for war with the communist nation is growing each day. "I think it's increasing every day, which means that we are in a race, really, we are in a race to be able to solve this problem," McMaster told an audience at the Reagan National Defense Forum in Simi Valley, California when asked if North Korea's launch of an intercontinental ballistic missile November 29 had increased the chance of war. President Donald Trump remains committed to the complete denuclearization of the Korean Peninsula, McMaster said, adding that there are nonmilitary ways to deal with the issue, such as calling on China to impose greater economic sanctions against Pyongyang. McMaster noted that Beijing's "tremendous coercive economic power" over North Korea. "There are ways to address this problem short of armed conflict, but it is a race because he's getting closer and closer, and there's not much time left," McMaster said, referring to North Korean leader Kim Jong Un. With every missile launch or nuclear test, Kim has improved his country's capabilities, McMaster said. "We're asking China not to do us or anybody else a favor," he said. "We're asking China to act in China's interest, as they should, and we believe increasingly that it's in China's urgent interest to do more." China should take unilateral action to cut off North Korean oil imports, McMaster said, adding,
"you can't shoot a missile without fuel." He said that both he and Trump felt that a 100% oil embargo would "be appropriate at this point." But the national security adviser said Kim was extremely unlikely to change his behavior "without some significant new actions in the form of much more severe sanctions" and "complete enforcement of the sanctions that are in place." On military options, McMaster acknowledged that given North Korea's fielding of conventional artillery and rockets aimed at Seoul, South Korea, "there's no military course of action that comes without risk." But he said that Pyongyang's actions had made America's alliances with Japan and South Korea "stronger than ever." (Ryan Browne and Barbara Starr, “McMaster: Potential for War with North Korea ‘Increasing Every Day,’” CNN, December 2, 2017)

South Korea and the United States kicked off a major air force exercise against North Korea's threats, with two dozen U.S. stealth jets mobilized. The five-day Vigilant annual air combat exercise (ACE) comes less than a week after the North fired a new intercontinental ballistic was scheduled before the provocation. It's known as the largest-ever combined air force drill between the allies, involving more than 230 warplanes and around 12,000 personnel. They include six F-22 Raptors and six F-35As, which have been deployed temporarily to Korea for the practice. It marks the first time that six Raptors, not just a few, have joined an exercise simultaneously in Korea. A dozen F-35Bs operated by the U.S. Marine Corps will take part in the training, flying from their base in Japan. Other assets include two B-1B Lancer bombers, six EA-18G Growler electronic warfare jets, and dozens of F-15C and F-16 fighter jets. The two sides plan to fly the aircraft at eight South Korean and U.S. military installations, according to the U.S. Seventh Air Force. "This exercise is comparable in size to previous Vigilant ACE exercises," while the fifth-generation stealth jets are new to the training, the Seventh Air Force said in a press release. Including the newest fighter jet in the inventory in exercises like this allows the military to learn more about the F-35s capabilities and how best to utilize them and integrate them with other platforms, it added. It's unusual for the U.S. to reveal the size of its participating forces in the training and other details. "The realistic air combat exercise is designed to enhance interoperability between the U.S. and Republic of Korea and increase the combat effectiveness of both nations," the unit said. South Korea has fielded F-15K, KF-16, FA-50 and F-5 fighters, as well as other planes. "It's aimed at enhancing the all-weather, day and night combined air power operation capabilities of South Korea and the U.S.,” the defense ministry said. The allies will conduct the drills under various wartime scenarios, including simulated precision strikes on mock North Korean nuclear and missile targets, it said. It remains unclear whether some of the U.S. fighter jets from outside Korea will remain here after the training. The South Korean government has requested the U.S. to expand the rotational deployment of its high-profile defense assets to and around its territory. "Such a drill is a dangerous provocation as it is driving the tension on the Korean peninsula to the brink of a nuclear war," Rodong Sinmun argued in a commentary. "The U.S. and the South Korean puppet forces are so foolish as to run amok with such stealth fighters." The North's Committee for the Peaceful Reunification of the Country, an organization handling Pyongyang's relations with Seoul, also issued a strongly worded war threat. "The U.S. and south Korean puppet military warmongers should bear in mind that their escalating provocation and adding to crimes will only invite more terrible retaliation and precipitate their self-destruction," it said in a statement. (Lee Chi-dong, “S. Korea, U.S. Begin Massive Air Combat Drills,” December 4, 2017)

United Nations political affairs chief Jeffrey Feltman arrived in North Korea for a rare visit that some analysts and diplomats hope could spark a U.N.-led effort to defuse rising tensions over Pyongyang’s nuclear and missile programs. The former senior U.S. State Department official is the highest-level U.N. official to visit North Korea since 2012. During a four-day visit he is due to meet Foreign Minister Ri Yong Ho to discuss “issues of mutual interest and concern.” “This is broadly a policy dialogue with the DPRK. I think we have to wait and see what comes out,” U.N. spokesman Stephane Dujarric told reporters. “All key member states ... were informed and briefed of the visit.” U.N. Secretary-General Antonio Guterres told Russia, Japan, the United States, China and North and South Korea in August he was available to help broker talks. So-called six-party talks on North Korea’s nuclear program stalled in 2008. A U.N. official described expectations for Feltman’s visit as “modest and high at the same time, meaning that they depend
on what our hosts are thinking as well.” “We need to find a way to scale back tensions,” the official said. “I don’t think we will have a major breakthrough being announced at the end of this trip. But the visit could serve as a step to build a framework for engagement.” Suzanne DiMaggio of the New America Foundation think tank, a participant in recent unofficial talks with North Korea, said Feltman could propose during his visit to Pyongyang that Guterres play a mediation role. “I do think that the Trump administration would like to explore talks about talks at this stage. I think the North Koreans are assessing the timing of when to do that,” she told a seminar in Washington on North Korea. State Department spokeswoman Heather Nauert said Feltman was not traveling on behalf of the U.S. government. “And he’s not traveling - I want to make this clear - with any kind of message from the U.S. government ... He’s going on behalf of the U.N., not the U.S. government,” she told a regular news briefing. Nauert said Washington remained open to talks if North Korea showed it was serious about giving up its nuclear weapons, but added: “The activities they have been engaged in recently have shown that they are not interested, they are not serious about sitting down and having conversations.” (Michelle Nichols and David Brunnstrom, “UN Official’s Visit to North Korea Sparks Hope of Mediation Role,” Reuters, December 5, 2017) Ignatius: “A senior U.N. envoy who visited Pyongyang this month carrying a pressing appeal for diplomacy was told by his North Korean hosts that it was “too early” for steps that might ease the confrontation over their nuclear program. “There was no sense of urgency” among North Korean officials, said one source familiar with the December 5 to 9 journey by Jeffrey Feltman, the U.N. undersecretary for political affairs and a former senior U.S. diplomat. His trip, which has received relatively little attention, was the first to Pyongyang by a high-level U.N. official in six years. The North Korean reluctance to enter talks now puts it on a potential collision course with the United States. ... North Korea’s seeming disinterest in any early negotiations was “convincing diplomatic theater, if it was theater,” said one analyst. Feltman made three requests of the North Koreans during his 15½ hours of talks, sources said. He proposed that they reopen military-to-military channels that were cut in 2009, so that the risk of accidental war might be reduced; he urged them to signal that they were ready to engage the United States in talks, following their November 29 proclamation that North Korea had completed its “state nuclear force”; and he asked them to implement Security Council resolutions condemning their weapons programs. To dramatize his message about the risk of unintended conflict, Feltman gave North Korean Foreign Minister Ri Yong Ho a copy of historian Christopher Clark’s study, “The Sleepwalkers: How Europe Went to War in 1914.” Ri was the most senior North Korean official Feltman met. Feltman was carrying a letter from U.N. Secretary-General António Guterres to North Korean leader Kim Jong Un, arguing that Pyongyang’s attempt to gain nuclear deterrence could produce the very conflict that it seeks to avoid. Feltman’s message was reviewed before the trip by the United States, China, Japan, South Korea and Russia, the nations that joined in the “Six-Party Talks” with North Korea from 2003 to 2009 that sought unsuccessfully to halt its nuclear program. Analysts interpreted the North Korean response as an indication that Pyongyang plans more missile and nuclear tests to convincingly demonstrate its ability to strike the U.S. mainland with a nuclear-tipped missile. “They don’t feel they are quite there yet,” said one source. Such additional North Korean weapons tests might trigger a U.S. response. The North Koreans engaged in spirited exchanges with Feltman, posing many questions about U.S. decision-making, the sources said. But they were elusive when asked to explain how they wanted the United States to change its “hostile” policy toward the regime, and what they meant in the November 29 announcement that North Korea had completed its state nuclear force. The North Koreans evidently want to bargain, but from a position of maximum strength. They agreed, for example, that a restoration of military-to-military contacts would at some point be necessary, but not yet. They also agreed that denuclearization is the ultimate long-term goal for Korea, but not yet. And they expressed interest in a follow-up meeting, though nothing specific is planned. One perversely encouraging sign is that after Feltman urged the North Koreans to engage the Security Council more closely, U.N. ambassador Ja Song Nam attended a Council discussion Friday with Guterres and senior diplomats focusing on the danger of accidental war on the Korean Peninsula. ... The sleepwalkers of 2017 should consider: On the brink of conflict, you never know just where the edge of the cliff may be. (David Ignatius, “Sleepwalkers in North Korea,” Washington Post, December 20, 2017, p. A-16)
Ignatius: “A senior U.N. envoy who visited Pyongyang this month carrying a pressing appeal for diplomacy was told by his North Korean hosts that it was “too early” for steps that might ease the confrontation over their nuclear program. “There was no sense of urgency” among North Korean officials, said one source familiar with the December 5 to 9 journey by Jeffrey Feltman, the U.N. undersecretary for political affairs and a former senior U.S. diplomat. Mattis: “Q: Let me ask you about Korea again. As we were in the Middle East, H.R. McMaster said at the Reagan Forum in California that "every day we move closer to war." Senator Lindsey Graham said, "Now is the time for the United States to start flying out non-combatant U.S. citizens from Korea." MATTIS: Who said that? Q: Senator Lindsey Graham has advocated evacuating non-combatants from South Korea. I need to get your reaction to those two remarks. Do you feel that every day we're moving closer to war on the Korean Peninsula if we don't resolve the nuclear issue? MATTIS: Tony, without trying to dissemble, okay, I don't comment on — because every day someone is saying something. And I see myself and the Department of Defense in a position to defend America, to allow people to have freedom of speech. There needs to be in a democracy robust discussions, and if at certain seminars, conferences, on Capitol Hill, news conferences people say things, — basically, I can be reacting or responding to those, rather than remaining focused on the issues. And you know where I stand on this as we try to resolve this with diplomatic means. You've seen me full heart — full effort in the United Nations in New York, led by Ambassador Haley. You've seen Secretary Tillerson making this his number one priority. The Canadian foreign minister and Secretary Tillerson recently came out and said they're pulling the sending states together — these are the states that sent troops to Korea in 1950.
under the U.N. mandate — plus ROK, Republic of Korea and Japan, in British Columbia. But it's under the foreign minister's authority, not the defense minister, not the secretaries of defense. So, I think right now there are some issues that I know it's frustrating for you all. But if they are not handled in private, political maneuver room can be reduced. In other words, even by going into some of this in the open, we can reduce other nations' ability to look like they're acting on their own rather than to something. So at times, as frustrating as it is, I don't want to engage publicly on it. I'm just trying to give you some of the why I won't. Because if I do that, I actually work against sometimes the very end. I don't control — once those words are out there, I think it was Lee Kuan Yew who said, Words are very precious things. Once they're let out, they can never be recalled. So in this question, I don't want to have to try to recall words, because it's a dynamic situation. But it remains diplomatically led right now, even as we exercise in order to keep the military options available." (DoD, Media Availability by Secretary Mattis En Route to U.S., December 5, 2017)

The United States currently has no plan to move military dependents out of South Korea despite rising tensions with North Korea, the Pentagon said. "The Department of Defense currently has no intent to initiate departures for military dependents, whether on a voluntary or mandatory basis, and no intent to modify the policy authorizing military dependents to accompany military members being stationed in South Korea," Lt. Col. Chris Logan, a Pentagon spokesman, said in emailed remarks to Yonhap. Commenting on North Korea's latest launch of a long-range missile, Sen. Lindsey Graham (R-SC) argued two days ago that the US should stop sending military dependents to South Korea and transfer those that are already there. The senator had told CBS that South Korea should be an unaccompanied tour. "It's crazy to send spouses and children to South Korea, given the provocation of North Korea," he said. (Yonhap, “U.S. Has No Plans to Move Military Dependents out of Korea: Pentagon,” Korea Herald, December 6, 2017)

Japan put a damper on plans for a multilateral meeting this month on North Korea proposed by the United States and Canada, in a rare split from its defense ally. Speaking after a Cabinet meeting, Foreign Minister Kono Taro indicated that the talks, to be hosted by Canada, will not take place this year. A Japanese government source said Canada invited the members of the United Nations Command and others to meet in Vancouver later this month to discuss North Korea's nuclear and ballistic missile development, but Japan expressed reluctance due to the potential for dialogue to be valued over pressure in dealing with Pyongyang. Japan received a reply from Canada that it would rearrange the talks, the source said. The United Nations Command was set up in the Korean War as a U.S.-led coalition of the countries that sent troops to support South Korea. While the Japanese government's move is broadly in line with its "pressure, not dialogue" stance on North Korea, it also comes amid speculation that U.S. Secretary of State Rex Tillerson, who would co-chair the talks, may not have long left in his post. Canadian Foreign Minister Chrystia Freeland and Tillerson announced the talks in November 28 press statements following North Korea's latest ballistic missile test. Kono said he had explained to the Canadian side that the meeting as originally scheduled would clash with the U.N. Security Council's schedule. He is expected to chair a ministerial-level Security Council meeting on North Korea in New York on December 15. Kono also said he told Canadian officials that "they should narrow down the participating countries a little more," citing the distance between some of the "sending states" and the current situation on the Korean Peninsula. A senior Foreign Ministry official expressed displeasure with the idea of the meeting itself, saying it would "be out of step with Japan's direction." Prime Minister Shinzo Abe and his administration have long pushed for the international community to increase diplomatic and economic pressure on North Korea and put aside any possibility of direct dialogue until the North makes clear it will give up its nuclear program. (Kyodo, “Japan Throws Cold Water on U.S.-Led Dialogue on N. Korea,” December 5, 2017)

William Perry, former U.S. defense secretary, expressed skepticism toward the options of nuclear deployment or armament in South Korea and Japan as a deterrent against North Korea’s growing threat. "I do not think it is either desirable or necessary to deploy (U.S.) nuclear weapons again in South Korea or in Japan," he told the Arms Control Association. "I do think, however, it is
preferred to those countries getting an independent nuclear force.” Perry said the U.S. should first provide “solid reassurance” to both allies that its commitment to extended deterrence is “real and will be honored.” “If we can do that, then over time we will work with North Korea to stop them from getting a nuclear arsenal,” he said. “I don’t see that happening today. I think we have to stabilize the situation with our allies first.” Talks with Pyongyang are still useful, Perry said, but only with lowered expectations. North Korea cannot be expected to give up its nuclear arsenal readily, although it might happen over time, so talks should aim to lower the risk of an accidental war, according to the former secretary. The U.S. should initially propose a freeze on nuclear and missile testing in exchange for economic and security assurances, such as building on the now-shuttered inter-Korean industrial park in North Korea’s border city of Kaesong, he added. (Yonhap, “Ex-U.S. Defense Secretary against Nuclear Options to Defend S. Korea, Japan,” December 5, 2017)

U.S. intelligence and military officials believe Kim Jong Un is a rational actor, a conclusion that for now is guiding Washington’s approach to the North Korean leader as he risks economic sanctions and military reprisals to build nuclear weapons and threaten rivals. The assessment by the main components of the U.S. national security community has shaped their thinking toward North Korea in two major ways, U.S. officials said. It means they believe that Kim understands that any attack on the U.S. or its allies threatens the security of his country and his grip on power. And it means that they believe there is potential to alter his behavior through diplomacy to lower the threat of war. U.S. officials are also calculating that Kim’s ability to act rationally is compromised. “We in the intelligence community…have said that Kim Jong Un is rational, but it is also the case today that we don’t think he has an understanding about how tenuous his position is—domestically and internationally,” Central Intelligence Agency Director Mike Pompeo said in an address at a security forum in California on December 2. U.S. military and intelligence officials, detailing the U.S. assessment in interviews, said that conclusion doesn’t mean Kim isn’t brutal or provocative, and they consider him to be immature and brash. But the finding means the U.S. sees someone who is methodical and driven by a desire for world recognition, securing his family’s dynasty and developing his nation economically. “Rational actors have clear goals and know how they want to get there based on reality,” a senior U.S. intelligence official explained. “He hasn’t demonstrated anything that would make one reconsider his rationality.” Had the U.S. feared an irrational actor, U.S. officials would likely have gone beyond threats of military action and undertaken a massive and sustained U.S. military buildup around the peninsula in anticipation of unexpected actions by North Korea, two U.S. officials said. Pompeo and White House national security adviser Lt. Gen. H.R. McMaster said over the weekend, at the Reagan National Defense Forum, that current U.S. efforts rely on economic and diplomatic measures, including appealing to China—steps that are possible only because the U.S. believes that Kim is rational, two U.S. military officials said. “The fact that we are leaning on China says that we think he is someone who can be bartered with. If we had no faith in that, why would we bother to ask China to do more?” said a former administration official. “We may have even done something pre-emptively by now.” A driving factor behind the U.S. assessment is that each time North Korea could have behaved in dangerous ways regarding its nuclear weapons, Kim hasn’t taken that risk. While angry exchanges of tweets and statements by President Donald Trump and North Korea this year appeared to portend an imminent threat, national security experts said the uptick in rhetoric didn’t appear to change Kim’s calculations or behavior. “Rhetorically, they have ratcheted it up a notch,” the senior U.S. intelligence official said. “But the focus on capability has not changed.” Intelligence officials said they first assessed that Kim was a rational actor after a 2012 launch was met by sanctions and international condemnation. For months afterward, Kim heightened his rhetoric against the U.S., at one point saying it was the target of his program. But by April, he stopped. “He learned something. He fanned the flames, but didn’t take it further,” the intelligence official said. More recently, during Trump’s visit to China in November and the meeting of China’s Party Congress a month earlier, North Korea didn’t conduct any weapons tests, its longest lull of the year. A test in October would have risked embarrassing an important ally, with Chinese President Xi Jinping seeking to shore up his political standing at home, some U.S. officials concluded. During Trump’s Asia visit, there were three U.S. carrier strike groups conducting exercises in the region. U.S. military officials have said that Kim’s decision to not conduct a test
in the midst of an extensive U.S. military presence was, for them, a rational act. “He could have conducted [the latest] test sooner, but he waited until it was best for him to do,” one U.S. military official explained. “He was not going to risk a test during the [U.S. presidential] visit.” While U.S. officials believe he is rational, that doesn’t mean they believe that acquiring nuclear weapons is the best means for Kim to achieve his goals. “Just because he is rational does not mean he is right,” the former administration official said. “To some, testing nuclear weapons while your people are starving is not rational,” the senior U.S. intelligence official said. “But when you believe those weapons are critical to your survival, it is not so irrational.” Among other signs of rationality, U.S. military officials noted that there is no indication of a North Korean military buildup. There is no movement of troops or provocative acts toward U.S. Navy ships or aircraft in the region, a sign, they said, that Kim isn’t seeking to engage in impetuous, ill-advised military actions. The U.S. still has gaps in its understanding of North Korea; U.S. officials concede, for example, that they don’t understand Kim’s command and control structure. South Korean officials have arrived at similar conclusions about Kim. A former top South Korean government official who took part in talks with senior aides to Kim in 2014 and 2015 said the approach to negotiations by North Korea under Kim was rational and well-thought out. Aides frequently took breaks to relay meeting updates to the Pyongyang leadership, and key decisions were almost certainly made by Kim, the former official said. During talks in 2015 over an armed standoff, North Korea initially refused to discuss the precipitating incident, a land mine explosion at their shared border that maimed two South Korean soldiers. Under pressure from South Korea to apologize, the North Koreans switched tactics and agreed to express regret and defuse the crisis, the former top official said. “Kim Jong Un’s leadership is better than we had expected,” he said. While some U.S. officials are worried about Kim isolating himself from valuable information, Melissa Hanham, senior research associate at the Middlebury Institute of International Studies in Monterey, noted that his father and grandfather operated in much the same way and that he is believed to benefit from advice from his sister. “I don’t know he is more isolated than his father,” Ms. Hanham said. (Nancy A. Youssef, “Why the U.S. Considers North Korea’s Kim a ‘Rational Actor,’” Wall Street Journal, December 5, 2017)

DPRK FoMin spokesperson’s answer to a question raised by KCNA “as regards the fact that high-level politicians of the U.S. are now constantly making reckless remarks about our country: Recently, as the U.S. is conducting the largest-ever joint aerial drill on the Korean peninsula targeting the Democratic People’s Republic of Korea (DPRK), its high-level politicians are showing alarming signs by making bellicose remarks one after another. The national security advisor of the White House and a Republican senator said that "the chances of war with north Korea" are increasing every day, a "preemptive war" with north Korea is becoming more likely, the families and dependents of the U.S. troops should be moved out of south Korea. These confrontational warmongering remarks cannot be interpreted in any other way but as a warning to us to be prepared for a war on the Korean peninsula. Worse still, the CIA director has made a provocation against us by impudently criticizing our supreme leadership which is the heart of our people. This is the revelation of the U.S. cunning and heinous intention which is to instigate our strong countermeasures and use them to ignite the fuse for a nuclear war on the Korean peninsula. The large-scale nuclear war exercises conducted by the U.S. in succession are creating touch-and-go situation on the Korean peninsula and series of violent war remarks coming from the U.S. high-level politicians amid such circumstances have made an outbreak of war on the Korean peninsula an established fact. The remaining question now is: when will the war break out. The careless remarks of war by the inner circle of Trump and the reckless military moves by the U.S. substantiate that the current U.S. administration has made a decision to provoke a war on the Korean peninsula and is taking a step-by-step approach to get there. The world should not harbor any prejudice in discerning who the main culprit behind the tense situation on the Korean peninsula is and who the violator of world peace and stability is. The U.S. is going frantic in advertising the nuclear war on the Korean peninsula every day and this invites our due vigilance. We do not wish for a war but shall not hide from it, and should the U.S. miscalculate our patience and light the fuse for a nuclear war, we will surely make the U.S. dearly pay the consequences with our mighty nuclear force which we have consistently strengthened. If the U.S. does not want to be burnt to death by the fire it ignites, it would better behave with prudence and caution.”
South Korea and the US stressed that now is not the time for talks with North Korea over its nuclear and missile program, as a US B-1B Lancer bomber flew over the Korean Peninsula for a joint aerial drill with the South Korean military. While seeking to resolve the nuclear standoff with “diplomatic and peaceful means,” the two countries will place their emphasis more on maximizing sanctions and pressure against the reclusive regime, the two countries’ government said. “While we still want to see a peaceful, diplomatic solution to the North Korean nuclear and missile threat, now is clearly not the time for talks,” Katina Adams, US State Department spokeswoman, said in an interview with Voice of America. “We must remain focused on increasing the costs for Pyongyang to continue to advance its WMD (weapons of mass destruction) programs. ... We remain fully committed to the defense of our allies, the Republic of Korea and Japan, using the full range of our conventional and nuclear capabilities.” South Korea’s Unification Ministry Spokesperson Baek Tae-hyun echoed the notion, saying the ministry would focus on implementing sanctions and pressure against North Korea and work with the international community to bring them back to the negotiating table. (Yeo Jun-suk, “S. Korea and U.S. Says Now Not Time for Talks with North Korea,” Korea Herald, December 6, 2017)

Joseph Yun, the senior US representative for North Korea Policy, said a “60-day plan” for dialogue with Pyongyang is still valid. The message comes amid a mixture of hardline and more moderate positions on Pyongyang within the Trump administration since North Korea’s ICBM test launch on November 29. Speaking to foreign correspondents at an end-of-year gathering jointly organized in Washington by the Korea Foundation and George Washington University Institute for Korean Studies, Yun said Washington could attempt dialogue if 60 days pass without nuclear and missile provocations after a message from Pyongyang that it intends to stop. The 60-day plan, also known as the “Tillerson plan,” is an exit strategy for dialogue developed with the support of both Yun and Secretary of State Rex Tillerson. “Regarding 60 days or any number of days…Secretary Tillerson has made it clear that a good first step for North Korea would be to stop testing nuclear devices and missiles. And then we are open to holding a dialogue,” Yun said during the lecture. “When you stop testing, for example, you really ought to tell us you are stopping testing because you want a dialogue… It's very important to state your intentions,” Yun emphasized. “So far, I can report no real progress on diplomatic engagement. So really… there is no choice but continued pressure policies.” But State Department Spokesperson Heather Nauert expressed a somewhat different perspective during the daily press briefing today. When asked about remarks by Russian Foreign Minister Sergei Lavrov that North Korea wants direct talks with the US about its security, Nauert said, “As a general matter the issue of direct talks with North Korea is not on the table until they are willing to denuclearize.” (Yi Yong-in, “U.S. Special Representative for NK Policy: 60-day Plan for Dialogue Remains on the Table,” Hankyore, December 9, 2017)

More than 40 warships from China’s navy took part in a major exercise in the East China Sea, just days after reports that the country’s air force had carried out similar high-level drills, and as tensions remain high over the North Korean nuclear crisis. The vessels, from the North Sea, East Sea and South Sea fleets, demonstrated the navy’s growing anti-missile and emergency response capabilities in “all-weather conditions”, according to a report published on its website. Military experts said the air- and seaborne exercises were evidence that all divisions of the People’s Liberation Army were boosting their combat readiness. On December 4, air force spokesman Shen Jinke announced that Chinese aircraft recently conducted drills over the Yellow and East China seas near the Korean peninsula using “routes and areas it has never flown before.” Shen did not say exactly when the drills took place, though the timing of the announcement coincided with the start of a five-day exercise by U.S. and South Korean forces. China’s navy said that today’s drill was conducted as “an assessment competition” simulating “real warfare” and was designed to test the performance and interception capabilities of its guided-missile frigates. During the exercise, warships were required to deal with repeated “multi-target missile attacks” at “extremely low
Robert Cohen: “As the UN Security Council prepares to meet next week to draw the connection between the North Korea’s human rights practices and international peace and security, it is pertinent to review the latest report of the UN Special Rapporteur on human rights in the DPRK. Appointed in 2016, Special Rapporteur Tomás Ojea Quintana of Argentina offers something for everyone, in particular the supporters of engagement with the DPRK. He gives special emphasis to issues that might resonate positively with the North Korean government and expresses confidence in the North’s ability to cooperate with the UN if access to and engagement with the government are pursued. At the same time, he acknowledges that human rights pressure has had impact on North Korea and his report does not shy away from addressing human rights issues objectionable to the regime. He seeks a greater balance between calls for accountability and efforts to engage. The pursuit of both, he believes, can lead to changes on the ground. Whether this new approach will achieve what his two predecessors and the UN Commission of Inquiry (COI) did not—a visit to the country or a meaningful dialogue—remains to be seen. By opening his report with the statement that “patterns of human rights violations” continue to be documented in North Korea, Mr. Ojea Quintana offers a lower-key description than that put forward in earlier Special Rapporteur reports and in the COI report, which found crimes against humanity and called for referral of the case to the International Criminal Court (ICC). The language mirrors that of the new UN Secretary-General António Guterres, who in reporting to the General Assembly, described “persisting patterns of serious human rights violations,” in sharp contrast to former Justice Michael Kirby, chair of the COI, who termed this characterization “a serious understatement.” Justice Kirby stated: “As the UN’s COI report made clear, North Korea is not simply another country causing ‘serious human rights violations.’ The COI found that it is guilty of ‘crimes against humanity’…. Such crimes demand immediate accountability.” Although the Special Rapporteur says he will “closely attend” to implementing the accountability recommendations of the Human Rights Council and Group of Independent Experts, the overall descriptive language used throughout of “violations” falls short of what would be required to hold perpetrators accountable in an international court focused on war crimes and crimes against humanity. That the Special Rapporteur seeks to be responsive to the DPRK is also evident in the emphasis he gives to the “unintended negative impact” of sanctions on the North Korean people. He warns that economic sanctions approved by the UN Security Council could affect the welfare of the population and becomes the first Rapporteur to call for a “full assessment” of the impact of
sanctions. In particular, he highlights the possible “detrimental impact” of “export bans” on vital sectors (e.g. coal, iron, seafood, textiles) and on “ordinary” North Koreans. (His position on this contrasts with that taken by the General Assembly, which in its November 14 resolution condemned the North Korean government for setting aside the welfare of its people by “diverting its resources” to its nuclear program.) To address the chronic malnutrition of nearly a quarter of the population, Mr. Ojea Quintana appeals for increased international humanitarian aid to North Korea, noting that sanctions could interfere with the timely delivery of aid, but also calls on North Korea to make food security a priority and to “carefully balance out subsistence needs with defense and security expenditures.” On the political side, the Special Rapporteur addresses the impact of the rise in tensions between the DPRK and the United States on ordinary people’s lives, and appeals for a reduction of “conflict rhetoric” and “incitement to armed confrontation.” He endorses “dialogue” with the DPRK, with human rights high on the agenda, and strongly supports rapprochement between North and South Korea, as proposed by the Moon Jae-in administration.

When the UN in 2004 created the position of UN Special Rapporteur “to investigate and report” on the human rights situation, North Korea made clear that it would not allow the Rapporteur to visit because it considered the appointment “a political plot” intended to “change the ideology and system of our country.” In 2014, it changed course and invited then Special Rapporteur Marzuki Darusman for a visit in exchange for the deletion of paragraphs on crimes against humanity and the ICC from the General Assembly resolution. When the paragraphs remained, the DPRK withdrew its invitation. In the case of Mr. Ojea Quintana, North Korean diplomats suggested that he undertake “a private visit” to the DPRK in his capacity as a law professor. But when he “signaled his availability,” he was told he would not be welcome as long as he remained Special Rapporteur. Nevertheless, the Special Rapporteur expresses his intention to continue informally to discuss with North Korea an official visit, or as a “starting point,” “a dialogue,” and he calls upon the DPRK to invite him “in the near future.” He also explores alternative routes in his report, citing, for example, the Special Rapporteur on the Rights of Persons with Disabilities who paid the first visit of any thematic rapporteur to the DPRK in 2017. Although some in the human rights field questioned her decision to go when the country rapporteur was denied entry, Mr. Ojea Quintana considers the visit progress on the road to opening up North Korea. He would like to see other thematic rapporteurs visit as well as representatives of UN treaty bodies as part of their review of North Korea’s compliance with human rights agreements to which it has acceded. Such visits and interactions, he believes, can lead to legal and policy changes. In a nod to proponents of accountability, Mr. Ojea Quintana credits international human rights pressure, in particular the COI, with a number of “positive” steps taken by North Korea to engage with UN human rights mechanisms: 1) the visit of the disability rapporteur; 2) the submission of reports on women’s and children’s rights to the UN treaty bodies; and 3) the acceptance of more than 100 recommendations made to the DPRK by UN member states at the Universal Periodic Review (UPR). He also links UN efforts at accountability to “unconfirmed” reports of improvements in detention facilities and predicts that further measures, such as the recruitment of international criminal law experts by the Office of the High Commissioner for Human Rights in Seoul, could have a deterrent effect as well. Although the extent to which all these steps will lead to genuine reform can be questioned, they do show that North Korea is sensitive to human rights criticism and considers it useful to engage with at least some parts of the UN human rights system. The Special Rapporteur regards such “openings” as “opportunities” for engagement and improving conditions on the ground. In addition to dealing with political prison camps, abductions, forced repatriations and restrictions on freedom of information, the report also introduces new issues, such as North Korea’s treatment of foreigners in detention, the need for humanitarian organizations to gain access to prisons, and the negative effect of corruption on human rights.

**Foreign Nationals in Detention** After the Special Rapporteur criticized the treatment of Otto Warmbier, the detained American student brought back to the United States in a coma, North Korea denounced Mr. Ojea Quintana as “the model servant of the hostile forces.” His report nonetheless continues to remind the DPRK of its international legal obligations in the Warmbier case and toward nine other foreign nationals held in detention (three Americans and six South Koreans). It implies that although different international rules apply to them, their fate may be as precarious as North Koreans held in detention. **A Role for Humanitarian Organizations** Mr. Ojea Quintana breaks welcome new ground in calling for humanitarian agencies to take account of the
food and medical deprivations of detained North Koreans, who number more than 100,000. Since the introduction of the UN’s Human Rights Up Front Approach (HRuF) in 2013, the entire UN system is expected to come together to address situations of serious human rights violations that can become atrocities. In the DPRK, however, the humanitarian agencies on the ground have been fearful of jeopardizing their programs. The Special Rapporteur encourages them to seek to reach all vulnerable groups with their aid, including “persons in detention.” Recalling Typhoon Lionrock (where the humanitarian organizations failed to request access), he warns that prisoners could be at risk in future natural disasters, and urges that “priority” be given to reaching them. He offers to work closely with the Country Team and Resident Coordinator and proposes discussions with the DPRK about access to the camps. Corruption The extensive use of bribes in North Korea to secure “access to public services” such as employment, medical care, travel and housing, is given attention in the report, as are bribes to avoid arrest. The rapid growth of markets, considered beneficial to the population, has at the same time increased corruption levels, with business people having to pay off government officials to operate. To address the “poorly structured economic, political and social institutions” at the root of this widespread practice, the Special Rapporteur proposes reforms and technical assistance but does not question whether the DPRK, as presently constituted, is capable of effectively transforming itself. While little optimism is generally to be found in reports about North Korea’s human rights record, Mr. Ojea Quintana sees the “possibility to achieve immediate, concrete changes on the ground” as a result of North Korea’s engagement with UN human rights mechanisms. Certainly, it is to be hoped that the lives of disabled persons will be improved by the visit of the disability rapporteur and that the outcome of North Korea’s exchange with the treaty bodies on children and women will lead to results, not to mention the hoped for implementation of the UPR recommendations. But given North Korea’s past practices, skepticism is warranted, underscoring the need for continued human rights pressure. Visits of additional thematic rapporteurs could be useful, but an agenda of the UN’s human rights priorities in North Korea should be developed. It would need to encompass not only those issues North Korea might be willing to talk about but those it excluded from consideration at the UPR, in particular the ones deemed to have crossed “the high threshold of crimes against humanity.” The Special Rapporteur is right when he describes “widespread fear among the population of political prison camps.” These deplorable facilities and other abhorrent human rights practices must remain center stage even while the Special Rapporteur seeks balance.” (Roberta Cohen, “A New UN Approach to Human Rights in North Korea: The 2017 Special Rapporteur’s Report,” 38North, December 7, 2017)

Russia has accused the U.S. of thwarting a diplomatic initiative to defuse the North Korean missile crisis, underscoring the gap between Moscow’s and Washington’s assessment of the situation on the peninsula. Sergei Lavrov, Russia’s foreign minister, said that the U.S. had indicated to Moscow in September that no more US military exercises around the Korean peninsula were planned until the spring, a message the Russian government took as a signal that Washington was ready to “create the conditions for dialogue” with North Korea. “We passed that signal on to Pyongyang, and they didn’t say no, but promptly two days later unscheduled large-scale exercises were announced for October,” he said at a press conference in Vienna. “Russia condemns North Korea’s missile tests, but it seems that the US is trying to provoke more risky antics from them.” Lavrov’s outburst follows repeated efforts by Moscow to mediate between the US and North Korea. “We tried very hard to explain to our American partners that there was an opening after the missile and nuclear tests in September, when North Korea abstained from further tests for a relatively long period,” said a senior Russian foreign policy official. “But unfortunately the US government appears fixated on forcing North Korea to abandon its nuclear program.” Under a joint Russian-Chinese plan, Moscow proposes a “dual freeze”: North Korea should suspend missile and nuclear tests, while the U.S. and South Korea would put a moratorium on joint large-scale military drills. The communication from Washington alleged by Lavrov, that the US had no plans for exercises for several months, was interpreted in Moscow as a possible opening for such a deal. “We were further encouraged when Pyongyang began hinting that they might not need to further step up testing,” the Russian official said. Choe Son Hui, head of the America department at the North Korean foreign ministry, said at a non-proliferation conference in Moscow in October that the “final goal” of her country’s nuclear program was to create a balance of power that would
ultimately deter the US from attacking North Korea. “Today we have almost reached a balance of power with the US,” she added. Her remarks were read by experts as a veiled offer to stop the spiral of escalation. Similar language has since reappeared in North Korea’s official statements. Moscow believes that tacit toleration of North Korea’s nuclear capabilities is the only way to keep Pyongyang from developing its program further. “They observe that no nuclear power has ever been invaded, so they believe that they will be safe with the nuclear deterrent they are now getting ready. Such is their logic,” said Vladimir Sukhinin, former Russian ambassador to Pyongyang. Pointing to North Korea’s 2013 law on nuclear weapons, he said that Pyongyang, if given enough assurances that its own capabilities would not be touched, could be trusted to act just as responsibly as other nuclear powers. A delegation of Russian lawmakers to Pyongyang at the beginning of the month brought back the same message. “They believe they have achieved their goal and become a nuclear power, and now they are ready to negotiate with the US,” Vitaly Pashin, a member of the delegation, said on his return on December 1. Yesterday, Lavrov reiterated that message in talks with Secretary of State Tillerson. “We know that North Korea, above all else, wants to talk with the U.S. about guarantees of its security. We are ready to support that and facilitate such negotiations,” he said after the meeting. “Our American colleague has heard this.” Washington was quick to push back. State department spokeswoman Heather Nauert said that direct talks with North Korea were “not on the table until they are willing to denuclearize.” (Kathrin Hille, “Russia Accuses U.S. of Thwarting North Korea Diplomacy,” Financial Times, December 8, 2017)

KCNA: “The U.S. has become desperate in its moves to carry out sea blockade against the DPRK. In a bid to provide the legal ground for sea blockade, the U.S. State Department nowadays seeks to modify such phrases as "consent of flag states" and "reasonable grounds" in the UN "sanctions resolution" 2375 into "by use of all necessary measures", claiming that "being continuously captured is the situation in which north Korea is using restricted vessels for illegal activities by means of handy methods." The White House National Security Adviser McMaster and other high-ranking officials of the Trump administration and other hardline elements of U.S. Congress are calling for sea blockade against the DPRK. The U.S. moves for sea blockade can never be tolerated as they constitute a wanton violation of the sovereignty and dignity of an independent state. The U.S. is trying to openly take the measure of sea blockade against the DPRK and strangle its economy in peace time. This is part of its scheme to escalate political and economic blockade against the DPRK which has lasted for decades. In the past the U.S. carried out collective sanctions and blockade campaign as evidenced by the manipulation and application of "proliferation security initiative" and "regional sea security initiative" targeting sea blockade by cooking up all sorts of ridiculous schemes, thereby escalating the degree of economic pressure on the DPRK. Under the pretext of checking the "proliferation of weapons of mass destruction" the U.S. has manipulated the international naval interception drill for blocking the DPRK from the sea. The U.S. Pacific Command has prepared the sea blockade operation in real earnest from the second half of this year and last month it conveyed to the south Korean puppet forces its action program, by which it ordered the puppet navy to take charge of the open sea in the East and South Seas of Korea, the Japan Maritime "Self-defense Force" to look after the distant waters in the East Sea and the U.S. navy to take care of the waters south of Jeju Island. It is stipulated in the London Treaty on definition of invasion and the UNGA resolution 3314 that blockade-type sanctions against a sovereign state in peace time becomes an act of invasion, an illegal act. Now the U.S. is trumpeting about sea blockade, not content with staging largest-ever nuclear war drills against the DPRK in the sea and air after shipping the strategic assets into the Korean peninsula. This is a hideous war criminal act to push the situation to an "uncontrollable" catastrophic phase and to a touch-and-go phase of a war. The U.S. blockade against the DPRK started long ago and the people of the DPRK will never be browbeaten by this. The moves for blockading the DPRK from the sea are tantamount to war acts. The Trump group should be mindful that should they show even the slightest movement to put its attempt at sea blockade into practice, it will be followed by an immediate and merciless counteraction for self-defense from the DPRK. The U.S. and the riff-raffs following it should ponder over the catastrophic consequences to be entailed by their sea The U.S. and the riff-raffs following it should ponder over the catastrophic consequences to be entailed
by their sea blockade moves and stop the reckless act.” (Jong Hyon, “Sea Blockade Is Act of War,” KCNA, December 8, 2017)

12/9/17

Japan is to acquire medium-range, air-launched cruise missiles, capable of striking North Korea, a controversial purchase of what will become the longest-range munitions of a country that has renounced the right to wage war. Defense Minister Onodera Itsunori did not refer to North Korea when announcing the planned acquisition and said the new missiles would be for defense, with Japan still relying on the United States to strike any enemy bases. "We are planning to introduce the JSM (Joint Strike Missile) that will be mounted on the F-35A (stealth fighter) as 'stand-off' missiles that can be fired beyond the range of enemy threats," Onodera told a news conference. Japan is also looking to mount Lockheed Martin Corp.'s extended-range Joint Air-to-Surface Standoff Missile (JASSM-ER) on its F-15 fighters, he said. The JSM, designed by Norway's Kongsberg defense & Aerospace, has a range of 500 km. The JASSM-ER can hit targets 1,000 km away. The purchase plan is likely to face criticism from opposition parties in parliament, especially from politicians wary of the watering down of Japan's renunciation of the right to wage war enshrined in its post-World War II Constitution. (Reuters, “Japan to Acquire Air-Launched Cruise Missile Able to Strike North Korea.” Asahi Shimbun, December 9, 2017)

12/7-9/17

KCNA: “The UN Under-Secretary-General Mr. Jeffrey Feltman and his delegation visited the Democratic People's Republic of Korea (DPRK) from December 5 to 9. During the visit Under-Secretary-General paid a courtesy call to the Minister of Foreign Affairs and had talks with Vice Foreign Minister on issues of common interest including the relations of cooperation between the DPRK and the UN and the issue of cooperation by the UN organizations in our country and the situation on the Korean peninsula. He also visited some of the project sites of the UN organizations in our country. The DPRK side, stressing that the current tense situation on the Korean peninsula is completely due to the U.S. hostile policy and nuclear threats against the DPRK and that even at the very moment of their talks the U.S. is revealing its intention of launching a surprise nuclear preemptive strike on the DPRK by conducting the largest scale ever joint aerial drill mobilizing different kinds of nuclear strategic bombers, clarified its principled stand concerning the issues of preserving peace on the Korean peninsula and impartiality of the UN. The UN secretariat side expressed concerns on the escalation of tension on the Korean peninsula and its willingness to contribute to the efforts for preventing escalation of tension on the Korean peninsula in accordance with the UN Charter which defined the main mission of the UN as preserving international peace and security. Looking around the project sites of the UN organizations including the Pyongyang Children's Foodstuff Factory, the Breast Tumor Institute of the Pyongyang Maternity Hospital, the Central Tuberculosis Preventive Institute, the Pediatric Hospital in Phyongsong City, Under-Secretary-General became aware that sanctions are having negative impact on the field of humanitarian cooperation and expressed his intention to put in efforts to ensure that the cooperation is carried out in accordance with its humanitarian mission. The DPRK side and the UN Secretariat side acknowledged that Under-Secretary-General's visit to the DPRK contributed to promoting trust between the two sides and agreed to have regular exchanges of opinions through frequent exchanges of visits at various levels.” (KCNA, “Press Release Regarding Visit of U.N. Under-Secretary-General Mr. Jeffrey Feltman to DPRK,” December 9, 2017) Feltman, a veteran American diplomat who is the U.N. undersecretary-general for political affairs, said December 12 that senior North Korean officials told him during his visit last week “that it was important to prevent war” over the country’s rapidly advancing nuclear and ballistic missile programs. He told reporters after briefing the U.N. Security Council privately that “how we do that” was the topic of more than 15 hours of discussions he had with Foreign Minister Ri Yong Ho, Vice Minister Pak Myong Guk, and other officials. He told the North Koreans “they need to signal that they’re willing now to go in a different direction, to start some kind of engagement, to start talking about talks.” He said he stressed “the urgent need to prevent miscalculation and reduce the risk of conflict,” while he also underlined both the international community’s commitment to a peaceful solution and its opposition to North Korea’s pursuit of nuclear weapons. He said he emphasized the importance of opening channels of communications “such as the military-to-military hotline to reduce risks, to signal intentions, to prevent
misunderstandings and manage any crisis.” It was the first in-depth exchange of views between the U.N. and the DPRK in almost eight years. Feltman called the mission the most important one that he has ever undertaken and called it “constructive and productive.” He said he believes he conveyed the concerns of Secretary-General Antonio Guterres, the Security Council and the international community, but he was cautious about the impact. “They listened seriously to our arguments ... they argued with us,” Feltman said. “They did not offer any type of commitment to us at that point. They have to reflect on what we said with their own leadership.” “I think we’ve left the door ajar, and I fervently hope that the door to a negotiated solution will now be opened wide,” he added. Feltman said both sides agreed the situation on the Korean Peninsula is “the most tense and dangerous peace and security issue in the world today.” He said they also agreed that his visit “was only a beginning and that we should continue our dialogue.” He said the U.N. and others are prepared to facilitate any new opening for talks. Feltman, when asked about Tillerson’s comments on December 12, said the Security Council is united on the need for a political solution, “so I would underscore that that was the message I took to Pyongyang.” “But we have to get there by opening the door to a different direction from the current trajectory” that North Korea is on, he said. “They agreed that it was important to prevent war,” he said. (Edith M. Lederer, “U.N. Official: N. Koreans Said It Is Important to Prevent War,” Associated Press, December 12, 2017)

The Donald Trump administration has nominated former White House official and Washington-based academic Victor Cha as the next US ambassador to South Korea and asked for Seoul’s approval, US sources said. According to sources in Washington, the request was recently delivered to the South Korean government in the form of an “agreement,” a formal request sent to the receiving state from the sending state before dispatching a diplomatic representative. The decision was made after an extensive vetting process, it added. The nominee’s appointment will be subjected to a US Senate confirmation hearing soon, which may allow Cha to take office before the PyeongChang Olympics here in February. “We are working closely (with the US government) to enable (Cha) to take office early,” an official at South Korea’s Foreign Ministry said. “We cannot confirm whether the agreement has been sent and any relevant procedures at this stage.” Cha is a former director for Asian affairs on the White House National Security Council and served as deputy head of the US delegation in multilateral talks with North Korea over its nuclear program during the administration of President George W. Bush. He now serves the Korea chair at the Center for Strategic and International Studies in Washington. If Cha is appointed, he is slated to become the second Korean-American to take the post after Ambassador Sung Kim. He has been widely seen as a strong candidate since August. (Jung Min-kyung, “Trump Nominates Victor Cha as Ambassador to Seoul,” Korea Herald, December 11, 2017)

An additional 20 North Korean firms and 12 individuals will be subjected to Seoul’s sanctions from tomorrow, Seoul’s Foreign Ministry said. “It is expected that the updated sanctions will block the inflow of illegal financial funding into North Korea and raise the risk of trading with such organizations and individuals,” a Foreign Ministry official said. Organizations that will be added to the blacklist include Rason International Commercial Bank, Agricultural Development Bank, Cheil Credit Bank, International Industrial Bank, Koryo Commercial Bank, Korea Daebong Shipping Company and Yusong Shipping Company. Named individuals are mostly North Korean agents and ranking bank officials including Kim Su-kwang, a North Korean intelligence agent based in Belarus, Kim Kyong-Hyok, a First Credit Bank representative in Shanghai, Pak Chol-nam, a First Credit Bank representative in Beijing, Ri Ho-nam, a Ryugyong Commercial Bank representative in Beijing, and Ji Sang-jun, an official of Korea Kumgang Group Bank in the United Arab Emirates. The latest list is a follow-up to South Korea’s sanctions announced last month, a day ahead of US President Donald Trump’s state visit here. It is in accordance with the United Nations Security Council resolutions that aims to cripple the North’s economic growth. At a campaign-style rally in Alabama on December 8, Trump said he doesn’t know if the international sanctions will have an effect on Kim Jong-un, but added “we need to give it a shot.” (Jung Min-kyung, “S. Korea Updates Its N.K. Sanctions Blacklist,” Korea Herald, December 11, 2017)
Amid fears that North Korea is rapidly developing its submarine-launched ballistic missile technology, the United States, Japan and South Korea are teaming up for a drill to track such hard-to-detect missiles, military officials said. The drill is taking place over two days in waters between Japan and the Korean Peninsula, said South Korea’s Joint Chiefs of Staff, and will involve destroyers from the three nations doing computer-simulated training to track submarine missile launchings by North Korea. The drills come in the wake of news reports that North Korea is making progress developing submarine-launched ballistic missiles, or SLBMs. The website 38 North, based at the U.S.-Korea Institute at Johns Hopkins University, obtained images of cylindrical objects, evidence that “suggests construction of a new submarine” at a facility on North Korea’s east coast. (Gerry Mullany, “North Korean Submarine Missile Threat Prompts U.S.-Led Military Drills,” New York Times, December 11, 2017)

A Chinese county along the border with North Korea is constructing refugee camps intended to house thousands of migrants fleeing a possible crisis on the Korean Peninsula, according to an internal document that appears to have been leaked from China’s main state-owned telecommunications company. Three villages in Changbai County and two cities in the northeastern border province of Jilin, have been designated for the camps, according to the document from China Mobile. The document appeared last week on Weibo, a microblogging site. The camps are an unusual, albeit tacit, admission by China that instability in North Korea is increasingly likely, and that refugees could swarm across the Tumen River, a narrow ribbon of water that divides the two countries. Lu Kang, China’s Foreign Ministry spokesman, told reporters on Monday that he was unaware of the plan for the refugee camps, but he did not deny their existence. “I haven’t seen such reports,” Lu said. Changbai County officials did not answer telephone calls on Monday, and an executive at China Mobile in Changbai declined to discuss the matter. The China Mobile document said that a manager of the company inspected five sites on December 2 at the request of the Changbai County government. The company was asked to ensure there was viable internet service in the areas that would be used for the camps. “Because the situation on the China-North Korea border has intensified lately, Changbai County government plans to set up five refugee sites in Changbai,” China Mobile said in the document. Last week, the Jilin Daily, a provincial newspaper, advised residents on how to react in case of a nuclear explosion or radioactive fallout. Although China does not appear to have changed its basic position on maintaining stability, the increasingly hostile talk in Washington appears to be spurring contingency preparations. Zheng Zeguang, the vice minister of foreign affairs, rushed to Washington last week to discuss what Chinese officials call the “black hole of confrontation” between the United States and North Korea. As a result of the rising tensions, one of China’s most prominent experts on North Korea, called building the camps “absolutely reasonable.” “It is highly possible that there is a conflict between North Korea and the United States now,” said Zhang Liangui, a professor of international strategic research at the Communist Party’s Central Party School. “What China does here is to be prepared for any kind of situation happening on the Korean Peninsula.” (Jane Perlez, “China Girds for North Korean Refugees,” New York Times, December 12, 2017, p. A-13)

Secretary of State Rex Tillerson softened America’s stance on possible talks with North Korea, calling it “unrealistic” to expect the nuclear-armed country to come to the table ready to give up a weapons of mass destruction program that it invested so much in developing. Tillerson said his boss, President Donald Trump, endorses this position. Tillerson’s remarks came two weeks after North Korea conducted a test with a missile that could potentially carry a nuclear warhead to the U.S. Eastern Seaboard. “We are ready to talk anytime North Korea would like to talk. And we are ready to have the first meeting without preconditions,” Tillerson said at the Atlantic Council think tank. He said that the North would need to hold off on its weapons testing. This year, the North has conducted more than 20 ballistic missile launches and one nuclear test explosion, its most powerful yet. “Let’s just meet and we can talk about the weather if you want to. We can talk about whether it’s a square table or a round table if that’s what you are excited about,” Tillerson said. “But can we at least sit down and see each other face to face and then we can begin to lay out a map, a road map, of what we might be willing to work towards.” Although Tillerson said the goal...
of U.S. policy remained denuclearization of the Korean Peninsula, he added it was “not realistic to say we’re only going to talk if you come to the table ready to give up your program. They’ve too much invested in it. The president is very realistic about that as well.”

Baik Tae-hyun, spokesman of Seoul’s Unification Ministry, said of Tillerson’s comments that Seoul wishes for talks to “happen soon” if they contribute to the goal of finding a peaceful solution for the North Korean nuclear problem. He said Washington and Seoul both maintain a firm stance that North Korea’s nuclear weapons cannot be tolerated and should be completely discarded in a peaceful way. White House spokeswoman Sarah Huckabee Sanders said in a statement later in the day, “The President’s views on North Korea have not changed.” She added, “North Korea is acting in an unsafe way not only toward Japan, China, and South Korea, but the entire world. North Korea’s actions are not good for anyone and certainly not good for North Korea.”

Trump, who has traded insults with Kim, kept up his tough talk today. As he signed a $700 billion defense authorization bill that includes additional spending on missile defense, he referred to North Korea as a “vile dictatorship.” “We’re working very diligently on that — building up forces. We’ll see how it all turns out. It’s a very bad situation — a situation that should have been handled long ago by other administrations,” Trump said. Tillerson did not indicate that North Korea had signaled a new readiness to talk, but said that “they clearly understand that if we’re going to talk, we’ve got to have a period of quiet” in weapons tests. Tillerson stressed that the U.S. would not accept a nuclear-armed North Korea, as it flouts international norms and might spread weapons technology to non-state groups in ways that other nuclear powers have not. In a rare admission of discussion of a highly sensitive topic, Tillerson said Washington has discussed with Beijing how North Korea’s nuclear weapons might be secured in case of instability there. “The most important thing to us would be securing those nuclear weapons that they have already developed and ensuring that nothing falls into the hands of people who we would not want to have it. We’ve had conversations with the Chinese about how that might be done,” Tillerson said. It appeared to the first public recognition from an administration official that the U.S. has discussed North Korean contingencies with China, which fought with the North against the U.S. in the 1950-53 Korean War. The Trump administration has held a series of high-level dialogues with Beijing this year, and U.S. and Chinese generals held rare talks in late November about how the two militaries might communicate in a crisis although U.S. officials said the dialogue wasn’t centered on North Korea. Tillerson said that the U.S. has assured China that in the event that American troops had to cross northward of the demilitarized zone separating the two Koreas, it would retreat back south once stability returned. “That is our commitment we made to them. Our only objective is to denuclearize the Korean Peninsula, and that is all,” Tillerson said. (Matthew Pennington, “Tillerson Softens U.S. Stance on Possible Talks with N. Korea,” Associated Press, December 12, 2017)

Tillerson: “Our policy with respect to the DPRK is really quite clear, and that is the complete and verifiable denuclearization of the Korean Peninsula. It is a policy that is shared by others in the region; in fact, that is China’s policy as well. And Russia has stated it is also its policy. So it is — while it is commonly held, our tactics for implementing the policy may differ a bit among parties in the region. Our approach, as you’ve seen, is to impose ever greater penalties and ever greater pressure on the regime in North Korea to persuade them to halt their current nuclear weapons development program and their systems by which they can deliver these weapons, and to change that course and choose a different course. We have put in place now over the past many months the most comprehensive set of economic sanctions that I think have ever been assembled through two very comprehensive UN Security Council resolutions with the support, notably, of both China and Russia, clearly indications of how they view the seriousness of the threat as well. These sanctions now have banned all coal exports from the North – from North Korea. They have ended their textile exports. They have put limits and will bring to an end the export of forced labor. They have also limited the imports of fuel and reduced all imports, each – with each action increasing the pressure on North Korea. We do know that these are having effects on the North. This is evidence in terms of what we see happening with fuel prices for North Korean citizens, which initially jumped 90 percent. They’re now back to where they’re up only 50 percent. We also know there are shortages beginning to appear, and there’s also, though appearing on the shelves of North Koreans, products which previously had been exported. So now they have to be consumed
I got to the State Department, we had many dialogue mechanisms with China over the past several years. I think when we engaged with China in the first summit with President Xi coming to Mar-a-Lago, we worked with the Chinese to find a way to begin an exchange of understanding in views at a much higher level than had previously been conducted. As many of you know, there were a number of disparities between the U.S. and China, and China to begin the first articulations of this policy on North Korea’s nuclear program, this new administration with China. It was the first trip I made overseas was to Japan, South Korea, and China to begin the first articulations of this policy on North Korea’s nuclear program, the end of the strategic patience. In many ways, this, I think, was fortuitous because it allowed this administration in its first engagements with China to find something that we could work together on. And when we understood that our policies were identical and our objectives were the same, then that gave us a platform from which to engage on a positive way from the outset. The history, as all of you know, of U.S.-China relations has been defined since the historic opening of the relationship with Nixon’s visit. And that served the U.S. and the Chinese well and it served the rest of the world well. But times have changed. China has risen its economic power. And in many ways, the successful Beijing Olympics was perhaps the coming-out of China to the rest of the world with a new sense of confidence and a new sense of a way forward. I think both of us, the U.S. and China, are now searching for what will define the U.S.-China relationship for the next 50 years, because that relationship that was defined by the “one China” policy and the three joint communiques has served everyone well. China has risen as an economic force in the world. And while they like to continue to describe themselves as a developing nation, because they have hundreds of millions who still need to move out of poverty, they are not a developing nation in the traditional sense. They have an economy that is very large, and it certainly has its influence on global markets. But as China has risen, a number of disparities have now occurred between the U.S. and China trade relations and China and other nations in trade relations as well which have to be addressed. So in engaging with China in the first summit with President Xi coming to Mar-a-Lago, we worked with the Chinese to find a way to begin an exchange of understanding in views at a much higher level than had previously been conducted. As many of you know, there were many, many dialogue mechanisms with China over the past several years. I think when we – when I got to State Department, we had 26 different dialogues at various levels. Our view was we...
needed to elevate these dialogues to a much higher level within our respective governments, closer to the ultimate decision makers. So we created four significant high-level dialogues with representation from our side and from the Chinese side that is very close to President Xi. The four dialogues are led by cabinet-level secretaries on our side and equivalents on the Chinese side. This diplomatic and strategic Dialogue is chaired by Secretary Mattis and myself, and this dialogue is really to explore areas that we can work together and explore areas where we have differences, and in this exploratory process create results that will over time hopefully allow us to define what this new relationship will be. The other dialogues are economic and trade, law enforcement and cyber, and social people-to-people dialogues. All four of the dialogues met throughout the last year, and they are designed to be results-driven, and the results of those were reported out at President Trump’s summit in Beijing, his state visit plus. So I think with respect to our relationship with China, we now have a very active mechanism in which we can put complex issues on the table. And we have differences, such as the South China Sea and China’s building of structures, militarization of these structures, and how that affects our allies in the region as well in terms of free and open trade. As we’ve said to the Chinese, we hope we can find a way to freeze this particular activity. Whether we can reverse it remains to seen. But it is not an acceptable — it’s not acceptable to us that these islands continue to be developed, and certainly not for military purposes. In Southeast Asia, we had a – we put forth a policy here not too long ago of a free and open Indo-Pacific, and this was built on the back of some of our views about China’s One Belt, One Road policy. China’s One Belt, One Road, we understand, is a policy they have to continue their economic development, and our policies do not seek to contain China’s economic development. But China’s economic development, in our view, should take place in the system of international rules and norms, and One Belt, One Road seems to want to define its own rules and norms. I like to quote Secretary Mattis’ comment on One Belt, One Road. For China, he said: Well, the U.S. and the rest of the world has many belts and many roads, and no one country gets to decide what they are. So a free and open Indo-Pacific means all countries have access to continue their economic development and free access for trade through the region. As part of the free and open Indo-Pacific, we have elevated our engagement with India. We’ve long had a trilateral relationship in the Indo-Pacific between Japan, Australia, and the U.S., and we’re now working towards whether this will become a quad relationship to include India because of the importance of India’s rising economy as well and I think shared national security concerns that we have with India. ...HADLEY: Since this is a conference focused on South Korea and Asia, we should probably start with North Korea. I have probably 10 questions on that subject. They center on two things which I’d like to cover with you: One, how optimistic are you about being able to achieve denuclearization through diplomacy? And if you’re optimistic, then when do we start the diplomacy? There’s a view out among some that in fact the administration is and should be letting the pressure build on North Korea – ramping up the sanctions, putting pressure on China to put more pressure on North Korea, getting Russia into the tent so they don’t substitute for what China might be cutting off. And that may be the right approach, but in your view, when do we get to the negotiations? And is there any precondition? And the one, of course, people are concerned about: North Korea says they will not come to the table to talk about denuclearization; our position is that’s the only thing worth talking about. How do you get over that? So can you talk about how the diplomatic process might unfold? TILLERSON: Well, first I would say the diplomacy is underway. It has been underway. In fact, the entire sanctions regime, the pressure campaign, that is a piece of diplomacy, is – it is how to create an understanding on the part of the North Koreans that the world does not accept this, so that they understand that if they continue, the isolation just continues. So that in and of itself is diplomacy, and it was – and was a very deliberate decision taken at the outset of the policy itself, is that simply picking up the phone and calling Kim Jong-un back in February when – and March when we first were developing this and saying, “Hey, we really don’t like those nuclear tests you’re doing. Can we sit down and talk,” probably was not going to get anyone to the table. So I think we took the view and we looked at the past efforts and talks, and the President has touched on this many times, that others – we’ve looked at what others tried and failed, and the North Koreans have been masters at always gaming those talks. And they have never proven to be a reliable counterparty. So we decided we were going to undertake this very intensive campaign of sanctions this time, but it was only going to be successful if first we built up very broad international participation. So this wasn’t just about the
United States and a few other countries, but it was very broad-based in its participation, and it had to have the active engagement of China and Russia in a very serious way. And this really was the beginning of discussions with China, and much of the decision to go forward hinged on China’s telling us they would participate. And I will tell you, in our judgment, they have participated; they are fully implementing the sanctions. That’s why it is having an effect. The President would like to see China cut the oil off. The last time the North Koreans came to the table, it was because China cut the oil off. Three days later, the North Koreans were at the table talking. And the President feels we’re really at that stage. So he’s putting a lot of pressure on the Chinese to do more with respect to oil. When do the talks begin? We’ve said from the diplomatic side we’re ready to talk anytime North Korea would like to talk, and we’re ready to have the first meeting without precondition. Let’s just meet and let’s – we can talk about the weather if you want. We can talk about whether it’s going to be a square table or a round table if that’s what you’re excited about. But can we at least sit down and see each other face to face? And then we can begin to lay out a map, a roadmap of what we might be willing to work towards. I don’t think – it’s not realistic to say we’re only going to talk if you come to the table ready to give up your program. They have too much invested in it. And the President is very realistic about that as well. And so it’s really about how do you even begin the process of engagement, because we’re dealing with a new leader in North Korea that no one’s ever engaged with. And he clearly is not like his father nor is he like his grandfather, and we don’t know a whole lot about what it will be like to engage with him. And that’s why I think my expectations of how to start are really framed around, first, I have to know who my counterpart is. I have to know something about them. I have to understand how do they process, how do they think. Because getting to an agreement, as all of us know, in negotiations means a willingness to talk about a lot of things.

Let’s just put a lot of things on the table. And what do you want to put on the table? And we’ll tell you what we want to put on the table. And the important thing is that we get started. The only – if there was any condition at all to this, it’s that, look, it’s going to be tough to talk if in the middle of our talks, you decide to test another device. It’s going to be difficult to talk if in the middle of our talks, you decide to fire another one off. So I think they clearly understand that if we’re going to talk, we have to have a period of quiet. We’ve got to have a period of quiet or it’s going to be very difficult to have productive discussions. And so we continue to indicate to them we need a period of quiet. You need to tell us you want to talk. The door is open. But we’ll show up when you tell us you’re ready to talk. HADLEY: Right. Let me ask you a second question. There is a lot of talk about use of force. Some people have said the likelihood of a use of force in a conflict on the peninsula is at 40 percent. I sometimes puckishly say to people, well, that’s an indication – that people are talking in that way is an indication of the success of the President’s policies, because he’s really convinced people that solving this problem is really important and it is part of the way of getting attention of both North Korea and China. On the other hand, there are a lot of people who have written risks and concerns, and a concern, for example, with someone like Kim Jong-un, who we do not know and who’s been pretty isolated, that he might at some point think the United States is coming for him militarily and then preempt. So how do you look at this issue of the likelihood of military force when we hear from administration folk – spokesman that there are military options? What are they talking about? TILLERSON: Well, I think any successful diplomatic effort of this nature has to be backed up with some type of a military alternative, and it can’t just be a threat. It has to be a credible alternative. And the President also requested that from the outset, that the threat of a nuclear-armed North Korea – now, I know many people have asked the question of, well, why can’t you live with a containment strategy? You lived with it with Russia; you lived with it with China; you lived with it with others. And the difference is that the past behavior of North Korea, it’s clear to us that they would not just use the possession of nuclear weapons as a deterrent. This would become a commercial activity for them. Because we already see elements of it in the commercial marketplace. And in a world we live in today where our greatest threats are non-state actors, we simply cannot accept that. We can’t accept a nation that has no established record of abiding by any kind of international norms. That certainly was not the case with the Soviet Union. It’s certainly not the case with China. It’s certainly not the case with other nuclear countries that possess nuclear weapons. These are countries that have a history of abiding by certain international norms. North Korea has no such record. In fact, their
record is quite contrary to that. And that’s the reason the President and I agree with his assessment that we simply cannot accept a nuclear-armed North Korea, and I think that’s why it is the policy of the neighborhood as well. So it is important that the diplomatic effort be backed up by a very credible military alternative. And yes, there are – there are multiple military options that have been developed to deal with a failure on my part. That’s why I say we’re going to work hard to not fail. And the President wants that, and he has encouraged our diplomatic efforts. But I think he also takes his responsibilities to protect the U.S. and our allies from this kind of a threat seriously, and he intends to ensure that they do not have a deliverable nuclear weapon to the shores of the United States. **HADLEY:** We’re running out of time and a lot of subjects we could cover. I’m going to stay on this one to try to cover it intensively and give you two things to respond to, and then we’ll wrap it up. One is respect to China. A number of people say that China is concerned that if it puts too much pressure on North Korea, the regime will collapse. That means refugees going across the border, and maybe the United States and South Korean forces moving into North Korean territory. And there have been a lot of people who have talked about the need for a strategic conversation at high levels with China to get an understanding about what would happen and not happen on the part of China and the United States in the event of those contingencies. You’ve been public about some noes that I think have been reassuring. What are the prospects? Is the U.S.-China relationship – and I’m not asking you to go into any details – but is the U.S.-China relationship at a point where that kind of discussion is possible? And secondly, we haven’t talked about Russia because the more pressure China puts on North Korea and cuts off resources, it’s a potential that Russia would come in and fill those. Is Russia on side in this effort? And can you talk a little bit about the diplomacy with Russia regarding North Korea? **TILLERSON:** Well, let me address the Chinese question first. And one of the real values of these new high-level dialogues and the diplomatic and strategic dialogue that Secretary Mattis and I chair with our counterparts, and we actually have included Joint Chief of Staff Chairman Dunford, General Dunford, and his counterparts from China as well. These are the subjects of these dialogues, and to try – for us to gain an understanding of, first, how credible do we think the Chinese concern is about a mass flow of refugees across the border in the event of a regime collapse. China is taking steps to prepare for such an eventuality. I think it is something that they can manage. I don’t think the threat is as significant as perhaps others view it. I don’t want to be dismissive of it, but it’s not an unmanageable situation. And they already are taking preparatory actions for such an event. We also have to – have had conversations about in the event that something happened – it could happen internal to North Korea; it might be nothing that we from the outside initiate – that if that unleashed some kind of instability, the most important thing to us would be securing those nuclear weapons they’ve already developed and ensuring that they – that nothing falls into the hands of people we would not want to have it. We’ve had conversations with the Chinese about how might that be done. The four noes that I articulated in that first trip to Asia were intentional: that we do not seek regime change; we do not seek regime collapse; we do not seek an accelerated unification of the Korean Peninsula; we do not seek a reason to send our own military forces north of the demilitarized zone. We have had conversations that if something happened and we had to go across a line, we have given the Chinese assurances we would go back and retreat back to the south of the 38th parallel when whatever the conditions that caused that to happen. That is our commitment we made to them. Our only objective is to denuclearize the Korean Peninsula, and that is all. And out of that and out of these discussions, perhaps we can create a different future for the North Korean people because the one they have right now is pretty dismal. As to Russia’s participation, Russia has been very supportive of the UN Security Council resolutions. They could have vetoed them. They could have blocked them, but they didn’t. I think on the sanctions implementation, it’s not as clear to us how fully those are being implemented. We know there are some violations. They’re not hard to see. We see what they are, and we, in particular, have had – I’ve had many conversations with Foreign Minister Lavrov about specific issues that we see that we would ask that they close those off. Forced labor is one in particular. There are a large number – something around 35,000 – North Koreans working in Russia to date. Russia has a labor shortage. They have economic development in the east in particular that they’re undertaking. So I understand why they have an economic stake in this. But it is also undermining the effectiveness of the sanctions. So we do talk very
specifically with our Russian counterparts about what we ask that they do. By and large at the
Security Council, again, they’ve been very supportive of the sanctions. They voiced their view of
how effective they think those may be. But we do need Russia’s support. And when we get to the
point that we’re actually going to start solving this problem, we’re going to need everyone in the
neighborhood, I call it. And it’s going to be important, obviously, first and foremost, to our allies
in the Republic of Korea, but it’s going to be important to Japan, Russia, China, everyone is there
to help ensure success around a diplomatic talk – around diplomatic talks.” (Secretary of State Rex
W. Tillerson, “Meeting the Foreign Policy Challenges of 2017 and Beyond,” Remarks at the 2017

Secretary of State Rex W. Tillerson let slip last week a few tantalizing details about one of the
nation’s most secret military contingency plans: how the United States would try to race inside
North Korea to seize its nuclear weapons if it ever saw evidence that Kim Jong-un’s government
was collapsing. For years, American diplomats have been trying to engage their Chinese
counterparts in a discussion of this scenario, hoping to avoid a conflict between arriving American
Special Forces — who have been practicing this operation for years — and the Chinese military,
which would almost certainly pour over the border in a parallel effort. And for years the Chinese
have resisted the conversation, according to several former American officials who tried to engage
them in joint planning. The Chinese feared that if news of a conversation leaked, Beijing would be
seen as conspiring with the United States over plans for an eventual North Korean collapse,
eroding any leverage that Beijing still held over Kim. So it was surprising to Tillerson’s
colleagues in the White House and the Pentagon when, in a talk to the Atlantic Council last week,
he revealed that the Trump administration had already provided assurances to China’s leadership
that if American forces landed in North Korea to search for and deactivate nuclear weapons, the
troops would do their work and then retreat. North Korea has defied past predictions of collapse,
and one does not appear imminent. But if a collapse were to occur, the aftermath could present
grave dangers. American officials have envisioned that North Korean officers, fearing the end of
Mr. Kim’s government, might lob a nuclear weapon at South Korea or Japan as a last, desperate
act — or detonate it on North Korean territory to make occupation impossible. Today, speaking
from note cards, Tillerson said at a conference on the Korea crisis that the United States and China
“have had conversations about in the event that something happened — it could happen internal to
North Korea; it might be nothing that we from the outside initiate — that if that unleashed some
kind of instability, the most important thing to us would be securing those nuclear weapons
they’ve already developed and ensuring that they — that nothing falls into the hands of people we
would not want to have it.” He added, “We’ve had conversations with the Chinese about how
might that be done.” He repeated his past assurance that the administration was not seeking
“regime collapse” or “an accelerated unification of the Korean Peninsula.” But if America’s hand
is forced, he added, “we have had conversations that if something happened and we had to go
across a line, we have given the Chinese assurances we would go back and retreat back to the
south of the 38th parallel” when conditions allowed. In other words, the United States would
essentially cede North Korean territory to the Chinese military, or let China and South Korea
figure out who would control 46,500 square miles of territory and take care of its 25 million
occupants, many of whom already do not have enough to eat. In an interview on other national
security issues on December 15, a senior administration official who has been deeply involved in
the North Korea contingency planning declined to speak about the issue, even to confirm that the
conversations the secretary described had taken place. The White House has been more focused on
the beleaguered Tillerson’s public offer to begin talks with North Korea on any issues, even “the
weather,” from which he backtracked December 15 in a presentation to the United Nations. But
the reference to planning for North Korean collapse, while not drawing wide notice, caught the
attention of those who have been drawing up military plans for a number of possible scenarios,
including American pre-emptive strikes. Asked whether Tillerson had referred by mistake to
entreaties to the Chinese that previous administrations kept secret, Steven Goldstein, the new
under secretary of state for public diplomacy and public affairs, said it was quite deliberate. “The
secretary reiterated the position he has taken in meetings with Chinese counterparts,” he said. “He
would like the U.S. and Chinese military leaders to develop a plan for the safe disposition of North
Korea’s nuclear weapons were the regime to collapse.” He added: “While the secretary has never
advocated for regime change, we all have an obligation to be prepared for any scenario.” There is no indication that the Chinese have responded, or that military officials have met — though Beijing would almost certainly keep that secret if it occurred. According to current and former American officials, the contingency plans to seize North Korea’s nuclear arsenal have grown in complexity in recent years, largely because the North Korean arsenal has grown. There are competing estimates among American intelligence agencies over how many weapons the North possesses. Most estimates range from 15 to 30 nuclear devices, but the Defense Intelligence Agency, which is responsible for protecting American troops on the Korean Peninsula, projected this year that the number could be in excess of 50. The North is presumed to have undertaken an elaborate effort to hide the weapons. The result, one senior military official said recently, is that even if dozens of weapons were seized and deactivated, there would be no way to determine whether many more were still hidden away, perhaps under the control of surviving members of Mr. Kim’s military. In the secret American rehearsals of how to execute a seizure of the North’s weapons — more of which are planned for the first half of next year, officials say — speed is of the essence. Finding those weapons, landing “render safe” teams to disarm them and airlifting them out of the country would be a difficult enough task in peacetime. But the American planning assumes a three-way scramble to seize both weapons and territory, involving Chinese troops who may find themselves facing off against the United States and its South Korean allies. “Washington should assume that any Korean conflict involving large-scale U.S. military operations will trigger a significant Chinese military intervention,” Oriana Skylar Mastro, a professor of security studies at Georgetown University, wrote this month in the journal Foreign Affairs, in a provocative article titled “Why China Won’t Rescue North Korea.” China, she wrote, “will likely attempt to seize control of key terrain, including North Korea’s nuclear sites,” most of which are within 60 miles or so of the Chinese border. Because of geographic advantage, they would probably arrive long before American forces. In the past, American planning was based on an assumption that China would come to the aid of North Korea, as it did during the Korean War nearly seven decades ago. But Ms. Mastro, who also advises the United States Pacific Command, wrote that today “the Chinese military assume that it would be opposing, not supporting, North Korean troops.” Her analysis mirrors what is increasingly becoming the dominant thinking among American military planners. That has made the secret discussion that Tillerson alluded to all the more vital. Curiously, some Chinese academics have begun writing about the need for the United States and China to prepare a joint strategy. Such public airing of the issue would have been banned in Chinese publications even a few years ago. Tillerson’s public comments prompted memories of a lengthy conversation between the American ambassador in South Korea and a senior South Korean official in 2010. The details were revealed by WikiLeaks in a trove of 250,000 State Department cables that included secret discussions about how to deal with China’s ambitions for North Korean territory in the event of a collapse. Over a lunchtime conversation, the South Korean diplomat confidently predicted to the American ambassador at the time, Kathleen Stephens, that North Korea would collapse “two to three years” after Kim Jong-il, the dictator at the time, died. In fact, he died in 2011, but the predicted collapse never came. The diplomat then described plans to assure that Chinese companies would have plenty of commercial opportunities to mine minerals in the northern part of the peninsula. Stephens’s description of the lunch, sent back to Washington, included the caution that “China would clearly ‘not welcome’ any U.S. military presence north of the DMZ.” There is no indication that those discussions included the sensitive issue of disposing of nuclear weapons. At the time, the North had only a handful. (David E. Sanger, “Tillerson Speaks on a Largely Secret North Korea Contingency Plan,” New York Times, December 18, 2017, p. A-5)

The US military is reportedly in talks with South Korea on the timing of large-scale annual military exercises that always infuriate nuclear-armed Pyongyang and could coincide with next year's Winter Olympics. The Foal Eagle and Key Resolve drills usually start in late February or early March and involve tens of thousands of troops from the two allies, which say they are purely defensive. Next year's Winter Olympics take place in Pyeongchang in the South from February 9-25, followed by the Paralympics. According to reports Seoul has asked Washington to delay the drills until after the Games to lower the chances of provocations by Pyongyang. "The ROK-US alliance continues to discuss the way ahead on the exercises Key Resolve and Foal Eagle, to

U.N. undersecretary-general for political affairs Jeffrey Feltman said that senior North Korean officials told him during his visit last week “that it was important to prevent war” over the country’s rapidly advancing nuclear and ballistic missile programs. Feltman told reporters after briefing the U.N. Security Council privately that “how we do that” was the topic of more than 15 hours of discussions he had with Foreign Minister Ri Yong Ho, Vice Minister Pak Myong Guk, and other officials. Feltman, a veteran American diplomat who is the, said he told the North Koreans “they need to signal that they’re willing now to go in a different direction, to start some kind of engagement, to start talking about talks.” He said he stressed “the urgent need to prevent miscalculation and reduce the risk of conflict,” while he also underlined both the international community’s commitment to a peaceful solution and its opposition to North Korea’s pursuit of nuclear weapons. He said he emphasized the importance of opening channels of communications “such as the military-to-military hotline to reduce risks, to signal intentions, to prevent misunderstandings and manage any crisis.” It was the first in-depth exchange of views between the U.N. and the DPRK in almost eight years. Feltman called the mission the most important one that he has ever undertaken and called it “constructive and productive.” He said he believes he conveyed the concerns of Secretary-General Antonio Guterres, the Security Council and the international community, but he was cautious about the impact. “They listened seriously to our arguments ... they argued with us,” Feltman said. “They did not offer any type of commitment to us at that point. They have to reflect on what we said with their own leadership.” “I think we’ve left the door ajar, and I fervently hope that the door to a negotiated solution will now be opened wide,” he added. Feltman said both sides agreed the situation on the Korean Peninsula is “the most tense and dangerous peace and security issue in the world today.” He said they also agreed that his visit “was only a beginning and that we should continue our dialogue.” He said the U.N. and others are prepared to facilitate any new opening for talks. (Edith M. Lederer, “U.N. Official: N. Koreas Say It Is Important to Prevent War,” Associated Press, December 12, 2017)

Mastro: “U.S. officials have long agreed with Mao Zedong’s famous formulation about relations between China and North Korea: the two countries are like "lips and teeth." Pyongyang depends heavily on Beijing for energy, food, and most of its meager trade with the outside world, and so successive U.S. administrations have tried to enlist the Chinese in their attempts to denuclearize North Korea. U.S. President Donald Trump has bought into this logic, alternately pleading for Chinese help and threatening action if China does not do more. In the same vein, policymakers have assumed that if North Korea collapsed or became embroiled in a war with the United States, China would try to support its cherished client from afar, and potentially even deploy troops along the border to prevent a refugee crisis from spilling over into China. But this thinking is dangerously out of date. Over the last two decades, Chinese relations with North Korea have deteriorated drastically behind the scenes, as China has tired of North Korea’s insolent behavior and reassessed its own interests on the peninsula. Today, China is no longer wedded to North Korea’s survival. In the event of a conflict or the regime’s collapse, Chinese forces would intervene to a degree not previously expected—not to protect Beijing’s supposed ally but to secure its own interests. …The real possibility of chaos on the peninsula means that the United States needs to update its thinking about Beijing’s motivations. In the event of an escalation, China will likely attempt to seize control of key terrain, including North Korea’s nuclear sites. The large-scale presence of both American and Chinese troops on the Korean Peninsula would raise the risk of a full-blown war between China and the United States, something neither side wants. But given how weak Beijing’s ties to Pyongyang are, and given China’s own concerns about North Korea’s nuclear program, the two great powers may find surprising common ground. With some forward thinking, the United States could lessen the risk of an accidental conflict and leverage Chinese involvement to reduce the costs and duration of a second Korean war. …Xi has publicly stated that the 1961 treaty will not apply if North Korea provokes a conflict—a standard easily met. In my travels to China over the past decade to discuss the North Korean issue with academics,
policymakers, and military officials, no one has ever brought up the treaty or a Chinese obligation to defend North Korea. Instead, my Chinese colleagues tell me about the relationship’s deterioration and Beijing’s efforts to distance itself from Pyongyang, a change that a Global Times public opinion poll suggests enjoys wide support. As the Chinese scholar Zhu Feng has argued in Foreign Affairs, giving up North Korea would be domestically popular and strategically sound. …In fact, the bilateral relationship has gotten so bad that officers in the People’s Liberation Army (PLA) have suggested to me in private meetings that Beijing and Pyongyang may not take the same side in the event of a new Korean war. The Chinese military assumes that it would be opposing, not supporting, North Korean troops. China would get involved not to defend Kim’s regime but to shape a post-Kim peninsula to its liking. These policies have shifted alongside China’s increasing confidence about its capabilities and regional influence. Chinese thinking is no longer dominated by fears of Korean instability and a resulting refugee crisis. The PLA’s contingency planning previously focused on sealing the border or establishing a buffer zone to deal with refugees. Indeed, for decades, that was probably all Chinese forces could hope to achieve. But over the past 20 years, the Chinese military has evolved into a far more sophisticated force by modernizing its equipment and reforming its organizational structure. As a result, China now has the ability to simultaneously manage instability at its borders and conduct major military operations on the peninsula. If Kim’s regime collapsed, the People’s Armed Police, which has approximately 50,000 personnel in China’s northeastern provinces, would likely be in charge of securing the border and handling the expected influx of North Korean refugees, freeing up the PLA for combat operations further south. China currently has three “group armies” in the Northern Theater Command, one of the PLA’s five theater commands, which borders North Korea. Each of these armies consists of 45,000 to 60,000 troops, plus army aviation and special forces brigades. And if it needed to, China could also pull forces from its Central Theater Command and mobilize the air force more extensively. When China reorganized its military regions into “war zones” in February 2016, it incorporated Shandong Province into its Northern Theater Command, even though it is not contiguous with the rest of the command, most likely because military leaders would require access to the shoreline to deploy forces to North Korea by sea. The last two decades of military modernization and reform, along with China’s geographic advantages, have ensured that the Chinese military would be capable of quickly occupying much of North Korea, before U.S. reinforcements could even deploy to South Korea to prepare for an attack. In the past, part of what explained China’s attachment to North Korea was the notion that the latter served as a buffer between China and a once hostile capitalist, and later democratic, South Korea. But China’s increased power and clout have all but eliminated that rationale, too. Beijing may have previously been wary of a reunified Korea led by Seoul, but no longer. Some prominent Chinese scholars have begun to advocate abandoning Pyongyang in favor of a better relationship with Seoul. Even Xi has been surprisingly vocal about his support for Korean reunification in the long term, albeit through an incremental peace process. In a July 2014 speech at Seoul National University, Xi stated that “China hopes that both sides of the peninsula will improve their relations and support the eventual realization of an independent and peaceful reunification of the peninsula.” Still, the Chinese calculus on South Korea has not completely changed. …China’s chief concern remains the prospect of U.S. forces in a reunified Korea. Although China still supports Korean reunification, it also wants to shape the terms. And its approach will likely depend on the status of its bilateral relationship with South Korea. Given the costs of a war on the Korean Peninsula, U.S. planners have long thought that China would do everything it could to avoid becoming entangled in a major conflagration involving South Korean and U.S. forces. If China did intervene, policymakers assumed that Beijing would limit its role to managing refugees close to the border or supporting the Kim regime from a distance through political, economic, and military aid. Either way, Washington believed that China’s role would not significantly impact U.S. operations. This is no longer a safe assumption. Instead, Washington must recognize that China will intervene extensively and militarily on the peninsula if the United States seems poised to move its forces north. This is not to say that China will take preemptive action. Beijing will still attempt to keep both sides from leading everyone down the path to war. Moreover, if an ensuing conflict were limited to an exchange of missile and air strikes, China would most likely stay out. But if its attempts to deter the United States from escalating the crisis to a major war failed, Beijing would not hesitate to send considerable Chinese forces into North
Korea to ensure its interests were taken into account during and after the war. China’s likely strategic assertiveness in a Korean war would be driven largely by its concerns about the Kim regime’s nuclear arsenal, an interest that would compel Chinese forces to intervene early to gain control over North Korea’s nuclear facilities. In the words of Shen Zhihua, a Chinese expert on North Korea, “If a Korean nuclear bomb explodes, who’ll be the victim of the nuclear leakage and fallout? That would be China and South Korea. Japan is separated by a sea, and the United States is separated by the Pacific Ocean.” China is well positioned to deal with the threat. Based on information from the Nuclear Threat Initiative, a U.S. nonprofit, if Chinese forces moved 100 kilometers (about 60 miles) across the border into North Korea, they would control territory containing all of the country’s highest-priority nuclear sites and two-thirds of its highest-priority missile sites. For Chinese leaders, the goal would be to avoid the spread of nuclear contamination, and they would hope that the presence of Chinese troops at these facilities would forestall a number of frightening scenarios: China could prevent accidents at the facilities; deter the United States, South Korea, or Japan from striking them; and block the North Koreans from using or sabotaging their weapons. Beijing is also concerned that a reunified Korea might inherit the North’s nuclear capabilities. My Chinese interlocutors seemed convinced that South Korea wants nuclear weapons and that the United States supports those ambitions. They fear that if the Kim regime falls, the South Korean military will seize the North’s nuclear sites and material, with or without Washington’s blessing. Although this concern may seem far-fetched, the idea of going nuclear has gained popularity in Seoul. And the main opposition party has called for the United States to redeploy tactical nuclear weapons to the peninsula—an option that the Trump administration has been reluctant to rule out. Beyond nuclear concerns, China’s stance on North Korea has shifted as part of its more general geopolitical assertiveness under Xi. Unlike his predecessors, Xi is not shy about China’s great-power ambitions. In a three-and-a-half-hour speech he gave in October, he described China as “a strong country” or “a great country” 26 times. That is a far cry from the dictum that one of his predecessors, Deng Xiaoping, preferred: “Hide your strength, bide your time.” Under Xi, China is increasingly playing the role of a major power, and he has pushed for military reforms to ensure that the PLA can fight and win future wars. Most important, a war on the Korean Peninsula would represent a litmus test of China’s regional competition with the United States. Indeed, Chinese concerns about Washington’s future influence best explain why China is unwilling to push North Korea to the degree that the Trump administration wants. China will not risk instability or war if the outcome could be a larger U.S. role in the region. Given this, China no longer feels comfortable sitting on the sidelines. As one PLA officer asked me, “Why should the United States be there but not us?” For this reason alone, Chinese scholars and military leaders argue, China will need to be involved in any contingency on the peninsula. The bottom line, then, is that Washington should assume that any Korean conflict involving large-scale U.S. military operations will trigger a significant Chinese military intervention. That does not mean that the United States should try to deter China: such a response would almost certainly fail, and it would increase the chances of a direct military confrontation between Chinese and U.S. forces. Moves that could damage the relationship between Beijing and Washington would also impede contingency planning or coordination before and during a crisis, raising the risks of miscalculation. Instead, Washington must recognize that some forms of Chinese intervention would actually be beneficial to its interests, especially with regard to nonproliferation. First and foremost, U.S. officials should note that Chinese forces are likely to make it to North Korea’s nuclear sites long before U.S. forces, thanks to advantages in geography, force posture, manpower, and access to early warning indicators. That is a good thing, since it would reduce the likelihood that the collapsing regime in Pyongyang would use nuclear weapons against the United States or its allies. China could also prove helpful by identifying nuclear sites (with the assistance of U.S. intelligence), then securing and accounting for the nuclear material at those sites, and finally inviting international experts in to dismantle the weapons. The United States, meanwhile, could lead multilateral efforts to intercept North Korean nuclear materials at sea, in the air, or traveling overland and to guarantee their accounting, safe storage, and disposal. More than anything, U.S. policymakers must shift their mindset to view China’s involvement as an opportunity instead of as a constraint on U.S. operations. For example, the U.S. Army and the Marines must accept that although securing nuclear facilities is currently a key mission in North Korea in the event of a conflict, they will have to change their plans if the Chinese get there first.
At the political level, Washington must be willing to take greater risks to improve coordination with China in peacetime. This may mean bilateral consultation with Beijing, even though that would conflict with Seoul's preference to keep China at arm's length. Granted, sharing intelligence with China and jointly planning and training for contingencies would seem unnatural, since the United States is simultaneously engaged in a long-term strategic competition with China. The U.S. Defense Department considers China to be one of its top five global threats, along with Iran, North Korea, Russia, and extremist organizations. But strategic challenges and severe threats often bring together potential adversaries, and rightfully so. With North Korea out of the way, the United States would have more resources at its disposal to address other threats. Of course, such an effort to cooperate would require a massive degree of coordination. China has long opposed engaging in discussions with the United States on how it would behave in the event of a conflict on the Korean Peninsula or the North Korean regime’s collapse because of its distrust of U.S. intentions and fears that Washington would use those conversations to sabotage Beijing’s attempts to resolve the nuclear crisis peacefully. But China appears to be softening its position. In a September op-ed in the East Asia Forum, Jia Qingguo, a professor at Peking University, argued that China should cooperate with the United States and South Korea, especially on the question of North Korea’s nuclear weapons arsenals. In Jia’s words, “The omens of war on the Korean peninsula loom larger by the day. When war becomes a real possibility, China must be prepared. And, with this in mind, China must be more willing to consider talks with concerned countries on contingency plans.” If Beijing continues to resist proposals to work together, Washington should consider unilaterally communicating aspects of U.S. contingency plans to reduce the risk of accidental clashes. It could even provide the Chinese side with intelligence to help the PLA secure the most important nuclear facilities. Alternatively, the two countries could use established mechanisms for nuclear security cooperation in the civilian sector, such as the jointly established Center of Excellence on Nuclear Security, or organizations such as the International Atomic Energy Agency to conduct technical training. No country has more experience dismantling and securing nuclear weapons than the United States. Although China has the manpower to seize control of the sites, it is unclear whether it has the expertise necessary to render safe, transport, or destroy nuclear weapons and material. Sharing best practices would help ensure that China can safely handle what it will find at these sites. Every strategy has its tradeoffs. Coordinating with or conceding to Chinese involvement in a Korean contingency does have a number of downsides, as critics are bound to point out. For starters, the South Koreans completely oppose the idea of any Chinese involvement on the peninsula, let alone Chinese boots on the ground. U.S. moves to coordinate efforts with China would harm U.S. relations with Seoul, although the benefit of managing the demise of North Korea at a lower cost would be worth it. Potentially more worrisome is the fact that Chinese intervention in North Korea would entail the loss of some U.S. influence on the peninsula. At a fundamental level, China would be acting not to assist the United States but to ensure that a reunified Korea would not include U.S. troops. But that may not be so bad, after all. In frank discussions, Chinese interlocutors have insinuated that Beijing may yet accede to a U.S. alliance with a reunified Korea. In that case, the end of a permanent U.S. military presence on the peninsula would be a reasonable price to pay to ensure that a second Korean war had the best possible outcome. (Oriana Skylar Mastro, “Why China Won’t Rescue North Korea,” Foreign Affairs, January/February 2018, 58-66)

No negotiations can be held with North Korea until it improves its behavior, a White House official said, raising questions about Secretary of State Rex Tillerson’s offer to begin talks with Pyongyang anytime and without pre-conditions. “Given North Korea’s most recent missile test, clearly right now is not the time [for negotiations],” the White House National Security Council spokesman told Reuters. Tillerson said yesterday the United States was “ready to talk anytime North Korea would like to talk,” backing away from a key U.S. demand that Pyongyang must first accept that any negotiations would have to be about giving up its nuclear arsenal. A day after Tillerson’s appearance before Washington’s Atlantic Council think tank, the White House official, who declined to be named, laid out a different formula for any engagement with North Korea. The administration is united in insisting that any negotiations with North Korea must wait until the regime fundamentally improves its behavior,” the official said. “As the secretary of state himself has said, this must include, but is not limited to, no further nuclear or missile tests.” The White
House has declined to say whether President Donald Trump, who has taken a tougher rhetorical line with North Korea than his chief diplomat, gave approval for the diplomatic overture. (Matt Spetalnick and David Brunnstrom, “White House Says Not Right Time for North Korea Talks Despite Tillerson Overture,” Reuters, December 13, 2017) President Trump and Secretary of State Rex W. Tillerson are once again at odds over how to deal with nuclear-armed North Korea after Tillerson declared yesterday that the United States was ready to open talks with the North “without precondition.” The secretary’s comments were remarkably conciliatory for an administration that has repeatedly threatened North Korea with military action, and ruled out any negotiations, if it did not curb its missile and nuclear programs. But a few hours later, the White House distanced itself from his overture. In an unusual statement released to reporters on Tuesday evening, the press secretary, Sarah Huckabee Sanders, said Mr. Trump’s position on North Korea had not changed — namely, that talks were pointless if the North’s leader, Kim Jong-un, continued to menace his neighbors. “North Korea is acting in an unsafe way not only toward Japan, China, and South Korea, but the entire world,” she said. “North Korea’s actions are not good for anyone and certainly not good for North Korea.” White House officials were alarmed by Tillerson’s conciliatory tone, according to several people, because they feared that it would sow confusion among allies after Trump rallied them behind a policy of “maximum pressure.” There were no signs that Tillerson intended to signal a change in policy. He was speaking to the Atlantic Council in what was billed as a wrap-up of foreign-policy challenges in the administration’s first year. Asked about the prospects for diplomacy with the North, he said, “We’re ready to talk anytime North Korea would like to talk, and we’re ready to have the first meeting without precondition.” To some extent, Tillerson was merely playing the role he has played throughout the administration’s confrontation with North Korea — the diplomat offering a softer line while Trump and other White House officials warn about the consequences if North Korea does not back off. But Tillerson indicated an urgency about getting to the table with North Korea, which officials said runs counter to the White House’s view that negotiations are unlikely to happen anytime soon, given Kim’s repeated tests of nuclear devices and ballistic missiles. Tillerson did say that talks would only make sense if North Korea paused those tests. Still, his statements reverberated in Beijing, where South Korea’s president, Moon Jae-in, was meeting with Chinese leaders about North Korea. Russia welcomed Tillerson’s remarks, saying they were an improvement over “the confrontational rhetoric we have heard so far,” according to Dmitri Peskov, a spokesman for President Vladimir V. Putin. Adding to the muddled messages, Tillerson spoke a few hours after the national security adviser, Lt. Gen. H.R. McMaster, warned that time was running out to avoid a military confrontation with North Korea, and that China needed to do more to squeeze the North economically. Speaking at a conference sponsored by a British think tank, Policy Exchange, General McMaster singled out shipping companies that he said were smuggling goods to North Korea and helping it evade sanctions. “A company whose ships would engage in that activity ought to be on notice that that might be the last delivery of anything they do for a long time, anywhere,” he said. General McMaster has been among the most hard-line among administration officials in his approach to North Korea, raising the prospect of preventive military strikes if the North appeared on the verge of launching a nuclear-tipped missile capable of reaching the United States. Analysts said there was nothing wrong with Tillerson’s emphasis on diplomacy, but that conditions for any meeting with North Korea were critical. “There’s a middle ground between setting ridiculous preconditions for negotiations, and accepting North Korea’s terms,” said Daniel R. Russel, who served as assistant secretary of state for East Asian affairs in the Obama administration. “It’s very important that we not appear to be accepting North Korea’s terms for negotiations.” Michael J. Green, a National Security Council official in the George W. Bush administration, said, “some communication and consultation with North Korea is appropriate. But there’s a big difference between that and a dramatic announcement about negotiations.” (Mark Landler, “White House Corrects Tillerson on North Korea Talks,” New York Times, December 14, 2017, p. A-10)

In the weeks before U.S. Secretary of State Rex Tillerson’s call for talks with Pyongyang, North Korean officials were privately telling their international counterparts that they see little point in discussions with the United States and other key powers, several current and former U.S. and U.N.-based officials told Foreign Policy. North Koreans complained that Washington reneged
on a pledge made earlier this fall to to restart talks with Pyongyang if it halted all nuclear and missile tests for sixty days, according to those sources. Instead of talks, North Korea says, it got slapped with a fresh round of U.S. sanctions. The development has dealt a blow to diplomatic efforts by the State Department and the United Nations to restart great-power talks with North Korea, which withdrew from those discussions in April 2009 to protest U.N. sanctions.

“The North Koreans have put the whole issue of contacts with the Americans on hold,” said Joel Wit, a senior fellow at the U.S.-Korea Institute at the John Hopkins School of Advanced International Studies, who said the North Koreans are likely confused by the contradictory messages emerging from Washington. “The Trump administration is sending mixed signals, and it is only undermining Secretary Tillerson’s effort to start some sort of dialogue,” Wit said. The administration, he added, “needs to get on the same song sheet, and the White House needs to be backing Tillerson in everything he says.” The United States and North Korea have been engaged in a mostly secret diplomatic dance for much of the year, according to several published reports. But even before the latest round of U.S. sanctions in November, Pyongyang seemed to have gotten cold feet about the idea of returning to the negotiating table. In a closed-door briefing to the U.N. Security Council Tuesday night, U.N. Under-Secretary-General Jeffrey Feltman, who just concluded a visit to Pyongyang, said the North Korean government told him that the time is not right for such talks, according to a Security Council diplomat — though Pyongyang is open to continuing discussions with the United Nations. North Korea has sent similar messages to the United States through a number of intermediaries, including the Russians and Chinese envoy Song Tao, who visited Pyongyang in November in what one well-placed diplomat characterized as a “failed” effort to start talks. The State Department reached out to the North Koreans in May, when the State Department’s special representative for North Korea policy, Joseph Yun, traveled to Oslo, Norway, for secret talks with a senior North Korean official, Choe Hon Sui, the director-general of her foreign ministry’s North America bureau, to discuss Washington’s concerns about American detainees. The talks covered more ground than just prisoners, providing an opening for broader nuclear talks, according to current and former U.S. officials. Tillerson encouraged Yun to maintain his contacts with Choe as well as with diplomats at the North Korean mission to the United Nations to explore the possibility of reopening stalled talks. For her part, Choe signaled that North Korea had its own red line. Speaking to a group of former U.S. officials in separate meetings in Oslo, Choe said that her government would not enter into talks with the United States if Washington sought to make North Korea give up its nuclear weapons, according to a source familiar with those talks. As part of his outreach, Yun signaled to the North Koreans that Pyongyang could create an atmosphere for direct talks if they enforced a voluntary moratorium on nuclear and ballistic missile tests for 60 days, according to current and former U.S. officials. The Washington Post previously reported on Yun’s proposal. Trump followed up on November 21 by relisting North Korea as a state sponsor of terrorism and imposed a new round of sanctions. Before the month was over, North Korea launched its most powerful intercontinental ballistic missile ever, a monster Hwasong-15 missile capable of traversing the American mainland. But North Korea’s interest in talks had already cooled after President Trump delivered a highly provocative address in September to the U.N. General Assembly, where he threatened to “totally destroy” North Korea. The following month, North Korea’s negotiator, Choe, attended a Moscow conference on nonproliferation along experts and former U.S. officials, including Wendy Sherman, the former U.S. undersecretary of state for political affairs. This time, she declined to hold any discussions with any of the Americans. Instead, she met with Russian officials, and informed them that her government was not prepared to restart nuclear talks with the United States. “Choe rejected talks when she went to Moscow in October,” said one diplomat briefed on the back-channel talks. “Kim Jong Un clearly said ‘no’ through all the diplomatic channels.” Still, Trump had not fully closed the door to diplomacy. In October, the president gave his blessing to an initiative by U.N. Secretary-General António Guterres to try a diplomatic approach, several sources said. During an October 20 White House meeting, the U.N. chief broached the idea of sending a personal envoy to Pyongyang, envisioning it as a way to calm the war of words between Trump and Kim. That meeting came about one month after North Korea’s foreign minister, Ri Yong Ho invited Guterres during the U.N. General Assembly summit to send a personal envoy to Pyongyang to begin discussions on a range of issues. Trump expressed skepticism that a fresh U.N. initiative could persuade North Korea’s leader to contain his increasingly provocative
nuclear activities, but gave enough encouragement for Guterres to dispatch Feltman on a three-day trip to Pyongyang in December. When he got back, Feltman said there could “only be a diplomatic solution” in North Korea, and underscored the urgency of opening diplomatic channels to “prevent miscalculations” that could lead to war. Though Feltman told the U.N. Security Council late Tuesday that North Korea wasn’t ready for talks, all the progress that Pyongyang has made on its weapons program — and continued U.S. and U.N. sanctions — might be changing that calculus. Since it appears to have overcome many of its technical hurdles, North Korea may be ready to come to the table, said Robert Einhorn, a senior fellow at the Brookings Institution’s arms control and nonproliferation initiative. “I think the North Koreans will wait a few days to see if this is a genuine signal from the Trump administration. They will want to see what the president has to say or tweet about it,” he said. “But they are undoubtedly getting more pressure from the Chinese, and the Trump administration has done a pretty good job of tightening the screws. They may be beginning to feel the pressure pinch.” But there are differing views inside the administration as to the prospects of diplomacy, and some officials who are skeptical of talks are more inclined to potential military action against North Korea, former officials and congressional aides said. For the moment, the White House believes the sanctions are working and it doesn’t need a full-court diplomatic press. “I think they’re satisfied with the trajectory of the pressure campaign,” said Ely Ratner of the Council on Foreign Relations. “So they’re not going to take their foot off the gas right now,” said Ratner, who was former Vice President Joe Biden’s deputy national security advisor. The question is whether there’s enough time left to pressure Pyongyang after the latest milestones in long-range missile development. “It’s unclear there’s enough runway left for the administration to do that, given how quickly the North Koreans are moving,” he said. “And it’s unclear if there’s a negotiating partner on the other side.” (Colum Lynch and Dan DeLuce, “North Korea Had Spurned Talks with U.S. Due to Latest Sanctions,” Foreign Policy, October 13, 2017)

12/14/17

DPRK FoMin spokesman’s answer to a question put by KCNA “as regards the fact that the U.S. is now talking about a naval blockade against the DPRK: The gang of Trump, being terrified by our accomplishment of the great historic cause of completing the state nuclear force, is driving the situation on the Korean peninsula more and more close to the brink of war, acting recklessly without any sense of reason. Recently, speaking at a gathering in Florida, Trump cried out for the harshest sanctions on our country. Soon after his remarks, Haley, U.S. permanent representative to the UN who is scorned by the world as an evil woman, dared to wag her tongue about further tightening the sanctions against north Korea and utterly destroying it without realizing the meaning of words coming out of her mouth. Besides, high-ranking officials of the U.S. administration like Tillerson, U.S. secretary of State, and McMaster, national security advisor at the White House, are crying out for sea blockade against our country. The U.S. is trying to arrange a ministerial-level meeting at the United Nations Security Council on the 15th to cook up another extremely harsh "sanctions resolution" against the DPRK such as enforcing the naval blockade under the excuse of "non-proliferation." The naval blockade the gang of Trump is trying to pursue is something that was already tried and ended in vain during the collective sanctions campaign against us undertaken by the Bush administration under the signboard of "Proliferation Security Initiative" in the early 2000s. A naval blockade is an act of wanton violation of the sovereignty and dignity of an independent state and an act of war of aggression which cannot be tolerated. The gang of Trump is taking extremely dangerous and big step towards the nuclear war by recklessly seeking the naval blockade against our country, neglecting the strategic prestige of our country that has achieved the great historic cause of completing the state nuclear force. Should the U.S. and its followers try to enforce the naval blockade against our country, we will see it as an act of war and respond with merciless self-defensive counter-measures as we have warned repeatedly. The international society should increase its vigilance on the reckless moves of the U.S. trying to ignite a nuclear war on the Korean peninsula, and if the UNSC does not wish to see the Korean peninsula and the whole world plunging into a nuclear war, it should act properly in accordance with its original mission which is to preserve peace and security of the world.” (KCNA, “Foreign Ministry Spokesman Warns U.S. and Its Followers against Sea Blockade on DPRK,” December 14, 2017)
After more than a year of frosty relations bordering on hostile, South Korea’s leader, Moon Jae-in, pledged a “new start” in his country’s dealings with China as he met with President Xi Jinping, a re-engagement that China hopes will lead to stepped-up diplomacy on disarming North Korea.

China moved to settle the dispute over the antimissile system in late October, and began to ease the unofficial trade war it had launched against Korean cars and consumer goods. But Beijing argues that the agreement was only “provisional,” and is pushing for the eventual removal of THAAD. Under pressure from the United States not to give further ground to China, Moon appears to have fallen short of pleasing Beijing on THAAD, and Xi acknowledged those lingering tensions. “China-South Korea relations experienced a setback due to the reason we all know,” he said at the meeting, according to pool reports. “I am confident the president’s visit will be an important opportunity for us to improve our relationship by paving a better way based on mutual respect and trust.” The two sides agreed before the meeting not to issue a joint statement, South Korean officials said, signaling that China was sticking to a tough position on the antimissile system. Moon expressed a desire for a new beginning in the two countries’ relationship, “I believe that trust is most important not only in a relationship between persons but also between countries,” he said at the beginning of his meeting with Xi, according to Yonhap. In an interview with the Chinese state broadcaster CCTV before leaving Seoul, Moon tried to satisfy China, saying Beijing did not need to worry about the antimissile system because South Korea would ensure that its radar did not penetrate far into Chinese territory. “We will make sure THAAD does not violate China’s security beyond its original purpose of defending South Korea against North Korean missiles,” Moon told the broadcaster. “And the U.S. has guaranteed this as well on multiple occasions.” Moon, who leans in Xi’s direction about the need for diplomacy to cool tensions on the peninsula, showed no sign of agreeing to the Chinese freeze for freeze proposal, and analysts doubted it would get traction. “I don’t think South Korea will go for it,” said Yun Sun, an analyst at the Stimson Center in Washington. “And North Korea has not agreed to it.” On the first full day of Moon’s visit, China tried to show that economic relations, at least, were on the mend.
Accompanied by a large contingent of South Korean businessmen, Moon visited a trade fair at Beijing’s vast convention center yesterday where about 200 of his country’s companies exhibited their goods to an estimated 500 Chinese buyers. The show was marred by a squad of more than a dozen Chinese security guards who beat a South Korean photojournalist trying to cover Moon as he toured the booths. The journalist needed to be taken to a hospital, and the attack drew a vigorous protest from the Foreign Correspondents’ Club of China. Moon’s big request to China was for Xi to attend the opening ceremony of the 2018 Olympics in Pyeongchang in early February. Concern over North Korea’s nuclear weapons tests has depressed overseas ticket sales for the Winter Games. Xi’s presence would almost guarantee that large numbers of Chinese tourists would attend. Chinese tourism, once a lucrative market for South Korea, was cut in half when the Chinese government issued advisories to travel agents to stop sending tour groups there. Chinese officials said that Beijing wanted the Winter Games to succeed as a symbol of peace in a tense region. There would still be time in the coming weeks for Xi to agree to go, a Chinese official said this week. After his visit to Beijing, Moon is scheduled to visit Hyundai Motor’s new $1 billion assembly plant in Chongqing, its fifth in China. Hyundai was one of the companies most severely hit by the government urging Chinese consumers to boycott South Korean products. (Jane Perlez, “South Korean Leader Seeks ‘New Start’ With China in Bid to End Trade War,” New York Times, December 15, 2017, p. A-8) South Korean President Moon Jae-in visited the former office of his country's provisional government in Chongqing on December 16, highlighting the long history of friendship between South Korea and China, and their joint struggle against Japan's past imperialism. The visit to the office of the provisional government marked the first of its kind by a South Korean president, according to the South Korean presidential office Cheong Wa Dae. The provisional government operated in China during the 1910-45 Japanese colonial rule of Korea. (Yonhap, “Moon Highlights S. Korea-China Ties in Visit to Site of Independence Movement,” Korea Herald, December 16, 2017)

Japanese Prime Minister Shinzo Abe expressed hope that Seoul, Washington and Tokyo would jointly conduct air drills, the leader of South Korea's main opposition Liberty Korea Party said. "Prime Minister Shinzo Abe said it is regrettable that the Seoul government is not doing it despite his hope that the three countries conduct joint air drills in Japanese skies,” Hong Joon-pyo told reporters following his talks with Abe. (Yonhap, “Abe Hopes for Joint Seoul, Washington, Tokyo Air Drills: S. Korea’s Opposition Leader,” December 14, 2017)

China did not export any refined oil products to North Korea in October under United Nations sanctions, Voice of America reported, citing data from the Korea International Trade Association. China’s export volume of all refined oil products such as gasoline to North Korea were marked “0” in October in the KITA data on trade between the two countries, down from $166,106 in September, VOA said. China exported $240,000 worth of other petroleum products to North Korea in October, but most of them were lubricants and items unrelated to the UN sanctions, VOA said. Russia, however, was not disclosing its October data on oil exports to North Korea, according to the VOA. (Kim So-hyun, “China Stopped Refined Oil Exports to N. Korea in Oct.: Report,” Korea Herald, December 15, 2017)

The North Korean economy is reliant on hard currency to function, especially on US dollars. ... Even prior to international sanctions, North Korean banking regulations restricted how its financial institutions could reach international markets. Using a small number of foreign exchange banks, the regime created an inter-bank clearing system, effectively bottlenecking access to foreign currency reserves and international transactions. These institutions were themselves sanctioned for their role in financing the regime’s nuclear and missile programs. Reliant on continued access to foreign currency, they adapted how they accessed the international market by outsourcing large pieces of their financial infrastructure to overseas commercial networks. According to the US Department of Justice, the ensuing illicit overseas financial networks, like Dandong Hongxiang Industrial Development Co. Ltd. and Dandong Zhicheng Metallic Material Co. Ltd., provided pathways for North Korea to illicitly transact billions of dollars on the regime’s
In maintaining access to international financial, commercial, and logistics networks, North Korea has had to hide its activity, and more importantly its money, using an interconnected web of networks. These networks draw together revenue from disparate illicit activity into a centralized structure that finances the system of North Korean sanctions evasion. The system makes no distinction between sources of revenue. ...North Korea is reliant on a system it cannot control. Its vulnerability is economic; our leverage is financial. ... The use of foreign currency within the North Korean domestic economy has become a fact of life for average North Koreans. ... In November 2009, the regime revalued the North Korean Won in an attempt to suppress unofficial economic activity and inflation. It limited the amount of old money that North Korean citizens could exchange for new bills and put in place a timeframe during which these exchanges could occur. The reform’s immediate effect was to wipe out much of the savings of average North Koreans and trigger hyperinflation. ...As average North Korean citizens searched for a stable way to securely store their assets and make daily purchases, they increasingly turned to foreign currency. While foreign currency had been a staple of the unofficial market economy since the early 1990’s, the reforms of 2009 were decisive in bringing its use out of the shadows and more into the formal economy. ...[A] survey, conducted by the Bank of Korea, showed that after the 2009 currency reforms, 70.7 percent of respondents held 90 percent or more of their assets in US dollars or Chinese Renminbi. ... To generate foreign exchange from around the world, the regime has relied on a wide array of transnational illicit schemes. These illicit networks have been highly diverse, highlighting the ingenuity and resilience of North Korean overseas networks to exploit the international market to ensure positive cash flows on the regime’s behalf. There is perhaps no better example of this than the growing use of North Korean-backed cybercrime to help raise funds. ...On February 4, 2016, the Bangladesh Central Bank sent out thirty-five transfer orders, requesting that nearly $1 billion be sent out of the bank’s settlement account at the Federal Reserve Bank of New York. Manipulating the bank’s access to SWIFT, an international financial network through which banks send financial messages, hackers stole $81 million dollars before mistakes in payment documents halted the remaining transfers. To gain access to the bank’s computer system, hackers had used malware embedded on a benign website as early as seven months before the attack and subsequently introduced engineered code capable of circumventing traditional security backstops to issue the fraudulent transfer requests. In April 2017, cyber security researchers at Kaspersky Lab used common attack signatures to link the attack to a specific North Korean cyber network: the “Lazarus Group,” ... alleged to be a branch of North Korea’s premier intelligence agency Reconnaissance General Bureau (RGB). ... If the Lazarus Group did, in fact, steal $81 million from the Bangladesh Central Bank, the subsequent laundering of the stolen money required the work of a much larger illicit network. The proceeds were sent to accounts at Rizal Commercial Banking Corporation in the Philippines. Account holders, who were later found to have opened the accounts with false documents, withdrew the funds, converted them to Philippine pesos and consolidated the money into the account of a Chinese-Filipino businessman. The attack was planned meticulously. The transfer requests came over the Chinese New Year, ensuring that bank employees would not be at work to catch the suspicious activity. By the time regulators were able to send out alerts to freeze and repatriate the funds back to the Bangladesh Central Bank, the $81 million had been withdrawn, redeposited, and transferred through different accounts several times over. Planners had identified loopholes in Philippine anti-money laundering regulations, specifically that casinos had been exempt from reporting regulations introduced in 2013. The money was used to buy a large number of chips in VIP junket rooms at several casinos, before then disappearing. To date, only a fifth of the $81 million has been recovered and returned to the Bangladesh Central Bank. ... To be of use, any potential funds raised from the Bangladesh heist would have to find their way back to the North Korean financial system. This newly raised capital would then join funds raised from other revenue-generating organizations, both licit and illicit, in North Korea’s foreign reserve accounts. While the importance of hard currency to the regime has increased, the financial institutions tasked with the day-to-day management of these funds have faced unprecedented challenges, causing fundamental shifts in the North Korean banking sector. ... Today, rather than traditional financial institutions that handle funds on behalf of their clients, North Korea’s foreign exchange banks work as large-scale accounting firms, moving money held in accounts in the name of front companies to maintain the balances of their domestic North Korean customers, including the regime itself. The
US Department of the Treasury has stated that “the DPRK uses and maintains a network of financial representatives, primarily in China, who operate as agents for North Korean financial institutions.” It further stated that by operating outside of North Korea, these agents are free to “orchestrate schemes, set up front or shell companies, and manage surreptitious bank accounts to move and disguise illicit funds, evade sanctions, and finance [WMD] proliferation.” In outsourcing these financial functions, North Korean foreign exchange banks such as FTB and KKBC were able to turn to those individuals or companies that stood to profit the most from North Korea’s continued presence in international trade—the Chinese companies that were most central to their overseas business. Although China makes up over 90 percent of North Korean trade today, it has not always been this way. According to John Park, director of the Korea Working Group at the Harvard Kennedy School, the main catalyst for this shift didn’t occur until Chinese Premier Wen Jiabao’s 2009 visit to Pyongyang. Wen signed three agreements – under the headings of economic development, tourism, and education – that signaled to Chinese companies that it was legal to conduct commercial activities with North Korean entities and provided a loophole with respect to UN sanctions. Park states that “the loophole took the form of a clause in UN Security Council resolutions stipulating that member states are not prohibited from engaging in economic development or humanitarian activities with the DPRK. When subsequently pressed to implement sanctions more robustly, Chinese authorities claimed that the commercial interactions in question were legitimate economic development activities.” By further sanctioning the regime, Park points out, the United States had succeeded in elevating the risk for some of those doing business with North Korea, dissuading them from continuing to do so. But “other Chinese middlemen saw the elevated risk as a special business opportunity. Rather than being deterred by the elevated risk, it incentivized them.” By paying higher commission fees due to the increased risk, North Korean entities were able to motivate their Chinese counterparties to provide additional services, such as banking, effectively circumventing international sanctions. Incentivized by higher commission fees and increased price tags for illicit items, North Korean entities were able to rent more sophisticated procurement and logistics capabilities from more capable Chinese middlemen. These middlemen developed multi-purpose business partnerships with select North Korean clients that covered selling goods from the North as well as procuring illicit components in the Chinese marketplace. These sophisticated activities soon began to bring in larger contracts for the middlemen, consolidating the number of major firms that did business with the North Korean regime. By 2016, the top ten importers of North Korean goods in China controlled nearly 30 percent of trade revenue. The reasons for the success of this outsourcing are clear: 84 percent of entities designated by the US Department of the Treasury are located within North Korea or are North Korean citizens. To date, only 55 non-North Korean entities have been designated for sanctions, many of which were only designated in the past year. These more recent actions by the US Department of the Treasury have begun to reveal that even after FTB and KKBC were able to successfully offshore key components of their financial infrastructure, the system remained remarkably centralized. Disparate illicit activity and networks were shown to have been connected by a narrow structure of illicit financial proxies. Although North Korea was able to successfully offshore aspects of its financial infrastructure to companies overseas, the connected structure of its foreign exchange began to link its overseas networks. Actions taken by the US Department of Justice have revealed the relationships, including specific transactions (citing information otherwise unobtainable in the open source) that highlight the degree to which these firms interacted with each other. Chinese financial institutions like the Bank of Dandong were perfect conduits at the start of this development in outsourcing. According to the US Department of the Treasury, between May 2012 and May 2015, the Bank of Dandong conducted roughly $133.6 million in transactions through US correspondent accounts that were with or on behalf of US and UN sanctioned entities. Representatives from KKBC were present at the bank, providing a direct link between North Korean foreign exchange institutions and the Bank of Dandong, an institution that the US Department of the Treasury’s Financial Crimes Enforcement Network (FinCEN) called “a gateway for North Korea to access the US and international financial systems despite US and UN sanctions.” In its June 29, 2016 Notice of Proposed Rulemaking, announcing the designation of the bank as a financial institution of primary money laundering concern, FinCEN highlighted that millions of dollars of transactions had been made on behalf of companies involved in the procurement of ballistic missile technology. However, when KKBC was
sanctioned in 2009, North Korea began to adapt the way in which it interacted with financial institutions. One of KKBC’s best international gateways was one of Bank of Dandong’s minority stakeholders: Dandong Hongxiang Industrial Development Co. Ltd. (DHID). According to a US Department of Justice indictment, DHID represented 20 percent of China-North Korea trade in 2010. ... The company was a leader in the development of trade with North Korea and was headed by a Chinese national and Communist Party member, Ma Xiaohong. Ma’s operation eventually expanded to include holdings as varied as international freight and travel services, restaurants, hotels, and Chinese-North Korean joint ventures. On its website, the company described itself as a “bridge between DPRK and the world.” Documents released by the US Department of Justice indicate that when KKBC was sanctioned in 2009, bank representatives needed to find a reliable and secure way to maintain its ability to conduct transactions in US dollars. It found its solution by using DHID and its front companies. Nearly 60 percent of the 28 front companies owned by DHID were registered or purchased within two years of August 11, 2009, the day KKBC was sanctioned. Of these, only two had been incorporated or purchased prior to August 2009. By the end of 2016, the DHID global network had expanded to include 43 companies on four continents. According to the US Department of Justice, DHID helped North Korea conduct foreign trade through this elaborate network of shell and front companies, using the US financial system without detection for seven years. In September 2016, the Public Security Department of Liaoning Province announced that it was investigating DHID for “serious economic crimes” and the US Department of Justice unsealed an indictment charging DHID, Ma Xiaohong, and several other top employees with aiding KKBC and acting as a financial proxy to evade sanctions. DHID was not only a major conduit for North Korean finance, but also a regional hub for North Korean activity. One of the company’s holdings, the Chilbosan Hotel, was reported to be a command outpost for North Korean cyber activity. According to US technology firm Hewlett Packard, within China “[North Korea] maintains technical reconnaissance teams responsible for infiltration of computer networks, hacking to obtain intelligence, and planting viruses on enemy networks.”

Transactions made between different overseas networks even connect global nodes of North Korea’s system of illicit international finance. Documents released by the United Nations Panel of Experts on North Korea (UN POE) in 2017 show one of DHID’s front companies, Nice Field International, received $610,000 in payments from MKP Capital. Malaysia Korea Partners (MKP), the owner of MKP Capital, is a Malaysia-based firm controlled by Han Hun Il, a reported associate of Kim Jong-un’s uncle Jang Song Thaek, who was purged in 2013. According to Lee Chol Ho, a North Korean defector who worked for Han for nine years, “When people from the [North Korean] Central Committee visited Malaysia, they only met with Han....They didn’t even bother to see the ambassador.” These same branches of the system also connected foreign exchange banks. Nice Field International also did significant business with Mingzheng International Trading Co. Ltd, which the US Department of Justice alleges was making illicit payments on behalf of the North Korean government, acting as a “front company for a covert branch of FTB,” and laundering US dollar payments. The connections between North Korea’s overseas networks, which conduct multiple types of illicit activity on behalf of different North Korean organizations, begin to reveal how deeply interconnected its overseas system is. Losing the ability to rely on a single piece of that system, such as DHID, can dramatically raise the transaction costs for multiple networks around the globe. ... Using these networks, North Korean’s foreign exchange banks were able to maintain access to US dollar accounts and transact globally without detection until earlier this year. Most notably, DHID reportedly allowed KKBC to conduct over $1.3 billion in transactions, DZMM reportedly conducted over $700 million in prohibited transactions, and Bank of Dandong reportedly conducted $133 million. This money, over $2 billion dollars within a seven-year period, is not a trivial figure in an economy as small as North Korea’s. Moreover, these funds were spent to circumvent international sanctions meant to prevent North Korea from obtaining WMD’s. The same day that DZMM was sanctioned by the US Department of the Treasury for its role in managing the finances of FTB, two other Chinese companies were designated: Dandong Tianfu Trade Co. Ltd. and Jin-hou International Holding Co. Defector testimony included in the Department of Justice documents stated that DZMM was one of three “primary China-based importers of North Korean coal, all three of which followed the same general business patterns...moving coal out of North Korea and moving illegal goods—including military munitions and items—into North Korea.” These statements further detailed that
the regime uses 95 percent of its foreign exchange revenue from coal for its military and WMD programs. According to trade records from 2013 to 2016, the four major Chinese companies sanctioned for North Korean ties—DHID, DZMM, Dandong Tianfu Trade Co., and Jin-Hou International Holding Co. Ltd.—were responsible for importing over 30 percent of North Korean coal over that time period. ... North Korea’s overseas networks have been vital proxies for the regime and its foreign exchange system. The fact that they exist outside North Korea has provided them greater opportunities to freely transact internationally. The benefits of being entrenched within international systems of banking and trade, though, is accompanied by an inherent vulnerability to international sanctions and restrictions. In fact, since September 2016, eight large-scale Chinese trading firms have been sanctioned by the US Department of the Treasury for their roles in supporting North Korea’s nuclear and ballistic missile programs. ... New sanctions and actions to enforce them can change the incentive structure companies face in doing business with North Korea and cause large-scale repercussions for the regime’s foreign exchange earnings, but it will take time for these measures to impact the regime’s bottom line. The US Department of Justice has clearly accelerated its targeting of North Korea’s foreign currency income and exchange reserves. Since September 2016, it has filed civil forfeiture complaints against funds held by North Korea-linked companies, including DHID, DZMM, and Mingzheng International Trading Corporation. It has identified North Korea-linked funds in US dollar accounts at some of the world’s largest banks. In the DHID forfeiture action alone, it sued to forfeit 25 bank accounts in 12 banks, including Agricultural Bank of China, China Construction Bank, and Industrial and Commercial Bank of China. Funds placed under civil asset forfeiture from these networks, totaling $84,364,544, represent a portion of the hard currency accounts of North Korea’s foreign exchange banks. They are vital regime assets. The Department of Justice’s seizures since September 2016 amount to three times what was frozen in 2005 from Banco Delta Asia (BDA) after the US Department of the Treasury named the Macau-based institution as a primary money laundering concern. According to retired World Bank expert Brad Babson, the $25 million frozen by Macau from BDA and the closure of its foreign reserve accounts was enough to have “an unusually effective impact.” Continued targeting of North Korea’s foreign currency accounts will allow the international community to generate additional leverage to coerce the regime into disarmament negotiations. Furthermore, as the entire system is interlinked, actions taken against nodes can lead to the identification of other parts of the network, achieving an unravelling effect and exposing the entire system. ... Yet the question remains: how can members of international law enforcement bodies identify these networks to enforce the coercive economic measures of successive UN resolutions? The answer lies in following the money. Even the actions of North Korea’s premier intelligence agency, the Reconnaissance General Bureau (RGB), are limited by their need to maintain accounts in North Korea’s foreign exchange banks. The RGB, which the US Department of the Treasury designated in August 2010, “trades in conventional arms and controls ... Green Pine Associated Corporation (Green Pine), which was also identified for sanctions by the President ... for exporting arms or related materiel from North Korea.” To raise hard currency for the regime, RGB and Green Pine have reportedly sold conventional weapons to countries around the world, including Syria, Egypt, and the UAE. In this respect, these weapons proliferators serve a role analogous to those of the “strategic chokepoint” trading companies, such as DHID and DZMM. Just as in the cases of DHID and DZMM, the illicit networks employed by RGB are both connected to North Korean illicit activity and to the illicit system of North Korean overseas finance. Reporting done by Reuters and the UN POE highlights the extent of the network surrounding the RGB’s use of the Malaysia-based firm Global Communications (Glocom). Although North Korean companies have been banned since 2009 from exporting arms and related material, Glocom, operating under the slogan “Anywhere, Anytime in Battlefield,” has sold radio systems meant for military and paramilitary organizations. In July 2016, customs agents interdicted an air shipment headed to Eritrea that had originated in China. The cargo of 45 boxes, bound for Eritech Computer Assembly & Communications Technology PLC, was made up of high-frequency software-defined radios, crypto-speaker microphones, GPS antennas, high-frequency whip antennas, clone cables, camouflage rucksacks, and carry pouches. Some of the boxes were labeled Glocom, and some included material marked “made in DPR Korea.” Although Glocom maintains an office in the “Little India” neighborhood of Kuala Lumpur, no company exists under the name Global Communications in the Malaysian business registry. However, two
Malaysian front companies operated by North Koreans, International Golden Services Sdn Bhd and International Global Systems Sdn Bhd, operate Glocom out of its second-floor “Little India” office. Furthermore, the UN POE shows Glocom is a front company for the North Korean firm Pan Systems Pyongyang. Both International Golden Services and Pan Systems Pyongyang are controlled by RGB agent Ryang Su Nyo, who has been involved in multiple instances of illicit activity involving the raising of hard currency for the regime. In February 2014, for example, Ryang and two other North Korean agents were detained in Kuala Lumpur International Airport for attempting to smuggle $450,000 in cash through customs. When questioned, the trio told Malaysian authorities that the funds belonged to the North Korean embassy. Through Pan Systems Pyongyang and under the alias Wonbang Trading Co., Ryang may also be involved in revenue generation through RGB coal exports. The UN POE has stated that an investigation is ongoing to determine whether this company is in fact Wonbong Trading Co., a leading North Korean coal exporter run by the RGB. Ryang is reportedly an employee of the RGB’s Liaison Office 519, an organization that specializes in overseas operations to conduct arms sales and weapons procurement. In the past, Ryang’s Pan Systems Pyongyang had transacted with multiple organizations related to North Korean weapons procurement. According to media reports, the organization has even sold arms to Somali pirates. Between 2011 and 2015, Pan Systems Pyongyang had regular transactions with the sanctioned North Korean weapons proliferator KOMID. In 2010 and 2013 the company also made transactions to the Hong Kong-based company Greenpine International, whose sole shareholder, Kim Song Il, was arrested in Hawaii attempting to purchase night vision goggles from a federal agent. Information provided to C4ADS by someone with knowledge of the Glocom network indicates that one of the RGB representatives, Kim Chang Hyok, met with an Egyptian general in 2011. Reporting by the Washington Post confirmed that a seized shipment of $23 million worth of rocket propelled grenades was found aboard the North Korean ship the Jie Shun, which was purchased by the Egyptian government. Estimates claim North Korea raises between $100 and $300 million annually through the sale of arms and related material. To be of use to the regime, funds generated by Ryang and Glocom’s illicit military equipment sales, like those stolen from the Bangladesh Central Bank, would need to be placed within the North Korean foreign exchange system. To access the international financial system and procure arms and related material, Pan Systems Pyongyang and its front companies used an extensive network of offshore bank accounts. These accounts, in both dollars and euros, were operated by Daedong Credit Bank (DCB), a sanctioned subsidiary of Korea Daesong Bank (KDB) and third arm of North Korea’s foreign exchange system. Since 1998, DCB had helped Ryang to move money in and out of North Korea—between Pan Systems and more than 20 companies on the Chinese mainland, in Hong Kong, and in Singapore. ... Like the North Korean regime, the RGB is reliant on access to foreign currency to function. Although it is the country’s main foreign intelligence agency, large pieces of RGB’s internal infrastructure are built to ensure positive cash flow through a diversified set of illicit activities: Glocom using sales of military equipment, the Lazarus group through hacking, and Wonbang Trading Co. Ltd. through sales of coal. Glocom’s ties to the foreign exchange system through accounts at DCB illustrate the same institutional bottleneck seen in various other North Korean networks. The system is fundamentally interconnected and vulnerable. The success of North Korea’s illicit activities is contingent on a range of foreign entities providing key services, from passing through payments to providing logistics, none of which North Korea can control. However, it is an environment that the international community does control. By levying fines, denying access to the US financial system, seizing assets, and filing indictments, it is possible to expose and disrupt this system. It is imperative to follow the money. (C4ADS and Sejong Institute, The Forex Effect: U.S. Dollars, Overseas Networks, and Illicit North Korea Finance, December 2017)

12/15/17

Secretary of State Rex Tillerson urged North Korea, for the second time this week, to enter negotiations and give up its nuclear weapons. Speaking at the United Nations Security Council in a session called for foreign ministers, Tillerson said the United States asks that any talks be preceded by a “sustained cessation of North Korea’s threatening behavior.” Tillerson did not repeat an assertion he made Tuesday that there are no preconditions to having talks. He said the ultimate goal must be the “complete, verifiable and irreversible abandonment of its nuclear weapons programs.” That position could preclude any negotiations. Pyongyang has been adamant
it will never even consider abandoning its nuclear weapons program, which it regards as a
deterrent against a U.S. invasion designed to oust the regime. North Korea’s ambassador to the
U.N., Ja Song Nam, joined the Security Council session in a rare appearance. The Security
Council meeting was called amid rising concerns the world is on the brink of nuclear conflict.
“The worst possible thing that could happen is for us all to sleepwalk into a war that might have
very dramatic circumstances,” U.N. Secretary General António Guterres said yesterday. In Russia,
President Vladimir Putin warned yesterday that the United States should not further aggravate
North Korean leader Kim Jong Un. ((Carol Morello, “Tillerson Offers Olive Branch to North
Korea If It Returns to talks,” Washington Post, December 15, 2017)

Tillerson: “...Each UN member state must fully implement all existing UN Security Council
resolutions. For those nations who have not done so, or who have been slow to enforce Security
Council resolutions, your hesitation calls into question whether your vote is a commitment to
words only, but not actions. For countries who have not taken action, I urge you to consider your
interests, your allegiances, and your values in the face of this grave and global threat. We believe
that more can and must be done beyond enforcing the minimum requirements of the
Security Council resolutions directed at the DPRK. Last spring, the United States initiated a
peaceful pressure campaign of economic and diplomatic sanctions against North Korea, with the
intent of setting conditions for North Korea to engage in serious negotiations toward the complete,
verifiable, and irreversible abandonment of its nuclear weapons programs. Our resolve to continue
this campaign is even greater today. Over the past year, many allies and partners of the United
States have joined our campaign, going beyond mere compliance with the Security Council
resolutions. We ask these nations to continue to increase pressure through unilateral action. Doing
so will further isolate North Korea politically and economically, cutting off support and funds for
its unlawful nuclear and missile programs. We particularly call on Russia and China to increase
pressure, including going beyond full implementation of the UN Security Council resolutions.
Continuing to allow North Korean laborers to toil in slave-like conditions inside Russia in
exchange for wages used to fund nuclear weapons programs calls into question Russia’s
dedication as a partner for peace. Similarly, as Chinese crude oil flows to North Korean refineries,
the United States questions China’s commitment to solving an issue that has serious implications
for the security of its own citizens.” (Secretary of State Rex W. Tillerson, Remarks at the United

Tillerson: MODERATOR: Conor Finnegan, ABC News. Q: Mr. Secretary, you’ve previously
said that a precondition to talks with North Korea is the regime agreeing to give up its nuclear and
ballistic missile capabilities. On Tuesday, you said that wasn’t realistic. And today, you didn’t
even mention the issue at all, despite what was in your prepared remarks. Does it remain a
precondition for the United States and are you and President Trump on the same page on whether
and when to engage in talks? TILLERSON: The President’s policy on North Korea is quite clear,
and there is no daylight at all between the President’s policy and the pursuit of that policy. And the
President, I think, has been very clear that we are going to lead this pressure campaign, we’re
going to unite the international community, and we’re going to keep the pressure as much as we
can and increase it where possible. Most recently, the President called President Xi personally
and asked him for China to cut the oil supplies off to North Korea to increase this pressure.
That is intended to lead to diplomatic talks. In the meantime, the President has been very clear:
Militarily, we are going to be prepared should something go wrong. And our military is
prepared. With respect to the talks, the pre – we are not going to accept preconditions. You heard
others who have called for a freeze for freeze. We do not accept a freeze for freeze as a
precondition to talks. We do not accept any relaxing of the sanctions regime as a precondition of
talks. We do not accept a resumption of humanitarian assistance as a precondition of talks. So we
are not going to accept preconditions for these talks, but as I indicated in my remarks, our
communication channels remain open. North Korea knows they’re open; they know where the
door is; they know where to walk through that door when they want to talk.” (Secretary of State
"It's very hard to discern what their intent is without, as I said, having a real dialogue," Joseph Yun, U.S. Special Representative on North Korea policy, said of the reclusive regime. "We are open to dialogue. And we hope they will agree to have a dialogue," he told reporters in Bangkok. It is necessary to exercise both "direct diplomacy as well as sanctions" to rein in the pariah state's nuclear program, he added. Yun is in Bangkok as part of a December 11-15 trip that also included a stop in Japan, as Washington seeks to shore up regional support for its "maximum pressure" campaign. Tillerson said earlier this week, Washington was ready to negotiate with the North without preconditions, following a "period of calm." When asked whether Pyongyang would need to meet any specific or even minimum prerequisites before a dialogue could begin, Yun said: "My boss's statement... addresses that. I think we have to start, and he mentioned we are open to dialogue, and let's see how they respond." (AFP, ‘U.S. Diplomat Says ‘Real Dialogue’ Needed with N. Korea,’ December 15, 2017)

U.N. Sec-Gen: Mr. President, allow me to first thank Japan, and thank you personally, for convening this meeting. I would also like to acknowledge and welcome the many Ministers and other representatives around this table, as well as the participation of the Republic of Korea and the Democratic People’s Republic of Korea in this important meeting. The situation on the Korean Peninsula is the most tense and dangerous peace and security issue in the world today. I am deeply concerned by the risk of military confrontation, including as a result of unintended escalation or miscalculation. I know that the Under-Secretary-General for Political Affairs briefed the Security Council earlier this week on his recent visit to the DPRK. I will not repeat what he said, but I want to note that it was the first in-depth political exchange of views between the United Nations Secretariat and officials in Pyongyang in almost eight years. His visit came at the end of a difficult period. In 2017, the DPRK conducted activities related to its nuclear and ballistic missile programmes at an alarming and accelerated pace. On September 3rd, it [conducted] its sixth nuclear explosive test, involving what it claimed was a “two-stage thermo-nuclear weapon”. This test caused a seismic event of magnitude 6.1. Over the year, the DPRK conducted 20 ballistic missile launches. This has included its first tests of two intercontinental-range ballistic missiles, as well as tests of new medium- and intermediate-range ballistic missiles. In September, two Hwasong-12 intermediate-range ballistic missiles overflew Japan. No aviation or maritime safety notifications were given for any of these launches. The International Atomic Energy Agency remains unable to access the DPRK to verify the status of its nuclear programme. The Agency monitors developments through satellite imagery. At the Yongbyon Nuclear Scientific Research Center, it has observed signatures consistent with the operation of the plutonium production reactor and reported centrifuge enrichment facility. The Agency also continues to observe indications of ongoing mining, milling and concentration activities at the Pyongsan uranium mine and Pyongsan uranium concentration plant. The DPRK remains the only country to continue to break the norm against nuclear testing. Its actions show blatant disregard for the will and resolutions of the Security Council and undermines the international norm against nuclear testing and the nuclear non-proliferation regime. Security Council resolution 2375, adopted in September, includes the strongest sanctions ever imposed on the DPRK. I reiterate my call on the DPRK leadership to comply with the relevant Security Council resolutions and allow space for the resumption of dialogue on denuclearization and sustainable peace on the Korean Peninsula.

While all concerned seek to avoid an accidental escalation leading to conflict, the risk is being multiplied by misplaced over-confidence, dangerous narratives and rhetoric, and the lack of communication channels. It is time to re-establish and strengthen communication channels, including inter-Korean and military to military channels. This is critical to lower the risk of miscalculation or misunderstanding and reduce tensions in the region. Any military action would have devastating and unpredictable consequences. The unity of the Security Council is an essential instrument to achieve the goal of denuclearization and creates the space for diplomatic initiatives aimed at achieving it in a peaceful manner. The Security Council’s call in resolution 2375 is united: “to further work to reduce tensions so as to advance the prospects for a comprehensive settlement” .... expressing “its desire for a peaceful and diplomatic solution to the situation” … and “welcoming efforts by Council members as well as other Member States to facilitate a peaceful and comprehensive solution through dialogue.” The Secretariat and I are your partner in this effort. My good offices remain always available. I believe the United Nations Secretariat
Visiting ex-White House chief strategist Steve Bannon lauded Prime Minister Abe Shinzo for his Trump-like effort to infuse Japan with a spirit of nationalism while unleashing a volley of scathing criticism against what he called the “mainstream media,” likening them to “running dogs” with a globalist agenda. Bannon, who was in Tokyo over the weekend to attend a gathering of conservatives, said Japan was on the right track under Abe, whom he called a “Trump before Trump.” “He talked about a nation’s pride, a nation’s destiny, a nation taking control of its future,” Bannon said when talking about Abe in his speech at the Japanese Conservative Political Action Conference 2017, co-hosted by the Japanese Conservative Union and the American Conservative Union. As such, Bannon, who is now head of the right-wing news website Breitbart News, credited Abe for trying to “re-institute the spirit of nationalism” and for not shying away from discussing “vital” issues including Japan’s “rearmament.” “Japan has every opportunity to seize its destiny, to re-establish its national identity (and) in true partnership with the United States, reverse what the elites have allowed to happen,” he said. He added it is not a “full-blown conclusion” yet that Japan has to keep languishing under the shadow of a rising China. Bannon’s attack on those who he referred to as “elites” and a “nullification project” that he claims is being led by the mainstream media, both overseas and in Japan, was another recurring theme in the blistering speech he delivered Sunday. “The mainstream media, liberal media, remember, they are the running dogs of the globalist. They are a propaganda machine,” Bannon said, quoting a source in Japan as telling him that the Japanese news coverage of U.S. politics makes it sound as if Trump will be impeached “tomorrow morning.” “The ‘hobbits,’ ‘deplorables,’ and the forgotten men and women that put him in office in November 2016 will never allow” him to be ousted, Bannon said, as core Trump supporters are often called by their political opponents. “They will only be there for him to make sure he wins a glorious re-election,” he said, eliciting a burst of applause. On trade, Bannon backed Trump’s controversial decision to pull out of the Trans-Pacific Partnership agreement, even though withdrawing from the multinational deal amounted to the U.S. essentially spoiling what would have been a perfect “China-containing project,” as freelance journalist Taro Kimura put it during his joint appearance with Bannon. In response, Bannon called the TPP an “ill-defined, generalized” agreement that the U.S. cannot get into anymore, and clarified Trump’s “America First” slogan as meaning an “America in partnership.” “If the Japanese intelligentsia is sitting around and waiting for us to re-hit the bid on TPP, it’s not going to happen.” Referring to joint military exercise between the U.S. Navy and the Self-Defense Forces, Bannon said “there is not a finer group of people” than the SDF. “If we come together as friends and partners, (sunlight) opens up ahead of us,” he said, referring to U.S. allies in Asia, including Japan, South Korea, India

12/16/17

The 2017 DPRK Humanitarian Needs and Priorities document calls for $114 million to meet urgent requirements. This is only 30 per cent funded. I ask all Member States, particularly those around this table, to carefully consider the humanitarian principles that underpin our work. The people of the DPRK need generosity and help. Not long from now, athletes will gather in Pyeongchang for the Winter Olympics. I express my sincerest hope that the DPRK will take part. As the General Assembly has recognized, these Games can foster an atmosphere of peace, development, tolerance and understanding on the Korean Peninsula and beyond. We need to spread and deepen that spirit of hope and possibility. Diplomatic engagement is the only pathway to sustainable peace and denuclearization. We must do everything we can to reach that objective – and avoid a level of danger that would be unpredictable in its trajectory and catastrophic in its consequences.” (U.N. Secretary-General Antonio Guterres, Remarks to the Security Council on Non-Proliferation/DPRK, December 15, 2017)
Sanctions aimed at punishing the North Korean regime are hampering the ability of aid groups to operate inside the country, triggering warnings that the international campaign is harming ordinary North Koreans. Difficulties in obtaining supplies, including medical equipment, and in transferring money to fund aid programs could have a direct impact on health and nutrition levels throughout North Korea, aid groups say. “We need to deal with the nuclear problem, but we need to properly ponder our means for achieving that goal,” Tomás Ojea Quintana, the U.N. special rapporteur on North Korean human rights, said in an interview in Tokyo. About 70 percent of the North Korean population is already categorized as “food insecure,” meaning constantly struggling against hunger, and growth stunting occurs in 1 in 4 children. The sanctions could increase the levels of food insecurity and the incidence of acute malnutrition among children. “These are not just statistics. This is reality in the DPRK,” Quintana said, using the abbreviation for North Korea’s official name. “It’s my responsibility to remind the Security Council that they should develop a comprehensive assessment of the possible impact of their sanctions,” he said. “What is the concrete impact on humanitarian agencies working inside North Korea?”

The U.N. World Food Program, UNICEF, the World Health Organization and the U.N. Development Program all have operations in North Korea. A small number of humanitarian agencies based in the United States and elsewhere provide food, medicines and agricultural assistance from bases outside the country. But the waves of multilateral and direct U.S. sanctions that have been imposed on Kim Jong Un’s regime have now made operations so difficult that some agencies are pulling out. Save the Children has shut down its operations in Pyongyang, billing the move as a “temporary suspension.” “U.S. and international humanitarian NGOs working in North Korea are experiencing death by a thousand cuts,” said Keith Luse, executive director of the Washington-based National Committee on North Korea, which includes many humanitarian agencies among its members. “These sanctions were not intended for them, but they have ended up being victims of the international sanctions regime,” Luse said. At a U.N. Security Council meeting December 15, Secretary of State Rex Tillerson said that it was the responsibility of the North Korean regime to care for its own people. “The regime could feed and care for women, children and ordinary people of North Korea if it chose the welfare of its people over weapons development,” Tillerson said. “It can reverse course, give up its unlawful nuclear weapons program, and join the community of nations, or it can continue to condemn its people to poverty and isolation,” he said. The difficulties have mounted as the crackdown has broadened, from “smart sanctions” designed to cut off parts and funding for the nuclear weapons program to more general measures that are starting to look like a trade embargo. Sanctions imposed in September through the Security Council, at the United States’ instigation, banned North Korean exports of seafood, garments and coal, adding to previous prohibitions on commodities. Japan, which holds the rotating presidency of the Security Council, is urging other member states to cut off humanitarian aid to North Korea. The campaign is having a tangible impact. The British government announced that it would no longer send assistance to North Korea. “We will use whatever means we have to make clear our displeasure at the reckless provocations from Kim Jong Un,” Mark Field, the British minister of state for Asia, told Yonhap in Seoul last month. The South Korean government, which has vowed not to let political considerations affect humanitarian decisions, has not delivered on its September pledge to give $8 million to the World Food Program and UNICEF for children and pregnant women. Seoul was still “in consultation” with the two agencies, said Unification Ministry spokeswoman Choi Ji-seon. The relatively few aid agencies still working to help North Koreans face increasing bureaucratic challenges to operate in a country replete with difficulties. The sanctions were becoming a “serious concern” for U.N. agencies operating in North Korea and could “hamper assistance and relief activities,” Tapan Mishra, the U.N. resident coordinator in Pyongyang, wrote in letters to U.N. officials at the end of October. “Crucial relief items, including medical equipment and drugs, have been held up for months despite being equipped with the required paperwork affirming that they are not on the list of sanctions items,” he wrote in the letters, which were first reported by NK News, a specialist website. Items that had been blocked included anesthesia machines used for emergency operations and digital X-ray machines needed to diagnose tuberculosis. American aid agencies must get licenses from the Commerce or Treasury
When the North Korean leader Kim Jong-un celebrated the launch of a powerful new missile last month, he was surrounded by a group of top scientists and officials. State media did not identify them, but they have all been seen with Kim before. These men – known by nicknames such as the “nuclear duo” and the “missile quartet” – have built an intercontinental ballistic missile that appears capable of hitting any city in the United States, an extraordinary scientific achievement for the world’s most isolated country. At only 33, Kim has been ruthless about consolidating power, executing scores of senior officials, including his own uncle. “We have never heard of him killing scientists,” said Choi Hyun-kyoo, a senior researcher in South Korea who runs NK Tech, a database of North Korean scientific publications. “He is someone who understands that trial and error are part of doing science.” Analysts are still trying to explain how North Korea managed to overcome decades of international sanctions and make so much progress so quickly. But it is clear the nation has accumulated a significant scientific foundation despite its backward image. “They are already pretty sophisticated in metallurgy, mechanical engineering, and to some extent chemistry,” all areas tied to the nation’s civilian and military needs, said Joshua Pollack, a senior research associate at the Middlebury Institute of International Studies at Monterey, California.

North Korea has imported scientific papers and journals from Japan for decades. And when it sends students abroad, it orders them to copy scientific literature and bring it home, said Michael Madden, who runs the North Korea Leadership Watch website. The internet has also been a gold mine for the North. While the state blocks public access, it allows elite scientists to scour the web for open-source data under the watch of security agents. The North has also built digital libraries of approved material that are accessible across the country. North Korea funnels its top science students into military projects. Those selected for the nuclear and missile program are relocated from their hometowns and allowed to return for visits only with government minders, according to defectors and analysts. But they are also given better food rations — and access to weapons designs and components obtained by the nation’s spies and hackers, who have focused on the former Soviet republics. Scientists and engineers also enjoyed special privileges under Kim’s grandfather, Kim Il-sung, as he struggled to rebuild North Korea from the ruins of the Korean

departments to send goods needed for their work into North Korea and now are required to get special dispensation to airfreight time-sensitive equipment, such as medical supplies, because Air Koryo, North Korea’s national carrier, is under sanction. “It’s all very tricky and new for us,” said one American humanitarian worker, who spoke on the condition of anonymity because sensitive negotiations were ongoing. “It’s been weeks and months of back-and-forth and talking to lawyers. It’s very complex and challenging, but if we don’t do it, we can’t continue.” Chinese customs officials are also cracking down on shipments to North Korea — and to a surprising extent, given Beijing’s previous halfhearted implementation of international sanctions. They have become stricter about shipments, asking for detailed inventories, including lists of manufacturers’ names and materials used in every item. A container of wheelchairs sent by a South Korean aid agency was blocked by China, as were water purification tablets meant for flood victims, according to people with knowledge of the incidents. A Pyongyang-based humanitarian worker said there were also “self-imposed sanctions” by suppliers in China. “Chinese suppliers who had been sending us raw materials we need for our projects have just suddenly disappeared,” the worker said. “They’re not doing anything that’s banned by sanctions, but they seem to have decided that it’s not worth the exposure or the risk to their reputations.” Meanwhile, Chinese banks are refusing to handle any money related to North Korea, say humanitarian workers who are trying to wire money to Chinese suppliers of medical equipment for use inside North Korea — even when the supplier is Chinese-owned. While foreign journalists invited to North Korea see the impressive construction projects in the capital, life is very different in the rest of the country, regular visitors say. “It’s going to be the people who are the most vulnerable, the people outside Pyongyang, who will suffer,” said Kee Park, an American neurosurgeon who performs operations in North Korea. The sanctions on the fishing, garment and coal industries, coupled with South Korea’s decision to close a joint factory complex that employed more than 50,000 North Koreans, will deprive many people of their incomes in an economy that is increasingly market-based, Park said. “Sanctions are designed to hurt so that the government will change its policy,” he said. “But they’re hurting the wrong people.” (Anna Fifield, “Sanctions Hit Humanitarian Aid in N. Korea,” Washington Post, December 17, 2017, p. A-10)
President Donald Trump vowed to take “all necessary steps” to compel North Korea to denuclearize as he unveiled a new national security strategy on Monday at the White House. Trump said in an address that the campaign of maximum pressure on North Korea has resulted in the toughest-ever sanctions on the regime, but “there is much more work to do.” He continued, “America and its allies will take all necessary steps to achieve a denuclearization and ensure that this regime cannot threaten the world.” The situation, he said “will be taken care of,” adding that the United States has “no choice” in the matter. “A nation that is not prepared to win a war is a nation not capable of preventing a war,” said Trump, as he called for a modernization and massive buildup of the U.S. military. Trump said he carried the United States’ message to Saudi Arabia, Poland, the United Nations General Assembly in New York and South Korea, referring to it as “the seat of democracy on the Korean Peninsula,” as he recalled his trips to 13 countries over 11 months in office. The strategy unveiled by Trump focused on four pillars buttressing his “America first” vision, which included protecting U.S. citizens and the homeland, promoting prosperity, preserving peace through strength and advancing American influence in the world. A newly released National Security Strategy report described North Korea as a “ruthless dictatorship without regard for human dignity” that “starves its own people,” spending hundreds of millions of dollars on its nuclear, chemical and biological weapons. “We remain ready to respond with overwhelming force to North Korean aggression and will improve options to compel

12/18/17

War. He embraced those trained in Japan when Korea was a Japanese colony and later sent hundreds of students to the Soviet Union, East Germany and other socialist states. One of them was So Sang-guk, a nuclear scientist who emerged as a key figure in the nation’s nuclear program but seems to have retired. Since taking power, Kim Jong-un appears to have overseen a generational shift at the top of the weapons program, elevating a group of scientists and officials about whom little is known. He tends to assign officials to different projects, letting them compete for his attention and favor. But analysts have identified six figures who have repeatedly appeared alongside Kim at key moments — four tied to missile development and two associated with nuclear tests. Two members of the “missile quartet” are scientists, according to state media. 1 Jang Chang-ha is 53 and president of the Academy of National Defense Science, and 2 Jon Il-ho, 61, is commonly described as an “official in the field of scientific research.” Ri Pyong-chol appears to be the quartet’s highest-ranking member. A former air force commander, he serves as first deputy director of the ruling Workers’ Party’s munitions industry department. Kim Jong-sik, 49, first began appearing with Kim Jong-un in February 2016 and has an engineering background. His rise has coincided with an acceleration of test launches, but he and Mr. Ri did not attend last month’s launch. Ri Hong-sop, the director of North Korea’s Nuclear Weapons Institute, appears to be a leading figure in the nuclear program. He has been blacklisted by the United Nations since 2009. Hong Sung-mu, the other member of the “nuclear duo,” is a former chief engineer at the Yongbyon nuclear complex, the birthplace of the North’s nuclear weapons program. North Korea has also recruited scientists from the former Soviet Union, offering salaries as high as $10,000 per month, according to Lee Yun-keol, a defector who runs the North Korea Strategic Information Service Center in Seoul and has studied the history of the North’s nuclear program. In 1992, a plane carrying 64 rocket scientists from Moscow was stopped before departing for North Korea. It is not clear how many, if any, former Soviet scientists made it to North Korea in the decades since. Theodore A. Postol, a professor emeritus of science, technology and international security at the Massachusetts Institute of Technology, said the North has “this fantastic record for flying rockets the first time and having them succeed.” “We think it’s because they had rocket motors and designs that were basically Russian designs, and they had the expertise of Russian engineers who knew how to solve the problems,” he said. Little is left to chance in propaganda related to the weapons program. Even the smallest of details can be laden with significance. “By launching rockets and treating scientists like stars, Kim Jong-un gives his people a sense of progress,” Mr. Lee said. “It’s not just a military project but also a political stratagem.” Missile experts were shown sharing cigarettes with Mr. Kim after last month’s missile launch — an almost unimaginable privilege in a nation where he is portrayed as a godlike figure. After successful tests, Kim is sometimes even shown embracing his scientists, some of whom can be seen weeping.

denuclearization of the peninsula,” the 55-page document stated. H. R. McMaster, the White House national security adviser, previously raised the possibility of “a preventive war” against North Korea, and in an interview with MSNBC in August said that Trump was “not going to tolerate” Pyongyang being able to threaten the United States. The report, however, took a more restrained tone in that it did not make mention of a preventive war, or a pre-emptive strike, against the North, nor directly refer to “military options.” “The longer we ignore threats from countries determined to proliferate and develop weapons of mass destruction, the worse such threats become, and the fewer defensive options we have,” it continued. A 2002 NSS report by the George W. Bush administration emphasized that the United States maintains an “option of pre-emptive actions to counter a sufficient threat to our national security,” though it was more focused on a war against terrorists than North Korea. (Sarah Kim, “Trump’s Security Policy Pledges a No-Nukes North,” JoongAng Ilbo, December 20, 2017)

NSS: “[T]he dictators of the Democratic People’s Republic of Korea and the Islamic Republic of Iran are determined to destabilize regions, threaten Americans and our allies, and brutalize their own people. Access to technology empowers and emboldens otherwise weak states. North Korea—a country that starves its own people—has spent hundreds of millions of dollars on nuclear, chemical, and biological weapons that could threaten our homeland. …North Korea seeks the capability to kill millions of Americans with nuclear weapons. …As missiles grow in numbers, types, and effectiveness, to include those with greater ranges, they are the most likely means for states like North Korea to use a nuclear weapon against the United States. North Korea is also pursuing chemical and biological weapons which could also be delivered by missile. …The United States is deploying a layered missile defense system focused on North Korea and Iran to defend our homeland against missile attacks. This system will include the ability to defeat missile threats prior to launch. Enhanced missile defense is not intended to undermine strategic stability or disrupt longstanding strategic relationships with Russia or China. …North Korea is ruled as a ruthless dictatorship without regard for human dignity. For more than 25 years, it has pursued nuclear weapons and ballistic missiles in defiance of every commitment it has made. Today, these missiles and weapons threaten the United States and our allies. The longer we ignore threats from countries determined to proliferate and develop weapons of mass destruction, the worse such threats become, and the fewer defensive options we have. …In Northeast Asia, the North Korean regime is rapidly accelerating its cyber, nuclear, and ballistic missile programs. North Korea’s pursuit of these weapons poses a global threat that requires a global response. Continued provocations by North Korea will prompt neighboring countries and the United States to further strengthen security bonds and take additional measures to protect themselves. And a nuclear-armed North Korea could lead to the proliferation of the world’s most destructive weapons across the Indo-Pacific region and beyond. U.S. allies are critical to responding to mutual threats, such as North Korea, and preserving our mutual interests in the Indo-Pacific region. Our alliance and friendship with South Korea, forged by the trials of history, is stronger than ever. We welcome and support the strong leadership role of our critical ally, Japan. …We will maintain a forward military presence capable of deterring and, if necessary, defeating any adversary. We will strengthen our long-standing military relationships and encourage the development of a strong defense network with our allies and partners. For example, we will cooperate on missile defense with Japan and South Korea to move toward an area defense capability. We remain ready to respond with overwhelming force to North Korean aggression and will improve options to compel denuclearization of the peninsula.” (White House, *The National Security Strategy of the United States*, December 18, 2017)

McMaster: “NORAH O’DONNELL: Lieutenant General H.R. McMaster is the President’s National Security Advisor, he helped in crafting this document, he joins us now from the White House. …NORAH: Thank you. Let me just ask you about a bit of news this morning. North Korea has rejected Secretary of State Rex Tillerson’s proposal for talks without preconditions. Does that mean the military option is the only one left? MCMASTER: No, what we're doing is really applying maximum pressure to North Korea to convince Kim Jong Un that this is a dead end, this pursuit of nuclear weapons and an intercontinental ballistic missile — long range ballistic missile
which of course poses a grave danger to the whole world. So what you've seen is an effort led by
the President worldwide really though to isolate that regime, to cut off not just what is restricted
by the current national — the current UN Security Council resolutions but to do more. The
President has asked all nations to cut off all trade with this rogue regime which you see has never
met a weapon it didn't use or proliferate or sell to somebody else. You saw that with the
cyberattacks you just discussed and you saw it with the murder of Kim Jong Un's brother in a
public airport with a banned nerve agent. So this is a regime that can't get this — this destructive
capability. NORAH: One of the things that I've noticed is the President spoke with Russian
President Putin several times in the last couple of weeks and yet Russia has increased its trade and
its oil exports to North Korea. Did the President specifically ask Putin to stop that? MCMASTER:
Yes, the President did ask President Putin to do more. He wants all nations to do more and it just
doesn't make sense that Russia would increase trade and alleviate any pressure on the North
Korean regime. Of course, North Korea poses a grave direct threat to all nations including China
and Russia, but what happens when North Korea gets this capability? What if other nations in the
region arm in this way and that's going to be even more destabilizing and of course, as I
mentioned, North Korea has never met a weapon it didn't try to sell to somebody else. ANTHONY
MASON: So General, you're saying that there's — is there any way in which the US can coexist
with a nuclear North Korea? MCMASTER: Anthony, I don't think we can't tolerate that risk.

The world can't tolerate that risk. I mean, if North Korea has a nuclear weapon, I mean, who are
you going to try to prevent getting one? Look at the behavior of this regime, the hostility of this
regime to the whole world. GAYLE KING: You know, President Trump and Secretary Rex
Tillerson have had some high profile disagreements. Does that undermine Rex Tillerson's
capability while he's traveling overseas? MCMASTER: No, the President has made very clear
that on North Korea for example, now is not the time to talk. And what he means is, there
can't be negotiations under these current conditions. The north has to show initial steps
toward denuclearization and the reason for this is previous approaches to negotiating with
North Korea have failed miserably. What the regime does is they enter into negotiations, all the
while they continue these very destructive programs, these talks often times end in a — in a weak
agreement and then North Korea immediately violates that agreement. The problem is now that
their programs have advanced so far we don't have time to do that again and so we can't repeat the
failed pattern of the past.” (Rebecca Shabad, “H.R. McMaster Says Trump Administration Will

The Trump administration formally accused North Korea of creating the WannaCry cyberattack
that briefly paralyzed the British health system and placed ransomware on computers in dozens of
countries around the world. President Trump’s homeland security adviser, Thomas P. Bossert,
write in an op-ed published in The Wall Street Journal that the conclusion was “based on
evidence” that he did not disclose. He suggested that the United States would act against North
Korea — beyond the sanctions now being imposed for its rapid expansion of its nuclear weapons
program, writing, “When we must, the U.S. will act alone to impose costs and consequences for
cybermalmfeasance.” The New York Times reported in May that North Korea was the leading
suspect in the attack, which encrypted hard drives on hundreds of thousands of computers and
demanded the payment of ransom to unlock the data. Later, British officials reported that their
forensic evidence and intelligence pointed to Pyongyang, and Bossert wrote that in recent days,
Microsoft and other companies that track major threats have closed pathways that the North’s
army of hackers could use for similar breaches. Still, the assertion by the administration, which
officials said would be supported at a White House news conference tomorrow, was notable for
deep reasons. It came almost three years to the week since President Barack Obama, appearing in
the White House press room, accused North Korea’s leadership of mounting a similarly
sophisticated cyberattack on Sony Pictures Entertainment. The North was enraged that Sony was
releasing a comedy, “The Interview,” envisioning a C.I.A.-ordered assassination of Kim Jong-un,
the country’s young leader. That was the first time the United States had accused another nation of
a direct, destructive online intrusion on an American target. But the decision to name the North
also stands in stark contrast to how Trump has dealt with evidence that Russian hackers, under
orders from President Vladimir V. Putin, organized the attack on the Democratic National
Committee and the information warfare campaign that was meant to influence the 2016 election.
Mr. Trump has often dismissed the intelligence finding that Russia was behind the hacking, declaring last month, “Putin said he did not do what they said he did.” It is the same intelligence agencies — and some of the government’s same experts — that built the case against North Korea, according to members of the intelligence community who spoke on the condition of anonymity to discuss the investigation. But the third, and perhaps most delicate, element of the WannaCry attack revolves around a fact that Bossert did not address in his op-ed: The North exploited vulnerabilities in software developed by the division of the National Security Agency that builds the United States’ cyberweapons. The code pulled off networks and computers compromised by WannaCry appears to have its roots in what the agency formerly called the Tailored Access Operations division, which devised online breaches. Once it was clear the code had been stolen, the National Security Agency rushed to contain the damage, asking Microsoft to build a “patch” in its operating systems to prevent the attacks. But the agency has never talked about the group that stole the computer code, called the Shadow Brokers, which many officials believe is operating on behalf of the Russian government. But Bossert and his deputy, Rob Joyce, who formerly ran the Tailored Access Operations, have argued that it is the perpetrator of the attacks, not the United States government, that must take all of the responsibility for the damage it has wreaked. “The consequences and repercussions of WannaCry were beyond economic,” Bossert wrote. “The malicious software hit computers in the U.K.’s health care sector particularly hard, compromising systems that perform critical work. These disruptions put lives at risk.” The assertion by the White House came only hours after Trump published his new national security strategy, which calls for pushing back on states that sponsor cyberactivity. And even some alumni of the Obama administration now agree that they often underreacted to a range of digital threats, including Iran’s 2012 attacks on American banks, the hacking at Sony and the effort by Russia to intervene in the election. Until now, North Korea’s cyberstrikes have prompted almost no punishment. Bossert seems determined to change that, and he wrote about elements of a new digital strategy that suggests that the Trump administration will be more aggressive in alerting manufacturers to flaws found in their software. But he has been vague about what kind of actions might be taken against those who initiate cyberattacks. Robert Hannigan, the former director of Britain’s Government Communications Headquarters, said last month that in the realm of digital breaches, North Korea had benefited from being underestimated. “Because they are such a mix of the weird and absurd and medieval and highly sophisticated, people didn’t take it seriously,” he said. “How can such an isolated, backward country have this capability? Well, how can such an isolated backward country have this nuclear ability?” (David E. Sanger, “U.S. Accuses North Korea of Cyberattack on British Health System,” New York Times, December 19, 2017, p. A-18) Facebook and Microsoft acted last week to disable a number of potential North Korean cyber threats, a senior White House official said, as the United States publicly blamed Pyongyang for a May cyber attack that crippled hospitals, banks and other companies. "Facebook took down accounts and stopped the operational execution of ongoing cyber attacks and Microsoft acted to patch existing attacks, not just the WannaCry attack initially," White House homeland security adviser Tom Bossert said. Bossert said at a White House news conference that Pyongyang was responsible for the WannaCry cyber weapon launched in May. The attack was "meant to cause havoc and destruction," Bossert said, while conceding there was little the United States could do to exert further pressure on Pyongyang. "We don't have a lot of room left here to apply pressure to change their behavior," Bossert said. "It's nevertheless important to call them out, to let them know that it's them and we know it's them." (Reuters, “Facebook and Microsoft Independently Stopped North Korean Cyberattacks Last Week, a U.S. Official Says,” December 19, 2017)

The Japanese Cabinet approved the installation of two land-based Aegis Ashore missile defense systems to defend against North Korea’s growing nuclear and missile threats, highlighted by a test of what appeared to be an intercontinental ballistic missile last month. The approval will allow the Defense Ministry to buy two Aegis Ashore systems to add to Japan’s current two-step missile defense system consisting of Patriot batteries and Aegis-equipped destroyers. Defense Ministry officials said the government plans to deploy the systems in two places, by 2023 at the earliest, but that the locations are yet to be decided. The cost of each system could be more than ¥100 billion, they said. Noting that North Korea’s nuclear and missile development poses a “new level of threat” to Japan’s security, the government said in a document endorsed by the Cabinet that Japan
The U.S. is reportedly weighing South Korean President Moon Jae-in’s proposal on December 19 to postpone joint military exercises until after the Pyeongchang Winter Olympics. In an interview with NBC that day, Moon said he was considering bold measures such as downscaling of joint South Korea-US military exercises to reduce tensions on the peninsula during the Olympics. The interview took place on board “Train 1,” an exclusive presidential KTX train service line between Seoul and Gangneung that is set to open on December 22 ahead of the Games. “It is possible that South Korea and the US will examine whether their joint military exercises can be postponed,” Moon said. “I made the proposal to the US, and the US is currently examining it,” he added. At the same time, Moon said that “everything hinges on what North Korea does.” While Moon was commenting on the possibility of North Korea taking part in the Pyeongchang Olympics, Gangwon Gov. Choi Moon-soon reportedly met with Ryomyong football team director Mun Ung on both December 18 and 19 in Kunming, China, where the 3rd Ari Sports Cup international youth football championship is being held. Choi’s meetings with Mun, a vice minister-level figure in the North Korean athletic community, is being seen as significant progress with other inter-Korean dialogue channels in the sports world all but silenced in the wake of the North’s nuclear tests. “I hope this football tournament will help lead to North Korea’s athletes, supporters, and members of its culture and arts community taking part in the Pyeongchang Winter Olympics,” Choi said after a Dec. 18 dinner with the North Korea team. An agreement was also reached to hold two exchange matches next year, one in Pyongyang during the first half of the year and another in South Korea during the second half. (Jung E-gil and Kim Dong-hoon, “President Moon Hints at Possibility of Postponing Joint Military Exercises,” Hankyore, December 20, 2017)

Any North Korean nuclear or missile provocation before the PyeongChang Winter Olympics next February will influence Seoul and Washington to withdraw their consideration of delaying their joint military drills during the Olympic period, a Cheong Wa Dae official said. The remark comes a day after President Moon Jae-in said in an interview with U.S. broadcaster NBC that South Korea proposed postponing the annual military exercises until after the Olympics to reduce tension on the Korean Peninsula if North Korea does not make any provocations. When asked whether Seoul will scrap the exercise postponement idea if Pyongyang makes a provocation before the Olympics, a senior Cheong Wa Dae official said, “Of course the two [delay and provocation] are linked. If the North makes a provocation, we will have to make a decision at that time, but I'm sure the provocation will affect the decision.” He added a provocation by the North would cause negative sentiment toward Pyongyang from international society and possibly bring more sanctions from the United Nations Security Council. "So the consideration of delaying military drills is a sign toward the North [not to make a provocation]," the official said. He said Seoul proposed the delay idea to Washington and is waiting for the latter's answer. "We believe the U.S. will make a decision after taking various international situations into consideration." When asked about the possibility of Seoul and Washington deferring more exercises in the future if the North does not make any provocations until the Olympics are over, the official said that was unknown for the moment. "For now, the suspension proposal is limited to this Olympic period," he said. The official added Seoul and Washington are considering "delaying" the drills, not "curtailing" them. In the NBC interview, the interviewer said Moon was considering even curtailing frequent military exercises with the U.S., but Cheong Wa Dae said Moon did not say this, disclosing his Korean-version remarks. (Kim Rahn, “Delay of Drills Depends on North Korea,” Korea Times, December 20, 2017) Secretary of State Rex Tillerson said he is not aware of any plans to postpone joint military exercises ahead of the 2018 Winter Olympics. “I’m not aware of any plans to halt our long-standing and scheduled and regular military exercises with our
partners in South Korea — the Republic of Korea — or our partners in Japan," he said, speaking at a joint news conference with Canadian Foreign Affairs Minister Chrystia Freeland. "These exercises have been ongoing for many years," Tillerson said. "They’re carried out on a scheduled basis. We announce them in advance. There’s nothing surprising about them, and I’m not aware of any plans to change what is scheduled." (Max Greenwood, “Tillerson: Not Aware of Plans to Curb Joint Military Drills with South Korea,” The Hill, December 19, 2017) “We want the Pyeongchang Olympics to be successful and have committed to our ally that we will aid their success,” the ROK-US Combined Forces Command (CFC) said on December 20 regarding the exercises’ postponement. “We, as allies, are committed to an alliance decision on the exercises and will announce the decision when appropriate,” it continued. The CFC statement made no direct reference to whether the exercises would be postponed. (Park Byong-su and Seong Yeon-cheol, “’Decision Expected Soon on Postponing Joint Military Exercises,’ Hankyore, December 21, 2017)

McEachern: “North Korea’s nuclear and ballistic missile testing has accelerated to an unprecedented pace since the death of Kim Jong Il in December 2011 and transfer of power to his son, Kim Jong Un. How should we understand Kim Jong Un’s explicitly-stated and observable effort to qualitatively and quantitatively “diversify” his country’s nuclear arsenal? Which North Korean statements are boiler-plate rhetoric and which reflect policy? This paper will address these questions and the continuities and differences between Kim Jong Il’s and Kim Jong Un’s efforts to develop a credible nuclear deterrent. ... Kim Jong Un did not have the same decision calculus as his father or grandfather to moderate his development of nuclear weapons. Kim Jong Un’s nuclear weapons capability was not an aspirational capability as it was under his father, rather it was a tested one. Kim Jong Un appeared uninterested in trading away his tested nuclear program at the price offered during the Six Party Talks when North Korea’s nuclear program had not yet demonstrated the same level of functionality. Without an active diplomatic process to freeze or reverse his nuclear program, Kim Jong Un moved forward with developing a more sophisticated nuclear deterrent. ... Kim Jong Un inherited a tested nuclear device. In theory, he could reverse, sustain, or advance the program. Reversing North Korea’s nuclear program in a “grand bargain” could generate substantial economic benefits and alternative security arrangements at the expense of a technical means to provide for the country’s security. Sustaining the program with a capped number of nuclear weapons might entice foreign partners to offer more modest security or economic rewards – or forego additional punishments – without completely abandoning a basic nuclear deterrent. Advancing the nuclear program would double down on the world’s most powerful weapons for regime security. Kim Jong Un to date has chosen the third option to advance his regime’s nuclear weapons capability. The advancement of North Korea’s nuclear weapons capability raises a number of questions. Why has the regime gone beyond a basic ability to impose unacceptable costs on its adversaries with a first generation nuclear device and singular means of delivery to provide a nuclear deterrent to pursuing thermonuclear devices and an array of missiles? Does the Kim Jong Un regime have additional goals in addition to existential deterrence, such as providing an insurance policy against retaliation for a more aggressive military approach to peninsular or regional objectives? What can we say about North Korea’s budding nuclear weapons doctrine? ... In the first four years of his reign, Kim Jong Un urged unity of thought on the regime’s approach to nuclear weapons. With a vague goal of advancing nuclear weapons development combined with the established technical means to do so, Kim Jong Un seemed not to entertain internal arguments voiced and adopted at times by his father to moderate the regime’s quest for nuclear weapons. Under his father’s leadership, one could see various views on approach articulated by different North Korean political institutions and media outlets. But this internal debate had vanished under Kim Jong Un as the new leader seemed to put together his own nuclear playbook. He did not allow distinct views to be expressed publicly nor would he oscillate between competing objectives around the North’s nuclear program. Although it would only become clear with the luxury of time to note a pattern, Kim Jong Un would come to articulate a more sophisticated nuclear doctrine based on diversifying in quantity and quality the regime’s nuclear forces and tangibly advance those stated goals. ... Major mouthpieces of the regime in the first year of the Kim Jong Un government neither articulated coherent policy platforms nor seemed fully informed on the pending decisions from the top. In mid-July 2012, Rodong Shinmun
published that South Korea was “boisterously circulating… absurd claims” about a pending North Korean nuclear test. Four days later, the Foreign Ministry announced the DPRK would “totally reexamine the nuclear issue” given increased concerns about the U.S. “hostile policy” in the wake of an alleged infiltrator demolishing statues in the country and harming the leader’s dignity. Three days later the Party daily caught up, referring to foreign allegations of a possible nuclear test and noting the U.S. hostile policy would prompt the regime to “strengthen our self-defensive nuclear deterrent.” North Korea’s major mouthpieces returned to safe ground for the next six months. The Foreign Ministry and the Cabinet’s daily, Minju Joson, criticized diplomatic remarks in Seoul by the U.S. Special Representative for North Korea policy, who reiterated standard U.S. positions that the DPRK should implement its obligations under the September 19 joint statement. The Party daily stayed quiet on the nuclear issue as it shifted to welcoming inter-Korean cooperation ahead of the South Korean presidential election. … On December 12, 2012, the DPRK launched another rocket with the Party, Cabinet, and Foreign Ministry each separately claiming success. Foreign sources widely confirmed the DPRK’s claim that the satellite launch had successfully reached orbit, followed by another UN Security Council Resolution and new sanctions. The DPRK Foreign Ministry again took the lead condemning the UN denunciation and threatening “physical countermeasures at our discretion to expand and strengthen the self-defensive military power, including nuclear deterrent, both qualitatively and quantitatively.” The National Defense Commission and Party daily followed, reiterating the nuclear test threat more explicitly, and the Cabinet daily warned about the impact on the inter-Korean agenda. North Korea’s main institutions remained united. Politburo member Kim Ki Nam followed with a speech noting the Party’s importance to upholding the general principles of the DPRK under the leadership of the Kims, prioritization of defense, economic self-reliance, and scientific advancement “as a dignified nuclear state and a legitimate space power.” Consistent with the broad themes in the speech, Kim Ki Nam cited Kim Jong Un as saying, “Only when the party cells, which are the basic organization of the party, are reinforced and their role is enhanced is it possible to unite extensive circles of the masses around the party, reinforce the party’s militant might in every way, and thus turn our country into a politically and ideologically powerful state, a militarily powerful state, and an economically powerful state.” The Party’s role in DPRK politics, Kim Jong Un instructed, is the traditional role of providing strategic instruction in all fields, including the economy, under the leader’s guidance to achieve the general, ideologically-defined goals of the regime. The Korean Worker’s Party under Kim Jong Un would start to look and act more like the Party under Kim Il Sung. … Kim Jong Un also reduced the role of North Korea’s military in national politics. His speech in August 2013 laid out a new interpretation of “military first politics” that did not include the military’s enhanced political roles that it enjoyed under his father. Kim Jong Un referred to the military first ideology as originating with Kim Il Sung, emphasizing a narrower interpretation of the idea as prioritizing resources for the military. But “the army of the leader [must be] boundlessly faithful to the cause of the WPK (Workers’ Party of Korea).” Kim acknowledged that his father modified this conception of military-first by establishing the NDC as a “new state administrative structure,” but Kim did not indicate he would rule primarily through this institution or afford the military the type of political role it enjoyed under his father. The KPA, Kim Jong Un continued, “with importance being attached to military affairs and primary efforts directed to building up the army” should focus its energies on its particular sphere rather than have a hand in all national decisions and their implementation. The 1990s was a particular time of crisis for North Korea, Kim Jong Un explained, and his father would adapt the ruling ideology to focus more on the military as an institution to get through that particularly difficult time. But the foundation of the regime had been restored, suggesting these special measures would no longer be necessary: “The officers and men of the KPA should burn their hearts with a single idea, a single determination, to support only the Party and the leader.” The speech marked a subtle but steady effort to reduce the military’s roles in national policy that would culminate three years later in the abolition of the National Defense Commission. Kim Jong Un’s speech did not come out of the blue. Senior military leaders had already been refocusing more exclusively on military affairs in public comments. For example, a month before Kim’s speech, Korean People’s Army General Political Department Director Choe Ryong Hae delivered a speech focused exclusively on military affairs, providing additional data points suggesting that the prior Cabinet and military roles in high-level political
affairs had been receding. However, exceptions remained that showed the military taking on new roles on particular policy issues, most notably the NDC’s newfound role dealing with South Korea on inter-Korean affairs and even making new diplomatic offers to the United States. As inter-Korean conflict over the Kaesong Industrial Complex (KIC) came to a head, the NDC was the institution that issued a statement threatening to close the complex. The Cabinet Premier toured coal, iron, and energy facilities as its mouthpiece reiterated finger pointing at the ROK for any closure of the KIC. The Party daily entered the fray only to reiterate what the NDC had already articulated. Despite Kim Jong Un’s emphasis on unity and pursuing nuclear weapons, his regime has offered to engage in talks with the United States. This cannot be sourced to a particular institution within the DPRK as the regime retained its outward unity. However, these offers do undermine any thesis that Kim Jong Un is unswervingly loyal to nuclear advances without consideration of competing objectives. Empirical reality is more complex than neat theories allow, and Kim’s words and deeds provided mixed messages. In a March 31, 2013 speech before the Party’s Central Committee Plenum, Kim Jong Un re-introduced the concept of byungjin, defining it as “a new strategic line on carrying out economic construction and building nuclear armed forces simultaneously... [expanding upon the] original [byungjin] line of simultaneously developing economy and national defense.” Kim noted byungjin is permanent and not intended as a political bargaining chip. The “nuclear shield” is for self-defense, and “the nuclear armed forces should be expanded and beefed up qualitatively and quantitatively until the denuclearization of the world is realized.” He instructed the KPA to integrate nuclear weapons into its “war strategy” and “combat posture.” Two days later, a spokesman for the DPRK’s General Department of Atomic Energy, citing Kim’s speech, announced that it would restart both the uranium enrichment and 5MW reactor at Yongbyon. The regime inscribed the guidance in the 2013 Nuclear Weapons State Law. Yet in June, the NDC urged “senior level talks” between the DPRK and the United States and noted, “The denuclearization of the Korean Peninsula was behests of President Kim Il Sung and leader Kim Jong Il and a policy task which the party, state, army and people of the DPRK have to carry out without fail.” The NDC repeated a similar diplomatic offer publicly to the United States in October 2013. The DPRK relaxed its super-inflated rhetoric on the United States, but unclassified satellite data showed in September that amid the offers to negotiate that the DPRK had restarted its 5MW reactor at Yongbyon, which had been disabled for six years. Ultimately, these offers did not materialize into sustained negotiations that could test Kim Jong Un’s seriousness about denuclearization. ... The U.S. Director of National Intelligence visited Pyongyang to secure the release of two American citizens in November 2014, and North Korean officials would later note their disappointment that this did not provide a diplomatic opening. There was no public DPRK debate on approaches to dealing with the Americans or the nuclear issue as they continued to develop their nuclear capability. In December 2014, U.S. authorities noted that the DPRK conducted a cyberattack on Sony Pictures. ...While the incident exemplified a worrying trend of new security challenges, it did not appear to be related directly to the long-standing issues in the U.S.-DPRK relationship. Indeed, in the same month that the United States imposed new sanctions on the DPRK for the Sony hack, the DPRK offered a moratorium on nuclear tests for a discontinuation of joint military exercises. The United States rejected the DPRK offer; the DPRK Foreign Ministry concluded, “The Obama Administration will have to disappear from the arena” before Pyongyang found an interlocutor in Washington it judged it could work with. Kim Jong Un injected new uncertainty on whether he was simply unwilling to negotiate on limiting his nuclear weapons program or the two sides simply had far different expectations about the nature of a possible deal. ... In mid-January 2016, the DPRK Foreign Ministry reiterated the country’s offer to suspend nuclear tests for a suspension of U.S.-ROK joint military exercises and noted its continued desire to negotiate a peace treaty with the United States ending the Korean War. It is unclear if the offer was an opening salvo, a tactical effort to water down UN Security Council sanctions under consideration, or both. The proposal did not gain traction, and the Foreign Ministry made no outward signs of pushing the agenda within the regime. ... The Korean Workers Party held its Seventh Congress in May 2016 – the first in 36 years. While the Sixth Congress in 1980 officially debuted Kim Jong Il as his father’s successor, the Seventh Congress would come after Kim Jong assumed his new roles. Nevertheless, it showed Kim Jong Un’s desire to resurrect party institutions that his grandfather used and his father sidelined. During and following the Congress, North Korea’s institutions publicly spoke with one voice. Kim Jong Un’s
opened the Congress noting the importance of “single-hearted unity of the Korean Workers Party, the army and the people around the leader,” blamed the “imperialists’” hostile policy and sanctions for economic woes, heralded the most recent nuclear test and rocket launches, and focused on increasing domestic production for economic growth. He closed the Congress with a more ideological speech, stressing the centrality of “establishing the monolithic leadership system of the party” under his guidance. Kim did not assign specific responsibility for issue sets to individual institutions, rather articulated the importance of the guiding role of the Korean Workers Party under his leadership – a goal this study shows he has attempted to resurrect since his assumption of power after his father’s death. Though not a centerpiece of wide-ranging Party Congress, Kim Jong Un’s comments provided the best single sketch available for the regime’s nuclear doctrine. North Korean leaders, including Kim, would continually reference his Party Congress speech following significant missile and nuclear tests in subsequent years as implementing actions for that vision. Summarizing the work of the Party Central Committee at the Congress, Kim Jong Un said, “As long as nuclear threats and the tyranny of imperialism continue, we will permanently adhere to the strategic line of simultaneously pushing forward economic construction and the building of nuclear armed forces. As long as the aggressive hostile forces do not infringe upon our sovereignty with nuclear [weapons], our Republic, as a responsible nuclear state, will not use a nuclear weapon first, as already elucidated; will faithfully carry out the obligation, assumed before the international community, to prevent nuclear proliferation; and make effort to achieve the denuclearization of the world.” Kim Jong Un seemed to adopt a “no first use” doctrine of sorts, which would be later refined and clarified. He articulated a nuclear doctrine that included securing an existential nuclear deterrent and engaging in global nuclear arms control efforts as a nuclear weapons state. Results of the Party Congress provided additional detail on the goals and methods of North Korea’s nuclear pursuit. The Congress stressed the regime’s nuclear weapons were intended to safeguard the country’s sovereignty, independence from imperialism, and removal of foreign bases from other countries. Interestingly, the party decided not to specify “imperialist” threats to the DPRK alone or the removal of U.S. troops from South Korea, but couched its ambitions in much more grandiose and global terms. More specifically, the Party concluded, “Let us turn our country into a matchless nuclear power by bolstering up the Juche-based nuclear force in quality and quantity to mercilessly stamp out the enemies challenging us, whether they are in the sky or underground or on the sea.” In subsequent years, the DPRK would indeed pursue a variety of land- and sea-based missile programs simultaneously as well as advance efforts to develop higher yield nuclear weapons and consistently cite these actions as working towards the nuclear doctrine articulated at the Party Congress. At North Korea’s National Defense University a month after the Congress, Kim Jong Un provided on-the-spot guidance that reiterated his goals for North Korea’s nuclear program. He went beyond existential deterrence as the singular purpose of the North’s nuclear program, indicating the nuclear program was also tied to the regime’s power and prestige as a regional power. “The respected and beloved Comrade Kim Jong Un said that the basic duty of the National Defense University is to more excellently train greater numbers of future leaders who further consolidate and glorify the status of military-first [North] Korea as a great nuclear power and the most powerful military state of the East.” The call to create the most powerful military in the region could be dismissed if a single data point, but Kim Jong Un made it a theme. Celebrating the launch of a ballistic missile and giving binding on-the-spot guidance to the regime’s rocket scientists, Kim urged continued diversification in the regime’s nuclear and missile forces without a clear end in sight. “Kim Jong Un said that the preemptive nuclear strike capabilities should be constantly expanded and augmented, and a variety of strategic attack weapons should be continuously researched and developed [to create] a militarily powerful country that is equipped with the most powerful nuclear deterrent and is the most invincible under heaven.” North Korea’s Foreign Ministry spokesman likewise responded to UN criticism of the North Korean missile launch by noting the pursuit of diversified missile capabilities. “As long as the U.S. persists in its hostile policy toward the DPRK, the latter will further bolster its nuclear deterrence for self-defense in quality and quantity and will continue to exercise its legitimate right to develop space for peaceful purposes no matter what others may say.” The DPRK noting nuclear “preemption” as part of its doctrine appeared to contradict Kim Jong Un’s promise not to use nuclear weapons first. Kim Jong Un had previously stated this no first use pledge would apply // the United States
did not infringe on North Korea’s sovereignty with nuclear weapons. Kim could broadly interpret (or ignore) the required condition of a violation of its sovereignty for the no-first-use pledge, limiting the meaning of the statement. Indeed, Kim noted that he ordered a ballistic missile drill to practice preemptive attacks: “The drill was conducted by limiting the firing range under the simulated conditions of making preemptive strikes at ports and airfields in the operational theater in South Korea where the U.S. imperialists nuclear war hardware is to be hurled” and praised “developing diverse type ballistic rockets.” Kim Jong Un also lauded the importance of nuclear technology to the DPRK’s position on the global stage. Following the test launch of a Submarine Launched Ballistic Missile, he noted operational specifics and wider implications: “we have joined in a dignified manner the ranks of the military powers that perfectly possess nuclear attack capabilities… no matter how hard the United States may deny it, the US mainland and the Pacific operational theater are now definitely in our hands…. [which will] uphold in practice our party’s plan for the construction of a powerful country of rockets.” Kim Jong Un expressed a sense that joining the ranks of the nuclear weapons states would establish his country as a global power better able to influence a range of security matters. The DPRK conducted its fifth nuclear test days later. ... Kim personally ordered and observed the test launch of a surface-to-surface ballistic missile in February 2017, claiming the North’s “nuclear attack means” now extended “to most accurately and most rapidly perform its strategic mission at any place — underwater or on the land.” He couched the technical development in terms of nationalism, highlighting the indigenous nature of the developments, and its role in preserving the DPRK’s freedom of movement in foreign affairs: “[This] proves that nothing can frustrate the unswerving faith and revolutionary will of our army and people who accomplish what they decide to do to the end.” Given North Korea’s revolutionary ambitions and demonstrated willingness to use force especially against South Korea, a self-perception of greater freedom of action in conventional military affairs afforded by its nuclear program is concerning. Kim Jong Un observed military drills to utilize nuclear weapons against U.S. bases in Japan while repeatedly referring to the DPRK’s “retaliatory strike” capability, again suggesting a second-strike warfighting role for North Korea’s nuclear arsenal. He provided on-the-spot guidance to “Hwasong artillery units of the KPA Strategic Force tasked to strike the bases of the U.S. imperialist aggressor forces in Japan in a contingency.” He later celebrated the regime’s “nuclear deterrence” to counter American nuclear blackmail and military intimidation efforts. “The most perfect weapon systems in the world will never become the eternal exclusive property of the U.S.,” he said, expressing the belief that “the day when the DPRK uses the similar retaliatory means will come.” The party daily the following day further noted that the North would rely on its nuclear arsenal to end confrontation with the United States but not start it. Diversifying North Korean missile capabilities would be useful in combat and enhance deterrence, Kim argued. Claiming to put U.S. military assets in Alaska and Hawaii in range and aim for deployable nuclear weapons, the party daily described the latest ballistic missile test as “carried out with the objectives to make a final validation of the technical indexes of the overall weapon system of the ‘Pukku’kso’ng-2’ model surface-to-surface medium long-range strategic ballistic missile, sufficiently examine the adaptability in different combat environments, and deploy the missiles to military units for actual warfare… The supreme leader reemphasized that we have to more expeditiously make our nuclear armed forces diverse… to strongly consolidate the country’s self-defensive national defense capabilities and nuclear deterrent.” Kim Jong Un would similarly instruct the development of precision ballistic missiles with quick launch for use in warfare and development of forces for use in a contingency, not a first strike. The binding nature of this guidance provided directly to missile and security practitioners suggests it reflects the regime’s nuclear doctrine. Contrary to early test flights developing a capability to range U.S. forces in the region, Kim said the Intercontinental Ballistic Missile launch on July 4, 2017 targeted the U.S. mainland with nuclear-tipped missiles. He claimed his country had achieved a nuclear deterrent, would not negotiate it away, and would further bolster its nuclear force unless the U.S. changed its “hostile policy.” The DPRK would “neither put its nukes and ballistic rockets on the table of negotiations in any case nor flinch even an inch from the road of bolstering the nuclear force chosen by itself unless the U.S. hostile policy and nuclear threat to the DPRK are definitely terminated. The ICBM launch had “fundamentally changed the strategic position of our Republic and the structure of global politics” and advanced the guiding nuclear goals set forth at the Seventh Party Congress. In a congratulatory banquet for the North’s rocket
scientists, Kim again ordered the continued qualitative and quantitative “bolstering” of its strategic
weapon systems. ... For decades, the DPRK has called for an end to what it terms Washington’s
“hostile policy.” It has usually remained vague and articulated as part of the regime’s blaming the
United States for its economic woes or need to mobilize North Korea society for defense.
Countering the U.S. “hostile policy” is part of the DPRK’s raison d’être. The DPRK is standing
up to the imperialists and protecting the Korean nation and its independence, they claim. Yet the
DPRK has defined in specific terms what it means by the “U.S. hostile policy” during the Kim
Jong Un reign, and reviewing even this static description of an evolving concept can help us
understand North Korea’s comprehensive goals vis-à-vis the United States as they articulate them.
In a lengthy Foreign Ministry memorandum in 2012, the DPRK describe the U.S. “hostile policy”
as the “root cause” of tensions on the Korean Peninsula that stimulated North Korea to pursue
nuclear weapons “and therefore, only when the U.S. abandons its hostile policy, will it be possible
to resolve the issue.” The DPRK Foreign Ministry documented examples from the last two
decades of U.S.-DPRK interactions to specify its meaning. The U.S. taking issue with North
Korea’s satellite launches given dual-use missile concerns while ignoring other countries’ space
exploration efforts, breakdown of the 1994 Agreed Framework and inclusion of the DPRK in the
“Axis of Evil” speech, failure to deliver on the Six Party Talks and provide North Korea a Light
Water Reactor (LWR), and sanctions on a uranium enrichment program needed to fuel a LWR all
show a hostile American approach to North Korea, it claimed. The Foreign Ministry continued
that the last twenty years represented only the tip of the iceberg. U.S. hostility towards North
Korea extends much further into the past before the nuclear issue came to the fore. The United
States has refused to recognize the DPRK even as it recognized other socialist bloc states during
the Cold War and the UN admitted North Korea as a member state in 1991. The U.S. denied a
unified Korean nation by hastily drawing the 38th parallel in service of its Cold War objectives
over the interests of the Korean people and threatened nuclear attack on the DPRK almost since its
inception. Later that month, speaking at the UN General Assembly and referencing the Seventh
Party Congress, North Korean Foreign Minister Ri Yong Ho urged an end to the U.S. “hostile
policy.” He called for an end to U.S.-ROK military exercises, conclusion of a peace agreement,
and withdrawal of U.S. forces from Korea that would allow the two Koreas to find a mutual
solution to outstanding differences and pursue unification. Absent this, North Korea needed “to
take measures to strengthen its national nuclear armed forces in both quantity and quality” to deal
with U.S. nuclear threats. By the end of 2016, Kim Jong Un still hit the same theme, telling a
conference of party committee chairs that the regime’s nuclear and missile efforts were
“remarkably increasing the strategic position of the DPRK... the DPRK bolstered up its nuclear
force both in quality and quantity by succeeding in developing Korean-style latest strategic
weapons.” ... For the DPRK, removing the U.S. “hostile policy” is a far-reaching objective and
their only articulated quid-pro-quo to the complete resolution of the nuclear issue. In maximalist
form, the DPRK Foreign Ministry suggests that ending the U.S. hostile policy would include
comprehensive sanctions relief, a legally binding peace treaty, an end to U.S.-ROK military
exercises and U.S. Forces Korea, diplomatic recognition, acceptance of North Korean space
activities, and provision of nuclear energy assistance. However, the DPRK Foreign Ministry noted
that it did not expect Washington to heed its demand: “The U.S. hostile policy pursued by the
U.S. [sic] makes the prospect of denuclearizing the Korean peninsula all the more gloomy. At
present stage, there is no possibility of the U.S. giving up its hostile policy towards the DPRK.”
It concludes that the DPRK did not develop nuclear weapons to trade them away and these weapons
remain fundamental to the country’s security as long as the perceived American threat remains. In
short, ending the “U.S. hostile policy” is realizing the full corpus of North Korea’s strategic goals
vis-à-vis the United States. It is a high bar, and the same fundamental demands have transgressed
administrations in the DPRK. It is North Korea’s version of comprehensive foreign demands of
North Korea to denuclearize, ends its ballistic missile programs, reduce tensions with South
Korea, and radically improve its human rights and humanitarian situation, including the resolution
of the abduction issue. Ending the “U.S. hostile policy” is the ultimate North Korean maximalist
demand, rooted in the regime’s founding ideology, and, by their own account, unlikely to be
achieved. The maximalist demands from both sides are useful starting points. Foreign analysts do
not need to speculate on what North Korea really wants, just as North Korean analysts should be
able to piece together the comprehensive demands of the United States and its allies and partners.
A North Korean soldier fled to South Korea through the Demilitarized Zone (DMZ), followed by gunfire from both sides, the South's military said. The "low-ranking" soldier appeared in front of a guard post on the mid-western front at around 8:04 a.m. amid thick fog, according to the Joint Chiefs of Staff (JCS). After the defection, the North's border guards approached the military demarcation line (MDL) apparently in search of the defector, a JCS official told reporters. In response, the South's troops sent a warning broadcast and fired some 20 warning shots from a K-3 machine gun at around 9:24 a.m. in accordance with related rules, he said. In less than an hour, there was the sound of several gunshots from the North, but no bullets were found to have crossed the border, he added. The North Korean soldier was identified as a 19-year-old man, and he was carrying an AK rifle, a defense source said, adding that the guard post was located in Yeoncheon, Gyeonggi Province. "We are coordinating with the Republic of Korea Joint Chiefs of Staff to determine the circumstances surrounding the defection," the United Nations Command (UNC) said in a statement. "Armistice Agreement rules are in effect throughout the Demilitarized Zone, including the area where the defection occurred." It pointed out that a UNC flag flies at the GP near where the defector was first encountered, like all other GPs in the DMZ. The command, a legacy of the 1950-53 Korean War, oversees the armistice on the peninsula. Meanwhile, the Unification Ministry said two North Korean people aboard a small wooden boat defected to the South yesterday. "The Navy found it in waters about 100 kilometers north of Dokdo during a patrol mission," a ministry official said at a press briefing. "A joint probe into the details of their identities is under way." The North Korean men expressed their intent to defect and agreed to abandon the aged and apparently damaged ship, added the official. An official tally of the JCS shows that 15 North Korean people, including four soldiers, have fled directly to the South this year, versus one soldier and four civilians in 2016. (Lee Chi-dong and Kim Soo-yeon, “S. Korea Fires Warning Shots at N. Korea after Defection,” Yonhap, December 21, 2017)

The United Nations Security Council placed new sanctions on North Korea that significantly choke off fuel supplies and order North Koreans working overseas to return home, in what may prove the last test of whether any amount of economic pressure can force the isolated country to reverse course on its nuclear weapons program. The sanctions, proposed by the United States and adopted by a vote of 15 to 0, were the third imposed this year, in an escalating effort to force the North into negotiations. China and Russia joined in the vote, in a striking display of unity, but only after the Trump administration agreed to soften a couple of the provisions. Under the new sanctions, the amount of refined petroleum North Korea can import each year will be cut by 89 percent, exacerbating fuel shortages. Roughly 100,000 North Korean laborers who work in other countries, a critical source of hard currency, will be expelled within two years. Nations will be urged to inspect all North Korean shipping and halt ship-to-ship transfers of fuel, which the North has used to evade sanctions. **But the resolution does not permit countries to hail or board North Korean ships in international waters,** which the Trump administration proposed in September. That would be the most draconian measure, because it would enable the United States Navy and its Pacific allies to create a cordon around the country, though Pentagon officials say it would risk setting off a firefight between North Korea and foreign navies. The new sanctions are the toughest ever, but so were the last two rounds: In August, the Security Council blocked North Korean exports of coal, iron, iron ore, lead, lead ore and seafood, and in September, it blocked textile exports, curbed oil imports and called for inspections of ships that have visited the North’s ports. Experts, and even the White House, agree that the United States is running out of sanctions options. The C.I.A. assessment is that no amount of economic sanctions will force the North Korean leader, Kim Jong-un, to give up his country’s nuclear program. “President Trump has used just about every lever you can use, short of starving the people of North Korea to death, to change their behavior,” the White House homeland security adviser, Thomas P. Bossert, said December
19. “And so we don’t have a lot of room left here to apply pressure to change their behavior.” The United States, which has led the sanctions effort at the Security Council, drafted the latest round in consultation with other members, notably China, which historically has been reluctant to impose them for fear of destabilizing North Korea, its neighbor. There were some last-minute changes in the final version of the resolution, partly to satisfy Russian complaints. The changes included doubling the deadline for the return of North Korean workers to 24 months from 12 months.

Russia’s deputy ambassador, Vladimir Safronkov, who attended the Security Council vote, made a point of complaining about negotiations over the resolution, in which he said Russia had not been adequately consulted. Still, Russia went along with the new measures — though American officials have charged that in recent months the Russians have secretly opened new links to the North, including internet connections that give the country an alternative to communicating primarily through China. The unanimous decision was a diplomatic achievement for the Trump administration, only a day after most members of the United Nations General Assembly, brushing aside President Trump’s threats of retaliation, condemned the United States’ new recognition of Jerusalem as Israel’s capital. China’s deputy ambassador, Wu Haitao, said the latest measures reflected “the unanimous position of the international community” and he urged North Korea to “refrain from conducting any further nuclear and missile tests.” But he also emphasized China’s longstanding position that all antagonists in the dispute needed to de-escalate and find ways to resume a dialogue, asserting that there was “no military option for settling the nuclear issue” on the Korean Peninsula. The increased sanctions are part of a strategy that, so far, has relied more on coercive diplomacy than on military action, though there is a long history of American efforts to sabotage North Korea’s missile and nuclear programs. But inside the administration, there are clear differences of opinion over how long Trump can, or will, tolerate a growing threat from North Korea without resorting to some kind of military force. While diplomacy backed by sanctions is the clear preference of Secretary of State Rex W. Tillerson and Defense Secretary Jim Mattis, others inside the administration say there is little time left for the sanctions to stop the North from achieving the ability to strike the United States with a nuclear weapon. Yet to prove effective, sanctions must be strictly enforced and require many months or several years to take effect. Even then, there is no guarantee: Despite all the sanctions heaped on North Korea in recent years, its economy grew 3.9 percent last year, by most estimates. Trump’s national security adviser, Lt. Gen. H. R. McMaster, has said in recent weeks, “There isn’t much time left.” That would suggest that even the new sanctions may not bite in time to change the calculus of the North Korean leadership. The fear in Washington, among those looking for a diplomatic solution, is that Trump will decide on some kind of pre-emptive strike, betting that the North will stop short of major retaliation. Experts on North Korea said the new measures had the potential to dissuade Mr. Kim from further escalating tensions with more tests, but they were cautious about predicting his behavior. “If the international community, including countries like China and Russia, implements these measures fully, faithfully and quickly, it will apply an unprecedented and irresistible level of pressure on the North Korean regime,” said Evans J. R. Revere, a former senior State Department diplomat for East Asia. If that happens, he said, it would force North Korea “to make a choice” between defiance and negotiations. Others were more skeptical. “If we are playing the long game, the accumulation of sanctions could eventually force North Korea to come to the table and negotiate,” Sue Mi Terry, a former C.I.A. analyst now at the Center for Strategic and International Studies, said in an email. However, she said it was doubtful that the move would persuade Kim “to give up his nuclear arsenal or even discuss a freeze” in 2018. Jae H. Ku, director of the U.S.-Korea Institute at the Johns Hopkins School of Advanced International Studies, said he feared that North Korea would “continue to weather the pressure” of sanctions. “The upshot,” he said, “would be the Trump administration admitting that maximum pressure to gain a diplomatic solution is a lost cause.” (Rick Gladstone and David E. Sanger, “Security Council Toughens Curbs on North Korea,” New York Times, December 23, 2017, p. A-1)

(S/PRST/2009/7), 16 April 2012 (S/PRST/2012/13), and 29 August 2017 (S/PRST/2017/16),
Reaffirming that proliferation of nuclear, chemical and biological weapons, as well as their means
of delivery, constitutes a threat to international peace and security, Expressing its gravest concern
at the ballistic missile launch by the Democratic People’s Republic of Korea (“the DPRK”) on 28
2270 (2016) 2321 (2016), 2356 (2017), 2371 (2017), and 2375 (2017) and at the challenge such a
test constitutes to the Treaty on Non-Proliferation of Nuclear Weapons (“the NPT”) and to
international efforts aimed at strengthening the global regime of non-proliferation of nuclear
weapons, and the danger it poses to peace and stability in the region and beyond, Underlining once
again the importance that the DPRK respond to other security and humanitarian concerns of the
international community including the necessity of the DPRK respecting and ensuring the welfare,
herent dignity, and rights of people in the DPRK, and expressing great concern that the DPRK
continues to develop nuclear weapons and ballistic missiles by diverting critically needed
resources away from the people in the DPRK at tremendous cost when they have great unmet
needs, Acknowledging that the proceeds of the DPRK’s trade in sectoral goods, including but not
limited to coal, iron, iron ore, lead, lead ore, textiles, seafood, gold, silver, rare earth minerals, and
other prohibited metals, as well as the revenue generated from DPRK workers overseas, among
others, contribute to the DPRK’s nuclear weapons and ballistic missile programs, Expressing its
gravest concern that the DPRK’s ongoing nuclear- and ballistic missile-related activities have
destabilized the region and beyond, and determining that there continues to exist a clear threat to
international peace and security, Acting under Chapter VII of the Charter of the United Nations,
and taking measures under Article 41,
1. Condemns in the strongest terms the ballistic missile launch conducted by the DPRK on 28
November 2017 in violation and flagrant disregard of the Security Council’s resolutions;
2. Reaffirms its decisions that the DPRK shall not conduct any further launches that use ballistic
missile technology, nuclear tests, or any other provocation; shall immediately suspend all
activities related to its ballistic missile program and in this context re-establish its pre-existing
commitments to a moratorium on all missile launches; shall immediately abandon all nuclear
weapons and existing nuclear programs in a complete, verifiable and irreversible manner, and
immediately cease all related activities; and shall abandon any other existing weapons of mass
destruction and ballistic missile programs in a complete, verifiable and irreversible manner;
Designations
3. Decides that the measures specified in paragraph 8(d) of resolution 1718 (2006) shall apply
also to the individuals and entities listed in Annex I and II of this resolution and to any
individuals or entities acting on their behalf or at their direction, and to entities owned or
controlled by them, including through illicit means, and decides further that the measures
specified in paragraph 8(e) of resolution 1718 (2006) shall also apply to the individuals listed
in Annex I of this resolution and to individuals acting on their behalf or at their direction;
Sectoral
4. Decides that all Member States shall prohibit the direct or indirect supply, sale or transfer to
the DPRK, through their territories or by their nationals, or using their flag vessels, aircraft,
pipelines, rail lines, or vehicles and whether or not originating in their territories, of all crude oil,
unless the Committee approves in advance on a case-by-case basis a shipment of crude oil
which is exclusively for livelihood purposes of DPRK nationals and unrelated to the DPRK’s
nuclear or ballistic missile programs or other activities prohibited by resolutions 1718 (2006),
2375 (2017) or this resolution, further decides that this prohibition shall not apply with respect
to crude oil that, for a period of twelve months after the date of adoption of this resolution,
and for twelve months periods thereafter, does not exceed 4 million barrels or 525,000 tons
in the aggregate per twelve month period, and decides that all Member States providing crude
oil shall provide a report to the Committee every 90 days from the date of adoption of this
resolution of the amount of crude oil provided to the DPRK;
5. Decides that all Member States shall prohibit the direct or indirect supply, sale or transfer to
the DPRK, through their territories or by their nationals, or using their flag vessels, aircraft,
pipelines, rail lines, or vehicles, and whether or not originating in their territories, of all refined
petroleum products, decides that the DPRK shall not procure such products, further decides that
this provision shall not apply with respect to procurement by the DPRK or the direct or indirect supply, sale, or transfer to the DPRK, through their territories or by their nationals, or using their flag vessels, aircraft, pipelines, rail lines, or vehicles, and whether or not originating in their territories, of refined petroleum products, including diesel and kerosene, in the aggregate amount of up to 500,000 barrels during a period of twelve months beginning on January 1, 2018, and for twelve month periods thereafter, provided that (a) the Member State notifies the Committee every thirty days of the amount of such supply, sale, or transfer to the DPRK of refined petroleum products along with information about all the parties to the transaction, (b) the supply, sale, or transfer of refined petroleum products involve no individuals or entities that are associated with the DPRK’s nuclear or ballistic missile programs or other activities prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017), or this resolution, including designated individuals or entities, or individuals or entities acting on their behalf or at their direction, or entities owned or controlled by them, directly or indirectly, or individuals or entities assisting in the evasion of sanctions, and (c) the supply, sale, or transfer of refined petroleum products are exclusively for livelihood purposes of DPRK nationals and unrelated to generating revenue for the DPRK’s nuclear or ballistic missile programs or other activities prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017) or this resolution, directs the Committee Secretary beginning on 1 January 2018 to notify all Member States when an aggregate amount of refined petroleum products sold, supplied, or transferred to the DPRK of 75 per cent of the aggregate yearly amounts have been reached, also directs the Committee Secretary beginning on 1 January 2018 to notify all Member States when an aggregate amount of refined petroleum products sold, supplied, or transferred to the DPRK of 90 per cent of the aggregate yearly amounts have been reached, and further directs the Committee Secretary beginning on 1 January 2018 to notify all Member States when an aggregate amount of refined petroleum products sold, supplied, or transferred to the DPRK of 95 per cent of the aggregate yearly amounts have been reached and to inform them that they must immediately cease selling, supplying, or transferring refined petroleum products to the DPRK for the remainder of the year, directs the Committee to make publicly available on its website the total amount of refined petroleum products sold, supplied, or transferred to the DPRK by month and by source country, directs the Committee to update this information on a real-time basis as it receives notifications from Member States, calls upon all Member States to regularly review this website to comply with the annual limits for refined petroleum products established by this provision beginning on 1 January 2018, directs the Panel of Experts to closely monitor the implementation efforts of all Member States to provide assistance and ensure full and global compliance, and requests the Secretary-General to make the necessary arrangements to this effect and provide additional resources in this regard;

6. Decides that the DPRK shall not supply, sell or transfer, directly or indirectly, from its territory or by its nationals or using its flag vessels or aircraft, food and agricultural products (HS codes 12, 08, 07), machinery (HS code 84), electrical equipment (HS code 85), earth and stone including magnesite and magnesia (HS code 25), wood (HS code 44), and vessels (HS code 89), and that all States shall prohibit the procurement of the above-mentioned commodities and products from the DPRK by their nationals, or using their flag vessels or aircraft, whether or not originating in the territory of the DPRK, clarifies that the full sectoral ban on seafood in paragraph 9 of resolution 2371 (2017) prohibits the DPRK from selling or transferring, directly or indirectly, fishing rights, and further decides that for sales of and transactions involving all commodities and products from the DPRK whose transfer, supply, or sale by the DPRK are prohibited by this resolution and for which written contracts have been finalized prior to the adoption of this resolution, all States may only allow those shipments to be imported into their territories up to 30 days from the date of adoption of this resolution with notification provided to the Committee containing details on those imports by no later than 45 days after the date of adoption of this resolution;

7. Decides that all Member States shall prohibit the direct or indirect supply, sale or transfer to the DPRK, through their territories or by their nationals, or using their flag vessels, aircraft, pipelines, rail lines, or vehicles and whether or not originating in their territories, of all industrial machinery (HS codes 84 and 85), transportation vehicles (HS codes 86 through 89), and iron, steel, and other
Maritime Interdiction of Cargo Vessels

9. Notes with great concern that the DPRK is illicitly exporting coal and other prohibited items through deceptive maritime practices and obtaining petroleum illegally through ship-to-ship transfers and decides that Member States shall seize, inspect, and freeze (impound) any vessel in their ports, and may seize, inspect, and freeze (impound) any vessel subject to its jurisdiction in its territorial waters, if the Member State has reasonable grounds to believe that the vessel was involved in activities, or the transport of items, prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017), or this resolution, encourages Member States to consult with the flag States of relevant vessels once they are seized, inspected, and frozen (impounded), and further decides that, after six months from the date such vessels were frozen (impounded), this provision shall not apply if the Committee decides, on a case-by-case basis and upon request of a flag State, that adequate arrangements have been made to prevent the vessel from contributing to future violations of these resolutions;

10. Decides that when a Member State has information to suspect that the DPRK is attempting to supply, sell, transfer or procure, directly or indirectly, illicit cargo, that Member State may request additional maritime and shipping information from other relevant Member States, including to determine whether the item, commodity, or product in question originated from the DPRK, and decides that all Member States receiving such inquiries shall respond as promptly as possible to such requests in an appropriate manner, decides that the Committee, with the support of its Panel of Experts, shall facilitate timely coordination of such information requests through an expedited process, and requests the Secretary-General to make the necessary arrangements to this effect and provide additional resources to the Committee and the Panel of Experts in this regard;

11. Reaffirms paragraph 22 of resolution 2321 (2016) and decides that each Member State shall prohibit its nationals, persons subject to its jurisdiction and entities incorporated in its territory or subject to its jurisdiction from providing insurance or re-insurance services to vessels it has reasonable grounds to believe were involved in activities, or the transport of items, prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017), or this resolution, unless the Committee determines on a case-by-case basis that the vessel is engaged in activities exclusively for livelihood purposes which will not be used by DPRK individuals or entities to generate revenue or exclusively for humanitarian purposes;

12. Reaffirms paragraph 24 of resolution 2321 (2016) and decides that each Member State shall de-register any vessel it has reasonable grounds to believe was involved in activities, or the transport of items, prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013),
2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017), or this resolution and prohibit
its nationals, persons subject to its jurisdiction and entities incorporated in its territory or subject to
its jurisdiction from thereafter providing classification services to such a vessel except as approved
in advance by the Committee on a case-by-case basis, and further decides that Member States shall
not register any such vessel that has been de-registered by another Member State pursuant to this
paragraph except as approved in advance by the Committee on a case-by-case basis;
13. Expresses concern that DPRK-flagged, controlled, chartered, or operated vessels intentionally
disregard requirements to operate their automatic identification systems (AIS) to evade UNSCR
sanctions monitoring by turning off such systems to mask their full movement history and calls
upon Member States to exercise enhanced vigilance with regards to such vessels conducting
activities prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270
(2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017), or this resolution;
14. Recalls paragraph 30 of resolution 2321 (2016) and decides that all Member States shall
prevent the direct or indirect supply, sale or transfer to the DPRK, through their territories or by
their nationals, or using their flag vessels or aircraft, and whether or not originating in their
territories, of any new or used vessels, except as approved in advance by the Committee on a case-
by-case basis;
15. Decides that, if a Member State has information regarding the number, name, and registry of
vessels encountered in its territory or on the high seas that are designated by the Security Council
or by the Committee as subject to the asset freeze imposed by paragraph 8(d) of resolution 1718
(2006), the various measures imposed by paragraph 12 of resolution 2321 (2016), the port entry
ban imposed by paragraph 6 of resolution 2371 (2017), or relevant measures in this resolution,
then the Member State shall notify the Committee of this information and what measures were
taken to carry out an inspection, an asset freeze and impoundment or other appropriate action as
authorized by the relevant provisions of resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094
(2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017), or this resolution;
16. Decides that the provisions of this resolution shall not apply with respect solely to the
trans-shipment of Russia-origin coal to other countries through the Russia-DPRK Rajin-
Khasan port and rail project, as permitted by paragraph 8 of resolution 2371 (2017) and paragraph
18 of resolution 2375 (2017);
Sanctions Implementation
17. Decides that Member States shall report to the Security Council within ninety days of the
adoption of this resolution, and thereafter upon request by the Committee, on concrete measures
they have taken in order to implement effectively the provisions of this resolution, requests the
Panel of Experts, in cooperation with other UN sanctions monitoring groups, to continue its efforts
to assist Member States in preparing and submitting such reports in a timely manner;
18. Calls upon all Member States to redouble efforts to implement in full the measures in
(2017), 2371 (2017), 2375 (2017) and this resolution and to cooperate with each other in doing so,
particularly with respect to inspecting, detecting and seizing items the transfer of which is
prohibited by these resolutions;
19. Decides that the mandate of the Committee, as set out in paragraph 12 of resolution 1718
(2006), shall apply with respect to the measures imposed in this resolution and further decides that
the mandate of the Panel of Experts, as specified in paragraph 26 of resolution 1874 (2009) and
modified in paragraph 1 of resolution 2345 (2017), shall also apply with respect to the measures
imposed in this resolution;
20. Decides to authorize all Member States to, and that all Member States shall, seize and dispose
(such as through destruction, rendering inoperable or unusable, storage, or transferring to a State
other than the originating or destination States for disposal) of items the supply, sale, transfer, or
export of which is prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013),
2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017) or this resolution that are
identified in inspections, in a manner that is not inconsistent with their obligations under
applicable Security Council resolutions, including resolution 1540 (2004), as well as any
obligations of parties to the NPT, the Convention on the Prohibition of the Development,
Production, Stockpiling and Use of Chemical Weapons and on Their Development of 29 April
1997, and the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction of 10 April 1972;

21. Emphasizes the importance of all States, including the DPRK, taking the necessary measures to ensure that no claim shall lie at the instance of the DPRK, or of any person or entity in the DPRK, or of persons or entities designated for measures set forth in resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017) or this resolution, or any person claiming through or for the benefit of any such person or entity, in connection with any contract or other transaction where its performance was prevented by reason of the measures imposed by this resolution or previous resolutions;

22. Emphasizes that the measures set forth in resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017) and this resolution shall in no way impede the activities of diplomatic or consular missions in the DPRK pursuant to the Vienna Conventions on Diplomatic and Consular Relations;

Political

23. Reiterates its deep concern at the grave hardship that the people in the DPRK are subjected to, Condemns the DPRK for pursuing nuclear weapons and ballistic missiles instead of the welfare of its people while people in the DPRK have great unmet needs, emphasizes the necessity of the DPRK respecting and ensuring the welfare and inherent dignity of people in the DPRK, and demands that the DPRK stop diverting its scarce resources toward its development of nuclear weapons and ballistic missiles at the cost of the people in the DPRK;

24. Regrets the DPRK’s massive diversion of its scarce resources toward its development of nuclear weapons and a number of expensive ballistic missile programs, notes the findings of the United Nations Office for the Coordination of Humanitarian Assistance that well over half of the people in the DPRK suffer from major insecurities in food and medical care, including a very large number of pregnant and lactating women and under-five children who are at risk of malnutrition and 41% of its total population who are undernourished, and, in this context, expresses deep concern at the grave hardship to which the people in the DPRK are subjected;

25. Reaffirms that the measures imposed by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017) and this resolution are not intended to have adverse humanitarian consequences for the civilian population of the DPRK or to affect negatively or restrict those activities, including economic activities and cooperation, food aid and humanitarian assistance, that are not prohibited by resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016), 2356 (2017), 2371 (2017), 2375 (2017) and this resolution, the work of international and non-governmental organizations carrying out assistance and relief activities in the DPRK for the benefit of the civilian population of the DPRK, stresses the DPRK’s primary responsibility and need to fully provide for the livelihood needs of people in the DPRK, and decides that the Committee may, on a case-by-case basis, exempt any activity from the measures imposed by these resolutions if the committee determines that such an exemption is necessary to facilitate the work of such organizations in the DPRK or for any other purpose consistent with the objectives of these resolutions;

26. Reaffirms its support for the Six Party Talks, calls for their resumption, and reiterates its support for the commitments set forth in the Joint Statement of 19 September 2005 issued by China, the DPRK, Japan, the Republic of Korea, the Russian Federation, and the United States, including that the goal of the Six-Party Talks is the verifiable denuclearization of the Korean Peninsula in a peaceful manner and the return of the DPRK to the Non-proliferation Treaty (NPT) and International Atomic Energy Agency safeguards at an early date, bearing in mind the rights and obligations of States parties to the NPT and underlining the need for all States parties to the NPT to continue to comply with their Treaty obligations, that the United States and the DPRK undertook to respect each other’s sovereignty and exist peacefully together, that the Six Parties undertook to promote economic cooperation, and all other relevant commitments;

27. Reiterates the importance of maintaining peace and stability on the Korean Peninsula and in north-east Asia at large, and expresses its commitment to a peaceful, diplomatic, and political solution to the situation and welcomes efforts by the Council members as well as other States to facilitate a peaceful and comprehensive solution through dialogue and stresses the importance of working to reduce tensions in the Korean Peninsula and beyond;
28. Affirms that it shall keep the DPRK’s actions under continuous review and is prepared to strengthen, modify, suspend or lift the measures as may be needed in light of the DPRK’s compliance, and, in this regard, expresses its determination to take further significant measures in the event of a further DPRK nuclear test or launch, and decides that, if the DPRK conducts a further nuclear test or a launch of a ballistic missile system capable of reaching intercontinental ranges or contributing to the development of a ballistic missile system capable of such ranges, then the Security Council will take action to restrict further the export to the DPRK of petroleum; 29. Decides to remain seized of the matter.

Annex I Travel Ban/Asset Freeze (Individuals)

CH’OE SO’K MIN a. Description: Ch’oe So’k-min is an overseas Foreign Trade Bank representative. In 2016, Ch’oe So’k-min was the deputy representative at the Foreign Trade Bank branch office in that overseas location. He has been associated with cash transfers from that overseas Foreign Trade Bank office to banks affiliated with North Korean special organizations and Reconnaissance General Bureau operatives located overseas in an effort to evade sanctions.
   b. AKA: n/a c. Identifiers: DOB: 25 July 1978; Nationality: DPRK; Gender: male

CHU HYO’K a. Description: Chu Hyo’k is a North Korean national who is an overseas Foreign Trade Bank representative.
   b. AKA: Ju Hyok c. Identifiers: DOB: 23 November 1986; Passport No. 836420186 issued 28 October 2016 expires 28 October 2021; Nationality: DPRK; Gender: male

KIM JONG SIK a. Description: A leading official guiding the DPRK’s WMD development efforts. Serving as Deputy Director of the Workers’ Party of Korea Munitions Industry Department.

KIM KYONG IL a. Description: Kim Kyong Il is a Foreign Trade Bank deputy chief representative in Libya.
   b. AKA: Kim Kyo’ng-il c. Identifiers: Location Libya; DOB: 01 August 1979; Passport No. 836210029; Nationality: DPRK; Gender: male

KIM TONG CHOL a. Description: Kim Tong Chol is an overseas Foreign Trade Bank representative.
   b. AKA: Kim Tong-ch’ol c. Identifiers: DOB: 28 January 1966; Nationality: DPRK; Gender: male

KO CHOL MAN a. Description: Ko Chol Man is an overseas Foreign Trade Bank representative.
   b. AKA: Ko Ch’ol-man c. Identifiers: DOB: 30 September 1967; Passport No. 472420180; Nationality: DPRK; Gender: male

KU JA HYONG a. Description: Ku Ja Hyong is a Foreign Trade Bank chief representative in Libya.
   b. AKA: Ku Cha-hyo’ng c. Identifiers: Location Libya; DOB: 08 September 1957; Nationality: DPRK; Gender: male

MUN KYONG HWAN a. Description: Mun Kyong Hwan is an overseas Bank of East Land representative.

PAE WON UK a. Description: Pae Won Uk is an overseas Daesong Bank representative.
   b. AKA: Pae Wo’n-uk c. Identifiers: DOB: 22 August 1969; Nationality: DPRK; Gender: male; Passport No. 472120208 expires 22 Feb 2017

PAK BONG NAM a. Description: Pak Bong Nam is an overseas Ilsim International Bank representative.
   b. AKA: Lui Wai Ming; Pak Pong Nam; Pak Pong-nam c. Identifiers: DOB: 06 May 1969; Nationality: DPRK; Gender: male

PAK MUN IL a. Description: Pak Mun Il is an overseas official of Korea Daesong Bank.
   b. AKA: Pak Mun-Il c. Identifiers: DOB 01 January 1965; Passport No. 563335509 expires 27 August 2018; Nationality: DPRK; Gender: male

RI CHUN HWAN a. Description: Ri Chun Hwan is an overseas Foreign Trade Bank representative.
   b. AKA: Ri Ch’un-hwan c. Identifiers: DOB 21 August 1957; Passport No. 563233049 expires 09 May 2018; Nationality: DPRK; Gender: male

RI CHUN SONG a. Description: Ri Chun Song is an overseas Foreign Trade Bank representative.
   b. AKA: Ri Ch’un-so’ng c. Identifiers: DOB: 30 October 1965; Passport No. 654133553 expires 11 March 2019; Nationality: DPRK; Gender: male

RI PYONG CHUL a. Description: Alternate Member of the Political Bureau of the Workers’ Party of Korea and First Vice Director of the Munitions Industry Department.
   b. A.K.A.: Ri Pyo’ng-ch’o’l c. Identifiers: YOB: 1948; Nationality: DPRK; Gender: male; Address: DPRK
RI SONG HYOK a. Description: Ri Song Hyok is an overseas representative for Koryo Bank and Koryo Credit Development Bank and has reportedly established front companies to procure items and conduct financial transactions on behalf of North Korea. b. AKA: Li Cheng He c. Identifiers: DOB: 19 March 1965; Nationality: DPRK; Gender: male
RI U’N SO’NG a. Description: Ri U’n-so’ng is an overseas Korea Unification Development Bank representative. b. AKA: Ri Eun Song; Ri Un Song c. Identifiers: DOB: 23 July 1969; Nationality: DPRK; Gender: male
Annex II Asset Freeze (Entities)
MINISTRY OF THE PEOPLE’S ARMED FORCES (MPAF) a. Description: The Ministry of the People’s Armed Forces manages the general administrative and logistical needs of the Korean People’s Army. b. Location: Pyongyang, DPRK

12/24/17

DPRK FoMin spokesperson’s statement: “The United States, completely terrified at our accomplishment of the great historic cause of completing the state nuclear force, is getting more and more frenzied in the moves to impose the harshest-ever sanctions and pressure on our country. On December 23, the U.S., while denouncing our successful test launch of ICBM Hwasong-15, cooked up once again the UN Security Council "sanctions resolution" 2397 which is tantamount to complete economic blockade of the DPRK. We define this "sanctions resolution" rigged up by the U.S. and its followers as a grave infringement upon the sovereignty of our Republic, as an act of war violating peace and stability in the Korean peninsula and the region and categorically reject the "resolution." The reason we have achieved the great cause of completing the state nuclear force, overcoming all kinds of hardships and weathering through manifold difficulties is to safeguard the sovereignty and territorial integrity of the country, ensure the peaceful life of the people and reliably guarantee peace and security of the Korean peninsula and the world against the nuclear blackmail policy and nuclear threats of the U.S imperialists. As we have stated several times, our nuclear weapons are self-defensive deterrence that does not contradict any international law since we have developed and completed them in a fair and legitimate way outside of the Treaty on the Non-Proliferation of Nuclear Weapons in order to put an end to the hostile policy and nuclear threats and blackmail of the U.S. It is a philosophical truth we have found through the past showdown with the U.S. that strengthening the powerful nuclear deterrence in every way is the only way to frustrate the moves of the U.S. who makes it its daily business to carry on military threats and blackmail in every region to realize its preposterous dream of hegemony over the world, advocating the "America First Policy" based on force. There is no more fatal blunder than the miscalculation that the U.S. and its followers could check by already worn-out "sanctions" the victorious advance of our people who have brilliantly accomplished the great historic cause of completing the state nuclear force, the cause of building a rocket power capable of coping with any nuclear war against the U.S. The U.S. should not forget even a second the entity of the DPRK that rapidly emerged as a strategic state capable of posing a substantial nuclear threat to the U.S. mainland. If the U.S. wishes to live safely, it must abandon its hostile policy towards the DPRK and learn to co-exist with the country that has nuclear weapons and should wake up from its pipe dream of our country giving up nuclear weapons which we have developed and completed through all kinds of hardships. Those countries that raised their hands in favor of this "sanctions resolution" shall be held completely responsible for all the consequences to be caused by the "resolution" and we will make sure for ever and ever that they pay heavy price for what they have done. Whatever difficulties and challenges lie ahead of our road of advance, we neither feel disappointed nor are afraid of them but are optimistic about brighter future, and no force in the world can break our people's indomitable spirit. We will further consolidate our self-defensive nuclear deterrence aimed at fundamentally eradicating the U.S. nuclear threats, blackmail and hostile moves by establishing the practical balance of force with the U.S. No matter how crazy the U.S. and the hostile forces become in their maneuvers against our country, our Republic that advances with the great power of the invincible single-minded unity around the great leader, the strongest military force and the self-reliance and self-development will always shine as the powerful country and the fortress of independence in politics, self-support in the economy and self-reliance in defense.” (KCNA, “Statement of Foreign Ministry Spokesman,” December 24, 2017)
Forecasting North Korea’s nuclear weapons program for the new year, the Unification Ministry in South Korea said on Tuesday that the North “will continue to advance its nuclear and missile capabilities” in 2018 despite its claims about completing its nuclear force. North Korea will conduct at least one more missile test to master the re-entry technology for its warheads, analysts said. But the North also was racing against time to secure full ICBM capabilities before new United Nations sanctions begin squeezing its economy, they said. “Re-entry is a question North Korea must solve to boost its negotiating leverage and for its military and technological purposes,” Shin Beom-chul, a security analyst, said in a report published over the weekend by the government-run Institute of Foreign Affairs and National Security in Seoul. “For North Korea, there is a big difference between entering negotiations with the United States after acquiring full ICBM capabilities and starting such talks without them.” Analysts warned that in its next long-range missile test, the North could launch a missile on a full ICBM trajectory and even carry a live nuclear warhead to demonstrate its mastery of warhead re-entry technology. “The North’s seventh nuclear test could take place not underground but over the Pacific,” said Cheong Seong-chang, a senior analyst, in a report published by the independent Sejong Institute of South Korea. From January to November, North Korea’s trade with China, its only major remaining trading partner, declined to $4.7 billion, a drop of more than 10 percent, the Unification Ministry said today. Its exports to China plummeted nearly 32 percent in the same period, the ministry said. The Treasury Department today imposed sanctions on two senior North Korean officials for their work on the country’s ballistic missile program. One of the officials, Kim Jong-sik, was reportedly crucial to North Korea’s efforts to develop solid fuel rockets, which are more difficult to defend against because they can be launched quickly. Liquid fuel rockets can take hours to fuel. The other official, Ri Pyong-chol, is said to have played a key role in developing North Korea’s intercontinental ballistic missile program, the Treasury Department reported. Reacting to the United Nations’ latest sanctions resolution, the North Korean Foreign Ministry said December 24 that the country “will further consolidate our self-defense nuclear deterrence.” But it did not specify any missile or nuclear tests. Instead, North Korea might be preparing for a satellite launch, JoongAng Ilbo said today, citing an anonymous government source. South Korea saw “nothing out of ordinary at this moment” while it and the United States were closely monitoring for possible provocations from the North, Noh Jae-chon, a South Korean military spokesman, said. (Choe Sang-hun, “North Korea Won’t Stop Its Arms Tests Anytime Soon, the South Warns,” New York Times, December 27, 2017, p. A-6)

U.S. reconnaissance satellites have spotted Chinese ships selling oil to North Korean vessels on the West Sea around 30 times since October. According to South Korean government sources, the satellites have pictured large Chinese and North Korean ships illegally trading in oil in a part of the West Sea closer to China than South Korea. The satellite pictures even show the names of the ships. A government source said, "We need to focus on the fact that the illicit trade started after a UN Security Council resolution in September drastically capped North Korea's imports of refined petroleum products." The U.S. Treasury Department placed six North Korean shipping and trading companies and 20 of their ships on sanctions list on Nov. 21, when it published spy satellite images taken on Oct. 19 showing a ship named Ryesonggang 1 connected to a Chinese vessel. The department noted that the two ships appeared to be illegally trading in oil from ship to ship to bypass sanctions. Ship-to-ship trade with North Korea on the high seas is forbidden in UNSC Resolution 2375 adopted in September, but such violations are nearly impossible to detect unless China aggressively cracks down on smuggling. The problem is that any oil embargo imposed on the North in the event of further provocations will probably be futile as long as illegal smuggling continues. It is uncertain whether the Chinese government is deliberately looking the other way, but it seems unlikely that it is unaware given the sheer volume. (Yu Yong-woon and Kim Jim-yung, “Chinese Ships Spotted Selling Oil to N. Korea,” Chosun Ilbo, December 26, 2017)
A few months after the collapse of the Soviet Union, a group of American investors and Russian scientists struck a deal to begin marketing one of the crown jewels of Moscow’s strategic arsenal: an entire family of missiles designed for launch from submarines. Up for sale were powerful missiles called “Calm” and “Ripple,” built to lob heavy warheads into space from a barge or a submarine tube, and a new model called “Surf” that could be rolled off the side of a ship and fired straight out of the water. The idea of the joint venture, as one of its U.S. partners wrote in early 1993, was to link American satellite companies to a top Russian weapons laboratory to “convert potentially threatening submarine missiles into peaceful space boosters.” The Americans quickly ran aground on a series of legal and bureaucratic barriers, but the Russians forged ahead with a new partner willing to pay cash for Soviet military technology: North Korea. More than two decades later, some of the Soviet designs are reappearing, one after another, in surprisingly sophisticated missiles that have turned up on North Korean launchpads over the past two years. Now, newly uncovered documents offer fresh clues about the possible origins of those technical advances, some of which seemed to outside observers to have come from nowhere. “The question that has long been raised is: Did North Korea get this technology from a [Russian] fire sale?” said David Wright, a missiles expert at the Union of Concerned Scientists. “Did they get plans years ago and are just now at the point where they can build these things?” North Korea is known to have relied on Russian parts and designs for its older missiles, including the Scud derivatives that had dominated its stockpile since the 1980s. The newly uncovered documents include technical drawings for much more advanced missiles — designs that include features seen in some of the newest missiles in North Korea’s expanding arsenal. The documents from the Makeyev Rocket Design Bureau include marketing brochures for an array of top-of-the-line Soviet missiles that were able to deliver nuclear warheads to U.S. cities. Initially designed for the Soviet navy’s nuclear submarines, some of the models offered for sale could be launched from a large boat, a submerged barge, or a capsule dropped into the ocean, negating the need for a modern submarine fleet. “The missile could be floated and ignited without any need for a launch platform,” recalled Kyle Gillman, the former executive vice president of the U.S.-Russian joint venture known as Sea Launch Investors. Gillman, who negotiated the business agreement with Russia’s Makeyev scientists, reviewed and authenticated the documents obtained by The Washington Post. The evidence that the designs eventually ended up in North Korea is partly circumstantial. In summer 1993, with the U.S.-Russian project flagging, more than 60 Russian missile scientists and family members from the Makeyev facility were arrested at Moscow’s Sheremetyevo International Airport as they prepared to travel to Pyongyang to work as consultants. U.S., Russian and South Korean intelligence officials later concluded that some of the scientists eventually succeeded in traveling to North Korea to offer blueprints and technical advice for the country’s missiles program. But U.S. analysts see more persuasive evidence in the actual missiles that North Korea has put on display over the past two years. In the most striking case, the Hwasong-10, or Musudan, a single-stage missile successfully tested by North Korea in June 2016, appears to use the same engine and many design features as the Soviet Union’s R-27 Zyb, a submarine-launched ballistic missile designed by Makeyev scientists and advertised in one of the brochures obtained by The Post. The fact that it has taken Pyongyang so long to exploit the Russian designs is perplexing, but North Korea had long lacked the sophisticated materials, engineering expertise and computer-driven machine tools for the kinds of advanced missiles it has recently tested, weapons experts say. With an industrial base enhanced by years of slow, patient acquisition efforts, North
Korea is only now in a position to capitalize on technology it had been sitting on for years or even decades, analysts say. “North Korea was just recently able to acquire machine tools that were state-of-the-art in the 1990s, meaning they are still damn good machine tools,” Wright said. “Once you have the plans, and are able to get your hands on the materials and the right kinds of tools, you have a real leg up.” The U.S. founders of Sea Launch Investors saw their joint project with the Russians as the profitable answer to two pressing global concerns, company documents show. One was a shortage of launch capacity for a new generation of satellites servicing the rapidly expanding global telecommunications industry. The other was the problem of newly idle weapons scientists in labs and factories across the former Soviet Union. The abrupt halt to the Cold War in 1991 upended the careers of the thousands of physicists, chemists, microbiologists and engineers who built the Red Army’s vast stockpile of nuclear, chemical and biological weapons, along with the missiles for delivering them. Once among the elites of Soviet society, these highly skilled scientists faced an uncertain future with little meaningful work and a plummeting standard of living. The United States would ultimately commit billions of dollars to help secure or dismantle Soviet weapons stockpiles and repurpose former weapons laboratories. Yet, in the early 1990s, U.S. officials remained gravely worried about the possible leakage of Soviet weapons secrets, and perhaps of the weapons themselves. The Americans who founded Sea Launch Investors in 1992 believed that their project could help prevent the poaching of Russian weapons experts by terrorists and rogue states, at least from the community of rocket scientists at the Makeyev Rocket Design Bureau, the premier Soviet manufacturer of submarine-launched ballistic missiles headquartered in Miass, a small city in Russia’s southern Ural Mountains. “We not only help the Russians to pay their bills and stabilize their country by showing them how the free enterprise system works,” John E. Draim, a Navy pilot and engineer, wrote in the company’s business plan in 1993, “but we also help those Americans who are looking for an economical way to get satellites into orbit.” In May of that year, a Protocol of Intent agreement was signed by retired Adm. Thomas Moorer, a former Joint Chiefs chairman and head of the American team, and retired Russian Adm. Fyodor Novoselov, a former deputy fleet commander for shipbuilding and armaments. The joint venture acquired exclusive rights to Makeyev’s inventory of submarine-launched ballistic missiles, and then developed marketing materials that showcased a line of products that could be converted for use in commercial ventures. These included a missile known as the R-27 Zyb — or “Ripple” — the squat, blunt-nosed workhorse of the Soviet Union’s Yankee-1 Class submarine fleet, along with larger, more powerful missiles such as the 50-foot-tall R-29 Shtil — or “Calm” — and the newer, solid-fueled R-39 Rif. The latter two were true intercontinental ballistic missiles with a range of more than 5,000 miles. But the marquee item was the Priboi, or “Surf,” a hybrid model that the investors planned to create by combining parts of the Shtil and Rif into two-stage spacecraft designed to put small satellites into orbit. The Surf’s most extraordinary feature was that it could be fired into space without a submarine or conventional launchpad. Using techniques that both the United States and Russia had developed experimentally in the 1960s and ’70s, the missile could be launched from a floating tube, virtually anywhere in the world. Here, Russian missiles had a distinct advantage, as their lower specific gravity allowed them to float vertically, like an ocean buoy. Moreover, the engines for Soviet submarine missiles were specifically designed to ignite while their nozzles were still in the water. Backers of the plan envisioned a day when Russia’s missiles could launch commercial satellites into space quickly and cheaply, using a nearly infinite number of launch sites across the world’s oceans. “Erection in the water, even for the largest rockets, will take less than a minute,” Draim wrote in the 1993 business plan. Telecommunications companies would save millions of dollars, he wrote, while eliminating a real threat to U.S. national security. As the months passed, Makeyev’s managers became increasingly frustrated as their American partners ran into a series of obstacles, including reservations about whether the joint venture was permissible under U.S.-Russian arms-control agreements. In April 1993, Gen. Colin L. Powell, then the Joint Chiefs chairman, informed Sea Launch Investors that the project could not proceed without a government review and a formal waiver of the Strategic Arms Limitation Treaty. No waiver was granted, and by the spring of 1995, it was clear that the company was a dead end. “The present ground rules . . . practically put us out of business,” Moorer complained in a memo on April 26 of that year. By then, some of the Makeyev drawings and blueprints had apparently gone out the door. The Russian scientists arrested at the Moscow airport in August 1993 acknowledged to investigators that they had been
recruited as a group to assist North Korea in building rockets, ostensibly as space boosters for satellites. In “The Dead Hand,” David E. Hoffman’s Pulitzer Prize-winning history of the last years of the Cold War, a Russian security official describes how the North Koreans systematically chose experts from across Makeyev’s entire production line, from fuels specialists to engineers who designed the nose cone and payload chamber. The salary offer, $1,200 a month, was 200 times as much as some of the scientists were earning at home. “This was the first case when we noticed the North Korean attempts to steal missile technology,” the security official is quoted as saying. Other attempts would follow. U.S. and South Korean intelligence officials have confirmed that Makeyev scientists eventually did land jobs as consultants for the North Koreans, and technical drawings were passed to Pyongyang, either directly or through intermediaries. Some of Makeyev’s missile secrets appear to have left Russia before the joint-venture effort officially disbanded. Still, years later, the company’s former executive vice president remains convinced that most, if not all, could have been kept locked away if Western governments had acted quickly. “We just needed to be creative, and try and win the peace,” Gillman said. “But our government and military and intelligence agencies were shortsighted.” On June 22, 2016, North Korea successfully tested a mysterious new missile that differed dramatically from anything in Pyongyang’s known arsenal. The 36-foot-tall missile had a squat, sub-nosed frame and used a liquid propellant more powerful than the kerosene-based fuels the North Koreans had used in the past, potentially allowing it to fly farther, with heavier payloads. The missile was dubbed the Hwasong-10, or Musudan. But experts noted striking similarities to the R-27 Zyb, or Ripple, manufactured by the Makeyev Rocket Design Bureau. Two months later, on Aug. 24, 2016, North Korea successfully tested the Pukguksong-1, a submarine-launched missile that also incorporates some features from the Zyb. Both models are “generally regarded as derived from the designs of the Makeyev Bureau’s R-27,” said Joshua Pollack, an analyst at the James Martin Center for Nonproliferation Studies in Monterey, Calif. Those two tests were followed in recent months by even greater technological leaps, culminating in the successful tests this year of North Korea’s first true intercontinental ballistic missiles, capable of reaching every city in the continental United States. There have been no further tests of the Musudan, but satellite images released this month show that North Korea is building floating barges thought to be intended for tests of new submarine-launched missiles. The construction is occurring in two different ports on opposite sides of the country. U.S. analysts also believe that North Korea is working on an improved version of the Pukguksong. “I have to assume that Makeyev pitched part, if not all, of these concepts and proposals to other interested investors, including the North Koreans,” said Michael Elleman, a former missiles scientist and a senior fellow at the International Institute for Strategic Studies, a British think tank. While there is “solid evidence” that North Korea acquired blueprints for the R-27 Zyb, there is no proof so far that Pyongyang is building a clone of the R-29 Shtil, with its more powerful engine and 5,000-mile range. But Elleman cautioned: “It may be there, and appear in the future.” (Joby Warrick, “Documents Shed Light on Gains by N. Korea,” Washington Post, December 28, 2017, p. A-1)

Escalating U.S. rhetoric towards North Korea this year has stoked fears of war but Donald Trump’s threats of “fire and fury” have yet to be matched by the logistical and military build-up that would almost certainly precede any strike. While the U.S. could launch some kind of pinprick attack on an individual target without the need for huge firepower, experts say the Pentagon would have to prepare for the possibility of serious retaliation. “If you start to shoot first, you better be prepared for a full range of counter-reactions,” said William Fallon, former head of US Pacific Command and Central Command. “You would want to have a very heavy capability to try to deter a significant counter-action.” With more than 200,000 US citizens in South Korea and another 50,000 in Japan, Washington would almost certainly want to conduct an evacuation. But this would be a big logistical operation and could itself be the trigger for pre-emptive action by Kim Jong Un’s nuclear-armed regime. The U.S. has “a war plan in South Korea that we have been polishing for 70 years”, said Dennis Blair, a retired admiral who commanded a carrier battlegroup in 1994 when Bill Clinton was considering striking North Korea and later headed Pacific Command. That plan covers, he said, among other things “the transportation preparation, logistics — such as breaking out pre-positioned war material — communications, call up of reservists, preparations for non-combatant evacuation operations — the actions you really have to do if you
think that serious conflict is a possibility.” The logistical complexity serves as a reminder of why the U.S. and its allies have long discounted the possibility of an attack — something that could lead to the loss of hundreds of thousands of lives and widespread economic disruption A huge complicating factor for the U.S. is the difficulty in locating North Korea’s nuclear weapons. Even if the U.S. knew where they were, the only way to destroy them without visible preparations would be a nuclear first strike, launched by stealth aircraft flying from the U.S. mainland, argues one former US military officer who has worked in the region. Blair, who has served as the head of the U.S. intelligence community, said it was “inconceivable that the U.S. would use nuclear weapons” to launch a pre-emptive strike. “It just would be such a Pandora’s box and would make us the first country in history to use nuclear weapons for coercive purposes since Hiroshima and Nagasaki, which is absolutely the wrong signal to send.” The U.S. would be more likely to look at other options, from precision strikes on weapons facilities to a wider assault aimed at regime change. Dennis Wilder, a former senior CIA analyst and Asia adviser to George W. Bush, believes the U.S. could, for example, attempt to destroy the facility near Pyongyang where North Korea fuelled and stored the recently fired Hwasong 15 intercontinental ballistic missile. Recommended Australian man accused of brokering N Korean missiles Trump, Putin discuss ‘working together’ on North Korea Putin hopeful of U.S. policy shift on North Korea “There are many options for hitting a target or targets associated with . . . missile and nuclear development efforts,” Wilder said. “The U.S., while lacking precise information on where the nuclear weapons are stored, has closely monitored all the facilities associated with nuclear and missile R&D.” The problem for Washington, however, is that there is no guarantee that North Korea would not respond with a barrage of artillery fire on Seoul. As such, visible preparations — both offensive and defensive — would precede any strike, according to military experts. According to operational plans for war with North Korea, nearly 700,000 US soldiers would be mobilised alongside 160 ships, 1,600 aircraft and about 2.7m South Korean reservists, said Kim Yeol-soo, head of security at the Korea Institute for Military Affairs. Strategic assets, such as aircraft carriers, F-22 jets and B1-B bombers, would also be deployed. Such assets are occasionally used in training exercises on the peninsula, which North Korea bitterly criticises as precursors to an invasion. When F-22 Raptor jets participated in air drills this month, Pyongyang said the “outbreak of war” had become an “established fact.” Daniel Pinkston, a lecturer at Troy University in Seoul, believes North Korea has grounds for concern over such exercises. “If you are going to initiate a conflict, any military is going to do it when at the advantage of peak readiness,” he said, suggesting conflict was most likely during North Korea’s winter maneuvers or the allied Foal Eagle drills in the spring. Kim Woo-chul, a former intelligence officer with the South Korean air force, said the US had stockpiled enough fuel and equipment following a year of preparations in 2017. The key indication of an imminent conflict, he said, would come from the movements and signals of the U.S. military brass in the region. “This cannot be done by U.S. Forces Korea only. This will require additional forces and movement into U.S. bases in Okinawa,” he said, pointing out that there are only about 30,000 US troops stationed in South Korea. By comparison, Pyongyang has more than 7.5m reserve forces. “This is not a rerun of the 1950s Korean war,” he said. “There is no front line. The real assets are the top decision makers. The human decisions will be critical.” (Bryan Harris, Robin Harding, and Demetri Sevastopulo, “U.S.-North Korea War Talk Runs up against Logistical Challenges,” Financial Times, December 27, 2017, p. 3)
by: And, by the way, it's not a tweet. It's social media, and it gets out in the world, and the reason I'm not happy about that. I think I differ, at least for a period of time. And that's what I've been doing. But when oil is going in, currency manipulation. If they're helping me with North Korea, I can look at trade a little bit — OK, which is another $300 billion. So, China has a trade deficit with China of $350 billion, minimum. That doesn’t include the theft of intellectual property, OK. When I campaigned, I was very tough on China and the reason I was soft on China because the only thing more important to me than trade is war. OK? [Cross talk with guests.] SCHMIDT: Can you finish your thought on North Korea. What’s going on there? TRUMP: I know that they found oil going into. … SCHMIDT: But how recently? TRUMP: It was very recently. In fact, I hate to say, it was reported this morning, and it was reported on Fox. Oil is going into North Korea. That wasn’t my deal! SCHMIDT: What was the deal? TRUMP: My deal was that, we’ve got to treat them rough. They’re a nuclear menace so we have to be very tough. RUDDY: Mr. President, was that a picture from recent or was that months ago? I don’t know. … TRUMP: Oil is going into North Korea, I know. Oil is going into North Korea. So I’m not happy about it. SCHMIDT: So what are you going to do? TRUMP: We’ll see. That I can’t tell you, Michael. But we’ll see. I can tell you one thing: This is a problem that should have been handled for the last 25 years. This is a problem, North Korea. That should have been handled for 25, 30 years, not by me. This should have been handled long before me. Long before this guy has whatever he has. SCHMIDT: Do you think we’ve been too soft on China on North Korea? TRUMP: No, look, I like China, and I like him a lot. But, as you know, when I campaigned, I was very tough on China in terms of trade. They made — last year, we had a trade deficit with China of $350 billion, minimum. That doesn’t include the theft of intellectual property, OK, which is another $300 billion. So, China — and you know, somebody said, oh, currency manipulation. If they’re helping me with North Korea, I can look at trade a little bit differently, at least for a period of time. And that’s what I’ve been doing. But when oil is going in, I’m not happy about that. I think I expressed that in probably [inaudible]. TRUMP, as aides walk by: And, by the way, it’s not a tweet. It’s social media, and it gets out in the world, and the reason

Trump interview: “MICHAEL SCHMIDT: Explain your North Korea tweet to me today. TRUMP: Which one? SCHMIDT: You said about the oil, that China. … What’s going on there. Tell me about that. TRUMP: Yeah, China. … China’s been. … I like very much President Xi. He treated me better than anybody’s ever been treated in the history of China. You know that. The presentations. … One of the great two days of anybody’s life and memory having to do with China. He’s a friend of mine, he likes me, I like him, we have a great chemistry together. He’s [inaudible] of the United States. … [Inaudible.] China’s hurting us very badly on trade, but I have been soft on China because the only thing more important to me than trade is war. O.K.? [Cross talk with guests.] SCHMIDT: Can you finish your thought on North Korea. What’s going on with China? TRUMP: I’m disappointed. You know that they found oil going into. … SCHMIDT: But how recently? TRUMP: It was very recently. In fact, I hate to say, it was reported this morning, and it was reported on Fox. Oil is going into North Korea. That wasn’t my deal! SCHMIDT: What was the deal? TRUMP: My deal was that, we’ve got to treat them rough. They’re a nuclear menace so we have to be very tough. RUDDY: Mr. President, was that a picture from recent or was that months ago? I don’t know. … TRUMP: Oil is going into North Korea, I know. Oil is going into North Korea. So I’m not happy about it. SCHMIDT: So what are you going to do? TRUMP: We’ll see. That I can’t tell you, Michael. But we’ll see. I can tell you one thing: This is a problem that should have been handled for the last 25 years. This is a problem, North Korea. That should have been handled for 25, 30 years, not by me. This should have been handled long before me. Long before this guy has whatever he has. SCHMIDT: Do you think we’ve been too soft on China on North Korea? TRUMP: No, look, I like China, and I like him a lot. But, as you know, when I campaigned, I was very tough on China in terms of trade. They made — last year, we had a trade deficit with China of $350 billion, minimum. That doesn’t include the theft of intellectual property, O.K., which is another $300 billion. So, China — and you know, somebody said, oh, currency manipulation. If they’re helping me with North Korea, I can look at trade a little bit differently, at least for a period of time. And that’s what I’ve been doing. But when oil is going in, I’m not happy about that. I think I expressed that in probably [inaudible]. TRUMP, as aides walk by: And, by the way, it’s not a tweet. It’s social media, and it gets out in the world, and the reason
I do well is that I can be treated unfairly and very dishonestly by CNN, and, you know, I have — what do have now, John, 158 million, including Facebook, including Twitter, including Instagram, including every form, I have a 158 million people. Reporting just this morning, they said 158 million. So if they a do a story that’s false, I can do something — otherwise, Andy, otherwise you just sort of walk around saying what can I do? What, am I going to have a press conference every time somebody, every time Michael writes something wrong? So, China on trade has ripped off this country more than any other element of the world in history has ripped off anything. But I can be different if they’re helping us with North Korea. If they don’t help us with North Korea, then I do what I’ve always said I want to do. China can help us much more, and they have to help us much more. And they have to help us much more. We have a nuclear menace out there, which is no good for China, and it’s not good for Russia. It’s no good for anybody. Does that make sense?

SCHMIDT: Yeah, yeah, it makes a lot of sense. TRUMP: The only thing that supersedes trade to me — because I’m the big trade guy, I got elected to a certain extent on trade. You see, I’m renegotiating Nafta, or I’ll terminate it. If I don’t make the right deal, I’ll terminate Nafta in two seconds. But we’re doing pretty good. You know, it’s easier to renegotiate it if we make it a fair deal because Nafta was a terrible deal for us. We lost $71 billion a year with Mexico, can you believe it? $17 billion with Canada — Canada says we broke even. But they don’t include lumber and they don’t include oil. Oh, that’s not … [Inaudible] … My friend Justin he says, “No, no, we break even.” I said, ‘Yeah, but you’re not including oil, and you’re not including lumber.” When you do, you lose $17 billion, and with the other one, we’re losing $71 billion. So the only thing that supersedes trade to me is war. If we can solve the North Korea problem. China cannot. …

SCHMIDT: You still think there’s a diplomatic solution? TRUMP: China has a tremendous power over North Korea. Far greater than anyone knows. SCHMIDT: Why haven’t they stood up? TRUMP: I hope they do, but as of this moment, they haven’t. They could be much stronger. SCHMIDT: But why not? TRUMP: China can solve the North Korea problem, and they’re helping us, and they’re even helping us a lot, but they’re not helping us enough.” (Excerpts from Trump’s Interview with the New York Times, December 28, 2017)
I don't consider rescheduling to be pausing them. Okay, I see what you mean. Yes, it — the rescheduling of the exercises will be, as always, subject to both countries, the military — all the different things that go into it. They're not — if pause is — I'm pausing them for a period of time because of — how to explain this — because of a diplomatic issue or something. No. I don't anticipate that right now.” (DoD, Press Gaggle with Secretary Mattis, December 29, 2017)

South Korea has seized and inspected a Panama-flagged ship suspected of selling oil to North Korea at sea in violation of U.N. sanctions, maritime authorities said. The 5,100-ton KOTI is being held in the western port of Pyeongtaek-Dangjin, Gyeonggi Province. Security and customs officials held a meeting on December 21 and decided not to allow the vessel to depart from the port, the local maritime office said. It is the second known vessel under probe by South Korea on suspicions of ship-to-ship supplies of petroleum products to North Korea, banned under the international sanctions over its nuclear and missile programs. The authorities said most of the crew of the ship KOTI are Chinese and Myanmarese. They declined to provide details of the probe, and the foreign ministry also said it has yet to receive any formal notification from the related agencies on the inquiry. (Yonhap, “Panamanian Vessel Probed for Suspected Oil Supplies to N. Korea,” December 31, 2017)

At an isolated shipyard on Poland’s Baltic coast, men in coveralls used welding torches under a cold drizzle, forging an oil tanker for a customer in the Netherlands. The scene was unremarkable, save for the provenance of a dozen of the workers. “Yes, we are from the Democratic People’s Republic of Korea,” one of them said. “We have been here quite a while.” Then he hurried away, alarm seizing his face. Four other welders confirmed that they were also from North Korea, the pariah state threatening the United States and much of East Asia with nuclear weapons. They, too, then scampered off. For decades, North Korea has dispatched laborers to points around the globe, engaging tens of thousands in logging, mining and construction ventures while taking a hefty slice of their earnings. The United States has sought to shut down this enterprise, lobbying other countries to eject the workers and eliminate a source of hard currency for the North Korean economy. But the continued presence of these workers in Poland — a NATO ally at the heart of the European Union — underscores how difficult it is to fully sever North Korea from the global economy, even as the nation accelerates efforts to build a nuclear missile capable of striking the United States. In December, the United Nations Security Council adopted a resolution requiring all countries to expel North Korean workers within two years. Poland sent soldiers to fight alongside Americans in Iraq, but is nonetheless one of the few countries still hosting North Korean workers over Washington’s objections. The State Labor Inspectorate, which regulates working conditions at Polish companies, said that perhaps 450 North Koreans remained in the country as of mid-2017, employed by at least 19 companies, including a complex of greenhouses growing tomatoes south of Warsaw. But the New York Times found North Korean workers at two other businesses — the shipyard in Police, near the German border, and a factory that makes shipping containers in the town of Czuchow, 100 miles southwest of Gdansk. In Poland, provincial governments issue work permits to foreign laborers, and there is little coordination with national agencies. As a result, no one appears to know precisely how many North Koreans are in Poland or what they are doing. The Foreign Ministry has urged local governments to stop approving work permits for North Koreans, and new legislation taking effect in January will require them to do so. But until now, the provinces have persisted, illustrating the durability of commercial relationships forged during the Cold War, when Poland was a fellow member of the Communist bloc. Poland remains one of seven European nations to maintain embassies in Pyongyang. The Times requested information on work permits issued to North Koreans from Poland’s 16 provincial governments. Nine responded, reporting that they had given 124 new permits to North Koreans in 2017, and 253 the previous year. Washington has intensified pressure on countries to stop hosting North Korean laborers, and the list of countries doing so has dropped to perhaps 16, including Austria and several Persian Gulf states, from about 40, according to human rights groups and United Nations reports. The Polish government has repeatedly pledged to phase out work permits for North Koreans after negative attention in academic papers and news reports. But the European Union has not pressed the issue, fearful of ratcheting up tensions over sovereignty issues after Britain’s vote
to exit the bloc. Poland’s right-wing government has bristled at European criticism of its moves to exercise greater control of the courts. “The E.U. has been afraid of driving Poland further away,” said Remco Breuker, a historian and Korea expert at Leiden University in the Netherlands. In a warren of streets near the Oder River in Police, a dreary town of 40,000, North Korean workers are often seen walking near train tracks from the Partner shipyard to a grocery store. Sometimes they squat on the sidewalks in front of their dormitory, smoking cigarettes while braced against a biting wind. In the evenings, they trudge to buy pastries or vegetables. On Sundays, they congregate at a local elementary school for soccer games. “It’s something very unusual,” said Pawel Wieczorkowski, deputy director of the local unemployment office. “It’s exotic.” The workers appear intent on maintaining a low profile. With few exceptions, North Korea’s totalitarian government forbids citizens from mixing with outsiders. Those who fall under suspicion can face arrest. “We are here legally. We pay taxes to the local government,” a North Korean worker said after being approached outside the dormitory. Asked about reports that workers have been mistreated, he snapped, “They are all lies!” Then he got in a van and drove away, down a muddy alley. North Koreans working elsewhere in Poland also keep to themselves. At the greenhouse complex that employs North Koreans, the workers’ dormitory was surrounded by a seven-foot-high concrete wall. But through a crack, a heavyset man in a thick parka could be seen directing six women to wash a blue Ford van in the winter chill. In Koldowo, a speck of a village some 200 miles northwest of Warsaw, residents said a group of North Koreans arrived in early 2017 for jobs at Remprodex, a manufacturer of shipping containers in the nearby town of Czuchow. During their first months, they slept inside empty containers despite the cold, residents said. Later, the workers rented half of a house tucked inside a walled compound. Remprodex did not respond to questions, and Times reporters were turned away at the estate of the Kociszewscy family, which owns the greenhouses. The countries hosting North Korean workers have defended the arrangements, arguing that they expose the laborers to the outside world and help them support their families. Conditions back home can be so desperate that some North Koreans pay bribes to get these jobs. But human rights organizations, North Korean defectors and United Nations monitors have described the assignments as forced labor because the workers are physically confined, under constant surveillance and deprived of most of their wages. As many as 147,000 North Koreans now work abroad, according to a recent estimate by the Korea Institute for National Unification in Seoul, and the ruling Workers’ Party in Pyongyang is said to seize anywhere from 30 to 80 percent of each laborer’s earnings. That amounts to a significant revenue source for a regime increasingly pinched by international sanctions — between $200 million and $500 million annually, according to most experts. The call that would put her in business with North Korea came around 2007, Cecylia Kowalska recalled. At the time, she ran a company in the port city of Gdansk that supplied electrical and welding services to the shipping and construction industries. A shipyard in Gdansk needed someone to manage 10 North Korean welders who had worked there in the past, she said. They had been employed through another firm that had struggled to pay them on time. Ms. Kowalska, now 67, said her company, Armex, assumed responsibility for the workers, and then established a relationship with the North Korean partners who had brought them to Poland. She later began supplying North Korean welders to two other shipyards, run by Crist S.A. and Nauta S.A., both companies that make war vessels for NATO members. “They were skilled and hard-working,” she said of the North Koreans. Ms. Kowalska also served as the legal representative of a company called Wonye that was established to supply workers to factories, shipyards, and fruit and vegetable wholesalers, according to Polish corporate records. The records identify Wonye’s president as a North Korean named Jo Chol-yong. In the mid-1990s, a man of the same name and birth date worked for a North Korean company controlled by the ruling party department that oversees the nation’s nuclear and missile programs, according to a registry of Pyongyang residents smuggled out of North Korea. Wonye’s vice president is listed as Kang Hong-gu, who appears to have previously served as commander of a unit involved in construction, the 8th Sokdojon Brigade, according to the Pyongyang registry. Ms. Kowalska said she helped establish Wonye in 2015 as a favor to one of her North Korean partners but never took an active role and sold her shares the next year. According to research by Breuker and his colleagues, Armex received its workers from the Rungrado General Trading Corporation, a North Korean supplier of overseas workers sanctioned by the United States in 2016 and accused of funding the department that oversees the nuclear weapons program. Asked about her partners, Ms.
Kowalska said she was uncertain of their names and promised to look them up. But she later declined to identify them, saying that doing so would divulge “trade secrets.” Once, she recalled, one of the North Koreans suggested she buy a gift for officials in Pyongyang — a sword. “A sign of our thanks for this partnership,” she said. “I thought it was like buying someone flowers.”

The sword was later displayed in a hall for gifts to North Korea’s leaders and highlighted in a North Korean propaganda video that identified Armex by name. Ms. Kowalska said the partnership proceeded smoothly until three years ago, when a North Korean welder without adequate safety gear burned to death at the Crist shipyard. The accident alarmed Crist’s customers, among them a Danish shipbuilder that had employed the Polish shipyard to handle work on a war vessel for Denmark, another NATO member. Soon afterward, Ms. Kowalska said, she stopped hiring North Korean workers “because it became such a sensitive issue.” She added that she was now retired and no longer managed North Korean workers. But her North Korean partners still appear to be active in Poland. On a recent afternoon, Times reporters spotted two vehicles with Polish license plates parked outside the workers’ dormitory at the tomato greenhouses: the van that was being washed and a dark Mercedes sedan. According to records seen by the Times, the van is registered to Wonye’s vice president, Mr. Kang, and the Mercedes to its president, Mr. Jo.

Though the European Union maintains extensive labor protections, North Koreans who have worked there describe a parallel reality. “Our girls lived as if they were in prison,” said Kim Tae-san, a North Korean defector who worked in the Czech Republic from 2000 to 2002 supervising 200 young North Korean women in a shoe factory. He said the women were forced to remain during off-hours in their dormitory, where they attended ideological study sessions and could watch only movies and propaganda documentaries sent from home. Once a week, he added, they were allowed out to go to the market — but only in groups. North Koreans sent to work overseas are vetted for political loyalty, but the government also sends minders to watch them. Kim said the workers also “monitored each other.” The women worked six days a week, earning $150 a month but keeping only about $25 for food and savings. Their supervisors took the rest, Mr. Kim said, spending some of the money on housing but sending most of it back to the authorities in North Korea.

Poles who have worked with North Koreans describe similar conditions. A shipyard worker at Crist, for example, recalled how a North Korean colleague fell ill on the job and was urged by a paramedic to stop working. Instead, the man became frantic, insisting he had to continue. “This is slave labor,” said Agnes Jongerius, a Dutch member of the European Parliament, who has urged European authorities to force Poland to stop admitting North Korean workers. Kowalska scoffed at allegations of abuse and said the North Koreans she managed enjoyed “a normal life.” “They asked us for advice on what to buy their wives and kids,” she said. “They liked to buy lingerie for their wives. It was a popular gift, and they would ask us about inexpensive shops.” She said her company paid the workers about $780 per month. She acknowledged at first that Armex sent a portion of their wages to a North Korean company, but later said she had misspoken and no one took a cut. As international scrutiny has intensified, the State Labor Inspectorate has vowed to investigate claims of abuse. So far, the agency has found “no signs of forced labor,” said Dorota Gorajska, an official responsible for companies that employ foreign workers. Officials acknowledged, however, that inspections have generally been confined to paperwork and that when interviews are conducted, investigators typically rely on translators provided by employers. Given North Korea’s reputation, does that not taint their findings? An official at the inspectorate, Michal Tyczynski, took a deep breath. “It’s a tricky question,” he said. “There is no good answer to this question.” (Peter S. Goodman, Choe Sang-hun, and Joanna Berendt, “Earning Wages for Pyongyang in a Polish Port,” New York Times, January 1, 2018)

North Korea’s leader, Kim Jong-un, moved to ease his country’s isolation by offering to send a delegation to the Winter Olympics in South Korea next month, even as he claimed to have accomplished the ability to launch a nuclear missile at the mainland United States. Mixing the nuclear threat with an overture for easing tensions on the divided Korean Peninsula, Kim proposed immediate dialogue with South Korea to discuss the North’s participation in the Olympics. If such talks were held, they would mark the first time the two Koreas have had an official dialogue since the South’s new president, Moon Jae-in, took office in May. Moon has doggedly championed dialogue with the North, even as President Trump has threatened military action to stop the
North’s nuclear weapons program. “I am willing to send a delegation and take necessary measures, and I believe that the authorities of the North and South can urgently meet to discuss the matter,” Kim said in his annual New Year’s Day speech, broadcast on North Korea’s state-run television. “We sincerely hope that the South will successfully host the Olympics.” “Above all, we must ease the acute military tensions between the North and the South,” Kim said. “The North and the South should no longer do anything that would aggravate the situation, and must exert efforts to ease military tensions and create a peaceful environment.” But Kim also reiterated that his country had mastered a state nuclear deterrent force, which he said would prevent the Trump administration from starting a war on the Korean Peninsula. “It’s not a mere threat but a reality that I have a nuclear button on the desk in my office,” he said. “All of the mainland United States is within the range of our nuclear strike.” But it has yet to demonstrate that its nuclear warhead could survive the re-entry into the Earth’s atmosphere and hit such long-range targets. He said his government would accelerate the production of nuclear warheads and rockets to launch them. Government and private analysts in South Korea have recently said that despite its claim to have achieved its nuclear ambitions, the North is likely to conduct more weapons tests to improve its nuclear and long-range ballistic missile capabilities. At the same time, they said North Korea will also seek opportunities to engage in dialogue with South Korea and the United States, hoping to use its nuclear threats as leverage to gain concessions, like easing sanctions. (Choe Sang-hun, “North Korean Leader Offers a Hand to South While Chiding the U.S.,” New York Times, January 1, 2018)

KCNA: “Respected Supreme Leader Kim Jong Un made the New Year Address for 2018. The full text of the New Year Address reads: …The year 2017 was a year of heroic struggle and great victory, a year when we set up an indestructible milestone in the history of building a powerful socialist country with the spirit of self-reliance and self-development as the dynamic force. Last year the moves of the United States and its vassal forces to isolate and stifle our country went to extremes, and our revolution faced the harshest-ever challenges. …An outstanding success our Party, state and people won last year was the accomplishment of the great, historic cause of perfecting the national nuclear forces. On this platform one year ago I officially made public on behalf of the Party and government that we had entered the final stage of preparation for the test launch of an intercontinental ballistic missile. In the past one year we conducted several rounds of its test launch, aimed at implementing the program, safely and transparently, thus proving before the eyes of the world its definite success. By also conducting tests of various means of nuclear delivery and super-intense thermonuclear weapon, we attained our general orientation and strategic goal with success, and our Republic has at last come to possess a powerful and reliable war deterrent, which no force and nothing can reverse. Our country’s nuclear forces are capable of thwarting and countering any nuclear threats from the United States, and they constitute a powerful deterrent that prevents it from starting an adventurous war. In no way would the United States dare to ignite a war against me and our country. The whole of its mainland is within the range of our nuclear strike and the nuclear button is on my office desk all the time; the United States needs to be clearly aware that this is not merely a threat but a reality. We have realized the wish of the great leaders who devoted their lives to building the strongest national defense capability for reliably safeguarding our country’s sovereignty, and we have created a mighty sword for defending peace, as desired by all our people who had to tighten their belts for long years. This great victory eloquently proves the validity and vitality of the Party’s line of simultaneously conducting economic construction and building up our nuclear forces and its idea of prioritizing science, and it is a great historic achievement that has opened up bright prospects for the building of a prosperous country and inspired our service personnel and people with confidence in sure victory. I offer my noble respects to the heroic Korean people who, despite the difficult living conditions caused by life-threatening sanctions and blockade, have firmly trusted, absolutely supported and dynamically implemented our Party’s line of simultaneously promoting the two fronts. …The nuclear weapons research sector and the rocket industry should mass-produce nuclear warheads and ballistic missiles, the power and reliability of which have already been proved to the full, to give a spur to the efforts for deploying them for action. And we should always be ready for immediate nuclear counterattack to cope with the enemy’s maneuvers for a nuclear war. …Last year, too, our people made strenuous efforts to defend the peace of the
country and hasten national reunification in keeping with the aspirations and demands of the nation. However, owing to the vicious sanctions and pressure by the United States and its vassal forces and their desperate maneuvers to ignite a war, all aimed at checking the reinforcement of the self-defensive nuclear deterrent by our Republic, the situation on the Korean peninsula became aggravated as never before, and greater difficulties and obstacles were put on the road of the country's reunification. Even though the conservative "regime" in south Korea, which had resorted to fascist rule and confrontation with fellow countrymen, collapsed and the ruling circles were replaced by another thanks to the massive resistance by the enraged people of all walks of life, nothing has been changed in the relations between the north and the south. On the contrary, the south Korean authorities, siding with the United States in its hostile policy towards the DPRK against the aspirations of all the fellow countrymen for national reunification, drove the situation to a tight corner, further aggravated the mistrust and confrontation between the north and the south, and brought the bilateral relations to a fix that can be hardly resolved. We can never escape the holocaust of a nuclear war forced by the outside forces, let alone achieve national reunification, unless we put an end to this abnormal situation. **The prevailing situation demands that now the north and the south improve the relations between themselves and take decisive measures for achieving a breakthrough for independent reunification without being obsessed by bygone days.** No one can present an honorable appearance in front of the nation if he or she ignores the urgent demands of the times. This year is significant both for the north and the south as in the north the people will greet the 70th founding anniversary of their Republic as a great, auspicious event and in the south the Winter Olympic Games will take place. In order to not only celebrate these great national events in a splendid manner but also demonstrate the dignity and spirit of the nation at home and abroad, **we should improve the frozen inter-Korean relations** and glorify this meaningful year as an eventful one noteworthy in the history of the nation. **First of all, we should work together to ease the acute military tension between the north and the south and create a peaceful environment on the Korean peninsula.** As long as this unstable situation, which is neither wartime nor peacetime, persists, the north and the south cannot ensure the success of the scheduled events, nor can they sit face to face to have a sincere discussion over the issue of improving bilateral relations, nor will they advance straight ahead towards the goal of national reunification. **The north and the south should desist from doing anything that might aggravate the situation,** and they should make concerted efforts to defuse military tension and create a peaceful environment. The south Korean authorities should respond positively to our sincere efforts for a detente, instead of inducing the exacerbation of the situation by joining the United States in its reckless moves for a north-targeted nuclear war that threatens the destiny of the entire nation as well as peace and stability on this land. They should **discontinue all the nuclear war drills they stage with outside forces,** as these drills will engulf this land in flames and lead to bloodshed on our sacred territory. They should also refrain from any acts of bringing in nuclear armaments and aggressive forces from the United States. Even though the United States is wielding the nuclear stick and going wild for another war, it will not dare to invade us because we currently have a powerful nuclear deterrent. And when the north and the south are determined, they can surely prevent the outbreak of war and ease tension on the Korean peninsula. A climate favorable for national reconciliation and reunification should be established. The improvement of inter-Korean relations is a pressing matter of concern not only to the authorities but to all other Koreans, and it is a crucial task to be carried out through a concerted effort by the entire nation. The north and the south should **promote bilateral contact, travel, cooperation and exchange on a broad scale to remove mutual misunderstanding and distrust,** and fulfil their responsibility and role as the motive force of national reunification. **We will open our doors to anyone from south Korea, including the ruling party and opposition parties, organizations and individual personages of all backgrounds, for dialogue, contact and travel,** if they sincerely wish national concord and unity. A definite end should be put to the acts that might offend the other party and incite discord and hostility between fellow countrymen. The south Korean authorities should not try, as the previous conservative "regime" did, to block contact and travel by people of different social strata and suppress the atmosphere for reunification through alliance with the north, under absurd pretexts and by invoking legal and institutional mechanisms; instead, they should direct efforts to creating conditions and environment conducive to national concord and unity. To improve inter-Korean relations as soon as possible, the
authorities of the north and the south should raise the banner of national independence higher than ever before, and fulfil their responsibility and role they have assumed for the times and the nation. Inter-Korean relations are, to all intents and purposes, an internal matter of our nation, which the north and the south should resolve on their own responsibility. Therefore, they should acquire a steadfast stand and viewpoint that they will resolve all the issues arising in bilateral relations on the principle of By Our Nation Itself. The south Korean authorities need to know that they will gain nothing from touring foreign countries to solicit their help on the issue of inter-Korean relations, and that such behavior will give the outside forces, who pursue dishonest objectives, an excuse for their interference and complicate matters further. Now it is not time for the north and the south to turn their backs on each other and merely express their respective standpoints; it is time that they sit face to face with a view to holding sincere discussions over the issue of improving inter-Korean relations by our nation itself and seek a way out for its settlement in a bold manner. As for the Winter Olympic Games to be held soon in south Korea, it will serve as a good occasion for demonstrating our nation's prestige and we earnestly wish the Olympic Games a success. From this point of view we are willing to dispatch our delegation and adopt other necessary measures; with regard to this matter, the authorities of the north and the south may meet together soon. Since we are compatriots of the same blood as south Koreans, it is natural for us to share their pleasure over the auspicious event and help them. We will, in the future, too, resolve all issues by the efforts of our nation itself under the unfurled banner of national independence and frustrate the schemes by anti-reunification forces within and without on the strength of national unity, thereby opening up a new history of national reunification. Availing myself of this opportunity, I extend warm New Year greetings once again to all Korean compatriots at home and abroad, and I sincerely wish that in this significant year everything would go well both in the north and in the south. Comrades, The international situation we witnessed last year was clear proof that our Party and our state were absolutely correct in their strategic judgement and decision that when we are confronting the imperialist forces of aggression who are attempting to wreck global peace and security and make mankind suffer a nuclear holocaust, our only recourse is the power of justice. As a responsible, peace-loving nuclear power, our country will neither have recourse to nuclear weapons unless hostile forces of aggression violate its sovereignty and interests nor threaten any other country or region by means of nuclear weapons. However, it will resolutely respond to acts of wrecking peace and security on the Korean peninsula. …” (KCNA, “Kim Jong Un Makes New Year Address,” January 1, 2018)
